| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Removes the characters in the range `[i1,i2)`. In place, characters in the range `[k1,k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1478 of file `vstring.h`.

```
5.18.3.101 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename >
class _Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (
const_iterator __i1, const_iterator __i2, std::initializer_list< _CharT > __l ) [inline]
```

Replace range of characters with `initializer_list`.

**Parameters**

|                   |                                                            |
|-------------------|------------------------------------------------------------|
| <code>__i1</code> | Iterator referencing start of range to replace.            |
| <code>__i2</code> | Iterator referencing end of range to replace.              |
| <code>__l</code>  | The <code>initializer_list</code> of characters to insert. |

**Returns**

Reference to this string.

**Exceptions**

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Removes the characters in the range `[i1,i2)`. In place, characters in the range `[k1,k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1582 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace()`.

```
5.18.3.102 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::reserve ( size_type __res_arg = 0 )
[inline]
```

Attempt to preallocate enough memory for specified number of characters.

**Parameters**

|                        |                                |
|------------------------|--------------------------------|
| <code>__res_arg</code> | Number of characters required. |
|------------------------|--------------------------------|

**Exceptions**

|                                |                                                             |
|--------------------------------|-------------------------------------------------------------|
| <code>std::length_error</code> | If <code>__res_arg</code> exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------------------|

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than `max_size()`, `length_error` is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.

Definition at line 507 of file `vstring.h`.

Referenced by `__gnu_cxx::operator+()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::shrink_to_fit()`.

5.18.3.103 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> void __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::resize ( size_type __n, _CharT __c )`

Resizes the string to the specified number of characters.

#### Parameters

|                  |                                                 |
|------------------|-------------------------------------------------|
| <code>__n</code> | Number of characters the string should contain. |
| <code>__c</code> | Character to fill any new elements.             |

This function will resize the string to the specified number of characters. If the number is smaller than the string's current size the string is truncated, otherwise the string is extended and new elements are set to `__c`.

Definition at line 50 of file `vstring.tcc`.

Referenced by `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::resize()`.

5.18.3.104 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> void __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::resize ( size_type __n )`  
`[inline]`

Resizes the string to the specified number of characters.

#### Parameters

|                  |                                                 |
|------------------|-------------------------------------------------|
| <code>__n</code> | Number of characters the string should contain. |
|------------------|-------------------------------------------------|

This function will resize the string to the specified length. If the new size is smaller than the string's current size the string is truncated, otherwise the string is extended and new characters are default-constructed. For basic types such as `char`, this means setting them to 0.

Definition at line 463 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::resize()`.

5.18.3.105 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> size_type __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::rfind ( const __versa_string<_CharT, _Traits, _Alloc, _Base > & __str, size_type __pos = npos ) const` `[inline]`, `[noexcept]`

Find last position of a string.

#### Parameters

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__str</code> | String to locate.                                     |
| <code>__pos</code> | Index of character to search back from (default end). |

#### Returns

Index of start of last occurrence.

Starting from `__pos`, searches backward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

Definition at line 1738 of file `vstring.h`.

Referenced by `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::find_last_of()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::rfind()`.

5.18.3.106 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rfind ( const _CharT * __s, size_type __pos, size_type __n ) const`

Find last position of a C substring.

## Parameters

|                    |                                                         |
|--------------------|---------------------------------------------------------|
| <code>__s</code>   | C string to locate.                                     |
| <code>__pos</code> | Index of character to search back from.                 |
| <code>__n</code>   | Number of characters from <code>s</code> to search for. |

## Returns

Index of start of last occurrence.

Starting from `__pos`, searches backward for the first `__n` characters in `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

Definition at line 313 of file `vstring.tcc`.

References `std::min()`.

5.18.3.107 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> size_type __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::rfind ( const _CharT * __s, size_type __pos = npos ) const [inline]`

Find last position of a C string.

## Parameters

|                    |                                                      |
|--------------------|------------------------------------------------------|
| <code>__s</code>   | C string to locate.                                  |
| <code>__pos</code> | Index of character to start search at (default end). |

## Returns

Index of start of last occurrence.

Starting from `__pos`, searches backward for the value of `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

Definition at line 1768 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::rfind()`.

5.18.3.111 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::substr ( size_type __pos = 0, size_type __n = npos ) const [inline]`

Get a substring.

Parameters

|                    |                                                        |
|--------------------|--------------------------------------------------------|
| <code>__pos</code> | Index of first character (default 0).                  |
| <code>__n</code>   | Number of characters in substring (default remainder). |

**Returns**

The new string.

**Exceptions**

|                                |                                   |
|--------------------------------|-----------------------------------|
| <code>std::out_of_range</code> | If <code>pos &gt; size()</code> . |
|--------------------------------|-----------------------------------|

Construct and return a new string using the `__n` characters starting at `__pos`. If the string is too short, use the remainder of the characters. If `__pos` is beyond the end of the string, `out_of_range` is thrown.

Definition at line 2052 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::__versa_string()`.

5.18.3.112 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> void __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::swap ( __versa_string<_CharT, _Traits, _Alloc, _Base > & __s ) [inline], [noexcept]`

Swap contents with another string.

## Parameters

|                  |                      |
|------------------|----------------------|
| <code>__s</code> | String to swap with. |
|------------------|----------------------|

Exchanges the contents of this string with that of `__s` in constant time.

Definition at line 1636 of file `vstring.h`.

Referenced by `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::operator=()`, and `__gnu_cxx::swap()`.

## 5.18.4 Member Data Documentation

5.18.4.1 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::__pad0__`

Construct string as copy of a C string.

## Parameters

|                  |                                                  |
|------------------|--------------------------------------------------|
| <code>__s</code> | Source C string.                                 |
| <code>__a</code> | Allocator to use (default is default allocator). |

Definition at line 218 of file `vstring.h`.

5.18.4.2 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::__pad1__`

Construct string as multiple characters.

## Parameters

|                  |                                                  |
|------------------|--------------------------------------------------|
| <code>__n</code> | Number of characters.                            |
| <code>__c</code> | Character to use.                                |
| <code>__a</code> | Allocator to use (default is default allocator). |

Definition at line 228 of file `vstring.h`.

5.18.4.3 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::iterator`

Insert one character.

Remove a range of characters.

Remove one character.

## Parameters

|                  |                                                       |
|------------------|-------------------------------------------------------|
| <code>__p</code> | Iterator referencing position in string to insert at. |
| <code>__c</code> | The character to insert.                              |

## Returns

Iterator referencing newly inserted char.

**Exceptions**

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Inserts character `__c` at position referenced by `__p`. If adding character causes the length to exceed `max_size()`, `length_error` is thrown. If `__p` is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

**Parameters**

|                         |                                               |
|-------------------------|-----------------------------------------------|
| <code>__position</code> | Iterator referencing the character to remove. |
|-------------------------|-----------------------------------------------|

**Returns**

iterator referencing same location after removal.

Removes the character at `__position` from this string. The value of the string doesn't change if an error is thrown.

**Parameters**

|                      |                                                     |
|----------------------|-----------------------------------------------------|
| <code>__first</code> | Iterator referencing the first character to remove. |
| <code>__last</code>  | Iterator referencing the end of the range.          |

**Returns**

Iterator referencing location of first after removal.

Removes the characters in the range `[first,last)` from this string. The value of the string doesn't change if an error is thrown.

Definition at line 1149 of file `vstring.h`.

```
5.18.4.4 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
    _Base> const __versa_string<_CharT, _Traits, _Alloc, _Base>::size_type __gnu_cxx::__versa_string<_CharT,
    _Traits, _Alloc, _Base>::npos [static]
```

Value returned by various member functions when they fail.

- [vstring.tcc](#)

**5.19 `__gnu_cxx::_Caster<_ToType>` Struct Template Reference****Public Types**

- `typedef _ToType::element_type * type`

**5.19.1 Detailed Description**

```
template<typename _ToType>struct __gnu_cxx::_Caster<_ToType >
```

These functions are here to allow containers to support non standard pointer types. For normal pointers, these resolve to the use of the standard cast operation. For other types the functions will perform the appropriate cast to/from the

custom pointer class so long as that class meets the following conditions: 1) has a typedef `element_type` which names the type it points to. 2) has a `get()` const method which returns `element_type*`. 3) has a constructor which can take one `element_type*` argument. This type supports the semantics of the pointer cast operators (below.)

Definition at line 52 of file `cast.h`.

The documentation for this struct was generated from the following file:

- [cast.h](#)

## 5.20 `__gnu_cxx::Char_types<_CharT>` Struct Template Reference

### Public Types

- typedef unsigned long `int_type`
- typedef `std::streamoff` `off_type`
- typedef `std::streampos` `pos_type`
- typedef `std::mbstate_t` `state_type`

### 5.20.1 Detailed Description

```
template<typename _CharT>struct __gnu_cxx::Char_types<_CharT >
```

Mapping from character type to associated types.

#### Note

This is an implementation class for the generic version of `char_traits`. It defines `int_type`, `off_type`, `pos_type`, and `state_type`. By default these are unsigned long, `streamoff`, `streampos`, and `mbstate_t`. Users who need a different set of types, but who don't need to change the definitions of any function defined in `char_traits`, can specialize `__gnu_cxx::Char_types` while leaving `__gnu_cxx::char_traits` alone.

Definition at line 62 of file `char_traits.h`.

The documentation for this struct was generated from the following file:

- [char\\_traits.h](#)

## 5.21.1 Detailed Description

```
template<typename _Tp>class __gnu_cxx::_ExtPtr_allocator<_Tp>
```

An example allocator which uses a non-standard pointer type.

This allocator specifies that containers use a 'relative pointer' as it's pointer type. (See `ext/pointer.h`) Memory allocation in this example is still performed using `std::allocator`.

Definition at line 56 of file `extptr_allocator.h`.

The documentation for this class was generated from the following file:

- [extptr\\_allocator.h](#)

## 5.22 `__gnu_cxx::_Invalid_type` Struct Reference

### 5.22.1 Detailed Description

The specialization on this type helps resolve the problem of reference to void, and eliminates the need to specialize `_Pointer_adapter` for cases of `void*`, `const void*`, and so on.

Definition at line 213 of file `pointer.h`.

The documentation for this struct was generated from the following file:

- [pointer.h](#)

#### 5.23.1 Detailed Description

```
template<typename Storage_policy> class __gnu_cxx::Pointer_adapter<_Storage_policy >
```

The following provides an 'alternative pointer' that works with the containers when specified as the pointer typedef of the allocator.

The pointer type used with the containers doesn't have to be this class, but it must support the implicit conversions, pointer arithmetic, comparison operators, etc. that are supported by this class, and avoid raising compile-time ambiguities. Because creating a working pointer can be challenging, this pointer template was designed to wrapper an easier storage policy type, so that it becomes reusable for creating other pointer types.

A key point of this class is also that it allows container writers to 'assume' `Allocator::pointer` is a typedef for a normal pointer. This class supports most of the conventions of a true pointer, and can, for instance handle implicit conversion to const and base class pointer types. The only impositions on container writers to support extended pointers are: 1) use the `Allocator::pointer` typedef appropriately for pointer types. 2) if you need pointer casting, use the `__pointer_cast<>` functions from `ext/cast.h`. This allows pointer cast operations to be overloaded as necessary by custom pointers.

Note: The const qualifier works with this pointer adapter as follows:

```
_Tp* == _Pointer_adapter<_Std_pointer_impl<_Tp> >; const _Tp* == _Pointer_adapter<_Std_pointer_impl<const
_Tp> >; _Tp* const == const _Pointer_adapter<_Std_pointer_impl<_Tp> >; const _Tp* const == const _Pointer_
adapter<_Std_pointer_impl<const _Tp> >;
```

Definition at line 281 of file `pointer.h`.

The documentation for this class was generated from the following file:

- [pointer.h](#)

## 5.24 `__gnu_cxx::Relative_pointer_impl<_Tp>` Class Template Reference

### Public Types

- typedef `_Tp` **element\_type**

### Public Member Functions

- `_Tp * get () const`
- `bool operator< (const \_Relative\_pointer\_impl &__rarg) const`
- `bool operator== (const \_Relative\_pointer\_impl &__rarg) const`
- `void set (_Tp *__arg)`

#### 5.24.1 Detailed Description

```
template<typename _Tp>class __gnu_cxx::Relative_pointer_impl<_Tp >
```

A storage policy for use with `_Pointer_adapter<>` which stores the pointer's address as an offset value which is relative to its own address.

This is intended for pointers within shared memory regions which might be mapped at different addresses by different processes. For null pointers, a value of 1 is used. (0 is legitimate sometimes for nodes in circularly linked lists) This value was chosen as the least likely to generate an incorrect null, As there is no reason why any normal pointer would point 1 byte into its own pointer address.

Definition at line 109 of file `pointer.h`.

The documentation for this class was generated from the following file:

- [pointer.h](#)

## 5.25 `__gnu_cxx::Relative_pointer_impl< const_Tp >` Class Template Reference

### Public Types

- typedef const\_Tp **element\_type**

### Public Member Functions

- const\_Tp \* **get** () const
- bool **operator**< (const [\\_Relative\\_pointer\\_impl](#) &\_\_rarg) const
- bool **operator**== (const [\\_Relative\\_pointer\\_impl](#) &\_\_rarg) const
- void **set** (const\_Tp \*\_\_arg)

#### 5.25.1 Detailed Description

```
template<typename_Tp>class __gnu_cxx::Relative_pointer_impl< const_Tp >
```

`Relative_pointer_impl` needs a specialization for const T because of the casting done during pointer arithmetic.

Definition at line 161 of file `pointer.h`.

The documentation for this class was generated from the following file:

- [pointer.h](#)

## 5.26 `__gnu_cxx::Std_pointer_impl< _Tp >` Class Template Reference

### Public Types

- typedef \_Tp **element\_type**

### Public Member Functions

- \_Tp \* **get** () const
- bool **operator**< (const [\\_Std\\_pointer\\_impl](#) &\_\_rarg) const
- bool **operator**== (const [\\_Std\\_pointer\\_impl](#) &\_\_rarg) const
- void **set** (element\_type \*\_\_arg)

#### 5.26.1 Detailed Description

```
template<typename_Tp>class __gnu_cxx::Std_pointer_impl< _Tp >
```

A storage policy for use with `_Pointer_adapter<>` which yields a standard pointer.

A `_Storage_policy` is required to provide 4 things: 1) A `get()` API for returning the stored pointer value. 2) An `set()` API for storing a pointer value. 3) An `element_type` typedef to define the type this points to. 4) An `operator<()` to support pointer comparison. 5) An `operator==()` to support pointer comparison.

Definition at line 66 of file `pointer.h`.

The documentation for this class was generated from the following file:

- [pointer.h](#)

## 5.27 `__gnu_cxx::Unqualified_type<_Tp>` Struct Template Reference

### Public Types

- typedef `_Tp` **type**

### 5.27.1 Detailed Description

```
template<typename _Tp>struct __gnu_cxx::Unqualified_type<_Tp>
```

This structure accommodates the way in which `std::iterator_traits<>` is normally specialized for `const T*`, so that `value_type` is still `T`.

Definition at line 241 of file `pointer.h`.

The documentation for this struct was generated from the following file:

- [pointer.h](#)

## 5.28 `__gnu_cxx::annotate_base` Struct Reference

Inheritance diagram for `__gnu_cxx::annotate_base`:

### Public Member Functions

- void [\\_M\\_insert](#) (size\_t \*\_\_addr) throw ()

### 5.32.1 Detailed Description

`template<typename _Tp>class __gnu_cxx::bitmap_allocator< _Tp >`

Bitmap Allocator, primary template.

Definition at line 660 of file `bitmap_allocator.h`.

### 5.32.2 Member Function Documentation

5.32.2.1 `template<typename _Tp > pointer __gnu_cxx::bitmap_allocator< _Tp >::_M_allocate_single_object ( )`  
[inline]

Allocates memory for a single object of size `sizeof(_Tp)`.

#### Exceptions

|                               |                                 |
|-------------------------------|---------------------------------|
| <code>std::bad_alloc</code> . | If memory can not be allocated. |
|-------------------------------|---------------------------------|

Complexity: Worst case complexity is  $O(N)$ , but that is hardly ever hit. If and when this particular case is encountered, the next few cases are guaranteed to have a worst case complexity of  $O(1)$ ! That's why this function performs very well on average. You can consider this function to have a complexity referred to commonly as: Amortized Constant time.

Definition at line 824 of file `bitmap_allocator.h`.

References `__gnu_cxx::__detail::__bit_allocate()`, `__gnu_cxx::__detail::__num_bitmaps()`, and `__gnu_cxx::_Bit_scan_forward()`.

5.32.2.2 `template<typename_Tp> void __gnu_cxx::bitmap_allocator<_Tp>::_M_deallocate_single_object ( pointer __p ) throw ) [inline]`

Deallocates memory that belongs to a single object of size `sizeof(_Tp)`.

Complexity:  $O(\lg(N))$ , but the worst case is not hit often! This is because containers usually deallocate memory close to each other and this case is handled in  $O(1)$  time by the `deallocate` function.

Definition at line 914 of file `bitmap_allocator.h`.

References `__gnu_cxx::__detail::_bit_free()`, `__gnu_cxx::__detail::_num_bitmaps()`, and `__gnu_cxx::free_list::_M_insert()`.

The documentation for this class was generated from the following file:

- [bitmap\\_allocator.h](#)

### 5.33 `__gnu_cxx::char_traits<_CharT>` Struct Template Reference

Inheritance diagram for `__gnu_cxx::char_traits<_CharT>`:

#### Public Types

- `typedef _CharT char_type`
- `typedef \_Char\_types<_CharT> ::int_type int_type`
- `typedef \_Char\_types<_CharT> ::off_type off_type`

- static constexpr int\_type **not\_eof** (const int\_type &\_\_c)
- static constexpr char\_type **to\_char\_type** (const int\_type &\_\_c)
- static constexpr int\_type **to\_int\_type** (const char\_type &\_\_c)

#### 5.33.1 Detailed Description

```
template<typename _CharT>struct __gnu_cxx::char_traits< _CharT >
```

Base class used to implement `std::char_traits`.

#### Note

For any given actual character type, this definition is probably wrong. (Most of the member functions are likely to be right, but the `int_type` and `state_type` typedefs, and the `eof()` member function, are likely to be wrong.) The reason this class exists is so users can specialize it. Classes in namespace `std` may not be specialized for fundamental types, but classes in namespace `__gnu_cxx` may be.

See [https://gcc.gnu.org/onlinedocs/libstdc++/manual/strings.html#strings.string.-character\\_types](https://gcc.gnu.org/onlinedocs/libstdc++/manual/strings.html#strings.string.-character_types) for advice on how to make use of this class for *unusual* character types. Also, check out `include/ext/pod_char_traits.h`.

Definition at line 87 of file `char_traits.h`.

The documentation for this struct was generated from the following file:

- [char\\_traits.h](#)

### 5.34 `__gnu_cxx::character< _Value, _Int, _St >` Struct Template Reference

#### Public Types

- typedef `character< _Value, _Int, _St >` **char\_type**
- typedef `_Int` **int\_type**
- typedef `_St` **state\_type**

class `debug_allocator`
- bool `operator==` (const `debug_allocator` &\_\_lhs, const `debug_allocator` &\_\_rhs)

## 5.39.1 Detailed Description

```
template<typename _Alloc>class __gnu_cxx::debug_allocator< _Alloc >
```

A meta-allocator with debugging bits.

This is precisely the allocator defined in the C++03 Standard.

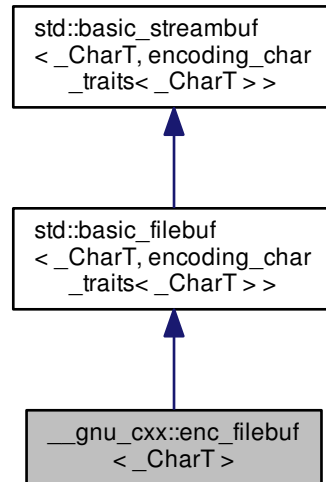

Definition at line 62 of file `debug_allocator.h`.

The documentation for this class was generated from the following file:

- [debug\\_allocator.h](#)

5.40 `__gnu_cxx::enc_filebuf<_CharT>` Class Template Reference

Inheritance diagram for `__gnu_cxx::enc_filebuf<_CharT>`:

## Public Types

- typedef `codecvt< char_type, char, __state_type >` **\_\_codecvt\_type**
- typedef `__basic_file< char >` **\_\_file\_type**
- typedef `basic_filebuf< char_type, traits_type >` **\_\_filebuf\_type**
- typedef `traits_type::state_type` **\_\_state\_type**
- typedef `basic_streambuf< char_type, traits_type >` **\_\_streambuf\_type**
- typedef `_CharT` **char\_type**
- typedef `traits_type::int_type` **int\_type**
- typedef `traits_type::off_type` **off\_type**
- typedef `traits_type::pos_type` **pos\_type**
- typedef `traits_type::state_type` **state\_type**
- typedef `encoding_char_traits<_CharT>` **traits\_type**

## Public Member Functions

- **enc\_filebuf** (`state_type &__state`)
- `__filebuf_type * close` ()
- locale `getloc` () const
- streamsize `in_avail` ()

- `bool is_open () const` `throw ()`
- `__filebuf_type * open (const char * __s, ios_base::openmode __mode)`
- `__filebuf_type * open (const std::string & __s, ios_base::openmode __mode)`
- `locale pubimbue (const locale & __loc)`

#### 5.40.1 Detailed Description

```
template<typename _CharT>class __gnu_cxx::enc_filebuf<_CharT>
```

```
class enc_filebuf.
```

Definition at line 42 of file `enc_filebuf.h`.

## 5.40.2 Member Function Documentation

**5.40.2.1** `void std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::_M_create_pback( ) [inline], [protected], [inherited]`

Initializes pback buffers, and moves normal buffers to safety. Assumptions: `_M_in_cur` has already been moved back  
Definition at line 199 of file `fstream`.

**5.40.2.2** `void std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::_M_destroy_pback( ) throw [inline], [protected], [inherited]`

Deactivates pback buffer contents, and restores normal buffer. Assumptions: The pback buffer has only moved forward.  
Definition at line 216 of file `fstream`.

**5.40.2.3** `void std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::_M_set_buffer( streamsize __off ) [inline], [protected], [inherited]`

This function sets the pointers of the internal buffer, both get and put areas. Typically:

`__off == egptr() - eback()` upon underflow/uflow (**read** mode); `__off == 0` upon overflow (**write** mode); `__off == -1` upon open, `setbuf`, `seekoff/pos` (**uncommitted** mode).

NB: `epptr() - pbase() == _M_buf_size - 1`, since `_M_buf_size` reflects the actual allocated memory and the last cell is reserved for the overflow char of a full put area.

Definition at line 443 of file `fstream`.

**5.40.2.4** `__filebuf_type* std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::close( ) [inherited]`

Closes the currently associated file.

### Returns

`this` on success, `NULL` on failure

If no file is currently open, this function immediately fails.

If a *put buffer area* exists, `overflow(eof)` is called to flush all the characters. The file is then closed.

If any operations fail, this function also fails.

**5.40.2.5** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::eback( ) const [inline], [protected], [inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 489 of file `streambuf`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_destroy_pback()`, `std::basic_streambuf< _Elem, _Tr >::sputbackc()`, and `std::basic_streambuf< _Elem, _Tr >::sungetc()`.

5.40.2.6 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::egptr ( ) const` `[inline]`, `[protected]`, `[inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 495 of file `streambuf`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_create_pback()`, `std::basic_streambuf<_Elem, _Tr>::in_avail()`, `std::basic_streambuf<_Elem, _Tr>::sbumpc()`, `std::basic_streambuf<_Elem, _Tr>::sgetc()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::showmanyc()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::str()`.

5.40.2.7 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::eptr ( ) const` `[inline]`, `[protected]`, `[inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Definition at line 542 of file `streambuf`.

Referenced by `std::basic_streambuf<_Elem, _Tr>::sputc()`.

5.40.2.8 `template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf<_CharT, _Traits>::gbump ( int __n )` `[inline]`, `[protected]`, `[inherited]`

Moving the read position.

Parameters

|                  |                             |
|------------------|-----------------------------|
| <code>__n</code> | The delta by which to move. |
|------------------|-----------------------------|

This just advances the read position without returning any data.

Definition at line 505 of file `streambuf`.

Referenced by `std::basic_streambuf<_Elem, _Tr>::sbumpc()`, `std::basic_streambuf<_Elem, _Tr>::sputbackc()`, `std::basic_streambuf<_Elem, _Tr>::sungetc()`, and `std::basic_streambuf<_Elem, _Tr>::uflow()`.

5.40.2.9 `template<typename _CharT, typename _Traits = char_traits<_CharT>> locale std::basic_streambuf<_CharT, _Traits>::getloc ( ) const` `[inline]`, `[inherited]`

Locale access.

**Returns**

The current locale in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

Definition at line 233 of file `streambuf`.

Referenced by `std::basic_streambuf<_Elem, _Tr >::pubimbue()`.

```
5.40.2.10 template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<
    _CharT, _Traits >::gptr ( ) const [inline], [protected], [inherited]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 492 of file `streambuf`.

Referenced by `std::basic_filebuf< char_type, traits_type >::M_create_pback()`, `std::basic_filebuf< char_type, traits_type >::M_destroy_pback()`, `std::basic_streambuf< _Elem, _Tr >::in_avail()`, `std::basic_streambuf< _Elem, _Tr >::sbumpc()`, `std::basic_streambuf< _Elem, _Tr >::sgetc()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc()`, `std::basic_streambuf< _Elem, _Tr >::sputbackc()`, `std::basic_streambuf< _Elem, _Tr >::sungetc()`, and `std::basic_streambuf< _Elem, _Tr >::uflow()`.

```
5.40.2.11 template<typename _CharT, typename _Traits = char_traits<_CharT>> virtual void std::basic_streambuf<_CharT,
    _Traits >::imbue ( const locale & __loc __attribute__( _unused_ ) ) [inline], [protected], [virtual],
    [inherited]
```

Changes translations.

**Parameters**

|                    |               |
|--------------------|---------------|
| <code>__loc</code> | A new locale. |
|--------------------|---------------|

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from `streambuf` can safely cache results of calls to locale functions and to members of facets so obtained.*

**Note**

Base class version does nothing.

Definition at line 583 of file `streambuf`.

Referenced by `std::basic_streambuf<_Elem, _Tr >::pubimbue()`.

```
5.40.2.12 template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_streambuf<_CharT,
    _Traits >::in_avail ( ) [inline], [inherited]
```

Looking ahead into the stream.

**Returns**

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

Definition at line 291 of file `streambuf`.

**5.40.2.13** `bool std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::is_open ( ) const throw` `[inline]`, `[inherited]`

Returns true if the external file is open.

Definition at line 260 of file `fstream`.

**5.40.2.14** `__filebuf_type* std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::open ( const char * __s, ios_base::openmode __mode )` `[inherited]`

Opens an external file.

**Parameters**

|                     |                       |
|---------------------|-----------------------|
| <code>__s</code>    | The name of the file. |
| <code>__mode</code> | The open mode flags.  |

**Returns**

`this` on success, NULL on failure

If a file is already open, this function immediately fails. Otherwise it tries to open the file named `__s` using the flags given in `__mode`.

Table 92, adapted here, gives the relation between openmode combinations and the equivalent `fopen()` flags. (NB: lines `app`, `in|out|app`, `in|app`, `binary|app`, `binary|in|out|app`, and `binary|in|app` per DR 596)

| ios_base Flag combination |    |     |       |     | stdio equivalent |
|---------------------------|----|-----|-------|-----|------------------|
| binary                    | in | out | trunc | app |                  |
|                           |    | +   |       |     | w                |
|                           |    | +   |       | +   | a                |
|                           |    |     |       | +   | a                |
|                           |    | +   | +     |     | w                |
|                           | +  |     |       |     | r                |
|                           | +  | +   |       |     | r+               |
|                           | +  | +   | +     |     | w+               |
|                           | +  | +   |       | +   | a+               |
|                           | +  |     |       | +   | a+               |
| +                         |    | +   |       |     | wb               |
| +                         |    | +   |       | +   | ab               |
| +                         |    |     |       | +   | ab               |
| +                         |    | +   | +     |     | wb               |
| +                         | +  |     |       |     | rb               |
| +                         | +  | +   |       |     | r+b              |
| +                         | +  | +   | +     |     | w+b              |
| +                         | +  | +   |       | +   | a+b              |
| +                         | +  |     |       | +   | a+b              |

5.40.2.15 `__filebuf_type* std::basic_filebuf<_CharT, encoding_char_traits<_CharT >>::open ( const std::string & __s, ios_base::openmode __mode ) [inline],[inherited]`

Opens an external file.

## Parameters

|                     |                       |
|---------------------|-----------------------|
| <code>__s</code>    | The name of the file. |
| <code>__mode</code> | The open mode flags.  |

## Returns

`this` on success, NULL on failure

Definition at line 315 of file `fstream`.

5.40.2.16 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::pbase ( ) const` `[inline]`, `[protected]`, `[inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `pptr()` returns the end pointer for the output sequence

Definition at line 536 of file `streambuf`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::str()`.

5.40.2.17 `template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf<_CharT, _Traits>::pbump ( int __n )` `[inline]`, `[protected]`, `[inherited]`

Moving the write position.

## Parameters

|                  |                             |
|------------------|-----------------------------|
| <code>__n</code> | The delta by which to move. |
|------------------|-----------------------------|

This just advances the write position without returning any data.

Definition at line 552 of file `streambuf`.

Referenced by `std::basic_streambuf<_Elem, _Tr>::sputc()`.

5.40.2.18 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::pptr ( ) const` `[inline]`, `[protected]`, `[inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `pptr()` returns the end pointer for the output sequence

Definition at line 539 of file `streambuf`.

Referenced by `std::basic_streambuf<_Elem, _Tr>::sputc()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::str()`.

5.40.2.19 `template<typename _CharT, typename _Traits = char_traits<_CharT>> locale std::basic_streambuf<_CharT, _Traits >::pubimbue ( const locale &__loc ) [inline],[inherited]`

Entry point for imbue().

## Parameters

|                    |                 |
|--------------------|-----------------|
| <code>__loc</code> | The new locale. |
|--------------------|-----------------|

## Returns

The previous locale.

Calls the derived `imbue(__loc)`.

Definition at line 216 of file `streambuf`.

```
5.40.220 template<typename _CharT, typename _Traits = char_traits<_CharT>> pos_type std::basic_streambuf<
    _CharT, _Traits >::pubseekoff ( off_type __off, ios_base::seekdir __way, ios_base::openmode __mode =
    ios_base::in | ios_base::out ) [inline],[inherited]
```

Alters the stream position.

## Parameters

|                     |                                             |
|---------------------|---------------------------------------------|
| <code>__off</code>  | Offset.                                     |
| <code>__way</code>  | Value for <code>ios_base::seekdir</code> .  |
| <code>__mode</code> | Value for <code>ios_base::openmode</code> . |

Calls virtual `seekoff` function.

Definition at line 258 of file `streambuf`.

```
5.40.221 template<typename _CharT, typename _Traits = char_traits<_CharT>> pos_type std::basic_streambuf<_CharT,
    _Traits >::pubseekpos ( pos_type __sp, ios_base::openmode __mode = ios_base::in | ios_base::out )
    [inline],[inherited]
```

Alters the stream position.

## Parameters

|                     |                                             |
|---------------------|---------------------------------------------|
| <code>__sp</code>   | Position                                    |
| <code>__mode</code> | Value for <code>ios_base::openmode</code> . |

Calls virtual `seekpos` function.

Definition at line 270 of file `streambuf`.

```
5.40.222 template<typename _CharT, typename _Traits = char_traits<_CharT>> basic_streambuf*
    std::basic_streambuf<_CharT, _Traits >::pubsetbuf ( char_type * __s, streamsize __n ) [inline],
    [inherited]
```

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 246 of file `streambuf`.

```
5.40.223 template<typename _CharT, typename _Traits = char_traits<_CharT>> int std::basic_streambuf<_CharT, _Traits
    >::pubsync ( ) [inline],[inherited]
```

Calls virtual `sync` function.

Definition at line 278 of file `streambuf`.

Referenced by `std::wbuffer_convert<_Codecvt, _Elem, _Tr >::sync()`, and `std::basic_istream<_CharT, _Traits >::sync()`.

5.40.2.24 `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits >::sbumpc ( ) [inline],[inherited]`

Getting the next character.

#### Returns

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 323 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits >::getline()`, `std::basic_istream<_CharT, _Traits >::ignore()`, `std::istreambuf_iterator<_CharT, _Traits >::operator++()`, and `std::basic_streambuf<_Elem, _Tr >::snextc()`.

5.40.2.25 `virtual pos_type std::basic_filebuf<_CharT, encoding_char_traits<_CharT >>::seekoff ( off_type , ios_base::seekdir , ios_base::openmode = ios_base::in | ios_base::out ) [protected],[virtual],[inherited]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

#### Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from `std::basic_streambuf<_CharT, _Traits >`.

5.40.2.26 `virtual pos_type std::basic_filebuf<_CharT, encoding_char_traits<_CharT >>::seekpos ( pos_type , ios_base::openmode = ios_base::in | ios_base::out ) [protected],[virtual],[inherited]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

#### Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from `std::basic_streambuf<_CharT, _Traits >`.

5.40.2.27 `virtual __streambuf_type* std::basic_filebuf<_CharT, encoding_char_traits<_CharT >>::setbuf ( char_type* __s, streamsize __n ) [protected],[virtual],[inherited]`

Manipulates the buffer.

#### Parameters

|                  |                            |
|------------------|----------------------------|
| <code>__s</code> | Pointer to a buffer area.  |
| <code>__n</code> | Size of <code>__s</code> . |

## Returns

`this`

If no file has been opened, and both `__s` and `__n` are zero, then the stream becomes unbuffered. Otherwise, `__s` is used as a buffer; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html#io.-streambuf.buffering> for more.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

5.40.2.28 `template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf<_CharT, _Traits>::setg ( char_type * __gbeg, char_type * __gnext, char_type * __gend )` `[inline]`, `[protected]`, `[inherited]`

Setting the three read area pointers.

## Parameters

|                      |            |
|----------------------|------------|
| <code>__gbeg</code>  | A pointer. |
| <code>__gnext</code> | A pointer. |
| <code>__gend</code>  | A pointer. |

## Postcondition

`__gbeg == eback()`, `__gnext == gptr()`, and `__gend == egptr()`

Definition at line 516 of file `streambuf`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_create_pback()`, `std::basic_filebuf<char_type, traits_type>::_M_destroy_pback()`, and `std::basic_filebuf<char_type, traits_type>::_M_set_buffer()`.

5.40.2.29 `template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf<_CharT, _Traits>::setp ( char_type * __pbeg, char_type * __pend )` `[inline]`, `[protected]`, `[inherited]`

Setting the three write area pointers.

## Parameters

|                     |            |
|---------------------|------------|
| <code>__pbeg</code> | A pointer. |
| <code>__pend</code> | A pointer. |

## Postcondition

`__pbeg == pbase()`, `__pbeg == pptr()`, and `__pend == epptr()`

Definition at line 562 of file `streambuf`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_set_buffer()`.

5.40.2.30 `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::sgetc ( )` `[inline]`, `[inherited]`

Getting the next character.

**Returns**

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 345 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::istreambuf_iterator<_CharT, _Traits>::operator++()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_streambuf<_Elem, _Tr>::snextc()`.

5.40.2.31 `template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_streambuf<_CharT, _Traits>::sgetn ( char_type * __s, streamsize __n )` `[inline]`, `[inherited]`

Entry point for `xsggetn`.

**Parameters**

|                  |                |
|------------------|----------------|
| <code>__s</code> | A buffer area. |
| <code>__n</code> | A count.       |

Returns `xsggetn(__s, __n)`. The effect is to fill `__s[0]` through `__s[__n-1]` with characters from the input sequence, if possible.

Definition at line 364 of file `streambuf`.

5.40.2.32 `virtual streamsize std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::showmanyc ( )` `[protected]`, `[virtual]`, `[inherited]`

Investigating the data available.

**Returns**

An estimate of the number of characters available in the input sequence, or -1.

*If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail. [27.5.2.4.3]/1*

**Note**

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to `underflow` or `uflow`] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

5.40.2.33 `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::snextc ( )` `[inline]`, `[inherited]`

Getting the next character.

**Returns**

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 305 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

5.40.234 `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::sputback( char_type __c ) [inline], [inherited]`

Pushing characters back into the input stream.

**Parameters**

|                  |                             |
|------------------|-----------------------------|
| <code>__c</code> | The character to push back. |
|------------------|-----------------------------|

**Returns**

The previous character, if possible.

Similar to `sungetc()`, but `__c` is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be `__c`.

Definition at line 379 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::putback()`.

5.40.235 `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::sputc( char_type __c ) [inline], [inherited]`

Entry point for all single-character output functions.

**Parameters**

|                  |                        |
|------------------|------------------------|
| <code>__c</code> | A character to output. |
|------------------|------------------------|

**Returns**

`__c`, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores `__c` in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(-__c)`.

Definition at line 431 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, and `std::ostreambuf_iterator<_CharT, _Traits>::operator=()`.

5.40.236 `template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_streambuf<_CharT, _Traits>::sputn( const char_type * __s, streamsize __n ) [inline], [inherited]`

Entry point for all single-character output functions.

## Parameters

|                  |                     |
|------------------|---------------------|
| <code>__s</code> | A buffer read area. |
| <code>__n</code> | A count.            |

One of two public output functions.

Returns `xsputn(__s,__n)`. The effect is to write `__s[0]` through `__s[__n-1]` to the output sequence, if possible.

Definition at line 457 of file `streambuf`.

```
5.40.2.37 template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT,
    _Traits >::sungetc ( ) [inline],[inherited]
```

Moving backwards in the input stream.

## Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns `pbackfail()`. The effect is to *unget* the last character *gotten*.

Definition at line 404 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits >::ungetc()`.

```
5.40.2.38 virtual int std::basic_filebuf<_CharT, encoding_char_traits<_CharT >>::sync( void ) [protected],
    [virtual],[inherited]
```

Synchronizes the buffer arrays with the controlled sequences.

## Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

## Note

Base class version does nothing, returns zero.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits >](#).

```
5.40.2.39 template<typename _CharT, typename _Traits = char_traits<_CharT>> virtual int_type return
    std::basic_streambuf<_CharT, _Traits >::traits_type::eof ( ) [protected],[virtual],
    [inherited]
```

Tries to back up the input sequence.

## Parameters

|                  |                                                      |
|------------------|------------------------------------------------------|
| <code>__c</code> | The character to be inserted back into the sequence. |
|------------------|------------------------------------------------------|

## Returns

`eof()` on failure, *some other value* on success

**Postcondition**

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

**Note**

Base class version does nothing, returns `eof()`.

**5.40.2.40** `template<typename _CharT, typename _Traits = char_traits<_CharT>> virtual int_type std::basic_streambuf<_CharT, _Traits>::uflow ( )` `[inline]`, `[protected]`, `[virtual]`, `[inherited]`

Fetches more data from the controlled sequence.

**Returns**

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>`.

Definition at line 707 of file `streambuf`.

Referenced by `std::basic_streambuf<_Elem, _Tr>::sbumpc()`.

**5.40.2.41** `virtual int_type std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::underflow ( )` `[protected]`, `[virtual]`, `[inherited]`

Fetches more data from the controlled sequence.

**Returns**

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html>

**Note**

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

**5.40.2.42** `virtual streamsize std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::xsgetn ( char_type * __s, streamsize __n )` `[protected]`, `[virtual]`, `[inherited]`

Multiple character extraction.

## Parameters

|                  |                                         |
|------------------|-----------------------------------------|
| <code>__s</code> | A buffer area.                          |
| <code>__n</code> | Maximum number of characters to assign. |

## Returns

The number of characters assigned.

Fills `__s[0]` through `__s[__n-1]` with characters from the input sequence, as if by `sbumpc()`. Stops when either `__n` characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

**5.40.2.43** virtual streamsize `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::xsputn ( const char_type * __s, streamsize __n )` [protected], [virtual], [inherited]

Multiple character insertion.

## Parameters

|                  |                                        |
|------------------|----------------------------------------|
| <code>__s</code> | A buffer area.                         |
| <code>__n</code> | Maximum number of characters to write. |

## Returns

The number of characters written.

Writes `__s[0]` through `__s[__n-1]` to the output sequence, as if by `sputc()`. Stops when either `n` characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

## 5.40.3 Member Data Documentation

**5.40.3.1** `char_type* std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::_M_buf` [protected], [inherited]

Pointer to the beginning of internal buffer.

Definition at line 136 of file `fstream`.

**5.40.3.2** `template<typename _CharT, typename _Traits = char_traits<_CharT>> locale std::basic_streambuf<_CharT, _Traits>::_M_buf_locale` [protected], [inherited]

Current locale setting.

Definition at line 199 of file `streambuf`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::basic_filebuf()`, `std::basic_streambuf<_Elem, _Tr>::getloc()`, and `std::basic_streambuf<_Elem, _Tr>::pubimbue()`.

5.40.3.3 `size_t std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::_M_buf_size` [protected], [inherited]

Actual size of internal buffer. This number is equal to the size of the put area + 1 position, reserved for the overflow char of a full area.

Definition at line 143 of file `fstream`.

5.40.3.4 `char* std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::_M_ext_buf` [protected], [inherited]

Buffer for external characters. Used for input when `codecvt::always_noconv() == false`. When valid, this corresponds to `eback()`.

Definition at line 178 of file `fstream`.

5.40.3.5 `streamsize std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::_M_ext_buf_size` [protected], [inherited]

Size of buffer held by `_M_ext_buf`.

Definition at line 183 of file `fstream`.

5.40.3.6 `const char* std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::_M_ext_next` [protected], [inherited]

Pointers into the buffer held by `_M_ext_buf` that delimit a subsequence of bytes that have been read but not yet converted. When valid, `_M_ext_next` corresponds to `egptr()`.

Definition at line 190 of file `fstream`.

5.40.3.7 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::_M_in_beg` [protected], [inherited]

Start of get area.

Definition at line 191 of file `streambuf`.

Referenced by `std::basic_streambuf<_Elem, _Tr>::eback()`, and `std::basic_streambuf<_Elem, _Tr>::setg()`.

5.40.3.8 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::_M_in_cur` [protected], [inherited]

Current read area.

Definition at line 192 of file `streambuf`.

Referenced by `std::basic_streambuf<_Elem, _Tr>::gbump()`, `std::basic_streambuf<_Elem, _Tr>::gptr()`, and `std::basic_streambuf<_Elem, _Tr>::setg()`.

5.40.3.9 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::_M_in_end` [protected], [inherited]

End of get area.

Definition at line 193 of file `streambuf`.

Referenced by `std::basic_streambuf<_Elem, _Tr>::egptr()`, and `std::basic_streambuf<_Elem, _Tr>::setg()`.

**5.40.3.10** `ios_base::openmode std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::_M_mode`  
`[protected], [inherited]`

Place to stash in || out || in | out settings for current filebuf.

Definition at line 121 of file fstream.

**5.40.3.11** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<`  
`_CharT, _Traits>::_M_out_beg` `[protected], [inherited]`

Start of put area.

Definition at line 194 of file streambuf.

Referenced by `std::basic_streambuf<_Elem, _Tr>::pbase()`, and `std::basic_streambuf<_Elem, _Tr>::setp()`.

**5.40.3.12** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<`  
`_CharT, _Traits>::_M_out_cur` `[protected], [inherited]`

Current put area.

Definition at line 195 of file streambuf.

Referenced by `std::basic_streambuf<_Elem, _Tr>::pbump()`, `std::basic_streambuf<_Elem, _Tr>::pptr()`, and `std::basic_streambuf<_Elem, _Tr>::setp()`.

**5.40.3.13** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<`  
`_CharT, _Traits>::_M_out_end` `[protected], [inherited]`

End of put area.

Definition at line 196 of file streambuf.

Referenced by `std::basic_streambuf<_Elem, _Tr>::pptr()`, and `std::basic_streambuf<_Elem, _Tr>::setp()`.

**5.40.3.14** `char_type std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::_M_pback` `[protected],`  
`[inherited]`

Necessary bits for putback buffer management.

**Note**

pbacks of over one character are not currently supported.

Definition at line 164 of file fstream.

**5.40.3.15** `char_type* std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::_M_pback_cur_save`  
`[protected], [inherited]`

Necessary bits for putback buffer management.

**Note**

pbacks of over one character are not currently supported.

Definition at line 165 of file fstream.

**5.40.3.16** `char_type* std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::_M_pback_end_save`  
`[protected], [inherited]`

Necessary bits for putback buffer management.

## Note

pbacks of over one character are not currently supported.

Definition at line 166 of file `fstream`.

5.40.3.17 `bool std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::_M_pback_init` [protected],  
[inherited]

Necessary bits for putback buffer management.

## Note

pbacks of over one character are not currently supported.

Definition at line 167 of file `fstream`.

5.40.3.18 `bool std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>::_M_reading` [protected],  
[inherited]

`_M_reading == false && _M_writing == false` for **uncommitted** mode; `_M_reading == true` for **read** mode; `_M_writing == true` for **write** mode;

NB: `_M_reading == true && _M_writing == true` is unused.

Definition at line 155 of file `fstream`.

The documentation for this class was generated from the following file:

- [enc\\_filebuf.h](#)

5.41 `__gnu_cxx::encoding_char_traits<_CharT>` Struct Template Reference

Inheritance diagram for `__gnu_cxx::encoding_char_traits<_CharT>`:

## Public Types

- typedef `_CharT` **char\_type**

#### 5.42.1 Detailed Description

Extension to use `iconv` for dealing with character encodings.

Definition at line 51 of file `codecv_t_specializations.h`.

The documentation for this class was generated from the following file:

- [codecv\\_t\\_specializations.h](#)

### 5.43 `__gnu_cxx::forced_error` Struct Reference

Inheritance diagram for `__gnu_cxx::forced_error`:

#### Public Member Functions

- virtual const char \* [what](#) () const `_GLIBCXX_TXN_SAFE_DYN` noexcept

#### 5.43.1 Detailed Description

Thrown by exception safety machinery.

Definition at line 74 of file `throw_allocator.h`.

The documentation for this struct was generated from the following file:

- [throw\\_allocator.h](#)

### 5.44 `__gnu_cxx::free_list` Class Reference

Inheritance diagram for `__gnu_cxx::free_list`:

## Public Types

- typedef `__mutex` `__mutex_type`
- typedef `vector_type::iterator` `iterator`
- typedef `size_t *` `value_type`
- typedef  
`__detail::__mini_vector`  
`< value_type >` `vector_type`

## Public Member Functions

- void `_M_clear` ()
- `size_t *` `_M_get` (`size_t __sz`)
- void `_M_insert` (`size_t *__addr`) throw ()

## 5.44.1 Detailed Description

The free list class for managing chunks of memory to be given to and returned by the `bitmap_allocator`.  
 Definition at line 518 of file `bitmap_allocator.h`.

## 5.44.2 Member Function Documentation

5.44.2.1 void `__gnu_cxx::free_list::_M_clear` ( )

This function just clears the internal Free List, and gives back all the memory to the OS.

5.44.2.2 `size_t *` `__gnu_cxx::free_list::_M_get` ( `size_t __sz` )

This function gets a block of memory of the specified size from the free list.

## Parameters

|                   |                                           |
|-------------------|-------------------------------------------|
| <code>__sz</code> | The size in bytes of the memory required. |
|-------------------|-------------------------------------------|

## Returns

A pointer to the new memory block of size at least equal to that requested.

5.44.2.3 void `__gnu_cxx::free_list::_M_insert` ( `size_t *__addr` ) throw () [inline]

This function returns the block of memory to the internal free list.

## Parameters

|                     |                                                                                               |
|---------------------|-----------------------------------------------------------------------------------------------|
| <code>__addr</code> | The pointer to the memory block that was given by a call to the <code>_M_get</code> function. |
|---------------------|-----------------------------------------------------------------------------------------------|

void **destroy** (`_Up` \*`__p`)
- `size_type` **max\_size** () const noexcept
- return **static\_cast** (::operator new(`__n` \*sizeof(`_Tp`)))

## Public Attributes

- **pointer**

### 5.54.1 Detailed Description

```
template<typename _Tp>class __gnu_cxx::new_allocator< _Tp >
```

An allocator that uses global new, as per [20.4].

This is precisely the allocator defined in the C++ Standard.

- all allocation calls operator new
- all deallocation calls operator delete

#### Template Parameters

|                  |                           |
|------------------|---------------------------|
| <code>_Tp</code> | Type of allocated object. |
|------------------|---------------------------|

Definition at line 58 of file new\_allocator.h.

The documentation for this class was generated from the following file:

- [new\\_allocator.h](#)

## 5.55 \_\_gnu\_cxx::project1st< \_Arg1, \_Arg2 > Struct Template Reference

Inherits `__gnu_cxx::Project1st< _Arg1, _Arg2 >`.

#### Public Types

- typedef `_Arg1` [first\\_argument\\_type](#)
- typedef `_Result` [result\\_type](#)
- typedef `_Arg2` [second\\_argument\\_type](#)

### Public Member Functions

- `_Arg2` **operator()** (const `_Arg1` &, const `_Arg2` &\_\_y) const

### 5.56.1 Detailed Description

`template<class _Arg1, class _Arg2>struct __gnu_cxx::project2nd<_Arg1, _Arg2 >`

An [SGI extension](#) .

Definition at line 241 of file `ext/functional`.

### 5.56.2 Member Typedef Documentation

5.56.2.1 `template<typename _Arg1, typename _Arg2, typename _Result> typedef _Arg1 std::binary_function<_Arg1, _Arg2, _Result >::first_argument_type` [inherited]

`first_argument_type` is the type of the first argument

Definition at line 121 of file `stl_function.h`.

5.56.2.2 `template<typename _Arg1, typename _Arg2, typename _Result> typedef _Result std::binary_function<_Arg1, _Arg2, _Result >::result_type` [inherited]

`result_type` is the return type

Definition at line 127 of file `stl_function.h`.

5.56.2.3 `template<typename _Arg1, typename _Arg2, typename _Result> typedef _Arg2 std::binary_function< _Arg1, _Arg2, _Result >::second_argument_type` [inherited]

`second_argument_type` is the type of the second argument

Definition at line 124 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [ext/functional](#)

## 5.57 `__gnu_cxx::random_condition` Struct Reference

Inheritance diagram for `__gnu_cxx::random_condition`:

### Classes

- struct [always\\_adjustor](#)
- struct [group\\_adjustor](#)
- struct [never\\_adjustor](#)

### Public Member Functions

- void **seed** (unsigned long \_\_s)

### Static Public Member Functions

- static void **set\_probability** (double \_\_p)
- static void **throw\_conditionally** ()

#### 5.57.1 Detailed Description

Base class for random probability control and throw.

Definition at line 484 of file `throw_allocator.h`.

The documentation for this struct was generated from the following file:

- [throw\\_allocator.h](#)

## 5.58 `__gnu_cxx::random_condition::always_adjustor` Struct Reference

Inherits `__gnu_cxx::random_condition::adjustor_base`.

### 5.58.1 Detailed Description

Always enter the condition.

Definition at line 517 of file `throw_allocator.h`.

The documentation for this struct was generated from the following file:

- [throw\\_allocator.h](#)

## 5.59 `__gnu_cxx::random_condition::group_adjustor` Struct Reference

Inherits `__gnu_cxx::random_condition::adjustor_base`.

### Public Member Functions

- **group\_adjustor** (size\_t size)

### 5.59.1 Detailed Description

Group condition.

Definition at line 502 of file `throw_allocator.h`.

The documentation for this struct was generated from the following file:

## 5.62 `__gnu_cxx::recursive_init_error` Class Reference

Inheritance diagram for `__gnu_cxx::recursive_init_error`:

### Public Member Functions

- virtual const char \* [what](#) () const \_GLIBCXX\_TXN\_SAFE\_DYN noexcept

#### 5.62.1 Detailed Description

Exception thrown by `__cxa_guard_acquire`.

6.7[stmt.dcl]/4: If control re-enters the declaration (recursively) while the object is being initialized, the behavior is undefined.

Since we already have a library function to handle locking, we might as well check for this situation and throw an exception. We use the second byte of the guard variable to remember that we're in the middle of an initialization.

Definition at line 694 of file cxxabi.h.

The documentation for this class was generated from the following file:

### 5.67.1 Detailed Description

`template<typename _CharT, typename _Traits = std::char_traits<_CharT>> class __gnu_cxx::stdio_filebuf<_CharT, _Traits >`

Provides a layer of compatibility for C/POSIX.

This GNU extension provides extensions for working with standard C FILE\*'s and POSIX file descriptors. It must be instantiated by the user with the type of character used in the file stream, e.g., `stdio_filebuf<char>`.

Definition at line 50 of file `stdio_filebuf.h`.

### 5.67.2 Constructor & Destructor Documentation

5.67.2.1 `template<typename _CharT, typename _Traits = std::char_traits<_CharT>> __gnu_cxx::stdio_filebuf<_CharT, _Traits >::stdio_filebuf( )` `[inline]`

deferred initialization

Definition at line 65 of file `stdio_filebuf.h`.

5.67.2.2 `template<typename _CharT, typename _Traits > __gnu_cxx::stdio_filebuf<_CharT, _Traits >::stdio_filebuf( int __fd, std::ios_base::openmode __mode, size_t __size = static_cast<size_t>(BUFSIZ) )`

Parameters

|                   |                          |
|-------------------|--------------------------|
| <code>__fd</code> | An open file descriptor. |
|-------------------|--------------------------|

|                     |                                                         |
|---------------------|---------------------------------------------------------|
| <code>__mode</code> | Same meaning as in a standard filebuf.                  |
| <code>__size</code> | Optimal or preferred size of internal buffer, in chars. |

This constructor associates a file stream buffer with an open POSIX file descriptor. The file descriptor will be automatically closed when the `stdio_filebuf` is closed/destroyed.

Definition at line 137 of file `stdio_filebuf.h`.

```
5.67.2.3 template<typename _CharT, typename _Traits > __gnu_cxx::stdio_filebuf< _CharT, _Traits >::stdio_filebuf (
    std::_c_file * __f, std::ios_base::openmode __mode, size_t __size = static_cast<size_t>(BUFSIZ)
) )
```

#### Parameters

|                     |                                                                                                    |
|---------------------|----------------------------------------------------------------------------------------------------|
| <code>__f</code>    | An open <code>FILE*</code> .                                                                       |
| <code>__mode</code> | Same meaning as in a standard filebuf.                                                             |
| <code>__size</code> | Optimal or preferred size of internal buffer, in chars. Defaults to system's <code>BUFSIZ</code> . |

This constructor associates a file stream buffer with an open C `FILE*`. The `FILE*` will not be automatically closed when the `stdio_filebuf` is closed/destroyed.

Definition at line 153 of file `stdio_filebuf.h`.

```
5.67.2.4 template<typename _CharT, typename _Traits > __gnu_cxx::stdio_filebuf< _CharT, _Traits >::~~stdio_filebuf ( )
    [virtual]
```

Closes the external data stream if the file descriptor constructor was used.

Definition at line 132 of file `stdio_filebuf.h`.

### 5.67.3 Member Function Documentation

```
5.67.3.1 template<typename _CharT, typename _Traits> void std::basic_filebuf< _CharT, _Traits >::_M_create_pback ( )
    [inline], [protected], [inherited]
```

Initializes pback buffers, and moves normal buffers to safety. Assumptions: `_M_in_cur` has already been moved back

Definition at line 199 of file `fstream`.

```
5.67.3.2 template<typename _CharT, typename _Traits> void std::basic_filebuf< _CharT, _Traits >::_M_destroy_pback ( )
    throw) [inline], [protected], [inherited]
```

Deactivates pback buffer contents, and restores normal buffer. Assumptions: The pback buffer has only moved forward.

Definition at line 216 of file `fstream`.

```
5.67.3.3 template<typename _CharT, typename _Traits> void std::basic_filebuf< _CharT, _Traits >::_M_set_buffer (
    streamsize __off) [inline], [protected], [inherited]
```

This function sets the pointers of the internal buffer, both get and put areas. Typically:

`__off == egptr() - eback()` upon underflow/uflow (**read** mode); `__off == 0` upon overflow (**write** mode); `__off == -1` upon open, setbuf, seekoff/pos (**uncommitted** mode).

NB: `epptr() - pbase() == _M_buf_size - 1`, since `_M_buf_size` reflects the actual allocated memory and the last cell is reserved for the overflow char of a full put area.

Definition at line 443 of file `fstream`.

5.67.3.4 `template<typename _CharT, typename _Traits> basic_filebuf<_CharT, _Traits>::__filebuf_type * std::basic_filebuf<_CharT, _Traits>::close ( )` [inherited]

Closes the currently associated file.

#### Returns

`this` on success, NULL on failure

If no file is currently open, this function immediately fails.

If a *put buffer area* exists, `overflow(eof)` is called to flush all the characters. The file is then closed.

If any operations fail, this function also fails.

Definition at line 213 of file `fstream.tcc`.

Referenced by `std::basic_ifstream<_CharT, _Traits>::close()`, `std::basic_ofstream<_CharT, _Traits>::close()`, `std::basic_fstream<_CharT, _Traits>::close()`, and `std::basic_filebuf<char_type, traits_type>::~~basic_filebuf()`.

5.67.3.5 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::eback ( ) const` [inline], [protected], [inherited]

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 489 of file `streambuf`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_destroy_pback()`, `std::basic_streambuf<_Elem, _Tr>::sputbackc()`, and `std::basic_streambuf<_Elem, _Tr>::sungetc()`.

5.67.3.6 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::egptr ( ) const` [inline], [protected], [inherited]

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 495 of file `streambuf`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_create_pback()`, `std::basic_streambuf<_Elem, _Tr>::in_avail()`, `std::basic_streambuf<_Elem, _Tr>::sbumpc()`, `std::basic_streambuf<_Elem, _Tr>::sgetc()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::showmanyc()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::str()`.

5.67.3.7 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::eptr( ) const` `[inline], [protected], [inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `eptr()` returns the end pointer for the output sequence

Definition at line 542 of file `streambuf`.

Referenced by `std::basic_streambuf<_Elem, _Tr>::sputc()`.

5.67.3.8 `template<typename _CharT, typename _Traits = std::char_traits<_CharT>> int __gnu_cxx::stdio_filebuf<_CharT, _Traits>::fd( )` `[inline]`

Returns

The underlying file descriptor.

Once associated with an external data stream, this function can be used to access the underlying POSIX file descriptor. Note that there is no way for the library to track what you do with the descriptor, so be careful.

Definition at line 118 of file `stdio_filebuf.h`.

5.67.3.9 `template<typename _CharT, typename _Traits = std::char_traits<_CharT>> std::_c_file* __gnu_cxx::stdio_filebuf<_CharT, _Traits>::file( )` `[inline]`

Returns

The underlying `FILE*`.

This function can be used to access the underlying "C" file pointer. Note that there is no way for the library to track what you do with the file, so be careful.

Definition at line 128 of file `stdio_filebuf.h`.

5.67.3.10 `template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf<_CharT, _Traits>::gbump( int __n )` `[inline], [protected], [inherited]`

Moving the read position.

Parameters

|                  |                             |
|------------------|-----------------------------|
| <code>__n</code> | The delta by which to move. |
|------------------|-----------------------------|

This just advances the read position without returning any data.

Definition at line 505 of file `streambuf`.

Referenced by `std::basic_streambuf<_Elem, _Tr>::sbumpc()`, `std::basic_streambuf<_Elem, _Tr>::sputbackc()`, `std::basic_streambuf<_Elem, _Tr>::sungetc()`, and `std::basic_streambuf<_Elem, _Tr>::uflow()`.

5.67.3.11 `template<typename _CharT, typename _Traits = char_traits<_CharT>> locale std::basic_streambuf<_CharT, _Traits>::getloc( ) const` `[inline], [inherited]`

Locale access.

**Returns**

The current locale in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

Definition at line 233 of file `streambuf`.

Referenced by `std::basic_streambuf<_Elem, _Tr>::pubimbue()`.

5.67.3.12 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::gptr ( ) const` `[inline], [protected], [inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 492 of file `streambuf`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_create_pback()`, `std::basic_filebuf<char_type, traits_type>::_M_destroy_pback()`, `std::basic_streambuf<_Elem, _Tr>::in_avail()`, `std::basic_streambuf<_Elem, _Tr>::sbumpc()`, `std::basic_streambuf<_Elem, _Tr>::sgetc()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::showmanyc()`, `std::basic_streambuf<_Elem, _Tr>::sputbackc()`, `std::basic_streambuf<_Elem, _Tr>::sungetc()`, and `std::basic_streambuf<_Elem, _Tr>::uflow()`.

5.67.3.13 `template<typename _CharT, typename _Traits = char_traits<_CharT>> virtual void std::basic_streambuf<_CharT, _Traits>::imbue ( const locale &__loc __attribute__((unused)) )` `[inline], [protected], [virtual], [inherited]`

Changes translations.

**Parameters**

|                    |               |
|--------------------|---------------|
| <code>__loc</code> | A new locale. |
|--------------------|---------------|

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from `streambuf` can safely cache results of calls to locale functions and to members of facets so obtained.*

**Note**

Base class version does nothing.

Definition at line 583 of file `streambuf`.

Referenced by `std::basic_streambuf<_Elem, _Tr>::pubimbue()`.

5.67.3.14 `template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_streambuf<_CharT, _Traits>::in_avail ( )` `[inline], [inherited]`

Looking ahead into the stream.

**Returns**

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

Definition at line 291 of file `streambuf`.

```
5.67.3.15 template<typename _CharT, typename _Traits> bool std::basic_filebuf<_CharT, _Traits>::is_open ( ) const throw
) [inline],[inherited]
```

Returns true if the external file is open.

Definition at line 260 of file `fstream`.

Referenced by `std::basic_ifstream<_CharT, _Traits>::is_open()`, `std::basic_ofstream<_CharT, _Traits>::is_open()`, and `std::basic_fstream<_CharT, _Traits>::is_open()`.

```
5.67.3.16 template<typename _CharT, typename _Traits > basic_filebuf<_CharT, _Traits>::__filebuf_type *
std::basic_filebuf<_CharT, _Traits>::open ( const char * __s, ios_base::openmode __mode )
[inherited]
```

Opens an external file.

**Parameters**

|                     |                       |
|---------------------|-----------------------|
| <code>__s</code>    | The name of the file. |
| <code>__mode</code> | The open mode flags.  |

**Returns**

`this` on success, NULL on failure

If a file is already open, this function immediately fails. Otherwise it tries to open the file named `__s` using the flags given in `__mode`.

Table 92, adapted here, gives the relation between openmode combinations and the equivalent `fopen()` flags. (NB: lines `app`, `in|out|app`, `in|app`, `binary|app`, `binary|in|out|app`, and `binary|in|app` per DR 596)

| ios_base Flag combination |    |     |       |     | stdio equivalent |
|---------------------------|----|-----|-------|-----|------------------|
| binary                    | in | out | trunc | app |                  |
|                           |    | +   |       |     | w                |
|                           |    | +   |       | +   | a                |
|                           |    |     |       | +   | a                |
|                           |    | +   | +     |     | w                |
|                           | +  |     |       |     | r                |
|                           | +  | +   |       |     | r+               |
|                           | +  | +   | +     |     | w+               |
|                           | +  | +   |       | +   | a+               |
|                           | +  |     |       | +   | a+               |
| +                         |    | +   |       |     | wb               |
| +                         |    | +   |       | +   | ab               |
| +                         |    |     |       | +   | ab               |
| +                         |    | +   | +     |     | wb               |
| +                         | +  |     |       |     | rb               |
| +                         | +  | +   |       |     | r+b              |

```

| + + + + w+b |
| + + + + a+b |
| + + + a+b |
+-----+

```

Definition at line 179 of file `fstream.tcc`.

References `std::ios_base::ate`, `std::ios_base::end`, and `std::basic_filebuf<_CharT, _Traits >::open()`.

Referenced by `std::basic_filebuf<_CharT, _Traits >::open()`, `std::basic_filebuf<char_type, traits_type >::open()`, `std::basic_ifstream<_CharT, _Traits >::open()`, `std::basic_ofstream<_CharT, _Traits >::open()`, and `std::basic_fstream<_CharT, _Traits >::open()`.

**5.67.3.17** `template<typename _CharT, typename _Traits> __filebuf_type* std::basic_filebuf<_CharT, _Traits >::open ( const std::string & __s, ios_base::openmode __mode ) [inline], [inherited]`

Opens an external file.

Parameters

|                     |                       |
|---------------------|-----------------------|
| <code>__s</code>    | The name of the file. |
| <code>__mode</code> | The open mode flags.  |

Returns

`this` on success, `NULL` on failure

Definition at line 315 of file `fstream`.

**5.67.3.18** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits >::pbase ( ) const [inline], [protected], [inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `eptr()` returns the end pointer for the output sequence

Definition at line 536 of file `streambuf`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc >::str()`.

**5.67.3.19** `template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf<_CharT, _Traits >::pbump ( int __n ) [inline], [protected], [inherited]`

Moving the write position.

Parameters

|                  |                             |
|------------------|-----------------------------|
| <code>__n</code> | The delta by which to move. |
|------------------|-----------------------------|

This just advances the write position without returning any data.

Definition at line 552 of file `streambuf`.

Referenced by `std::basic_streambuf<_Elem, _Tr >::sputc()`.

5.67.3.20 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits >::pptr( ) const` `[inline], [protected], [inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `eptr()` returns the end pointer for the output sequence

Definition at line 539 of file `streambuf`.

Referenced by `std::basic_streambuf<_Elem, _Tr >::sputc()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc >::str()`.

5.67.3.21 `template<typename _CharT, typename _Traits = char_traits<_CharT>> locale std::basic_streambuf<_CharT, _Traits >::pubimbue( const locale &__loc )` `[inline], [inherited]`

Entry point for `imbue()`.

Parameters

|                    |                 |
|--------------------|-----------------|
| <code>__loc</code> | The new locale. |
|--------------------|-----------------|

Returns

The previous locale.

Calls the derived `imbue(__loc)`.

Definition at line 216 of file `streambuf`.

5.67.3.22 `template<typename _CharT, typename _Traits = char_traits<_CharT>> pos_type std::basic_streambuf<_CharT, _Traits >::pubseekoff( off_type __off, ios_base::seekdir __way, ios_base::openmode __mode = ios_base::in | ios_base::out )` `[inline], [inherited]`

Alters the stream position.

Parameters

|                     |                                             |
|---------------------|---------------------------------------------|
| <code>__off</code>  | Offset.                                     |
| <code>__way</code>  | Value for <code>ios_base::seekdir</code> .  |
| <code>__mode</code> | Value for <code>ios_base::openmode</code> . |

Calls virtual `seekoff` function.

Definition at line 258 of file `streambuf`.

5.67.3.23 `template<typename _CharT, typename _Traits = char_traits<_CharT>> pos_type std::basic_streambuf<_CharT, _Traits >::pubseekpos( pos_type __sp, ios_base::openmode __mode = ios_base::in | ios_base::out )` `[inline], [inherited]`

Alters the stream position.

## Parameters

|                     |                                             |
|---------------------|---------------------------------------------|
| <code>__sp</code>   | Position                                    |
| <code>__mode</code> | Value for <code>ios_base::openmode</code> . |

Calls virtual `seekpos` function.

Definition at line 270 of file `streambuf`.

```
5.67.3.24 template<typename _CharT, typename _Traits = char_traits<_CharT>> basic_streambuf*
      std::basic_streambuf<_CharT, _Traits>::pubsetbuf( char_type * __s, streamsize __n ) [inline],
      [inherited]
```

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 246 of file `streambuf`.

```
5.67.3.25 template<typename _CharT, typename _Traits = char_traits<_CharT>> int std::basic_streambuf<_CharT, _Traits>::pubsync( ) [inline], [inherited]
```

Calls virtual `sync` function.

Definition at line 278 of file `streambuf`.

Referenced by `std::wbuffer_convert<_Codecvt, _Elem, _Tr>::sync()`, and `std::basic_istream<_CharT, _Traits>::sync()`.

```
5.67.3.26 template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::sbumpc( ) [inline], [inherited]
```

Getting the next character.

## Returns

The next character, or `eof`.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 323 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::istreambuf_iterator<_CharT, _Traits>::operator++()`, and `std::basic_streambuf<_Elem, _Tr>::snextc()`.

```
5.67.3.27 template<typename _CharT, typename _Traits> basic_filebuf<_CharT, _Traits>::pos_type
      std::basic_filebuf<_CharT, _Traits>::seekoff( off_type, ios_base::seekdir, ios_base::openmode =
      ios_base::in | ios_base::out ) [protected], [virtual], [inherited]
```

Alters the stream positions.

Each derived class provides its own appropriate behavior.

## Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Definition at line 798 of file `fstream.tcc`.

References `std::ios_base::cur`.

```
5.67.3.28 template<typename _CharT, typename _Traits > basic_filebuf< _CharT, _Traits >::pos_type std::basic_filebuf<
    _CharT, _Traits >::seekpos ( pos_type, ios_base::openmode = ios_base::in | ios_base::out )
    [protected], [virtual], [inherited]
```

Alters the stream positions.

Each derived class provides its own appropriate behavior.

#### Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

Definition at line 858 of file `fstream.tcc`.

References `std::ios_base::beg`.

```
5.67.3.29 template<typename _CharT, typename _Traits > basic_filebuf< _CharT, _Traits >::__streambuf_type *
    std::basic_filebuf< _CharT, _Traits >::setbuf ( char_type * __s, streamsize __n ) [protected],
    [virtual], [inherited]
```

Manipulates the buffer.

#### Parameters

|                  |                            |
|------------------|----------------------------|
| <code>__s</code> | Pointer to a buffer area.  |
| <code>__n</code> | Size of <code>__s</code> . |

#### Returns

`this`

If no file has been opened, and both `__s` and `__n` are zero, then the stream becomes unbuffered. Otherwise, `__s` is used as a buffer; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html#io.-streambuf.buffering> for more.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

Definition at line 769 of file `fstream.tcc`.

```
5.67.3.30 template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf< _CharT, _Traits
    >::setg ( char_type * __gbeg, char_type * __gnext, char_type * __gend ) [inline], [protected],
    [inherited]
```

Setting the three read area pointers.

#### Parameters

|                      |            |
|----------------------|------------|
| <code>__gbeg</code>  | A pointer. |
| <code>__gnext</code> | A pointer. |
| <code>__gend</code>  | A pointer. |

## Postcondition

`__gbeg == eback()`, `__gnext == gptr()`, and `__gend == egptr()`

Definition at line 516 of file `streambuf`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_create_pback()`, `std::basic_filebuf<char_type, traits_type>::_M_destroy_pback()`, and `std::basic_filebuf<char_type, traits_type>::_M_set_buffer()`.

**5.67.3.31** `template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf<_CharT, _Traits>::setp( char_type * __pbeg, char_type * __pend )` `[inline]`, `[protected]`, `[inherited]`

Setting the three write area pointers.

## Parameters

|                     |            |
|---------------------|------------|
| <code>__pbeg</code> | A pointer. |
| <code>__pend</code> | A pointer. |

## Postcondition

`__pbeg == pbase()`, `__pbeg == pptr()`, and `__pend == epptr()`

Definition at line 562 of file `streambuf`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_set_buffer()`.

**5.67.3.32** `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::sgetc( )` `[inline]`, `[inherited]`

Getting the next character.

## Returns

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 345 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::istreambuf_iterator<_CharT, _Traits>::operator++()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_streambuf<_Elem, _Tr>::snextc()`.

**5.67.3.33** `template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_streambuf<_CharT, _Traits>::sgetn( char_type * __s, streamsize __n )` `[inline]`, `[inherited]`

Entry point for `xsggetn`.

## Parameters

|                  |                |
|------------------|----------------|
| <code>__s</code> | A buffer area. |
| <code>__n</code> | A count.       |

Returns `xsggetn(__s, __n)`. The effect is to fill `__s[0]` through `__s[__n-1]` with characters from the input sequence, if possible.

Definition at line 364 of file `streambuf`.

5.67.3.34 `template<typename _CharT, typename _Traits > streamsize std::basic_filebuf< _CharT, _Traits >::showmanyc ( )`  
`[protected], [virtual], [inherited]`

Investigating the data available.

#### Returns

An estimate of the number of characters available in the input sequence, or -1.

*If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail.* [27.5.2.4.3]/1

#### Note

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to `underflow` or `uflow`] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

Definition at line 263 of file `fstream.tcc`.

References `std::ios_base::binary`, and `std::ios_base::in`.

5.67.3.35 `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf< _CharT, _Traits >::snextc ( )` `[inline], [inherited]`

Getting the next character.

#### Returns

The next character, or `eof`.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 305 of file `streambuf`.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

5.67.3.36 `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf< _CharT, _Traits >::sputbackc ( char_type __c )` `[inline], [inherited]`

Pushing characters back into the input stream.

#### Parameters

|                  |                             |
|------------------|-----------------------------|
| <code>__c</code> | The character to push back. |
|------------------|-----------------------------|

#### Returns

The previous character, if possible.

Similar to `sungetc()`, but `__c` is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be `__c`.

Definition at line 379 of file `streambuf`.

Referenced by `std::basic_istream< _CharT, _Traits >::putback()`.

5.67.3.37 `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits >::sputc ( char_type __c ) [inline], [inherited]`

Entry point for all single-character output functions.

## Parameters

|                  |                        |
|------------------|------------------------|
| <code>__c</code> | A character to output. |
|------------------|------------------------|

## Returns

`__c`, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores `__c` in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(-__c)`.

Definition at line 431 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, and `std::ostreambuf_iterator<_CharT, _Traits>::operator=()`.

**5.67.3.38** `template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_streambuf<_CharT, _Traits>::sputn ( const char_type * __s, streamsize __n ) [inline], [inherited]`

Entry point for all single-character output functions.

## Parameters

|                  |                     |
|------------------|---------------------|
| <code>__s</code> | A buffer read area. |
| <code>__n</code> | A count.            |

One of two public output functions.

Returns `xsputn(__s, __n)`. The effect is to write `__s[0]` through `__s[__n-1]` to the output sequence, if possible.

Definition at line 457 of file `streambuf`.

**5.67.3.39** `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::sungetc ( ) [inline], [inherited]`

Moving backwards in the input stream.

## Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns `pbackfail()`. The effect is to *unget* the last character *gotten*.

Definition at line 404 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::ungetc()`.

**5.67.3.40** `template<typename _CharT, typename _Traits> int std::basic_filebuf<_CharT, _Traits>::sync ( ) [protected], [virtual], [inherited]`

Synchronizes the buffer arrays with the controlled sequences.

## Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

**Note**

Base class version does nothing, returns zero.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 978 of file `fstream.tcc`.

```
5.67.3.41 template<typename _CharT, typename _Traits = char_traits<_CharT>> virtual int_type return
        std::basic_streambuf<_CharT, _Traits>::traits_type::eof ( ) [protected], [virtual],
        [inherited]
```

Tries to back up the input sequence.

**Parameters**

|                  |                                                      |
|------------------|------------------------------------------------------|
| <code>__c</code> | The character to be inserted back into the sequence. |
|------------------|------------------------------------------------------|

**Returns**

`eof()` on failure, *some other value* on success

**Postcondition**

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

**Note**

Base class version does nothing, returns `eof()`.

```
5.67.3.42 template<typename _CharT, typename _Traits = char_traits<_CharT>> virtual int_type std::basic_streambuf<
        _CharT, _Traits>::uflow ( ) [inline], [protected], [virtual], [inherited]
```

Fetches more data from the controlled sequence.

**Returns**

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>`.

Definition at line 707 of file `streambuf`.

Referenced by `std::basic_streambuf<_Elem, _Tr>::sbumpc()`.

```
5.67.3.43 template<typename _CharT, typename _Traits> basic_filebuf<_CharT, _Traits>::int_type std::basic_filebuf<
        _CharT, _Traits>::underflow ( ) [protected], [virtual], [inherited]
```

Fetches more data from the controlled sequence.

**Returns**

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html>

**Note**

Base class version does nothing, returns `eof()`.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Definition at line 289 of file `fstream.tcc`.

References `std::ios_base::in`, and `std::min()`.

5.67.3.44 `template<typename _CharT, typename _Traits > streamsize std::basic_filebuf<_CharT, _Traits >::xsgetn ( char_type * __s, streamsize __n )` [protected], [virtual], [inherited]

Multiple character extraction.

**Parameters**

|                  |                                         |
|------------------|-----------------------------------------|
| <code>__s</code> | A buffer area.                          |
| <code>__n</code> | Maximum number of characters to assign. |

**Returns**

The number of characters assigned.

Fills `__s[0]` through `__s[__n-1]` with characters from the input sequence, as if by `sbumpc()`. Stops when either `__n` characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Definition at line 635 of file `fstream.tcc`.

References `std::ios_base::in`.

5.67.3.45 `template<typename _CharT, typename _Traits > streamsize std::basic_filebuf<_CharT, _Traits >::xsputn ( const char_type * __s, streamsize __n )` [protected], [virtual], [inherited]

Multiple character insertion.

**Parameters**

|                  |                                        |
|------------------|----------------------------------------|
| <code>__s</code> | A buffer area.                         |
| <code>__n</code> | Maximum number of characters to write. |

**Returns**

The number of characters written.

Writes `__s[0]` through `__s[__n-1]` to the output sequence, as if by `sputc()`. Stops when either  $n$  characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 721 of file `fstream.tcc`.

References `std::ios_base::app`, `std::min()`, and `std::ios_base::out`.

**5.67.4 Member Data Documentation**

**5.67.4.1** `template<typename _CharT, typename _Traits> char_type* std::basic_filebuf<_CharT, _Traits>::_M_buf`  
`[protected], [inherited]`

Pointer to the beginning of internal buffer.

Definition at line 136 of file `fstream`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_destroy_pback()`, and `std::basic_filebuf<char_type, traits_type>::_M_set_buffer()`.

**5.67.4.2** `template<typename _CharT, typename _Traits = char_traits<_CharT>> locale std::basic_streambuf<_CharT, _Traits>::_M_buf_locale`  
`[protected], [inherited]`

Current locale setting.

Definition at line 199 of file `streambuf`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::basic_filebuf()`, `std::basic_streambuf<_Elem, _Tr>::getloc()`, and `std::basic_streambuf<_Elem, _Tr>::pubimbue()`.

**5.67.4.3** `template<typename _CharT, typename _Traits> size_t std::basic_filebuf<_CharT, _Traits>::_M_buf_size`  
`[protected], [inherited]`

Actual size of internal buffer. This number is equal to the size of the put area + 1 position, reserved for the overflow char of a full area.

Definition at line 143 of file `fstream`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_set_buffer()`.

**5.67.4.4** `template<typename _CharT, typename _Traits> char* std::basic_filebuf<_CharT, _Traits>::_M_ext_buf`  
`[protected], [inherited]`

Buffer for external characters. Used for input when `codecvt::always_noconv() == false`. When valid, this corresponds to `eback()`.

Definition at line 178 of file `fstream`.

**5.67.4.5** `template<typename _CharT, typename _Traits> streamsize std::basic_filebuf<_CharT, _Traits>::_M_ext_buf_size`  
`[protected], [inherited]`

Size of buffer held by `_M_ext_buf`.

Definition at line 183 of file `fstream`.

**5.67.4.6** `template<typename _CharT, typename _Traits> const char* std::basic_filebuf< _CharT, _Traits >::_M_ext_next [protected], [inherited]`

Pointers into the buffer held by `_M_ext_buf` that delimit a subsequence of bytes that have been read but not yet converted. When valid, `_M_ext_next` corresponds to `egptr()`.

Definition at line 190 of file `fstream`.

**5.67.4.7** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_beg [protected], [inherited]`

Start of get area.

Definition at line 191 of file `streambuf`.

Referenced by `std::basic_streambuf< _Elem, _Tr >::eback()`, and `std::basic_streambuf< _Elem, _Tr >::setg()`.

**5.67.4.8** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_cur [protected], [inherited]`

Current read area.

Definition at line 192 of file `streambuf`.

Referenced by `std::basic_streambuf< _Elem, _Tr >::gbump()`, `std::basic_streambuf< _Elem, _Tr >::gptr()`, and `std::basic_streambuf< _Elem, _Tr >::setg()`.

## 5.68.1 Detailed Description

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>> class __gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>
```

Provides a layer of compatibility for C.

This GNU extension provides extensions for working with standard C FILE\*'s. It must be instantiated by the user with the type of character used in the file stream, e.g., `stdio_filebuf<char>`.

Definition at line 57 of file `stdio_sync_filebuf.h`.

## 5.68.2 Member Function Documentation

```
5.68.2.1 template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::eback( ) const [inline], [protected], [inherited]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 489 of file `streambuf`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_destroy_pback()`, `std::basic_streambuf<_Elem, _Tr>::_sputbackc()`, and `std::basic_streambuf<_Elem, _Tr>::_sungetc()`.

```
5.68.2.2 template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::egptr( ) const [inline], [protected], [inherited]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 495 of file `streambuf`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_create_pback()`, `std::basic_streambuf<_Elem, _Tr>::_in_avail()`, `std::basic_streambuf<_Elem, _Tr>::_sbumpc()`, `std::basic_streambuf<_Elem, _Tr>::_sgetc()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::showmanyc()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::str()`.

```
5.68.2.3 template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::epptr( ) const [inline], [protected], [inherited]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence

- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Definition at line 542 of file `streambuf`.

Referenced by `std::basic_streambuf<_Elem, _Tr>::sputc()`.

**5.68.2.4** `template<typename _CharT, typename _Traits = std::char_traits<_CharT>> std::_c_file*  
__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>::file ( ) [inline]`

Returns

The underlying `FILE*`.

This function can be used to access the underlying C file pointer. Note that there is no way for the library to track what you do with the file, so be careful.

Definition at line 118 of file `stdio_sync_filebuf.h`.

**5.68.2.5** `template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf<_CharT, _Traits>::gbump ( int __n ) [inline], [protected], [inherited]`

Moving the read position.

Parameters

|                  |                             |
|------------------|-----------------------------|
| <code>__n</code> | The delta by which to move. |
|------------------|-----------------------------|

This just advances the read position without returning any data.

Definition at line 505 of file `streambuf`.

Referenced by `std::basic_streambuf<_Elem, _Tr>::sbumpc()`, `std::basic_streambuf<_Elem, _Tr>::sputbackc()`, `std::basic_streambuf<_Elem, _Tr>::sungetc()`, and `std::basic_streambuf<_Elem, _Tr>::uflow()`.

**5.68.2.6** `template<typename _CharT, typename _Traits = char_traits<_CharT>> locale std::basic_streambuf<_CharT, _Traits>::getloc ( ) const [inline], [inherited]`

Locale access.

Returns

The current locale in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

Definition at line 233 of file `streambuf`.

Referenced by `std::basic_streambuf<_Elem, _Tr>::pubimbue()`.

**5.68.2.7** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::gptr ( ) const [inline], [protected], [inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence

- `egptr()` returns the end pointer for the input sequence

Definition at line 492 of file `streambuf`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_create_pback()`, `std::basic_filebuf<char_type, traits_type>::_M_destroy_pback()`, `std::basic_streambuf<_Elem, _Tr>::in_avail()`, `std::basic_streambuf<_Elem, _Tr>::sbumpc()`, `std::basic_streambuf<_Elem, _Tr>::sgetc()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::showmanyc()`, `std::basic_streambuf<_Elem, _Tr>::sputbackc()`, `std::basic_streambuf<_Elem, _Tr>::sungetc()`, and `std::basic_streambuf<_Elem, _Tr>::uflow()`.

**5.68.2.8** `template<typename _CharT, typename _Traits = char_traits<_CharT>> virtual void std::basic_streambuf<_CharT, _Traits>::imbue ( const locale &__loc __attribute__( __unused__ ) )` `[inline]`, `[protected]`, `[virtual]`, `[inherited]`

Changes translations.

Parameters

|                    |               |
|--------------------|---------------|
| <code>__loc</code> | A new locale. |
|--------------------|---------------|

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from `streambuf` can safely cache results of calls to locale functions and to members of facets so obtained.*

Note

Base class version does nothing.

Definition at line 583 of file `streambuf`.

Referenced by `std::basic_streambuf<_Elem, _Tr>::pubimbue()`.

**5.68.2.9** `template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_streambuf<_CharT, _Traits>::in_avail ( )` `[inline]`, `[inherited]`

Looking ahead into the stream.

Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

Definition at line 291 of file `streambuf`.

**5.68.2.10** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::pbase ( ) const` `[inline]`, `[protected]`, `[inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Definition at line 536 of file `streambuf`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::str()`.

5.68.2.11 `template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf<_CharT, _Traits>::pbump( int n )` [inline], [protected], [inherited]

Moving the write position.

## Parameters

|                  |                             |
|------------------|-----------------------------|
| <code>__n</code> | The delta by which to move. |
|------------------|-----------------------------|

This just advances the write position without returning any data.

Definition at line 552 of file `streambuf`.

Referenced by `std::basic_streambuf<_Elem, _Tr>::sputc()`.

5.68.2.12 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::pptr ( ) const` `[inline]`, `[protected]`, `[inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Definition at line 539 of file `streambuf`.

Referenced by `std::basic_streambuf<_Elem, _Tr>::sputc()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::str()`.

5.68.2.13 `template<typename _CharT, typename _Traits = char_traits<_CharT>> locale std::basic_streambuf<_CharT, _Traits>::pubimbue ( const locale & __loc )` `[inline]`, `[inherited]`

Entry point for `imbue()`.

## Parameters

|                    |                 |
|--------------------|-----------------|
| <code>__loc</code> | The new locale. |
|--------------------|-----------------|

## Returns

The previous locale.

Calls the derived `imbue(__loc)`.

Definition at line 216 of file `streambuf`.

5.68.2.14 `template<typename _CharT, typename _Traits = char_traits<_CharT>> pos_type std::basic_streambuf<_CharT, _Traits>::pubseekoff ( off_type __off, ios_base::seekdir __way, ios_base::openmode __mode = ios_base::in | ios_base::out )` `[inline]`, `[inherited]`

Alters the stream position.

## Parameters

|                     |                                             |
|---------------------|---------------------------------------------|
| <code>__off</code>  | Offset.                                     |
| <code>__way</code>  | Value for <code>ios_base::seekdir</code> .  |
| <code>__mode</code> | Value for <code>ios_base::openmode</code> . |

Calls virtual `seekoff` function.

Definition at line 258 of file `streambuf`.

---

5.68.2.15 `template<typename _CharT, typename _Traits = char_traits<_CharT>> pos_type std::basic_streambuf<_CharT, _Traits>::pubseekpos ( pos_type __sp, ios_base::openmode __mode = ios_base::in | ios_base::out )`  
[inline], [inherited]

Alters the stream position.

## Parameters

|                     |                                             |
|---------------------|---------------------------------------------|
| <code>__sp</code>   | Position                                    |
| <code>__mode</code> | Value for <code>ios_base::openmode</code> . |

Calls virtual `seekpos` function.

Definition at line 270 of file `streambuf`.

```
5.68.2.16 template<typename _CharT, typename _Traits = char_traits<_CharT>> basic_streambuf*
std::basic_streambuf<_CharT, _Traits>::pubsetbuf( char_type *__s, streamsize __n ) [inline],
[inherited]
```

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 246 of file `streambuf`.

```
5.68.2.17 template<typename _CharT, typename _Traits = char_traits<_CharT>> int std::basic_streambuf<_CharT, _Traits>::pubsync( ) [inline],[inherited]
```

Calls virtual `sync` function.

Definition at line 278 of file `streambuf`.

Referenced by `std::wbuffer_convert<_Codecvt, _Elem, _Tr>::sync()`, and `std::basic_istream<_CharT, _Traits>::sync()`.

```
5.68.2.18 template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::sbumpc( ) [inline],[inherited]
```

Getting the next character.

## Returns

The next character, or `eof`.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 323 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::istreambuf_iterator<_CharT, _Traits>::operator++()`, and `std::basic_streambuf<_Elem, _Tr>::snextc()`.

```
5.68.2.19 template<typename _CharT, typename _Traits = char_traits<_CharT>> virtual pos_type std::basic_streambuf<_CharT, _Traits>::seekoff( off_type, ios_base::seekdir, ios_base::openmode = ios_base::in | ios_base::out ) [inline],[protected],[virtual],[inherited]
```

Alters the stream positions.

Each derived class provides its own appropriate behavior.

## Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented in `std::basic_filebuf<_CharT, _Traits >`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT >>`, `std::basic_filebuf<char_type, traits_type >`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc >`.

Definition at line 609 of file streambuf.

Referenced by `std::basic_streambuf<_Elem, _Tr>::pubseekoff()`.

```
5.68.2.20 template<typename _CharT, typename _Traits = char_traits<_CharT>> virtual pos_type std::basic_streambuf<
    _CharT, _Traits>::seekpos ( pos_type , ios_base::openmode = ios_base::in | ios_base::out )
    [inline], [protected], [virtual], [inherited]
```

Alters the stream positions.

Each derived class provides its own appropriate behavior.

#### Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, `std::basic_filebuf<char_type, traits_type>`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>`.

Definition at line 621 of file streambuf.

Referenced by `std::basic_streambuf<_Elem, _Tr>::pubseekpos()`.

```
5.68.2.21 template<typename _CharT, typename _Traits = char_traits<_CharT>> virtual basic_streambuf<char_type,-
    _Traits>* std::basic_streambuf<_CharT, _Traits>::setbuf ( char_type *, streamsize ) [inline],
    [protected], [virtual], [inherited]
```

Manipulates the buffer.

Each derived class provides its own appropriate behavior. See the next-to-last paragraph of <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html#io.streambuf.buffering> for more on this function.

#### Note

Base class version does nothing, returns `this`.

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, `std::basic_filebuf<char_type, traits_type>`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>`.

Definition at line 598 of file streambuf.

Referenced by `std::basic_streambuf<_Elem, _Tr>::pubsetbuf()`.

```
5.68.2.22 template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf<_CharT, _Traits
    >::setg ( char_type * __gbeg, char_type * __gnext, char_type * __gend ) [inline], [protected],
    [inherited]
```

Setting the three read area pointers.

#### Parameters

|                      |            |
|----------------------|------------|
| <code>__gbeg</code>  | A pointer. |
| <code>__gnext</code> | A pointer. |
| <code>__gend</code>  | A pointer. |

## Postcondition

`__gbeg == eback()`, `__gnext == gptr()`, and `__gend == egptr()`

Definition at line 516 of file `streambuf`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_create_pback()`, `std::basic_filebuf<char_type, traits_type>::_M_destroy_pback()`, and `std::basic_filebuf<char_type, traits_type>::_M_set_buffer()`.

5.68.2.23 `template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf<_CharT, _Traits>::setp ( char_type * __pbeg, char_type * __pend )` `[inline]`, `[protected]`, `[inherited]`

Setting the three write area pointers.

## Parameters

|                     |            |
|---------------------|------------|
| <code>__pbeg</code> | A pointer. |
| <code>__pend</code> | A pointer. |

## Postcondition

`__pbeg == pbase()`, `__pbeg == pptr()`, and `__pend == epptr()`

Definition at line 562 of file `streambuf`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_set_buffer()`.

5.68.2.24 `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::sgetc ( )` `[inline]`, `[inherited]`

Getting the next character.

## Returns

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 345 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::istreambuf_iterator<_CharT, _Traits>::operator++()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_streambuf<_Elem, _Tr>::snextc()`.

5.68.2.25 `template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_streambuf<_CharT, _Traits>::sgetn ( char_type * __s, streamsize __n )` `[inline]`, `[inherited]`

Entry point for `xsggetn`.

## Parameters

|                  |                |
|------------------|----------------|
| <code>__s</code> | A buffer area. |
| <code>__n</code> | A count.       |

Returns `xsggetn(__s, __n)`. The effect is to fill `__s[0]` through `__s[__n-1]` with characters from the input sequence, if possible.

Definition at line 364 of file `streambuf`.

5.68.2.26 `template<typename _CharT, typename _Traits = char_traits<_CharT>> virtual streamsize std::basic_streambuf<_CharT, _Traits>::showmanyc ( ) [inline], [protected], [virtual], [inherited]`

Investigating the data available.

#### Returns

An estimate of the number of characters available in the input sequence, or -1.

*If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail.* [27.5.2.4.3]1

#### Note

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to `underflow` or `uflow`] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, `std::basic_filebuf<char_type, traits_type>`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>`.

Definition at line 656 of file `streambuf`.

Referenced by `std::basic_streambuf<_Elem, _Tr>::in_avail()`.

5.68.2.27 `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::snextc ( ) [inline], [inherited]`

Getting the next character.

#### Returns

The next character, or `eof`.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 305 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

5.68.2.28 `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::sputbackc ( char_type __c ) [inline], [inherited]`

Pushing characters back into the input stream.

#### Parameters

|                  |                             |
|------------------|-----------------------------|
| <code>__c</code> | The character to push back. |
|------------------|-----------------------------|

#### Returns

The previous character, if possible.

Similar to `sungetc()`, but `__c` is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be `__c`.

Definition at line 379 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::putback()`.

5.68.2.29 `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::sputc ( char_type __c ) [inline], [inherited]`

Entry point for all single-character output functions.

## Parameters

|                  |                        |
|------------------|------------------------|
| <code>__c</code> | A character to output. |
|------------------|------------------------|

## Returns

`__c`, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores `__c` in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(-__c)`.

Definition at line 431 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, and `std::ostreambuf_iterator<_CharT, _Traits>::operator=()`.

**5.68.2.30** `template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_streambuf<_CharT, _Traits>::sputn( const char_type * __s, streamsize __n ) [inline], [inherited]`

Entry point for all single-character output functions.

## Parameters

|                  |                     |
|------------------|---------------------|
| <code>__s</code> | A buffer read area. |
| <code>__n</code> | A count.            |

One of two public output functions.

Returns `xspn(__s, __n)`. The effect is to write `__s[0]` through `__s[__n-1]` to the output sequence, if possible.

Definition at line 457 of file `streambuf`.

**5.68.2.31** `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::sungetc( ) [inline], [inherited]`

Moving backwards in the input stream.

## Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns `pbackfail()`. The effect is to *unget* the last character *gotten*.

Definition at line 404 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::ungetc()`.

**5.68.2.32** `template<typename _CharT, typename _Traits = std::char_traits<_CharT>> virtual int __gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>::sync( void ) [inline], [protected], [virtual]`

Synchronizes the buffer arrays with the controlled sequences.

## Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

**Note**

Base class version does nothing, returns zero.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Definition at line 190 of file `stdio_sync_filebuf.h`.

```
5.68.2.33 template<typename _CharT, typename _Traits = char_traits<_CharT>> virtual int_type return
    std::basic_streambuf<_CharT, _Traits>::traits_type::eof ( ) [protected], [virtual],
    [inherited]
```

Tries to back up the input sequence.

**Parameters**

|                  |                                                      |
|------------------|------------------------------------------------------|
| <code>__c</code> | The character to be inserted back into the sequence. |
|------------------|------------------------------------------------------|

**Returns**

`eof()` on failure, *some other value* on success

**Postcondition**

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

**Note**

Base class version does nothing, returns `eof()`.

```
5.68.2.34 template<typename _CharT, typename _Traits = std::char_traits<_CharT>> virtual int_type
    __gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>::uflow ( ) [inline], [protected], [virtual]
```

Fetches more data from the controlled sequence.

**Returns**

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Definition at line 138 of file `stdio_sync_filebuf.h`.

```
5.68.2.35 template<typename _CharT, typename _Traits = std::char_traits<_CharT>> virtual int_type
    __gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>::underflow ( ) [inline], [protected],
    [virtual]
```

Fetches more data from the controlled sequence.

**Returns**

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html>

**Note**

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf<_CharT, _Traits >`.

Definition at line 131 of file `stdio_sync_filebuf.h`.

5.68.2.36 `template<typename _CharT, typename _Traits > streamsize std::basic_streambuf<_CharT, _Traits >::xsgetn (char_type * __s, streamsize __n) [protected], [virtual], [inherited]`

Multiple character extraction.

**Parameters**

|                  |                                         |
|------------------|-----------------------------------------|
| <code>__s</code> | A buffer area.                          |
| <code>__n</code> | Maximum number of characters to assign. |

**Returns**

The number of characters assigned.

Fills `__s[0]` through `__s[__n-1]` with characters from the input sequence, as if by `sbumpc()`. Stops when either `__n` characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in `std::basic_filebuf<_CharT, _Traits >`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT >`, and `std::basic_filebuf<char_type, traits_type >`.

Definition at line 46 of file `streambuf.tcc`.

References `std::min()`.

Referenced by `std::basic_streambuf<_Elem, _Tr >::sgetn()`.

5.68.2.37 `template<typename _CharT, typename _Traits > streamsize std::basic_streambuf<_CharT, _Traits >::xsputn (const char_type * __s, streamsize __n) [protected], [virtual], [inherited]`

Multiple character insertion.

**Parameters**

|                  |                |
|------------------|----------------|
| <code>__s</code> | A buffer area. |
|------------------|----------------|

|                  |                                        |
|------------------|----------------------------------------|
| <code>__n</code> | Maximum number of characters to write. |
|------------------|----------------------------------------|

**Returns**

The number of characters written.

Writes `__s[0]` through `__s[__n-1]` to the output sequence, as if by `sputc()`. Stops when either `n` characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, and `std::basic_filebuf<char_type, traits_type>`.

Definition at line 80 of file `streambuf.tcc`.

References `std::min()`.

Referenced by `std::basic_streambuf<_Elem, _Tr>::sputn()`.

- unsigned int [operator\(\)](#) (unsigned int \_\_limit)

### 5.69.1 Detailed Description

The `subtractive_rng` class is documented on [SGI's site](#). Note that this code assumes that `int` is 32 bits. Definition at line 352 of file `ext/functional`.

### 5.69.2 Member Typedef Documentation

**5.69.2.1** `template<typename _Arg, typename _Result> typedef _Arg std::unary_function< _Arg, _Result >::argument_type`  
[inherited]

`argument_type` is the type of the argument

Definition at line 108 of file `stl_function.h`.

**5.69.2.2** `template<typename _Arg, typename _Result> typedef _Result std::unary_function< _Arg, _Result >::result_type`  
[inherited]

`result_type` is the return type

Definition at line 111 of file `stl_function.h`.

### 5.69.3 Constructor & Destructor Documentation

**5.69.3.1** `__gnu_cxx::subtractive_rng::subtractive_rng ( unsigned int __seed )` [inline]

Ctor allowing you to initialize the seed.

Definition at line 394 of file `ext/functional`.

**5.69.3.2** `__gnu_cxx::subtractive_rng::subtractive_rng ( )` [inline]

Default ctor; initializes its state with some number you don't see.

Definition at line 398 of file `ext/functional`.

### 5.69.4 Member Function Documentation

**5.69.4.1** `unsigned int __gnu_cxx::subtractive_rng::operator()( unsigned int __limit )` [inline]

Returns a number less than the argument.

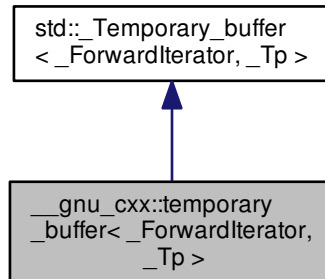

Definition at line 363 of file `ext/functional`.

The documentation for this class was generated from the following file:

- [ext/functional](#)

## 5.70 `__gnu_cxx::temporary_buffer<_ForwardIterator, _Tp>` Struct Template Reference

Inheritance diagram for `__gnu_cxx::temporary_buffer<_ForwardIterator, _Tp>`:

### Public Types

- typedef pointer **iterator**
- typedef value\_type \* **pointer**
- typedef ptrdiff\_t **size\_type**
- typedef \_Tp **value\_type**

### Public Member Functions

- [temporary\\_buffer](#) (\_ForwardIterator \_\_first, \_ForwardIterator \_\_last)
- [~temporary\\_buffer](#) ()
- iterator [begin](#) ()
- iterator [end](#) ()
- size\_type [requested\\_size](#) () const
- size\_type [size](#) () const

### Protected Attributes

- pointer **\_M\_buffer**
- size\_type **\_M\_len**
- size\_type **\_M\_original\_len**

#### 5.70.1 Detailed Description

```
template<class _ForwardIterator, class _Tp = typename std::iterator_traits<_ForwardIterator>::value_type>struct __gnu_cxx::temporary_buffer<_ForwardIterator, _Tp>
```

This class provides similar behavior and semantics of the standard functions `get_temporary_buffer()` and `return_temporary_buffer()`, but encapsulated in a type vaguely resembling a standard container.

By default, a `temporary_buffer<Iter>` stores space for objects of whatever type the `Iter` iterator points to. It is constructed from a typical `[first,last)` range, and provides the `begin()`, `end()`, `size()` functions, as well as `requested_size()`. For non-trivial types, copies of `*first` will be used to initialize the storage.

`malloc` is used to obtain underlying storage.

Like `get_temporary_buffer()`, not all the requested memory may be available. Ideally, the created buffer will be large enough to hold a copy of `[first,last)`, but if `size()` is less than `requested_size()`, then this didn't happen.

Definition at line 183 of file `ext/memory`.

### 5.70.2 Constructor & Destructor Documentation

5.70.2.1 `template<class _ForwardIterator, class _Tp = typename std::iterator_traits<_ForwardIterator>::value_type> __gnu_cxx::temporary_buffer<_ForwardIterator, _Tp>::temporary_buffer ( _ForwardIterator __first, _ForwardIterator __last ) [inline]`

Requests storage large enough to hold a copy of `[first,last)`.

Definition at line 186 of file `ext/memory`.

5.70.2.2 `template<class _ForwardIterator, class _Tp = typename std::iterator_traits<_ForwardIterator>::value_type> __gnu_cxx::temporary_buffer<_ForwardIterator, _Tp>::~~temporary_buffer ( ) [inline]`

Destroys objects and frees storage.

Definition at line 190 of file `ext/memory`.

### 5.70.3 Member Function Documentation

5.70.3.1 `template<typename _ForwardIterator, typename _Tp> iterator std::_Temporary_buffer<_ForwardIterator, _Tp>::begin ( ) [inline], [inherited]`

As per Table mumble.

Definition at line 151 of file `stl_tempbuf.h`.

5.70.3.2 `template<typename _ForwardIterator, typename _Tp> iterator std::_Temporary_buffer<_ForwardIterator, _Tp>::end ( ) [inline], [inherited]`

As per Table mumble.

Definition at line 156 of file `stl_tempbuf.h`.

5.70.3.3 `template<typename _ForwardIterator, typename _Tp> size_type std::_Temporary_buffer<_ForwardIterator, _Tp>::requested_size ( ) const [inline], [inherited]`

Returns the size requested by the constructor; may be `>size()`.

Definition at line 146 of file `stl_tempbuf.h`.

5.70.3.4 `template<typename _ForwardIterator, typename _Tp> size_type std::_Temporary_buffer<_ForwardIterator, _Tp>::size ( ) const [inline], [inherited]`

As per Table mumble.

Definition at line 141 of file `stl_tempbuf.h`.

The documentation for this struct was generated from the following file:

- `_Operation2 _M_fn2`

## 5.77.1 Detailed Description

```
template<class _Operation1, class _Operation2>class __gnu_cxx::unary_compose< _Operation1, _Operation2 >
```

An [SGI extension](#) .

Definition at line 125 of file `ext/functional`.

## 5.77.2 Member Typedef Documentation

5.77.2.1 `template<typename _Arg, typename _Result> typedef _Arg std::unary_function< _Arg, _Result >::argument_type`  
[inherited]

`argument_type` is the type of the argument

Definition at line 108 of file `stl_function.h`.

5.77.2.2 `template<typename _Arg, typename _Result> typedef _Result std::unary_function< _Arg, _Result >::result_type`  
[inherited]

`result_type` is the return type

Definition at line 111 of file `stl_function.h`.

The documentation for this class was generated from the following file:

- [ext/functional](#)

5.78 `__gnu_debug::After_nth_from<_Iterator>` Class Template Reference

## Public Member Functions

- `After_nth_from` (const `difference_type` &`_n`, const `_Iterator` &`_base`)
- bool `operator()` (const `_Iterator` &`_x`) const

## 5.78.1 Detailed Description

```
template<typename _Iterator>class __gnu_debug::After_nth_from< _Iterator >
```

A function object that returns true when the given random access iterator is at least `n` steps away from the given iterator.

Definition at line 74 of file `safe_sequence.h`.

The documentation for this class was generated from the following file:

- [safe\\_sequence.h](#)

5.79 `__gnu_debug::BeforeBeginHelper<_Sequence>` Struct Template Reference

## Static Public Member Functions

- `template<typename _Iterator >`  
static bool `_S_Is` (const [\\_Safe\\_iterator](#)< `_Iterator`, `_Sequence` > &)
- `template<typename _Iterator >`  
static bool `_S_Is_Beginnest` (const [\\_Safe\\_iterator](#)< `_Iterator`, `_Sequence` > &`_it`)

### 5.79.1 Detailed Description

```
template<typename _Sequence>struct __gnu_debug::_BeforeBeginHelper< _Sequence >
```

Helper struct to deal with sequence offering a `before_begin` iterator.

Definition at line 45 of file `safe_iterator.h`.

The documentation for this struct was generated from the following file:

- [safe\\_iterator.h](#)

## 5.80 `__gnu_debug::_Equal_to<_Type >` Class Template Reference

### Public Member Functions

- `_Equal_to` (const `_Type` &\_\_v)
- bool `operator()` (const `_Type` &\_\_x) const

### 5.80.1 Detailed Description

```
template<typename _Type>class __gnu_debug::_Equal_to<_Type >
```

A simple function object that returns true if the passed-in value is equal to the stored value.

Definition at line 59 of file `safe_sequence.h`.

The documentation for this class was generated from the following file:

- [safe\\_sequence.h](#)

## 5.81 `__gnu_debug::_Not_equal_to<_Type >` Class Template Reference

### Public Member Functions

- `_Not_equal_to` (const `_Type` &\_\_v)
- bool `operator()` (const `_Type` &\_\_x) const

### 5.81.1 Detailed Description

```
template<typename _Type>class __gnu_debug::_Not_equal_to<_Type >
```

A simple function object that returns true if the passed-in value is not equal to the stored value. It saves typing over using both `bind1st` and `not_equal`.

Definition at line 44 of file `safe_sequence.h`.

The documentation for this class was generated from the following file:

- [safe\\_sequence.h](#)

5.82 `__gnu_debug::_Safe_container<_SafeContainer, _Alloc, _SafeBase, _IsCxx11AllocatorAware >` Class  
Template Reference

Inherits `_SafeBase<_SafeContainer >`.

#### Public Member Functions

- `void _M_swap (_Safe_container &__x)` noexcept
- `_Safe_container & operator= (const _Safe_container &)` noexcept
- `_Safe_container & operator= (_Safe_container &&__x)` noexcept

#### Protected Member Functions

- `_Safe_container (const _Safe_container &)=default`
- `_Safe_container (_Safe_container &&)=default`
- `_Safe_container (_Safe_container &&__x, const _Alloc &__a)`
- `_Safe_container & _M_safe ()` noexcept

#### 5.82.1 Detailed Description

```
template<typename _SafeContainer, typename _Alloc, template< typename > class _SafeBase, bool _IsCxx11AllocatorAware = true>class __gnu_debug::_Safe_container<_SafeContainer, _Alloc, _SafeBase, _IsCxx11AllocatorAware >
```

Safe class dealing with some allocator dependent operations.

Definition at line 41 of file `safe_container.h`.

The documentation for this class was generated from the following file:

- [safe\\_container.h](#)

### 5.83 `__gnu_debug::_Safe_forward_list<_SafeSequence >` Class Template Reference

Inheritance diagram for `__gnu_debug::_Safe_forward_list<_SafeSequence >`:

#### Public Member Functions

- `void _M_invalidate_if (_Predicate __pred)`
- `void _M_transfer_from_if (_Safe_sequence &__from, _Predicate __pred)`

#### Public Attributes

- `_Safe_iterator_base * _M_const_iterators`
- `_Safe_iterator_base * _M_iterators`
- `unsigned int _M_version`

#### Protected Member Functions

- `void _M_detach_all ()`
- `void _M_detach_singular ()`
- `__gnu_cxx::__mutex & _M_get_mutex () throw ()`
- `void _M_invalidate_all ()`
- `void _M_invalidate_all () const`
- `void _M_revalidate_singular ()`
- `void _M_swap (_Safe_sequence_base &) noexcept`

## 5.83.1 Detailed Description

```
template<typename SafeSequence>class __gnu_debug::Safe_forward_list< SafeSequence >
```

Special iterators swap and invalidation for `forward_list` because of the `before_begin` iterator.

Definition at line 51 of file `debug/forward_list`.

## 5.83.2 Member Function Documentation

5.83.2.1 `void __gnu_debug::Safe_sequence_base::M_detach_all ( )` `[protected]`, `[inherited]`

Detach all iterators, leaving them singular.

Referenced by `__gnu_debug::Safe_sequence_base::~~Safe_sequence_base()`.

5.83.2.2 `void __gnu_debug::Safe_sequence_base::M_detach_singular ( )` `[protected]`, `[inherited]`

Detach all singular iterators.

## Postcondition

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

5.83.2.3 `__gnu_cxx::mutex& __gnu_debug::Safe_sequence_base::M_get_mutex ( ) throw` `[protected]`, `[inherited]`

For use in `_Safe_sequence`.

Referenced by `__gnu_debug::Safe_sequence< _Sequence >::M_transfer_from_if()`.

5.83.2.4 `void __gnu_debug::Safe_sequence_base::M_invalidate_all ( ) const` `[inline]`, `[protected]`, `[inherited]`

Invalidates all iterators.

Definition at line 256 of file `safe_base.h`.

References `__gnu_debug::Safe_sequence_base::_M_version`.

5.83.2.5 `void __gnu_debug::Safe_sequence< SafeSequence >::M_invalidate_if ( _Predicate __pred )` `[inherited]`

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

5.83.2.6 `void __gnu_debug::Safe_sequence_base::M_revalidate_singular ( )` `[protected]`, `[inherited]`

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

5.83.2.7 `void __gnu_debug::Safe_sequence< SafeSequence >::M_transfer_from_if ( _Safe_sequence< SafeSequence > & __from, _Predicate __pred )` `[inherited]`

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

### 5.83.3 Member Data Documentation

#### 5.83.3.1 `__gnu_debug::Safe_iterator_base*` `__gnu_debug::Safe_sequence_base::M_const_iterators` [inherited]

The list of constant iterators that reference this container.

Definition at line 197 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence>::M_transfer_from_if()`.

#### 5.83.3.2 `__gnu_debug::Safe_iterator_base*` `__gnu_debug::Safe_sequence_base::M_iterators` [inherited]

The list of mutable iterators that reference this container.

Definition at line 194 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence>::M_transfer_from_if()`.

#### 5.83.3.3 `unsigned int` `__gnu_debug::Safe_sequence_base::M_version` [mutable],[inherited]

The container version number. This number may never be 0.

Definition at line 200 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence_base::M_invalidate_all()`.

The documentation for this class was generated from the following file:

- [debug/forward\\_list](#)

#### 5.84.1 Detailed Description

```
template<typename _Iterator, typename _Sequence>class __gnu_debug::Safe_iterator<_Iterator, _Sequence >
```

Safe iterator wrapper.

The class template `_Safe_iterator` is a wrapper around an iterator that tracks the iterator's movement among sequences and checks that operations performed on the "safe" iterator are legal. In addition to the basic iterator operations (which are validated, and then passed to the underlying iterator), `_Safe_iterator` has member functions for iterator invalidation, attaching/detaching the iterator from sequences, and querying the iterator's state.

Note that `_Iterator` must be the first base class so that it gets initialized before the iterator is being attached to the container's list of iterators and it is being detached before `_Iterator` get destroyed. Otherwise it would result in a data race.

Definition at line 56 of file `formatter.h`.

#### 5.84.2 Constructor & Destructor Documentation

```
5.84.2.1 template<typename _Iterator, typename _Sequence> __gnu_debug::Safe_iterator<_Iterator, _Sequence
>::Safe_iterator( ) [inline], [noexcept]
```

##### Postcondition

the iterator is singular and unattached

Definition at line 119 of file `safe_iterator.h`.

Referenced by `__gnu_debug::Safe_iterator<_Base_iterator, map >::operator++()`, and `__gnu_debug::Safe_iterator<_Base_iterator, map >::operator--()`.

5.84.2.2 `template<typename _Iterator, typename _Sequence> __gnu_debug::Safe_iterator<_Iterator, _Sequence>::Safe_iterator ( const _Safe_iterator<_Iterator, _Sequence> &_x ) [inline], [noexcept]`

Copy construction.

Definition at line 140 of file `safe_iterator.h`.

5.84.2.3 `template<typename _Iterator, typename _Sequence> __gnu_debug::Safe_iterator<_Iterator, _Sequence>::Safe_iterator ( _Safe_iterator<_Iterator, _Sequence> &&_x ) [inline], [noexcept]`

Move construction.

Postcondition

`__x` is singular and unattached

Definition at line 158 of file `safe_iterator.h`.

5.84.2.4 `template<typename _Iterator, typename _Sequence> template<typename _MutableIterator > __gnu_debug::Safe_iterator<_Iterator, _Sequence>::Safe_iterator ( const _Safe_iterator<_MutableIterator, typename __gnu_cxx::enable_if<std::is_same<_MutableIterator, typename _Sequence::iterator::iterator_type>::value>, _Sequence>::type > &_x ) [inline], [noexcept]`

Converting constructor from a mutable iterator to a constant iterator.

Definition at line 178 of file `safe_iterator.h`.

### 5.84.3 Member Function Documentation

5.84.3.1 `void __gnu_debug::Safe_iterator_base::M_attach ( _Safe_sequence_base * __seq, bool __constant ) [protected], [inherited]`

Attaches this iterator to the given sequence, detaching it from whatever sequence it was attached to originally. If the new sequence is the NULL pointer, the iterator is left unattached.

Referenced by `__gnu_debug::Safe_iterator<_Base_iterator, map >::M_attach()`, and `__gnu_debug::Safe_iterator_base::Safe_iterator_base()`.

5.84.3.2 `template<typename _Iterator, typename _Sequence> void __gnu_debug::Safe_iterator<_Iterator, _Sequence>::M_attach ( _Safe_sequence_base * __seq ) [inline]`

Attach iterator to the given sequence.

Definition at line 416 of file `safe_iterator.h`.

Referenced by `__gnu_debug::Safe_iterator<_Base_iterator, map >::Safe_iterator()`, and `__gnu_debug::Safe_iterator<_Base_iterator, map >::operator=()`.

5.84.3.3 `void __gnu_debug::Safe_iterator_base::M_attach_single ( _Safe_sequence_base * __seq, bool __constant ) throw [protected], [inherited]`

Likewise, but not thread-safe.

Referenced by `__gnu_debug::Safe_iterator<_Base_iterator, map >::M_attach_single()`.

5.84.3.4 `template<typename _Iterator, typename _Sequence> void __gnu_debug::Safe_iterator<_Iterator, _Sequence>::M_attach_single ( _Safe_sequence_base * __seq ) [inline]`

Likewise, but not thread-safe.

Definition at line 421 of file `safe_iterator.h`.

**5.84.3.5** `bool __gnu_debug::_Safe_iterator_base::_M_attached_to ( const _Safe_sequence_base * __seq ) const`  
`[inline], [inherited]`

Determines if we are attached to the given sequence.

Definition at line 131 of file `safe_base.h`.

References `__gnu_debug::_Safe_iterator_base::_M_sequence`.

**5.84.3.6** `template<typename _Iterator, typename _Sequence> bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_before_dereferenceable ( ) const` `[inline]`

Is the iterator before a dereferenceable one?

Definition at line 431 of file `safe_iterator.h`.

**5.84.3.7** `bool __gnu_debug::_Safe_iterator_base::_M_can_compare ( const _Safe_iterator_base & __x ) const throw ( )`  
`[inherited]`

Can we compare this iterator to the given iterator `__x`? Returns true if both iterators are nonsingular and reference the same sequence.

**5.84.3.8** `template<typename _Iterator, typename _Sequence> bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_dereferenceable ( ) const` `[inline]`

Is the iterator dereferenceable?

Definition at line 426 of file `safe_iterator.h`.

Referenced by `__gnu_debug::_check_dereferenceable()`, `__gnu_debug::_Safe_iterator< _Base_iterator, map >::operator*()`, and `__gnu_debug::_Safe_iterator< _Base_iterator, map >::operator->()`.

**5.84.3.9** `void __gnu_debug::_Safe_iterator_base::_M_detach ( )` `[protected], [inherited]`

Detach the iterator for whatever sequence it is attached to, if any.

Referenced by `__gnu_debug::_Safe_iterator< _Base_iterator, map >::operator=( )`.

**5.84.3.10** `void __gnu_debug::_Safe_iterator_base::_M_detach_single ( ) throw ( )` `[inherited]`

Likewise, but not thread-safe.

Referenced by `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if()`.

**5.84.3.11** `__gnu_cxx::__mutex& __gnu_debug::_Safe_iterator_base::_M_get_mutex ( ) throw ( )` `[protected], [inherited]`

For use in `_Safe_iterator`.

Referenced by `__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::operator++()`, `__gnu_debug::_Safe_iterator< _Base_iterator, map >::operator++()`, `__gnu_debug::_Safe_iterator< _Base_iterator, map >::operator--()`, `__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::operator=( )`, and `__gnu_debug::_Safe_iterator< _Base_iterator, map >::operator=( )`.

**5.84.3.12** `template<typename _Iterator, typename _Sequence> bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_incrementable ( ) const` `[inline]`

Is the iterator incrementable?

Definition at line 443 of file `safe_iterator.h`.

Referenced by `__gnu_debug::Safe_iterator<_Base_iterator, map >::M_before_dereferenceable()`, and `__gnu_debug::Safe_iterator<_Base_iterator, map >::operator++()`.

**5.84.3.13** `void __gnu_debug::Safe_iterator_base::M_invalidate ( ) [inline],[inherited]`

Invalidate the iterator, making it singular.

Definition at line 146 of file `safe_base.h`.

References `__gnu_debug::Safe_iterator_base::M_version`.

**5.84.3.14** `template<typename _Iterator, typename _Sequence> bool __gnu_debug::Safe_iterator<_Iterator, _Sequence>::M_is_before_begin ( ) const [inline]`

Is this iterator equal to the sequence's `before_begin()` iterator if any?

Definition at line 482 of file `safe_iterator.h`.

Referenced by `__gnu_debug::Safe_iterator<_Base_iterator, map >::M_dereferenceable()`.

**5.84.3.15** `template<typename _Iterator, typename _Sequence> bool __gnu_debug::Safe_iterator<_Iterator, _Sequence>::M_is_begin ( ) const [inline]`

Is this iterator equal to the sequence's `begin()` iterator?

Definition at line 471 of file `safe_iterator.h`.

**5.84.3.16** `template<typename _Iterator, typename _Sequence> bool __gnu_debug::Safe_iterator<_Iterator, _Sequence>::M_is_beginnest ( ) const [inline]`

Is this iterator equal to the sequence's `before_begin()` iterator if any or `begin()` otherwise?

Definition at line 488 of file `safe_iterator.h`.

**5.84.3.17** `template<typename _Iterator, typename _Sequence> bool __gnu_debug::Safe_iterator<_Iterator, _Sequence>::M_is_end ( ) const [inline]`

Is this iterator equal to the sequence's `end()` iterator?

Definition at line 476 of file `safe_iterator.h`.

Referenced by `__gnu_debug::Safe_iterator<_Base_iterator, map >::M_dereferenceable()`, and `__gnu_debug::Safe_iterator<_Base_iterator, map >::M_incrementable()`.

**5.84.3.18** `void __gnu_debug::Safe_iterator_base::M_reset ( ) throw ) [inherited]`

Reset all member variables

**5.84.3.19** `bool __gnu_debug::Safe_iterator_base::M_singular ( ) const throw ) [inherited]`

Is this iterator singular?

Referenced by `__gnu_debug::_check_singular_aux()`, `__gnu_debug::Safe_local_iterator<_Iterator, _Sequence>::M_dereferenceable()`, `__gnu_debug::Safe_iterator<_Base_iterator, map >::M_dereferenceable()`, `__gnu_debug::Safe_local_iterator<_Iterator, _Sequence>::M_incrementable()`, `__gnu_debug::Safe_iterator<_Base_iterator, map >::M_incrementable()`, and `__gnu_debug::Safe_local_iterator<_Iterator, _Sequence>::Safe_local_iterator()`.

5.84.3.20 `void __gnu_debug::Safe_iterator_base::M_unlink ( ) throw` `[inline],[inherited]`

Unlink itself

Definition at line 155 of file `safe_base.h`.

References `__gnu_debug::Safe_iterator_base::M_next`, and `__gnu_debug::Safe_iterator_base::M_prior`.

5.84.3.21 `template<typename _Iterator, typename _Sequence> _Iterator& __gnu_debug::Safe_iterator< _Iterator, _Sequence >::base ( )` `[inline],[noexcept]`

Return the underlying iterator.

Definition at line 403 of file `safe_iterator.h`.

Referenced by `__gnu_debug::__get_distance()`, `__gnu_debug::Safe_iterator< _Base_iterator, map >::M_before_dereferenceable()`, `__gnu_debug::Safe_iterator< _Base_iterator, map >::M_is_begin()`, `__gnu_debug::Safe_iterator< _Base_iterator, map >::M_is_end()`, `__gnu_debug::Safe_iterator< _Base_iterator, map >::Safe_iterator()`, `__gnu_debug::Safe_iterator< _Base_iterator, map >::operator*()`, `__gnu_debug::Safe_iterator< _Base_iterator, map >::operator++()`, `__gnu_debug::Safe_iterator< _Base_iterator, map >::operator--()`, `__gnu_debug::Safe_iterator< _Base_iterator, map >::operator->()`, and `__gnu_debug::Safe_iterator< _Base_iterator, map >::operator=()`.

5.84.3.22 `template<typename _Iterator, typename _Sequence> __gnu_debug::Safe_iterator< _Iterator, _Sequence >::operator_iterator ( ) const` `[inline],[noexcept]`

Conversion to underlying non-debug iterator to allow better interaction with non-debug containers.

Definition at line 412 of file `safe_iterator.h`.

5.84.3.23 `template<typename _Iterator, typename _Sequence> reference __gnu_debug::Safe_iterator< _Iterator, _Sequence >::operator* ( ) const` `[inline],[noexcept]`

Iterator dereference.

**Precondition**

iterator is dereferenceable

Definition at line 266 of file `safe_iterator.h`.

5.84.3.24 `template<typename _Iterator, typename _Sequence> _Safe_iterator& __gnu_debug::Safe_iterator< _Iterator, _Sequence >::operator++ ( )` `[inline],[noexcept]`

Iterator preincrement.

**Precondition**

iterator is incrementable

Definition at line 293 of file `safe_iterator.h`.

5.84.3.25 `template<typename _Iterator, typename _Sequence> _Safe_iterator __gnu_debug::Safe_iterator< _Iterator, _Sequence >::operator++ ( int )` `[inline],[noexcept]`

Iterator postincrement.

**Precondition**

iterator is incrementable

Definition at line 308 of file `safe_iterator.h`.

5.84.3.26 `template<typename _Iterator, typename _Sequence> _Safe_iterator& __gnu_debug::_Safe_iterator<_Iterator, _Sequence>::operator--( ) [inline], [noexcept]`

Iterator predecrement.

**Precondition**

iterator is decrementable

Definition at line 323 of file `safe_iterator.h`.

5.84.3.27 `template<typename _Iterator, typename _Sequence> _Safe_iterator __gnu_debug::_Safe_iterator<_Iterator, _Sequence>::operator--( int ) [inline], [noexcept]`

Iterator postdecrement.

**Precondition**

iterator is decrementable

Definition at line 338 of file `safe_iterator.h`.

5.84.3.28 `template<typename _Iterator, typename _Sequence> pointer __gnu_debug::_Safe_iterator<_Iterator, _Sequence>::operator->( ) const [inline], [noexcept]`

Iterator dereference.

**Precondition**

iterator is dereferenceable

Definition at line 279 of file `safe_iterator.h`.

5.84.3.29 `template<typename _Iterator, typename _Sequence> _Safe_iterator& __gnu_debug::_Safe_iterator<_Iterator, _Sequence>::operator=( const _Safe_iterator<_Iterator, _Sequence> &__x ) [inline], [noexcept]`

Copy assignment.

Definition at line 199 of file `safe_iterator.h`.

5.84.3.30 `template<typename _Iterator, typename _Sequence> _Safe_iterator& __gnu_debug::_Safe_iterator<_Iterator, _Sequence>::operator=( _Safe_iterator<_Iterator, _Sequence> &&__x ) [inline], [noexcept]`

Move assignment.

**Postcondition**

`__x` is singular and unattached

Definition at line 231 of file `safe_iterator.h`.

## 5.84.4 Member Data Documentation

5.84.4.1 `template<typename _Iterator, typename _Sequence> noexcept __gnu_debug::_Safe_iterator<_Iterator, _Sequence>::__pad0__`

Safe iterator construction from an unsafe iterator and its sequence.

**Precondition**

`seq` is not NULL

**Postcondition**

this is not singular

Definition at line 130 of file `safe_iterator.h`.

**5.84.4.2 `_Safe_iterator_base* __gnu_debug:: Safe_iterator_base:: M_next` [inherited]**

Pointer to the next iterator in the sequence's list of iterators. Only valid when `_M_sequence` != NULL.

Definition at line 74 of file `safe_base.h`.

Referenced by `__gnu_debug:: Safe_sequence< _Sequence >:: M_transfer_from_if()`, and `__gnu_debug:: Safe_iterator_base:: M_unlink()`.

**5.84.4.3 `_Safe_iterator_base* __gnu_debug:: Safe_iterator_base:: M_prior` [inherited]**

Pointer to the previous iterator in the sequence's list of iterators. Only valid when `_M_sequence` != NULL.

Definition at line 70 of file `safe_base.h`.

Referenced by `__gnu_debug:: Safe_sequence< _Sequence >:: M_transfer_from_if()`, and `__gnu_debug:: Safe_iterator_base:: M_unlink()`.

**5.84.4.4 `_Safe_sequence_base* __gnu_debug:: Safe_iterator_base:: M_sequence` [inherited]**

The sequence this iterator references; may be NULL to indicate a singular iterator.

Definition at line 57 of file `safe_base.h`.

### 5.85.1 Detailed Description

Basic functionality for a *safe* iterator.

The `_Safe_iterator_base` base class implements the functionality of a safe iterator that is not specific to a particular iterator type. It contains a pointer back to the sequence it references along with iterator version information and pointers to form a doubly-linked list of iterators referenced by the container.

This class must not perform any operations that can throw an exception, or the exception guarantees of derived iterators will be broken.

Definition at line 50 of file `safe_base.h`.

### 5.85.2 Constructor & Destructor Documentation

#### 5.85.2.1 `__gnu_debug::Safe_iterator_base::Safe_iterator_base ( )` `[inline]`, `[protected]`

Initializes the iterator and makes it singular.

Definition at line 78 of file `safe_base.h`.

#### 5.85.2.2 `__gnu_debug::Safe_iterator_base::Safe_iterator_base ( const _Safe_sequence_base * __seq, bool __constant )` `[inline]`, `[protected]`

Initialize the iterator to reference the sequence pointed to by `__seq`. `__constant` is true when we are initializing a constant iterator, and false if it is a mutable iterator. Note that `__seq` may be NULL, in which case the iterator will be singular. Otherwise, the iterator will reference `__seq` and be nonsingular.

Definition at line 89 of file `safe_base.h`.

References `_M_attach()`.

#### 5.85.2.3 `__gnu_debug::Safe_iterator_base::Safe_iterator_base ( const _Safe_iterator_base & __x, bool __constant )` `[inline]`, `[protected]`

Initializes the iterator to reference the same sequence that `__x` does. `__constant` is true if this is a constant iterator, and false if it is mutable.

Definition at line 96 of file `safe_base.h`.

References `_M_attach()`, and `_M_sequence`.

### 5.85.3 Member Function Documentation

#### 5.85.3.1 `void __gnu_debug::Safe_iterator_base::M_attach ( _Safe_sequence_base * __seq, bool __constant )` `[protected]`

Attaches this iterator to the given sequence, detaching it from whatever sequence it was attached to originally. If the new sequence is the NULL pointer, the iterator is left unattached.

Referenced by `__gnu_debug::Safe_iterator<_Base_iterator, map >::M_attach()`, and `_Safe_iterator_base()`.

#### 5.85.3.2 `void __gnu_debug::Safe_iterator_base::M_attach_single ( _Safe_sequence_base * __seq, bool __constant ) throw` `[protected]`

Likewise, but not thread-safe.

Referenced by `__gnu_debug::Safe_iterator<_Base_iterator, map >::M_attach_single()`.

5.85.3.3 `bool __gnu_debug::_Safe_iterator_base::M_attached_to ( const _Safe_sequence_base * __seq ) const`  
`[inline]`

Determines if we are attached to the given sequence.

Definition at line 131 of file `safe_base.h`.

References `_M_sequence`.

5.85.3.4 `bool __gnu_debug::_Safe_iterator_base::M_can_compare ( const _Safe_iterator_base & __x ) const throw ()`

Can we compare this iterator to the given iterator `__x`? Returns true if both iterators are nonsingular and reference the same sequence.

5.85.3.5 `void __gnu_debug::_Safe_iterator_base::M_detach ( )` `[protected]`

Detach the iterator for whatever sequence it is attached to, if any.

Referenced by `__gnu_debug::_Safe_iterator<_Base_iterator, map >::operator=()`.

5.85.3.6 `void __gnu_debug::_Safe_iterator_base::M_detach_single ( ) throw ()`

Likewise, but not thread-safe.

Referenced by `__gnu_debug::_Safe_sequence<_Sequence >::M_transfer_from_if()`.

5.85.3.7 `__gnu_cxx::mutex& __gnu_debug::_Safe_iterator_base::M_get_mutex ( ) throw ()` `[protected]`

For use in `_Safe_iterator`.

Referenced by `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence >::operator++()`, `__gnu_debug::_Safe_iterator<_Base_iterator, map >::operator++()`, `__gnu_debug::_Safe_iterator<_Base_iterator, map >::operator--()`, `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence >::operator=()`, and `__gnu_debug::_Safe_iterator<_Base_iterator, map >::operator=()`.

5.85.3.8 `void __gnu_debug::_Safe_iterator_base::M_invalidate ( )` `[inline]`

Invalidate the iterator, making it singular.

Definition at line 146 of file `safe_base.h`.

References `_M_version`.

5.85.3.9 `void __gnu_debug::_Safe_iterator_base::M_reset ( ) throw ()`

Reset all member variables

5.85.3.10 `bool __gnu_debug::_Safe_iterator_base::M_singular ( ) const throw ()`

Is this iterator singular?

Referenced by `__gnu_debug::_check_singular_aux()`, `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence >::M_dereferenceable()`, `__gnu_debug::_Safe_iterator<_Base_iterator, map >::M_dereferenceable()`, `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence >::M_incrementable()`, `__gnu_debug::_Safe_iterator<_Base_iterator, map >::M_incrementable()`, and `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence >::_Safe_local_iterator()`.

5.85.3.11 `void __gnu_debug::_Safe_iterator_base::M_unlink ( ) throw ()` `[inline]`

Unlink itself

Definition at line 155 of file `safe_base.h`.

References `_M_next`, and `_M_prior`.

#### 5.85.4 Member Data Documentation

##### 5.85.4.1 `_Safe_iterator_base* __gnu_debug::_Safe_iterator_base::_M_next`

Pointer to the next iterator in the sequence's list of iterators. Only valid when `_M_sequence != NULL`.

Definition at line 74 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence<_Sequence >::_M_transfer_from_if()`, and `_M_unlink()`.

##### 5.85.4.2 `_Safe_iterator_base* __gnu_debug::_Safe_iterator_base::_M_prior`

Pointer to the previous iterator in the sequence's list of iterators. Only valid when `_M_sequence != NULL`.

Definition at line 70 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence<_Sequence >::_M_transfer_from_if()`, and `_M_unlink()`.

##### 5.85.4.3 `_Safe_sequence_base* __gnu_debug::_Safe_iterator_base::_M_sequence`

The sequence this iterator references; may be `NULL` to indicate a singular iterator.

Definition at line 57 of file `safe_base.h`.

Referenced by `_M_attached_to()`, `__gnu_debug::_Safe_sequence<_Sequence >::_M_transfer_from_if()`, `_Safe_iterator_base()`, `__gnu_debug::_Safe_local_iterator_base::_Safe_local_iterator_base()`, `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence >::operator++()`, `__gnu_debug::_Safe_iterator<_Base_iterator, map >::operator++()`, `__gnu_debug::_Safe_iterator<_Base_iterator, map >::operator--()`, `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence >::operator=()`, and `__gnu_debug::_Safe_iterator<_Base_iterator, map >::operator=()`.

##### 5.85.4.4 `unsigned int __gnu_debug::_Safe_iterator_base::_M_version`

The version number of this iterator. The sentinel value 0 is used to indicate an invalidated iterator (i.e., one that is singular because of an operation on the container). This version number must equal the version number in the sequence referenced by `_M_sequence` for the iterator to be non-singular.

Definition at line 66 of file `safe_base.h`.

Referenced by `_M_invalidate()`, `__gnu_debug::_Safe_sequence<_Sequence >::_M_transfer_from_if()`, `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence >::operator=()`, and `__gnu_debug::_Safe_iterator<_Base_iterator, map >::operator=()`.

## 5.86.1 Detailed Description

```
template<typename _Iterator, typename _Sequence> class __gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>
```

Safe iterator wrapper.

The class template `_Safe_local_iterator` is a wrapper around an iterator that tracks the iterator's movement among sequences and checks that operations performed on the "safe" iterator are legal. In addition to the basic iterator operations (which are validated, and then passed to the underlying iterator), `_Safe_local_iterator` has member functions for iterator invalidation, attaching/detaching the iterator from sequences, and querying the iterator's state.

Definition at line 59 of file `formatter.h`.

## 5.86.2 Constructor &amp; Destructor Documentation

```
5.86.2.1 template<typename _Iterator, typename _Sequence> __gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>
    >::_Safe_local_iterator( ) [inline], [noexcept]
```

## Postcondition

the iterator is singular and unattached

Definition at line 84 of file `safe_local_iterator.h`.

Referenced by `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::operator++()`.

```
5.86.2.2 template<typename _Iterator, typename _Sequence> __gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>
    >::_Safe_local_iterator( const _Iterator &_i, const _Safe_sequence_base* _cont ) [inline]
```

Safe iterator construction from an unsafe iterator and its sequence.

## Precondition

`seq` is not NULL

## Postcondition

this is not singular

Definition at line 93 of file `safe_local_iterator.h`.

References `__gnu_debug::_Safe_iterator_base::M_singular()`.

```
5.86.2.3 template<typename _Iterator, typename _Sequence> __gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>
    >::_Safe_local_iterator( const _Safe_local_iterator<_Iterator, _Sequence> &_x ) [inline],
    [noexcept]
```

Copy construction.

Definition at line 105 of file `safe_local_iterator.h`.

References `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::M_attach()`.

```
5.86.2.4 template<typename _Iterator, typename _Sequence> __gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>
    >::_Safe_local_iterator( _Safe_local_iterator<_Iterator, _Sequence> &&_x ) [inline], [noexcept]
```

Move construction.

**Postcondition**

`__x` is singular and unattached

Definition at line 122 of file `safe_local_iterator.h`.

References `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence >::_M_attach()`, and `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence >::base()`.

```
5.86.2.5 template<typename _Iterator , typename _Sequence > template<typename _MutableIterator >
    __gnu_debug::_Safe_local_iterator<_Iterator, _Sequence >::_Safe_local_iterator ( const
    _Safe_local_iterator<_MutableIterator, typename __gnu_cxx::enable_if< std::are_same<_MutableIterator,
    typename _Sequence::local_iterator::iterator_type >::_value, _Sequence >::_type > &__x ) [inline]
```

Converting constructor from a mutable iterator to a constant iterator.

Definition at line 141 of file `safe_local_iterator.h`.

References `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence >::_M_attach()`.

**5.86.3 Member Function Documentation**

```
5.86.3.1 void __gnu_debug::_Safe_local_iterator_base::_M_attach ( _Safe_sequence_base * __seq, bool __constant )
    [protected], [inherited]
```

Attaches this iterator to the given container, detaching it from whatever container it was attached to originally. If the new container is the NULL pointer, the iterator is left unattached.

Referenced by `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence >::_M_attach()`, and `__gnu_debug::_Safe_local_iterator_base::_Safe_local_iterator_base()`.

```
5.86.3.2 template<typename _Iterator , typename _Sequence > void __gnu_debug::_Safe_local_iterator<_Iterator,
    _Sequence >::_M_attach ( _Safe_sequence_base * __seq ) [inline]
```

Attach iterator to the given sequence.

Definition at line 304 of file `safe_local_iterator.h`.

References `__gnu_debug::_Safe_local_iterator_base::_M_attach()`.

Referenced by `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence >::_Safe_local_iterator()`, and `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence >::operator=()`.

```
5.86.3.3 void __gnu_debug::_Safe_local_iterator_base::_M_attach_single ( _Safe_sequence_base * __seq, bool __constant )
    throw ) [protected], [inherited]
```

Likewise, but not thread-safe.

Referenced by `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence >::_M_attach_single()`.

```
5.86.3.4 template<typename _Iterator , typename _Sequence > void __gnu_debug::_Safe_local_iterator<_Iterator,
    _Sequence >::_M_attach_single ( _Safe_sequence_base * __seq ) [inline]
```

Likewise, but not thread-safe.

Definition at line 309 of file `safe_local_iterator.h`.

References `__gnu_debug::_Safe_local_iterator_base::_M_attach_single()`.

5.86.3.5 `bool __gnu_debug::_Safe_iterator_base::M_attached_to ( const _Safe_sequence_base * __seq ) const`  
`[inline], [inherited]`

Determines if we are attached to the given sequence.

Definition at line 131 of file `safe_base.h`.

References `__gnu_debug::_Safe_iterator_base::M_sequence`.

5.86.3.6 `bool __gnu_debug::_Safe_iterator_base::M_can_compare ( const _Safe_iterator_base & __x ) const throw ()`  
`[inherited]`

Can we compare this iterator to the given iterator `__x`? Returns true if both iterators are nonsingular and reference the same sequence.

5.86.3.7 `template<typename _Iterator, typename _Sequence > bool __gnu_debug::_Safe_local_iterator<_Iterator, _Sequence >::M_dereferenceable ( ) const` `[inline]`

Is the iterator dereferenceable?

Definition at line 314 of file `safe_local_iterator.h`.

References `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence >::M_is_end()`, and `__gnu_debug::_Safe_iterator_base::M_singular()`.

Referenced by `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence >::operator*()`, and `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence >::operator->()`.

5.86.3.8 `void __gnu_debug::_Safe_local_iterator_base::M_detach ( )` `[protected], [inherited]`

Detach the iterator for whatever container it is attached to, if any.

Referenced by `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence >::operator=()`.

5.86.3.9 `void __gnu_debug::_Safe_local_iterator_base::M_detach_single ( ) throw ()` `[protected], [inherited]`

Likewise, but not thread-safe.

5.86.3.10 `__gnu_cxx::__mutex& __gnu_debug::_Safe_iterator_base::M_get_mutex ( ) throw ()` `[protected], [inherited]`

For use in `_Safe_iterator`.

Referenced by `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence >::operator++()`, `__gnu_debug::_Safe_iterator<_Base_iterator, map >::operator++()`, `__gnu_debug::_Safe_iterator<_Base_iterator, map >::operator--()`, `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence >::operator=()`, and `__gnu_debug::_Safe_iterator<_Base_iterator, map >::operator=()`.

5.86.3.11 `template<typename _Iterator, typename _Sequence > template<typename _Other > bool __gnu_debug::_Safe_local_iterator<_Iterator, _Sequence >::M_in_same_bucket ( const _Safe_local_iterator<_Other, _Sequence > & __other ) const` `[inline]`

Is this iterator part of the same bucket as the other one?

Definition at line 348 of file `safe_local_iterator.h`.

References `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence >::bucket()`.

5.86.3.12 `template<typename _Iterator, typename _Sequence > bool __gnu_debug::Safe_local_iterator< _Iterator, _Sequence >::_M_incrementable ( ) const [inline]`

Is the iterator incrementable?

Definition at line 319 of file `safe_local_iterator.h`.

References `__gnu_debug::Safe_local_iterator< _Iterator, _Sequence >::_M_is_end()`, and `__gnu_debug::Safe_iterator_base::_M_singular()`.

Referenced by `__gnu_debug::Safe_local_iterator< _Iterator, _Sequence >::operator++()`.

5.86.3.13 `void __gnu_debug::Safe_iterator_base::_M_invalidate ( ) [inline],[inherited]`

Invalidate the iterator, making it singular.

Definition at line 146 of file `safe_base.h`.

References `__gnu_debug::Safe_iterator_base::_M_version`.

5.86.3.14 `template<typename _Iterator, typename _Sequence > bool __gnu_debug::Safe_local_iterator< _Iterator, _Sequence >::_M_is_begin ( ) const [inline]`

Is this iterator equal to the sequence's begin(bucket) iterator?

Definition at line 338 of file `safe_local_iterator.h`.

References `__gnu_debug::Safe_local_iterator< _Iterator, _Sequence >::base()`, and `__gnu_debug::Safe_local_iterator< _Iterator, _Sequence >::bucket()`.

5.86.3.15 `template<typename _Iterator, typename _Sequence > bool __gnu_debug::Safe_local_iterator< _Iterator, _Sequence >::_M_is_end ( ) const [inline]`

Is this iterator equal to the sequence's end(bucket) iterator?

Definition at line 342 of file `safe_local_iterator.h`.

References `__gnu_debug::Safe_local_iterator< _Iterator, _Sequence >::base()`, and `__gnu_debug::Safe_local_iterator< _Iterator, _Sequence >::bucket()`.

#### 5.86.4 Member Data Documentation

##### 5.86.4.1 `__Safe_iterator_base* __gnu_debug::Safe_iterator_base::M_next` [inherited]

Pointer to the next iterator in the sequence's list of iterators. Only valid when `_M_sequence != NULL`.

Definition at line 74 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence>::M_transfer_from_if()`, and `__gnu_debug::Safe_iterator_base::M_unlink()`.

##### 5.86.4.2 `__Safe_iterator_base* __gnu_debug::Safe_iterator_base::M_prior` [inherited]

Pointer to the previous iterator in the sequence's list of iterators. Only valid when `_M_sequence != NULL`.

Definition at line 70 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence>::M_transfer_from_if()`, and `__gnu_debug::Safe_iterator_base::M_unlink()`.

##### 5.86.4.3 `__Safe_sequence_base* __gnu_debug::Safe_iterator_base::M_sequence` [inherited]

The sequence this iterator references; may be `NULL` to indicate a singular iterator.

Definition at line 57 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_iterator_base::M_attached_to()`, `__gnu_debug::Safe_sequence<_Sequence>::M_transfer_from_if()`, `__gnu_debug::Safe_iterator_base::Safe_iterator_base()`, `__gnu_debug::Safe_local_iterator_base::Safe_local_iterator_base()`, `__gnu_debug::Safe_local_iterator<_Iterator, _Sequence>::operator++()`, `__gnu_debug::Safe_iterator<_Base_iterator, map>::operator++()`, `__gnu_debug::Safe_iterator<_Base_iterator, map>::operator--()`, `__gnu_debug::Safe_local_iterator<_Iterator, _Sequence>::operator=()`, and `__gnu_debug::Safe_iterator<_Base_iterator, map>::operator=()`.

##### 5.86.4.4 `unsigned int __gnu_debug::Safe_iterator_base::M_version` [inherited]

The version number of this iterator. The sentinel value 0 is used to indicate an invalidated iterator (i.e., one that is singular because of an operation on the container). This version number must equal the version number in the sequence referenced by `_M_sequence` for the iterator to be non-singular.

Definition at line 66 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_iterator_base::M_invalidate()`, `__gnu_debug::Safe_sequence<_Sequence>::M_transfer_from_if()`, `__gnu_debug::Safe_local_iterator<_Iterator, _Sequence>::operator=()`, and `__gnu_debug::Safe_iterator<_Base_iterator, map>::operator=()`.

### 5.87.1 Detailed Description

Basic functionality for a *safe* iterator.

The `_Safe_local_iterator_base` base class implements the functionality of a safe local iterator that is not specific to a particular iterator type. It contains a pointer back to the container it references along with iterator version information and pointers to form a doubly-linked list of local iterators referenced by the container.

This class must not perform any operations that can throw an exception, or the exception guarantees of derived iterators will be broken.

Definition at line 50 of file `safe_unordered_base.h`.

### 5.87.2 Constructor & Destructor Documentation

#### 5.87.2.1 `__gnu_debug::Safe_local_iterator_base::Safe_local_iterator_base ( )` [`inline`], [`protected`]

Initializes the iterator and makes it singular.

Definition at line 54 of file `safe_unordered_base.h`.

#### 5.87.2.2 `__gnu_debug::Safe_local_iterator_base::Safe_local_iterator_base ( const _Safe_sequence_base * __seq, bool __constant )` [`inline`], [`protected`]

Initialize the iterator to reference the container pointed to by `__seq`. `__constant` is true when we are initializing a constant local iterator, and false if it is a mutable local iterator. Note that `__seq` may be NULL, in which case the iterator will be singular. Otherwise, the iterator will reference `__seq` and be nonsingular.

Definition at line 64 of file `safe_unordered_base.h`.

References `_M_attach()`.

#### 5.87.2.3 `__gnu_debug::Safe_local_iterator_base::Safe_local_iterator_base ( const _Safe_local_iterator_base & __x, bool __constant )` [`inline`], [`protected`]

Initializes the iterator to reference the same container that `__x` does. `__constant` is true if this is a constant iterator, and false if it is mutable.

Definition at line 70 of file `safe_unordered_base.h`.

References `_M_attach()`, and `__gnu_debug::Safe_iterator_base::M_sequence`.

### 5.87.3 Member Function Documentation

#### 5.87.3.1 `void __gnu_debug::Safe_local_iterator_base::M_attach ( _Safe_sequence_base * __seq, bool __constant )` [`protected`]

Attaches this iterator to the given container, detaching it from whatever container it was attached to originally. If the new container is the NULL pointer, the iterator is left unattached.

Referenced by `__gnu_debug::Safe_local_iterator< _Iterator, _Sequence >::M_attach()`, and `_Safe_local_iterator_base()`.

5.87.3.2 `void __gnu_debug::Safe_local_iterator_base::M_attach_single ( _Safe_sequence_base * __seq, bool __constant ) throw` [protected]

Likewise, but not thread-safe.

Referenced by `__gnu_debug::Safe_local_iterator< _Iterator, _Sequence >::M_attach_single()`.

5.87.3.3 `bool __gnu_debug::Safe_iterator_base::M_attached_to ( const _Safe_sequence_base * __seq ) const` [inline],[inherited]

Determines if we are attached to the given sequence.

Definition at line 131 of file `safe_base.h`.

References `__gnu_debug::Safe_iterator_base::M_sequence`.

5.87.3.4 `bool __gnu_debug::Safe_iterator_base::M_can_compare ( const _Safe_iterator_base & __x ) const throw` [inherited]

Can we compare this iterator to the given iterator `__x`? Returns true if both iterators are nonsingular and reference the same sequence.

5.87.3.5 `void __gnu_debug::Safe_local_iterator_base::M_detach ( )` [protected]

Detach the iterator for whatever container it is attached to, if any.

Referenced by `__gnu_debug::Safe_local_iterator< _Iterator, _Sequence >::operator=()`.

5.87.3.6 `void __gnu_debug::Safe_local_iterator_base::M_detach_single ( ) throw` [protected]

Likewise, but not thread-safe.

5.87.3.7 `__gnu_cxx::mutex& __gnu_debug::Safe_iterator_base::M_get_mutex ( ) throw` [protected],[inherited]

For use in `_Safe_iterator`.

Referenced by `__gnu_debug::Safe_local_iterator< _Iterator, _Sequence >::operator++()`, `__gnu_debug::Safe_iterator< _Base_iterator, map >::operator++()`, `__gnu_debug::Safe_iterator< _Base_iterator, map >::operator--()`, `__gnu_debug::Safe_local_iterator< _Iterator, _Sequence >::operator=()`, and `__gnu_debug::Safe_iterator< _Base_iterator, map >::operator=()`.

5.87.3.8 `void __gnu_debug::Safe_iterator_base::M_invalidate ( )` [inline],[inherited]

Invalidate the iterator, making it singular.

Definition at line 146 of file `safe_base.h`.

References `__gnu_debug::Safe_iterator_base::M_version`.

5.87.3.9 `void __gnu_debug::Safe_iterator_base::M_reset ( ) throw` [inherited]

Reset all member variables

5.87.3.10 `bool __gnu_debug::Safe_iterator_base::M_singular ( ) const throw` [inherited]

Is this iterator singular?

Referenced by `__gnu_debug::check_singular_aux()`, `__gnu_debug::Safe_local_iterator< _Iterator, _Sequence >::M_dereferenceable()`, `__gnu_debug::Safe_iterator< _Base_iterator, map >::M_dereferenceable()`, `__gnu_debug::Safe_local_iterator< _Iterator, _Sequence >::M_incrementable()`, `__gnu_debug::Safe_iterator< _Base_iterator,`

`map >::M_incrementable()`, and `__gnu_debug::Safe_local_iterator<_Iterator, _Sequence >::Safe_local_iterator()`.

**5.87.3.11** `void __gnu_debug::Safe_iterator_base::M_unlink( ) throw` `[inline]`, `[inherited]`

Unlink itself

Definition at line 155 of file `safe_base.h`.

References `__gnu_debug::Safe_iterator_base::M_next`, and `__gnu_debug::Safe_iterator_base::M_prior`.

## 5.87.4 Member Data Documentation

**5.87.4.1** `_Safe_iterator_base* __gnu_debug::Safe_iterator_base::M_next` `[inherited]`

Pointer to the next iterator in the sequence's list of iterators. Only valid when `_M_sequence != NULL`.

Definition at line 74 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence >::M_transfer_from_if()`, and `__gnu_debug::Safe_iterator_base::M_unlink()`.

**5.87.4.2** `_Safe_iterator_base* __gnu_debug::Safe_iterator_base::M_prior` `[inherited]`

Pointer to the previous iterator in the sequence's list of iterators. Only valid when `_M_sequence != NULL`.

Definition at line 70 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence >::M_transfer_from_if()`, and `__gnu_debug::Safe_iterator_base::M_unlink()`.

**5.87.4.3** `_Safe_sequence_base* __gnu_debug::Safe_iterator_base::M_sequence` `[inherited]`

The sequence this iterator references; may be `NULL` to indicate a singular iterator.

Definition at line 57 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_iterator_base::M_attached_to()`, `__gnu_debug::Safe_sequence<_Sequence >::M_transfer_from_if()`, `__gnu_debug::Safe_iterator_base::Safe_iterator_base()`, `_Safe_local_iterator_base()`, `__gnu_debug::Safe_local_iterator<_Iterator, _Sequence >::operator++()`, `__gnu_debug::Safe_iterator<_Base_iterator, map >::operator++()`, `__gnu_debug::Safe_iterator<_Base_iterator, map >::operator--()`, `__gnu_debug::Safe_local_iterator<_Iterator, _Sequence >::operator=()`, and `__gnu_debug::Safe_iterator<_Base_iterator, map >::operator=()`.

**5.87.4.4** `unsigned int __gnu_debug::Safe_iterator_base::M_version` `[inherited]`

The version number of this iterator. The sentinel value 0 is used to indicate an invalidated iterator (i.e., one that is singular because of an operation on the container). This version number must equal the version number in the sequence referenced by `_M_sequence` for the iterator to be non-singular.

Definition at line 66 of file `safe_base.h`.

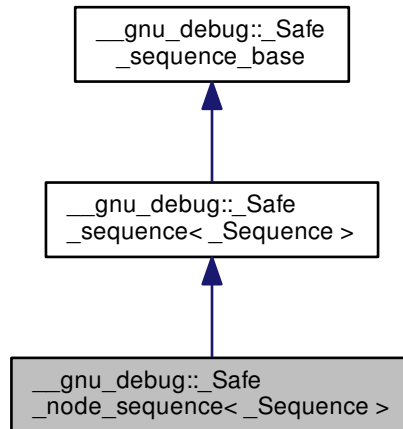

Referenced by `__gnu_debug::Safe_iterator_base::M_invalidate()`, `__gnu_debug::Safe_sequence<_Sequence >::M_transfer_from_if()`, `__gnu_debug::Safe_local_iterator<_Iterator, _Sequence >::operator=()`, and `__gnu_debug::Safe_iterator<_Base_iterator, map >::operator=()`.

- `void \_M\_swap (\_Safe\_sequence\_base &__x) noexcept`

## 5.88.1 Detailed Description

```
template<typename _Sequence>class __gnu_debug::_Safe_node_sequence<_Sequence >
```

Like `_Safe_sequence` but with a special `_M_invalidate_all` implementation not invalidating past-the-end iterators. Used by node based sequence.

Definition at line 131 of file `safe_sequence.h`.

## 5.88.2 Member Function Documentation

5.88.2.1 `void __gnu_debug::_Safe_sequence_base::_M_detach_all ( )` [protected],[inherited]

Detach all iterators, leaving them singular.

Referenced by `__gnu_debug::_Safe_sequence_base::~~_Safe_sequence_base()`.

5.88.2.2 `void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( )` [protected],[inherited]

Detach all singular iterators.

## Postcondition

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

5.88.2.3 `__gnu_cxx::mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw` [protected],[inherited]

For use in `_Safe_sequence`.

Referenced by `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if()`.

5.88.2.4 `void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const` [inline],[protected],[inherited]

Invalidates all iterators.

Definition at line 256 of file `safe_base.h`.

References `__gnu_debug::_Safe_sequence_base::_M_version`.

5.88.2.5 `template<typename _Sequence> template<typename _Predicate> void __gnu_debug::_Safe_sequence<_Sequence>::_M_invalidate_if ( _Predicate __pred )` [inherited]

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

Definition at line 38 of file `safe_sequence.tcc`.

5.88.2.6 `void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( )` [protected],[inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

**5.88.2.7** `void __gnu_debug::Safe_sequence_base::M_swap ( _Safe_sequence_base & __x )` [protected], [noexcept], [inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

**5.88.2.8** `template<typename _Sequence > template<typename _Predicate > void __gnu_debug::Safe_sequence<_Sequence >::M_transfer_from_if ( _Safe_sequence<_Sequence > & __from, _Predicate __pred )` [inherited]

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

Definition at line 69 of file `safe_sequence.tcc`.

References `__gnu_debug::Safe_sequence_base::M_const_iterators`, `__gnu_debug::Safe_iterator_base::M_detach_single()`, `__gnu_debug::Safe_sequence_base::M_get_mutex()`, `__gnu_debug::Safe_sequence_base::M_iterators`, `__gnu_debug::Safe_iterator_base::M_next`, `__gnu_debug::Safe_iterator_base::M_prior`, `__gnu_debug::Safe_iterator_base::M_sequence`, and `__gnu_debug::Safe_iterator_base::M_version`.

### 5.88.3 Member Data Documentation

**5.88.3.1** `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::M_const_iterators` [inherited]

The list of constant iterators that reference this container.

Definition at line 197 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence >::M_transfer_from_if()`.

**5.88.3.2** `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::M_iterators` [inherited]

The list of mutable iterators that reference this container.

Definition at line 194 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence >::M_transfer_from_if()`.

**5.88.3.3** `unsigned int __gnu_debug::Safe_sequence_base::M_version` [mutable], [inherited]

The container version number. This number may never be 0.

Definition at line 200 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence_base::M_invalidate_all()`.

### 5.89.1 Detailed Description

```
template<typename _Sequence>class __gnu_debug::_Safe_sequence< _Sequence >
```

Base class for constructing a *safe* sequence type that tracks iterators that reference it.

The class template `_Safe_sequence` simplifies the construction of *safe* sequences that track the iterators that reference the sequence, so that the iterators are notified of changes in the sequence that may affect their operation, e.g., if the container invalidates its iterators or is destructed. This class template may only be used by deriving from it and passing the name of the derived class as its template parameter via the curiously recurring template pattern. The derived class must have `iterator` and `const_iterator` types that are instantiations of class template `_Safe_iterator` for this sequence. Iterators will then be tracked automatically.

Definition at line 62 of file `formatter.h`.

### 5.89.2 Member Function Documentation

5.89.2.1 `void __gnu_debug::_Safe_sequence_base::_M_detach_all ( ) [protected], [inherited]`

Detach all iterators, leaving them singular.

Referenced by `__gnu_debug::_Safe_sequence_base::~~_Safe_sequence_base()`.

#### Friends

- class `_Safe_iterator_base`

#### 5.90.1 Detailed Description

Base class that supports tracking of iterators that reference a sequence.

The `_Safe_sequence_base` class provides basic support for tracking iterators into a sequence. Sequences that track iterators must derived from `_Safe_sequence_base` publicly, so that safe iterators (which inherit `_Safe_iterator_base`) can attach to them. This class contains two linked lists of iterators, one for constant iterators and one for mutable iterators, and a version number that allows very fast invalidation of all iterators that reference the container.

This class must ensure that no operation on it may throw an exception, otherwise *safe* sequences may fail to provide the exception-safety guarantees required by the C++ standard.

Definition at line 188 of file `safe_base.h`.

#### 5.90.2 Constructor & Destructor Documentation

##### 5.90.2.1 `__gnu_debug::_Safe_sequence_base::~~Safe_sequence_base()` [`inline`], [`protected`]

### 5.91.1 Detailed Description

```
template<typename _Container>class __gnu_debug::Safe_unordered_container<_Container >
```

Base class for constructing a *safe* unordered container type that tracks iterators that reference it.

The class template `_Safe_unordered_container` simplifies the construction of *safe* unordered containers that track the iterators that reference the container, so that the iterators are notified of changes in the container that may affect their operation, e.g., if the container invalidates its iterators or is destructed. This class template may only be used by deriving from it and passing the name of the derived class as its template parameter via the curiously recurring template pattern. The derived class must have `iterator` and `const_iterator` types that are instantiations of class template `_Safe_iterator` for this container and `local_iterator` and `const_local_iterator` types that are instantiations of class template `_Safe_local_iterator` for this container. Iterators will then be tracked automatically.

Definition at line 58 of file `safe_unordered_container.h`.

### 5.91.2 Member Function Documentation

5.91.2.1 `void __gnu_debug::Safe_unordered_container_base::_M_detach_all ( )` [protected], [inherited]

Detach all iterators, leaving them singular.

5.91.2.2 `void __gnu_debug::Safe_sequence_base::_M_detach_singular ( )` [protected], [inherited]

Detach all singular iterators.

#### Postcondition

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

5.91.2.3 `__gnu_cxx::mutex& __gnu_debug::Safe_sequence_base::_M_get_mutex ( ) throw` [protected], [inherited]

For use in `_Safe_sequence`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence >::_M_transfer_from_if()`.

5.91.2.4 `void __gnu_debug::Safe_sequence_base::_M_invalidate_all ( ) const` [inline], [protected], [inherited]

Invalidates all iterators.

Definition at line 256 of file `safe_base.h`.

References `__gnu_debug::Safe_sequence_base::_M_version`.

5.91.2.5 `template<typename _Container > template<typename _Predicate > void __gnu_debug::Safe_unordered_container<_Container >::_M_invalidate_if ( _Predicate __pred )` [protected]

Invalidates all iterators `x` that reference this container, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the *safe* ones.

Definition at line 38 of file `safe_unordered_container.tcc`.

5.91.2.6 `template<typename _Container > template<typename _Predicate > void __gnu_debug::Safe_unordered_container<_Container >::M_invalidate_local_if ( _Predicate __pred )`  
`[protected]`

Invalidates all local iterators `x` that reference this container, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal local iterators nested in the safe ones.

Definition at line 70 of file `safe_unordered_container.tcc`.

5.91.2.7 `void __gnu_debug::Safe_sequence_base::M_revalidate_singular ( )` `[protected]`, `[inherited]`

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

5.91.2.8 `void __gnu_debug::Safe_unordered_container_base::M_swap ( _Safe_unordered_container_base & __x )`  
`[protected]`, `[noexcept]`, `[inherited]`

Swap this container with the given container. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

5.91.2.9 `void __gnu_debug::Safe_sequence_base::M_swap ( _Safe_sequence_base & __x )` `[protected]`,  
`[noexcept]`, `[inherited]`

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

### 5.91.3 Member Data Documentation

5.91.3.1 `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::M_const_iterators` `[inherited]`

The list of constant iterators that reference this container.

## Friends

- class `_Safe_local_iterator_base`

## 5.92.1 Detailed Description

Base class that supports tracking of local iterators that reference an unordered container.

The `_Safe_unordered_container_base` class provides basic support for tracking iterators into an unordered container. Containers that track iterators must derived from `_Safe_unordered_container_base` publicly, so that safe iterators (which inherit `_Safe_iterator_base`) can attach to them. This class contains four linked lists of iterators, one for constant iterators, one for mutable iterators, one for constant local iterators, one for mutable local iterators and a version number that allows very fast invalidation of all iterators that reference the container.

This class must ensure that no operation on it may throw an exception, otherwise *safe* containers may fail to provide the exception-safety guarantees required by the C++ standard.

Definition at line 120 of file `safe_unordered_base.h`.

## 5.92.2 Constructor &amp; Destructor Documentation

5.92.2.1 `__gnu_debug::_Safe_unordered_container_base::~_Safe_unordered_container_base ( )` `[inline]`, `[protected]`, `[noexcept]`

Notify all iterators that reference this container that the container is being destroyed.

Definition at line 151 of file `safe_unordered_base.h`.

## 5.92.3 Member Function Documentation

5.92.3.1 `void __gnu_debug::_Safe_unordered_container_base::_M_detach_all ( )` `[protected]`

Detach all iterators, leaving them singular.

5.92.3.2 `void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( )` `[protected]`, `[inherited]`

Detach all singular iterators.

## Postcondition

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

5.92.3.3 `__gnu_cxx::mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( )` `throw` `[protected]`, `[inherited]`

For use in `_Safe_sequence`.

Referenced by `__gnu_debug::_Safe_sequence<_Sequence >::_M_transfer_from_if()`.

5.92.3.4 `void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const` `[inline], [protected], [inherited]`

Invalidates all iterators.

Definition at line 256 of file `safe_base.h`.

References `__gnu_debug::_Safe_sequence_base::_M_version`.

5.92.3.5 `void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( )` `[protected], [inherited]`

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

5.92.3.6 `void __gnu_debug::_Safe_unordered_container_base::_M_swap ( _Safe_unordered_container_base & __x )` `[protected], [noexcept]`

Swap this container with the given container. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

5.92.3.7 `void __gnu_debug::_Safe_sequence_base::_M_swap ( _Safe_sequence_base & __x )` `[protected], [noexcept], [inherited]`

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

#### 5.92.4 Member Data Documentation

5.92.4.1 `_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators` `[inherited]`

The list of constant iterators that reference this container.

Definition at line 197 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if()`.

5.92.4.2 `_Safe_iterator_base* __gnu_debug::_Safe_unordered_container_base::_M_const_local_iterators`

The list of constant local iterators that reference this container.

Definition at line 130 of file `safe_unordered_base.h`.

5.92.4.3 `_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators` `[inherited]`

The list of mutable iterators that reference this container.

Definition at line 194 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if()`.

5.92.4.4 `_Safe_iterator_base* __gnu_debug::_Safe_unordered_container_base::_M_local_iterators`

The list of mutable local iterators that reference this container.

Definition at line 127 of file `safe_unordered_base.h`.

5.92.4.5 `unsigned int __gnu_debug::_Safe_sequence_base::_M_version` `[mutable], [inherited]`

The container version number. This number may never be 0.

Definition at line 200 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence_base::M_invalidate_all()`.

## 5.93 `__gnu_debug::Safe_vector<_SafeSequence, _BaseSequence>` Class Template Reference

### Protected Member Functions

- `Safe_vector` (const `Safe_vector` &) noexcept
- `Safe_vector` (size\_type \_\_n) noexcept
- `Safe_vector` (`Safe_vector` && \_\_x) noexcept
- bool `M_requires_reallocation` (size\_type \_\_elements) const noexcept
- void `M_update_guaranteed_capacity` () noexcept
- `Safe_vector` & `operator=` (const `Safe_vector` &) noexcept
- `Safe_vector` & `operator=` (`Safe_vector` && \_\_x) noexcept

### Protected Attributes

- size\_type `M_guaranteed_capacity`

#### 5.93.1 Detailed Description

```
template<typename _SafeSequence, typename _BaseSequence>class __gnu_debug::Safe_vector<_SafeSequence, _BaseSequence >
```

Base class for Debug Mode vector.

Adds information about the guaranteed capacity, which is useful for detecting code which relies on non-portable implementation details of the libstdc++ reallocation policy.

Definition at line 50 of file `debug/vector`.

The documentation for this class was generated from the following file:

- [debug/vector](#)

## 5.94 `__gnu_debug::Sequence_traits<_Sequence>` Struct Template Reference

### Public Types

- typedef `_Distance_traits`  
< typename `_Sequence::iterator` > `_DistTraits`

### Static Public Member Functions

- static `_DistTraits::type` `S_size` (const `_Sequence` & \_\_seq)

### 5.94.1 Detailed Description

```
template<typename _Sequence>struct __gnu_debug::_Sequence_traits< _Sequence >
```

Sequence traits giving the size of a container if possible.

Definition at line 60 of file safe\_iterator.h.

The documentation for this struct was generated from the following file:

- [safe\\_iterator.h](#)

## 5.95.1 Detailed Description

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>class
__gnu_debug::basic_string<_CharT, _Traits, _Allocator>
```

Class `std::basic_string` with safety/checking/debug instrumentation.

Definition at line 44 of file `debug/string`.

## 5.95.2 Member Function Documentation

5.95.2.1 `void __gnu_debug::Safe_sequence_base::M_detach_all ( )` [protected], [inherited]

Detach all iterators, leaving them singular.

Referenced by `__gnu_debug::Safe_sequence_base::~~Safe_sequence_base()`.

5.95.2.2 `void __gnu_debug::Safe_sequence_base::M_detach_singular ( )` [protected], [inherited]

Detach all singular iterators.

## Postcondition

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

5.95.2.3 `__gnu_cxx::mutex& __gnu_debug::Safe_sequence_base::M_get_mutex ( ) throw` [protected], [inherited]

For use in `_Safe_sequence`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence>::M_transfer_from_if()`.

5.95.2.4 `void __gnu_debug::Safe_sequence_base::M_invalidate_all ( ) const` [inline], [protected], [inherited]

Invalidates all iterators.

Definition at line 256 of file `safe_base.h`.

References `__gnu_debug::Safe_sequence_base::_M_version`.

5.95.2.5 `void __gnu_debug::Safe_sequence<basic_string<_CharT, _Traits, _Allocator>>::M_invalidate_if ( _Predicate __pred )` [inherited]

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

5.95.2.6 `void __gnu_debug::Safe_sequence_base::M_revalidate_singular ( )` [protected], [inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

5.95.2.7 `void __gnu_debug::Safe_sequence_base::M_swap ( _Safe_sequence_base & __x )` [protected], [noexcept], [inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

5.95.2.8 `void __gnu_debug::Safe_sequence< basic_string< _CharT, _Traits, _Allocator > >::M_transfer_from_if ( _Safe_sequence< basic_string< _CharT, _Traits, _Allocator > > & __from, _Predicate __pred )` [inherited]

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

5.95.2.9 `basic_string& std::basic_string< _CharT, _Traits, _Allocator >::append ( const basic_string< _CharT, _Traits, _Allocator > & __str )` [inherited]

Append a string to this string.

Parameters

|                    |                       |
|--------------------|-----------------------|
| <code>__str</code> | The string to append. |
|--------------------|-----------------------|

Returns

Reference to this string.

5.95.2.10 `basic_string& std::basic_string< _CharT, _Traits, _Allocator >::append ( const basic_string< _CharT, _Traits, _Allocator > & __str, size_type __pos, size_type __n = npos )` [inherited]

Append a substring.

Parameters

|                    |                                                             |
|--------------------|-------------------------------------------------------------|
| <code>__str</code> | The string to append.                                       |
| <code>__pos</code> | Index of the first character of <code>str</code> to append. |
| <code>__n</code>   | The number of characters to append.                         |

Returns

Reference to this string.

Exceptions

|                                |                                             |
|--------------------------------|---------------------------------------------|
| <code>std::out_of_range</code> | if <code>__pos</code> is not a valid index. |
|--------------------------------|---------------------------------------------|

This function appends `__n` characters from `__str` starting at `__pos` to this string. If `__n` is larger than the number of available characters in `__str`, the remainder of `__str` is appended.

5.95.2.11 `basic_string& std::basic_string< _CharT, _Traits, _Allocator >::append ( initializer_list< _CharT > __l )` [inline], [inherited]

Append an `initializer_list` of characters.

Parameters

|                  |                                                            |
|------------------|------------------------------------------------------------|
| <code>__l</code> | The <code>initializer_list</code> of characters to append. |
|------------------|------------------------------------------------------------|

Returns

Reference to this string.

Definition at line 4189 of file `basic_string.h`.

5.95.2.12 `basic_string& std::basic_string<_CharT, _Traits, _Allocator >::assign ( const basic_string<_CharT, _Traits, _Allocator > &_str )` [inherited]

Set value to contents of another string.

## Parameters

|                    |                       |
|--------------------|-----------------------|
| <code>__str</code> | Source string to use. |
|--------------------|-----------------------|

## Returns

Reference to this string.

5.95.2.13 `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::assign ( basic_string<_CharT, _Traits, _Allocator> &&__str )` [inline],[inherited]

Set value to contents of another string.

## Parameters

|                    |                       |
|--------------------|-----------------------|
| <code>__str</code> | Source string to use. |
|--------------------|-----------------------|

## Returns

Reference to this string.

This function sets this string to the exact contents of `__str`. `__str` is a valid, but unspecified string.

Definition at line 4272 of file `basic_string.h`.

5.95.2.14 `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::assign ( const basic_string<_CharT, _Traits, _Allocator> &__str, size_type __pos, size_type __n = npos )` [inline],[inherited]

Set value to a substring of a string.

## Parameters

|                    |                                      |
|--------------------|--------------------------------------|
| <code>__str</code> | The string to use.                   |
| <code>__pos</code> | Index of the first character of str. |
| <code>__n</code>   | Number of characters to use.         |

## Returns

Reference to this string.

## Exceptions

|                                |                                           |
|--------------------------------|-------------------------------------------|
| <code>std::out_of_range</code> | if <code>pos</code> is not a valid index. |
|--------------------------------|-------------------------------------------|

This function sets this string to the substring of `__str` consisting of `__n` characters at `__pos`. If `__n` is larger than the number of available characters in `__str`, the remainder of `__str` is used.

Definition at line 4293 of file `basic_string.h`.

5.95.2.15 `const_reference std::basic_string<_CharT, _Traits, _Allocator>::at ( size_type __n ) const` [inline],[inherited]

Provides access to the data contained in the string.

## Parameters

|                  |                                       |
|------------------|---------------------------------------|
| <code>__n</code> | The index of the character to access. |
|------------------|---------------------------------------|

## Returns

Read-only (const) reference to the character.

## Exceptions

|                                |                                  |
|--------------------------------|----------------------------------|
| <code>std::out_of_range</code> | If <i>n</i> is an invalid index. |
|--------------------------------|----------------------------------|

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails.

Definition at line 3993 of file `basic_string.h`.

**5.95.2.16** reference `std::basic_string<_CharT, _Traits, _Allocator >::at ( size_type __n )` `[inline]`, `[inherited]`

Provides access to the data contained in the string.

## Parameters

|                  |                                       |
|------------------|---------------------------------------|
| <code>__n</code> | The index of the character to access. |
|------------------|---------------------------------------|

## Returns

Read/write reference to the character.

## Exceptions

|                                |                                  |
|--------------------------------|----------------------------------|
| <code>std::out_of_range</code> | If <i>n</i> is an invalid index. |
|--------------------------------|----------------------------------|

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails. Success results in unsharing the string.

Definition at line 4015 of file `basic_string.h`.

**5.95.2.17** reference `std::basic_string<_CharT, _Traits, _Allocator >::back ( )` `[inline]`, `[inherited]`

Returns a read/write reference to the data at the last element of the string.

Definition at line 4054 of file `basic_string.h`.

**5.95.2.18** const reference `std::basic_string<_CharT, _Traits, _Allocator >::back ( ) const` `[inline]`, `[noexcept]`, `[inherited]`

Returns a read-only (constant) reference to the data at the last element of the string.

Definition at line 4065 of file `basic_string.h`.

**5.95.2.19** size\_type `std::basic_string<_CharT, _Traits, _Allocator >::capacity ( ) const` `[inline]`, `[noexcept]`, `[inherited]`

Returns the total number of characters that the string can hold before needing to allocate more memory.

Definition at line 3889 of file `basic_string.h`.

**5.95.2.20** int `std::basic_string<_CharT, _Traits, _Allocator >::compare ( const basic_string<_CharT, _Traits, _Allocator > &__str ) const` `[inline]`, `[inherited]`

Compare to a string.

## Parameters

|                    |                            |
|--------------------|----------------------------|
| <code>__str</code> | String to compare against. |
|--------------------|----------------------------|

## Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Returns an integer  $< 0$  if this string is ordered before `__str`,  $0$  if their values are equivalent, or  $> 0$  if this string is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of `size()` and `str.size()`. The function then compares the two strings by calling `traits::compare(data(), str.data(), rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 5675 of file `basic_string.h`.

```
5.95.2.21 int std::basic_string<_CharT, _Traits, _Allocator >::compare ( size_type __pos, size_type __n, const
        basic_string<_CharT, _Traits, _Allocator > &__str ) const [inherited]
```

Compare substring to a string.

## Parameters

|                    |                                        |
|--------------------|----------------------------------------|
| <code>__pos</code> | Index of first character of substring. |
| <code>__n</code>   | Number of characters in substring.     |
| <code>__str</code> | String to compare against.             |

## Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Form the substring of this string from the `__n` characters starting at `__pos`. Returns an integer  $< 0$  if the substring is ordered before `__str`,  $0$  if their values are equivalent, or  $> 0$  if the substring is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__str.size()`. The function then compares the two strings by calling `traits::compare(substring.data(), str.data(), rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

```
5.95.2.22 int std::basic_string<_CharT, _Traits, _Allocator >::compare ( size_type __pos1, size_type __n1, const
        basic_string<_CharT, _Traits, _Allocator > &__str, size_type __pos2, size_type __n2 = npos ) const
        [inherited]
```

Compare substring to a substring.

## Parameters

|                     |                                                             |
|---------------------|-------------------------------------------------------------|
| <code>__pos1</code> | Index of first character of substring.                      |
| <code>__n1</code>   | Number of characters in substring.                          |
| <code>__str</code>  | String to compare against.                                  |
| <code>__pos2</code> | Index of first character of substring of <code>str</code> . |
| <code>__n2</code>   | Number of characters in substring of <code>str</code> .     |

## Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Form the substring of this string from the `__n1` characters starting at `__pos1`. Form the substring of `__str` from the `__n2` characters starting at `__pos2`. Returns an integer  $< 0$  if this substring is ordered before the substring of `__str`,  $0$  if their values are equivalent, or  $> 0$  if this substring is ordered after the substring of `__str`. Determines the effective

length `rlen` of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling `traits::compare(substring.data(),str.substr(pos2,n2).data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

**5.95.2.23** `bool std::basic_string<_CharT, _Traits, _Allocator >::empty ( ) const` `[inline]`, `[noexcept]`, `[inherited]`

Returns true if the string is empty. Equivalent to `*this == ""`.

Definition at line 3939 of file `basic_string.h`.

**5.95.2.24** `iterator std::basic_string<_CharT, _Traits, _Allocator >::erase ( iterator __position )` `[inline]`, `[inherited]`

Remove one character.

Parameters

|                         |                                               |
|-------------------------|-----------------------------------------------|
| <code>__position</code> | Iterator referencing the character to remove. |
|-------------------------|-----------------------------------------------|

Returns

iterator referencing same location after removal.

Removes the character at `__position` from this string. The value of the string doesn't change if an error is thrown.

Definition at line 4639 of file `basic_string.h`.

**5.95.2.25** `iterator std::basic_string<_CharT, _Traits, _Allocator >::erase ( iterator __first, iterator __last )` `[inherited]`

Remove a range of characters.

Parameters

|                      |                                                     |
|----------------------|-----------------------------------------------------|
| <code>__first</code> | Iterator referencing the first character to remove. |
| <code>__last</code>  | Iterator referencing the end of the range.          |

Returns

Iterator referencing location of first after removal.

Removes the characters in the range `[first,last)` from this string. The value of the string doesn't change if an error is thrown.

**5.95.2.26** `size_type std::basic_string<_CharT, _Traits, _Allocator >::find ( const basic_string<_CharT, _Traits, _Allocator > &__str, size_type __pos = 0 ) const` `[inline]`, `[noexcept]`, `[inherited]`

Find position of a string.

Parameters

|                    |                                                |
|--------------------|------------------------------------------------|
| <code>__str</code> | String to locate.                              |
| <code>__pos</code> | Index of character to search from (default 0). |

**Returns**

Index of start of first occurrence.

Starting from `__pos`, searches forward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

Definition at line 5183 of file `basic_string.h`.

**5.95.2.27** `size_type std::basic_string<_CharT, _Traits, _Allocator >::find_first_not_of ( const basic_string<_CharT, _Traits, _Allocator > & __str, size_type __pos = 0 ) const` `[inline]`, `[noexcept]`, `[inherited]`

Find position of a character not in string.

**Parameters**

|                    |                                                |
|--------------------|------------------------------------------------|
| <code>__str</code> | String containing characters to avoid.         |
| <code>__pos</code> | Index of character to search from (default 0). |

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 5491 of file `basic_string.h`.

**5.95.2.28** `size_type std::basic_string<_CharT, _Traits, _Allocator >::find_first_of ( const basic_string<_CharT, _Traits, _Allocator > & __str, size_type __pos = 0 ) const` `[inline]`, `[noexcept]`, `[inherited]`

Find position of a character of string.

**Parameters**

|                    |                                                |
|--------------------|------------------------------------------------|
| <code>__str</code> | String containing characters to locate.        |
| <code>__pos</code> | Index of character to search from (default 0). |

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for one of the characters of `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 5324 of file `basic_string.h`.

**5.95.2.29** `size_type std::basic_string<_CharT, _Traits, _Allocator >::find_last_not_of ( const basic_string<_CharT, _Traits, _Allocator > & __str, size_type __pos = npos ) const` `[inline]`, `[noexcept]`, `[inherited]`

Find last position of a character not in string.

**Parameters**

|                    |                                        |
|--------------------|----------------------------------------|
| <code>__str</code> | String containing characters to avoid. |
|--------------------|----------------------------------------|

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__pos</code> | Index of character to search back from (default end). |
|--------------------|-------------------------------------------------------|

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 5573 of file `basic_string.h`.

**5.95.2.30** `size_type std::basic_string<_CharT, _Traits, _Allocator >::find_last_of ( const basic_string<_CharT, _Traits, _Allocator > &__str, size_type __pos = npos ) const` `[inline]`, `[noexcept]`, `[inherited]`

Find last position of a character of string.

**Parameters**

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__str</code> | String containing characters to locate.               |
| <code>__pos</code> | Index of character to search back from (default end). |

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for one of the characters of `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 5408 of file `basic_string.h`.

**5.95.2.31** `reference std::basic_string<_CharT, _Traits, _Allocator >::front ( )` `[inline]`, `[inherited]`

Returns a read/write reference to the data at the first element of the string.

Definition at line 4032 of file `basic_string.h`.

**5.95.2.32** `const_reference std::basic_string<_CharT, _Traits, _Allocator >::front ( ) const` `[inline]`, `[noexcept]`, `[inherited]`

Returns a read-only (constant) reference to the data at the first element of the string.

Definition at line 4043 of file `basic_string.h`.

**5.95.2.33** `allocator_type std::basic_string<_CharT, _Traits, _Allocator >::get_allocator ( ) const` `[inline]`, `[noexcept]`, `[inherited]`

Return copy of allocator used to construct this string.

Definition at line 5153 of file `basic_string.h`.

**5.95.2.34** `void std::basic_string<_CharT, _Traits, _Allocator >::insert ( iterator __p, size_type __n, _CharT __c )` `[inline]`, `[inherited]`

Insert multiple characters.

## Parameters

|                  |                                                       |
|------------------|-------------------------------------------------------|
| <code>__p</code> | Iterator referencing location in string to insert at. |
| <code>__n</code> | Number of characters to insert                        |
| <code>__c</code> | The character to insert.                              |

## Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Inserts `__n` copies of character `__c` starting at the position referenced by iterator `__p`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4410 of file `basic_string.h`.

**5.95.2.35** `void std::basic_string<_CharT, _Traits, _Allocator >::insert ( iterator __p, _InputIterator __beg, _InputIterator __end ) [inline],[inherited]`

Insert a range of characters.

## Parameters

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__p</code>   | Iterator referencing location in string to insert at. |
| <code>__beg</code> | Start of range.                                       |
| <code>__end</code> | End of range.                                         |

## Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Inserts characters in range `[__beg,__end)`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4427 of file `basic_string.h`.

**5.95.2.36** `void std::basic_string<_CharT, _Traits, _Allocator >::insert ( iterator __p, initializer_list<_CharT > __l ) [inline],[inherited]`

Insert an `initializer_list` of characters.

## Parameters

|                  |                                                            |
|------------------|------------------------------------------------------------|
| <code>__p</code> | Iterator referencing location in string to insert at.      |
| <code>__l</code> | The <code>initializer_list</code> of characters to insert. |

## Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Definition at line 4438 of file `basic_string.h`.

**5.95.2.37** `basic_string& std::basic_string<_CharT, _Traits, _Allocator >::insert ( size_type __pos1, const basic_string<_CharT, _Traits, _Allocator > & __str ) [inline],[inherited]`

Insert value of a string.

## Parameters

|                     |                                                       |
|---------------------|-------------------------------------------------------|
| <code>__pos1</code> | Iterator referencing location in string to insert at. |
| <code>__str</code>  | The string to insert.                                 |

**Returns**

Reference to this string.

**Exceptions**

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Inserts value of `__str` starting at `__pos1`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4458 of file `basic_string.h`.

**5.95.2.38** `basic_string& std::basic_string<_CharT, _Traits, _Allocator >::insert ( size_type __pos1, const basic_string<_CharT, _Traits, _Allocator > & __str, size_type __pos2, size_type __n = npos )` `[inline]`, `[inherited]`

Insert a substring.

**Parameters**

|                     |                                                       |
|---------------------|-------------------------------------------------------|
| <code>__pos1</code> | Iterator referencing location in string to insert at. |
| <code>__str</code>  | The string to insert.                                 |
| <code>__pos2</code> | Start of characters in <code>str</code> to insert.    |
| <code>__n</code>    | Number of characters to insert.                       |

**Returns**

Reference to this string.

**Exceptions**

|                                |                                                                           |
|--------------------------------|---------------------------------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> .                           |
| <code>std::out_of_range</code> | If <code>pos1 &gt; size()</code> or <code>__pos2 &gt; str.size()</code> . |

Starting at `pos1`, insert `__n` character of `__str` beginning with `__pos2`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos1` is beyond the end of this string or `__pos2` is beyond the end of `__str`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4480 of file `basic_string.h`.

**5.95.2.39** `iterator std::basic_string<_CharT, _Traits, _Allocator >::insert ( iterator __p, _CharT __c )` `[inline]`, `[inherited]`

Insert one character.

**Parameters**

|                  |                                                       |
|------------------|-------------------------------------------------------|
| <code>__p</code> | Iterator referencing position in string to insert at. |
| <code>__c</code> | The character to insert.                              |

**Returns**

Iterator referencing newly inserted char.

**Exceptions**

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Inserts character `__c` at position referenced by `__p`. If adding character causes the length to exceed `max_size()`, `length_error` is thrown. If `__p` is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4562 of file `basic_string.h`.

5.95.2.40 `size_type std::basic_string<_CharT, _Traits, _Allocator >::length ( ) const` [inline], [noexcept], [inherited]

Returns the number of characters in the string, not including any null-termination.

Definition at line 3832 of file basic\_string.h.

5.95.2.41 `size_type std::basic_string<_CharT, _Traits, _Allocator >::max_size ( ) const` [inline], [noexcept], [inherited]

Returns the size() of the largest possible string.

Definition at line 3837 of file basic\_string.h.

5.95.2.42 `basic_string& std::basic_string<_CharT, _Traits, _Allocator >::operator+=( const basic_string<_CharT, _Traits, _Allocator > &__str )` [inline], [inherited]

Append a string to this string.

Parameters

|                    |                       |
|--------------------|-----------------------|
| <code>__str</code> | The string to append. |
|--------------------|-----------------------|

Returns

Reference to this string.

Definition at line 4079 of file basic\_string.h.

5.95.2.43 `basic_string& std::basic_string<_CharT, _Traits, _Allocator >::replace ( size_type __pos, size_type __n, const basic_string<_CharT, _Traits, _Allocator > &__str )` [inline], [inherited]

Replace characters with value from another string.

Parameters

|                    |                                      |
|--------------------|--------------------------------------|
| <code>__pos</code> | Index of first character to replace. |
| <code>__n</code>   | Number of characters to be replaced. |
| <code>__str</code> | String to insert.                    |

Returns

Reference to this string.

Exceptions

|                                |                                                       |
|--------------------------------|-------------------------------------------------------|
| <code>std::out_of_range</code> | If <code>pos</code> is beyond the end of this string. |
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> .       |

Removes the characters in the range [`__pos`, `__pos+__n`) from this string. In place, the value of `__str` is inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4693 of file basic\_string.h.

5.95.2.44 `basic_string& std::basic_string<_CharT, _Traits, _Allocator >::replace ( size_type __pos1, size_type __n1, const basic_string<_CharT, _Traits, _Allocator > &__str, size_type __pos2, size_type __n2 = npos )` [inline], [inherited]

Replace characters with value from another string.

## Parameters

|                     |                                                      |
|---------------------|------------------------------------------------------|
| <code>__pos1</code> | Index of first character to replace.                 |
| <code>__n1</code>   | Number of characters to be replaced.                 |
| <code>__str</code>  | String to insert.                                    |
| <code>__pos2</code> | Index of first character of <code>str</code> to use. |
| <code>__n2</code>   | Number of characters from <code>str</code> to use.   |

## Returns

Reference to this string.

## Exceptions

|                                |                                                                               |
|--------------------------------|-------------------------------------------------------------------------------|
| <code>std::out_of_range</code> | If <code>__pos1 &gt; size()</code> or <code>__pos2 &gt; __str.size()</code> . |
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> .                               |

Removes the characters in the range `[__pos1, __pos1 + n)` from this string. In place, the value of `__str` is inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4715 of file `basic_string.h`.

**5.95.2.45** `basic_string& std::basic_string<_CharT, _Traits, _Allocator >::replace ( iterator __i1, iterator __i2, const basic_string<_CharT, _Traits, _Allocator > & __str )` `[inline]`, `[inherited]`

Replace range of characters with string.

## Parameters

|                    |                                                 |
|--------------------|-------------------------------------------------|
| <code>__i1</code>  | Iterator referencing start of range to replace. |
| <code>__i2</code>  | Iterator referencing end of range to replace.   |
| <code>__str</code> | String value to insert.                         |

## Returns

Reference to this string.

## Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Removes the characters in the range `[__i1, __i2)`. In place, the value of `__str` is inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4802 of file `basic_string.h`.

**5.95.2.46** `basic_string& std::basic_string<_CharT, _Traits, _Allocator >::replace ( iterator __i1, iterator __i2, const _CharT * __s, size_type __n )` `[inline]`, `[inherited]`

Replace range of characters with C substring.

## Parameters

|                   |                                                 |
|-------------------|-------------------------------------------------|
| <code>__i1</code> | Iterator referencing start of range to replace. |
|-------------------|-------------------------------------------------|

|                   |                                                     |
|-------------------|-----------------------------------------------------|
| <code>__i2</code> | Iterator referencing end of range to replace.       |
| <code>__s</code>  | C string value to insert.                           |
| <code>__n</code>  | Number of characters from <code>s</code> to insert. |

**Returns**

Reference to this string.

**Exceptions**

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Removes the characters in the range `[__i1, __i2)`. In place, the first `__n` characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4821 of file `basic_string.h`.

**5.95.2.47** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::replace ( iterator __i1, iterator __i2, const _CharT * __s )` `[inline]`, `[inherited]`

Replace range of characters with C string.

**Parameters**

|                   |                                                 |
|-------------------|-------------------------------------------------|
| <code>__i1</code> | Iterator referencing start of range to replace. |
| <code>__i2</code> | Iterator referencing end of range to replace.   |
| <code>__s</code>  | C string value to insert.                       |

**Returns**

Reference to this string.

**Exceptions**

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Removes the characters in the range `[__i1, __i2)`. In place, the characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4842 of file `basic_string.h`.

**5.95.2.48** `basic_string& std::basic_string<_CharT, _Traits, _Allocator>::replace ( iterator __i1, iterator __i2, size_type __n, _CharT __c )` `[inline]`, `[inherited]`

Replace range of characters with multiple characters.

**Parameters**

|                   |                                                 |
|-------------------|-------------------------------------------------|
| <code>__i1</code> | Iterator referencing start of range to replace. |
| <code>__i2</code> | Iterator referencing end of range to replace.   |
| <code>__n</code>  | Number of characters to insert.                 |
| <code>__c</code>  | Character to insert.                            |

**Returns**

Reference to this string.

## Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Removes the characters in the range `[__i1, __i2)`. In place, `__n` copies of `__c` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4863 of file `basic_string.h`.

5.95.2.49 `basic_string& std::basic_string<_CharT, _Traits, _Allocator >::replace ( iterator __i1, iterator __i2, _InputIterator __k1, _InputIterator __k2 )` `[inline]`, `[inherited]`

Replace range of characters with range.

## Parameters

|                   |                                                 |
|-------------------|-------------------------------------------------|
| <code>__i1</code> | Iterator referencing start of range to replace. |
| <code>__i2</code> | Iterator referencing end of range to replace.   |
| <code>__k1</code> | Iterator referencing start of range to insert.  |
| <code>__k2</code> | Iterator referencing end of range to insert.    |

## Returns

Reference to this string.

## Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Removes the characters in the range `[__i1, __i2)`. In place, characters in the range `[__k1, __k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4887 of file `basic_string.h`.

5.95.2.50 `basic_string& std::basic_string<_CharT, _Traits, _Allocator >::replace ( iterator __i1, iterator __i2, initializer_list<_CharT> __l )` `[inline]`, `[inherited]`

Replace range of characters with `initializer_list`.

## Parameters

|                   |                                                            |
|-------------------|------------------------------------------------------------|
| <code>__i1</code> | Iterator referencing start of range to replace.            |
| <code>__i2</code> | Iterator referencing end of range to replace.              |
| <code>__l</code>  | The <code>initializer_list</code> of characters to insert. |

## Returns

Reference to this string.

## Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Removes the characters in the range `[__i1, __i2)`. In place, characters in the range `[__k1, __k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 4956 of file `basic_string.h`.

5.95.2.51 `void std::basic_string<_CharT, _Traits, _Allocator >::reserve ( size_type __res_arg = 0 )` `[inherited]`

Attempt to preallocate enough memory for specified number of characters.

## Parameters

|                        |                                |
|------------------------|--------------------------------|
| <code>__res_arg</code> | Number of characters required. |
|------------------------|--------------------------------|

## Exceptions

|                                |                                                             |
|--------------------------------|-------------------------------------------------------------|
| <code>std::length_error</code> | If <code>__res_arg</code> exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------------------|

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than `max_size()`, `length_error` is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.

**5.95.2.52** `size_type std::basic_string<_CharT, _Traits, _Allocator >::rfind ( const basic_string<_CharT, _Traits, _Allocator > &__str, size_type __pos = npos ) const` `[inline]`, `[noexcept]`, `[inherited]`

Find last position of a string.

## Parameters

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__str</code> | String to locate.                                     |
| <code>__pos</code> | Index of character to search back from (default end). |

## Returns

Index of start of last occurrence.

Starting from `__pos`, searches backward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

Definition at line 5245 of file `basic_string.h`.

**5.95.2.53** `size_type std::basic_string<_CharT, _Traits, _Allocator >::size ( ) const` `[inline]`, `[noexcept]`, `[inherited]`

Returns the number of characters in the string, not including any null-termination.

Definition at line 3826 of file `basic_string.h`.

**5.95.2.54** `void std::basic_string<_CharT, _Traits, _Allocator >::swap ( basic_string<_CharT, _Traits, _Allocator > &__s )` `[inherited]`

Swap contents with another string.

## Parameters

|                  |                      |
|------------------|----------------------|
| <code>__s</code> | String to swap with. |
|------------------|----------------------|

Exchanges the contents of this string with that of `__s` in constant time.

**5.95.3 Member Data Documentation**

**5.95.3.1** `noexcept std::basic_string<_CharT, _Traits, _Allocator >::_pad1__` `[inherited]`

Move construct string.

## Parameters

|                    |                |
|--------------------|----------------|
| <code>__str</code> | Source string. |
|--------------------|----------------|

The newly-created string contains the exact contents of `__str`. `__str` is a valid, but unspecified string.

Definition at line 3569 of file `basic_string.h`.

### 5.95.3.2 `_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::M_const_iterators` `[inherited]`

The list of constant iterators that reference this container.

Definition at line 197 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence<_Sequence>::M_transfer_from_if()`.

### 5.95.3.3 `_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::M_iterators` `[inherited]`

The list of mutable iterators that reference this container.

Definition at line 194 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence<_Sequence>::M_transfer_from_if()`.

### 5.95.3.4 `unsigned int __gnu_debug::_Safe_sequence_base::M_version` `[mutable]`, `[inherited]`

The container version number. This number may never be 0.

Definition at line 200 of file `safe_base.h`.

Referenced by `__gnu_debug::_Safe_sequence_base::M_invalidate_all()`.

### 5.95.3.5 `const size_type std::basic_string<_CharT, _Traits, _Allocator>::npos` `[static]`, `[inherited]`

Value returned by various member functions when they fail.

Definition at line 3297 of file `basic_string.h`.

The documentation for this class was generated from the following file:

- [debug/string](#)

## 5.96 `__gnu_parallel::__accumulate_binop_reduct<_BinOp>` Struct Template Reference

### Public Member Functions

- `__accumulate_binop_reduct` (`_BinOp &__b`)
- `template<typename _Result, typename _Addend>`  
`_Result operator()` (`const _Result &__x`, `const _Addend &__y`)

### Public Attributes

- `_BinOp &__binop`

### 5.96.1 Detailed Description

```
template<typename _BinOp>struct __gnu_parallel::__accumulate_binop_reduct<_BinOp>
```

General reduction, using a binary operator.

Definition at line 335 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.97 `__gnu_parallel::__accumulate_selector<_It>` Struct Template Reference

Inheritance diagram for `__gnu_parallel::__accumulate_selector<_It>`:

### Public Member Functions

- `template<typename _Op > std::iterator_traits<_It >::value_type operator() (_Op __o, _It __i)`

### Public Attributes

- `_It _M_finish_iterator`

#### 5.97.1 Detailed Description

`template<typename _It> struct __gnu_parallel::__accumulate_selector<_It >`

`std::accumulate()` selector.

Definition at line 208 of file `for_each_selectors.h`.

#### 5.97.2 Member Function Documentation

5.97.2.1 `template<typename _It> template<typename _Op > std::iterator_traits<_It>::value_type __gnu_parallel::__accumulate_selector<_It >::operator() (_Op __o, _It __i) [inline]`

Functor execution.

## Parameters

|                  |                              |
|------------------|------------------------------|
| <code>__o</code> | Operator (unused).           |
| <code>__i</code> | iterator referencing object. |

## Returns

The current value.

Definition at line 216 of file `for_each_selectors.h`.

## 5.97.3 Member Data Documentation

5.97.3.1 `template<typename _It> _It __gnu_parallel::__generic_for_each_selector<_It>::M_finish_iterator`  
[inherited]

`_Iterator` on last element processed; needed for some algorithms (e. g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

5.98 `__gnu_parallel::__adjacent_difference_selector<_It>` Struct Template Reference

Inheritance diagram for `__gnu_parallel::__adjacent_difference_selector<_It>`:

## Public Member Functions

- `template<typename _Op>`  
`bool operator() (_Op &__o, _It __i)`

## Public Attributes

- `_It` [M\\_finish\\_iterator](#)

### 5.98.1 Detailed Description

```
template<typename _It>struct __gnu_parallel::__adjacent_difference_selector< _It >
```

Selector that returns the difference between two adjacent \_\_elements.

Definition at line 269 of file for\_each\_selectors.h.

### 5.98.2 Member Data Documentation

5.98.2.1 `template<typename _It > _It __gnu_parallel::__generic_for_each_selector< _It >::__M_finish_iterator`  
[inherited]

\_\_Iterator on last element processed; needed for some algorithms (e. g. `std::transform()`).

Definition at line 47 of file for\_each\_selectors.h.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.99 \_\_gnu\_parallel::\_\_adjacent\_find\_selector Struct Reference

Inheritance diagram for \_\_gnu\_parallel::\_\_adjacent\_find\_selector:

### Public Member Functions

- `template<typename _RAIter1 , typename _RAIter2 , typename _Pred >`  
`std::pair< _RAIter1 , _RAIter2 > \_M\_sequential\_algorithm (_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred)`
- `template<typename _RAIter1 , typename _RAIter2 , typename _Pred >`  
`bool operator\(\) (_RAIter1 __i1, _RAIter2 __i2, _Pred __pred)`

### 5.99.1 Detailed Description

Test predicate on two adjacent elements.

Definition at line 80 of file `find_selectors.h`.

## 5.99.2 Member Function Documentation

5.99.2.1 `template<typename _RAIter1, typename _RAIter2, typename _Pred > std::pair<_RAIter1, _RAIter2> __gnu_parallel::__adjacent_find_selector::M_sequential_algorithm ( _RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred ) [inline]`

Corresponding sequential algorithm on a sequence.

### Parameters

|                       |                                    |
|-----------------------|------------------------------------|
| <code>__begin1</code> | Begin iterator of first sequence.  |
| <code>__end1</code>   | End iterator of first sequence.    |
| <code>__begin2</code> | Begin iterator of second sequence. |
| <code>__pred</code>   | Find predicate.                    |

Definition at line 105 of file `find_selectors.h`.

References `std::make_pair()`.

5.99.2.2 `template<typename _RAIter1, typename _RAIter2, typename _Pred > bool __gnu_parallel::__adjacent_find_selector::operator() ( _RAIter1 __i1, _RAIter2 __i2, _Pred __pred ) [inline]`

Test on one position.

### Parameters

|                     |                                                         |
|---------------------|---------------------------------------------------------|
| <code>__i1</code>   | <code>__i1</code> iterator on first sequence.           |
| <code>__i2</code>   | <code>__i2</code> iterator on second sequence (unused). |
| <code>__pred</code> | Find predicate.                                         |

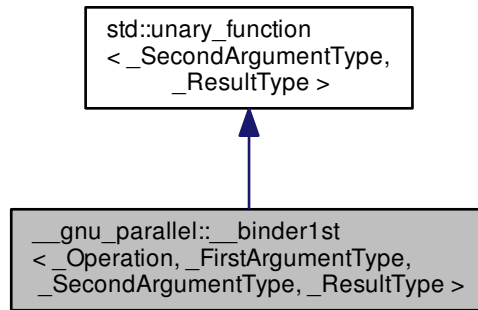

Definition at line 90 of file `find_selectors.h`.

The documentation for this struct was generated from the following file:

- [find\\_selectors.h](#)

## 5.100 `__gnu_parallel::__binder1st<_Operation, _FirstArgumentType, _SecondArgumentType, _ResultType >` Class Template Reference

Inheritance diagram for `__gnu_parallel::__binder1st<_Operation, _FirstArgumentType, _SecondArgumentType, _ResultType >`:

### Public Types

- typedef `_SecondArgumentType` [argument\\_type](#)
- typedef `_ResultType` [result\\_type](#)

### Public Member Functions

- `__binder1st` (`const _Operation &__x`, `const _FirstArgumentType &__y`)
- `_ResultType operator()` (`const _SecondArgumentType &__x`)
- `_ResultType operator()` (`_SecondArgumentType &__x`) `const`

### Protected Attributes

- `_Operation` `_M_op`
- `_FirstArgumentType` `_M_value`

#### 5.100.1 Detailed Description

```
template<typename _Operation, typename _FirstArgumentType, typename _SecondArgumentType, typename _ResultType>class __gnu_parallel::__binder1st<_Operation, _FirstArgumentType, _SecondArgumentType, _ResultType >
```

Similar to `std::binder1st`, but giving the argument types explicitly.

Definition at line 192 of file `parallel/base.h`.

### 5.100.2 Member Typedef Documentation

#### 5.100.2.1 `typedef _SecondArgumentType std::unary_function<_SecondArgumentType, _ResultType>::argument_type` [inherited]

`argument_type` is the type of the argument

Definition at line 108 of file `stl_function.h`.

#### 5.100.2.2 `typedef _ResultType std::unary_function<_SecondArgumentType, _ResultType>::result_type` [inherited]

`result_type` is the return type

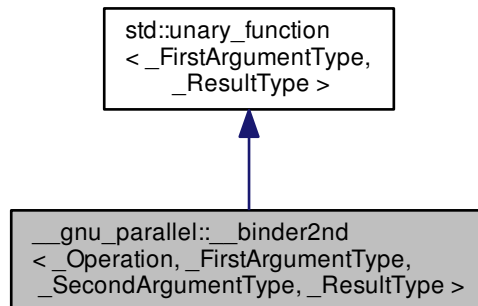

Definition at line 111 of file `stl_function.h`.

The documentation for this class was generated from the following file:

- [parallel/base.h](#)

### 5.101 `__gnu_parallel::__binder2nd<_Operation, _FirstArgumentType, _SecondArgumentType, _ResultType>` > Class Template Reference

Inheritance diagram for `__gnu_parallel::__binder2nd<_Operation, _FirstArgumentType, _SecondArgumentType, _ResultType>`:

#### Public Types

- `typedef _FirstArgumentType` [argument\\_type](#)
- `typedef _ResultType` [result\\_type](#)

#### Public Member Functions

- `__binder2nd` (`const _Operation &__x, const _SecondArgumentType &__y`)
- `_ResultType operator()` (`const _FirstArgumentType &__x`) `const`
- `_ResultType operator()` (`_FirstArgumentType &__x`)

## Protected Attributes

- `_Operation` **`_M_op`**
- `_SecondArgumentType` **`_M_value`**

### 5.101.1 Detailed Description

```
template<typename _Operation, typename _FirstArgumentType, typename _SecondArgumentType, typename _ResultType>class __-
gnu_parallel::__binder2nd< _Operation, _FirstArgumentType, _SecondArgumentType, _ResultType >
```

Similar to `std::binder2nd`, but giving the argument types explicitly.

Definition at line 220 of file `parallel/base.h`.

### 5.101.2 Member Typedef Documentation

5.101.2.1 `typedef _FirstArgumentType std::unary_function< _FirstArgumentType , _ResultType >::argument_type` `[inherited]`

`argument_type` is the type of the argument

Definition at line 108 of file `stl_function.h`.

5.101.2.2 `typedef _ResultType std::unary_function< _FirstArgumentType , _ResultType >::result_type` `[inherited]`

`result_type` is the return type

Definition at line 111 of file `stl_function.h`.

The documentation for this class was generated from the following file:

- [parallel/base.h](#)

## 5.102 `__gnu_parallel::__count_if_selector< _It, _Diff >` Struct Template Reference

Inheritance diagram for `__gnu_parallel::__count_if_selector< _It, _Diff >`:

## Public Member Functions

- `template<typename _Op > _Diff operator() (_Op &__o, _It __i)`

## Public Attributes

- `_It _M_finish_iterator`

### 5.102.1 Detailed Description

`template<typename _It, typename _Diff> struct __gnu_parallel::__count_if_selector<_It, _Diff >`

`std::count_if()` selector.

Definition at line 194 of file `for_each_selectors.h`.

### 5.102.2 Member Function Documentation

5.102.2.1 `template<typename _It, typename _Diff > template<typename _Op > _Diff __gnu_parallel::__count_if_selector<_It, _Diff >::operator() (_Op & __o, _It __i) [inline]`

Functor execution.

#### Parameters

|                  |                              |
|------------------|------------------------------|
| <code>__o</code> | Operator.                    |
| <code>__i</code> | iterator referencing object. |

#### Returns

1 if count, 0 if does not count.

Definition at line 202 of file `for_each_selectors.h`.

### 5.102.3 Member Data Documentation

5.102.3.1 `template<typename _It > _It __gnu_parallel::__generic_for_each_selector<_It >::_M_finish_iterator [inherited]`

`_Iterator` on last element processed; needed for some algorithms (e. g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

### 5.103 `__gnu_parallel::__count_selector<_It, _Diff>` Struct Template Reference

Inheritance diagram for `__gnu_parallel::__count_selector<_It, _Diff>`:

#### Public Member Functions

- `template<typename _ValueType > _Diff operator() (_ValueType &__v, _It __i)`

#### Public Attributes

- `_It _M_finish_iterator`

#### 5.103.1 Detailed Description

```
template<typename _It, typename _Diff>struct __gnu_parallel::__count_selector<_It, _Diff >
```

`std::count()` selector.

Definition at line 180 of file `for_each_selectors.h`.

#### 5.103.2 Member Function Documentation

5.103.2.1 `template<typename _It, typename _Diff> template<typename _ValueType > _Diff __gnu_parallel::__count_selector<_It, _Diff >::operator() (_ValueType &__v, _It __i) [inline]`

Functor execution.

#### Parameters

|                  |                              |
|------------------|------------------------------|
| <code>__v</code> | Current value.               |
| <code>__i</code> | iterator referencing object. |

**Returns**

1 if count, 0 if does not count.

Definition at line 188 of file `for_each_selectors.h`.

**5.103.3 Member Data Documentation****5.103.3.1** `template<typename _It> _It __gnu_parallel::__generic_for_each_selector<_It>::M_finish_iterator`  
[inherited]

`_Iterator` on last element processed; needed for some algorithms (e. g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

**5.104 `__gnu_parallel::__fill_selector<_It>` Struct Template Reference**

Inheritance diagram for `__gnu_parallel::__fill_selector<_It>`:

**Public Member Functions**

- `template<typename _ValueType>`  
`bool operator() (_ValueType &__v, _It __i)`

**Public Attributes**

- `_It` [M\\_finish\\_iterator](#)

**5.104.1 Detailed Description**

```
template<typename _It>struct __gnu_parallel::__fill_selector<_It >
```

std::fill() selector.

Definition at line 84 of file for\_each\_selectors.h.

#### 5.104.2 Member Function Documentation

5.104.2.1 `template<typename _It > template<typename _ValueType > bool __gnu_parallel::__fill_selector<_It >::operator()( _ValueType & __v, _It __i ) [inline]`

Functor execution.

##### Parameters

|                  |                              |
|------------------|------------------------------|
| <code>__v</code> | Current value.               |
| <code>__i</code> | iterator referencing object. |

Definition at line 91 of file for\_each\_selectors.h.

#### 5.104.3 Member Data Documentation

5.104.3.1 `template<typename _It > _It __gnu_parallel::__generic_for_each_selector<_It >::M_finish_iterator [inherited]`

`_Iterator` on last element processed; needed for some algorithms (e. g. `std::transform()`).

Definition at line 47 of file for\_each\_selectors.h.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

### 5.105 \_\_gnu\_parallel::\_\_find\_first\_of\_selector<\_FIterator > Struct Template Reference

Inheritance diagram for `__gnu_parallel::__find_first_of_selector<_FIterator >`:

## Public Member Functions

- `__find_first_of_selector` (`_FIterator __begin`, `_FIterator __end`)
- `template<typename _RAAlter1, typename _RAAlter2, typename _Pred > std::pair<_RAAlter1, _RAAlter2 > __M_sequential_algorithm` (`_RAAlter1 __begin1`, `_RAAlter1 __end1`, `_RAAlter2 __begin2`, `_Pred __pred`)
- `template<typename _RAAlter1, typename _RAAlter2, typename _Pred > bool operator()` (`_RAAlter1 __i1`, `_RAAlter2 __i2`, `_Pred __pred`)

## Public Attributes

- `_FIterator _M_begin`
- `_FIterator _M_end`

## 5.105.1 Detailed Description

`template<typename _FIterator>struct __gnu_parallel::__find_first_of_selector<_FIterator >`

Test predicate on several elements.

Definition at line 153 of file `find_selectors.h`.

## 5.105.2 Member Function Documentation

5.105.2.1 `template<typename _FIterator > template<typename _RAAlter1, typename _RAAlter2, typename _Pred > std::pair<_RAAlter1, _RAAlter2> __gnu_parallel::__find_first_of_selector<_FIterator >::__M_sequential_algorithm` (`_RAAlter1 __begin1`, `_RAAlter1 __end1`, `_RAAlter2 __begin2`, `_Pred __pred`) [`inline`]

Corresponding sequential algorithm on a sequence.

## Parameters

|                       |                                    |
|-----------------------|------------------------------------|
| <code>__begin1</code> | Begin iterator of first sequence.  |
| <code>__end1</code>   | End iterator of first sequence.    |
| <code>__begin2</code> | Begin iterator of second sequence. |
| <code>__pred</code>   | Find predicate.                    |

Definition at line 186 of file `find_selectors.h`.

References `std::make_pair()`.

5.105.2.2 `template<typename _FIterator > template<typename _RAAlter1, typename _RAAlter2, typename _Pred > bool __gnu_parallel::__find_first_of_selector<_FIterator >::operator()` (`_RAAlter1 __i1`, `_RAAlter2 __i2`, `_Pred __pred`) [`inline`]

Test on one position.

## Parameters

|                   |                                                       |
|-------------------|-------------------------------------------------------|
| <code>__i1</code> | <code>_l</code> iterator on first sequence.           |
| <code>__i2</code> | <code>_l</code> iterator on second sequence (unused). |

|                     |                 |
|---------------------|-----------------|
| <code>__pred</code> | Find predicate. |
|---------------------|-----------------|

Definition at line 169 of file `find_selectors.h`.

The documentation for this struct was generated from the following file:

- [find\\_selectors.h](#)

## 5.106 `__gnu_parallel::__find_if_selector` Struct Reference

Inheritance diagram for `__gnu_parallel::__find_if_selector`:

### Public Member Functions

- `template<typename _RAAlter1, typename _RAAlter2, typename _Pred > std::pair<_RAAlter1, _RAAlter2 > \_M\_sequential\_algorithm (_RAAlter1 __begin1, _RAAlter1 __end1, _RAAlter2 __begin2, _Pred __pred)`
- `template<typename _RAAlter1, typename _RAAlter2, typename _Pred > bool operator (_RAAlter1 __i1, _RAAlter2 __i2, _Pred __pred)`

### 5.106.1 Detailed Description

Test predicate on a single element, used for `std::find()` and `std::find_if()`.

Definition at line 50 of file `find_selectors.h`.

### 5.106.2 Member Function Documentation

5.106.2.1 `template<typename _RAAlter1, typename _RAAlter2, typename _Pred > std::pair<_RAAlter1, _RAAlter2> \_\_gnu\_parallel::\_\_find\_if\_selector::\_M\_sequential\_algorithm (_RAAlter1 __begin1, _RAAlter1 __end1, _RAAlter2 __begin2, _Pred __pred) [inline]`

Corresponding sequential algorithm on a sequence.

## Parameters

|                       |                                    |
|-----------------------|------------------------------------|
| <code>__begin1</code> | Begin iterator of first sequence.  |
| <code>__end1</code>   | End iterator of first sequence.    |
| <code>__begin2</code> | Begin iterator of second sequence. |
| <code>__pred</code>   | Find predicate.                    |

Definition at line 72 of file `find_selectors.h`.

References `std::make_pair()`.

5.106.2.2 `template<typename _RAIter1, typename _RAIter2, typename _Pred> bool __gnu_parallel::__find_if_selector::operator() ( _RAIter1 __i1, _RAIter2 __i2, _Pred __pred ) [inline]`

Test on one position.

## Parameters

|                     |                                        |
|---------------------|----------------------------------------|
| <code>__i1</code>   | _Iterator on first sequence.           |
| <code>__i2</code>   | _Iterator on second sequence (unused). |
| <code>__pred</code> | Find predicate.                        |

Definition at line 60 of file `find_selectors.h`.

The documentation for this struct was generated from the following file:

- [find\\_selectors.h](#)

5.107 `__gnu_parallel::__for_each_selector<_It>` Struct Template Reference

Inheritance diagram for `__gnu_parallel::__for_each_selector<_It>`:

## Public Member Functions

- `template<typename _Op> bool operator() (_Op &__o, _It __i)`

## Public Attributes

- [\\_It\\_M\\_finish\\_iterator](#)

## 5.107.1 Detailed Description

```
template<typename _It>struct __gnu_parallel::__for_each_selector<_It >
```

std::for\_each() selector.

Definition at line 52 of file for\_each\_selectors.h.

## 5.107.2 Member Function Documentation

```
5.107.2.1 template<typename _It> template<typename _Op > bool __gnu_parallel::__for_each_selector<_It
>::operator()( _Op & _o, _It _i ) [inline]
```

Functor execution.

## Parameters

|                  |                              |
|------------------|------------------------------|
| <code>__o</code> | Operator.                    |
| <code>__i</code> | iterator referencing object. |

Definition at line 59 of file for\_each\_selectors.h.

## 5.107.3 Member Data Documentation

```
5.107.3.1 template<typename _It > _It __gnu_parallel::__generic_for_each_selector<_It >::__M_finish_iterator
[inherited]
```

\_Iterator on last element processed; needed for some algorithms (e. g. std::transform()).

Definition at line 47 of file for\_each\_selectors.h.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

5.108 `__gnu_parallel::__generate_selector<_It>` Struct Template Reference

Inheritance diagram for `__gnu_parallel::__generate_selector<_It>`:

## Public Member Functions

- `template<typename _Op > bool operator() (_Op &__o, _It __i)`

## Public Attributes

- `_It \_M\_finish\_iterator`

## 5.108.1 Detailed Description

`template<typename _It>struct __gnu_parallel::__generate_selector<_It>`

`std::generate()` selector.

Definition at line 68 of file `for_each_selectors.h`.

## 5.108.2 Member Function Documentation

5.108.2.1 `template<typename _It> template<typename _Op > bool __gnu_parallel::__generate_selector<_It >::operator() (_Op &__o, _It __i) [inline]`

Functor execution.

## Parameters

|                  |                              |
|------------------|------------------------------|
| <code>__o</code> | Operator.                    |
| <code>__i</code> | iterator referencing object. |

Definition at line 75 of file `for_each_selectors.h`.

### 5.108.3 Member Data Documentation

#### 5.108.3.1 `template<typename _It > _It __gnu_parallel::__generic_for_each_selector< _It >::_M_finish_iterator` [inherited]

`_Iterator` on last element processed; needed for some algorithms (e. g. `std::transform()`).

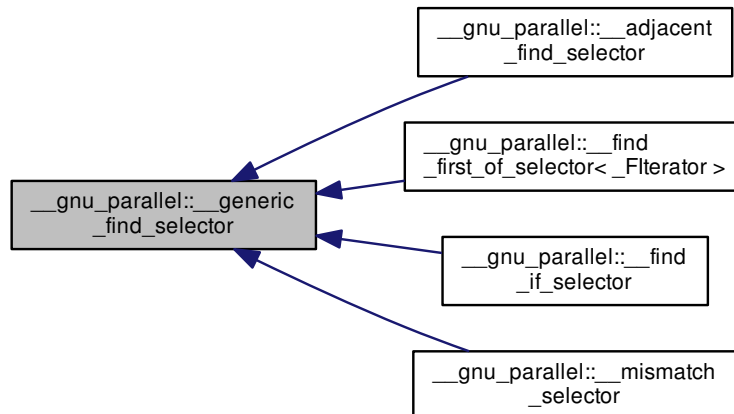

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

### 5.109 `__gnu_parallel::__generic_find_selector` Struct Reference

Inheritance diagram for `__gnu_parallel::__generic_find_selector`:

#### 5.109.1 Detailed Description

Base class of all `__gnu_parallel::__find_template` selectors.

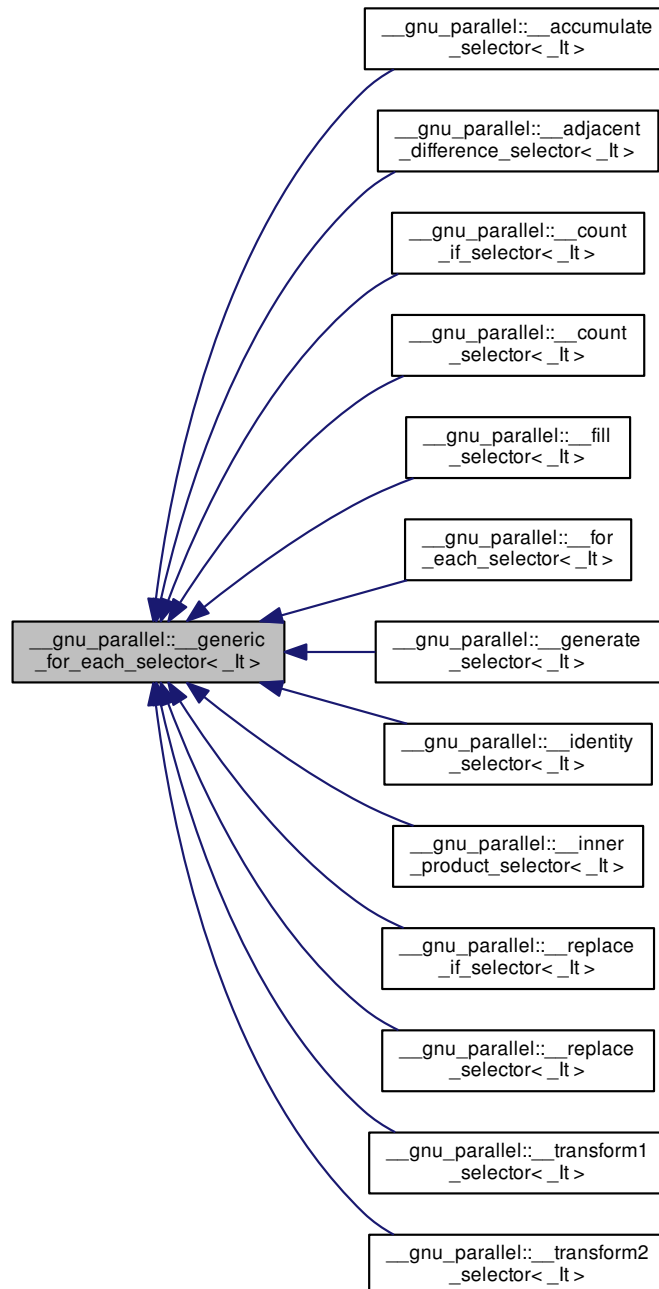

Definition at line 43 of file `find_selectors.h`.

The documentation for this struct was generated from the following file:

- [find\\_selectors.h](#)

5.110 `__gnu_parallel::__generic_for_each_selector<_It>` Struct Template Reference

Inheritance diagram for `__gnu_parallel::__generic_for_each_selector<_It>`:

**Public Attributes**

- [\\_It\\_M\\_finish\\_iterator](#)

**5.110.1 Detailed Description**

template<typename \_It>struct \_\_gnu\_parallel::\_\_generic\_for\_each\_selector<\_It >

Generic \_\_selector for embarrassingly parallel functions.

Definition at line 42 of file for\_each\_selectors.h.

**5.110.2 Member Data Documentation**

5.110.2.1 template<typename \_It > \_It \_\_gnu\_parallel::\_\_generic\_for\_each\_selector<\_It >::M\_finish\_iterator

\_Iterator on last element processed; needed for some algorithms (e. g. std::transform()).

Definition at line 47 of file for\_each\_selectors.h.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

**5.111 \_\_gnu\_parallel::\_\_identity\_selector<\_It > Struct Template Reference**

Inheritance diagram for \_\_gnu\_parallel::\_\_identity\_selector<\_It >:

**Public Member Functions**

- template<typename \_Op >  
\_It [operator\(\)](#) (\_Op \_\_o, \_It \_\_i)

**Public Attributes**

- [\\_It\\_M\\_finish\\_iterator](#)

### 5.111.1 Detailed Description

```
template<typename _It>struct __gnu_parallel::__identity_selector<_It >
```

Selector that just returns the passed iterator.

Definition at line 253 of file `for_each_selectors.h`.

### 5.111.2 Member Function Documentation

```
5.111.2.1 template<typename _It> template<typename _Op > _It __gnu_parallel::__identity_selector<_It >::operator() (
    _Op __o, _It __i ) [inline]
```

Functor execution.

#### Parameters

|                  |                              |
|------------------|------------------------------|
| <code>__o</code> | Operator (unused).           |
| <code>__i</code> | iterator referencing object. |

#### Returns

Passed iterator.

Definition at line 261 of file `for_each_selectors.h`.

### 5.111.3 Member Data Documentation

```
5.111.3.1 template<typename _It > _It __gnu_parallel::__generic_for_each_selector<_It >::_M_finish_iterator
[inherited]
```

`_Iterator` on last element processed; needed for some algorithms (e. g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

### 5.112 `__gnu_parallel::__inner_product_selector<_It, _It2, _Tp>` Struct Template Reference

Inheritance diagram for `__gnu_parallel::__inner_product_selector<_It, _It2, _Tp>`:

#### Public Member Functions

- `__inner_product_selector` (`_It __b1, _It2 __b2`)
- `template<typename _Op > _Tp operator()` (`_Op __mult, _It __current`)

#### Public Attributes

- `_It __begin1_iterator`
- `_It2 __begin2_iterator`
- `_It __M_finish_iterator`

#### 5.112.1 Detailed Description

```
template<typename _It, typename _It2, typename _Tp>struct __gnu_parallel::__inner_product_selector<_It, _It2, _Tp >
```

`std::inner_product()` selector.

Definition at line 222 of file `for_each_selectors.h`.

#### 5.112.2 Constructor & Destructor Documentation

```
5.112.2.1 template<typename _It, typename _It2, typename _Tp > __gnu_parallel::__inner_product_selector<_It, _It2, _Tp >::__inner_product_selector ( _It __b1, _It2 __b2 ) [inline], [explicit]
```

Constructor.

## Parameters

|                   |                                    |
|-------------------|------------------------------------|
| <code>__b1</code> | Begin iterator of first sequence.  |
| <code>__b2</code> | Begin iterator of second sequence. |

Definition at line 234 of file `for_each_selectors.h`.

## 5.112.3 Member Function Documentation

5.112.3.1 `template<typename _It, typename _It2, typename _Tp> template<typename _Op> _Tp  
__gnu_parallel::__inner_product_selector<_It, _It2, _Tp>::operator() ( _Op __mult, _It __current )  
[inline]`

Functor execution.

## Parameters

|                        |                              |
|------------------------|------------------------------|
| <code>__mult</code>    | Multiplication functor.      |
| <code>__current</code> | iterator referencing object. |

## Returns

Inner product elemental `__result`.

Definition at line 243 of file `for_each_selectors.h`.

References `__gnu_parallel::__inner_product_selector<_It, _It2, _Tp>::__begin1_iterator`, and `__gnu_parallel::__inner_product_selector<_It, _It2, _Tp>::__begin2_iterator`.

## 5.112.4 Member Data Documentation

5.112.4.1 `template<typename _It, typename _It2, typename _Tp> _It __gnu_parallel::__inner_product_selector<_It, _It2, _Tp>::__begin1_iterator`

Begin iterator of first sequence.

Definition at line 225 of file `for_each_selectors.h`.

Referenced by `__gnu_parallel::__inner_product_selector<_It, _It2, _Tp>::operator()()`.

5.112.4.2 `template<typename _It, typename _It2, typename _Tp> _It2 __gnu_parallel::__inner_product_selector<_It, _It2, _Tp>::__begin2_iterator`

Begin iterator of second sequence.

Definition at line 228 of file `for_each_selectors.h`.

Referenced by `__gnu_parallel::__inner_product_selector<_It, _It2, _Tp>::operator()()`.

5.112.4.3 `template<typename _It> _It __gnu_parallel::__generic_for_each_selector<_It>::__M_finish_iterator  
[inherited]`

`__iterator` on last element processed; needed for some algorithms (e. g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

### 5.113 `__gnu_parallel::__max_element_reduct<_Compare, _It >` Struct Template Reference

#### Public Member Functions

- `__max_element_reduct` (`_Compare &_c`)
- `_It operator()` (`_It __x, _It __y`)

#### Public Attributes

- `_Compare & __comp`

#### 5.113.1 Detailed Description

```
template<typename _Compare, typename _It>struct __gnu_parallel::__max_element_reduct<_Compare, _It >
```

Reduction for finding the maximum element, using a comparator.

Definition at line 321 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

### 5.114 `__gnu_parallel::__min_element_reduct<_Compare, _It >` Struct Template Reference

#### Public Member Functions

- `__min_element_reduct` (`_Compare &_c`)
- `_It operator()` (`_It __x, _It __y`)

#### Public Attributes

- `_Compare & __comp`

#### 5.114.1 Detailed Description

```
template<typename _Compare, typename _It>struct __gnu_parallel::__min_element_reduct<_Compare, _It >
```

Reduction for finding the maximum element, using a comparator.

Definition at line 307 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

5.115 `__gnu_parallel::__mismatch_selector` Struct Reference

Inheritance diagram for `__gnu_parallel::__mismatch_selector`:

## Public Member Functions

- `template<typename _RAIter1, typename _RAIter2, typename _Pred > std::pair<_RAIter1, _RAIter2 > \_M\_sequential\_algorithm (_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred)`
- `template<typename _RAIter1, typename _RAIter2, typename _Pred > bool operator() (_RAIter1 __i1, _RAIter2 __i2, _Pred __pred)`

## 5.115.1 Detailed Description

Test inverted predicate on a single element.

Definition at line 119 of file `find_selectors.h`.

## 5.115.2 Member Function Documentation

5.115.2.1 `template<typename _RAIter1, typename _RAIter2, typename _Pred > std::pair<_RAIter1, _RAIter2> \_\_gnu\_parallel::\_\_mismatch\_selector::\_M\_sequential\_algorithm (_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred) [inline]`

Corresponding sequential algorithm on a sequence.

## Parameters

|                       |                                    |
|-----------------------|------------------------------------|
| <code>__begin1</code> | Begin iterator of first sequence.  |
| <code>__end1</code>   | End iterator of first sequence.    |
| <code>__begin2</code> | Begin iterator of second sequence. |
| <code>__pred</code>   | Find predicate.                    |

Definition at line 143 of file `find_selectors.h`.

5.115.2.2 `template<typename _RAAlter1, typename _RAAlter2, typename _Pred > bool __gnu_parallel::__mismatch_selector::operator() ( _RAAlter1 __i1, _RAAlter2 __i2, _Pred __pred ) [inline]`

Test on one position.

Parameters

|                     |                                       |
|---------------------|---------------------------------------|
| <code>__i1</code>   | Iterator on first sequence.           |
| <code>__i2</code>   | Iterator on second sequence (unused). |
| <code>__pred</code> | Find predicate.                       |

Definition at line 130 of file `find_selectors.h`.

The documentation for this struct was generated from the following file:

- [find\\_selectors.h](#)

5.116 `__gnu_parallel::__multiway_merge_3_variant_sentinel_switch< __sentinels, _RAIterlterator, _RAIter3, _DifferenceTp, _Compare >` Struct Template Reference

Public Member Functions

- `_RAIter3 operator() (_RAIterlterator __seqs_begin, _RAIterlterator __seqs_end, _RAIter3 __target, _DifferenceTp __length, _Compare __comp)`

5.116.1 Detailed Description

```
template<bool __sentinels, typename _RAIterlterator, typename _RAIter3, typename _DifferenceTp, typename _Compare>struct __gnu_parallel::__multiway_merge_3_variant_sentinel_switch< __sentinels, _RAIterlterator, _RAIter3, _DifferenceTp, _Compare >
```

Switch for 3-way merging with `__sentinels` turned off.

Note that 3-way merging is always stable!

Definition at line 752 of file `multiway_merge.h`.

The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

5.117 `__gnu_parallel::__multiway_merge_3_variant_sentinel_switch< true, _RAIterlterator, _RAIter3, _DifferenceTp, _Compare >` Struct Template Reference

Public Member Functions

- `_RAIter3 operator() (_RAIterlterator __seqs_begin, _RAIterlterator __seqs_end, _RAIter3 __target, _DifferenceTp __length, _Compare __comp)`

5.117.1 Detailed Description

```
template<typename _RAIterlterator, typename _RAIter3, typename _DifferenceTp, typename _Compare>struct __gnu_parallel::__multiway_merge_3_variant_sentinel_switch< true, _RAIterlterator, _RAIter3, _DifferenceTp, _Compare >
```

Switch for 3-way merging with `__sentinels` turned on.

Note that 3-way merging is always stable!

Definition at line 772 of file `multiway_merge.h`.

The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

### 5.118 `__gnu_parallel::__multiway_merge_4_variant_sentinel_switch< __sentinels, _RAIterlterator, _RAIter3, _DifferenceTp, _Compare >` Struct Template Reference

#### Public Member Functions

- `_RAIter3 operator()` (`_RAIterlterator __seqs_begin, _RAIterlterator __seqs_end, _RAIter3 __target, _DifferenceTp __length, _Compare __comp`)

#### 5.118.1 Detailed Description

```
template<bool __sentinels, typename _RAIterlterator, typename _RAIter3, typename _DifferenceTp, typename _Compare>struct __gnu_parallel::__multiway_merge_4_variant_sentinel_switch< __sentinels, _RAIterlterator, _RAIter3, _DifferenceTp, _Compare >
```

Switch for 4-way merging with `__sentinels` turned off.

Note that 4-way merging is always stable!

Definition at line 795 of file `multiway_merge.h`.

The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

### 5.119 `__gnu_parallel::__multiway_merge_4_variant_sentinel_switch< true, _RAIterlterator, _RAIter3, _DifferenceTp, _Compare >` Struct Template Reference

#### Public Member Functions

- `_RAIter3 operator()` (`_RAIterlterator __seqs_begin, _RAIterlterator __seqs_end, _RAIter3 __target, _DifferenceTp __length, _Compare __comp`)

#### 5.119.1 Detailed Description

```
template<typename _RAIterlterator, typename _RAIter3, typename _DifferenceTp, typename _Compare>struct __gnu_parallel::__multiway_merge_4_variant_sentinel_switch< true, _RAIterlterator, _RAIter3, _DifferenceTp, _Compare >
```

Switch for 4-way merging with `__sentinels` turned on.

Note that 4-way merging is always stable!

Definition at line 815 of file `multiway_merge.h`.

The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

### 5.120 `__gnu_parallel::__multiway_merge_k_variant_sentinel_switch< __sentinels, __stable, _RAIterlterator, _RAIter3, _DifferenceTp, _Compare >` Struct Template Reference

## Public Member Functions

- `_RAIter3 operator()` (`_RAIterlterator __seqs_begin, _RAIterlterator __seqs_end, _RAIter3 __target, const typename std::iterator_traits< typename std::iterator_traits< _RAIterlterator >::value_type::first_type >::value_type &__sentinel, _DifferenceTp __length, _Compare __comp`)

### 5.120.1 Detailed Description

```
template<bool __sentinels, bool __stable, typename _RAIterlterator, typename _RAIter3, typename _DifferenceTp, typename _Compare>struct __gnu_parallel::__multiway_merge_k_variant_sentinel_switch< __sentinels, __stable, _RAIterlterator, _RAIter3, _DifferenceTp, _Compare >
```

Switch for k-way merging with `__sentinels` turned on.

Definition at line 837 of file `multiway_merge.h`.

The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

## 5.121 `__gnu_parallel::__multiway_merge_k_variant_sentinel_switch< false, __stable, _RAIterlterator, _RAIter3, _DifferenceTp, _Compare >` Struct Template Reference

### Public Member Functions

- `_RAIter3 operator()` (`_RAIterlterator __seqs_begin, _RAIterlterator __seqs_end, _RAIter3 __target, const typename std::iterator_traits< typename std::iterator_traits< _RAIterlterator >::value_type::first_type >::value_type &__sentinel, _DifferenceTp __length, _Compare __comp`)

### 5.121.1 Detailed Description

```
template<bool __stable, typename _RAIterlterator, typename _RAIter3, typename _DifferenceTp, typename _Compare>struct __gnu_parallel::__multiway_merge_k_variant_sentinel_switch< false, __stable, _RAIterlterator, _RAIter3, _DifferenceTp, _Compare >
```

Switch for k-way merging with `__sentinels` turned off.

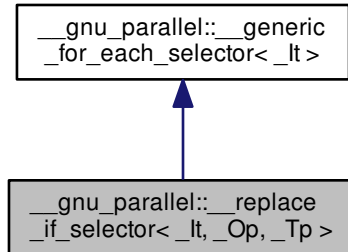

Definition at line 872 of file `multiway_merge.h`.

The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

## 5.122 `__gnu_parallel::__replace_if_selector<_It, _Op, _Tp >` Struct Template Reference

Inheritance diagram for `__gnu_parallel::__replace_if_selector<_It, _Op, _Tp >`:

### Public Member Functions

- `__replace_if_selector` (const `_Tp` & `__new_val`)
- bool `operator()` (`_Op` & `__o`, `_It` `__i`)

### Public Attributes

- const `_Tp` & `__new_val`
- `_It` `_M_finish_iterator`

### 5.122.1 Detailed Description

```
template<typename _It, typename _Op, typename _Tp>struct __gnu_parallel::__replace_if_selector<_It, _Op, _Tp >
```

`std::replace()` selector.

Definition at line 156 of file `for_each_selectors.h`.

### 5.122.2 Constructor & Destructor Documentation

```
5.122.2.1 template<typename _It, typename _Op, typename _Tp > __gnu_parallel::__replace_if_selector<_It, _Op, _Tp >::__replace_if_selector ( const _Tp & __new_val ) [inline], [explicit]
```

Constructor.

#### Parameters

|                        |                        |
|------------------------|------------------------|
| <code>__new_val</code> | Value to replace with. |
|------------------------|------------------------|

Definition at line 164 of file `for_each_selectors.h`.

## 5.122.3 Member Function Documentation

5.122.3.1 `template<typename _It, typename _Op, typename _Tp > bool __gnu_parallel::__replace_if_selector<_It, _Op, _Tp >::operator() ( _Op &__o, _It __i ) [inline]`

Functor execution.

## Parameters

|                  |                              |
|------------------|------------------------------|
| <code>__o</code> | Operator.                    |
| <code>__i</code> | iterator referencing object. |

Definition at line 170 of file `for_each_selectors.h`.

References `__gnu_parallel::__replace_if_selector<_It, _Op, _Tp >::__new_val`.

## 5.122.4 Member Data Documentation

5.122.4.1 `template<typename _It, typename _Op, typename _Tp > const _Tp& __gnu_parallel::__replace_if_selector<_It, _Op, _Tp >::__new_val`

Value to replace with.

Definition at line 159 of file `for_each_selectors.h`.

Referenced by `__gnu_parallel::__replace_if_selector<_It, _Op, _Tp >::operator()`.

5.122.4.2 `template<typename _It > _It __gnu_parallel::__generic_for_each_selector<_It >::__M_finish_iterator`  
[inherited]

`_Iterator` on last element processed; needed for some algorithms (e. g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

5.123 `__gnu_parallel::__replace_selector<_It, _Tp >` Struct Template Reference

Inheritance diagram for `__gnu_parallel::__replace_selector<_It, _Tp >`:

## Public Member Functions

- `__replace_selector` (`const _Tp &__new_val`)
- `bool operator()` (`_Tp &__v, _It __i`)

## Public Attributes

- `const _Tp & __new_val`
- `_It _M_finish_iterator`

## 5.123.1 Detailed Description

`template<typename _It, typename _Tp> struct __gnu_parallel::__replace_selector<_It, _Tp>`

`std::replace()` selector.

Definition at line 132 of file `for_each_selectors.h`.

## 5.123.2 Constructor &amp; Destructor Documentation

5.123.2.1 `template<typename _It, typename _Tp> __gnu_parallel::__replace_selector<_It, _Tp>::__replace_selector ( const _Tp & __new_val ) [inline], [explicit]`

Constructor.

## Parameters

|                        |                        |
|------------------------|------------------------|
| <code>__new_val</code> | Value to replace with. |
|------------------------|------------------------|

Definition at line 140 of file `for_each_selectors.h`.

## 5.123.3 Member Function Documentation

5.123.3.1 `template<typename _It, typename _Tp> bool __gnu_parallel::__replace_selector<_It, _Tp>::operator() ( _Tp & __v, _It __i ) [inline]`

Functor execution.

## Parameters

|                  |                              |
|------------------|------------------------------|
| <code>__v</code> | Current value.               |
| <code>__i</code> | iterator referencing object. |

Definition at line 146 of file `for_each_selectors.h`.

References `__gnu_parallel::__replace_selector<_It, _Tp>::__new_val`.

## 5.123.4 Member Data Documentation

5.123.4.1 `template<typename _It, typename _Tp> const _Tp & __gnu_parallel::__replace_selector<_It, _Tp>::__new_val`

Value to replace with.

Definition at line 135 of file `for_each_selectors.h`.

Referenced by `__gnu_parallel::__replace_selector<_It, _Tp>::operator()()`.

5.123.4.2 `template<typename _It> _It __gnu_parallel::__generic_for_each_selector<_It>::__M_finish_iterator [inherited]`

`_It` iterator on last element processed; needed for some algorithms (e. g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.124 `__gnu_parallel::__transform1_selector<_It>` Struct Template Reference

Inheritance diagram for `__gnu_parallel::__transform1_selector<_It>`:

### Public Member Functions

- `template<typename _Op > bool operator() (_Op &__o, _It __i)`

### Public Attributes

- `_It _M_finish_iterator`

#### 5.124.1 Detailed Description

`template<typename _It> struct __gnu_parallel::__transform1_selector<_It >`

`std::transform()` `__selector`, one input sequence variant.

Definition at line 100 of file `for_each_selectors.h`.

#### 5.124.2 Member Function Documentation

5.124.2.1 `template<typename _It> template<typename _Op > bool __gnu_parallel::__transform1_selector<_It >::operator() (_Op &__o, _It __i) [inline]`

Functor execution.

## Parameters

|                  |                              |
|------------------|------------------------------|
| <code>__o</code> | Operator.                    |
| <code>__i</code> | iterator referencing object. |

Definition at line 107 of file `for_each_selectors.h`.

## 5.124.3 Member Data Documentation

5.124.3.1 `template<typename _It> _It __gnu_parallel::__generic_for_each_selector<_It>::M_finish_iterator`  
[*inherited*]

`_Iterator` on last element processed; needed for some algorithms (e. g. `std::transform()`).

Definition at line 47 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

5.125 `__gnu_parallel::__transform2_selector<_It>` Struct Template Reference

Inheritance diagram for `__gnu_parallel::__transform2_selector<_It>`:

## Public Member Functions

- `template<typename _Op>`  
`bool operator() (_Op &__o, _It __i)`

## Public Attributes

- `_It M_finish_iterator`

## 5.125.1 Detailed Description

```
template<typename _It>struct __gnu_parallel::__transform2_selector<_It >
```

std::transform() \_\_selector, two input sequences variant.

Definition at line 116 of file for\_each\_selectors.h.

### 5.125.2 Member Function Documentation

```
5.125.2.1 template<typename _It> template<typename _Op > bool __gnu_parallel::__transform2_selector<_It
>::operator()( _Op & _o, _It _i ) [inline]
```

Functor execution.

Parameters

|                  |                              |
|------------------|------------------------------|
| <code>__o</code> | Operator.                    |
| <code>__i</code> | iterator referencing object. |

Definition at line 123 of file for\_each\_selectors.h.

### 5.125.3 Member Data Documentation

```
5.125.3.1 template<typename _It > _It __gnu_parallel::__generic_for_each_selector<_It >::_M_finish_iterator
[inherited]
```

\_Iterator on last element processed; needed for some algorithms (e. g. std::transform()).

Definition at line 47 of file for\_each\_selectors.h.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.126 \_\_gnu\_parallel::\_\_unary\_negate<\_Predicate, argument\_type > Class Template Reference

Inheritance diagram for \_\_gnu\_parallel::\_\_unary\_negate<\_Predicate, argument\_type >:

### Public Types

- typedef `argument_type` `argument_type`
- typedef `bool` `result_type`

### Public Member Functions

- `__unary_negate` (`const _Predicate &__x`)
- `bool operator()` (`const argument_type &__x`)

### Protected Attributes

- `_Predicate _M_pred`

#### 5.126.1 Detailed Description

```
template<typename _Predicate, typename argument_type> class __gnu_parallel::_unary_negate<_Predicate, argument_type >
```

Similar to `std::unary_negate`, but giving the argument types explicitly.

Definition at line 173 of file `parallel/base.h`.

#### 5.126.2 Member Typedef Documentation

5.126.2.1 `typedef argument_type std::unary_function< argument_type, bool >::argument_type` `[inherited]`

`argument_type` is the type of the argument

Definition at line 108 of file `stl_function.h`.

5.126.2.2 `typedef bool std::unary_function< argument_type, bool >::result_type` `[inherited]`

`result_type` is the return type

Definition at line 111 of file `stl_function.h`.

The documentation for this class was generated from the following file:

- `parallel/base.h`

## 5.127 `__gnu_parallel::_DRandomShufflingGlobalData<_RAIter >` Struct Template Reference

### Public Types

- typedef `_TraitsType::difference_type` `_DifferenceType`
- typedef `std::iterator_traits<_RAIter >` `_TraitsType`
- typedef `_TraitsType::value_type` `_ValueType`

### Public Member Functions

- `_DRandomShufflingGlobalData` (`_RAIter &__source`)

## Public Attributes

- [\\_ThreadIndex \\* \\_M\\_bin\\_proc](#)
- [\\_DifferenceType \\*\\* \\_M\\_dist](#)
- [int \\_M\\_num\\_bins](#)
- [int \\_M\\_num\\_bits](#)
- [\\_RAIter & \\_M\\_source](#)
- [\\_DifferenceType \\* \\_M\\_starts](#)
- [\\_ValueType \\*\\* \\_M\\_temporaries](#)

### 5.127.1 Detailed Description

`template<typename _RAIter> struct __gnu_parallel::DRandomShufflingGlobalData<_RAIter >`

Data known to every thread participating in `__gnu_parallel::__parallel_random_shuffle()`.

Definition at line 52 of file `random_shuffle.h`.

### 5.127.2 Constructor & Destructor Documentation

5.127.2.1 `template<typename _RAIter> __gnu_parallel::DRandomShufflingGlobalData<_RAIter >::__DRandomShufflingGlobalData( _RAIter & __source ) [inline]`

Constructor.

Definition at line 83 of file `random_shuffle.h`.

### 5.127.3 Member Data Documentation

5.127.3.1 `template<typename _RAIter> _ThreadIndex* __gnu_parallel::DRandomShufflingGlobalData<_RAIter >::__M_bin_proc`

Number of the thread that will further process the corresponding bin.

Definition at line 74 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`.

5.127.3.2 `template<typename _RAIter> _DifferenceType** __gnu_parallel::DRandomShufflingGlobalData<_RAIter >::__M_dist`

Two-dimensional array to hold the thread-bin distribution.

Dimensions `( _M_num_threads + 1 ) __x ( _M_num_bins + 1 )`.

Definition at line 67 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs_pu()`.

5.127.3.3 `template<typename _RAIter> int __gnu_parallel::DRandomShufflingGlobalData<_RAIter >::__M_num_bins`

Number of bins to distribute to.

Definition at line 77 of file `random_shuffle.h`.

## 5.128 `__gnu_parallel::_DRSSorterPU<_RAIter, _RandomNumberGenerator >` Struct Template Reference ¶19

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs_pu()`.

### 5.127.3.4 `template<typename _RAIter> int __gnu_parallel::_DRandomShufflingGlobalData<_RAIter >::_M_num_bits`

Number of bits needed to address the bins.

Definition at line 80 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs_pu()`.

### 5.127.3.5 `template<typename _RAIter> _RAIter& __gnu_parallel::_DRandomShufflingGlobalData<_RAIter >::_M_source`

Begin iterator of the `__source`.

Definition at line 59 of file `random_shuffle.h`.

### 5.127.3.6 `template<typename _RAIter> _DifferenceType* __gnu_parallel::_DRandomShufflingGlobalData<_RAIter >::_M_starts`

Start indexes of the threads' `__chunks`.

Definition at line 70 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs_pu()`.

### 5.127.3.7 `template<typename _RAIter> _ValueType** __gnu_parallel::_DRandomShufflingGlobalData<_RAIter >::_M_temporaries`

Temporary arrays for each thread.

Definition at line 62 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`.

The documentation for this struct was generated from the following file:

- [random\\_shuffle.h](#)

## 5.128 `__gnu_parallel::_DRSSorterPU<_RAIter, _RandomNumberGenerator >` Struct Template Reference

### Public Attributes

- [\\_BinIndex \\_\\_bins\\_end](#)
- [\\_BinIndex \\_M\\_bins\\_begin](#)
- [int \\_M\\_num\\_threads](#)
- [\\_DRandomShufflingGlobalData<\\_RAIter > \\* \\_M\\_sd](#)
- [uint32\\_t \\_M\\_seed](#)

### 5.128.1 Detailed Description

```
template<typename _RAIter, typename _RandomNumberGenerator>struct __gnu_parallel::DRSSorterPU< _RAIter, _RandomNumberGenerator >
```

Local data for a thread participating in `__gnu_parallel::__parallel_random_shuffle()`.

Definition at line 91 of file `random_shuffle.h`.

## 5.128.2 Member Data Documentation

```
5.128.2.1 template<typename _RAIter, typename _RandomNumberGenerator> _BinIndex __gnu_parallel::DRSSorterPU<
    _RAIter, _RandomNumberGenerator >::__bins_end
```

End index for bins taken care of by this thread.

Definition at line 100 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`.

```
5.128.2.2 template<typename _RAIter, typename _RandomNumberGenerator> _BinIndex __gnu_parallel::DRSSorterPU<
    _RAIter, _RandomNumberGenerator >::__M_bins_begin
```

Begin index for bins taken care of by this thread.

Definition at line 97 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`.

```
5.128.2.3 template<typename _RAIter, typename _RandomNumberGenerator> int __gnu_parallel::DRSSorterPU< _RAIter,
    _RandomNumberGenerator >::__M_num_threads
```

Number of threads participating in total.

Definition at line 94 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs_pu()`.

```
5.128.2.4 template<typename _RAIter, typename _RandomNumberGenerator> _DRandomShufflingGlobalData<_RAIter>*
    __gnu_parallel::DRSSorterPU< _RAIter, _RandomNumberGenerator >::__M_sd
```

Pointer to global data.

Definition at line 106 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs_pu()`.

```
5.128.2.5 template<typename _RAIter, typename _RandomNumberGenerator> uint32_t __gnu_parallel::DRSSorterPU<
    _RAIter, _RandomNumberGenerator >::__M_seed
```

Random `_M_seed` for this thread.

Definition at line 103 of file `random_shuffle.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs_pu()`.

The documentation for this struct was generated from the following file:

- [random\\_shuffle.h](#)

5.129 `__gnu_parallel::_DummyReduct` Struct Reference

## Public Member Functions

- `bool operator()` (`bool`, `bool`) `const`

## 5.129.1 Detailed Description

Reduction function doing nothing.

Definition at line 298 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

5.130 `__gnu_parallel::_EqualFromLess<_T1, _T2, _Compare >` Class Template Reference

Inheritance diagram for `__gnu_parallel::_EqualFromLess<_T1, _T2, _Compare >`:

## Public Types

- `typedef _T1 first_argument_type`
- `typedef bool result_type`
- `typedef _T2 second_argument_type`

## Public Member Functions

- `_EqualFromLess` (`_Compare &__comp`)
- `bool operator()` (`const _T1 &__a`, `const _T2 &__b`)

## 5.130.1 Detailed Description

```
template<typename _T1, typename _T2, typename _Compare>class __gnu_parallel::_EqualFromLess< _T1, _T2, _Compare >
```

Constructs predicate for equality from strict weak ordering predicate.

Definition at line 157 of file parallel/base.h.

### 5.130.2 Member Typedef Documentation

5.130.2.1 `typedef _T1 std::binary_function< _T1, _T2, bool >::first_argument_type` [inherited]

`first_argument_type` is the type of the first argument

Definition at line 121 of file stl\_function.h.

5.130.2.2 `typedef bool std::binary_function< _T1, _T2, bool >::result_type` [inherited]

`result_type` is the return type

Definition at line 127 of file stl\_function.h.

5.130.2.3 `typedef _T2 std::binary_function< _T1, _T2, bool >::second_argument_type` [inherited]

`second_argument_type` is the type of the second argument

Definition at line 124 of file stl\_function.h.

The documentation for this class was generated from the following file:

- [parallel/base.h](#)

### 5.131 `__gnu_parallel::_EqualTo< _T1, _T2 >` Struct Template Reference

Inheritance diagram for `__gnu_parallel::_EqualTo< _T1, _T2 >`:

#### Public Types

- `typedef _T1` [first\\_argument\\_type](#)
- `typedef bool` [result\\_type](#)
- `typedef _T2` [second\\_argument\\_type](#)

## Public Member Functions

- `bool operator() (const _T1 &__t1, const _T2 &__t2) const`

## 5.131.1 Detailed Description

`template<typename _T1, typename _T2>struct __gnu_parallel::_EqualTo<_T1, _T2 >`

Similar to `std::equal_to`, but allows two different types.

Definition at line 244 of file `parallel/base.h`.

## 5.131.2 Member Typedef Documentation

5.131.2.1 `typedef _T1 std::binary_function<_T1, _T2, bool >::first_argument_type` [inherited]

`first_argument_type` is the type of the first argument

Definition at line 121 of file `stl_function.h`.

5.131.2.2 `typedef bool std::binary_function<_T1, _T2, bool >::result_type` [inherited]

`result_type` is the return type

Definition at line 127 of file `stl_function.h`.

5.131.2.3 `typedef _T2 std::binary_function<_T1, _T2, bool >::second_argument_type` [inherited]

`second_argument_type` is the type of the second argument

Definition at line 124 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [parallel/base.h](#)

5.132 `__gnu_parallel::_GuardedIterator<_RAIter, _Compare >` Class Template Reference

## Public Member Functions

- `_GuardedIterator` (`_RAIter __begin, _RAIter __end, _Compare &__comp`)
- `operator _RAIter` ()
- `std::iterator_traits<_RAIter >::value_type & operator*` ()
- `_GuardedIterator<_RAIter, _Compare > & operator++` ()

## Friends

- `bool operator< (_GuardedIterator<_RAIter, _Compare > &__bi1, _GuardedIterator<_RAIter, _Compare > &__bi2)`
- `bool operator<= (_GuardedIterator<_RAIter, _Compare > &__bi1, _GuardedIterator<_RAIter, _Compare > &__bi2)`

### 5.132.1 Detailed Description

```
template<typename _RAIter, typename _Compare>class __gnu_parallel::_GuardedIterator< _RAIter, _Compare >
```

\_Iterator wrapper supporting an implicit supremum at the end of the sequence, dominating all comparisons.

The implicit supremum comes with a performance cost.

Deriving from \_RAIter is not possible since \_RAIter need not be a class.

Definition at line 73 of file multiway\_merge.h.

### 5.132.2 Constructor & Destructor Documentation

```
5.132.2.1 template<typename _RAIter, typename _Compare > __gnu_parallel::_GuardedIterator< _RAIter, _Compare >::_GuardedIterator ( _RAIter __begin, _RAIter __end, _Compare & __comp ) [inline]
```

Constructor. Sets iterator to beginning of sequence.

#### Parameters

|                      |                                                                  |
|----------------------|------------------------------------------------------------------|
| <code>__begin</code> | Begin iterator of sequence.                                      |
| <code>__end</code>   | End iterator of sequence.                                        |
| <code>__comp</code>  | Comparator provided for associated overloaded compare operators. |

Definition at line 91 of file multiway\_merge.h.

### 5.132.3 Member Function Documentation

```
5.132.3.1 template<typename _RAIter, typename _Compare > __gnu_parallel::_GuardedIterator< _RAIter, _Compare >::operator _RAIter ( ) [inline]
```

Convert to wrapped iterator.

#### Returns

Wrapped iterator.

Definition at line 112 of file multiway\_merge.h.

```
5.132.3.2 template<typename _RAIter, typename _Compare > std::iterator_traits<_RAIter>::value_type& __gnu_parallel::_GuardedIterator< _RAIter, _Compare >::operator*( ) [inline]
```

Dereference operator.

#### Returns

Referenced element.

Definition at line 107 of file multiway\_merge.h.

```
5.132.3.3 template<typename _RAIter, typename _Compare > _GuardedIterator<_RAIter, _Compare>& __gnu_parallel::_GuardedIterator< _RAIter, _Compare >::operator++( ) [inline]
```

Pre-increment operator.

**Returns**

This.

Definition at line 98 of file `multiway_merge.h`.

**5.132.4 Friends And Related Function Documentation**

5.132.4.1 `template<typename _RAIter, typename _Compare > bool operator< ( _GuardedIterator<_RAIter, _Compare > & __bi1, _GuardedIterator<_RAIter, _Compare > & __bi2 ) [friend]`

Compare two elements referenced by guarded iterators.

**Parameters**

|                    |                  |
|--------------------|------------------|
| <code>__bi1</code> | First iterator.  |
| <code>__bi2</code> | Second iterator. |

**Returns**

`true` if less.

Definition at line 120 of file `multiway_merge.h`.

5.132.4.2 `template<typename _RAIter, typename _Compare > bool operator<= ( _GuardedIterator<_RAIter, _Compare > & __bi1, _GuardedIterator<_RAIter, _Compare > & __bi2 ) [friend]`

Compare two elements referenced by guarded iterators.

**Parameters**

|                    |                  |
|--------------------|------------------|
| <code>__bi1</code> | First iterator.  |
| <code>__bi2</code> | Second iterator. |

**Returns**

True if less equal.

Definition at line 135 of file multiway\_merge.h.

The documentation for this class was generated from the following file:

- [multiway\\_merge.h](#)

**5.133 \_\_gnu\_parallel::\_IteratorPair<\_Iterator1, \_Iterator2, \_IteratorCategory > Class Template Reference**

Inheritance diagram for \_\_gnu\_parallel::\_IteratorPair<\_Iterator1, \_Iterator2, \_IteratorCategory >:

**Public Types**

- using **`_PCCFP`** = `_PCC<lis_same<_Iterator1, _U1 >::value||lis_same<_Iterator2, _U2 >::value, _Iterator1, _Iterator2 >`
- using **`_PCCP`** = `_PCC< true, _Iterator1, _Iterator2 >`
- typedef `std::iterator_traits<_Iterator1 >` **`_TraitsType`**
- typedef `_TraitsType::difference_type` **`difference_type`**
- typedef `_Iterator1` **`first_type`**
- typedef `_IteratorCategory` **`iterator_category`**
- typedef `_IteratorPair *` **`pointer`**
- typedef `_IteratorPair &` **`reference`**
- typedef `_Iterator2` **`second_type`**
- typedef `void` **`value_type`**

**Public Member Functions**

- **`_IteratorPair`** (`const _Iterator1 &__first, const _Iterator2 &__second`)
- void **`noexcept`** (`__and_< __is_nothrow_swappable<_Iterator1 >, __is_nothrow_swappable<_Iterator2 >>::value`)

- `operator _Iterator2 ()` const
- `_IteratorPair operator+ (difference_type __delta)` const
- `_IteratorPair & operator++ ()`
- `const _IteratorPair operator++ (int)`
- `difference_type operator- (const _IteratorPair &__other)` const
- `_IteratorPair & operator-- ()`
- `const _IteratorPair operator-- (int)`
- `_IteratorPair & operator= (const _IteratorPair &__other)`

#### Public Attributes

- `_Iterator1` [first](#)
- `_Iterator2` [second](#)

#### 5.133.1 Detailed Description

`template<typename _Iterator1, typename _Iterator2, typename _IteratorCategory>class __gnu_parallel::IteratorPair<_Iterator1, _Iterator2, _IteratorCategory >`

A pair of iterators. The usual iterator operations are applied to both child iterators.

Definition at line 45 of file `iterator.h`.

#### 5.133.2 Member Typedef Documentation

5.133.2.1 `using std::pair<_Iterator1, _Iterator2 >::PCCFP = PCC<lis_same<_Iterator1, _U1>::value || lis_same<_Iterator2, _U2>::value, _Iterator1, _Iterator2 >` [inherited]

There is also a templated copy ctor for the `pair` class itself.

Definition at line 272 of file `stl_pair.h`.

5.133.2.2 `using std::pair<_Iterator1, _Iterator2 >::PCCP = PCC<true, _Iterator1, _Iterator2 >` [inherited]

Two objects may be passed to a `pair` constructor to be copied.

Definition at line 241 of file `stl_pair.h`.

5.133.2.3 `typedef _Iterator2 std::pair<_Iterator1, _Iterator2 >::second_type` [inherited]

`first_type` is the first bound type

Definition at line 201 of file `stl_pair.h`.

#### 5.133.3 Member Data Documentation

5.133.3.1 `_Iterator1 std::pair<_Iterator1, _Iterator2 >::first` [inherited]

`second_type` is the second bound type

Definition at line 203 of file `stl_pair.h`.

### 5.133.3.2 `_Iterator2 std::pair<_Iterator1, _Iterator2>::second` [inherited]

`first` is a copy of the first object

Definition at line 204 of file `stl_pair.h`.

The documentation for this class was generated from the following file:

- [iterator.h](#)

## 5.134 `__gnu_parallel::_IteratorTriple<_Iterator1, _Iterator2, _Iterator3, _IteratorCategory>` Class Template Reference

### Public Types

- typedef `std::iterator_traits<_Iterator1>::difference_type` **difference\_type**
- typedef `_IteratorCategory` **iterator\_category**
- typedef `_IteratorTriple*` **pointer**
- typedef `_IteratorTriple&` **reference**
- typedef `void` **value\_type**

### Public Member Functions

- **\_IteratorTriple** (`const _Iterator1 &__first, const _Iterator2 &__second, const _Iterator3 &__third`)
- **operator \_Iterator3** () const
- **\_IteratorTriple operator+** (`difference_type __delta`) const
- **\_IteratorTriple & operator++** ()
- `const _IteratorTriple operator++` (`int`)
- `difference_type operator-` (`const _IteratorTriple &__other`) const
- **\_IteratorTriple & operator--** ()
- `const _IteratorTriple operator--` (`int`)
- **\_IteratorTriple & operator=** (`const _IteratorTriple &__other`)

### Public Attributes

- `_Iterator1` **\_M\_first**
- `_Iterator2` **\_M\_second**
- `_Iterator3` **\_M\_third**

### 5.134.1 Detailed Description

```
template<typename _Iterator1, typename _Iterator2, typename _Iterator3, typename _IteratorCategory> class __gnu_parallel::_IteratorTriple<_Iterator1, _Iterator2, _Iterator3, _IteratorCategory>
```

A triple of iterators. The usual iterator operations are applied to all three child iterators.

Definition at line 120 of file `iterator.h`.

The documentation for this class was generated from the following file:

- [iterator.h](#)

## 5.135 `__gnu_parallel::_Job<_DifferenceTp >` Struct Template Reference

### Public Types

- `typedef _DifferenceTp _DifferenceType`

### Public Attributes

- `volatile _DifferenceType _M_first`
- `volatile _DifferenceType _M_last`
- `volatile _DifferenceType _M_load`

#### 5.135.1 Detailed Description

`template<typename _DifferenceTp>struct __gnu_parallel::_Job<_DifferenceTp >`

One `__job` for a certain thread.

Definition at line 54 of file `workstealing.h`.

#### 5.135.2 Member Data Documentation

5.135.2.1 `template<typename _DifferenceTp> volatile _DifferenceType __gnu_parallel::_Job<_DifferenceTp >::_M_first`

First element.

Changed by owning and stealing thread. By stealing thread, always incremented.

Definition at line 62 of file `workstealing.h`.

Referenced by `__gnu_parallel::_for_each_template_random_access_workstealing()`.

5.135.2.2 `template<typename _DifferenceTp> volatile _DifferenceType __gnu_parallel::_Job<_DifferenceTp >::_M_last`

Last element.

Changed by owning thread only.

Definition at line 67 of file `workstealing.h`.

Referenced by `__gnu_parallel::_for_each_template_random_access_workstealing()`.

5.135.2.3 `template<typename _DifferenceTp> volatile _DifferenceType __gnu_parallel::_Job<_DifferenceTp >::_M_load`

Number of elements, i.e. `_M_last - _M_first + 1`.

Changed by owning thread only.

Definition at line 72 of file `workstealing.h`.

Referenced by `__gnu_parallel::_for_each_template_random_access_workstealing()`.

The documentation for this struct was generated from the following file:

- [workstealing.h](#)

### 5.136 `__gnu_parallel::_Less<_T1, _T2 >` Struct Template Reference

Inheritance diagram for `__gnu_parallel::_Less<_T1, _T2 >`:

#### Public Types

- typedef `_T1` `first_argument_type`
- typedef `bool` `result_type`
- typedef `_T2` `second_argument_type`

#### Public Member Functions

- `bool operator()` (`const _T1 &__t1, const _T2 &__t2`) `const`
- `bool operator()` (`const _T2 &__t2, const _T1 &__t1`) `const`

#### 5.136.1 Detailed Description

```
template<typename _T1, typename _T2>struct __gnu_parallel::_Less<_T1, _T2 >
```

Similar to `std::less`, but allows two different types.

Definition at line 252 of file `parallel/base.h`.

#### 5.136.2 Member Typedef Documentation

5.136.2.1 typedef `_T1` `std::binary_function<_T1, _T2, bool >::first_argument_type` `[inherited]`

`first_argument_type` is the type of the first argument

Definition at line 121 of file `stl_function.h`.

5.136.2.2 typedef `bool` `std::binary_function<_T1, _T2, bool >::result_type` `[inherited]`

`result_type` is the return type

Definition at line 127 of file `stl_function.h`.

5.136.2.3 `typedef _T2 std::binary_function<_T1, _T2, bool >::second_argument_type` [inherited]

`second_argument_type` is the type of the second argument

Definition at line 124 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [parallel/base.h](#)

5.137 `__gnu_parallel::_Lexicographic<_T1, _T2, _Compare >` Class Template Reference

Inheritance diagram for `__gnu_parallel::_Lexicographic<_T1, _T2, _Compare >`:

## Public Types

- typedef `std::pair<_T1, _T2 >` `first_argument_type`
- typedef `bool` `result_type`
- typedef `std::pair<_T1, _T2 >` `second_argument_type`

## Public Member Functions

- `_Lexicographic` (`_Compare &__comp`)
- `bool operator()` (`const std::pair<_T1, _T2 > &__p1, const std::pair<_T1, _T2 > &__p2`) `const`

## 5.137.1 Detailed Description

```
template<typename _T1, typename _T2, typename _Compare>class __gnu_parallel::_Lexicographic<_T1, _T2, _Compare >
```

Compare `__a` pair of types lexicographically, ascending.

Definition at line 53 of file `multiseq_selection.h`.

### 5.137.2 Member Typedef Documentation

5.137.2.1 `typedef std::pair<_T1,_T2> std::binary_function< std::pair<_T1,_T2>, std::pair<_T1,_T2>, bool >::first_argument_type` [inherited]

`first_argument_type` is the type of the first argument

Definition at line 121 of file `stl_function.h`.

5.137.2.2 `typedef bool std::binary_function< std::pair<_T1,_T2>, std::pair<_T1,_T2>, bool >::result_type` [inherited]

`result_type` is the return type

Definition at line 127 of file `stl_function.h`.

5.137.2.3 `typedef std::pair<_T1,_T2> std::binary_function< std::pair<_T1,_T2>, std::pair<_T1,_T2>, bool >::second_argument_type` [inherited]

`second_argument_type` is the type of the second argument

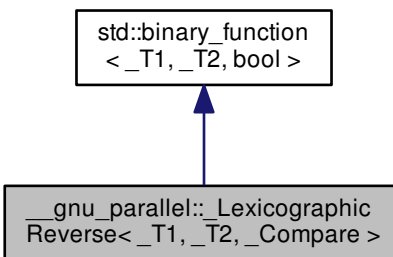

Definition at line 124 of file `stl_function.h`.

The documentation for this class was generated from the following file:

- [multiseq\\_selection.h](#)

### 5.138 `__gnu_parallel::_LexicographicReverse<_T1,_T2,_Compare>` Class Template Reference

Inheritance diagram for `__gnu_parallel::_LexicographicReverse<_T1,_T2,_Compare>`:

#### Public Types

- `typedef _T1 first_argument_type`
- `typedef bool result_type`
- `typedef _T2 second_argument_type`

## Public Member Functions

- `_LexicographicReverse` (`_Compare &__comp`)
- `bool operator()` (`const std::pair<_T1, _T2 > &__p1, const std::pair<_T1, _T2 > &__p2`) `const`

### 5.138.1 Detailed Description

```
template<typename _T1, typename _T2, typename _Compare>class __gnu_parallel::_LexicographicReverse<_T1, _T2, _Compare >
```

Compare \_\_a pair of types lexicographically, descending.

Definition at line 80 of file `multiseq_selection.h`.

### 5.138.2 Member Typedef Documentation

5.138.2.1 `typedef _T1 std::binary_function<_T1, _T2, bool >::first_argument_type` `[inherited]`

`first_argument_type` is the type of the first argument

Definition at line 121 of file `stl_function.h`.

5.138.2.2 `typedef bool std::binary_function<_T1, _T2, bool >::result_type` `[inherited]`

`result_type` is the return type

Definition at line 127 of file `stl_function.h`.

5.138.2.3 `typedef _T2 std::binary_function<_T1, _T2, bool >::second_argument_type` `[inherited]`

`second_argument_type` is the type of the second argument

Definition at line 124 of file `stl_function.h`.

The documentation for this class was generated from the following file:

- [multiseq\\_selection.h](#)

### 5.139 `__gnu_parallel::_LoserTree< __stable, _Tp, _Compare >` Class Template Reference

Inheritance diagram for `__gnu_parallel::_LoserTree< __stable, _Tp, _Compare >`:

#### Public Member Functions

- `_LoserTree` (unsigned int \_\_k, \_Compare \_\_comp)
- void `__delete_min_insert` (\_Tp \_\_key, bool \_\_sup)
- int `__get_min_source` ()
- void `__init` ()
- unsigned int `__init_winner` (unsigned int \_\_root)
- void `__insert_start` (const \_Tp &\_\_key, int \_\_source, bool \_\_sup)

#### Protected Attributes

- `_Compare` `_M_comp`
- bool `_M_first_insert`
- unsigned int `_M_ik`
- unsigned int `_M_k`
- unsigned int `_M_log_k`
- `_Loser` \* `_M_losers`
- unsigned int `_M_offset`

#### 5.139.1 Detailed Description

```
template<bool __stable, typename _Tp, typename _Compare>class __gnu_parallel::_LoserTree< __stable, _Tp, _Compare >
```

Stable `_LoserTree` variant.

Provides the stable implementations of `insert_start`, `__init_winner`, `__init` and `__delete_min_insert`.

Unstable variant is done using partial specialisation below.

Definition at line 169 of file `losertree.h`.

## 5.139.2 Member Function Documentation

5.139.2.1 `template<bool __stable, typename _Tp, typename _Compare > void __gnu_parallel::_LoserTree< __stable, _Tp, _Compare >::_delete_min_insert ( _Tp __key, bool __sup ) [inline]`

Delete the smallest element and insert a new element from the previously smallest element's sequence.

This implementation is stable.

Definition at line 222 of file `losertree.h`.

5.139.2.2 `template<typename _Tp, typename _Compare > int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_get_min_source ( ) [inline],[inherited]`

## Returns

the index of the sequence with the smallest element.

Definition at line 155 of file `losertree.h`.

References `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source`.

5.139.2.3 `template<typename _Tp, typename _Compare > void __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_insert_start ( const _Tp & __key, int __source, bool __sup ) [inline],[inherited]`

Initializes the sequence "`_M_source`" with the element "`__key`".

## Parameters

|                       |                                                                                           |
|-----------------------|-------------------------------------------------------------------------------------------|
| <code>__key</code>    | the element to insert                                                                     |
| <code>__source</code> | <code>__index</code> of the <code>__source</code> sequence                                |
| <code>__sup</code>    | flag that determines whether the value to insert is an explicit <code>__supremum</code> . |

Definition at line 134 of file `losertree.h`.

References `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_first_insert`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_key`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_sup`.

## 5.139.3 Member Data Documentation

5.139.3.1 `template<typename _Tp, typename _Compare > _Compare __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_comp [protected],[inherited]`

`_Compare` to use.

Definition at line 78 of file `losertree.h`.

5.139.3.2 `template<typename _Tp, typename _Compare > bool __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_first_insert [protected],[inherited]`

State flag that determines whether the `_LoserTree` is empty.

Only used for building the `_LoserTree`.

Definition at line 85 of file `losertree.h`.

Referenced by `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_insert_start()`, and `__gnu_parallel::_LoserTree-`

## 5.140 `__gnu_parallel::_LoserTree< false, _Tp, _Compare >` Class Template Reference

Inheritance diagram for `__gnu_parallel::_LoserTree< false, _Tp, _Compare >`:

### Public Member Functions

- **`_LoserTree`** (`unsigned int __k, _Compare __comp`)
- `void __delete_min_insert` (`_Tp __key, bool __sup`)
- `int __get_min_source` ()
- `void __init` ()
- `unsigned int __init_winner` (`unsigned int __root`)
- `void __insert_start` (`const _Tp &__key, int __source, bool __sup`)

## Protected Attributes

- `_Compare` `_M_comp`
- `bool` `_M_first_insert`
- `unsigned int` `_M_ik`
- `unsigned int` `_M_k`
- `unsigned int` `_M_log_k`
- `_Loser` \* `_M_losers`
- `unsigned int` `_M_offset`

## 5.140.1 Detailed Description

`template<typename _Tp, typename _Compare>class __gnu_parallel::_LoserTree< false, _Tp, _Compare >`

Unstable `_LoserTree` variant.

Stability (non-stable here) is selected with partial specialization.

Definition at line 261 of file `losertree.h`.

## 5.140.2 Member Function Documentation

5.140.2.1 `template<typename _Tp, typename _Compare > void __gnu_parallel::_LoserTree< false, _Tp, _Compare >::_delete_min_insert( _Tp __key, bool __sup ) [inline]`

Delete the `_M_key` smallest element and insert the element `__key` instead.

## Parameters

|                    |                                                              |
|--------------------|--------------------------------------------------------------|
| <code>__key</code> | the <code>_M_key</code> to insert                            |
| <code>__sup</code> | true iff <code>__key</code> is an explicitly marked supremum |

Definition at line 324 of file `losertree.h`.

5.140.2.2 `template<typename _Tp, typename _Compare > int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_get_min_source( ) [inline],[inherited]`

## Returns

the index of the sequence with the smallest element.

Definition at line 155 of file `losertree.h`.

References `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source`.

5.140.2.3 `template<typename _Tp, typename _Compare > unsigned int __gnu_parallel::_LoserTree< false, _Tp, _Compare >::_init_winner( unsigned int __root ) [inline]`

Computes the winner of the competition at position "`__root`".

Called recursively (starting at 0) to build the initial tree.

## Parameters

|                     |                                 |
|---------------------|---------------------------------|
| <code>__root</code> | __index of the "game" to start. |
|---------------------|---------------------------------|

Definition at line 284 of file losertree.h.

5.140.2.4 `template<typename _Tp, typename _Compare > void __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_insert_start ( const _Tp & __key, int __source, bool __sup ) [inline], [inherited]`

Initializes the sequence "`_M_source`" with the element "`__key`".

## Parameters

|                       |                                                                                           |
|-----------------------|-------------------------------------------------------------------------------------------|
| <code>__key</code>    | the element to insert                                                                     |
| <code>__source</code> | __index of the <code>__source</code> sequence                                             |
| <code>__sup</code>    | flag that determines whether the value to insert is an explicit <code>__supremum</code> . |

Definition at line 134 of file losertree.h.

References `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_first_insert`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_key`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_sup`.

## 5.140.3 Member Data Documentation

5.140.3.1 `template<typename _Tp, typename _Compare > _Compare __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_comp [protected], [inherited]`

`_Compare` to use.

Definition at line 78 of file losertree.h.

5.140.3.2 `template<typename _Tp, typename _Compare > bool __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_first_insert [protected], [inherited]`

State flag that determines whether the `_LoserTree` is empty.

Only used for building the `_LoserTree`.

Definition at line 85 of file losertree.h.

Referenced by `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_insert_start()`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase()`.

5.140.3.3 `template<typename _Tp, typename _Compare > unsigned int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_log_k [protected], [inherited]`

`log_2{ _M_k }`

Definition at line 72 of file losertree.h.

Referenced by `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase()`.

5.140.3.4 `template<typename _Tp, typename _Compare > _Loser* __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers [protected], [inherited]`

`_LoserTree` elements.

Definition at line 75 of file losertree.h.

Referenced by `__gnu_parallel::_LoserTreeBase<_Tp, _Compare>::__get_min_source()`, `__gnu_parallel::_LoserTreeBase<_Tp, _Compare>::__insert_start()`, `__gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_LoserTreeBase()`, and `__gnu_parallel::_LoserTreeBase<_Tp, _Compare>::~~LoserTreeBase()`.

The documentation for this class was generated from the following file:

- unsigned int [`\_M\_log\_k`](#)
- `_Loser` \* [`\_M\_losers`](#)
- unsigned int [`\_M\_offset`](#)

### 5.141.1 Detailed Description

```
template<typename _Tp, typename _Compare>class __gnu_parallel::_LoserTreeBase< _Tp, _Compare >
```

Guarded loser/tournament tree.

The smallest element is at the top.

Guarding is done explicitly through one flag `_M_sup` per element, `inf` is not needed due to a better initialization routine. This is a well-performing variant.

#### Parameters

|                       |                                                                      |
|-----------------------|----------------------------------------------------------------------|
| <code>_Tp</code>      | the element type                                                     |
| <code>_Compare</code> | the comparator to use, defaults to <code>std::less&lt;_Tp&gt;</code> |

Definition at line 55 of file `losertree.h`.

### 5.141.2 Constructor & Destructor Documentation

```
5.141.2.1 template<typename _Tp , typename _Compare > __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase( unsigned int __k, _Compare __comp ) [inline]
```

The constructor.

#### Parameters

|                     |                                   |
|---------------------|-----------------------------------|
| <code>__k</code>    | The number of sequences to merge. |
| <code>__comp</code> | The comparator to use.            |

Definition at line 94 of file `losertree.h`.

References `__gnu_parallel::_rd_log2()`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_first_insert`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_log_k`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers`.

```
5.141.2.2 template<typename _Tp , typename _Compare > __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::~~_LoserTreeBase( ) [inline]
```

The destructor.

Definition at line 118 of file `losertree.h`.

References `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers`.

### 5.141.3 Member Function Documentation

```
5.141.3.1 template<typename _Tp , typename _Compare > int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_get_min_source( ) [inline]
```

#### Returns

the index of the sequence with the smallest element.

Definition at line 155 of file `losertree.h`.

References `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source`.

5.141.3.2 `template<typename _Tp, typename _Compare > void __gnu_parallel::_LoserTreeBase<_Tp, _Compare >::_insert_start( const _Tp &__key, int __source, bool __sup ) [inline]`

Initializes the sequence "`_M_source`" with the element "`__key`".

## Parameters

|                       |                                                                                           |
|-----------------------|-------------------------------------------------------------------------------------------|
| <code>__key</code>    | the element to insert                                                                     |
| <code>__source</code> | <code>__index</code> of the <code>__source</code> <code>__sequence</code>                 |
| <code>__sup</code>    | flag that determines whether the value to insert is an explicit <code>__supremum</code> . |

Definition at line 134 of file `losertree.h`.

References `__gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_M_first_insert`, `__gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_Loser::_M_key`, `__gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_M_losers`, `__gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_Loser::_M_source`, and `__gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_Loser::_M_sup`.

## 5.141.4 Member Data Documentation

5.141.4.1 `template<typename _Tp, typename _Compare> _Compare __gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_M_comp` [protected]

`_Compare` to use.

Definition at line 78 of file `losertree.h`.

5.141.4.2 `template<typename _Tp, typename _Compare> bool __gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_M_first_insert` [protected]

State flag that determines whether the `_LoserTree` is empty.

Only used for building the `_LoserTree`.

Definition at line 85 of file `losertree.h`.

Referenced by `__gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_insert_start()`, and `__gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_LoserTreeBase()`.

5.141.4.3 `template<typename _Tp, typename _Compare> unsigned int __gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_M_log_k` [protected]

`log_2{M_k}`

Definition at line 72 of file `losertree.h`.

Referenced by `__gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_LoserTreeBase()`.

5.141.4.4 `template<typename _Tp, typename _Compare> _Loser* __gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_M_losers` [protected]

`_LoserTree` `__elements`.

Definition at line 75 of file `losertree.h`.

Referenced by `__gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_get_min_source()`, `__gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_insert_start()`, `__gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_LoserTreeBase()`, and `__gnu_parallel::_LoserTreeBase<_Tp, _Compare>::~~LoserTreeBase()`.

The documentation for this class was generated from the following file:

5.142 `__gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_Loser` Struct Reference

## Public Attributes

- [\\_Tp \\_M\\_key](#)
- [int \\_M\\_source](#)
- [bool \\_M\\_sup](#)

### 5.142.1 Detailed Description

`template<typename _Tp, typename _Compare>struct __gnu_parallel::_LoserTreeBase<_Tp, _Compare >::_Loser`

Internal representation of a `_LoserTree` element.

Definition at line 59 of file `losertree.h`.

### 5.142.2 Member Data Documentation

5.142.2.1 `template<typename _Tp, typename _Compare >_Tp __gnu_parallel::_LoserTreeBase<_Tp, _Compare >::_Loser::_M_key`

`_M_key` of the element in the `_LoserTree`.

Definition at line 66 of file `losertree.h`.

Referenced by `__gnu_parallel::_LoserTreeBase<_Tp, _Compare >::_insert_start()`.

5.142.2.2 `template<typename _Tp, typename _Compare >int __gnu_parallel::_LoserTreeBase<_Tp, _Compare >::_Loser::_M_source`

`__index` of the `__source` `__sequence`.

Definition at line 64 of file `losertree.h`.

Referenced by `__gnu_parallel::_LoserTreeBase<_Tp, _Compare >::_get_min_source()`, and `__gnu_parallel::_LoserTreeBase<_Tp, _Compare >::_insert_start()`.

5.142.2.3 `template<typename _Tp, typename _Compare >bool __gnu_parallel::_LoserTreeBase<_Tp, _Compare >::_Loser::_M_sup`

flag, true iff this is a "maximum" `__sentinel`.

Definition at line 62 of file `losertree.h`.

Referenced by `__gnu_parallel::_LoserTreeBase<_Tp, _Compare >::_insert_start()`.

The documentation for this struct was generated from the following file:

- [losertree.h](#)

### 5.143 `__gnu_parallel::_LoserTreePointer< __stable, _Tp, _Compare >` Class Template Reference

Inheritance diagram for `__gnu_parallel::_LoserTreePointer< __stable, _Tp, _Compare >`:

#### Public Member Functions

- `int __get_min_source ()`
- `void __insert_start (const _Tp &__key, int __source, bool __sup)`

- int **`__get_min_source`** ()
- void **`__insert_start`** (const `_Tp` &`__key`, int `__source`, bool)

## Protected Attributes

- `_Compare` **`_M_comp`**
- unsigned int **`_M_ik`**

- unsigned int **\_M\_k**
- **\_Loser \* \_M\_losers**
- unsigned int **\_M\_offset**

#### 5.149.1 Detailed Description

```
template<typename _Tp, typename _Compare>class __gnu_parallel::_LoserTreePointerUnguardedBase< _Tp, _Compare >
```

Unguarded loser tree, keeping only pointers to the elements in the tree structure.

No guarding is done, therefore not a single input sequence must run empty. This is a very fast variant.

Definition at line 828 of file losertree.h.

The documentation for this class was generated from the following file:

- [losertree.h](#)

### 5.150 \_\_gnu\_parallel::\_LoserTreeTraits< \_Tp > Struct Template Reference

#### Static Public Attributes

- static const bool [\\_M\\_use\\_pointer](#)

#### 5.150.1 Detailed Description

```
template<typename _Tp>struct __gnu_parallel::_LoserTreeTraits< _Tp >
```

Traits for determining whether the loser tree should use pointers or copies.

The field "[\\_M\\_use\\_pointer](#)" is used to determine whether to use pointers in the loser trees or whether to copy the values into the loser tree.

The default behavior is to use pointers if the data type is 4 times as big as the pointer to it.

Specialize for your data type to customize the behavior.

Example:

```
template<> struct _LoserTreeTraits<int> { static const bool _M_use_pointer = false; };
```

```
template<> struct _LoserTreeTraits<heavyweight_type> { static const bool _M_use_pointer = true; };
```

#### Parameters

|                  |                                         |
|------------------|-----------------------------------------|
| <code>_Tp</code> | type to give the loser tree traits for. |
|------------------|-----------------------------------------|

Definition at line 731 of file multiway\_merge.h.

#### 5.150.2 Member Data Documentation

5.150.2.1 `template<typename _Tp> const bool __gnu_parallel::_LoserTreeTraits< _Tp >::_M_use_pointer` [static]

True iff to use pointers instead of values in loser trees.

The default behavior is to use pointers if the data type is four times as big as the pointer to it.

Definition at line 739 of file multiway\_merge.h.

The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

## 5.151 `__gnu_parallel::_LoserTreeUnguarded< __stable, _Tp, _Compare >` Class Template Reference

- unsigned int **`_M_offset`**

### 5.151.1 Detailed Description

```
template<bool __stable, typename _Tp, typename _Compare>class __gnu_parallel::_LoserTreeUnguarded< __stable, _Tp, _Compare >
```

Stable implementation of unguarded `_LoserTree`.

Unstable variant is selected below with partial specialization.

Definition at line 646 of file losertree.h.

The documentation for this class was generated from the following file:

- [losertree.h](#)

### 5.152 `__gnu_parallel::_LoserTreeUnguarded< false, _Tp, _Compare >` Class Template Reference

Inheritance diagram for `__gnu_parallel::_LoserTreeUnguarded< false, _Tp, _Compare >`:

#### Public Member Functions

- **`_LoserTreeUnguarded`** (unsigned int \_\_k, const \_Tp &\_\_sentinel, \_Compare \_\_comp=`std::less< _Tp >()`)
- void **`__delete_min_insert`** (\_Tp \_\_key, bool)
- int **`__get_min_source`** ()
- void **`__init`** ()
- unsigned int **`__init_winner`** (unsigned int \_\_root)
- void **`__insert_start`** (const \_Tp &\_\_key, int \_\_source, bool)

#### Protected Attributes

- `_Compare` **`_M_comp`**
- unsigned int **`_M_ik`**
- unsigned int **`_M_k`**
- `_Loser *` **`_M_losers`**
- unsigned int **`_M_offset`**

#### 5.152.1 Detailed Description

```
template<typename _Tp, typename _Compare>class __gnu_parallel::_LoserTreeUnguarded< false, _Tp, _Compare >
```

Non-Stable implementation of unguarded `_LoserTree`.

Stable implementation is above.

Definition at line 734 of file losertree.h.

The documentation for this class was generated from the following file:

- [losertree.h](#)

## 5.153 `__gnu_parallel::_LoserTreeUnguardedBase<_Tp, _Compare>` Class Template Reference

Inheritance diagram for `__gnu_parallel::_LoserTreeUnguardedBase<_Tp, _Compare>`:

### Public Member Functions

- `_LoserTreeUnguardedBase` (unsigned int \_\_k, const \_Tp &\_\_sentinel, \_Compare \_\_comp=`std::less<_Tp>`())
- int `__get_min_source` ()
- void `__insert_start` (const \_Tp &\_\_key, int \_\_source, bool)

### Protected Attributes

- `_Compare` **`_M_comp`**
- unsigned int **`_M_ik`**
- unsigned int **`_M_k`**
- `_Loser` \* **`_M_losers`**
- unsigned int **`_M_offset`**

#### 5.153.1 Detailed Description

```
template<typename _Tp, typename _Compare>class __gnu_parallel::_LoserTreeUnguardedBase<_Tp, _Compare>
```

Base class for unguarded `_LoserTree` implementation.

The whole element is copied into the tree structure.

No guarding is done, therefore not a single input sequence must run empty. Unused `__sequence` heads are marked with a sentinel which is `>` all elements that are to be merged.

This is a very fast variant.

Definition at line 574 of file losertree.h.

The documentation for this class was generated from the following file:

- [losertree.h](#)

### 5.154 `__gnu_parallel::Multiplies<_Tp1, _Tp2, _Result >` Struct Template Reference

Inheritance diagram for `__gnu_parallel::Multiplies<_Tp1, _Tp2, _Result >`:

#### Public Types

- typedef `_Tp1` `first_argument_type`
- typedef `_Result` `result_type`
- typedef `_Tp2` `second_argument_type`

#### Public Member Functions

- `_Result` **operator()** (const `_Tp1` &`_x`, const `_Tp2` &`_y`) const

#### 5.154.1 Detailed Description

```
template<typename _Tp1, typename _Tp2, typename _Result = __typeof__(*static_cast<_Tp1*>(0) * *static_cast<_Tp2*>(0))>struct __gnu_parallel::Multiplies<_Tp1, _Tp2, _Result >
```

Similar to `std::multiplies`, but allows two different types.

Definition at line 288 of file `parallel/base.h`.

#### 5.154.2 Member Typedef Documentation

5.154.2.1 typedef `_Tp1` `std::binary_function<_Tp1, _Tp2, _Result >::first_argument_type` [inherited]

`first_argument_type` is the type of the first argument

Definition at line 121 of file `stl_function.h`.

5.154.2.2 typedef `_Result` `std::binary_function<_Tp1, _Tp2, _Result >::result_type` [inherited]

`result_type` is the return type

Definition at line 127 of file `stl_function.h`.

5.154.2.3 `typedef Tp2 std::binary_function<_Tp1, _Tp2, _Result >::second_argument_type` [inherited]

`second_argument_type` is the type of the second argument

Definition at line 124 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [parallel/base.h](#)

## 5.155 `__gnu_parallel::_Nothing` Struct Reference

### Public Member Functions

- `template<typename _It > void operator() (_It __i)`

#### 5.155.1 Detailed Description

Functor doing nothing.

For some `__reduction` tasks (this is not a function object, but is passed as `__selector __dummy` parameter.

Definition at line 288 of file `for_each_selectors.h`.

#### 5.155.2 Member Function Documentation

5.155.2.1 `template<typename _It > void __gnu_parallel::_Nothing::operator() (_It __i)` [inline]

Functor execution.

##### Parameters

|                  |                              |
|------------------|------------------------------|
| <code>__i</code> | iterator referencing object. |
|------------------|------------------------------|

Definition at line 294 of file `for_each_selectors.h`.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 5.156 `__gnu_parallel::_Piece<_DifferenceTp >` Struct Template Reference

### Public Types

- `typedef _DifferenceTp _DifferenceType`

### Public Attributes

- `_DifferenceType _M_begin`
- `_DifferenceType _M_end`

### 5.156.1 Detailed Description

`template<typename _DifferenceTp>struct __gnu_parallel::_Piece<_DifferenceTp >`

Subsequence description.

Definition at line 46 of file `multiway_mergesort.h`.

### 5.156.2 Member Data Documentation

5.156.2.1 `template<typename _DifferenceTp >_DifferenceType __gnu_parallel::_Piece<_DifferenceTp >::_M_begin`

Begin of subsequence.

Definition at line 51 of file `multiway_mergesort.h`.

5.156.2.2 `template<typename _DifferenceTp >_DifferenceType __gnu_parallel::_Piece<_DifferenceTp >::_M_end`

End of subsequence.

Definition at line 54 of file `multiway_mergesort.h`.

The documentation for this struct was generated from the following file:

- [multiway\\_mergesort.h](#)

## 5.157 `__gnu_parallel::_Plus<_Tp1, _Tp2, _Result >` Struct Template Reference

Inheritance diagram for `__gnu_parallel::_Plus<_Tp1, _Tp2, _Result >`:

### Public Types

- typedef `_Tp1` `first_argument_type`
- typedef `_Result` `result_type`
- typedef `_Tp2` `second_argument_type`

## Public Member Functions

- `_Result operator()` (const `_Tp1` &`_x`, const `_Tp2` &`_y`) const

## 5.157.1 Detailed Description

```
template<typename _Tp1, typename _Tp2, typename _Result = __typeof__(*static_cast<_Tp1*>(0) + *static_cast<_Tp2*>(0))>struct __gnu_parallel::Plus<_Tp1, _Tp2, _Result >
```

Similar to `std::plus`, but allows two different types.

Definition at line 272 of file `parallel/base.h`.

## 5.157.2 Member Typedef Documentation

5.157.2.1 `typedef _Tp1 std::binary_function<_Tp1, _Tp2, _Result >::first_argument_type` [inherited]

`first_argument_type` is the type of the first argument

Definition at line 121 of file `stl_function.h`.

5.157.2.2 `typedef _Result std::binary_function<_Tp1, _Tp2, _Result >::result_type` [inherited]

`result_type` is the return type

Definition at line 127 of file `stl_function.h`.

5.157.2.3 `typedef _Tp2 std::binary_function<_Tp1, _Tp2, _Result >::second_argument_type` [inherited]

`second_argument_type` is the type of the second argument

Definition at line 124 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [parallel/base.h](#)

5.158 `__gnu_parallel::PMWSSortingData<_RAIter>` Struct Template Reference

## Public Types

- typedef `_TraitsType::difference_type` `_DifferenceType`

### 5.158.1 Detailed Description

`template<typename _RAAlter>struct __gnu_parallel::PMWMSortingData< _RAAlter >`

Data accessed by all threads.

PMWMS = parallel multiway mergesort

Definition at line 61 of file `multiway_mergesort.h`.

### 5.158.2 Member Data Documentation

5.158.2.1 `template<typename _RAAlter> _ThreadIndex __gnu_parallel::PMWMSortingData< _RAAlter >::M_num_threads`

Number of threads involved.

Definition at line 68 of file `multiway_mergesort.h`.

Referenced by `__gnu_parallel::parallel_sort_mwms()`, and `__gnu_parallel::parallel_sort_mwms_pu()`.

5.158.2.2 `template<typename _RAAlter> _DifferenceType* __gnu_parallel::PMWMSortingData< _RAAlter >::M_offsets`

Offsets to add to the found positions.

Definition at line 83 of file `multiway_mergesort.h`.

Referenced by `__gnu_parallel::parallel_sort_mwms()`.

5.158.2.3 `template<typename _RAAlter> std::vector< _Piece< _DifferenceType > >* __gnu_parallel::PMWMSortingData< _RAAlter >::M_pieces`

Pieces of data to merge [`thread`][`__sequence`].

Definition at line 86 of file `multiway_mergesort.h`.

Referenced by `__gnu_parallel::parallel_sort_mwms()`, and `__gnu_parallel::parallel_sort_mwms_pu()`.

5.158.2.4 `template<typename _RAAlter> _ValueType* __gnu_parallel::PMWMSortingData< _RAAlter >::M_samples`

Samples.

Definition at line 80 of file `multiway_mergesort.h`.

Referenced by `__gnu_parallel::__determine_samples()`, and `__gnu_parallel::parallel_sort_mwms()`.

5.158.2.5 `template<typename _RAAlter> _RAAlter __gnu_parallel::PMWMSortingData< _RAAlter >::M_source`

Input `__begin`.

Definition at line 71 of file `multiway_mergesort.h`.

Referenced by `__gnu_parallel::__determine_samples()`, `__gnu_parallel::parallel_sort_mwms()`, and `__gnu_parallel::parallel_sort_mwms_pu()`.

5.158.2.6 `template<typename _RAIter> _DifferenceType* __gnu_parallel::_PMWMSortingData<_RAIter>::_M_starts`

Start indices, per thread.

Definition at line 74 of file `multiway_mergesort.h`.

Referenced by `__gnu_parallel::_determine_samples()`, `__gnu_parallel::parallel_sort_mwms()`, and `__gnu_parallel::parallel_sort_mwms_pu()`.

5.158.2.7 `template<typename _RAIter> _ValueType** __gnu_parallel::_PMWMSortingData<_RAIter>::_M_temporary`

Storage in which to sort.

Definition at line 77 of file `multiway_mergesort.h`.

Referenced by `__gnu_parallel::parallel_sort_mwms()`, and `__gnu_parallel::parallel_sort_mwms_pu()`.

The documentation for this struct was generated from the following file:

- [multiway\\_mergesort.h](#)

5.159 `__gnu_parallel::_PseudoSequence<_Tp, _DifferenceTp>` Class Template Reference

## Public Types

- typedef `_DifferenceTp` **`_DifferenceType`**
- typedef `_PseudoSequenceIterator<_Tp, uint64_t>` **`iterator`**

## Public Member Functions

- `_PseudoSequence` (`const _Tp &__val, _DifferenceType __count`)
- `iterator begin` () const
- `iterator end` () const

## 5.159.1 Detailed Description

```
template<typename _Tp, typename _DifferenceTp> class __gnu_parallel::_PseudoSequence<_Tp, _DifferenceTp>
```

Sequence that conceptually consists of multiple copies of the same element. The copies are not stored explicitly, of course.

## Parameters

|                            |                                      |
|----------------------------|--------------------------------------|
| <code>_Tp</code>           | Sequence <code>_M_value</code> type. |
| <code>_DifferenceTp</code> | Sequence difference type.            |

Definition at line 359 of file `parallel/base.h`.

## 5.159.2 Constructor &amp; Destructor Documentation

```
5.159.2.1 template<typename _Tp, typename _DifferenceTp> __gnu_parallel::_PseudoSequence<_Tp, _DifferenceTp>
::_PseudoSequence ( const _Tp &__val, _DifferenceType __count ) [inline]
```

Constructor.

## Parameters

|                      |                             |
|----------------------|-----------------------------|
| <code>__val</code>   | Element of the sequence.    |
| <code>__count</code> | Number of (virtual) copies. |

Definition at line 371 of file parallel/base.h.

## 5.159.3 Member Function Documentation

5.159.3.1 `template<typename _Tp, typename _DifferenceTp> iterator __gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >::begin ( ) const [inline]`

Begin iterator.

Definition at line 376 of file parallel/base.h.

5.159.3.2 `template<typename _Tp, typename _DifferenceTp> iterator __gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >::end ( ) const [inline]`

End iterator.

Definition at line 381 of file parallel/base.h.

The documentation for this class was generated from the following file:

- [parallel/base.h](#)

5.160 `__gnu_parallel::_PseudoSequenceliterator< _Tp, _DifferenceTp >` Class Template Reference

## Public Types

- `typedef _DifferenceTp _DifferenceType`

## Public Member Functions

- `_PseudoSequenceliterator` (const `_Tp` & `__val`, `_DifferenceType` `__pos`)
- `bool operator!=` (const `_PseudoSequenceliterator` & `__i2`)
- `const _Tp & operator*` () const
- `_PseudoSequenceliterator` & `operator++` ()
- `_PseudoSequenceliterator` `operator++` (int)
- `_DifferenceType operator-` (const `_PseudoSequenceliterator` & `__i2`)
- `bool operator==` (const `_PseudoSequenceliterator` & `__i2`)
- `const _Tp & operator[]` (`_DifferenceType`) const

## 5.160.1 Detailed Description

`template<typename _Tp, typename _DifferenceTp> class __gnu_parallel::_PseudoSequenceliterator< _Tp, _DifferenceTp >`

`_Iterator` associated with `__gnu_parallel::_PseudoSequence`. It features the usual random-access iterator functionality.

## Parameters

|                            |                                      |
|----------------------------|--------------------------------------|
| <code>_Tp</code>           | Sequence <code>_M_value</code> type. |
| <code>_DifferenceTp</code> | Sequence difference type.            |

Definition at line 306 of file `parallel/base.h`.

The documentation for this class was generated from the following file:

- [parallel/base.h](#)

5.161 `__gnu_parallel::_QSSThreadLocal<_RAIter >` Struct Template Reference

## Public Types

- typedef `_TraitsType::difference_type` **`_DifferenceType`**
- typedef `std::pair<_RAIter, _RAIter >` **`_Piece`**
- typedef `std::iterator_traits<_RAIter >` **`_TraitsType`**

## Public Member Functions

- [\\_QSSThreadLocal](#) (int `__queue_size`)

## Public Attributes

- volatile `_DifferenceType * _M_elements_leftover`
- [\\_Piece](#) `_M_global`
- [\\_Piece](#) `_M_initial`
- [\\_RestrictedBoundedConcurrentQueue](#)  
`<_Piece > _M_leftover_parts`
- [\\_ThreadIndex](#) `_M_num_threads`

## 5.161.1 Detailed Description

```
template<typename _RAIter>struct __gnu_parallel::_QSSThreadLocal<_RAIter >
```

Information local to one thread in the parallel quicksort run.

Definition at line 65 of file `balanced_quicksort.h`.

## 5.161.2 Member Typedef Documentation

5.161.2.1 `template<typename _RAIter> typedef std::pair<_RAIter, _RAIter> __gnu_parallel::_QSSThreadLocal<_RAIter >::_Piece`

Continuous part of the sequence, described by an iterator pair.

Definition at line 72 of file `balanced_quicksort.h`.

### 5.161.3 Constructor & Destructor Documentation

5.161.3.1 `template<typename _RAIter> __gnu_parallel::QSBThreadLocal<_RAIter>::__QSBThreadLocal ( int __queue_size ) [inline]`

Constructor.

Parameters

|                           |                                  |
|---------------------------|----------------------------------|
| <code>__queue_size</code> | size of the work-stealing queue. |
|---------------------------|----------------------------------|

Definition at line 91 of file `balanced_quicksort.h`.

### 5.161.4 Member Data Documentation

5.161.4.1 `template<typename _RAIter> volatile_DifferenceType* __gnu_parallel::QSBThreadLocal<_RAIter>::__M_elements_leftover`

Pointer to a counter of elements left over to sort.

Definition at line 84 of file `balanced_quicksort.h`.

Referenced by `__gnu_parallel::parallel_sort_qsb()`, `__gnu_parallel::qsb_conquer()`, and `__gnu_parallel::qsb_local_sort_with_helping()`.

5.161.4.2 `template<typename _RAIter> _Piece __gnu_parallel::QSBThreadLocal<_RAIter>::__M_global`

The complete sequence to sort.

Definition at line 87 of file `balanced_quicksort.h`.

5.161.4.3 `template<typename _RAIter> _Piece __gnu_parallel::QSBThreadLocal<_RAIter>::__M_initial`

Initial piece to work on.

Definition at line 75 of file `balanced_quicksort.h`.

Referenced by `__gnu_parallel::qsb_conquer()`, and `__gnu_parallel::qsb_local_sort_with_helping()`.

5.161.4.4 `template<typename _RAIter> _RestrictedBoundedConcurrentQueue<_Piece> __gnu_parallel::QSBThreadLocal<_RAIter>::__M_leftover_parts`

Work-stealing queue.

Definition at line 78 of file `balanced_quicksort.h`.

Referenced by `__gnu_parallel::qsb_local_sort_with_helping()`.

5.161.4.5 `template<typename _RAIter> _ThreadIndex __gnu_parallel::QSBThreadLocal<_RAIter>::__M_num_threads`

Number of threads involved in this algorithm.

Definition at line 81 of file `balanced_quicksort.h`.

Referenced by `__gnu_parallel::qsb_local_sort_with_helping()`.

The documentation for this struct was generated from the following file:

- [balanced\\_quicksort.h](#)

5.162 `__gnu_parallel::_RandomNumber` Class Reference

## Public Member Functions

- `_RandomNumber` ()
- `_RandomNumber` (uint32\_t \_\_seed, uint64\_t \_M\_supremum=0x100000000ULL)
- unsigned long `__genrand_bits` (int \_\_bits)
- uint32\_t `operator`() ()
- uint32\_t `operator`() (uint64\_t local\_supremum)

## 5.162.1 Detailed Description

Random number generator, based on the Mersenne twister.

Definition at line 42 of file `random_number.h`.

## 5.162.2 Constructor &amp; Destructor Documentation

5.162.2.1 `__gnu_parallel::_RandomNumber::_RandomNumber` ( ) [inline]

Default constructor. Seed with 0.

Definition at line 74 of file `random_number.h`.

5.162.2.2 `__gnu_parallel::_RandomNumber::_RandomNumber` ( uint32\_t \_\_seed, uint64\_t \_M\_supremum = 0x100000000ULL ) [inline]

Constructor.

## Parameters

|                          |                                                                  |
|--------------------------|------------------------------------------------------------------|
| <code>__seed</code>      | Random __seed.                                                   |
| <code>_M_supremum</code> | Generate integer random numbers in the interval [0,_M_supremum). |

Definition at line 85 of file `random_number.h`.

## 5.162.3 Member Function Documentation

5.162.3.1 unsigned long `__gnu_parallel::_RandomNumber::_genrand_bits` ( int \_\_bits ) [inline]

Generate a number of random bits, run-time parameter.

## Parameters

|                     |                             |
|---------------------|-----------------------------|
| <code>__bits</code> | Number of bits to generate. |
|---------------------|-----------------------------|

Definition at line 109 of file `random_number.h`.

5.162.3.2 uint32\_t `__gnu_parallel::_RandomNumber::operator`() ( ) [inline]

Generate unsigned random 32-bit integer.

Definition at line 94 of file `random_number.h`.

5.162.3.3 uint32\_t `__gnu_parallel::_RandomNumber::operator`() ( uint64\_t local\_supremum ) [inline]

Generate unsigned random 32-bit integer in the interval [0,local\_supremum).

Definition at line 100 of file `random_number.h`.

The documentation for this class was generated from the following file:

- [random\\_number.h](#)

## 5.163 `__gnu_parallel::_RestrictedBoundedConcurrentQueue<_Tp>` Class Template Reference

### Public Member Functions

- [\\_RestrictedBoundedConcurrentQueue](#) (`_SequenceIndex __max_size`)
- [~\\_RestrictedBoundedConcurrentQueue](#) ()
- `bool pop_back` (`_Tp &__t`)
- `bool pop_front` (`_Tp &__t`)
- `void push_front` (`const _Tp &__t`)

### 5.163.1 Detailed Description

```
template<typename _Tp>class __gnu_parallel::_RestrictedBoundedConcurrentQueue<_Tp >
```

Double-ended queue of bounded size, allowing lock-free atomic access. `push_front()` and `pop_front()` must not be called concurrently to each other, while `pop_back()` can be called concurrently at all times. `empty()`, `size()`, and `top()` are intentionally not provided. Calling them would not make sense in a concurrent setting.

#### Parameters

|                  |                         |
|------------------|-------------------------|
| <code>_Tp</code> | Contained element type. |
|------------------|-------------------------|

Definition at line 52 of file `queue.h`.

### 5.163.2 Constructor & Destructor Documentation

5.163.2.1 `template<typename _Tp> __gnu_parallel::_RestrictedBoundedConcurrentQueue<_Tp >::_RestrictedBoundedConcurrentQueue ( _SequenceIndex __max_size ) [inline]`

Constructor. Not to be called concurrent, of course.

#### Parameters

|                         |                                             |
|-------------------------|---------------------------------------------|
| <code>__max_size</code> | Maximal number of elements to be contained. |
|-------------------------|---------------------------------------------|

Definition at line 68 of file `queue.h`.

5.163.2.2 `template<typename _Tp> __gnu_parallel::_RestrictedBoundedConcurrentQueue<_Tp >::~~_RestrictedBoundedConcurrentQueue ( ) [inline]`

Destructor. Not to be called concurrent, of course.

Definition at line 77 of file `queue.h`.

### 5.163.3 Member Function Documentation

5.163.3.1 `template<typename _Tp> bool __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::pop_back ( _Tp &__t ) [inline]`

Pops one element from the queue at the front end. Must not be called concurrently with `pop_front()`.

Definition at line 127 of file `queue.h`.

5.163.3.2 `template<typename _Tp> bool __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::pop_front ( _Tp &__t ) [inline]`

Pops one element from the queue at the front end. Must not be called concurrently with `pop_front()`.

Definition at line 100 of file `queue.h`.

5.163.3.3 `template<typename _Tp> void __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::push_front ( const _Tp &__t ) [inline]`

Pushes one element into the queue at the front end. Must not be called concurrently with `pop_front()`.

Definition at line 83 of file `queue.h`.

The documentation for this class was generated from the following file:

- [queue.h](#)

## 5.164 `__gnu_parallel::_SamplingSorter< __stable, _RAIter, _StrictWeakOrdering >` Struct Template Reference

### Public Member Functions

- void **operator()** (`_RAIter __first, _RAIter __last, _StrictWeakOrdering __comp`)

#### 5.164.1 Detailed Description

`template<bool __stable, class _RAIter, class _StrictWeakOrdering>struct __gnu_parallel::_SamplingSorter< __stable, _RAIter, _StrictWeakOrdering >`

Stable sorting functor.

Used to reduce code instantiation in `multiway_merge_sampling_splitting`.

Definition at line 1007 of file `multiway_merge.h`.

The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

## 5.165 `__gnu_parallel::_SamplingSorter< false, _RAIter, _StrictWeakOrdering >` Struct Template Reference

### Public Member Functions

- void **operator()** (`_RAIter __first, _RAIter __last, _StrictWeakOrdering __comp`)

#### 5.165.1 Detailed Description

```
template<class _RAIter, class _StrictWeakOrdering>struct __gnu_parallel::_SamplingSorter< false, _RAIter, _StrictWeakOrdering >
```

Non-\_\_stable sorting functor.

Used to reduce code instantiation in multiway\_merge\_sampling\_splitting.

Definition at line 1020 of file multiway\_merge.h.

### 5.166.1 Detailed Description

class `_Settings` Run-time settings for the parallel mode including all tunable parameters.

Definition at line 123 of file `settings.h`.

### 5.166.2 Member Function Documentation

#### 5.166.2.1 `static const _Settings& __gnu_parallel::_Settings::get( ) throw` `[static]`

Get the global settings.

Referenced by `__gnu_parallel::_find_template()`, `__gnu_parallel::_for_each_template_random_access_workstealing()`, `__gnu_parallel::_parallel_nth_element()`, `__gnu_parallel::_parallel_partial_sum()`, `__gnu_parallel::_parallel_partial_sum_linear()`, `__gnu_parallel::_parallel_partition()`, `__gnu_parallel::_parallel_random_shuffle_drs()`, `__gnu_parallel::_parallel_sort()`, `__gnu_parallel::_parallel_sort_qs_conquer()`, `__gnu_parallel::_qsb_local_sort_with_helping()`, `__gnu_parallel::_sequential_random_shuffle()`, `__gnu_parallel::multiway_merge_sampling_splitting()`, `__gnu_parallel::parallel_multiway_merge()`, `__gnu_parallel::parallel_sort_mwms()`, and `__gnu_parallel::parallel_sort_mwms_pu()`.

#### 5.166.2.2 `static void __gnu_parallel::_Settings::set( _Settings & ) throw` `[static]`

Set the global settings.

### 5.166.3 Member Data Documentation

#### 5.166.3.1 `_SequenceIndex __gnu_parallel::_Settings::accumulate_minimal_n`

Minimal input size for `accumulate`.

Definition at line 139 of file `settings.h`.

**5.166.3.2 unsigned int \_\_gnu\_parallel::\_Settings::adjacent\_difference\_minimal\_n**

Minimal input size for adjacent\_difference.

Definition at line 142 of file settings.h.

**5.166.3.3 unsigned int \_\_gnu\_parallel::\_Settings::cache\_line\_size**

Overestimation of cache line size. Used to avoid false sharing, i.e. elements of different threads are at least this amount apart.

Definition at line 265 of file settings.h.

Referenced by \_\_gnu\_parallel::\_for\_each\_template\_random\_access\_workstealing().

**5.166.3.4 \_SequenceIndex \_\_gnu\_parallel::\_Settings::count\_minimal\_n**

Minimal input size for count and count\_if.

Definition at line 145 of file settings.h.

**5.166.3.5 \_SequenceIndex \_\_gnu\_parallel::\_Settings::fill\_minimal\_n**

Minimal input size for fill.

Definition at line 148 of file settings.h.

**5.166.3.6 double \_\_gnu\_parallel::\_Settings::find\_increasing\_factor**

Block size increase factor for find.

Definition at line 151 of file settings.h.

**5.166.3.7 \_SequenceIndex \_\_gnu\_parallel::\_Settings::find\_initial\_block\_size**

Initial block size for find.

Definition at line 154 of file settings.h.

Referenced by \_\_gnu\_parallel::\_find\_template().

**5.166.3.8 \_SequenceIndex \_\_gnu\_parallel::\_Settings::find\_maximum\_block\_size**

Maximal block size for find.

Definition at line 157 of file settings.h.

**5.166.3.9 float \_\_gnu\_parallel::\_Settings::find\_scale\_factor**

Block size scale-down factor with respect to current position.

Definition at line 276 of file settings.h.

Referenced by \_\_gnu\_parallel::\_find\_template().

**5.166.3.10 \_SequenceIndex \_\_gnu\_parallel::\_Settings::find\_sequential\_search\_size**

Start with looking for this many elements sequentially, for find.

Definition at line 160 of file settings.h.

Referenced by \_\_gnu\_parallel::\_find\_template().

**5.166.3.11** `_SequenceIndex __gnu_parallel::_Settings::for_each_minimal_n`

Minimal input size for `for_each`.

Definition at line 163 of file `settings.h`.

**5.166.3.12** `_SequenceIndex __gnu_parallel::_Settings::generate_minimal_n`

Minimal input size for `generate`.

Definition at line 166 of file `settings.h`.

**5.166.3.13** `unsigned long long __gnu_parallel::_Settings::L1_cache_size`

size of the L1 cache in bytes (underestimation).

Definition at line 254 of file `settings.h`.

**5.166.3.14** `unsigned long long __gnu_parallel::_Settings::L2_cache_size`

size of the L2 cache in bytes (underestimation).

Definition at line 257 of file `settings.h`.

Referenced by `__gnu_parallel::_parallel_random_shuffle_drs()`, and `__gnu_parallel::_sequential_random_shuffle()`.

**5.166.3.15** `_SequenceIndex __gnu_parallel::_Settings::max_element_minimal_n`

Minimal input size for `max_element`.

Definition at line 169 of file `settings.h`.

**5.166.3.16** `_SequenceIndex __gnu_parallel::_Settings::merge_minimal_n`

Minimal input size for `merge`.

Definition at line 172 of file `settings.h`.

**5.166.3.17** `unsigned int __gnu_parallel::_Settings::merge_oversampling`

Oversampling factor for `merge`.

Definition at line 175 of file `settings.h`.

Referenced by `__gnu_parallel::multiway_merge_sampling_splitting()`, and `__gnu_parallel::parallel_multiway_merge()`.

**5.166.3.18** `_SequenceIndex __gnu_parallel::_Settings::min_element_minimal_n`

Minimal input size for `min_element`.

Definition at line 178 of file `settings.h`.

**5.166.3.19** `int __gnu_parallel::_Settings::multiway_merge_minimal_k`

Oversampling factor for `multiway_merge`.

Definition at line 184 of file `settings.h`.

**5.166.3.20** `_SequenceIndex __gnu_parallel::_Settings::multiway_merge_minimal_n`

Minimal input size for `multiway_merge`.

Definition at line 181 of file `settings.h`.

**5.166.3.21 unsigned int \_\_gnu\_parallel::\_Settings::multiway\_merge\_oversampling**

Oversampling factor for multiway\_merge.

Definition at line 187 of file settings.h.

**5.166.3.22 \_SequenceIndex \_\_gnu\_parallel::\_Settings::nth\_element\_minimal\_n**

Minimal input size for nth\_element.

Definition at line 190 of file settings.h.

Referenced by \_\_gnu\_parallel::\_parallel\_nth\_element().

**5.166.3.23 \_SequenceIndex \_\_gnu\_parallel::\_Settings::partial\_sort\_minimal\_n**

Minimal input size for partial\_sort.

Definition at line 203 of file settings.h.

**5.166.3.24 float \_\_gnu\_parallel::\_Settings::partial\_sum\_dilation**

Ratio for partial\_sum. Assume "sum and write result" to be this factor slower than just "sum".

Definition at line 207 of file settings.h.

Referenced by \_\_gnu\_parallel::\_parallel\_partial\_sum\_linear().

**5.166.3.25 unsigned int \_\_gnu\_parallel::\_Settings::partial\_sum\_minimal\_n**

Minimal input size for partial\_sum.

Definition at line 210 of file settings.h.

**5.166.3.26 double \_\_gnu\_parallel::\_Settings::partition\_chunk\_share**

Chunk size for partition, relative to input size. If > 0.0, this value overrides partition\_chunk\_size.

Definition at line 197 of file settings.h.

Referenced by \_\_gnu\_parallel::\_parallel\_partition().

**5.166.3.27 \_SequenceIndex \_\_gnu\_parallel::\_Settings::partition\_chunk\_size**

Chunk size for partition.

Definition at line 193 of file settings.h.

Referenced by \_\_gnu\_parallel::\_parallel\_partition().

**5.166.3.28 \_SequenceIndex \_\_gnu\_parallel::\_Settings::partition\_minimal\_n**

Minimal input size for partition.

Definition at line 200 of file settings.h.

Referenced by \_\_gnu\_parallel::\_parallel\_nth\_element().

**5.166.3.29 \_SequenceIndex \_\_gnu\_parallel::\_Settings::qsb\_steals**

The number of stolen ranges in load-balanced quicksort.

Definition at line 270 of file settings.h.

**5.166.3.30** unsigned int \_\_gnu\_parallel::\_Settings::random\_shuffle\_minimal\_n

Minimal input size for random\_shuffle.

Definition at line 213 of file settings.h.

**5.166.3.31** \_\_SequenceIndex \_\_gnu\_parallel::\_Settings::replace\_minimal\_n

Minimal input size for replace and replace\_if.

Definition at line 216 of file settings.h.

**5.166.3.32** \_\_SequenceIndex \_\_gnu\_parallel::\_Settings::search\_minimal\_n

Minimal input size for search and search\_n.

Definition at line 273 of file settings.h.

**5.166.3.33** \_\_SequenceIndex \_\_gnu\_parallel::\_Settings::set\_difference\_minimal\_n

Minimal input size for set\_difference.

Definition at line 219 of file settings.h.

**5.166.3.34** \_\_SequenceIndex \_\_gnu\_parallel::\_Settings::set\_intersection\_minimal\_n

Minimal input size for set\_intersection.

Definition at line 222 of file settings.h.

**5.166.3.35** \_\_SequenceIndex \_\_gnu\_parallel::\_Settings::set\_symmetric\_difference\_minimal\_n

Minimal input size for set\_symmetric\_difference.

Definition at line 225 of file settings.h.

**5.166.3.36** \_\_SequenceIndex \_\_gnu\_parallel::\_Settings::set\_union\_minimal\_n

Minimal input size for set\_union.

Definition at line 228 of file settings.h.

**5.166.3.37** \_\_SequenceIndex \_\_gnu\_parallel::\_Settings::sort\_minimal\_n

Minimal input size for parallel sorting.

Definition at line 231 of file settings.h.

**5.166.3.38** unsigned int \_\_gnu\_parallel::\_Settings::sort\_mwms\_oversampling

Oversampling factor for parallel std::sort (MWMS).

Definition at line 234 of file settings.h.

Referenced by \_\_gnu\_parallel::parallel\_sort\_mwms(), and \_\_gnu\_parallel::parallel\_sort\_mwms\_pu().

**5.166.3.39** unsigned int \_\_gnu\_parallel::\_Settings::sort\_qs\_num\_samples\_preset

Such many samples to take to find a good pivot (quicksort).

Definition at line 237 of file settings.h.

### 5.166.3.40 `__SequenceIndex __gnu_parallel::Settings::sort_qsb_base_case_maximal_n`

Maximal subsequence `__length` to switch to unbalanced `__base` case. Applies to `std::sort` with dynamically load-balanced quicksort.

Definition at line 241 of file `settings.h`.

Referenced by `__gnu_parallel::__qsb_local_sort_with_helping()`.

### 5.166.3.41 `unsigned int __gnu_parallel::Settings::TLB_size`

size of the Translation Lookaside Buffer (underestimation).

Definition at line 260 of file `settings.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__sequential_random_shuffle()`.

### 5.166.3.42 `__SequenceIndex __gnu_parallel::Settings::transform_minimal_n`

Minimal input size for parallel `std::transform`.

Definition at line 244 of file `settings.h`.

### 5.166.3.43 `__SequenceIndex __gnu_parallel::Settings::unique_copy_minimal_n`

Minimal input size for `unique_copy`.

Definition at line 247 of file `settings.h`.

The documentation for this struct was generated from the following file:

- [settings.h](#)

## 5.167 `__gnu_parallel::SplitConsistently< __exact, _RAIter, _Compare, _SortingPlacesIterator >` Struct Template Reference

### 5.167.1 Detailed Description

```
template<bool __exact, typename _RAIter, typename _Compare, typename _SortingPlacesIterator>struct __gnu_parallel::SplitConsistently< __exact, _RAIter, _Compare, _SortingPlacesIterator >
```

Split consistently.

Definition at line 122 of file `multiway_mergesort.h`.

The documentation for this struct was generated from the following file:

- [multiway\\_mergesort.h](#)

## 5.168 `__gnu_parallel::SplitConsistently< false, _RAIter, _Compare, _SortingPlacesIterator >` Struct Template Reference

### Public Member Functions

- `void operator() (const \_\_ThreadIndex __iam, \_\_PMWSSortingData< _RAIter > * __sd, _Compare & __comp, const typename std::iterator_traits< _RAIter >::difference_type __num_samples) const`

5.168.1 Detailed Description

```
template<typename _RAIter, typename _Compare, typename _SortingPlacesIterator>struct __gnu_parallel::SplitConsistently<false, _RAIter, _Compare, _SortingPlacesIterator >
```

Split by sampling.

Definition at line 187 of file `multiway_mergesort.h`.

The documentation for this struct was generated from the following file:

- [multiway\\_mergesort.h](#)

5.169 `__gnu_parallel::SplitConsistently`< true, `_RAIter`, `_Compare`, `_SortingPlacesIterator` > Struct Template Reference

Public Member Functions

5.170 `__gnu_parallel::balanced_quicksort_tag` Struct Reference

Inheritance diagram for `__gnu_parallel::balanced_quicksort_tag`:

## Public Member Functions

- **balanced\_quicksort\_tag** ([\\_ThreadIndex](#) \_\_num\_threads)
- [\\_ThreadIndex](#) **\_\_get\_num\_threads** ()
- void **set\_num\_threads** ([\\_ThreadIndex](#) \_\_num\_threads)

### 5.170.1 Detailed Description

Forces parallel sorting using balanced quicksort at compile time.

Definition at line 164 of file tags.h.

### 5.170.2 Member Function Documentation

#### 5.170.2.1 [\\_ThreadIndex](#) `__gnu_parallel::parallel_tag::__get_num_threads ( )` [`inline`],[`inherited`]

Find out desired number of threads.

#### Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by `__gnu_parallel::__parallel_sort()`.

#### 5.170.2.2 `void __gnu_parallel::parallel_tag::set_num_threads ( \_ThreadIndex __num_threads )` [`inline`],[`inherited`]

Set the desired number of threads.

#### Parameters

|                            |                            |
|----------------------------|----------------------------|
| <code>__num_threads</code> | Desired number of threads. |
|----------------------------|----------------------------|

Definition at line 73 of file tags.h.

## 5.180 `__gnu_parallel::multiway_mergesort_tag` Struct Reference

Inheritance diagram for `__gnu_parallel::multiway_mergesort_tag`:

## Public Member Functions

- `multiway_mergesort_tag` (`_ThreadIndex` `__num_threads`)
- `_ThreadIndex` `__get_num_threads` ()
- void `set_num_threads` (`_ThreadIndex` `__num_threads`)

### 5.180.1 Detailed Description

Forces parallel sorting using multiway mergesort at compile time.

Definition at line 128 of file tags.h.

### 5.180.2 Member Function Documentation

#### 5.180.2.1 `_ThreadIndex` `__gnu_parallel::parallel_tag::__get_num_threads` ( ) `[inline]`, `[inherited]`

Find out desired number of threads.

## Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by `__gnu_parallel::__parallel_sort`().

5.180.2.2 `void __gnu_parallel::parallel_tag::set_num_threads ( _ThreadIndex num_threads )` [inline],  
[inherited]

Set the desired number of threads.

## Parameters

|                            |                            |
|----------------------------|----------------------------|
| <code>__num_threads</code> | Desired number of threads. |
|----------------------------|----------------------------|

Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- [tags.h](#)

### 5.181 `__gnu_parallel::omp_loop_static_tag` Struct Reference

Inheritance diagram for `__gnu_parallel::omp_loop_static_tag`:

## Public Member Functions

- [\\_ThreadIndex \\_\\_get\\_num\\_threads\(\)](#)
- [void set\\_num\\_threads\(\\_ThreadIndex \\_\\_num\\_threads\)](#)

#### 5.181.1 Detailed Description

Recommends parallel execution using OpenMP static load-balancing at compile time.

Definition at line 100 of file tags.h.

#### 5.181.2 Member Function Documentation

##### 5.181.2.1 `_ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads()` `[inline]`, `[inherited]`

Find out desired number of threads.

## Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by `__gnu_parallel::__parallel_sort()`.

5.181.2.2 `void __gnu_parallel::parallel_tag::set_num_threads ( _ThreadIndex __num_threads )` [inline],  
[inherited]

Set the desired number of threads.

## Parameters

|                            |                            |
|----------------------------|----------------------------|
| <code>__num_threads</code> | Desired number of threads. |
|----------------------------|----------------------------|

Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.182 `__gnu_parallel::omp_loop_tag` Struct Reference

Inheritance diagram for `__gnu_parallel::omp_loop_tag`:

## Public Member Functions

- [\\_ThreadIndex \\_\\_get\\_num\\_threads\(\)](#)
- [void set\\_num\\_threads\(\\_ThreadIndex \\_\\_num\\_threads\)](#)

### 5.182.1 Detailed Description

Recommends parallel execution using OpenMP dynamic load-balancing at compile time.

Definition at line 96 of file tags.h.

### 5.182.2 Member Function Documentation

#### 5.182.2.1 `_ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads()` `[inline]`, `[inherited]`

Find out desired number of threads.

## Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by `__gnu_parallel::__parallel_sort()`.

5.182.2.2 `void __gnu_parallel::parallel_tag::set_num_threads ( _ThreadIndex __num_threads )` [inline],  
[inherited]

Set the desired number of threads.

**Parameters**

|                            |                            |
|----------------------------|----------------------------|
| <code>__num_threads</code> | Desired number of threads. |
|----------------------------|----------------------------|

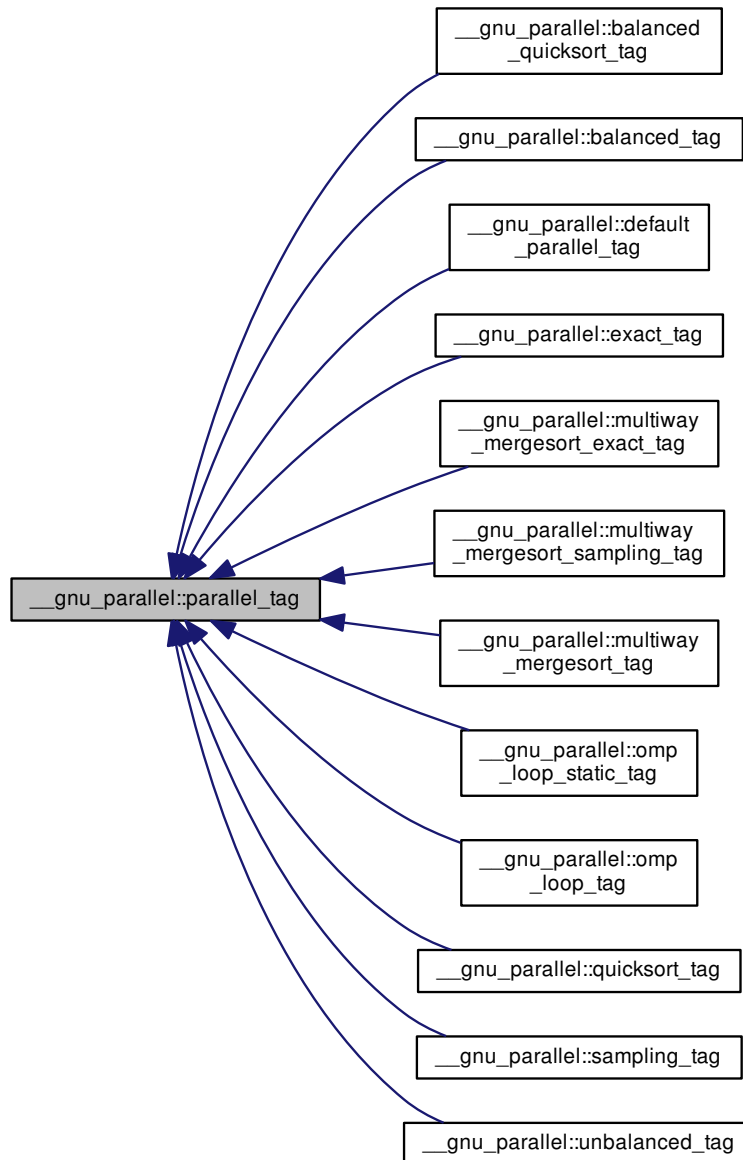

Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 5.183 \_\_gnu\_parallel::parallel\_tag Struct Reference

Inheritance diagram for \_\_gnu\_parallel::parallel\_tag:

**Public Member Functions**

- [parallel\\_tag \(\)](#)
- [parallel\\_tag \(\\_ThreadIndex \\_\\_num\\_threads\)](#)
- [\\_ThreadIndex \\_\\_get\\_num\\_threads \(\)](#)

- void [set\\_num\\_threads](#) ([\\_ThreadIndex](#) \_\_num\_threads)

### 5.183.1 Detailed Description

Recommends parallel execution at compile time, optionally using a user-specified number of threads.

Definition at line 46 of file tags.h.

### 5.183.2 Constructor & Destructor Documentation

#### 5.183.2.1 [\\_\\_gnu\\_parallel::parallel\\_tag::parallel\\_tag](#) ( ) `[inline]`

Default constructor. Use default number of threads.

Definition at line 53 of file tags.h.

#### 5.183.2.2 [\\_\\_gnu\\_parallel::parallel\\_tag::parallel\\_tag](#) ( [\\_ThreadIndex](#) \_\_num\_threads ) `[inline]`

Default constructor. Recommend number of threads to use.

#### Parameters

|                               |                            |
|-------------------------------|----------------------------|
| <a href="#">__num_threads</a> | Desired number of threads. |
|-------------------------------|----------------------------|

Definition at line 58 of file tags.h.

### 5.183.3 Member Function Documentation

#### 5.183.3.1 [\\_ThreadIndex](#) [\\_\\_gnu\\_parallel::parallel\\_tag::\\_get\\_num\\_threads](#) ( ) `[inline]`

Find out desired number of threads.

#### Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by [\\_\\_gnu\\_parallel::\\_parallel\\_sort](#)().

#### 5.183.3.2 void [\\_\\_gnu\\_parallel::parallel\\_tag::set\\_num\\_threads](#) ( [\\_ThreadIndex](#) \_\_num\_threads ) `[inline]`

Set the desired number of threads.

#### Parameters

|                               |                            |
|-------------------------------|----------------------------|
| <a href="#">__num_threads</a> | Desired number of threads. |
|-------------------------------|----------------------------|

Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- [tags.h](#)

5.184 `__gnu_parallel::quicksort_tag` Struct Reference

Inheritance diagram for `__gnu_parallel::quicksort_tag`:

#### Public Member Functions

- `quicksort_tag` (`_ThreadIndex __num_threads`)
- `_ThreadIndex __get_num_threads` ()
- void `set_num_threads` (`_ThreadIndex __num_threads`)

#### 5.184.1 Detailed Description

Forces parallel sorting using unbalanced quicksort at compile time.

Definition at line 155 of file `tags.h`.

#### 5.184.2 Member Function Documentation

5.184.2.1 `_ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads` ( ) `[inline]`, `[inherited]`

Find out desired number of threads.

#### Returns

Desired number of threads.

Definition at line 63 of file `tags.h`.

Referenced by `__gnu_parallel::__parallel_sort`().

5.184.2.2 void `__gnu_parallel::parallel_tag::set_num_threads` ( `_ThreadIndex __num_threads` ) `[inline]`, `[inherited]`

Set the desired number of threads.

## Parameters

|                            |                            |
|----------------------------|----------------------------|
| <code>__num_threads</code> | Desired number of threads. |
|----------------------------|----------------------------|

Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- [tags.h](#)

### 5.185 `__gnu_parallel::sampling_tag` Struct Reference

Inheritance diagram for `__gnu_parallel::sampling_tag`:

## Public Member Functions

- **sampling\_tag** (`_ThreadIndex __num_threads`)
- `_ThreadIndex __get_num_threads ()`
- void `set_num_threads (_ThreadIndex __num_threads)`

#### 5.185.1 Detailed Description

Forces parallel merging with exact splitting, at compile time.

Definition at line 118 of file tags.h.

#### 5.185.2 Member Function Documentation

##### 5.185.2.1 `_ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ( )` `[inline]`, `[inherited]`

Find out desired number of threads.

## Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by `__gnu_parallel::__parallel_sort()`.

5.185.2.2 `void __gnu_parallel::parallel_tag::set_num_threads ( _ThreadIndex __num_threads )` [inline],  
[inherited]

Set the desired number of threads.

**Parameters**

|                            |                            |
|----------------------------|----------------------------|
| <code>__num_threads</code> | Desired number of threads. |
|----------------------------|----------------------------|

Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- [tags.h](#)

**5.186 \_\_gnu\_parallel::sequential\_tag Struct Reference****5.186.1 Detailed Description**

Forces sequential execution at compile time.

Definition at line 42 of file tags.h.

The documentation for this struct was generated from the following file:

- [tags.h](#)

**5.187 \_\_gnu\_parallel::unbalanced\_tag Struct Reference**

Inheritance diagram for `__gnu_parallel::unbalanced_tag`:

**Public Member Functions**

- [\\_ThreadIndex \\_\\_get\\_num\\_threads \(\)](#)
- [void set\\_num\\_threads \(\\_ThreadIndex \\_\\_num\\_threads\)](#)

**5.187.1 Detailed Description**

Recommends parallel execution using static load-balancing at compile time.

Definition at line 92 of file tags.h.

## 5.187.2 Member Function Documentation

5.187.2.1 `_ThreadIndex __gnu_parallel::parallel_tag::_get_num_threads( )` [inline], [inherited]

Find out desired number of threads.

## Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by `__gnu_parallel::__parallel_sort()`.

5.187.2.2 `void __gnu_parallel::parallel_tag::set_num_threads( _ThreadIndex __num_threads )` [inline], [inherited]

Set the desired number of threads.

## Parameters

|                            |                            |
|----------------------------|----------------------------|
| <code>__num_threads</code> | Desired number of threads. |
|----------------------------|----------------------------|

**`basic_branch`** (`T0` t0, `T1` t1, `T2` t2, `T3` t3, `T4` t4, `T5` t5, `T6` t6)

### 5.189.1 Detailed Description

template<typename `Key`, typename `Mapped`, typename `Tag`, typename `Node_Update`, typename `Policy_Tl`, typename `_Alloc`>class `__gnu_pbds::basic_branch`< `Key`, `Mapped`, `Tag`, `Node_Update`, `Policy_Tl`, `_Alloc` >

A branched, tree-like (tree, trie) container abstraction.

#### Template Parameters

|                    |                                                                     |
|--------------------|---------------------------------------------------------------------|
| <i>Key</i>         | Key type.                                                           |
| <i>Mapped</i>      | Map type.                                                           |
| <i>Tag</i>         | Instantiating data structure type, see <code>container_tag</code> . |
| <i>Node_Update</i> | Updates nodes, restores invariants.                                 |
| <i>Policy_Tl</i>   | Policy typelist.                                                    |
| <i>_Alloc</i>      | Allocator type.                                                     |

Base is dispatched at compile time via `Tag`, from the following choices: `tree_tag`, `trie_tag`, and their descendants.

Base choices are: `detail::ov_tree_map`, `detail::rb_tree_map`, `detail::splay_tree_map`, and `detail::pat_trie_map`.

Definition at line 555 of file `assoc_container.hpp`.

The documentation for this class was generated from the following file:

**basic\_hash\_table** (T0 t0, T1 t1, T2 t2, T3 t3, T4 t4, T5 t5, T6 t6, T7 t7)
- template<typename T0 , typename T1 , typename T2 , typename T3 , typename T4 , typename T5 , typename T6 , typename T7 , typename T8 >  
**basic\_hash\_table** (T0 t0, T1 t1, T2 t2, T3 t3, T4 t4, T5 t5, T6 t6, T7 t7, T8 t8)

## 5.191.1 Detailed Description

```
template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename Resize_Policy, bool Store_Hash, type-
name Tag, typename Policy_Tl, typename _Alloc>class __gnu_pbds::basic_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Resize_-
Policy, Store_Hash, Tag, Policy_Tl, _Alloc >
```

A hashed container abstraction.

## Template Parameters

|                      |                                                                      |
|----------------------|----------------------------------------------------------------------|
| <i>Key</i>           | Key type.                                                            |
| <i>Mapped</i>        | Map type.                                                            |
| <i>Hash_Fn</i>       | Hashing functor.                                                     |
| <i>Eq_Fn</i>         | Equal functor.                                                       |
| <i>Resize_Policy</i> | Resizes hash.                                                        |
| <i>Store_Hash</i>    | Indicates whether the hash value will be stored along with each key. |
| <i>Tag</i>           | Instantiating data structure type, see container_tag.                |
| <i>Policy_Tl</i>     | Policy typelist.                                                     |
| <i>_Alloc</i>        | Allocator type.                                                      |

Base is dispatched at compile time via Tag, from the following choices: cc\_hash\_tag, gp\_hash\_tag, and descendants of basic\_hash\_tag.

Base choices are: detail::cc\_ht\_map, detail::gp\_ht\_map

Definition at line 104 of file assoc\_container.hpp.

- void `notify_resized` (size\_type new\_size)

#### 5.196.1 Detailed Description

`template<bool External_Load_Access = false, typename Size_Type = std::size_t>class __gnu_pbds::cc_hash_max_collision_check_resize_trigger`< `External_Load_Access`, `Size_Type` >

A resize trigger policy based on collision checks. It keeps the simulated load factor lower than some given load factor.

Definition at line 293 of file `hash_policy.hpp`.

#### 5.196.2 Member Enumeration Documentation

5.196.2.1 `template<bool External_Load_Access = false, typename Size_Type = std::size_t> anonymous enum`

##### Enumerator

**`external_load_access`** Specifies whether the load factor can be accessed externally. The two options have different trade-offs in terms of flexibility, genericity, and encapsulation.

Definition at line 298 of file `hash_policy.hpp`.

#### 5.196.3 Constructor & Destructor Documentation

5.196.3.1 `template<bool External_Load_Access, typename Size_Type > __gnu_pbds::cc_hash_max_collision_check_resize_trigger`< `External_Load_Access`, `Size_Type` >::`cc_hash_max_collision_check_resize_trigger` ( float `load = 0.5` )

Default constructor, or constructor taking load, a `__load` factor which it will attempt to maintain.

Definition at line 44 of file `hash_policy.hpp`.

#### 5.196.4 Member Function Documentation

5.196.4.1 `template<bool External_Load_Access, typename Size_Type > float __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::get_load ( ) const`  
`[inline]`

Returns the current load.

Definition at line 190 of file hash\_policy.hpp.

5.196.4.2 `template<bool External_Load_Access, typename Size_Type > bool __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::is_grow_needed ( size_type size, size_type num_entries ) const` `[inline],[protected]`

Queries whether a grow is needed. This method is called only if this object indicated is needed.

Definition at line 133 of file hash\_policy.hpp.

5.196.4.3 `template<bool External_Load_Access, typename Size_Type > bool __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::is_resize_needed ( ) const` `[inline],[protected]`

Queries whether a resize is needed.

Definition at line 127 of file hash\_policy.hpp.

5.196.4.4 `template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_cleared ( )`  
`[protected]`

Notifies the table was cleared.

Definition at line 121 of file hash\_policy.hpp.

5.196.4.5 `template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_erase_search_collision ( )` `[inline],[protected]`

Notifies a search encountered a collision.

Definition at line 97 of file hash\_policy.hpp.

5.196.4.6 `template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_erase_search_end ( )` `[inline],[protected]`

Notifies a search ended.

Definition at line 103 of file hash\_policy.hpp.

5.196.4.7 `template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_erase_search_start ( )` `[inline],[protected]`

Notifies an erase search started.

Definition at line 91 of file hash\_policy.hpp.

5.196.4.8 `template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::cc_hash_max_collision_`  
`_check_resize_trigger`< `External_Load_Access`, `Size_Type` >::`notify_erased` ( `size_type num_entries` )  
[`inline`], [`protected`]

Notifies an element was erased.

Definition at line 115 of file `hash_policy.hpp`.

5.196.4.9 `template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::cc_hash_max_collision_`  
`check_resize_trigger`< `External_Load_Access`, `Size_Type` >::`notify_externally_resized` ( `size_type new_size` )  
[`protected`]

Notifies the table was resized externally.

Definition at line 172 of file `hash_policy.hpp`.

5.196.4.10 `template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::cc_hash_max_collision_`  
`check_resize_trigger`< `External_Load_Access`, `Size_Type` >::`notify_find_search_collision` ( ) [`inline`],  
[`protected`]

Notifies a search encountered a collision.

Definition at line 61 of file `hash_policy.hpp`.

5.196.4.11 `template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::cc_hash_max_collision_`  
`check_resize_trigger`< `External_Load_Access`, `Size_Type` >::`notify_find_search_end` ( ) [`inline`],  
[`protected`]

Notifies a search ended.

Definition at line 67 of file `hash_policy.hpp`.

5.196.4.12 `template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::cc_hash_max_collision_`  
`check_resize_trigger`< `External_Load_Access`, `Size_Type` >::`notify_find_search_start` ( ) [`inline`],  
[`protected`]

Notifies a find search started.

Definition at line 55 of file `hash_policy.hpp`.

5.196.4.13 `template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::cc_hash_max_collision_`  
`check_resize_trigger`< `External_Load_Access`, `Size_Type` >::`notify_insert_search_collision` ( ) [`inline`],  
[`protected`]

Notifies a search encountered a collision.

Definition at line 79 of file `hash_policy.hpp`.

5.196.4.14 `template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::cc_hash_max_collision_`  
`_check_resize_trigger`< `External_Load_Access`, `Size_Type` >::`notify_insert_search_end` ( ) [`inline`],  
[`protected`]

Notifies a search ended.

Definition at line 85 of file `hash_policy.hpp`.

5.196.4.15 `template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_insert_search_start ( ) [inline], [protected]`

Notifies an insert search started.

Definition at line 73 of file hash\_policy.hpp.

5.196.4.16 `template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_inserted ( size_type num_entries ) [inline], [protected]`

Notifies an element was inserted.

Definition at line 109 of file hash\_policy.hpp.

5.196.4.17 `template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_resized ( size_type new_size ) [protected]`

Notifies the table was resized as a result of this object's signifying that a resize is needed.

Definition at line 139 of file hash\_policy.hpp.

5.196.4.18 `template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::set_load ( float load )`

Sets the load; does not resize the container.

Definition at line 205 of file hash\_policy.hpp.

- void **swap** (`cc_hash_table` &other)

## 5.197.1 Detailed Description

template<typename Key, typename Mapped, typename Hash\_Fn = typename detail::default\_hash\_fn<Key>::type, typename Eq\_Fn = typename detail::default\_eq\_fn<Key>::type, typename Comb\_Hash\_Fn = detail::default\_comb\_hash\_fn::type, typename Resize\_Policy = typename detail::default\_resize\_policy<Comb\_Hash\_Fn>::type, bool Store\_Hash = detail::default\_store\_hash, typename \_Alloc = std::allocator<char>>>class `__gnu_pbds::cc_hash_table`< Key, Mapped, Hash\_Fn, Eq\_Fn, Comb\_Hash\_Fn, Resize\_Policy, Store\_Hash, \_Alloc >

A collision-chaining hash-based associative container.

## Template Parameters

|                     |                                                                                                                                                                                                 |
|---------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Key</i>          | Key type.                                                                                                                                                                                       |
| <i>Mapped</i>       | Map type.                                                                                                                                                                                       |
| <i>Hash_Fn</i>      | Hashing functor.                                                                                                                                                                                |
| <i>Eq_Fn</i>        | Equal functor.                                                                                                                                                                                  |
| <i>Comb_Hash_Fn</i> | Combining hash functor. If Hash_Fn is not null_type, then this is the ranged-hash functor; otherwise, this is the range-hashing functor. XXX(See Design::Hash-Based Containers::Hash Policies.) |

|                      |                                                                                                                                                         |
|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Resize_Policy</i> | Resizes hash.                                                                                                                                           |
| <i>Store_Hash</i>    | Indicates whether the hash value will be stored along with each key. If Hash_Fn is null_type, then the container will not compile if this value is true |
| <i>_Alloc</i>        | Allocator type.                                                                                                                                         |

Base tag choices are: cc\_hash\_tag.

Base is basic\_hash\_table.

Definition at line 204 of file assoc\_container.hpp.

## 5.197.2 Constructor & Destructor Documentation

5.197.2.1 `template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>> __gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >::cc_hash_table ( ) [inline]`

Default constructor.

Definition at line 217 of file assoc\_container.hpp.

5.197.2.2 `template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>> __gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >::cc_hash_table ( const hash_fn & h ) [inline]`

Constructor taking some policy objects. r\_hash\_fn will be copied by the Hash\_Fn object of the container object.

Definition at line 221 of file assoc\_container.hpp.

5.197.2.3 `template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>> __gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >::cc_hash_table ( const hash_fn & h, const eq_fn & e ) [inline]`

Constructor taking some policy objects. r\_hash\_fn will be copied by the hash\_fn object of the container object, and r\_eq\_fn will be copied by the eq\_fn object of the container object.

Definition at line 228 of file assoc\_container.hpp.

5.197.2.4 `template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>> __gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >::cc_hash_table ( const hash_fn & h, const eq_fn & e, const comb_hash_fn & ch ) [inline]`

Constructor taking some policy objects. r\_hash\_fn will be copied by the hash\_fn object of the container object, r\_eq\_fn will be copied by the eq\_fn object of the container object, and r\_comb\_hash\_fn will be copied by the comb\_hash\_fn object of the container object.

Definition at line 236 of file assoc\_container.hpp.

```
5.197.2.5 template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type,
typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_
fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash =
detail::default_store_hash, typename _Alloc = std::allocator<char>> __gnu_pbds::cc_hash_table< Key, Mapped,
Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >::cc_hash_table ( const hash_fn & h, const
eq_fn & e, const comb_hash_fn & ch, const resize_policy & rp ) [inline]
```

Constructor taking some policy objects. `r_hash_fn` will be copied by the `hash_fn` object of the container object, `r_eq_fn` will be copied by the `eq_fn` object of the container object, `r_comb_hash_fn` will be copied by the `comb_hash_fn` object of the container object, and `r_resize_policy` will be copied by the `resize_policy` object of the container object.

Definition at line 245 of file `assoc_container.hpp`.

```
5.197.2.6 template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type,

## 5.202 \_\_gnu\_pbds::container\_traits\_base< \_Tag > Struct Template Reference

### 5.202.1 Detailed Description

```
template<typename _Tag>struct __gnu_pbds::container_traits_base< _Tag >
```

Primary template, container traits base.

Definition at line 220 of file tag\_and\_trait.hpp.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

## 5.203 `__gnu_pbds::container_traits_base< binary_heap_tag >` Struct Template Reference

### Public Types

- enum { `order_preserving`, `erase_can_throw`, `split_join_can_throw`, `reverse_iteration` }
- typedef `binary_heap_tag` `container_category`
- typedef `basic_invalidation_guarantee` `invalidation_guarantee`

### 5.203.1 Detailed Description

```
template<>struct __gnu_pbds::container_traits_base< binary_heap_tag >
```

Specialization, binary heap.

Definition at line 400 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

## 5.204 `__gnu_pbds::container_traits_base< binomial_heap_tag >` Struct Template Reference

### Public Types

- enum { `order_preserving`, `erase_can_throw`, `split_join_can_throw`, `reverse_iteration` }
- typedef `binomial_heap_tag` `container_category`
- typedef `point_invalidation_guarantee` `invalidation_guarantee`

### 5.204.1 Detailed Description

```
template<>struct __gnu_pbds::container_traits_base< binomial_heap_tag >
```

Specialization, binomial heap.

Definition at line 368 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

## 5.205 `__gnu_pbds::container_traits_base< cc_hash_tag >` Struct Template Reference

### Public Types

- enum { `order_preserving`, `erase_can_throw`, `split_join_can_throw`, `reverse_iteration` }
- typedef `cc_hash_tag` `container_category`
- typedef `point_invalidation_guarantee` `invalidation_guarantee`

### 5.205.1 Detailed Description

`template<>struct __gnu_pbds::container_traits_base< cc_hash_tag >`

Specialization, cc hash.

Definition at line 224 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

### 5.206 `__gnu_pbds::container_traits_base< gp_hash_tag >` Struct Template Reference

#### Public Types

- enum { **order\_preserving**, **erase\_can\_throw**, **split\_join\_can\_throw**, **reverse\_iteration** }
- typedef [gp\\_hash\\_tag](#) **container\_category**
- typedef [basic\\_invalidation\\_guarantee](#) **invalidation\_guarantee**

### 5.206.1 Detailed Description

`template<>struct __gnu_pbds::container_traits_base< gp_hash_tag >`

Specialization, gp hash.

Definition at line 240 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

### 5.207 `__gnu_pbds::container_traits_base< list_update_tag >` Struct Template Reference

#### Public Types

- enum { **order\_preserving**, **erase\_can\_throw**, **split\_join\_can\_throw**, **reverse\_iteration** }
- typedef [list\\_update\\_tag](#) **container\_category**
- typedef [point\\_invalidation\\_guarantee](#) **invalidation\_guarantee**

### 5.207.1 Detailed Description

`template<>struct __gnu_pbds::container_traits_base< list_update_tag >`

Specialization, list update.

Definition at line 320 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

## 5.208 `__gnu_pbds::container_traits_base< ov_tree_tag >` Struct Template Reference

### Public Types

- enum { **order\_preserving**, **erase\_can\_throw**, **split\_join\_can\_throw**, **reverse\_iteration** }
- typedef `ov_tree_tag` **container\_category**
- typedef [basic\\_invalidation\\_guarantee](#) **invalidation\_guarantee**

### 5.208.1 Detailed Description

```
template<>struct __gnu_pbds::container_traits_base< ov_tree_tag >
```

Specialization, ov tree.

Definition at line 288 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

## 5.209 `__gnu_pbds::container_traits_base< pairing_heap_tag >` Struct Template Reference

### Public Types

- enum { **order\_preserving**, **erase\_can\_throw**, **split\_join\_can\_throw**, **reverse\_iteration** }
- typedef `pairing_heap_tag` **container\_category**
- typedef [point\\_invalidation\\_guarantee](#) **invalidation\_guarantee**

### 5.209.1 Detailed Description

```
template<>struct __gnu_pbds::container_traits_base< pairing_heap_tag >
```

Specialization, pairing heap.

Definition at line 336 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

## 5.210 `__gnu_pbds::container_traits_base< pat_trie_tag >` Struct Template Reference

### Public Types

- enum { **order\_preserving**, **erase\_can\_throw**, **split\_join\_can\_throw**, **reverse\_iteration** }
- typedef `pat_trie_tag` **container\_category**
- typedef [range\\_invalidation\\_guarantee](#) **invalidation\_guarantee**

### 5.210.1 Detailed Description

`template<>struct __gnu_pbds::container_traits_base< pat_trie_tag >`

Specialization, pat trie.

Definition at line 304 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

### 5.211 `__gnu_pbds::container_traits_base< rb_tree_tag >` Struct Template Reference

#### Public Types

- enum { `order_preserving`, `erase_can_throw`, `split_join_can_throw`, `reverse_iteration` }
- typedef `rb_tree_tag` `container_category`
- typedef `range_invalidation_guarantee` `invalidation_guarantee`

#### 5.211.1 Detailed Description

`template<>struct __gnu_pbds::container_traits_base< rb_tree_tag >`

Specialization, rb tree.

Definition at line 256 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

### 5.212 `__gnu_pbds::container_traits_base< rc_binomial_heap_tag >` Struct Template Reference

#### Public Types

- enum { `order_preserving`, `erase_can_throw`, `split_join_can_throw`, `reverse_iteration` }
- typedef `rc_binomial_heap_tag` `container_category`
- typedef `point_invalidation_guarantee` `invalidation_guarantee`

#### 5.212.1 Detailed Description

`template<>struct __gnu_pbds::container_traits_base< rc_binomial_heap_tag >`

Specialization, rc binomial heap.

Definition at line 384 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

## 5.213 `__gnu_pbds::container_traits_base< splay_tree_tag >` Struct Template Reference

### Public Types

- enum { `order_preserving`, `erase_can_throw`, `split_join_can_throw`, `reverse_iteration` }
- typedef `splay_tree_tag` `container_category`
- typedef `range_invalidation_guarantee` `invalidation_guarantee`

#### 5.213.1 Detailed Description

```
template<>struct __gnu_pbds::container_traits_base< splay_tree_tag >
```

Specialization, splay tree.

Definition at line 272 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

## 5.214 `__gnu_pbds::container_traits_base< thin_heap_tag >` Struct Template Reference

### Public Types

- enum { `order_preserving`, `erase_can_throw`, `split_join_can_throw`, `reverse_iteration` }
- typedef `thin_heap_tag` `container_category`
- typedef `point_invalidation_guarantee` `invalidation_guarantee`

#### 5.214.1 Detailed Description

```
template<>struct __gnu_pbds::container_traits_base< thin_heap_tag >
```

Specialization, thin heap.

Definition at line 352 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

## 5.215 `__gnu_pbds::detail::bin_search_tree_const_it_< Node_Pointer, Value_Type, Pointer, Const_Pointer, Reference, Const_Reference, Is_Forward_Iterator, _Alloc >` Class Template Reference

Inheritance diagram for `__gnu_pbds::detail::bin_search_tree_const_it_< Node_Pointer, Value_Type, Pointer, Const_Pointer, Reference, Const_Reference, Is_Forward_Iterator, _Alloc >`:

### Public Types

- typedef Const\_Pointer **const\_pointer**
- typedef Const\_Reference **const\_reference**
- typedef \_Alloc::difference\_type **difference\_type**
- typedef [std::bidirectional\\_iterator\\_tag](#) **iterator\_category**
- typedef Pointer **pointer**
- typedef Reference **reference**
- typedef Value\_Type **value\_type**

### Public Member Functions

- **bin\_search\_tree\_const\_it\_** (const Node\_Pointer p\_nd=0)
- **bin\_search\_tree\_const\_it\_** (const [bin\\_search\\_tree\\_const\\_it\\_< Node\\_Pointer, Value\\_Type, Pointer, Const\\_Pointer, Reference, Const\\_Reference, Is\\_Forward\\_Iterator, \\_Alloc >](#) &other)

- `const_reference operator*` () const
- `bool operator==` (`const bin\_search\_tree\_const\_node\_it\_< Node, Const\_Iterator, Iterator, \_Alloc > &other`) const

### Public Attributes

- `node_pointer` [m\\_p\\_nd](#)

### 5.216.1 Detailed Description

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>class __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >
```

Const node iterator.

Definition at line 58 of file `bin_search_tree_/node_iterators.hpp`.

### 5.216.2 Member Typedef Documentation

5.216.2.1 `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > typedef Const_Iterator __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::const_reference`

Iterator's `__const` reference type.

Definition at line 80 of file `bin_search_tree_/node_iterators.hpp`.

5.216.2.2 `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > typedef trivial_iterator_difference_type __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::difference_type`

Difference type.

Definition at line 71 of file `bin_search_tree_/node_iterators.hpp`.

5.216.2.3 `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > typedef trivial_iterator_tag __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::iterator_category`

Category.

Definition at line 68 of file `bin_search_tree_/node_iterators.hpp`.

5.216.2.4 `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > typedef _Alloc::template rebind<metadata_type>::other::const_reference __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::metadata_const_reference`

Const metadata reference type.

Definition at line 88 of file `bin_search_tree_/node_iterators.hpp`.

5.216.2.5 `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > typedef Node::metadata_type __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::metadata_type`

Metadata type.

Definition at line 83 of file `bin_search_tree_/node_iterators.hpp`.

5.216.2.6 `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > typedef Const_Iterator __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::reference`

Iterator's reference type.

Definition at line 77 of file `bin_search_tree_/node_iterators.hpp`.

5.216.2.7 `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > typedef Const_Iterator  
__gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::value_type`

Iterator's value type.

Definition at line 74 of file `bin_search_tree_/node_iterators.hpp`.

### 5.216.3 Member Function Documentation

5.216.3.1 `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > bin_search_tree_const_node_it_<Node, Const_Iterator, Iterator, _Alloc> __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::get_l_child( ) const [inline]`

Returns the `__const` node iterator associated with the left node.

Definition at line 107 of file `bin_search_tree_/node_iterators.hpp`.

5.216.3.2 `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > metadata_const_reference __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::get_metadata( ) const [inline]`

Metadata access.

Definition at line 102 of file `bin_search_tree_/node_iterators.hpp`.

5.216.3.3 `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > bin_search_tree_const_node_it_<Node, Const_Iterator, Iterator, _Alloc> __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::get_r_child( ) const [inline]`

Returns the `__const` node iterator associated with the right node.

Definition at line 112 of file `bin_search_tree_/node_iterators.hpp`.

5.216.3.4 `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > bool __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::operator!=( const bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > & other ) const [inline]`

Compares (negatively) to a different iterator object.

Definition at line 122 of file `bin_search_tree_/node_iterators.hpp`.

5.216.3.5 `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > const_reference __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::operator*( ) const [inline]`

Access.

Definition at line 97 of file `bin_search_tree_/node_iterators.hpp`.

5.216.3.6 `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > bool __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::operator==( const bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > & other ) const [inline]`

Compares to a different iterator object.

Definition at line 117 of file `bin_search_tree_/node_iterators.hpp`.

The documentation for this class was generated from the following file:

- [bin\\_search\\_tree\\_/node\\_iterators.hpp](#)

5.217 `__gnu_pbds::detail::bin_search_tree_it_< Node_Pointer, Value_Type, Pointer, Const_Pointer, Reference, Const_Reference, Is_Forward_Iterator, _Alloc >` Class Template Reference

Inheritance diagram for `__gnu_pbds::detail::bin_search_tree_it_< Node_Pointer, Value_Type, Pointer, Const_Pointer, Reference, Const_Reference, Is_Forward_Iterator, _Alloc >`:

Public Types

- typedef Const\_Pointer **const\_pointer**
- typedef Const\_Reference **const\_reference**
- typedef \_Alloc::difference\_type **difference\_type**

### 5.218.1 Detailed Description

`template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>class __gnu_pbds::detail::bin_search_tree_node_it_ < Node, Const_Iterator, Iterator, _Alloc >`

Node iterator.

Definition at line 136 of file `bin_search_tree_/node_iterators.hpp`.

### 5.218.2 Member Typedef Documentation

5.218.2.1 `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > typedef Iterator __gnu_pbds::detail::bin_search_tree_node_it_ < Node, Const_Iterator, Iterator, _Alloc >::const_reference`

Iterator's `__const` reference type.

Definition at line 153 of file `bin_search_tree_/node_iterators.hpp`.

5.218.2.2 `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > typedef trivial_iterator_difference_type __gnu_pbds::detail::bin_search_tree_const_node_it_ < Node, Const_Iterator, Iterator, _Alloc >::difference_type` `[inherited]`

Difference type.

Definition at line 71 of file `bin_search_tree_/node_iterators.hpp`.

5.218.2.3 `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > typedef trivial_iterator_tag __gnu_pbds::detail::bin_search_tree_const_node_it_ < Node, Const_Iterator, Iterator, _Alloc >::iterator_category` `[inherited]`

Category.

Definition at line 68 of file `bin_search_tree_/node_iterators.hpp`.

5.218.2.4 `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > typedef _Alloc::template  
rebind<metadata_type>::other::const_reference __gnu_pbds::detail::bin_search_tree_const_node_it_<  
Node, Const_Iterator, Iterator, _Alloc >::metadata_const_reference [inherited]`

Const metadata reference type.

Definition at line 88 of file `bin_search_tree_/node_iterators.hpp`.

5.218.2.5 `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > typedef Node::metadata_type  
__gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc  
>::metadata_type [inherited]`

Metadata type.

Definition at line 83 of file `bin_search_tree_/node_iterators.hpp`.

5.218.2.6 `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > typedef Iterator  
__gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _Alloc >::reference`

Iterator's reference type.

Definition at line 150 of file `bin_search_tree_/node_iterators.hpp`.

5.218.2.7 `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > typedef Iterator  
__gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _Alloc >::value_type`

Iterator's value type.

Definition at line 147 of file `bin_search_tree_/node_iterators.hpp`.

### 5.218.3 Member Function Documentation

5.218.3.1 `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > bin_search_tree_node_it_  
<Node, Const_Iterator, Iterator, _Alloc> __gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator,  
Iterator, _Alloc >::get_l_child ( ) const [inline]`

Returns the node iterator associated with the left node.

Definition at line 167 of file `bin_search_tree_/node_iterators.hpp`.

5.218.3.2 `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > metadata_const_reference  
__gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::get_metadata  
( ) const [inline], [inherited]`

Metadata access.

Definition at line 102 of file `bin_search_tree_/node_iterators.hpp`.

5.218.3.3 `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > bin_search_tree_node_it_  
<Node, Const_Iterator, Iterator, _Alloc> __gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator,  
Iterator, _Alloc >::get_r_child ( ) const [inline]`

Returns the node iterator associated with the right node.

Definition at line 175 of file `bin_search_tree_/node_iterators.hpp`.

```
5.218.3.4 template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > bool
    __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::operator!=(
    const bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > & other ) const [inline],
    [inherited]
```

Compares (negatively) to a different iterator object.

Definition at line 122 of file bin\_search\_tree\_/node\_iterators.hpp.

```
5.218.3.5 template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > Iterator
    __gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _Alloc >::operator*( ) const
    [inline]
```

Access.

Definition at line 162 of file bin\_search\_tree\_/node\_iterators.hpp.

```
5.218.3.6 template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > bool
    __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::operator==(
    const bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > & other ) const [inline],
    [inherited]
```

Compares to a different iterator object.

Definition at line 117 of file bin\_search\_tree\_/node\_iterators.hpp.

The documentation for this class was generated from the following file:

- [bin\\_search\\_tree\\_/node\\_iterators.hpp](#)

### 5.219.1 Detailed Description

```
template<typename Key, typename Mapped, class Cmp_Fn, template< typename Node_Cltr, class Node_Itr, class _Cmp_Fn, typename
_Alloc > class Node_Update, class Node, typename _Alloc>struct __gnu_pbds::detail::bin_search_tree_traits< Key, Mapped, Cmp_
Fn, Node_Update, Node, _Alloc >
```

Binary search tree traits, primary template.

Definition at line 63 of file bin\_search\_tree\_/traits.hpp.

### 5.219.2 Member Typedef Documentation

```
5.219.2.1 template<typename Key, typename Mapped, class Cmp_Fn, template< typename Node_Cltr, class
Node_Itr, class _Cmp_Fn, typename _Alloc > class Node_Update, class Node, typename _Alloc> typedef
bin_search_tree_const_node_it_< Node, point_const_iterator, point_iterator, _Alloc>
__gnu_pbds::detail::bin_search_tree_traits< Key, Mapped, Cmp_Fn, Node_Update, Node, _Alloc
>::node_const_iterator
```

This is an iterator to an iterator: it iterates over nodes, and de-referencing it returns one of the tree's iterators.

Definition at line 131 of file bin\_search\_tree\_/traits.hpp.

The documentation for this struct was generated from the following file:

- [bin\\_search\\_tree\\_/traits.hpp](#)

## 5.222.1 Detailed Description

`template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>class __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >`

Const point-type iterator.

Definition at line 60 of file `binary_heap_/const_iterator.hpp`.

## 5.222.2 Member Typedef Documentation

5.222.2.1 `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > typedef base_type::const_pointer __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >::const_pointer`

Iterator's const pointer type.

Definition at line 80 of file `binary_heap_/const_iterator.hpp`.

5.222.2.2 `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > typedef base_type::const_reference __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >::const_reference`

Iterator's const reference type.

Definition at line 86 of file `binary_heap_/const_iterator.hpp`.

5.222.2.3 `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > typedef _Alloc::difference_type  
__gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >::difference_type`

Difference type.

Definition at line 71 of file `binary_heap_/const_iterator.hpp`.

5.222.2.4 `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > typedef std::forward_iterator_tag  
__gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >::iterator_category`

Category.

Definition at line 68 of file `binary_heap_/const_iterator.hpp`.

5.222.2.5 `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > typedef base_type::pointer  
__gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >::pointer`

Iterator's pointer type.

Definition at line 77 of file `binary_heap_/const_iterator.hpp`.

5.222.2.6 `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > typedef base_type::reference  
__gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >::reference`

Iterator's reference type.

Definition at line 83 of file `binary_heap_/const_iterator.hpp`.

5.222.2.7 `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > typedef base_type::value_type  
__gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >::value_type`

Iterator's value type.

Definition at line 74 of file `binary_heap_/const_iterator.hpp`.

### 5.222.3 Constructor & Destructor Documentation

5.222.3.1 `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > __gnu_pbds::detail-  
::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >::binary_heap_const_iterator_( )  
[inline]`

Default constructor.

Definition at line 94 of file `binary_heap_/const_iterator.hpp`.

5.222.3.2 `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > __gnu_pbds::detail::binary-  
_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >::binary_heap_const_iterator_( const  
binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc > & other ) [inline]`

Copy constructor.

Definition at line 99 of file `binary_heap_/const_iterator.hpp`.

### 5.222.4 Member Function Documentation

5.222.4.1 `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > bool  
__gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >::operator!=( const  
binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc > & other ) const [inline]`

Compares content (negatively) to a different iterator object.

Definition at line 110 of file `binary_heap_/const_iterator.hpp`.

5.222.4.2 `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > bool  
__gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >::operator!=(  
const binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc > & other ) const [inline],  
[inherited]`

Compares content (negatively) to a different iterator object.

Definition at line 126 of file `binary_heap_/point_const_iterator.hpp`.

5.222.4.3 `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > const_reference  
__gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >::operator*( )  
const [inline],[inherited]`

Access.

Definition at line 113 of file `binary_heap_/point_const_iterator.hpp`.

5.222.4.4 `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > const_pointer  
__gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >::operator->(  
)const [inline],[inherited]`

Access.

Definition at line 105 of file `binary_heap_/point_const_iterator.hpp`.

5.222.4.5 `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > bool  
__gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >::operator==( const  
binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc > & other ) const [inline]`

Compares content to a different iterator object.

Definition at line 105 of file `binary_heap_/const_iterator.hpp`.

5.222.4.6 `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > bool  
__gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >::operator==(  
const binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc > & other ) const [inline],  
[inherited]`

Compares content to a different iterator object.

Definition at line 121 of file `binary_heap_/point_const_iterator.hpp`.

The documentation for this class was generated from the following file:

- [binary\\_heap\\_/const\\_iterator.hpp](#)

### 5.223.1 Detailed Description

`template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>class __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >`

Const point-type iterator.

Definition at line 55 of file `binary_heap_/point_const_iterator.hpp`.

### 5.223.2 Member Typedef Documentation

5.223.2.1 `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > typedef _Alloc::template  
rebind<value_type>::other::const_pointer __gnu_pbds::detail::binary_heap_point_const_iterator_<  
Value_Type, Entry, Simple, _Alloc >::const_pointer`

Iterator's const pointer type.

Definition at line 77 of file `binary_heap_/point_const_iterator.hpp`.

5.223.2.2 `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > typedef _Alloc::template  
rebind<value_type>::other::const_reference __gnu_pbds::detail::binary_heap_point_const_iterator_<  
Value_Type, Entry, Simple, _Alloc >::const_reference`

Iterator's const reference type.

Definition at line 87 of file `binary_heap_/point_const_iterator.hpp`.

5.223.2.3 `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > typedef  
trivial_iterator_difference_type __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type,  
Entry, Simple, _Alloc >::difference_type`

Difference type.

Definition at line 65 of file `binary_heap_/point_const_iterator.hpp`.

5.223.2.4 `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > typedef trivial_iterator_tag  
__gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc  
>::iterator_category`

Category.

Definition at line 62 of file `binary_heap_/point_const_iterator.hpp`.

5.223.2.5 `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > typedef _Alloc::template  
rebind<value_type>::other::pointer __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type,  
Entry, Simple, _Alloc >::pointer`

Iterator's pointer type.

Definition at line 72 of file `binary_heap_/point_const_iterator.hpp`.

5.223.2.6 `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > typedef _Alloc::template rebind<value_type>::other::reference __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >::reference`

Iterator's reference type.

Definition at line 82 of file `binary_heap_/point_const_iterator.hpp`.

5.223.2.7 `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > typedef Value_Type __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >::value_type`

Iterator's value type.

Definition at line 68 of file `binary_heap_/point_const_iterator.hpp`.

### 5.223.3 Constructor & Destructor Documentation

5.223.3.1 `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >::binary_heap_point_const_iterator_ ( ) [inline]`

Default constructor.

Definition at line 95 of file `binary_heap_/point_const_iterator.hpp`.

5.223.3.2 `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >::binary_heap_point_const_iterator_ ( const binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc > & other ) [inline]`

Copy constructor.

Definition at line 99 of file `binary_heap_/point_const_iterator.hpp`.

### 5.223.4 Member Function Documentation

5.223.4.1 `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > bool __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >::operator!=( const binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc > & other ) const [inline]`

Compares content (negatively) to a different iterator object.

Definition at line 126 of file `binary_heap_/point_const_iterator.hpp`.

5.223.4.2 `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > const_reference __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >::operator*( ) const [inline]`

Access.

Definition at line 113 of file `binary_heap_/point_const_iterator.hpp`.

5.223.4.3 `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > const_pointer __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >::operator-> ( ) const [inline]`

Access.

Definition at line 105 of file `binary_heap_/point_const_iterator.hpp`.

```
5.223.4.4 template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > bool
    __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >::operator==(
        const binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc > & other ) const [inline]
```

Compares content to a different iterator object.

Definition at line 121 of file `binary_heap_/point_const_iterator.hpp`.

The documentation for this class was generated from the following file:

- [binary\\_heap\\_/point\\_const\\_iterator.hpp](#)

## 5.224 `__gnu_pbds::detail::binomial_heap< Value_Type, Cmp_Fn, _Alloc >` Class Template Reference

Inheritance diagram for `__gnu_pbds::detail::binomial_heap< Value_Type, Cmp_Fn, _Alloc >`:

## 5.228.1 Detailed Description

template<typename Key, typename Mapped, typename Hash\_Fn, typename Eq\_Fn, typename \_Alloc, bool Store\_Hash, typename Comb\_Hash\_Fn, typename Resize\_Policy> class `__gnu_pbds::detail::cc_ht_map`< Key, Mapped, Hash\_Fn, Eq\_Fn, \_Alloc, Store\_Hash, Comb\_Hash\_Fn, Resize\_Policy >

A collision-chaining hash-based container.

## Template Parameters

<i>Key</i>	Key type.
<i>Mapped</i>	Map type.
<i>Hash_Fn</i>	Hashing functor. Default is <code>__gnu_cxx::hash</code> .
<i>Eq_Fn</i>	Equal functor. Default <code>std::equal_to&lt;Key&gt;</code>
<i>_Alloc</i>	Allocator type.
<i>Store_Hash</i>	If key type stores extra metadata. Defaults to false.
<i>Comb_Hash_Fn</i>	Combining hash functor. If <i>Hash_Fn</i> is not null_type, then this is the ranged-hash functor; otherwise, this is the range-hashing functor. XXX(See Design::Hash-Based Containers::Hash Policies.) Default <code>direct_mask_range_hashing</code> .
<i>Resize_Policy</i>	Resizes hash. Defaults to <code>hash_standard_resize_policy</code> , using <code>hash_exponential_size_policy</code> and <code>hash_load_check_resize_trigger</code> .

Bases are: `detail::hash_eq_fn`, `Resize_Policy`, `detail::ranged_hash_fn`, `detail::types_traits`. (Optional: `detail::debug_map_base`.)

Definition at line 139 of file `cc_ht_map.hpp`.

## 5.228.2 Member Enumeration Documentation

5.228.2.1 `template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool Store_Hash, typename Comb_Hash_Fn, typename Resize_Policy> anonymous enum`

Value stores hash, true or false.

Definition at line 200 of file `cc_ht_map.hpp`.

## 5.228.3 Member Function Documentation

5.228.3.1 `template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool Store_Hash, typename Comb_Hash_Fn, typename Resize_Policy> bool __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::empty ( ) const` `[inline]`

True if `size() == 0`.

Definition at line 52 of file `cc_ht_map.hpp`.

5.228.3.2 `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy > Comb_Hash_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::get_comb_hash_fn ( )`

Return current `comb_hash_fn`.

Definition at line 70 of file `cc_ht_map.hpp`.

5.228.3.3 `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy > const Comb_Hash_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::get_comb_hash_fn ( ) const`

Return current `const comb_hash_fn`.

Definition at line 76 of file `cc_ht_map.hpp`.

5.228.3.4 `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy > Eq_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::get_eq_fn ( )`

Return current `eq_fn`.

Definition at line 58 of file `cc_ht_map.hpp`.

5.228.3.5 `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy > const Eq_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::get_eq_fn ( ) const`

Return current `const eq_fn`.

Definition at line 64 of file `cc_ht_map.hpp`.

5.228.3.6 `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy > Hash_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::get_hash_fn ( )`

Return current `hash_fn`.

Definition at line 46 of file `cc_ht_map.hpp`.

5.228.3.7 `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy > const Hash_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::get_hash_fn ( ) const`

Return current `const hash_fn`.

Definition at line 52 of file `cc_ht_map.hpp`.

5.228.3.8 `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy > Resize_Policy & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::get_resize_policy ( )`

Return current `resize_policy`.

Definition at line 82 of file `cc_ht_map.hpp`.

5.228.3.9 `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy > const Resize_Policy & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::get_resize_policy ( ) const`

Return current `const` `resize_policy`.

Definition at line 88 of file `cc_ht_map.hpp`.

The documentation for this class was generated from the following files:

## 5.229 `__gnu_pbds::detail::cond_dealtor< Entry, _Alloc >` Class Template Reference

### Public Types

- typedef `HT_Map::entry` **entry**
- typedef `HT_Map::entry_allocator` **entry\_allocator**
- typedef `__rebind_e::other` **entry\_allocator**
- typedef `entry_allocator::pointer` **entry\_pointer**
- typedef `HT_Map::key_type` **key\_type**

### Public Member Functions

- **cond\_dealtor** (`entry_allocator *p_a, entry *p_e`)
- **cond\_dealtor** (`entry_pointer p_e`)
- void **set\_key\_destruct** ()
- void **set\_no\_action** ()
- void **set\_no\_action\_destructor** ()

### Protected Attributes

- bool **m\_key\_destruct**
- `entry_allocator *const` **m\_p\_a**
- `entry *const` **m\_p\_e**

#### 5.229.1 Detailed Description

```
template<typename Entry, typename _Alloc>class __gnu_pbds::detail::cond_dealtor< Entry, _Alloc >
```

Conditional deallocate constructor argument.

Conditional dey destructor, cc\_hash.

Definition at line 50 of file cond\_dealtor.hpp.

The documentation for this class was generated from the following files:

- [cond\\_dealtor.hpp](#)
- [cond\\_key\\_dtor\\_entry\\_dealtor.hpp](#)

## 5.230 `__gnu_pbds::detail::container_base_dispatch`< Key, Mapped, \_Alloc, Tag, Policy\_TI > Struct Template Reference

#### 5.230.1 Detailed Description

```
template<typename Key, typename Mapped, typename _Alloc, typename Tag, typename Policy_TI = null_type>struct __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, Tag, Policy_TI >
```

Dispatch mechanism, primary template for associative types.

Definition at line 449 of file tag\_and\_trait.hpp.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

## 5.231 `__gnu_pbds::detail::container_base_dispatch`< \_VTp, Cmp\_Fn, \_Alloc, binary\_heap\_tag, null\_type > Struct Template Reference

#### Public Types

- typedef [binary\\_heap](#)< \_VTp, Cmp\_Fn, \_Alloc > [type](#)

#### 5.231.1 Detailed Description

```
template<typename _VTp, typename Cmp_Fn, typename _Alloc>struct __gnu_pbds::detail::container_base_dispatch< _VTp, Cmp_Fn, _Alloc, binary_heap_tag, null_type >
```

Specialization for binary\_heap.

Definition at line 95 of file priority\_queue\_base\_dispatch.hpp.

#### 5.231.2 Member Typedef Documentation

5.231.2.1 `template<typename _VTp, typename Cmp_Fn, typename _Alloc > typedef binary_heap<_VTp, Cmp_Fn, _Alloc> __gnu_pbds::detail::container_base_dispatch<_VTp, Cmp_Fn, _Alloc, binary_heap_tag, null_type >::type`

Dispatched type.

Definition at line 99 of file `priority_queue_base_dispatch.hpp`.

The documentation for this struct was generated from the following file:

- [priority\\_queue\\_base\\_dispatch.hpp](#)

5.232 `__gnu_pbds::detail::container_base_dispatch<_VTp, Cmp_Fn, _Alloc, binomial_heap_tag, null_type >`  
**Struct Template Reference**

Public Types

- typedef `binomial_heap<_VTp, Cmp_Fn, _Alloc > type`

5.232.1 Detailed Description

`template<typename _VTp, typename Cmp_Fn, typename _Alloc> struct __gnu_pbds::detail::container_base_dispatch<_VTp, Cmp_Fn, _Alloc, binomial_heap_tag, null_type >`

Specialization for `binomial_heap`.

Definition at line 77 of file `priority_queue_base_dispatch.hpp`.

5.232.2 Member Typedef Documentation

5.232.2.1 `template<typename _VTp, typename Cmp_Fn, typename _Alloc > typedef binomial_heap<_VTp, Cmp_Fn, _Alloc> __gnu_pbds::detail::container_base_dispatch<_VTp, Cmp_Fn, _Alloc, binomial_heap_tag, null_type >::type`

Dispatched type.

Definition at line 81 of file `priority_queue_base_dispatch.hpp`.

The documentation for this struct was generated from the following file:

- [priority\\_queue\\_base\\_dispatch.hpp](#)

5.233 `__gnu_pbds::detail::container_base_dispatch<_VTp, Cmp_Fn, _Alloc, pairing_heap_tag, null_type >`  
**Struct Template Reference**

Public Types

- typedef `pairing_heap<_VTp, Cmp_Fn, _Alloc > type`

#### 5.233.1 Detailed Description

```
template<typename _VTp, typename Cmp_Fn, typename _Alloc>struct __gnu_pbds::detail::container_base_dispatch<_VTp, Cmp_Fn, _Alloc, pairing_heap_tag, null_type >
```

Specialization for pairing\_heap.

Definition at line 68 of file priority\_queue\_base\_dispatch.hpp.

#### 5.233.2 Member Typedef Documentation

5.233.2.1 `template<typename _VTp, typename Cmp_Fn, typename _Alloc > typedef pairing_heap<_VTp, Cmp_Fn, _Alloc> __gnu_pbds::detail::container_base_dispatch<_VTp, Cmp_Fn, _Alloc, pairing_heap_tag, null_type >::type`

Dispatched type.

Definition at line 72 of file priority\_queue\_base\_dispatch.hpp.

The documentation for this struct was generated from the following file:

- [priority\\_queue\\_base\\_dispatch.hpp](#)

### 5.234 `__gnu_pbds::detail::container_base_dispatch<_VTp, Cmp_Fn, _Alloc, rc_binomial_heap_tag, null_type >` **Struct Template Reference**

#### Public Types

- typedef `rc_binomial_heap<_VTp, Cmp_Fn, _Alloc >` `type`

#### 5.234.1 Detailed Description

```
template<typename _VTp, typename Cmp_Fn, typename _Alloc>struct __gnu_pbds::detail::container_base_dispatch<_VTp, Cmp_Fn, _Alloc, rc_binomial_heap_tag, null_type >
```

Specialization for rc\_binary\_heap.

Definition at line 86 of file priority\_queue\_base\_dispatch.hpp.

#### 5.234.2 Member Typedef Documentation

5.234.2.1 `template<typename _VTp, typename Cmp_Fn, typename _Alloc > typedef rc_binomial_heap<_VTp, Cmp_Fn, _Alloc> __gnu_pbds::detail::container_base_dispatch<_VTp, Cmp_Fn, _Alloc, rc_binomial_heap_tag, null_type >::type`

Dispatched type.

Definition at line 90 of file priority\_queue\_base\_dispatch.hpp.

The documentation for this struct was generated from the following file:

- [priority\\_queue\\_base\\_dispatch.hpp](#)

## 5.235 `__gnu_pbds::detail::container_base_dispatch< _VTp, Cmp_Fn, _Alloc, thin_heap_tag, null_type >` Struct Template Reference

### Public Types

- typedef [thin\\_heap](#)< \_VTp, Cmp\_Fn, \_Alloc > [type](#)

#### 5.235.1 Detailed Description

`template<typename _VTp, typename Cmp_Fn, typename _Alloc>struct __gnu_pbds::detail::container_base_dispatch< _VTp, Cmp_Fn, _Alloc, thin_heap_tag, null_type >`

Specialization for `thin_heap`.

Definition at line 104 of file `priority_queue_base_dispatch.hpp`.

#### 5.235.2 Member Typedef Documentation

5.235.2.1 `template<typename _VTp, typename Cmp_Fn, typename _Alloc > typedef thin_heap<_VTp, Cmp_Fn, _Alloc> __gnu_pbds::detail::container_base_dispatch<_VTp, Cmp_Fn, _Alloc, thin_heap_tag, null_type >::type`

Dispatched type.

Definition at line 108 of file `priority_queue_base_dispatch.hpp`.

The documentation for this struct was generated from the following file:

- [priority\\_queue\\_base\\_dispatch.hpp](#)

## 5.236 `__gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, cc_hash_tag, Policy_TI >` Struct Template Reference

### Public Types

- typedef [cc\\_ht\\_map](#)< Key, Mapped, at0t, at1t, \_Alloc, at3t::value, at4t, at2t > [type](#)

#### 5.236.1 Detailed Description

`template<typename Key, typename Mapped, typename _Alloc, typename Policy_TI>struct __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, cc_hash_tag, Policy_TI >`

Specialization collision-chaining hash map.

Definition at line 258 of file `container_base_dispatch.hpp`.

#### 5.236.2 Member Typedef Documentation

5.236.2.1 `template<typename Key , typename Mapped , typename _Alloc , typename Policy_TI > typedef cc_ht_map<Key, Mapped, at0t, at1t, _Alloc, at3t::value, at4t, at2t> __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, cc_hash_tag, Policy_TI >::type`

Dispatched type.

Definition at line 275 of file `container_base_dispatch.hpp`.

The documentation for this struct was generated from the following file:

- [container\\_base\\_dispatch.hpp](#)

## 5.237 `__gnu_pbds::detail::container_base_dispatch`< Key, Mapped, `_Alloc`, `gp_hash_tag`, `Policy_TI` > Struct Template Reference

### Public Types

- typedef `gp_ht_map`< Key, Mapped, `at0t`, `at1t`, `_Alloc`, `at3t::value`, `at4t`, `at5t`, `at2t` > `type`

### 5.237.1 Detailed Description

`template<typename Key, typename Mapped, typename _Alloc, typename Policy_TI>struct __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, gp_hash_tag, Policy_TI >`

Specialization general-probe hash map.

Definition at line 303 of file `container_base_dispatch.hpp`.

### 5.237.2 Member Typedef Documentation

5.237.2.1 `template<typename Key , typename Mapped , typename _Alloc , typename Policy_TI > typedef gp_ht_map<Key, Mapped, at0t, at1t, _Alloc, at3t::value, at4t, at5t, at2t> __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, gp_hash_tag, Policy_TI >::type`

Dispatched type.

Definition at line 322 of file `container_base_dispatch.hpp`.

The documentation for this struct was generated from the following file:

- [container\\_base\\_dispatch.hpp](#)

## 5.238 `__gnu_pbds::detail::container_base_dispatch`< Key, Mapped, `_Alloc`, `list_update_tag`, `Policy_TI` > Struct Template Reference

### Public Types

- typedef `lu_map`< Key, Mapped, `at0t`, `_Alloc`, `at1t` > `type`

### 5.238.1 Detailed Description

```
template<typename Key, typename Mapped, typename _Alloc, typename Policy_TI>struct __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, list_update_tag, Policy_TI >
```

Specialization for list-update map.

Definition at line 107 of file container\_base\_dispatch.hpp.

### 5.238.2 Member Typedef Documentation

5.238.2.1 `template<typename Key , typename Mapped , typename _Alloc , typename Policy_TI > typedef lu_map<Key, Mapped, at0t, _Alloc, at1t> __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, list_update_tag, Policy_TI >::type`

Dispatched type.

Definition at line 118 of file container\_base\_dispatch.hpp.

The documentation for this struct was generated from the following file:

- [container\\_base\\_dispatch.hpp](#)

## 5.239 \_\_gnu\_pbds::detail::container\_base\_dispatch< Key, Mapped, \_Alloc, ov\_tree\_tag, Policy\_TI > Struct Template Reference

### Public Types

- typedef `ov_tree_map< Key, Mapped, at0t, at1t, _Alloc >` [type](#)

### 5.239.1 Detailed Description

```
template<typename Key, typename Mapped, typename _Alloc, typename Policy_TI>struct __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, ov_tree_tag, Policy_TI >
```

Specialization ordered-vector tree map.

Definition at line 227 of file container\_base\_dispatch.hpp.

### 5.239.2 Member Typedef Documentation

5.239.2.1 `template<typename Key , typename Mapped , typename _Alloc , typename Policy_TI > typedef ov_tree_map<Key, Mapped, at0t, at1t, _Alloc> __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, ov_tree_tag, Policy_TI >::type`

Dispatched type.

Definition at line 237 of file container\_base\_dispatch.hpp.

The documentation for this struct was generated from the following file:

- [container\\_base\\_dispatch.hpp](#)

## 5.240 `__gnu_pbds::detail::container_base_dispatch`< Key, Mapped, `_Alloc`, `pat_trie_tag`, `Policy_TI` > Struct Template Reference

### Public Types

- typedef `pat_trie_map`< Key, Mapped, `at1t`, `_Alloc` > **type**

#### 5.240.1 Detailed Description

`template<typename Key, typename Mapped, typename _Alloc, typename Policy_TI>struct __gnu_pbds::detail::container_base_dispatch`< Key, Mapped, `_Alloc`, `pat_trie_tag`, `Policy_TI` >

Specialization for PATRICIA trie map.

Definition at line 139 of file `container_base_dispatch.hpp`.

The documentation for this struct was generated from the following file:

- [container\\_base\\_dispatch.hpp](#)

## 5.241 `__gnu_pbds::detail::container_base_dispatch`< Key, Mapped, `_Alloc`, `rb_tree_tag`, `Policy_TI` > Struct Template Reference

### Public Types

- typedef `rb_tree_map`< Key, Mapped, `at0t`, `at1t`, `_Alloc` > **type**

#### 5.241.1 Detailed Description

`template<typename Key, typename Mapped, typename _Alloc, typename Policy_TI>struct __gnu_pbds::detail::container_base_dispatch`< Key, Mapped, `_Alloc`, `rb_tree_tag`, `Policy_TI` >

Specialization for R-B tree map.

Definition at line 165 of file `container_base_dispatch.hpp`.

#### 5.241.2 Member Typedef Documentation

5.241.2.1 `template<typename Key , typename Mapped , typename _Alloc , typename Policy_TI > typedef rb_tree_map`<Key, Mapped, `at0t`, `at1t`, `_Alloc`> `__gnu_pbds::detail::container_base_dispatch`< Key, Mapped, `_Alloc`, `rb_tree_tag`, `Policy_TI` >::**type**

Dispatched type.

Definition at line 175 of file `container_base_dispatch.hpp`.

The documentation for this struct was generated from the following file:

- [container\\_base\\_dispatch.hpp](#)

## 5.242 `__gnu_pbds::detail::container_base_dispatch`< Key, Mapped, \_Alloc, splay\_tree\_tag, Policy\_TI > Struct Template Reference

### Public Types

- typedef `splay_tree_map`< Key, Mapped, at0t, at1t, \_Alloc > `type`

#### 5.242.1 Detailed Description

`template<typename Key, typename Mapped, typename _Alloc, typename Policy_TI>struct __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, splay_tree_tag, Policy_TI >`

Specialization splay tree map.

Definition at line 195 of file `container_base_dispatch.hpp`.

#### 5.242.2 Member Typedef Documentation

5.242.2.1 `template<typename Key, typename Mapped, typename _Alloc, typename Policy_TI > typedef splay_tree_map<Key, Mapped, at0t, at1t, _Alloc> __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, splay_tree_tag, Policy_TI >::type`

Dispatched type.

Definition at line 206 of file `container_base_dispatch.hpp`.

The documentation for this struct was generated from the following file:

- [container\\_base\\_dispatch.hpp](#)

## 5.243 `__gnu_pbds::detail::container_base_dispatch`< Key, null\_type, \_Alloc, cc\_hash\_tag, Policy\_TI > Struct Template Reference

### Public Types

- typedef `cc_ht_set`< Key, `null_type`, at0t, at1t, \_Alloc, at3t::value, at4t, at2t > `type`

#### 5.243.1 Detailed Description

`template<typename Key, typename _Alloc, typename Policy_TI>struct __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, cc_hash_tag, Policy_TI >`

Specialization collision-chaining hash set.

Definition at line 280 of file `container_base_dispatch.hpp`.

#### 5.243.2 Member Typedef Documentation

5.243.2.1 `template<typename Key , typename _Alloc , typename Policy_TI > typedef cc_ht_set<Key, null_type, at0t, at1t, _Alloc, at3t::value, at4t, at2t> __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, cc_hash_tag, Policy_TI >::type`

Dispatched type.

Definition at line 298 of file `container_base_dispatch.hpp`.

The documentation for this struct was generated from the following file:

- [container\\_base\\_dispatch.hpp](#)

## 5.244 `__gnu_pbds::detail::container_base_dispatch`< Key, null\_type, \_Alloc, gp\_hash\_tag, Policy\_TI > Struct Template Reference

### Public Types

- `typedef gp_ht_set< Key, null_type, at0t, at1t, _Alloc, at3t::value, at4t, at5t, at2t > type`

### 5.244.1 Detailed Description

`template<typename Key, typename _Alloc, typename Policy_TI>struct __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, gp_hash_tag, Policy_TI >`

Specialization general-probe hash set.

Definition at line 327 of file `container_base_dispatch.hpp`.

### 5.244.2 Member Typedef Documentation

5.244.2.1 `template<typename Key , typename _Alloc , typename Policy_TI > typedef gp_ht_set<Key, null_type, at0t, at1t, _Alloc, at3t::value, at4t, at5t, at2t> __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, gp_hash_tag, Policy_TI >::type`

Dispatched type.

Definition at line 347 of file `container_base_dispatch.hpp`.

The documentation for this struct was generated from the following file:

- [container\\_base\\_dispatch.hpp](#)

## 5.245 `__gnu_pbds::detail::container_base_dispatch`< Key, null\_type, \_Alloc, list\_update\_tag, Policy\_TI > Struct Template Reference

### Public Types

- `typedef lu_set< Key, null_type, at0t, _Alloc, at1t > type`

### 5.245.1 Detailed Description

```
template<typename Key, typename _Alloc, typename Policy_TI>struct __gnu_pbds::detail::container_base_dispatch< Key, null_type,
_Alloc, list_update_tag, Policy_TI >
```

Specialization for list-update set.

Definition at line 123 of file container\_base\_dispatch.hpp.

### 5.245.2 Member Typedef Documentation

```
5.245.2.1 template<typename Key , typename _Alloc , typename Policy_TI > typedef lu_set<Key, null_type, at0t, _Alloc, at1t>
__gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, list_update_tag, Policy_TI >::type
```

Dispatched type.

Definition at line 134 of file container\_base\_dispatch.hpp.

The documentation for this struct was generated from the following file:

- [container\\_base\\_dispatch.hpp](#)

## 5.246 \_\_gnu\_pbds::detail::container\_base\_dispatch< Key, null\_type, \_Alloc, ov\_tree\_tag, Policy\_TI > Struct Template Reference

### Public Types

- typedef ov\_tree\_set< Key, null\_type, at0t, at1t, \_Alloc > type

### 5.246.1 Detailed Description

```
template<typename Key, typename _Alloc, typename Policy_TI>struct __gnu_pbds::detail::container_base_dispatch< Key, null_type,
_Alloc, ov_tree_tag, Policy_TI >
```

Specialization ordered-vector tree set.

Definition at line 242 of file container\_base\_dispatch.hpp.

### 5.246.2 Member Typedef Documentation

```
5.246.2.1 template<typename Key , typename _Alloc , typename Policy_TI > typedef ov_tree_set<Key, null_type, at0t, at1t,
_Alloc> __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, ov_tree_tag, Policy_TI
>::type
```

Dispatched type.

Definition at line 253 of file container\_base\_dispatch.hpp.

The documentation for this struct was generated from the following file:

- [container\\_base\\_dispatch.hpp](#)

## 5.247 `__gnu_pbds::detail::container_base_dispatch`< Key, null\_type, \_Alloc, pat\_trie\_tag, Policy\_TI > Struct Template Reference

### Public Types

- typedef pat\_trie\_set< Key, [null\\_type](#), at1t, \_Alloc > [type](#)

#### 5.247.1 Detailed Description

```
template<typename Key, typename _Alloc, typename Policy_TI>struct __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, pat_trie_tag, Policy_TI >
```

Specialization for PATRICIA trie set.

Definition at line 151 of file `container_base_dispatch.hpp`.

#### 5.247.2 Member Typedef Documentation

5.247.2.1 `template<typename Key , typename _Alloc , typename Policy_TI > typedef pat_trie_set<Key, null_type, at1t, _Alloc> __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, pat_trie_tag, Policy_TI >::type`

Dispatched type.

Definition at line 160 of file `container_base_dispatch.hpp`.

The documentation for this struct was generated from the following file:

- [container\\_base\\_dispatch.hpp](#)

## 5.248 `__gnu_pbds::detail::container_base_dispatch`< Key, null\_type, \_Alloc, rb\_tree\_tag, Policy\_TI > Struct Template Reference

### Public Types

- typedef rb\_tree\_set< Key, [null\\_type](#), at0t, at1t, \_Alloc > [type](#)

#### 5.248.1 Detailed Description

```
template<typename Key, typename _Alloc, typename Policy_TI>struct __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, rb_tree_tag, Policy_TI >
```

Specialization for R-B tree set.

Definition at line 180 of file `container_base_dispatch.hpp`.

The documentation for this struct was generated from the following file:

- [container\\_base\\_dispatch.hpp](#)

## 5.249 `__gnu_pbds::detail::container_base_dispatch`< Key, null\_type, \_Alloc, splay\_tree\_tag, Policy\_Tl > Struct Template Reference

### Public Types

- typedef `splay_tree_set`< Key, [null\\_type](#), at0t, at1t, \_Alloc > `type`

### 5.249.1 Detailed Description

`template<typename Key, typename _Alloc, typename Policy_Tl>struct __gnu_pbds::detail::container_base_dispatch`< Key, null\_type, \_Alloc, splay\_tree\_tag, Policy\_Tl >

Specialization splay tree set.

Definition at line 211 of file `container_base_dispatch.hpp`.

### 5.249.2 Member Typedef Documentation

5.249.2.1 `template<typename Key , typename _Alloc , typename Policy_Tl > typedef splay_tree_set`<Key, `null_type`, at0t, at1t, \_Alloc> `__gnu_pbds::detail::container_base_dispatch`< Key, `null_type`, \_Alloc, splay\_tree\_tag, Policy\_Tl >::`type`

Dispatched type.

Definition at line 222 of file `container_base_dispatch.hpp`.

The documentation for this struct was generated from the following file:

- [container\\_base\\_dispatch.hpp](#)

## 5.250 `__gnu_pbds::detail::default_comb_hash_fn` Struct Reference

### Public Types

- typedef `direct_mask_range_hashing` `type`

### 5.250.1 Detailed Description

Primary template, `default_comb_hash_fn`.

Definition at line 80 of file `standard_policies.hpp`.

### 5.250.2 Member Typedef Documentation

5.250.2.1 `typedef direct_mask_range_hashing` `__gnu_pbds::detail::default_comb_hash_fn::type`

Dispatched type.

Definition at line 83 of file `standard_policies.hpp`.

The documentation for this struct was generated from the following file:

- [standard\\_policies.hpp](#)

## 5.251 `__gnu_pbds::detail::default_eq_fn< Key >` Struct Template Reference

### Public Types

- typedef `std::equal_to< Key >` `type`

#### 5.251.1 Detailed Description

```
template<typename Key>struct __gnu_pbds::detail::default_eq_fn< Key >
```

Primary template, `default_eq_fn`.

Definition at line 67 of file `standard_policies.hpp`.

#### 5.251.2 Member Typedef Documentation

5.251.2.1 `template<typename Key> typedef std::equal_to<Key> __gnu_pbds::detail::default_eq_fn< Key >::type`

Dispatched type.

Definition at line 70 of file `standard_policies.hpp`.

The documentation for this struct was generated from the following file:

- [standard\\_policies.hpp](#)

## 5.252 `__gnu_pbds::detail::default_hash_fn< Key >` Struct Template Reference

### Public Types

- typedef `std::tr1::hash< Key >` `type`

#### 5.252.1 Detailed Description

```
template<typename Key>struct __gnu_pbds::detail::default_hash_fn< Key >
```

Primary template, `default_hash_fn`.

Definition at line 59 of file `standard_policies.hpp`.

#### 5.252.2 Member Typedef Documentation

5.252.2.1 `template<typename Key> typedef std::tr1::hash<Key> __gnu_pbds::detail::default_hash_fn< Key >::type`

Dispatched type.

Definition at line 62 of file `standard_policies.hpp`.

The documentation for this struct was generated from the following file:

- [standard\\_policies.hpp](#)

## 5.253 `__gnu_pbds::detail::default_probe_fn< Comb_Probe_Fn >` Struct Template Reference

### Public Types

- typedef `cond_type::__type` [type](#)

#### 5.253.1 Detailed Description

```
template<typename Comb_Probe_Fn>struct __gnu_pbds::detail::default_probe_fn< Comb_Probe_Fn >
```

Primary template, `default_probe_fn`.

Definition at line 117 of file `standard_policies.hpp`.

#### 5.253.2 Member Typedef Documentation

5.253.2.1 `template<typename Comb_Probe_Fn > typedef cond_type::__type __gnu_pbds::detail::default_probe_fn< Comb_Probe_Fn >::type`

Dispatched type.

Definition at line 129 of file `standard_policies.hpp`.

The documentation for this struct was generated from the following file:

- [standard\\_policies.hpp](#)

## 5.254 `__gnu_pbds::detail::default_resize_policy< Comb_Hash_Fn >` Struct Template Reference

### Public Types

- typedef [hash\\_standard\\_resize\\_policy](#)  
`< size_policy_type, trigger, false, size_type >` [type](#)

#### 5.254.1 Detailed Description

```
template<typename Comb_Hash_Fn>struct __gnu_pbds::detail::default_resize_policy< Comb_Hash_Fn >
```

Primary template, `default_resize_policy`.

Definition at line 88 of file `standard_policies.hpp`.

#### 5.254.2 Member Typedef Documentation

5.254.2.1 `template<typename Comb_Hash_Fn> typedef hash_standard_resize_policy<size_policy_type, trigger, false, size_type> __gnu_pbds::detail::default_resize_policy< Comb_Hash_Fn >::type`

Dispatched type.

Definition at line 105 of file `standard_policies.hpp`.

The documentation for this struct was generated from the following file:

- [standard\\_policies.hpp](#)

## 5.255 `__gnu_pbds::detail::default_trie_access_traits< Key >` Struct Template Reference

### 5.255.1 Detailed Description

`template<typename Key>struct __gnu_pbds::detail::default_trie_access_traits< Key >`

Primary template, `default_trie_access_traits`.

Definition at line 135 of file `standard_policies.hpp`.

The documentation for this struct was generated from the following file:

- [standard\\_policies.hpp](#)

## 5.256 `__gnu_pbds::detail::default_trie_access_traits< std::basic_string< Char, Char_Traits, std::allocator< char > > >` Struct Template Reference

### Public Types

- typedef  
`trie_string_access_traits`  
`< string_type > type`

### 5.256.1 Detailed Description

`template<typename Char, typename Char_Traits>struct __gnu_pbds::detail::default_trie_access_traits< std::basic_string< Char, Char_Traits, std::allocator< char > > >`

Partial specialization, `default_trie_access_traits`.

Definition at line 142 of file `standard_policies.hpp`.

### 5.256.2 Member Typedef Documentation

5.256.2.1 `template<typename Char, typename Char_Traits > typedef trie_string_access_traits<string_type> __gnu_pbds::detail::default_trie_access_traits< std::basic_string< Char, Char_Traits, std::allocator< char > > >::type`

Dispatched type.

Definition at line 149 of file `standard_policies.hpp`.

The documentation for this struct was generated from the following file:

- [standard\\_policies.hpp](#)

## 5.257 `__gnu_pbds::detail::default_update_policy` Struct Reference

### Public Types

- typedef `lu_move_to_front_policy` type

### 5.257.1 Detailed Description

Default update policy.

Definition at line 109 of file `standard_policies.hpp`.

### 5.257.2 Member Typedef Documentation

#### 5.257.2.1 `typedef lu_move_to_front_policy __gnu_pbds::detail::default_update_policy::type`

Dispatched type.

Definition at line 112 of file `standard_policies.hpp`.

The documentation for this struct was generated from the following file:

- [standard\\_policies.hpp](#)

## 5.258 `__gnu_pbds::detail::dumnode_const_iterator< Key, Data, _Alloc >` Struct Template Reference

### Public Types

- `typedef const_iterator` **const\_reference**
- `typedef const_reference` **reference**
- `typedef const_iterator` **value\_type**

### 5.258.1 Detailed Description

```
template<typename Key, typename Data, typename _Alloc>struct __gnu_pbds::detail::dumnode_const_iterator< Key, Data, _Alloc
>
```

Constant node iterator.

Definition at line 52 of file `null_node_metadata.hpp`.

The documentation for this struct was generated from the following file:

- [null\\_node\\_metadata.hpp](#)

## 5.259 `__gnu_pbds::detail::entry_cmp< _VTp, Cmp_Fn, _Alloc, No_Throw >` Struct Template Reference

### 5.259.1 Detailed Description

```
template<typename _VTp, typename Cmp_Fn, typename _Alloc, bool No_Throw>struct __gnu_pbds::detail::entry_cmp< _VTp, Cmp-
_Fn, _Alloc, No_Throw >
```

Entry compare, primary template.

Definition at line 50 of file `entry_cmp.hpp`.

The documentation for this struct was generated from the following file:

- [entry\\_cmp.hpp](#)

5.260 `__gnu_pbds::detail::entry_cmp<_VTp, Cmp_Fn, _Alloc, false >` Struct Template Reference

## Classes

- struct [type](#)

## Public Types

- typedef `__rebind_v::other::const_pointer` **entry**

## 5.260.1 Detailed Description

`template<typename _VTp, typename Cmp_Fn, typename _Alloc>struct __gnu_pbds::detail::entry_cmp<_VTp, Cmp_Fn, _Alloc, false >`

Specialization, false.

Definition at line 62 of file `entry_cmp.hpp`.

The documentation for this struct was generated from the following file:

- [entry\\_cmp.hpp](#)

5.261 `__gnu_pbds::detail::entry_cmp<_VTp, Cmp_Fn, _Alloc, false >::type` Struct Reference

Inherits `Cmp_Fn`.

## Public Member Functions

- **type** (const `Cmp_Fn` &other)
- bool **operator()** (entry lhs, entry rhs) const

## 5.261.1 Detailed Description

`template<typename _VTp, typename Cmp_Fn, typename _Alloc>struct __gnu_pbds::detail::entry_cmp<_VTp, Cmp_Fn, _Alloc, false >::type`

Compare plus entry.

Definition at line 71 of file `entry_cmp.hpp`.

The documentation for this struct was generated from the following file:

- [entry\\_cmp.hpp](#)

5.262 `__gnu_pbds::detail::entry_cmp<_VTp, Cmp_Fn, _Alloc, true >` Struct Template Reference

## Public Types

- typedef `Cmp_Fn` [type](#)

### 5.262.1 Detailed Description

```
template<typename _VTp, typename Cmp_Fn, typename _Alloc>struct __gnu_pbds::detail::entry_cmp< _VTp, Cmp_Fn, _Alloc, true
>
```

Specialization, true.

Definition at line 54 of file entry\_cmp.hpp.

### 5.262.2 Member Typedef Documentation

5.262.2.1 `template<typename _VTp , typename Cmp_Fn , typename _Alloc > typedef Cmp_Fn  
__gnu_pbds::detail::entry_cmp< _VTp, Cmp_Fn, _Alloc, true >::type`

Compare.

Definition at line 57 of file entry\_cmp.hpp.

The documentation for this struct was generated from the following file:

- [entry\\_cmp.hpp](#)

## 5.263 \_\_gnu\_pbds::detail::entry\_pred< \_VTp, Pred, \_Alloc, No\_Throw > Struct Template Reference

### 5.263.1 Detailed Description

```
template<typename _VTp, typename Pred, typename _Alloc, bool No_Throw>struct __gnu_pbds::detail::entry_pred< _VTp, Pred,
_Alloc, No_Throw >
```

Entry predicate primary class template.

Definition at line 50 of file entry\_pred.hpp.

The documentation for this struct was generated from the following file:

- [entry\\_pred.hpp](#)

## 5.264 \_\_gnu\_pbds::detail::entry\_pred< \_VTp, Pred, \_Alloc, false > Struct Template Reference

### Public Types

- typedef  
\_\_rebind\_v::other::const\_pointer **entry**

### 5.264.1 Detailed Description

```
template<typename _VTp, typename Pred, typename _Alloc>struct __gnu_pbds::detail::entry_pred< _VTp, Pred, _Alloc, false >
```

Specialization, false.

Definition at line 61 of file entry\_pred.hpp.

The documentation for this struct was generated from the following file:

- [entry\\_pred.hpp](#)

5.265 `__gnu_pbds::detail::entry_pred<_VTp, Pred, _Alloc, true >` Struct Template Reference

## Public Types

- typedef Pred **type**

## 5.265.1 Detailed Description

```
template<typename _VTp, typename Pred, typename _Alloc>struct __gnu_pbds::detail::entry_pred<_VTp, Pred, _Alloc, true >
```

Specialization, true.

Definition at line 54 of file `entry_pred.hpp`.

The documentation for this struct was generated from the following file:

- [entry\\_pred.hpp](#)

5.266 `__gnu_pbds::detail::eq_by_less<Key, Cmp_Fn >` Struct Template Reference

Inherits Cmp\_Fn.

## Public Member Functions

- bool **operator()** (const Key &r\_lhs, const Key &r\_rhs) const

## 5.266.1 Detailed Description

```
template<typename Key, class Cmp_Fn>struct __gnu_pbds::detail::eq_by_less<Key, Cmp_Fn >
```

Equivalence function.

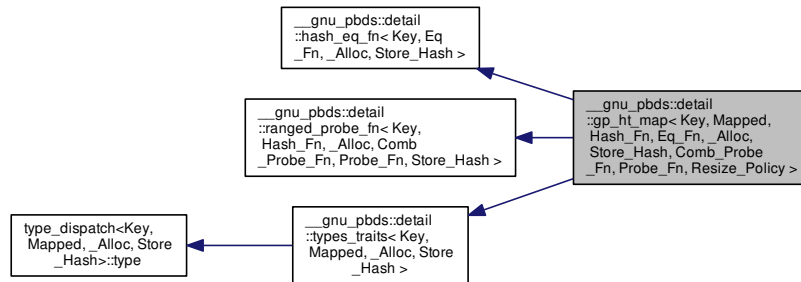

Definition at line 56 of file `eq_by_less.hpp`.

The documentation for this struct was generated from the following file:

- [eq\\_by\\_less.hpp](#)

## 5.267 `__gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy >` Class Template Reference

Inheritance diagram for `__gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy >`:

#### 5.267.1 Detailed Description

```
template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool Store_Hash, typename Comb_Probe_Fn, typename Probe_Fn, typename Resize_Policy>class __gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy >
```

A general-probing hash-based container.

#### Template Parameters

<i>Key</i>	Key type.
<i>Mapped</i>	Map type.
<i>Hash_Fn</i>	Hashing functor. Default is <code>__gnu_cxx::hash</code> .
<i>Eq_Fn</i>	Equal functor. Default <code>std::equal_to&lt;Key&gt;</code>
<i>_Alloc</i>	Allocator type.
<i>Store_Hash</i>	If key type stores extra metadata. Defaults to false.
<i>Comb_Probe_Fn</i>	Combining probe functor. If <i>Hash_Fn</i> is not null_type, then this is the ranged-probe functor; otherwise, this is the range-hashing functor. XXX See Design::Hash-Based Containers::Hash Policies. Default <code>direct_mask_range_hashing</code> .
<i>Probe_Fn</i>	Probe functor. Defaults to <code>linear_probe_fn</code> , also <code>quadratic_probe_fn</code> .
<i>Resize_Policy</i>	Resizes hash. Defaults to <code>hash_standard_resize_policy</code> , using <code>hash_exponential_size_policy</code> and <code>hash_load_check_resize_trigger</code> .

Bases are: `detail::hash_eq_fn`, `Resize_Policy`, `detail::ranged_probe_fn`, `detail::types_traits`. (Optional: `detail::debug_map_base`.)

Definition at line 142 of file `gp_ht_map.hpp`.

#### 5.267.2 Member Enumeration Documentation

5.267.2.1 `template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool Store_Hash, typename Comb_Probe_Fn, typename Probe_Fn, typename Resize_Policy> anonymous enum`

Value stores hash, true or false.

Definition at line 208 of file `gp_ht_map.hpp`.

5.267.3 Member Function Documentation

5.267.3.1 `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Probe_Fn , typename Probe_Fn , typename Resize_Policy > bool __gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy >::empty ( ) const` `[inline]`

True if size() == 0.

Definition at line 58 of file `gp_ht_map.hpp`.

5.267.3.2 `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Probe_Fn , typename Probe_Fn , typename Resize_Policy > Comb_Probe_Fn & __gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy >::get_comb_probe_fn ( )`

Return current `comb_probe_fn`.

Definition at line 82 of file `gp_ht_map.hpp`.

5.267.3.3 `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Probe_Fn , typename Probe_Fn , typename Resize_Policy > const Comb_Probe_Fn & __gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy >::get_comb_probe_fn ( ) const`

Return current `const comb_probe_fn`.

Definition at line 88 of file `gp_ht_map.hpp`.

5.267.3.4 `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Probe_Fn , typename Probe_Fn , typename Resize_Policy > Eq_Fn & __gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy >::get_eq_fn ( )`

Return current `eq_fn`.

Definition at line 58 of file `gp_ht_map.hpp`.

5.267.3.5 `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Probe_Fn , typename Probe_Fn , typename Resize_Policy > const Eq_Fn & __gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy >::get_eq_fn ( ) const`

Return current `const eq_fn`.

Definition at line 64 of file `gp_ht_map.hpp`.

5.267.3.6 `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Probe_Fn , typename Probe_Fn , typename Resize_Policy > Hash_Fn & __gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy >::get_hash_fn ( )`

Return current `hash_fn`.

Definition at line 46 of file `gp_ht_map.hpp`.

5.267.3.7 `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Probe_Fn , typename Probe_Fn , typename Resize_Policy > const Hash_Fn & __gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy >::get_hash_fn ( ) const`

Return current const hash\_fn.

Definition at line 52 of file gp\_ht\_map.hpp.

5.267.3.8 `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Probe_Fn , typename Probe_Fn , typename Resize_Policy > Probe_Fn & __gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy >::get_probe_fn ( )`

Return current probe\_fn.

Definition at line 70 of file gp\_ht\_map.hpp.

5.267.3.9 `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Probe_Fn , typename Probe_Fn , typename Resize_Policy > const Probe_Fn & __gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy >::get_probe_fn ( ) const`

Return current const probe\_fn.

Definition at line 76 of file gp\_ht\_map.hpp.

5.267.3.10 `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Probe_Fn , typename Probe_Fn , typename Resize_Policy > Resize_Policy & __gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy >::get_resize_policy ( )`

Return current resize\_policy.

Definition at line 94 of file gp\_ht\_map.hpp.

5.267.3.11 `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Probe_Fn , typename Probe_Fn , typename Resize_Policy > const Resize_Policy & __gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy >::get_resize_policy ( ) const`

Return current const resize\_policy.

Definition at line 100 of file gp\_ht\_map.hpp.

- `left_child_next_sibling_heap_const_iterator_< Node, _Alloc > operator++` (`int`)
- `const_pointer operator->` () `const`
- `bool operator==` (`const left_child_next_sibling_heap_const_iterator_< Node, _Alloc > &other`) `const`
- `bool operator==` (`const left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc > &other`) `const`

### Public Attributes

- `node_pointer m_p_nd`

### 5.274.1 Detailed Description

```
template<typename Node, typename _Alloc>class __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >
```

Const point-type iterator.

Definition at line 60 of file `left_child_next_sibling_heap_/const_iterator.hpp`.

### 5.274.2 Member Typedef Documentation

5.274.2.1 `template<typename Node , typename _Alloc > typedef base_type::const_pointer __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::const_pointer`

Iterator's const pointer type.

Definition at line 81 of file `left_child_next_sibling_heap_/const_iterator.hpp`.

5.274.2.2 `template<typename Node , typename _Alloc > typedef base_type::const_reference __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::const_reference`

Iterator's const reference type.

Definition at line 87 of file `left_child_next_sibling_heap_/const_iterator.hpp`.

5.274.2.3 `template<typename Node , typename _Alloc > typedef _Alloc::difference_type __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::difference_type`

Difference type.

Definition at line 72 of file `left_child_next_sibling_heap_/const_iterator.hpp`.

5.274.2.4 `template<typename Node , typename _Alloc > typedef std::forward_iterator_tag __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::iterator_category`

Category.

Definition at line 69 of file `left_child_next_sibling_heap_/const_iterator.hpp`.

5.274.2.5 `template<typename Node , typename _Alloc > typedef base_type::pointer __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::pointer`

Iterator's pointer type.

Definition at line 78 of file `left_child_next_sibling_heap_/const_iterator.hpp`.

5.274.2.6 `template<typename Node , typename _Alloc > typedef base_type::reference __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::reference`

Iterator's reference type.

Definition at line 84 of file `left_child_next_sibling_heap_/const_iterator.hpp`.

5.274.2.7 `template<typename Node , typename _Alloc > typedef base_type::value_type __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::value_type`

Iterator's value type.

Definition at line 75 of file `left_child_next_sibling_heap_/const_iterator.hpp`.

### 5.274.3 Constructor & Destructor Documentation

5.274.3.1 `template<typename Node , typename _Alloc > __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::left_child_next_sibling_heap_const_iterator_( )`  
`[inline]`

Default constructor.

Definition at line 96 of file `left_child_next_sibling_heap_/const_iterator.hpp`.

5.274.3.2 `template<typename Node , typename _Alloc > __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::left_child_next_sibling_heap_const_iterator_( const left_child_next_sibling_heap_const_iterator_< Node, _Alloc > & other )` `[inline]`

Copy constructor.

Definition at line 101 of file `left_child_next_sibling_heap_/const_iterator.hpp`.

### 5.274.4 Member Function Documentation

5.274.4.1 `template<typename Node , typename _Alloc > bool __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::operator!=( const left_child_next_sibling_heap_const_iterator_< Node, _Alloc > & other ) const` `[inline]`

Compares content (negatively) to a different iterator object.

Definition at line 111 of file `left_child_next_sibling_heap_/const_iterator.hpp`.

5.274.4.2 `template<typename Node , typename _Alloc > bool __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::operator!=( const left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc > & other ) const` `[inline]`,  
`[inherited]`

Compares content (negatively) to a different iterator object.

Definition at line 137 of file `left_child_next_sibling_heap_/point_const_iterator.hpp`.

5.274.4.3 `template<typename Node , typename _Alloc > const_reference __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::operator*( ) const` `[inline]`,  
`[inherited]`

Access.

Definition at line 124 of file `left_child_next_sibling_heap_/point_const_iterator.hpp`.

5.274.4.4 `template<typename Node , typename _Alloc > const_pointer __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::operator->( ) const` `[inline]`,  
`[inherited]`

Access.

Definition at line 116 of file `left_child_next_sibling_heap_/point_const_iterator.hpp`.

5.274.4.5 `template<typename Node , typename _Alloc > bool __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::operator==( const left_child_next_sibling_heap_const_iterator_< Node, _Alloc > & other ) const` `[inline]`

Compares content to a different iterator object.

Definition at line 106 of file `left_child_next_sibling_heap_/const_iterator.hpp`.

```
5.274.4.6 template<typename Node , typename _Alloc > bool __gnu_pbds::detail::left_child_ -
next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::operator==( const
left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc > & other ) const [inline],
[inherited]
```

Compares content to a different iterator object.

Definition at line 132 of file `left_child_next_sibling_heap_/point_const_iterator.hpp`.

The documentation for this class was generated from the following file:

- [left\\_child\\_next\\_sibling\\_heap\\_/const\\_iterator.hpp](#)

## 5.275 `__gnu_pbds::detail::left_child_next_sibling_heap_node_<_Value, _Metadata, _Alloc >` Struct Template Reference

### Public Types

- typedef `_Metadata` **metadata\_type**
- typedef `_Alloc::template rebind< this\_type > ::other::pointer` **node\_pointer**
- typedef `_Alloc::size_type` **size\_type**
- typedef `_Value` **value\_type**

### Public Attributes

- `metadata_type` **m\_metadata**
- `node_pointer` **m\_p\_l\_child**
- `node_pointer` **m\_p\_next\_sibling**
- `node_pointer` **m\_p\_prev\_or\_parent**
- `value_type` **m\_value**

### 5.275.1 Detailed Description

```
template<typename _Value, typename _Metadata, typename _Alloc>struct __gnu_pbds::detail::left_child_next_sibling_heap_node_ -
<_Value, _Metadata, _Alloc >
```

Node.

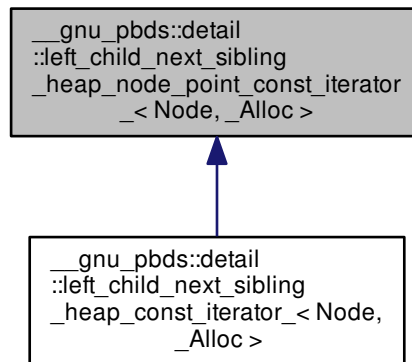

Definition at line 50 of file `left_child_next_sibling_heap_/node.hpp`.

The documentation for this struct was generated from the following file:

- [left\\_child\\_next\\_sibling\\_heap\\_/node.hpp](#)

## 5.276 `__gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >` Class Template Reference

Inheritance diagram for `__gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >`:

### Public Types

- typedef `_Alloc::template rebind< value_type >::other::const_pointer` `const_pointer`

#### 5.276.1 Detailed Description

`template<typename Node, typename _Alloc>class __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >`

Const point-type iterator.

Definition at line 61 of file `left_child_next_sibling_heap_/point_const_iterator.hpp`.

#### 5.276.2 Member Typedef Documentation

5.276.2.1 `template<typename Node , typename _Alloc > typedef _Alloc::template rebind< value_type>::other::const_pointer __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::const_pointer`

Iterator's const pointer type.

Definition at line 86 of file `left_child_next_sibling_heap_/point_const_iterator.hpp`.

5.276.2.2 `template<typename Node , typename _Alloc > typedef _Alloc::template rebind< value_type>::other::const_reference __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::const_reference`

Iterator's const reference type.

Definition at line 98 of file `left_child_next_sibling_heap_/point_const_iterator.hpp`.

5.276.2.3 `template<typename Node , typename _Alloc > typedef trivial_iterator_difference_type __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::difference_type`

Difference type.

Definition at line 71 of file `left_child_next_sibling_heap_/point_const_iterator.hpp`.

5.276.2.4 `template<typename Node , typename _Alloc > typedef trivial_iterator_tag __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::iterator_category`

Category.

Definition at line 68 of file `left_child_next_sibling_heap_/point_const_iterator.hpp`.

5.276.2.5 `template<typename Node , typename _Alloc > typedef _Alloc::template rebind< value_type >::other::pointer  
__gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc  
>::pointer`

Iterator's pointer type.

Definition at line 80 of file `left_child_next_sibling_heap_/point_const_iterator.hpp`.

5.276.2.6 `template<typename Node , typename _Alloc > typedef _Alloc::template rebind< value_type >::other::reference  
__gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc  
>::reference`

Iterator's reference type.

Definition at line 92 of file `left_child_next_sibling_heap_/point_const_iterator.hpp`.

5.276.2.7 `template<typename Node , typename _Alloc > typedef Node::value_type __gnu_pbds-  
::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc  
>::value_type`

Iterator's value type.

Definition at line 74 of file `left_child_next_sibling_heap_/point_const_iterator.hpp`.

### 5.276.3 Constructor & Destructor Documentation

5.276.3.1 `template<typename Node , typename _Alloc > __gnu_pbds::detail::left_child_next_sibling_heap_node_  
point_const_iterator_< Node, _Alloc >::left_child_next_sibling_heap_node_point_const_iterator_( )  
[inline]`

Default constructor.

Definition at line 106 of file `left_child_next_sibling_heap_/point_const_iterator.hpp`.

5.276.3.2 `template<typename Node , typename _Alloc > __gnu_pbds::detail::left_child_next_sibling_heap_node_  
point_const_iterator_< Node, _Alloc >::left_child_next_sibling_heap_node_point_const_iterator_(  
const left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc > & other ) [inline]`

Copy constructor.

Definition at line 111 of file `left_child_next_sibling_heap_/point_const_iterator.hpp`.

### 5.276.4 Member Function Documentation

5.276.4.1 `template<typename Node , typename _Alloc > bool __gnu_pbds::detail::left_child_  
next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::operator!=( const  
left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc > & other ) const [inline]`

Compares content (negatively) to a different iterator object.

Definition at line 137 of file `left_child_next_sibling_heap_/point_const_iterator.hpp`.

5.276.4.2 `template<typename Node , typename _Alloc > const_reference __gnu_pbds::detail::left_  
child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::operator*( ) const  
[inline]`

Access.

Definition at line 124 of file `left_child_next_sibling_heap_/point_const_iterator.hpp`.

```
5.276.4.3 template<typename Node , typename _Alloc > const_pointer __gnu_pbds::detail::left_child_
  _next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::operator-> ( ) const
  [inline]
```

Access.

Definition at line 116 of file `left_child_next_sibling_heap_/point_const_iterator.hpp`.

```
5.276.4.4 template<typename Node , typename _Alloc > bool __gnu_pbds::detail::left_child_
  next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::operator==( const
  left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc > & other ) const [inline]
```

Compares content to a different iterator object.

Definition at line 132 of file `left_child_next_sibling_heap_/point_const_iterator.hpp`.

The documentation for this class was generated from the following file:

- [left\\_child\\_next\\_sibling\\_heap\\_/point\\_const\\_iterator.hpp](#)

## 5.277 `__gnu_pbds::detail::lu_counter_metadata< Size_Type >` Class Template Reference

### Public Types

- typedef `Size_Type` **size\_type**

### Friends

- class `lu_counter_policy_base< size_type >`

### 5.277.1 Detailed Description

```
template<typename Size_Type = std::size_t>class __gnu_pbds::detail::lu_counter_metadata< Size_Type >
```

A list-update metadata type that moves elements to the front of the list based on the counter algorithm.

Definition at line 51 of file `lu_counter_metadata.hpp`.

The documentation for this class was generated from the following file:

- [lu\\_counter\\_metadata.hpp](#)

## 5.278 `__gnu_pbds::detail::lu_counter_policy_base< Size_Type >` Class Template Reference

### Protected Types

- typedef `Size_Type` **size\_type**

### Protected Member Functions

- `lu_counter_metadata< size_type >` **operator()** (`size_type` max\_size) const

- `template<typename Metadata_Reference >`  
`bool operator() (Metadata_Reference r_data, size_type m_max_count) const`

### 5.278.1 Detailed Description

```
template<typename Size_Type>class __gnu_pbds::detail::lu_counter_policy_base< Size_Type >
```

Base class for list-update counter policy.

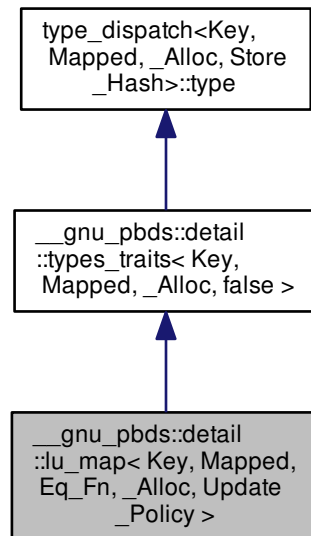

Definition at line 46 of file `lu_counter_metadata.hpp`.

The documentation for this class was generated from the following file:

- [lu\\_counter\\_metadata.hpp](#)

### 5.279 \_\_gnu\_pbds::detail::lu\_map< Key, Mapped, Eq\_Fn, \_Alloc, Update\_Policy > Class Template Reference

5.280 `__gnu_pbds::detail::mask_based_range_hashing< Size_Type >` Class Template Reference

Inheritance diagram for `__gnu_pbds::detail::mask_based_range_hashing< Size_Type >`:

#### Protected Types

- typedef `Size_Type` **size\_type**

#### Protected Member Functions

- void **notify\_resized** (`size_type` size)
- `size_type` **range\_hash** (`size_type` hash) const
- void **swap** ([mask\\_based\\_range\\_hashing](#) &other)

#### 5.280.1 Detailed Description

```
template<typename Size_Type>class __gnu_pbds::detail::mask_based_range_hashing< Size_Type >
```

Range hashing policy.

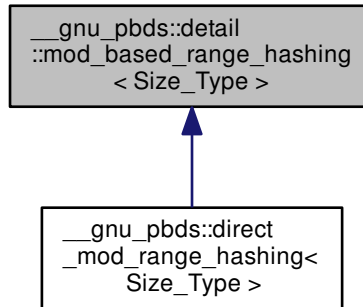

Definition at line 50 of file `mask_based_range_hashing.hpp`.

The documentation for this class was generated from the following file:

- [mask\\_based\\_range\\_hashing.hpp](#)

## 5.281 `__gnu_pbds::detail::mod_based_range_hashing< Size_Type >` Class Template Reference

Inheritance diagram for `__gnu_pbds::detail::mod_based_range_hashing< Size_Type >`:

### Protected Types

- typedef `Size_Type` **size\_type**

### Protected Member Functions

- void **notify\_resized** (`size_type s`)
- `size_type` **range\_hash** (`size_type s`) const
- void **swap** (`mod_based_range_hashing &other`)

### 5.281.1 Detailed Description

```
template<typename Size_Type>class __gnu_pbds::detail::mod_based_range_hashing< Size_Type >
```

Mod based range hashing.

Definition at line 50 of file `mod_based_range_hashing.hpp`.

The documentation for this class was generated from the following file:

- [mod\\_based\\_range\\_hashing.hpp](#)

## 5.282 `__gnu_pbds::detail::no_throw_copies< Key, Mapped >` Struct Template Reference

### Public Types

- typedef `integral_constant< int, __simple >` **indicator**

### Static Public Attributes

- static const bool `__simple`

#### 5.282.1 Detailed Description

```
template<typename Key, typename Mapped>struct __gnu_pbds::detail::no_throw_copies< Key, Mapped >
```

Primary template.

Definition at line 61 of file `types_traits.hpp`.

The documentation for this struct was generated from the following file:

- [types\\_traits.hpp](#)

## 5.283 `__gnu_pbds::detail::no_throw_copies< Key, null_type >` Struct Template Reference

### Public Types

- typedef integral\_constant< int, is\_simple< Key >::value > **indicator**

#### 5.283.1 Detailed Description

```
template<typename Key>struct __gnu_pbds::detail::no_throw_copies< Key, null_type >
```

Specialization.

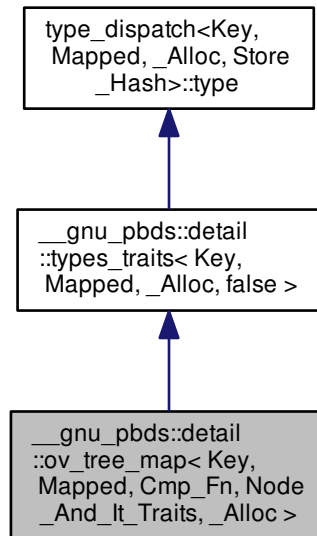

Definition at line 70 of file `types_traits.hpp`.

The documentation for this struct was generated from the following file:

- [types\\_traits.hpp](#)

## 5.284 `__gnu_pbds::detail::ov_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >` Class Template Reference

Inheritance diagram for `__gnu_pbds::detail::ov_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >`:

### Classes

- class [cond\\_dtor](#)

### Public Types

- typedef `_Alloc` **allocator\_type**
- typedef `Cmp_Fn` **cmp\_fn**
- typedef `std::pair< size_type, size_type >` **comp\_hash**
- typedef `point_const_iterator` **const\_iterator**

- point\_iterator **upper\_bound** (key\_const\_reference r\_key)
- point\_const\_iterator **upper\_bound** (key\_const\_reference r\_key) const

#### Public Attributes

- no\_throw\_indicator **m\_no\_throw\_copies\_indicator**
- store\_extra **m\_store\_extra\_indicator**

#### 5.284.1 Detailed Description

```
template<typename Key, typename Mapped, typename Cmp_Fn, typename Node_And_It_Traits, typename _Alloc>class __gnu_pbds::detail::ov_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >
```

Ordered-vector tree associative-container.

Definition at line 106 of file `ov_tree_map.hpp`.

#### 5.284.2 Member Function Documentation

5.284.2.1 `template<typename Key , typename Mapped , typename Cmp_Fn , typename Node_And_It_Traits , typename _Alloc > ov_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_const_iterator __gnu_pbds::detail::ov_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_begin ( ) const`  
`[inline]`

Returns a const `node_iterator` corresponding to the node at the root of the tree.

Definition at line 45 of file `ov_tree_map.hpp`.

5.284.2.2 `template<typename Key , typename Mapped , typename Cmp_Fn , typename Node_And_It_Traits , typename _Alloc > ov_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_iterator __gnu_pbds::detail::ov_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_begin ( )`  
`[inline]`

Returns a `node_iterator` corresponding to the node at the root of the tree.

Definition at line 57 of file `ov_tree_map.hpp`.

5.284.2.3 `template<typename Key , typename Mapped , typename Cmp_Fn , typename Node_And_It_Traits , typename _Alloc > ov_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_const_iterator  
__gnu_pbds::detail::ov_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_end ( ) const  
[inline]`

Returns a const node\_iterator corresponding to a node just after a leaf of the tree.

Definition at line 51 of file `ov_tree_map_.hpp`.

5.284.2.4 `template<typename Key , typename Mapped , typename Cmp_Fn , typename Node_And_It_Traits ,  
typename _Alloc > ov_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_iterator  
__gnu_pbds::detail::ov_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_end ( )  
[inline]`

Returns a node\_iterator corresponding to a node just after a leaf of the tree.

Definition at line 63 of file `ov_tree_map_.hpp`.

The documentation for this class was generated from the following files:

- [ov\\_tree\\_map\\_.hpp](#)

## 5.285 `__gnu_pbds::detail::ov_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::cond_dtor< Size_Type >` > Class Template Reference

### Public Member Functions

- **cond\_dtor** (value\_vector a\_vec, iterator &r\_last\_it, Size\_Type total\_size)
- void **set\_no\_action** ()

### Protected Attributes

- value\_vector **m\_a\_vec**
- const Size\_Type **m\_max\_size**
- bool **m\_no\_action**
- iterator & **m\_r\_last\_it**

### 5.285.1 Detailed Description

```
template<typename Key, typename Mapped, typename Cmp_Fn, typename Node_And_It_Traits, typename _Alloc>template<typename  
Size_Type>class __gnu_pbds::detail::ov_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::cond_dtor< Size_Type  
>
```

Conditional destructor.

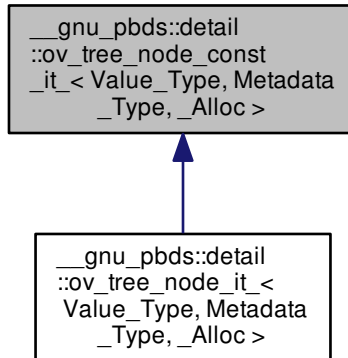

Definition at line 182 of file `ov_tree_map_.hpp`.

The documentation for this class was generated from the following file:

- [ov\\_tree\\_map\\_.hpp](#)

## 5.286 `__gnu_pbds::detail::ov_tree_node_const_it_< Value_Type, Metadata_Type, _Alloc >` Class Template Reference

Inheritance diagram for `__gnu_pbds::detail::ov_tree_node_const_it_< Value_Type, Metadata_Type, _Alloc >`:

### Public Types

- typedef `_Alloc::template rebind< typename remove_const< Value_Type >::type >`  
`::other::const_pointer` **const\_reference**

#### Public Attributes

- pointer **m\_p\_begin\_value**
- pointer **m\_p\_end\_value**
- const\_metadata\_pointer **m\_p\_metadata**
- pointer **m\_p\_value**

#### Protected Types

- typedef `_Alloc::template rebind< Metadata_Type >::other::const_pointer` **const\_metadata\_pointer**
- typedef `_Alloc::template rebind< Value_Type >::other::const_pointer` **const\_pointer**
- typedef `_Alloc::template rebind< Value_Type >::other::pointer` **pointer**
- typedef `ov_tree_node_const_it_< Value_Type, Metadata_Type, _Alloc >` **this\_type**

#### Static Protected Member Functions

- `template<typename Ptr > static Ptr mid_pointer (Ptr p_begin, Ptr p_end)`

#### 5.286.1 Detailed Description

`template<typename Value_Type, typename Metadata_Type, typename _Alloc> class __gnu_pbds::detail::ov_tree_node_const_it_< Value_Type, Metadata_Type, _Alloc >`

Const node reference.

Definition at line 57 of file `ov_tree_map_/node_iterators.hpp`.

#### 5.286.2 Member Function Documentation

5.286.2.1 `template<typename Value_Type, typename Metadata_Type, typename _Alloc > this_type __gnu_pbds::detail::ov_tree_node_const_it_< Value_Type, Metadata_Type, _Alloc >::get_l_child ( ) const`  
[inline]

Returns the node iterator associated with the left node.

Definition at line 142 of file `ov_tree_map_/node_iterators.hpp`.

5.286.2.2 `template<typename Value_Type , typename Metadata_Type , typename _Alloc > this_type  
 __gnu_pbds::detail::ov_tree_node_const_it_< Value_Type, Metadata_Type, _Alloc >::get_r_child ( ) const  
 [inline]`

Returns the node iterator associated with the right node.

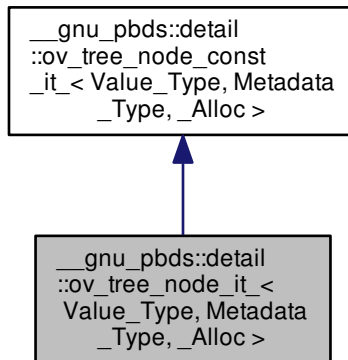

Definition at line 158 of file `ov_tree_map_/node_iterators.hpp`.

The documentation for this class was generated from the following file:

- [ov\\_tree\\_map\\_/node\\_iterators.hpp](#)

## 5.287 `__gnu_pbds::detail::ov_tree_node_it_< Value_Type, Metadata_Type, _Alloc >` Class Template Reference

Inheritance diagram for `__gnu_pbds::detail::ov_tree_node_it_< Value_Type, Metadata_Type, _Alloc >`:

### Public Types

- typedef `_Alloc::template rebind< typename remove_const < Value_Type >::type >::other::pointer` **const\_reference**

#### 5.300.1 Detailed Description

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _Citerator, typename Iterator, typename _Alloc>class __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _Citerator, Iterator, _Alloc >
```

Node const iterator.

Definition at line 814 of file `pat_trie_base.hpp`.

#### 5.300.2 Member Typedef Documentation

```
5.300.2.1 template<typename Node , typename Leaf , typename Head , typename Inode , typename _Citerator , typename Iterator , typename _Alloc > typedef _Alloc::template rebind<metadata_type> __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _Citerator, Iterator, _Alloc >::__rebind_m
```

Const metadata reference type.

Definition at line 869 of file `pat_trie_base.hpp`.

5.300.2.2 `template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator , typename Iterator ,  
typename _Alloc > typedef Node::metadata_type __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf,  
Head, Inode, _CIterator, Iterator, _Alloc >::metadata_type`

Metadata type.

Definition at line 866 of file `pat_trie_base.hpp`.

### 5.300.3 Member Function Documentation

5.300.3.1 `template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator , typename Iterator ,  
typename _Alloc > _Node_citer __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode,  
_CIterator, Iterator, _Alloc >::get_child( size_type i ) const [inline]`

Returns a `__const` node `__iterator` to the corresponding node's `i`-th child.

Definition at line 911 of file `pat_trie_base.hpp`.

References `std::advance()`.

5.300.3.2 `template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator , typename Iterator ,  
typename _Alloc > metadata_const_reference __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf,  
Head, Inode, _CIterator, Iterator, _Alloc >::get_metadata( ) const [inline]`

Metadata access.

Definition at line 894 of file `pat_trie_base.hpp`.

5.300.3.3 `template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator , typename Iterator  
, typename _Alloc > size_type __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode,  
_CIterator, Iterator, _Alloc >::num_children( ) const [inline]`

Returns the number of children in the corresponding node.

Definition at line 899 of file `pat_trie_base.hpp`.

References `std::distance()`.

Referenced by `__gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc  
>::operator*()`, and `__gnu_pbds::detail::pat_trie_base::_Node_iter< Node, Leaf, Head, Inode, _CIterator, Iterator, _-  
Alloc >::operator*()`.

5.300.3.4 `template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator , typename Iterator ,  
typename _Alloc > bool __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator,  
Iterator, _Alloc >::operator!=( const _Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc > & other )  
const [inline]`

Compares content (negatively) to a different iterator object.

Definition at line 927 of file `pat_trie_base.hpp`.

5.300.3.5 `template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator , typename Iterator ,  
typename _Alloc > const_reference __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode,  
_CIterator, Iterator, _Alloc >::operator*( ) const [inline]`

Const access; returns the `__const` `iterator*` associated with the current leaf.

Definition at line 886 of file `pat_trie_base.hpp`.

References `__gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >-`

::num\_children().

```
5.300.3.6 template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator , typename Iterator ,
typename _Alloc > bool __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator,
Iterator, _Alloc >::operator==( const _Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc > & other )
const [inline]
```

Compares content to a different iterator object.

Definition at line 922 of file pat\_trie\_base.hpp.

```
5.300.3.7 template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator , typename
Iterator , typename _Alloc > std::pair<a_const_iterator, a_const_iterator> __gnu_pbds::detail::pat_
trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::valid_prefix ( ) const
[inline]
```

Subtree valid prefix.

Definition at line 880 of file pat\_trie\_base.hpp.

References std::make\_pair().

Definition at line 866 of file pat\_trie\_base.hpp.

### 5.301.3 Member Function Documentation

5.301.3.1 `template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator , typename Iterator , typename _Alloc > _Node_iter __gnu_pbds::detail::pat_trie_base::_Node_iter< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::get_child ( size_type i ) const [inline]`

Returns a node \_\_iterator to the corresponding node's i-th child.

Definition at line 976 of file pat\_trie\_base.hpp.

References `std::advance()`, and `std::begin()`.

5.301.3.2 `template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator , typename Iterator , typename _Alloc > metadata_const_reference __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::get_metadata ( ) const [inline],[inherited]`

Metadata access.

Definition at line 894 of file pat\_trie\_base.hpp.

5.301.3.3 `template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator , typename Iterator , typename _Alloc > size_type __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::num_children ( ) const [inline],[inherited]`

Returns the number of children in the corresponding node.

Definition at line 899 of file pat\_trie\_base.hpp.

References `std::distance()`.

Referenced by `__gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::operator*()`, and `__gnu_pbds::detail::pat_trie_base::_Node_iter< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::operator*()`.

5.301.3.4 `template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator , typename Iterator , typename _Alloc > bool __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::operator!=( const _Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc > & other ) const [inline],[inherited]`

Compares content (negatively) to a different iterator object.

Definition at line 927 of file `pat_trie_base.hpp`.

5.301.3.5 `template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator , typename Iterator , typename _Alloc > reference __gnu_pbds::detail::pat_trie_base::_Node_iter< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::operator*( ) const [inline]`

Access; returns the `iterator*` associated with the current leaf.

Definition at line 968 of file `pat_trie_base.hpp`.

References `__gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::num_children()`.

5.301.3.6 `template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator , typename Iterator , typename _Alloc > bool __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::operator==( const _Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc > & other ) const [inline], [inherited]`

Compares content to a different iterator object.

Definition at line 922 of file `pat_trie_base.hpp`.

5.301.3.7 `template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator , typename Iterator , typename _Alloc > std::pair<a_const_iterator, a_const_iterator> __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::valid_prefix ( ) const [inline], [inherited]`

Subtree valid prefix.

Definition at line 880 of file `pat_trie_base.hpp`.

References `std::make_pair()`.

The documentation for this class was generated from the following file:

- [pat\\_trie\\_base.hpp](#)

## 5.302 `__gnu_pbds::detail::pat_trie_map< Key, Mapped, Node_And_It_Traits, _Alloc >` Class Template Reference

Inheritance diagram for `__gnu_pbds::detail::pat_trie_map< Key, Mapped, Node_And_It_Traits, _Alloc >`:

### Public Types

### 5.302.1 Detailed Description

```
template<typename Key, typename Mapped, typename Node_And_It_Traits, typename _Alloc>class __gnu_pbds::detail::pat_trie_map< Key, Mapped, Node_And_It_Traits, _Alloc >
```

PATRICIA trie.

This implementation loosely borrows ideas from: 1) Fast Mergeable Integer Maps, Okasaki, Gill 1998 2) Ptset: Sets of integers implemented as Patricia trees, Jean-Christophe Filliatr, 2000.

Definition at line 101 of file pat\_trie\_.hpp.

### 5.302.2 Member Enumeration Documentation

5.302.2.1 enum `__gnu_pbds::detail::pat_trie_base::node_type` `[inherited]`

Three types of nodes.

`i_node` is used by `_Inode`, `leaf_node` by `_Leaf`, and `head_node` by `_Head`.

Definition at line 58 of file pat\_trie\_base.hpp.

### 5.302.3 Member Function Documentation

5.302.3.1 `template<typename Key , typename Mapped , typename Node_And_It_Traits , typename _Alloc > pat_trie_map< Key, Mapped, Node_And_It_Traits, _Alloc >::node_const_iterator __gnu_pbds::detail::pat_trie_map< Key, Mapped, Node_And_It_Traits, _Alloc >::node_begin ( ) const` `[inline]`

Returns a `const_node_iterator` corresponding to the node at the root of the tree.

Definition at line 101 of file pat\_trie\_.hpp.

5.302.3.2 `template<typename Key , typename Mapped , typename Node_And_It_Traits , typename _Alloc > pat_trie_map< Key, Mapped, Node_And_It_Traits, _Alloc >::node_iterator __gnu_pbds::detail::pat_trie_map< Key, Mapped, Node_And_It_Traits, _Alloc >::node_begin ( )` `[inline]`

Returns a `node_iterator` corresponding to the node at the root of the tree.

Definition at line 107 of file pat\_trie\_.hpp.

5.302.3.3 `template<typename Key , typename Mapped , typename Node_And_It_Traits , typename _Alloc > pat_trie_map< Key, Mapped, Node_And_It_Traits, _Alloc >::node_const_iterator __gnu_pbds::detail::pat_trie_map< Key, Mapped, Node_And_It_Traits, _Alloc >::node_end ( ) const` `[inline]`

Returns a `const_node_iterator` corresponding to a node just after a leaf of the tree.

Definition at line 113 of file pat\_trie\_.hpp.

5.302.3.4 `template<typename Key , typename Mapped , typename Node_And_It_Traits , typename _Alloc > pat_trie_map< Key, Mapped, Node_And_It_Traits, _Alloc >::node_iterator __gnu_pbds::detail::pat_trie_map< Key, Mapped, Node_And_It_Traits, _Alloc >::node_end ( )` `[inline]`

Returns a `node_iterator` corresponding to a node just after a leaf of the tree.

Definition at line 119 of file pat\_trie\_.hpp.

The documentation for this class was generated from the following files:

- [pat\\_trie.hpp](#)
- [pat\\_trie\\_/constructors\\_destructor\\_fn\\_imps.hpp](#)
- [pat\\_trie\\_/iterators\\_fn\\_imps.hpp](#)

### 5.303 `__gnu_pbds::detail::probe_fn_base<_Alloc>` Class Template Reference

#### 5.303.1 Detailed Description

```
template<typename _Alloc> class __gnu_pbds::detail::probe_fn_base<_Alloc>
```

Probe functor base.

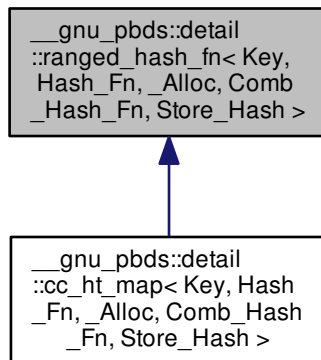

Definition at line 52 of file `probe_fn_base.hpp`.

The documentation for this class was generated from the following file:

- [probe\\_fn\\_base.hpp](#)

### 5.304 `__gnu_pbds::detail::ranged_hash_fn<Key, Hash_Fn, _Alloc, Comb_Hash_Fn, Store_Hash>` Class Template Reference

Inheritance diagram for `__gnu_pbds::detail::ranged_hash_fn<Key, Hash_Fn, _Alloc, Comb_Hash_Fn, Store_Hash>`:

### 5.304.1 Detailed Description

```
template<typename Key, typename Hash_Fn, typename _Alloc, typename Comb_Hash_Fn, bool Store_Hash>class __gnu_pbds::detail::ranged_hash_fn< Key, Hash_Fn, _Alloc, Comb_Hash_Fn, Store_Hash >
```

Primary template.

Definition at line 55 of file `ranged_hash_fn.hpp`.

The documentation for this class was generated from the following file:

- [ranged\\_hash\\_fn.hpp](#)

### 5.305 \_\_gnu\_pbds::detail::ranged\_hash\_fn< Key, Hash\_Fn, \_Alloc, Comb\_Hash\_Fn, false > Class Template Reference

Inherits `Hash_Fn`, and `Comb_Hash_Fn`.

#### Protected Types

- typedef `Comb_Hash_Fn` **comb\_hash\_fn\_base**
- typedef `Hash_Fn` **hash\_fn\_base**
- typedef `_Alloc::template rebind< Key >::other` **key\_allocator**
- typedef `key_allocator::const_reference` **key\_const\_reference**
- typedef `_Alloc::size_type` **size\_type**

#### Protected Member Functions

- **ranged\_hash\_fn** (`size_type`)

### 5.313.1 Detailed Description

`template<typename Key, typename Mapped, typename Cmp_Fn, typename Node_And_It_Traits, typename _Alloc> class __gnu_pbds::detail::rb_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >`

Red-Black tree.

This implementation uses an idea from the SGI STL (using a *header* node which is needed for efficient iteration).

Definition at line 84 of file `rb_tree_.hpp`.

### 5.313.2 Member Function Documentation

5.313.2.1 `template<typename Key , typename Mapped , typename Cmp_Fn , typename Node_And_It_Traits , typename _Alloc > bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_const_iterator __gnu_pbds::detail::bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_begin ( ) const`  
[inline], [inherited]

Returns a `const node_iterator` corresponding to the node at the root of the tree.

Definition at line 109 of file `bin_search_tree_.hpp`.

5.313.2.2 `template<typename Key , typename Mapped , typename Cmp_Fn , typename Node_And_It_Traits , typename _Alloc > bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_iterator __gnu_pbds::detail::bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_begin ( )`  
[inline], [inherited]

Returns a `node_iterator` corresponding to the node at the root of the tree.

Definition at line 117 of file `bin_search_tree_.hpp`.

5.313.2.3 `template<typename Key , typename Mapped , typename Cmp_Fn , typename Node_And_It_Traits , typename _Alloc > bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_const_iterator __gnu_pbds::detail::bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_end ( ) const`  
[inline], [inherited]

Returns a `const node_iterator` corresponding to a node just after a leaf of the tree.

Definition at line 125 of file `bin_search_tree_.hpp`.

5.313.2.4 `template<typename Key , typename Mapped , typename Cmp_Fn , typename Node_And_It_Traits , typename _Alloc > bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_iterator __gnu_pbds::detail::bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_end ( )`  
[inline], [inherited]

Returns a `node_iterator` corresponding to a node just after a leaf of the tree.

Definition at line 133 of file `bin_search_tree_.hpp`.

#### 5.318.1 Detailed Description

`template<typename Key, typename Mapped, typename Cmp_Fn, typename Node_And_It_Traits, typename _Alloc>class __gnu_pbds::detail::splay_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >`

Splay tree.

Definition at line 107 of file `splay_tree.hpp`.

#### 5.318.2 Member Function Documentation

5.318.2.1 `template<typename Key , typename Mapped , typename Cmp_Fn , typename Node_And_It_Traits , typename _Alloc > bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_const_iterator __gnu_pbds::detail::bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_begin ( ) const`  
[inline], [inherited]

Returns a const node\_iterator corresponding to the node at the root of the tree.

Definition at line 109 of file `bin_search_tree.hpp`.

5.318.2.2 `template<typename Key , typename Mapped , typename Cmp_Fn , typename Node_And_It_Traits , typename _Alloc > bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_iterator`  
`__gnu_pbds::detail::bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_begin ( )`  
`[inline], [inherited]`

Returns a `node_iterator` corresponding to the node at the root of the tree.

Definition at line 117 of file `bin_search_tree_.hpp`.

5.318.2.3 `template<typename Key , typename Mapped , typename Cmp_Fn , typename Node_And_It_Traits , typename _Alloc > bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_const_iterator`  
`__gnu_pbds::detail::bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_end ( ) const`  
`[inline], [inherited]`

Returns a `const node_iterator` corresponding to a node just after a leaf of the tree.

Definition at line 125 of file `bin_search_tree_.hpp`.

5.318.2.4 `template<typename Key , typename Mapped , typename Cmp_Fn , typename Node_And_It_Traits , typename _Alloc > bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_iterator`  
`__gnu_pbds::detail::bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_end ( )`  
`[inline], [inherited]`

Returns a `node_iterator` corresponding to a node just after a leaf of the tree.

Definition at line 133 of file `bin_search_tree_.hpp`.

The documentation for this class was generated from the following files:

## 5.319 `__gnu_pbds::detail::splay_tree_node_< Value_Type, Metadata, _Alloc >` Struct Template Reference

### Public Types

- `typedef _Alloc::template rebind< metadata_type > ::other::const_reference metadata_const_reference`
- `typedef _Alloc::template rebind< metadata_type > ::other::reference metadata_reference`
- `typedef Metadata metadata_type`
- `typedef _Alloc::template rebind< splay\_tree\_node\_< Value\_Type, Metadata, \_Alloc > > ::other::pointer node_pointer`
- `typedef Value_Type value_type`

## Public Member Functions

- `metadata_const_reference` **get\_metadata** () const
- `metadata_reference` **get\_metadata** ()
- `bool` **special** () const

## Public Attributes

- `metadata_type` **m\_metadata**
- `node_pointer` **m\_p\_left**
- `node_pointer` **m\_p\_parent**
- `node_pointer` **m\_p\_right**
- `bool` **m\_special**
- `value_type` **m\_value**

## 5.319.1 Detailed Description

`template<typename Value_Type, class Metadata, typename _Alloc>struct __gnu_pbds::detail::splay_tree_node_< Value_Type, Metadata, _Alloc >`

Node for splay tree.

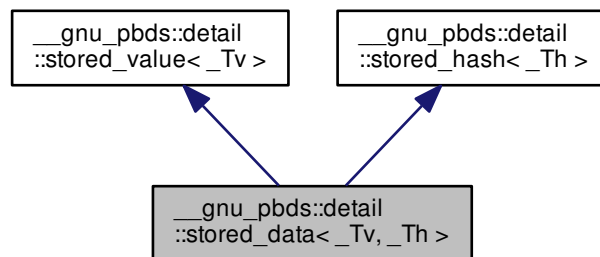

Definition at line 50 of file `splay_tree_/node.hpp`.

The documentation for this struct was generated from the following file:

- [splay\\_tree\\_/node.hpp](#)

5.320 `__gnu_pbds::detail::stored_data<_Tv, _Th >` Struct Template Reference

Inheritance diagram for `__gnu_pbds::detail::stored_data<_Tv, _Th >`:

## Public Types

- `typedef _Th` **hash\_type**
- `typedef _Tv` **value\_type**

**Public Attributes**

- hash\_type **m\_hash**
- value\_type **m\_value**

**5.320.1 Detailed Description**

```
template<typename _Tv, typename _Th>struct __gnu_pbds::detail::stored_data< _Tv, _Th >
```

Primary template for representation of stored data. Two types of data can be stored: value and hash.

Definition at line 95 of file types\_traits.hpp.

The documentation for this struct was generated from the following file:

- [types\\_traits.hpp](#)

**5.321 \_\_gnu\_pbds::detail::stored\_data< \_Tv, null\_type > Struct Template Reference**

Inheritance diagram for \_\_gnu\_pbds::detail::stored\_data< \_Tv, null\_type >:

**Public Types**

- typedef \_Tv **value\_type**

**Public Attributes**

- value\_type **m\_value**

**5.321.1 Detailed Description**

```
template<typename _Tv>struct __gnu_pbds::detail::stored_data< _Tv, null_type >
```

Specialization for representation of stored data of just value type.

Definition at line 101 of file `types_traits.hpp`.

The documentation for this struct was generated from the following file:

- [types\\_traits.hpp](#)

## 5.322 `__gnu_pbds::detail::stored_hash<_Th>` Struct Template Reference

Inheritance diagram for `__gnu_pbds::detail::stored_hash<_Th>`:

### Public Types

- `typedef _Th hash_type`

### Public Attributes

- `hash_type m_hash`

#### 5.322.1 Detailed Description

```
template<typename _Th>struct __gnu_pbds::detail::stored_hash<_Th>
```

Stored hash.

Definition at line 86 of file `types_traits.hpp`.

The documentation for this struct was generated from the following file:

- [types\\_traits.hpp](#)

### 5.323 `__gnu_pbds::detail::stored_value<_Tv >` Struct Template Reference

Inheritance diagram for `__gnu_pbds::detail::stored_value<_Tv >`:

#### Public Types

- typedef `_Tv` **value\_type**

#### Public Attributes

- value\_type **m\_value**

#### 5.323.1 Detailed Description

```
template<typename _Tv>struct __gnu_pbds::detail::stored_value<_Tv >
```

Stored value.

Definition at line 78 of file `types_traits.hpp`.

The documentation for this struct was generated from the following file:

- [types\\_traits.hpp](#)

### 5.324 `__gnu_pbds::detail::synth_access_traits<Type_Traits, Set, _ATraits >` Struct Template Reference

Inherits `_ATraits`.

#### Public Types

- typedef `_ATraits` **base\_type**
- typedef `base_type::const_iterator` **const\_iterator**
- typedef `type_traits::const_reference` **const\_reference**
- typedef `type_traits::key_const_reference` **key\_const\_reference**

5.326 `__gnu_pbds::detail::tree_metadata_helper< Node_Update, _BTp >` Struct Template Reference

## 5.326.1 Detailed Description

template<typename Node\_Update, bool \_BTp>struct `__gnu_pbds::detail::tree_metadata_helper`< Node\_Update, \_BTp >

Tree metadata helper.

Definition at line 58 of file `tree_policy/node_metadata_selector.hpp`.

The documentation for this struct was generated from the following file:

- [tree\\_policy/node\\_metadata\\_selector.hpp](#)

### 5.327 `__gnu_pbds::detail::tree_metadata_helper< Node_Update, false >` Struct Template Reference

#### Public Types

- typedef `Node_Update::metadata_type` **type**

#### 5.327.1 Detailed Description

```
template<typename Node_Update>struct __gnu_pbds::detail::tree_metadata_helper< Node_Update, false >
```

Specialization, false.

Definition at line 62 of file `tree_policy/node_metadata_selector.hpp`.

The documentation for this struct was generated from the following file:

- [tree\\_policy/node\\_metadata\\_selector.hpp](#)

### 5.328 `__gnu_pbds::detail::tree_metadata_helper< Node_Update, true >` Struct Template Reference

#### Public Types

- typedef `null_type` **type**

#### 5.328.1 Detailed Description

```
template<typename Node_Update>struct __gnu_pbds::detail::tree_metadata_helper< Node_Update, true >
```

Specialization, true.

Definition at line 69 of file `tree_policy/node_metadata_selector.hpp`.

The documentation for this struct was generated from the following file:

- [tree\\_policy/node\\_metadata\\_selector.hpp](#)

### 5.329 `__gnu_pbds::detail::tree_node_metadata_dispatch< Key, Data, Cmp_Fn, Node_Update, _Alloc >` Struct Template Reference

#### Public Types

- typedef `tree_metadata_helper< __node_u, null_update >::type` **type**

### 5.329.1 Detailed Description

```
template<typename Key, typename Data, typename Cmp_Fn, template< typename Node_Cltr, typename Const_Iterator, typename Cmp_Fn_, typename _Alloc_ > class Node_Update, typename _Alloc>struct __gnu_pbds::detail::tree_node_metadata_dispatch< Key, Data, Cmp_Fn, Node_Update, _Alloc >
```

Tree node metadata dispatch.

Definition at line 84 of file `tree_policy/node_metadata_selector.hpp`.

The documentation for this struct was generated from the following file:

- [tree\\_policy/node\\_metadata\\_selector.hpp](#)

### 5.330 `__gnu_pbds::detail::tree_traits< Key, Data, Cmp_Fn, Node_Update, Tag, _Alloc >` Struct Template Reference

#### 5.330.1 Detailed Description

```
template<typename Key, typename Data, typename Cmp_Fn, template< typename Node_Cltr, typename Node_Itr, typename Cmp_Fn_, typename _Alloc > class Node_Update, typename Tag, typename _Alloc>struct __gnu_pbds::detail::tree_traits< Key, Data, Cmp_Fn, Node_Update, Tag, _Alloc >
```

Tree traits class, primary template.

Definition at line 70 of file `branch_policy/traits.hpp`.

The documentation for this struct was generated from the following file:

- [branch\\_policy/traits.hpp](#)

### 5.331 `__gnu_pbds::detail::tree_traits< Key, Mapped, Cmp_Fn, Node_Update, ov_tree_tag, _Alloc >` Struct Template Reference

#### Public Types

- typedef [tree\\_node\\_metadata\\_dispatch](#)  
< Key, Mapped, Cmp\_Fn, Node\_Update, \_Alloc >::type **metadata\_type**
- typedef [ov\\_tree\\_node\\_const\\_it\\_](#)  
< value\_type, metadata\_type, \_Alloc > [node\\_const\\_iterator](#)
- typedef [ov\\_tree\\_node\\_it\\_](#)

### 5.333.2 Member Typedef Documentation

5.333.2.1 `typedef bin_search_tree_const_node_it< splay_tree_node< types_traits< Key, Mapped, _Alloc, false >::value_type, tree_node_metadata_dispatch< Key, Mapped, Cmp_Fn, Node_Update, _Alloc >::type, _Alloc >, point_const_iterator, point_iterator, _Alloc> __gnu_pbds::detail::bin_search_tree_traits< Key, Mapped, Cmp_Fn, Node_Update, splay_tree_node< types_traits< Key, Mapped, _Alloc, false >::value_type, tree_node_metadata_dispatch< Key, Mapped, Cmp_Fn, Node_Update, _Alloc >::type, _Alloc >, _Alloc >::node_const_iterator` `[inherited]`

This is an iterator to an iterator: it iterates over nodes, and de-referencing it returns one of the tree's iterators.

Definition at line 131 of file `bin_search_tree_/traits.hpp`.

The documentation for this struct was generated from the following file:

- [splay\\_tree\\_/traits.hpp](#)

### 5.334 `__gnu_pbds::detail::tree_traits< Key, null_type, Cmp_Fn, Node_Update, ov_tree_tag, _Alloc >` Struct Template Reference

#### Public Types

- typedef [tree\\_node\\_metadata\\_dispatch](#)  
< Key, [null\\_type](#), Cmp\_Fn, Node\_Update, \_Alloc >::type **metadata\_type**
- typedef [ov\\_tree\\_node\\_const\\_it](#)  
< value\_type, metadata\_type, \_Alloc > [node\\_const\\_iterator](#)
- typedef [node\\_const\\_iterator](#) **node\_iterator**
- typedef Node\_Update  
< [node\\_const\\_iterator](#), [node\\_const\\_iterator](#), Cmp\_Fn, \_Alloc > **node\_update**
- typedef [\\_\\_gnu\\_pbds::null\\_node\\_update](#)  
< [node\\_const\\_iterator](#), [node\\_iterator](#), Cmp\_Fn, \_Alloc > \* **null\_node\_update\_pointer**

#### 5.334.1 Detailed Description

```
template<typename Key, class Cmp_Fn, template< typename Node_Cltr, class Node_Itr, class Cmp_Fn_, typename _Alloc_ > class Node_Update, typename _Alloc>struct __gnu_pbds::detail::tree_traits< Key, null_type, Cmp_Fn, Node_Update, ov_tree_tag, _Alloc >
```

Specialization.

Definition at line 132 of file `ov_tree_map_/traits.hpp`.

#### 5.334.2 Member Typedef Documentation

5.334.2.1 `template<typename Key , class Cmp_Fn , template< typename Node_Cltr, class Node_Itr, class Cmp_Fn_, typename _Alloc_ > class Node_Update, typename _Alloc > typedef ov\_tree\_node\_const\_it< value_type, metadata_type, _Alloc> \_\_gnu\_pbds::detail::tree\_traits< Key, null_type, Cmp_Fn, Node_Update, ov\_tree\_tag, _Alloc >::node\_const\_iterator`

This is an iterator to an iterator: it iterates over nodes, and de-referencing it returns one of the tree's iterators.

Definition at line 166 of file `ov_tree_map_/traits.hpp`.

The documentation for this struct was generated from the following file:

- [ov\\_tree\\_map\\_/traits.hpp](#)

5.335 `__gnu_pbds::detail::tree_traits< Key, null_type, Cmp_Fn, Node_Update, rb_tree_tag, _Alloc >` Struct  
 Template Reference

## 5.337 \_\_gnu\_pbds::detail::trie\_metadata\_helper< Node\_Update, \_BTp > Struct Template Reference

### 5.337.1 Detailed Description

```

template<typename Node_Update, bool _BTp>struct __gnu_pbds::detail::trie_metadata_helper< Node_Update, _BTp >

```

Trie metadata helper.

Definition at line 58 of file `trie_policy/node_metadata_selector.hpp`.

The documentation for this struct was generated from the following file:

- [trie\\_policy/node\\_metadata\\_selector.hpp](#)

5.338 `__gnu_pbds::detail::trie_metadata_helper< Node_Update, false >` Struct Template Reference

## Public Types

- typedef `Node_Update::metadata_type` **type**

## 5.338.1 Detailed Description

```
template<typename Node_Update>struct __gnu_pbds::detail::trie_metadata_helper< Node_Update, false >
```

Specialization, false.

Definition at line 62 of file `trie_policy/node_metadata_selector.hpp`.

The documentation for this struct was generated from the following file:

- [trie\\_policy/node\\_metadata\\_selector.hpp](#)

5.339 `__gnu_pbds::detail::trie_metadata_helper< Node_Update, true >` Struct Template Reference

## Public Types

- typedef `null_type` **type**

## 5.339.1 Detailed Description

```
template<typename Node_Update>struct __gnu_pbds::detail::trie_metadata_helper< Node_Update, true >
```

Specialization, true.

Definition at line 69 of file `trie_policy/node_metadata_selector.hpp`.

The documentation for this struct was generated from the following file:

- [trie\\_policy/node\\_metadata\\_selector.hpp](#)

5.340 `__gnu_pbds::detail::trie_node_metadata_dispatch< Key, Data, Cmp_Fn, Node_Update, _Alloc >` Struct Template Reference

## Public Types

- typedef `trie_metadata_helper< __node_u, null_update >::type` **type**

## 5.340.1 Detailed Description

```
template<typename Key, typename Data, typename Cmp_Fn, template< typename Node_Cltr, typename Const_Iterator, typename Cmp_Fn, typename _Alloc > class Node_Update, typename _Alloc>struct __gnu_pbds::detail::trie_node_metadata_dispatch< Key, Data, Cmp_Fn, Node_Update, _Alloc >
```

Trie node metadata dispatch.

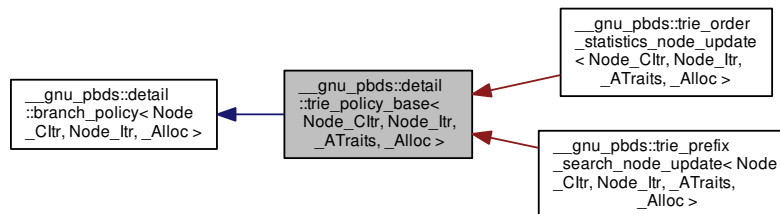

Definition at line 84 of file trie\_policy/node\_metadata\_selector.hpp.

The documentation for this struct was generated from the following file:

- [trie\\_policy/node\\_metadata\\_selector.hpp](#)

### 5.341 `__gnu_pbds::detail::trie_policy_base< Node_Cltr, Node_Itr, _ATraits, _Alloc >` Class Template Reference

Inheritance diagram for `__gnu_pbds::detail::trie_policy_base< Node_Cltr, Node_Itr, _ATraits, _Alloc >`:

#### Public Types

- `store_extra` **m\_store\_extra\_indicator**

#### 5.351.1 Detailed Description

```
template<typename Key, typename Mapped, typename _Alloc, bool Store_Hash>struct __gnu_pbds::detail::types_traits< Key, Mapped, _Alloc, Store_Hash >
```

Traits for abstract types.

Definition at line 263 of file `types_traits.hpp`.

The documentation for this struct was generated from the following file:

- [types\\_traits.hpp](#)

5.352 `__gnu_pbds::direct_mask_range_hashing< Size_Type >` Class Template Reference

Inheritance diagram for `__gnu_pbds::direct_mask_range_hashing< Size_Type >`:

#### Public Types

- typedef `Size_Type` **size\_type**

#### Public Member Functions

- void **swap** (`direct_mask_range_hashing< Size_Type > &other`)

#### Protected Member Functions

- void **notify\_resized** (`size_type size`)
- `size_type operator()` (`size_type hash`) const
- `size_type range_hash` (`size_type hash`) const
- void **swap** (`mask_based_range_hashing &other`)

#### 5.352.1 Detailed Description

```
template<typename Size_Type = std::size_t>class __gnu_pbds::direct_mask_range_hashing< Size_Type >
```

A mask range-hashing class (uses a bitmask).

Definition at line 109 of file `hash_policy.hpp`.

#### 5.352.2 Member Function Documentation

5.352.2.1 `template<typename Size_Type > direct_mask_range_hashing< Size_Type >::size_type  
 __gnu_pbds::direct_mask_range_hashing< Size_Type >::operator() ( size_type hash ) const [inline],  
 [protected]`

Transforms the `__hash` value `hash` into a ranged-hash value (using a bit-mask).

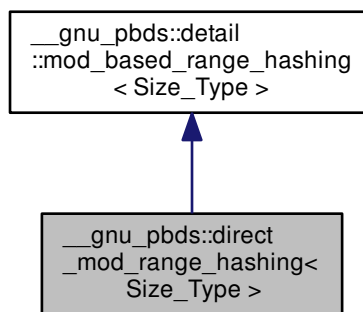

Definition at line 57 of file `hash_policy.hpp`.

The documentation for this class was generated from the following files:

- [hash\\_policy.hpp](#)
- [direct\\_mask\\_range\\_hashing\\_imp.hpp](#)

### 5.353 `__gnu_pbds::direct_mod_range_hashing< Size_Type >` Class Template Reference

Inheritance diagram for `__gnu_pbds::direct_mod_range_hashing< Size_Type >`:

#### Public Types

- typedef `Size_Type` **size\_type**

#### Public Member Functions

- void **swap** ([direct\\_mod\\_range\\_hashing](#)< `Size_Type` > &other)

#### Protected Member Functions

- void **notify\_resized** (`size_type` size)
- `size_type` [operator\(\)](#) (`size_type` hash) const
- `size_type` **range\_hash** (`size_type` s) const
- void **swap** ([mod\\_based\\_range\\_hashing](#) &other)

5.353.1 Detailed Description

```
template<typename Size_Type = std::size_t>class __gnu_pbds::direct_mod_range_hashing< Size_Type >
```

A mod range-hashing class (uses the modulo function).

Definition at line 141 of file hash\_policy.hpp.

5.353.2 Member Function Documentation

5.353.2.1 `template<typename Size_Type > direct_mod_range_hashing< Size_Type >::size_type __gnu_pbds::direct_mod_range_hashing< Size_Type >::operator() ( size_type hash ) const` `[inline]`, `[protected]`

Transforms the `__hash` value `hash` into a ranged-hash value (using a modulo operation).

Definition at line 57 of file hash\_policy.hpp.

The documentation for this class was generated from the following files:

- [hash\\_policy.hpp](#)
- [direct\\_mod\\_range\\_hashing\\_imp.hpp](#)

5.354 `__gnu_pbds::gp_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Probe_Fn, Probe_Fn, Resize_Policy, Store_Hash, _Alloc >` Class Template Reference

Inheritance diagram for `__gnu_pbds::gp_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Probe_Fn, Probe_Fn, Resize_Policy, Store_Hash, _Alloc >`:

Public Types

## 5.354.1 Detailed Description

```
template<typename Key, typename Mapped, typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn =
typename detail::default_eq_fn<Key>::type, typename Comb_Probe_Fn = detail::default_comb_hash_fn::type, typename Probe_Fn =
typename detail::default_probe_fn<Comb_Probe_Fn>::type, typename Resize_Policy = typename detail::default_resize_policy<
Comb_Probe_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>>> class __gnu_pbds::
gp_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Probe_Fn, Probe_Fn, Resize_Policy, Store_Hash, _Alloc >
```

A general-probing hash-based associative container.

## Template Parameters

<i>Key</i>	Key type.
<i>Mapped</i>	Map type.
<i>Hash_Fn</i>	Hashing functor.
<i>Eq_Fn</i>	Equal functor.
<i>Comb_Probe_Fn</i>	Combining probe functor. If <i>Hash_Fn</i> is not null_type, then this is the ranged-probe functor; otherwise, this is the range-hashing functor. XXX See Design::Hash-Based Containers::Hash Policies.
<i>Probe_Fn</i>	Probe functor.
<i>Resize_Policy</i>	Resizes hash.
<i>Store_Hash</i>	Indicates whether the hash value will be stored along with each key. If <i>Hash_Fn</i> is null_type, then the container will not compile if this value is true

<code>_Alloc</code>	Allocator type.
---------------------	-----------------

Base tag choices are: `gp_hash_tag`.

Base is `basic_hash_table`.

Definition at line 368 of file `assoc_container.hpp`.

### 5.354.2 Constructor & Destructor Documentation

5.354.2.1 `template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Probe_Fn = detail::default_comb_hash_fn::type, typename Probe_Fn = typename detail::default_probe_fn<Comb_Probe_Fn>::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Probe_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>> __gnu_pbds::gp_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Probe_Fn, Probe_Fn, Resize_Policy, Store_Hash, _Alloc >::gp_hash_table ( ) [inline]`

Default constructor.

Definition at line 382 of file `assoc_container.hpp`.

5.354.2.2 `template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Probe_Fn = detail::default_comb_hash_fn::type, typename Probe_Fn = typename detail::default_probe_fn<Comb_Probe_Fn>::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Probe_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>> __gnu_pbds::gp_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Probe_Fn, Probe_Fn, Resize_Policy, Store_Hash, _Alloc >::gp_hash_table ( const hash_fn & h ) [inline]`

Constructor taking some policy objects. `r_hash_fn` will be copied by the `hash_fn` object of the container object.

Definition at line 386 of file `assoc_container.hpp`.

5.354.2.3 `template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Probe_Fn = detail::default_comb_hash_fn::type, typename Probe_Fn = typename detail::default_probe_fn<Comb_Probe_Fn>::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Probe_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>> __gnu_pbds::gp_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Probe_Fn, Probe_Fn, Resize_Policy, Store_Hash, _Alloc >::gp_hash_table ( const hash_fn & h, const eq_fn & e ) [inline]`

Constructor taking some policy objects. `r_hash_fn` will be copied by the `hash_fn` object of the container object, and `r_eq_fn` will be copied by the `eq_fn` object of the container object.

Definition at line 393 of file `assoc_container.hpp`.

5.354.2.4 `template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Probe_Fn = detail::default_comb_hash_fn::type, typename Probe_Fn = typename detail::default_probe_fn<Comb_Probe_Fn>::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Probe_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>> __gnu_pbds::gp_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Probe_Fn, Probe_Fn, Resize_Policy, Store_Hash, _Alloc >::gp_hash_table ( const hash_fn & h, const eq_fn & e, const comb_probe_fn & cp ) [inline]`

Constructor taking some policy objects. `r_hash_fn` will be copied by the `hash_fn` object of the container object, `r_eq_fn` will be copied by the `eq_fn` object of the container object, and `r_comb_probe_fn` will be copied by the `comb_probe_fn` object of the container object.

Definition at line 401 of file `assoc_container.hpp`.

```
5.354.2.5 template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type,
typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Probe_Fn =

### 5.356 `__gnu_pbds::hash_exponential_size_policy< Size_Type >` Class Template Reference

Public Types

- typedef `Size_Type` **size\_type**

#### Public Member Functions

- [hash\\_exponential\\_size\\_policy](#) (size\_type start\_size=8, size\_type grow\_factor=2)
- void **swap** ([hash\\_exponential\\_size\\_policy](#)< Size\_Type > &other)

#### Protected Member Functions

- size\_type **get\_nearest\_larger\_size** (size\_type size) const
- size\_type **get\_nearest\_smaller\_size** (size\_type size) const

#### 5.356.1 Detailed Description

`template<typename Size_Type = std::size_t>class __gnu_pbds::hash_exponential_size_policy< Size_Type >`

A size policy whose sequence of sizes form an exponential sequence (typically powers of 2).

Definition at line 413 of file hash\_policy.hpp.

#### 5.356.2 Constructor & Destructor Documentation

5.356.2.1 `template<typename Size_Type > __gnu_pbds::hash_exponential_size_policy< Size_Type >::hash_exponential_size_policy ( size_type start_size = 8, size_type grow_factor = 2 )`

Default constructor, or onstructor taking a start\_size, or constructor taking a start size and grow\_factor. The policy will use the sequence of sizes start\_size, start\_size\* grow\_factor, start\_size\* grow\_factor<sup>2</sup>, ...

Definition at line 44 of file hash\_policy.hpp.

The documentation for this class was generated from the following files:

- [hash\\_policy.hpp](#)
- [hash\\_exponential\\_size\\_policy\\_imp.hpp](#)

#### 5.357 `__gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >` Class Template Reference

Inheritance diagram for `__gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >`:

- void **notify\_insert\_search\_start** ()
- void [notify\\_inserted](#) (size\_type num\_entries)
- void [notify\\_resized](#) (size\_type new\_size)

#### 5.357.1 Detailed Description

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>class __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >
```

A resize trigger policy based on a load check. It keeps the load factor between some load factors load\_min and load\_max.

Definition at line 175 of file hash\_policy.hpp.

#### 5.357.2 Member Enumeration Documentation

5.357.2.1 `template<bool External_Load_Access = false, typename Size_Type = std::size_t> anonymous enum`

#### Enumerator

**external\_load\_access** Specifies whether the load factor can be accessed externally. The two options have different trade-offs in terms of flexibility, genericity, and encapsulation.

Definition at line 180 of file hash\_policy.hpp.

### 5.357.3 Constructor & Destructor Documentation

5.357.3.1 `template<bool External_Load_Access, typename Size_Type > __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >::hash_load_check_resize_trigger ( float load_min = 0.125, float load_max = 0.5 )`

Default constructor, or constructor taking `load_min` and `load_max` load factors between which this policy will keep the actual load.

Definition at line 47 of file `hash_policy.hpp`.

### 5.357.4 Member Function Documentation

5.357.4.1 `template<bool External_Load_Access, typename Size_Type > std::pair< float, float > __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >::get_loads ( ) const`   
 `[inline]`

Returns a pair of the minimal and maximal loads, respectively.

Definition at line 236 of file `hash_policy.hpp`.

5.357.4.2 `template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >::notify_cleared ( )`   
 `[protected]`

Notifies the table was cleared.

Definition at line 206 of file `hash_policy.hpp`.

5.357.4.3 `template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >::notify_inserted ( size_type num_entries )`   
 `[inline]`, `[protected]`

Notifies an element was inserted. The total number of entries in the table is `num_entries`.

Definition at line 109 of file `hash_policy.hpp`.

5.357.4.4 `template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >::notify_resized ( size_type new_size )`   
 `[protected]`

Notifies the table was resized as a result of this object's signifying that a resize is needed.

Definition at line 151 of file `hash_policy.hpp`.

5.357.4.5 `template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >::set_loads ( std::pair< float, float > load_pair )`

Sets the loads through a pair of the minimal and maximal loads, respectively.

Definition at line 245 of file `hash_policy.hpp`.

The documentation for this class was generated from the following files:

- [hash\\_policy.hpp](#)
- [hash\\_load\\_check\\_resize\\_trigger\\_imp.hpp](#)

## 5.358 `__gnu_pbds::hash_prime_size_policy` Class Reference

### Public Types

- typedef `std::size_t` [size\\_type](#)

### Public Member Functions

- [hash\\_prime\\_size\\_policy](#) ([size\\_type](#) start\_size=8)
- void **swap** ([hash\\_prime\\_size\\_policy](#) &other)

### Protected Member Functions

- [size\\_type](#) **get\_nearest\_larger\_size** ([size\\_type](#) size) const
- [size\\_type](#) **get\_nearest\_smaller\_size** ([size\\_type](#) size) const

#### 5.358.1 Detailed Description

A size policy whose sequence of sizes form a nearly-exponential sequence of primes.

Definition at line 450 of file `hash_policy.hpp`.

#### 5.358.2 Member Typedef Documentation

##### 5.358.2.1 typedef `std::size_t` `__gnu_pbds::hash_prime_size_policy::size_type`

Size type.

Definition at line 454 of file `hash_policy.hpp`.

#### 5.358.3 Constructor & Destructor Documentation

##### 5.358.3.1 `__gnu_pbds::hash_prime_size_policy::hash_prime_size_policy ( size_type start_size = 8 ) [inline]`

Default constructor, or onstructor taking a start\_size The policy will use the sequence of sizes approximately start\_size, start\_size\* 2, start\_size\* 2^2, ...

Definition at line 127 of file `hash_policy.hpp`.

The documentation for this class was generated from the following files:

- [hash\\_policy.hpp](#)
- [hash\\_prime\\_size\\_policy\\_imp.hpp](#)

## 5.359 `__gnu_pbds::hash_standard_resize_policy`< `Size_Policy`, `Trigger_Policy`, `External_Size_Access`, `Size_Type` > Class Template Reference

Inherits `Size_Policy`, and `Trigger_Policy`.

## Public Types

### 5.359.1 Detailed Description

```
template<typename Size_Policy = hash_exponential_size_policy<>, typename Trigger_Policy = hash_load_check_resize_trigger<>, bool External_Size_Access = false, typename Size_Type = std::size_t>class __gnu_pbds::hash_standard_resize_policy<Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >
```

A resize policy which delegates operations to size and trigger policies.

Definition at line 489 of file `hash_policy.hpp`.

### 5.359.2 Constructor & Destructor Documentation

5.359.2.1 `template<typename Size_Policy , typename Trigger_Policy , bool External_Size_Access, typename Size_Type >
__gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type
>::hash_standard_resize_policy ( )`

Default constructor.

Definition at line 44 of file hash\_policy.hpp.

5.359.2.2 `template<typename Size_Policy, typename Trigger_Policy , bool External_Size_Access, typename Size_Type >
__gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type
>::hash_standard_resize_policy ( const Size_Policy & r_size_policy )`

constructor taking some policies r\_size\_policy will be copied by the Size\_Policy object of this object.

Definition at line 50 of file hash\_policy.hpp.

5.359.2.3 `template<typename Size_Policy, typename Trigger_Policy, bool External_Size_Access, typename Size_Type >
__gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type
>::hash_standard_resize_policy ( const Size_Policy & r_size_policy, const Trigger_Policy & r_trigger_policy )`

constructor taking some policies. r\_size\_policy will be copied by the Size\_Policy object of this object. r\_trigger\_policy will be copied by the Trigger\_Policy object of this object.

Definition at line 56 of file hash\_policy.hpp.

### 5.359.3 Member Function Documentation

5.359.3.1 `template<typename Size_Policy , typename Trigger_Policy , bool External_Size_Access, typename Size_Type >
hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >::size_type
__gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type
>::get_actual_size ( ) const [inline]`

Returns the actual size of the container.

Definition at line 177 of file hash\_policy.hpp.

5.359.3.2 `template<typename Size_Policy , typename Trigger_Policy , bool External_Size_Access, typename Size_Type >
hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >::size_type
__gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type
>::get_new_size ( size_type size, size_type num_used_e ) const [protected]`

Queries what the new size should be, when the container is resized naturally. The current \_\_size of the container is size, and the number of used entries within the container is num\_used\_e.

Definition at line 158 of file hash\_policy.hpp.

5.359.3.3 `template<typename Size_Policy , typename Trigger_Policy , bool External_Size_Access, typename Size_Type >
Size_Policy & __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access,
Size_Type >::get_size_policy ( )`

Access to the Size\_Policy object used.

Definition at line 242 of file hash\_policy.hpp.

5.359.3.4 `template<typename Size_Policy , typename Trigger_Policy , bool External_Size_Access, typename Size_Type > const Size_Policy & __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >::get_size_policy ( ) const`

Const access to the `Size_Policy` object used.

Definition at line 248 of file `hash_policy.hpp`.

5.359.3.5 `template<typename Size_Policy , typename Trigger_Policy , bool External_Size_Access, typename Size_Type > Trigger_Policy & __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >::get_trigger_policy ( )`

Access to the `Trigger_Policy` object used.

Definition at line 230 of file `hash_policy.hpp`.

5.359.3.6 `template<typename Size_Policy , typename Trigger_Policy , bool External_Size_Access, typename Size_Type > const Trigger_Policy & __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >::get_trigger_policy ( ) const`

Access to the `Trigger_Policy` object used.

Definition at line 236 of file `hash_policy.hpp`.

5.359.3.7 `template<typename Size_Policy , typename Trigger_Policy , bool External_Size_Access, typename Size_Type > void __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >::resize ( size_type suggested_new_size )`

Resizes the container to `suggested_new_size`, a suggested size (the actual size will be determined by the `Size_Policy` object).

Definition at line 186 of file `hash_policy.hpp`.

The documentation for this class was generated from the following files:

- [hash\\_policy.hpp](#)
- [hash\\_standard\\_resize\\_policy\\_imp.hpp](#)

### 5.360 `__gnu_pbds::insert_error` Struct Reference

Inheritance diagram for `__gnu_pbds::insert_error`:

#### Public Member Functions

- virtual const char \* [what](#) () const `_GLIBCXX_TXN_SAFE_DYN` noexcept

#### 5.360.1 Detailed Description

An entry cannot be inserted into a container object for logical reasons (not, e.g., if memory is unavailable, in which case the `allocator_type`'s exception will be thrown).

Definition at line 66 of file `exception.hpp`.

#### 5.360.2 Member Function Documentation

##### 5.360.2.1 virtual const char\* `std::logic_error::what` ( ) const `[virtual]`, `[noexcept]`, `[inherited]`

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from `std::exception`.

Reimplemented in `std::future_error`.

The documentation for this struct was generated from the following file:

- [exception.hpp](#)

5.361 `__gnu_pbds::join_error` Struct Reference

Inheritance diagram for `__gnu_pbds::join_error`:

### Public Member Functions

- virtual const char \* [what](#) () const `_GLIBCXX_TXN_SAFE_DYN` noexcept

#### 5.361.1 Detailed Description

A join cannot be performed logical reasons (i.e., the ranges of the two container objects being joined overlaps).

Definition at line 70 of file `exception.hpp`.

#### 5.361.2 Member Function Documentation

##### 5.361.2.1 virtual const char\* `std::logic_error::what` ( ) const `[virtual]`, `[noexcept]`, `[inherited]`

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from [std::exception](#).

Reimplemented in [std::future\\_error](#).

The documentation for this struct was generated from the following file:

- [exception.hpp](#)

### 5.362 `__gnu_pbds::linear_probe_fn< Size_Type >` Class Template Reference

#### Public Types

- typedef `Size_Type` **size\_type**

#### Public Member Functions

- void **swap** (`linear_probe_fn< Size_Type > &other`)

#### Protected Member Functions

- `size_type` **operator()** (`size_type i`) const

#### 5.362.1 Detailed Description

```
template<typename Size_Type = std::size_t>class __gnu_pbds::linear_probe_fn< Size_Type >
```

A probe sequence policy using fixed increments.

Definition at line 61 of file `hash_policy.hpp`.

#### 5.362.2 Member Function Documentation

5.362.2.1 `template<typename Size_Type > linear_probe_fn< Size_Type >::size_type __gnu_pbds::linear_probe_fn< Size_Type >::operator() ( size_type i ) const` `[inline]`, `[protected]`

Returns the *i*-th offset from the hash value.

Definition at line 51 of file `hash_policy.hpp`.

The documentation for this class was generated from the following files:

- [hash\\_policy.hpp](#)
- [linear\\_probe\\_fn\\_imp.hpp](#)

### 5.363 `__gnu_pbds::list_update< Key, Mapped, Eq_Fn, Update_Policy, _Alloc >` Class Template Reference

Inherits `type< Key, Mapped, _Alloc, list_update_tag, __gnu_cxx::typelist::create2< Eq_Fn, Update_Policy >::type >`.

#### Public Types

- typedef `list_update_tag` **container\_category**
- typedef `Eq_Fn` **eq\_fn**
- typedef `Update_Policy` **update\_policy**

#### Public Member Functions

- `template<typename It >`  
`list_update` (`It first`, `It last`)

## 5.363 `__gnu_pbds::list_update< Key, Mapped, Eq_Fn, Update_Policy, _Alloc >` Class Template Reference#309

- `list_update` (const `list_update` &other)
- `list_update` & `operator=` (const `list_update` &other)
- void `swap` (`list_update` &other)

### 5.363.1 Detailed Description

```
template<typename Key, typename Mapped, class Eq_Fn = typename detail::default_eq_fn<Key>::type, class Update_Policy = detail::default_update_policy::type, class _Alloc = std::allocator<char>>>class __gnu_pbds::list_update< Key, Mapped, Eq_Fn, Update_Policy, _Alloc >
```

A list-update based associative container.

#### Template Parameters

<i>Key</i>	Key type.
<i>Mapped</i>	Map type.
<i>Eq_Fn</i>	Equal functor.
<i>Update_Policy</i>	Update policy, determines when an element will be moved to the front of the list.
<i>_Alloc</i>	Allocator type.

Base is `detail::lu_map`.

Definition at line 815 of file `assoc_container.hpp`.

### 5.363.2 Constructor & Destructor Documentation

5.363.2.1 `template<typename Key , typename Mapped , class Eq_Fn = typename detail::default_eq_fn<Key>::type, class Update_Policy = detail::default_update_policy::type, class _Alloc = std::allocator<char>> template<typename It > __gnu_pbds::list_update< Key, Mapped, Eq_Fn, Update_Policy, _Alloc >::list_update ( It first, It last )`  
[inline]

Constructor taking `__iterators` to a range of `value_types`. The `value_types` between `first_it` and `last_it` will be inserted into the container object.

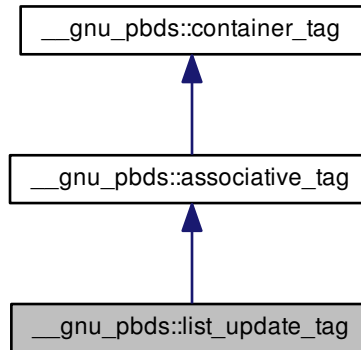

Definition at line 831 of file `assoc_container.hpp`.

The documentation for this class was generated from the following file:

- [assoc\\_container.hpp](#)

### 5.364 `__gnu_pbds::list_update_tag` Struct Reference

Inheritance diagram for `__gnu_pbds::list_update_tag`:

#### 5.364.1 Detailed Description

List-update.

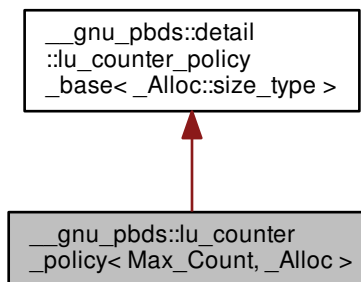

Definition at line 168 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

### 5.365 `__gnu_pbds::lu_counter_policy< Max_Count, _Alloc >` Class Template Reference

Inheritance diagram for `__gnu_pbds::lu_counter_policy< Max_Count, _Alloc >`:

## Public Types

- enum { `max_count` }
- typedef `_Alloc` **allocator\_type**
- typedef `__rebind_m::other::reference` **metadata\_reference**
- typedef `detail::lu_counter_metadata< size_type >` **metadata\_type**
- typedef `allocator_type::size_type` **size\_type**

## Public Member Functions

- `metadata_type operator() ()` const
- `bool operator() (metadata_reference r_data)` const

## Private Member Functions

- `lu_counter_metadata< size_type > operator() (size_type max_size)` const
- `bool operator() (Metadata_Reference r_data, size_type m_max_count)` const

### 5.365.1 Detailed Description

```
template<std::size_t Max_Count = 5, typename _Alloc = std::allocator<char>>class __gnu_pbds::lu_counter_policy< Max_Count,
_Alloc >
```

A list-update policy that moves elements to the front of the list based on the counter algorithm.

Definition at line 92 of file `list_update_policy.hpp`.

### 5.365.2 Member Typedef Documentation

5.365.2.1 `template<std::size_t Max_Count = 5, typename _Alloc = std::allocator<char>> typedef __rebind_m::other::reference`  
`__gnu_pbds::lu_counter_policy< Max_Count, _Alloc >::metadata_reference`

Reference to metadata on which this functor operates.

Definition at line 115 of file `list_update_policy.hpp`.

5.365.2.2 `template<std::size_t Max_Count = 5, typename _Alloc = std::allocator<char>> typedef`  
`detail::lu_counter_metadata<size_type> __gnu_pbds::lu_counter_policy< Max_Count, _Alloc`  
`>::metadata_type`

Metadata on which this functor operates.

Definition at line 107 of file `list_update_policy.hpp`.

### 5.365.3 Member Enumeration Documentation

5.365.3.1 `template<std::size_t Max_Count = 5, typename _Alloc = std::allocator<char>> anonymous enum`

#### Enumerator

**`max_count`** When some element is accessed this number of times, it will be moved to the front of the list.

Definition at line 99 of file `list_update_policy.hpp`.

#### 5.365.4 Member Function Documentation

5.365.4.1 `template<std::size_t Max_Count = 5, typename _Alloc = std::allocator<char>> metadata_type  
__gnu_pbds::lu_counter_policy< Max_Count, _Alloc >::operator() ( ) const [inline]`

Creates a metadata object.

Definition at line 119 of file `list_update_policy.hpp`.

References `__gnu_pbds::lu_counter_policy< Max_Count, _Alloc >::max_count`.

5.365.4.2 `template<std::size_t Max_Count = 5, typename _Alloc = std::allocator<char>> bool __gnu_pbds-  
::lu_counter_policy< Max_Count, _Alloc >::operator() ( metadata_reference r_data ) const  
[inline]`

Decides whether a metadata object should be moved to the front of the list.

Definition at line 125 of file `list_update_policy.hpp`.

References `__gnu_pbds::lu_counter_policy< Max_Count, _Alloc >::max_count`.

The documentation for this class was generated from the following file:

- [list\\_update\\_policy.hpp](#)

### 5.366 `__gnu_pbds::lu_move_to_front_policy< _Alloc >` Class Template Reference

#### Public Types

- typedef `_Alloc` **allocator\_type**
- typedef `__rebind_m::other::reference` `metadata_reference`
- typedef `null_type` `metadata_type`

#### Public Member Functions

- `metadata_type operator() () const`
- `bool operator() (metadata_reference r_metadata) const`

#### 5.366.1 Detailed Description

`template<typename _Alloc = std::allocator<char>> class __gnu_pbds::lu_move_to_front_policy< _Alloc >`

A list-update policy that unconditionally moves elements to the front of the list. A null type means that each link in a list-based container does not actually need metadata.

Definition at line 57 of file `list_update_policy.hpp`.

#### 5.366.2 Member Typedef Documentation

5.366.2.1 `template<typename _Alloc = std::allocator<char>> typedef __rebind_m::other::reference  
__gnu_pbds::lu_move_to_front_policy<_Alloc >::metadata_reference`

Reference to metadata on which this functor operates.

Definition at line 70 of file `list_update_policy.hpp`.

5.366.2.2 `template<typename _Alloc = std::allocator<char>> typedef null_type __gnu_pbds::lu_move_to_front_  
policy<_Alloc >::metadata_type`

Metadata on which this functor operates.

Definition at line 63 of file `list_update_policy.hpp`.

### 5.366.3 Member Function Documentation

5.366.3.1 `template<typename _Alloc = std::allocator<char>> metadata_type __gnu_pbds::lu_move_to_front_policy<  
_Alloc >::operator()( ) const [inline]`

Creates a metadata object.

Definition at line 74 of file `list_update_policy.hpp`.

5.366.3.2 `template<typename _Alloc = std::allocator<char>> bool __gnu_pbds::lu_move_to_front_policy<_Alloc  
>::operator()( metadata_reference r_metadata ) const [inline]`

Decides whether a metadata object should be moved to the front of the list.

Definition at line 80 of file `list_update_policy.hpp`.

The documentation for this class was generated from the following file:

- [list\\_update\\_policy.hpp](#)

## 5.367 `__gnu_pbds::null_node_update<_Tp1, _Tp2, _Tp3, _Tp4 >` Struct Template Reference

Inheritance diagram for `__gnu_pbds::null_node_update<_Tp1, _Tp2, _Tp3, _Tp4 >`:

### 5.367.1 Detailed Description

```
template<typename _Tp1, typename _Tp2, typename _Tp3, typename _Tp4>struct __gnu_pbds::null_node_update< _Tp1, _Tp2, _Tp3, _Tp4 >
```

A null node updatator, indicating that no node updates are required.

Definition at line 214 of file tag\_and\_trait.hpp.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

### 5.368 \_\_gnu\_pbds::null\_type Struct Reference

Inheritance diagram for \_\_gnu\_pbds::null\_type:

### 5.368.1 Detailed Description

Represents no type, or absence of type, for template tricks.

In a mapped-policy, indicates that an associative container is a set.

In a list-update policy, indicates that each link does not need metadata.

In a hash policy, indicates that the combining hash function is actually a ranged hash function.

In a probe policy, indicates that the combining probe function is actually a ranged probe function.

Definition at line 210 of file tag\_and\_trait.hpp.

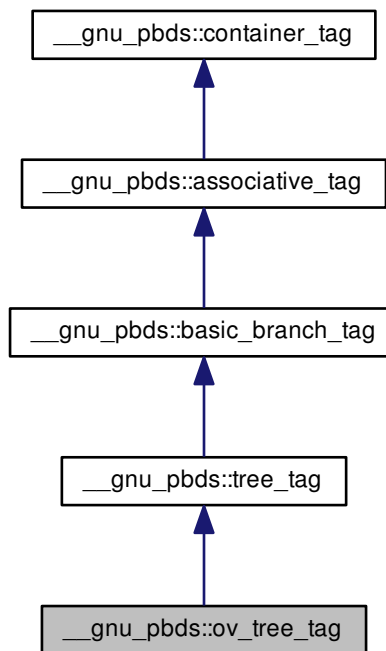

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

5.369 `__gnu_pbds::ov_tree_tag` Struct Reference

Inheritance diagram for `__gnu_pbds::ov_tree_tag`:

## 5.369.1 Detailed Description

Ordered-vector tree.

Definition at line 159 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

### 5.370 `__gnu_pbds::pairing_heap_tag` Struct Reference

Inheritance diagram for `__gnu_pbds::pairing_heap_tag`:

#### 5.370.1 Detailed Description

Pairing-heap.

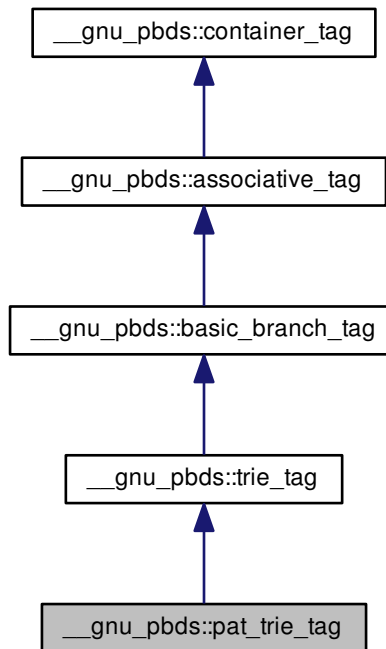

Definition at line 174 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

## 5.371 \_\_gnu\_pbds::pat\_trie\_tag Struct Reference

Inheritance diagram for \_\_gnu\_pbds::pat\_trie\_tag:

## 5.371.1 Detailed Description

PATRICIA trie.

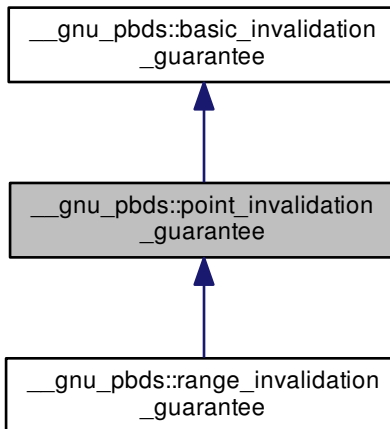

Definition at line 165 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

### 5.372 `__gnu_pbds::point_invalidation_guarantee` Struct Reference

Inheritance diagram for `__gnu_pbds::point_invalidation_guarantee`:

#### 5.372.1 Detailed Description

Signifies an invalidation guarantee that includes all those of its base, and additionally, that any point-type iterator, pointer, or reference to a container object's mapped value type is valid as long as its corresponding entry has not be erased, regardless of modifications to the container object.

Definition at line 103 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

### 5.373 `__gnu_pbds::priority_queue<_Tv, Cmp_Fn, Tag, _Alloc >` Class Template Reference

Inherits `type<_Tv, Cmp_Fn, _Alloc, Tag >`.

#### Public Types

- typedef `_Alloc` **allocator\_type**
- typedef `Cmp_Fn` **cmp\_fn**
- typedef `base_type::const_iterator` **const\_iterator**
- typedef `__rebind_va::const_pointer` **const\_pointer**
- typedef `__rebind_va::const_reference` **const\_reference**
- typedef `Tag` **container\_category**

- typedef `allocator_type::difference_type` **difference\_type**
- typedef `base_type::iterator` **iterator**
- typedef `base_type::point_const_iterator` **point\_const\_iterator**
- typedef `base_type::point_iterator` **point\_iterator**
- typedef `__rebind_va::pointer` **pointer**
- typedef `__rebind_va::reference` **reference**
- typedef `allocator_type::size_type` **size\_type**
- typedef `_Tv` **value\_type**

### Public Member Functions

- [priority\\_queue](#) (const `cmp_fn` &`r_cmp_fn`)
- `template<typename It >`  
[priority\\_queue](#) (It `first_it`, It `last_it`)
- `template<typename It >`  
[priority\\_queue](#) (It `first_it`, It `last_it`, const `cmp_fn` &`r_cmp_fn`)
- **priority\_queue** (const [priority\\_queue](#) &`other`)
- [priority\\_queue](#) & **operator=** (const [priority\\_queue](#) &`other`)
- void **swap** ([priority\\_queue](#) &`other`)

### 5.373.1 Detailed Description

`template<typename _Tv, typename Cmp_Fn = std::less<_Tv>, typename Tag = pairing_heap_tag, typename _Alloc = std::allocator<char>> class __gnu_pbds::priority_queue<_Tv, Cmp_Fn, Tag, _Alloc >`

A priority queue composed of one specific heap policy.

#### Template Parameters

<code>_Tv</code>	Value type.
<code>Cmp_Fn</code>	Comparison functor.
<code>Tag</code>	Instantiating data structure type, see <code>container_tag</code> .
<code>_Alloc</code>	Allocator type.

Base is dispatched at compile time via `Tag`, from the following choices: `binary_heap_tag`, `binomial_heap_tag`, `pairing_heap_tag`, `rc_binomial_heap_tag`, `thin_heap_tag`

Base choices are: `detail::binary_heap`, `detail::binomial_heap`, `detail::pairing_heap`, `detail::rc_binomial_heap`, `detail::thin_heap`.

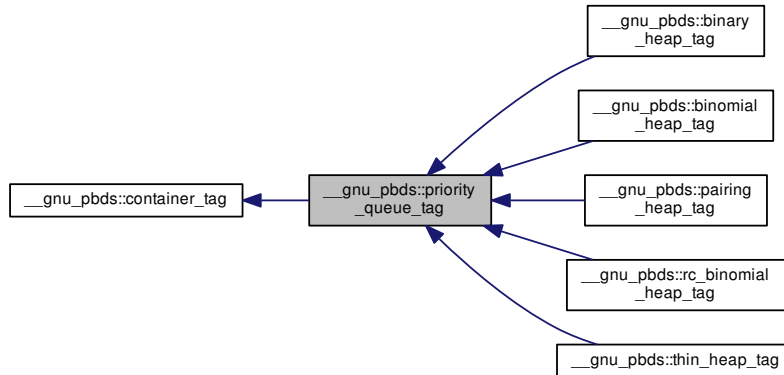

Definition at line 83 of file `priority_queue.hpp`.

The documentation for this class was generated from the following file:

- [priority\\_queue.hpp](#)

### 5.374 `__gnu_pbds::priority_queue_tag` Struct Reference

Inheritance diagram for `__gnu_pbds::priority_queue_tag`:

#### 5.374.1 Detailed Description

Basic priority-queue.

Definition at line 171 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

### 5.375 `__gnu_pbds::quadratic_probe_fn< Size_Type >` Class Template Reference

#### Public Types

- typedef `Size_Type` **size\_type**

#### Public Member Functions

- void **swap** ([quadratic\\_probe\\_fn< Size\\_Type >](#) &other)

#### Protected Member Functions

- `size_type` **operator()** (`size_type` i) const

#### 5.375.1 Detailed Description

```
template<typename Size_Type = std::size_t>class __gnu_pbds::quadratic_probe_fn< Size_Type >
```

A probe sequence policy using square increments.

Definition at line 85 of file `hash_policy.hpp`.

### 5.375.2 Member Function Documentation

5.375.2.1 `template<typename Size_Type > quadratic_probe_fn< Size_Type >::size_type __gnu_pbds::quadratic_probe_fn< Size_Type >::operator() ( size_type i ) const` `[inline]`, `[protected]`

Returns the *i*-th offset from the hash value.

Definition at line 51 of file `hash_policy.hpp`.

The documentation for this class was generated from the following files:

- [hash\\_policy.hpp](#)
- [quadratic\\_probe\\_fn\\_imp.hpp](#)

### 5.376 `__gnu_pbds::range_invalidation_guarantee` Struct Reference

Inheritance diagram for `__gnu_pbds::range_invalidation_guarantee`:

#### 5.376.1 Detailed Description

Signifies an invalidation guarantee that includes all those of its base, and additionally, that any range-type iterator (including the returns of `begin()` and `end()`) is in the correct relative positions to other range-type iterators as long as its corresponding entry has not been erased, regardless of modifications to the container object.

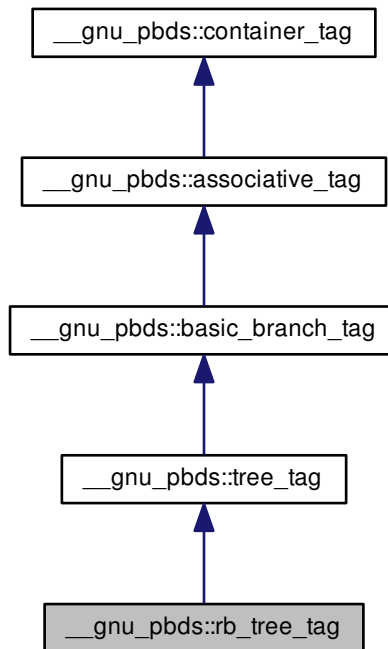

Definition at line 114 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

### 5.377 `__gnu_pbds::rb_tree_tag` Struct Reference

Inheritance diagram for `__gnu_pbds::rb_tree_tag`:

#### 5.377.1 Detailed Description

Red-black tree.

Definition at line 153 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

5.378 `__gnu_pbds::rc_binomial_heap_tag` Struct Reference

Inheritance diagram for `__gnu_pbds::rc_binomial_heap_tag`:

## 5.378.1 Detailed Description

Redundant-counter binomial-heap.

Definition at line 180 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

### 5.379 `__gnu_pbds::resize_error` Struct Reference

Inheritance diagram for `__gnu_pbds::resize_error`:

#### Public Member Functions

- virtual const char \* [what](#) () const `_GLIBCXX_TXN_SAFE_DYN` noexcept

#### 5.379.1 Detailed Description

A container cannot be resized.

Definition at line 73 of file `exception.hpp`.

#### 5.379.2 Member Function Documentation

##### 5.379.2.1 virtual const char\* `std::logic_error::what` ( ) const `[virtual]`, `[noexcept]`, `[inherited]`

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from [std::exception](#).

Reimplemented in [std::future\\_error](#).

The documentation for this struct was generated from the following file:

- [exception.hpp](#)

## 5.380 `__gnu_pbds::sample_probe_fn` Class Reference

### Public Types

- typedef `std::size_t` **size\_type**

### Public Member Functions

- [sample\\_probe\\_fn](#) ()
- [sample\\_probe\\_fn](#) (const [sample\\_probe\\_fn](#) &)
- void [swap](#) ([sample\\_probe\\_fn](#) &)

### Protected Member Functions

- `size_type` [operator](#)() (key\_const\_reference r\_key, size\_type i) const

#### 5.380.1 Detailed Description

A sample probe policy.

Definition at line 47 of file `sample_probe_fn.hpp`.

#### 5.380.2 Constructor & Destructor Documentation

##### 5.380.2.1 `__gnu_pbds::sample_probe_fn::sample_probe_fn ( )`

Default constructor.

##### 5.380.2.2 `__gnu_pbds::sample_probe_fn::sample_probe_fn ( const sample_probe_fn & )`

Copy constructor.

#### 5.380.3 Member Function Documentation

##### 5.380.3.1 `size_type __gnu_pbds::sample_probe_fn::operator() ( key_const_reference r_key, size_type i ) const` `[inline]`, `[protected]`

Returns the *i*-th offset from the hash value of some key *r\_key*.

##### 5.380.3.2 `void __gnu_pbds::sample_probe_fn::swap ( sample_probe_fn & )` `[inline]`

Swaps content.

The documentation for this class was generated from the following file:

- [sample\\_probe\\_fn.hpp](#)

## 5.381 `__gnu_pbds::sample_range_hashing` Class Reference

### Public Types

- typedef `std::size_t` **size\_type**

### Public Member Functions

- [sample\\_range\\_hashing](#) ()
- [sample\\_range\\_hashing](#) (const [sample\\_range\\_hashing](#) &other)
- void [swap](#) ([sample\\_range\\_hashing](#) &other)

### Protected Member Functions

- void [notify\\_resized](#) ([size\\_type](#))
- [size\\_type](#) [operator](#)() ([size\\_type](#)) const

#### 5.381.1 Detailed Description

A sample range-hashing functor.

Definition at line 47 of file [sample\\_range\\_hashing.hpp](#).

#### 5.381.2 Member Typedef Documentation

##### 5.381.2.1 typedef std::size\_t [\\_\\_gnu\\_pbds::sample\\_range\\_hashing::size\\_type](#)

Size type.

Definition at line 51 of file [sample\\_range\\_hashing.hpp](#).

#### 5.381.3 Constructor & Destructor Documentation

##### 5.381.3.1 [\\_\\_gnu\\_pbds::sample\\_range\\_hashing::sample\\_range\\_hashing](#) ( )

Default constructor.

##### 5.381.3.2 [\\_\\_gnu\\_pbds::sample\\_range\\_hashing::sample\\_range\\_hashing](#) ( const [sample\\_range\\_hashing](#) & *other* )

Copy constructor.

#### 5.381.4 Member Function Documentation

##### 5.381.4.1 void [\\_\\_gnu\\_pbds::sample\\_range\\_hashing::notify\\_resized](#) ( [size\\_type](#) ) `[protected]`

Notifies the policy object that the container's size has changed to argument's size.

##### 5.381.4.2 [size\\_type](#) [\\_\\_gnu\\_pbds::sample\\_range\\_hashing::operator](#)() ( [size\\_type](#) ) const `[inline],[protected]`

Transforms the `__hash` value hash into a ranged-hash value.

##### 5.381.4.3 void [\\_\\_gnu\\_pbds::sample\\_range\\_hashing::swap](#) ( [sample\\_range\\_hashing](#) & *other* ) `[inline]`

Swaps content.

The documentation for this class was generated from the following file:

- [sample\\_range\\_hashing.hpp](#)

## 5.382 `__gnu_pbds::sample_ranged_hash_fn` Class Reference

### Public Types

- typedef `std::size_t` **size\_type**

### Public Member Functions

- [sample\\_ranged\\_hash\\_fn](#) ()
- [sample\\_ranged\\_hash\\_fn](#) (const [sample\\_ranged\\_hash\\_fn](#) &)
- void [swap](#) ([sample\\_ranged\\_hash\\_fn](#) &)

### Protected Member Functions

- void [notify\\_resized](#) (size\_type)
- size\_type [operator\(\)](#) (key\_const\_reference) const

#### 5.382.1 Detailed Description

A sample ranged-hash functor.

Definition at line 47 of file `sample_ranged_hash_fn.hpp`.

#### 5.382.2 Constructor & Destructor Documentation

##### 5.382.2.1 `__gnu_pbds::sample_ranged_hash_fn::sample_ranged_hash_fn ( )`

Default constructor.

##### 5.382.2.2 `__gnu_pbds::sample_ranged_hash_fn::sample_ranged_hash_fn ( const sample_ranged_hash_fn & )`

Copy constructor.

#### 5.382.3 Member Function Documentation

##### 5.382.3.1 `void __gnu_pbds::sample_ranged_hash_fn::notify_resized ( size_type )` `[protected]`

Notifies the policy object that the container's `__size` has changed to `size`.

##### 5.382.3.2 `size_type __gnu_pbds::sample_ranged_hash_fn::operator() ( key_const_reference ) const` `[inline]`, `[protected]`

Transforms `key_const_reference` into a position within the table.

##### 5.382.3.3 `void __gnu_pbds::sample_ranged_hash_fn::swap ( sample_ranged_hash_fn & )` `[inline]`

Swaps content.

The documentation for this class was generated from the following file:

- [sample\\_ranged\\_hash\\_fn.hpp](#)

### 5.383 `__gnu_pbds::sample_ranged_probe_fn` Class Reference

#### Public Types

- typedef `std::size_t` **size\_type**

#### Public Member Functions

- **sample\_ranged\_probe\_fn** (const [sample\\_ranged\\_probe\\_fn](#) &)
- void **swap** ([sample\\_ranged\\_probe\\_fn](#) &)

#### Protected Member Functions

- void **notify\_resized** (size\_type)
- size\_type **operator()** (key\_const\_reference, `std::size_t`, size\_type) const

#### 5.383.1 Detailed Description

A sample ranged-probe functor.

Definition at line 47 of file `sample_ranged_probe_fn.hpp`.

The documentation for this class was generated from the following file:

- [sample\\_ranged\\_probe\\_fn.hpp](#)

### 5.384 `__gnu_pbds::sample_resize_policy` Class Reference

#### Public Types

- typedef `std::size_t` **size\_type**

#### Public Member Functions

- [sample\\_resize\\_policy](#) ()
- [sample\\_range\\_hashing](#) (const [sample\\_resize\\_policy](#) &other)
- void **swap** ([sample\\_resize\\_policy](#) &other)

#### Protected Member Functions

- **size\_type** [get\\_new\\_size](#) (size\_type size, size\_type num\_used\_e) const
- bool [is\\_resize\\_needed](#) () const
- void [notify\\_cleared](#) ()
- void [notify\\_erase\\_search\\_collision](#) ()
- void [notify\\_erase\\_search\\_end](#) ()
- void [notify\\_erase\\_search\\_start](#) ()
- void [notify\\_erased](#) (size\_type num\_e)
- void [notify\\_find\\_search\\_collision](#) ()
- void [notify\\_find\\_search\\_end](#) ()
- void [notify\\_find\\_search\\_start](#) ()

- void `notify_insert_search_collision` ()
- void `notify_insert_search_end` ()
- void `notify_insert_search_start` ()
- void `notify_inserted` (`size_type` num\_e)
- void `notify_resized` (`size_type` new\_size)

#### 5.384.1 Detailed Description

A sample resize policy.

Definition at line 47 of file `sample_resize_policy.hpp`.

#### 5.384.2 Member Typedef Documentation

##### 5.384.2.1 `typedef std::size_t __gnu_pbds::sample_resize_policy::size_type`

Size type.

Definition at line 51 of file `sample_resize_policy.hpp`.

#### 5.384.3 Constructor & Destructor Documentation

##### 5.384.3.1 `__gnu_pbds::sample_resize_policy::sample_resize_policy ( )`

Default constructor.

#### 5.384.4 Member Function Documentation

##### 5.384.4.1 `size_type __gnu_pbds::sample_resize_policy::get_new_size ( size_type size, size_type num_used_e ) const` `[protected]`

Queries what the new size should be.

##### 5.384.4.2 `bool __gnu_pbds::sample_resize_policy::is_resize_needed ( ) const` `[inline]`, `[protected]`

Queries whether a resize is needed.

##### 5.384.4.3 `void __gnu_pbds::sample_resize_policy::notify_cleared ( )` `[protected]`

Notifies the table was cleared.

##### 5.384.4.4 `void __gnu_pbds::sample_resize_policy::notify_erase_search_collision ( )` `[inline]`, `[protected]`

Notifies a search encountered a collision.

##### 5.384.4.5 `void __gnu_pbds::sample_resize_policy::notify_erase_search_end ( )` `[inline]`, `[protected]`

Notifies a search ended.

##### 5.384.4.6 `void __gnu_pbds::sample_resize_policy::notify_erase_search_start ( )` `[inline]`, `[protected]`

Notifies a search started.

5.384.4.7 void `__gnu_pbds::sample_resize_policy::notify_erased ( size_type num_e )` [inline],[protected]

Notifies an element was erased.

5.384.4.8 void `__gnu_pbds::sample_resize_policy::notify_find_search_collision ( )` [inline],[protected]

Notifies a search encountered a collision.

5.384.4.9 void `__gnu_pbds::sample_resize_policy::notify_find_search_end ( )` [inline],[protected]

Notifies a search ended.

5.384.4.10 void `__gnu_pbds::sample_resize_policy::notify_find_search_start ( )` [inline],[protected]

Notifies a search started.

5.384.4.11 void `__gnu_pbds::sample_resize_policy::notify_insert_search_collision ( )` [inline],[protected]

Notifies a search encountered a collision.

5.384.4.12 void `__gnu_pbds::sample_resize_policy::notify_insert_search_end ( )` [inline],[protected]

Notifies a search ended.

5.384.4.13 void `__gnu_pbds::sample_resize_policy::notify_insert_search_start ( )` [inline],[protected]

Notifies a search started.

5.384.4.14 void `__gnu_pbds::sample_resize_policy::notify_inserted ( size_type num_e )` [inline],[protected]

Notifies an element was inserted.

5.384.4.15 void `__gnu_pbds::sample_resize_policy::notify_resized ( size_type new_size )` [protected]

Notifies the table was resized to `new_size`.

5.384.4.16 `__gnu_pbds::sample_resize_policy::sample_range_hashing ( const sample_resize_policy & other )`

Copy constructor.

5.384.4.17 void `__gnu_pbds::sample_resize_policy::swap ( sample_resize_policy & other )` [inline]

Swaps content.

The documentation for this class was generated from the following file:

- [sample\\_resize\\_policy.hpp](#)

## 5.385 `__gnu_pbds::sample_resize_trigger` Class Reference

### Public Types

- typedef std::size\_t [size\\_type](#)

## Public Member Functions

- `sample_resize_trigger ()`
- `sample_range_hashing (const sample_resize_trigger &)`
- `void swap (sample_resize_trigger &)`

- `void notify_resized (size_type new_size)`

### 5.385.1 Detailed Description

A sample resize trigger policy.

Definition at line 47 of file `sample_resize_trigger.hpp`.

### 5.385.2 Member Typedef Documentation

#### 5.385.2.1 `typedef std::size_t __gnu_pbds::sample_resize_trigger::size_type`

Size type.

Definition at line 51 of file `sample_resize_trigger.hpp`.

### 5.385.3 Constructor & Destructor Documentation

#### 5.385.3.1 `__gnu_pbds::sample_resize_trigger::sample_resize_trigger ( )`

Default constructor.

### 5.385.4 Member Function Documentation

#### 5.385.4.1 `bool __gnu_pbds::sample_resize_trigger::is_grow_needed ( size_type size, size_type num_entries ) const` `[inline], [protected]`

Queries whether a grow is needed.

5.385.4.2 `bool __gnu_pbds::sample_resize_trigger::is_resize_needed ( ) const` [inline],[protected]

Queries whether a resize is needed.

5.385.4.3 `void __gnu_pbds::sample_resize_trigger::notify_cleared ( )` [protected]

Notifies the table was cleared.

5.385.4.4 `void __gnu_pbds::sample_resize_trigger::notify_erase_search_collision ( )` [inline],[protected]

Notifies a search encountered a collision.

5.385.4.5 `void __gnu_pbds::sample_resize_trigger::notify_erase_search_end ( )` [inline],[protected]

Notifies a search ended.

5.385.4.6 `void __gnu_pbds::sample_resize_trigger::notify_erase_search_start ( )` [inline],[protected]

Notifies a search started.

5.385.4.7 `void __gnu_pbds::sample_resize_trigger::notify_erased ( size_type num_entries )` [inline],[protected]

Notifies an element was erased.

5.385.4.8 `void __gnu_pbds::sample_resize_trigger::notify_externally_resized ( size_type new_size )` [protected]

Notifies the table was resized externally.

5.385.4.9 `void __gnu_pbds::sample_resize_trigger::notify_find_search_collision ( )` [inline],[protected]

Notifies a search encountered a collision.

5.385.4.10 `void __gnu_pbds::sample_resize_trigger::notify_find_search_end ( )` [inline],[protected]

Notifies a search ended.

5.385.4.11 `void __gnu_pbds::sample_resize_trigger::notify_find_search_start ( )` [inline],[protected]

Notifies a search started.

5.385.4.12 `void __gnu_pbds::sample_resize_trigger::notify_insert_search_collision ( )` [inline],[protected]

Notifies a search encountered a collision.

5.385.4.13 `void __gnu_pbds::sample_resize_trigger::notify_insert_search_end ( )` [inline],[protected]

Notifies a search ended.

5.385.4.14 `void __gnu_pbds::sample_resize_trigger::notify_insert_search_start ( )` [inline],[protected]

Notifies a search started.

5.385.4.15 `void __gnu_pbds::sample_resize_trigger::notify_inserted ( size_type num_entries )` [inline],[protected]

Notifies an element was inserted. the total number of entries in the table is num\_entries.

5.385.4.16 `void __gnu_pbds::sample_resize_trigger::notify_resized ( size_type new_size )` [protected]

Notifies the table was resized as a result of this object's signifying that a resize is needed.

5.385.4.17 `__gnu_pbds::sample_resize_trigger::sample_range_hashing ( const sample_resize_trigger & )`

Copy constructor.

5.385.4.18 `void __gnu_pbds::sample_resize_trigger::swap ( sample_resize_trigger & )` [inline]

Swaps content.

The documentation for this class was generated from the following file:

- [sample\\_resize\\_trigger.hpp](#)

## 5.386 `__gnu_pbds::sample_size_policy` Class Reference

### Public Types

- typedef `std::size_t` [size\\_type](#)

### Public Member Functions

- [sample\\_size\\_policy](#) ()
- [sample\\_range\\_hashing](#) (const [sample\\_size\\_policy](#) &)
- void [swap](#) ([sample\\_size\\_policy](#) &other)

### Protected Member Functions

- [size\\_type](#) [get\\_nearest\\_larger\\_size](#) ([size\\_type](#) size) const
- [size\\_type](#) [get\\_nearest\\_smaller\\_size](#) ([size\\_type](#) size) const

### 5.386.1 Detailed Description

A sample size policy.

Definition at line 47 of file `sample_size_policy.hpp`.

### 5.386.2 Member Typedef Documentation

5.386.2.1 typedef `std::size_t` `__gnu_pbds::sample_size_policy::size_type`

Size type.

Definition at line 51 of file `sample_size_policy.hpp`.

### 5.386.3 Constructor & Destructor Documentation

5.386.3.1 `__gnu_pbds::sample_size_policy::sample_size_policy ( )`

Default constructor.

### 5.386.4 Member Function Documentation

5.386.4.1 `size_type __gnu_pbds::sample_size_policy::get_nearest_larger_size ( size_type size ) const` [inline], [protected]

Given a `__size` size, returns a `__size` that is larger.

5.386.4.2 `size_type __gnu_pbds::sample_size_policy::get_nearest_smaller_size ( size_type size ) const` [inline], [protected]

Given a `__size` size, returns a `__size` that is smaller.

5.386.4.3 `__gnu_pbds::sample_size_policy::sample_range_hashing ( const sample_size_policy & )`

Copy constructor.

5.386.4.4 `void __gnu_pbds::sample_size_policy::swap ( sample_size_policy & other )` [inline]

Swaps content.

The documentation for this class was generated from the following file:

- [sample\\_size\\_policy.hpp](#)

## 5.387 `__gnu_pbds::sample_tree_node_update< Const_Node_Iter, Node_Iter, Cmp_Fn, _Alloc >` Class Template Reference

### 5.387.1 Detailed Description

```
template<typename Const_Node_Iter, typename Node_Iter, typename Cmp_Fn, typename _Alloc>class __gnu_pbds::sample_tree_node_update< Const_Node_Iter, Node_Iter, Cmp_Fn, _Alloc >
```

A sample node updator.

Definition at line 49 of file `sample_tree_node_update.hpp`.

The documentation for this class was generated from the following file:

- [sample\\_tree\\_node\\_update.hpp](#)

## 5.388 `__gnu_pbds::sample_trie_access_traits` Struct Reference

### Public Types

- enum { **max\_size** }
- typedef `_Alloc::template rebind< key_type > __rebind_k`
- typedef `std::string::const_iterator` **const\_iterator**
- typedef char **e\_type**
- typedef `__rebind_k::other::const_reference` **key\_const\_reference**
- typedef `std::string` **key\_type**
- typedef `std::size_t` **size\_type**

### Static Public Member Functions

- static const\_iterator [begin](#) (key\_const\_reference)
- static size\_type [e\\_pos](#) (e\_type)
- static const\_iterator [end](#) (key\_const\_reference)

#### 5.388.1 Detailed Description

A sample trie element access traits.

Definition at line 47 of file `sample_trie_access_traits.hpp`.

#### 5.388.2 Member Typedef Documentation

##### 5.388.2.1 typedef char `__gnu_pbds::sample_trie_access_traits::e_type`

Element type.

Definition at line 57 of file `sample_trie_access_traits.hpp`.

#### 5.388.3 Member Function Documentation

##### 5.388.3.1 static const\_iterator `__gnu_pbds::sample_trie_access_traits::begin ( key_const_reference )` [`inline`], [`static`]

Returns a const\_iterator to the first element of r\_key.

##### 5.388.3.2 static size\_type `__gnu_pbds::sample_trie_access_traits::e_pos ( e_type )` [`inline`], [`static`]

Maps an element to a position.

##### 5.388.3.3 static const\_iterator `__gnu_pbds::sample_trie_access_traits::end ( key_const_reference )` [`inline`], [`static`]

Returns a const\_iterator to the after-last element of r\_key.

The documentation for this struct was generated from the following file:

- [sample\\_trie\\_access\\_traits.hpp](#)

### 5.389 `__gnu_pbds::sample_trie_node_update< Node_Cltr, Node_Itr, _ATraits, _Alloc >` Class Template Reference

#### Public Types

- typedef std::size\_t `metadata_type`

#### Protected Member Functions

- [sample\\_trie\\_node\\_update](#) ()
- void [operator\(\)](#) (node\_iterator, node\_const\_iterator) const

### 5.389.1 Detailed Description

```
template<typename Node_Cltr, typename Node_Itr, typename _ATraits, typename _Alloc>class __gnu_pbds::sample_trie_node_
update< Node_Cltr, Node_Itr, _ATraits, _Alloc >
```

A sample node updator.

Definition at line 49 of file sample\_trie\_node\_update.hpp.

### 5.389.2 Constructor & Destructor Documentation

```
5.389.2.1 template<typename Node_Cltr , typename Node_Itr , typename _ATraits , typename _Alloc >
__gnu_pbds::sample_trie_node_update< Node_Cltr, Node_Itr, _ATraits, _Alloc >::sample_trie_node_update
( ) [protected]
```

Default constructor.

### 5.389.3 Member Function Documentation

```
5.389.3.1 template<typename Node_Cltr , typename Node_Itr , typename _ATraits , typename _Alloc > void
__gnu_pbds::sample_trie_node_update< Node_Cltr, Node_Itr, _ATraits, _Alloc >::operator() ( node_iterator ,
node_const_iterator ) const [inline], [protected]
```

Updates the rank of a node through a node\_iterator node\_it; end\_nd\_it is the end node iterator.

The documentation for this class was generated from the following file:

- [sample\\_trie\\_node\\_update.hpp](#)

## 5.390 \_\_gnu\_pbds::sample\_update\_policy Struct Reference

### Public Member Functions

- [sample\\_update\\_policy](#) ()
- [sample\\_update\\_policy](#) (const [sample\\_update\\_policy](#) &)
- void [swap](#) ([sample\\_update\\_policy](#) &other)

### Protected Types

- typedef some\_metadata\_type [metadata\\_type](#)

### Protected Member Functions

- [metadata\\_type operator\(\)](#) () const
- bool [operator\(\)](#) (metadata\_reference) const

### 5.390.1 Detailed Description

A sample list-update policy.

Definition at line 47 of file sample\_update\_policy.hpp.

### 5.390.2 Member Typedef Documentation

#### 5.390.2.1 `typedef some_metadata_type __gnu_pbds::sample_update_policy::metadata_type` `[protected]`

Metadata on which this functor operates.

Definition at line 61 of file `sample_update_policy.hpp`.

### 5.390.3 Constructor & Destructor Documentation

#### 5.390.3.1 `__gnu_pbds::sample_update_policy::sample_update_policy ( )`

Default constructor.

#### 5.390.3.2 `__gnu_pbds::sample_update_policy::sample_update_policy ( const sample_update_policy & )`

Copy constructor.

### 5.390.4 Member Function Documentation

#### 5.390.4.1 `metadata_type __gnu_pbds::sample_update_policy::operator()( ) const` `[protected]`

Creates a metadata object.

#### 5.390.4.2 `bool __gnu_pbds::sample_update_policy::operator()( metadata_reference ) const` `[protected]`

Decides whether a metadata object should be moved to the front of the list. A list-update based containers object will call this method to decide whether to move a node to the front of the list. The method should return true if the node should be moved to the front of the list.

#### 5.390.4.3 `void __gnu_pbds::sample_update_policy::swap ( sample_update_policy & other )` `[inline]`

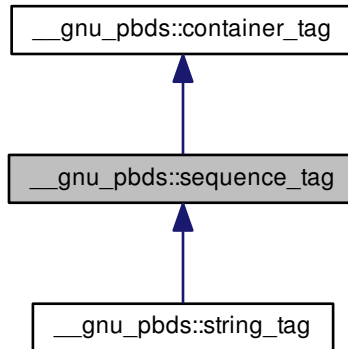

Swaps content.

The documentation for this struct was generated from the following file:

- [sample\\_update\\_policy.hpp](#)

## 5.391 `__gnu_pbds::sequence_tag` Struct Reference

Inheritance diagram for `__gnu_pbds::sequence_tag`:

### 5.391.1 Detailed Description

Basic sequence.

Definition at line 129 of file `tag_and_trait.hpp`.

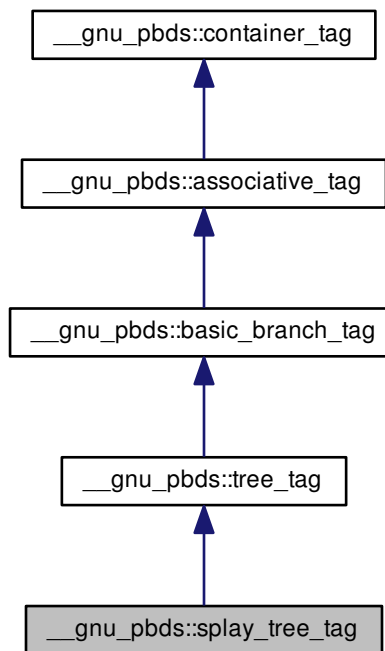

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

## 5.392 \_\_gnu\_pbds::splay\_tree\_tag Struct Reference

Inheritance diagram for \_\_gnu\_pbds::splay\_tree\_tag:

## 5.392.1 Detailed Description

Splay tree.

Definition at line 156 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

### 5.393 `__gnu_pbds::string_tag` Struct Reference

Inheritance diagram for `__gnu_pbds::string_tag`:

#### 5.393.1 Detailed Description

Basic string container, inclusive of strings, ropes, etc.

Definition at line 132 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

5.394 `__gnu_pbds::thin_heap_tag` Struct Reference

Inheritance diagram for `__gnu_pbds::thin_heap_tag`:

## 5.394.1 Detailed Description

Thin heap.

Definition at line 186 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

5.395 `__gnu_pbds::tree< Key, Mapped, Cmp_Fn, Tag, Node_Update, _Alloc >` Class Template Reference

Inheritance diagram for `__gnu_pbds::tree< Key, Mapped, Cmp_Fn, Tag, Node_Update, _Alloc >`:

## Public Types

- typedef Cmp\_Fn `cmp_fn`
- typedef `detail::tree_traits`  
< Key, Mapped, Cmp\_Fn,  
Node\_Update, Tag, \_Alloc >  
::node\_update **node\_update**

## Public Member Functions

- `tree` (const `cmp_fn` &c)
- template<typename It >  
`tree` (It first, It last)
- template<typename It >  
`tree` (It first, It last, const `cmp_fn` &c)
- **tree** (const `tree` &other)
- `tree` & **operator=** (const `tree` &other)
- void **swap** (`tree` &other)

## 5.395.1 Detailed Description

```
template<typename Key, typename Mapped, typename Cmp_Fn = std::less<Key>, typename Tag = rb_tree_tag, template< typename
Node_Cltr, typename Node_Itr, typename Cmp_Fn_, typename _Alloc_ > class Node_Update = null_node_update, typename _Alloc =
std::allocator<char>>>class __gnu_pbds::tree< Key, Mapped, Cmp_Fn, Tag, Node_Update, _Alloc >
```

A tree-based container.

## Template Parameters

<i>Key</i>	Key type.
<i>Mapped</i>	Map type.
<i>Cmp_Fn</i>	Comparison functor.
<i>Tag</i>	Instantiating data structure type, see <code>container_tag</code> .
<i>Node_Update</i>	Updates tree internal-nodes, restores invariants when invalidated. XXX See design- ::tree-based-containersnode invariants.
<i>_Alloc</i>	Allocator type.

Base tag choices are: `ov_tree_tag`, `rb_tree_tag`, `splay_tree_tag`.

Base is `basic_branch`.

Definition at line 635 of file `assoc_container.hpp`.

## 5.395.2 Member Typedef Documentation

5.395.2.1 `template<typename Key , typename Mapped , typename Cmp_Fn = std::less<Key>, typename Tag = rb_tree_tag,
template< typename Node_Cltr, typename Node_Itr, typename Cmp_Fn_, typename _Alloc_ > class Node_Update =
null_node_update, typename _Alloc = std::allocator<char>>> typedef Cmp_Fn __gnu_pbds::tree< Key, Mapped,
Cmp_Fn, Tag, Node_Update, _Alloc >::cmp_fn`

Comparison functor type.

Definition at line 642 of file `assoc_container.hpp`.

### 5.395.3 Constructor & Destructor Documentation

5.395.3.1 `template<typename Key , typename Mapped , typename Cmp_Fn = std::less<Key>, typename Tag = rb_tree_tag, template< typename Node_Cltr, typename Node_Itr, typename Cmp_Fn_, typename _Alloc_ > class Node_Update = null_node_update, typename _Alloc = std::allocator<char>> __gnu_pbds::tree< Key, Mapped, Cmp_Fn, Tag, Node_Update, _Alloc >::tree ( const cmp_fn & c ) [inline]`

Constructor taking some policy objects. `r_cmp_fn` will be copied by the `Cmp_Fn` object of the container object.

Definition at line 648 of file `assoc_container.hpp`.

5.395.3.2 `template<typename Key , typename Mapped , typename Cmp_Fn = std::less<Key>, typename Tag = rb_tree_tag, template< typename Node_Cltr, typename Node_Itr, typename Cmp_Fn_, typename _Alloc_ > class Node_Update = null_node_update, typename _Alloc = std::allocator<char>> template<typename It > __gnu_pbds::tree< Key, Mapped, Cmp_Fn, Tag, Node_Update, _Alloc >::tree ( It first, It last ) [inline]`

Constructor taking `__iterators` to a range of `value_types`. The `value_types` between `first_it` and `last_it` will be inserted into the container object.

Definition at line 655 of file `assoc_container.hpp`.

5.395.3.3 `template<typename Key , typename Mapped , typename Cmp_Fn = std::less<Key>, typename Tag = rb_tree_tag, template< typename Node_Cltr, typename Node_Itr, typename Cmp_Fn_, typename _Alloc_ > class Node_Update = null_node_update, typename _Alloc = std::allocator<char>> template<typename It > __gnu_pbds::tree< Key, Mapped, Cmp_Fn, Tag, Node_Update, _Alloc >::tree ( It first, It last, const cmp_fn & c ) [inline]`

Constructor taking `__iterators` to a range of `value_types` and some policy objects. The `value_types` between `first_it` and `last_it` will be inserted into the container object. `r_cmp_fn` will be copied by the `cmp_fn` object of the container object.

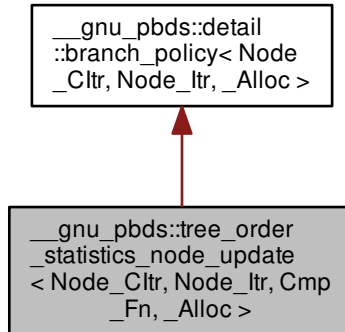

Definition at line 663 of file `assoc_container.hpp`.

The documentation for this class was generated from the following file:

- [assoc\\_container.hpp](#)

### 5.396 `__gnu_pbds::tree_order_statistics_node_update< Node_Cltr, Node_Itr, Cmp_Fn, _Alloc >` Class Template Reference

Inheritance diagram for `__gnu_pbds::tree_order_statistics_node_update< Node_Cltr, Node_Itr, Cmp_Fn, _Alloc >`:

#### Public Types

- typedef `_Alloc` **allocator\_type**

- `it_type` **end\_iterator** () const

### Static Private Member Functions

- static `key_const_reference` **extract\_key** (`const_reference` r\_val)

### 5.396.1 Detailed Description

`template<typename Node_Cltr, typename Node_Itr, typename Cmp_Fn, typename _Alloc>class __gnu_pbds::tree_order_statistics_node_update< Node_Cltr, Node_Itr, Cmp_Fn, _Alloc >`

Functor updating ranks of entrees.

Definition at line 64 of file `tree_policy.hpp`.

### 5.396.2 Member Function Documentation

5.396.2.1 `template<typename Node_Cltr , typename Node_Itr , typename Cmp_Fn , typename _Alloc > tree_order_statistics_node_update< Node_Cltr, Node_Itr, Cmp_Fn, _Alloc >::const_iterator __gnu_pbds::tree_order_statistics_node_update< Node_Cltr, Node_Itr, Cmp_Fn, _Alloc >::find_by_order ( size_type order ) const [inline]`

Finds an entry by `__order`. Returns a `const_iterator` to the entry with the `__order` order, or a `const_iterator` to the container object's end if order is at least the size of the container object.

Definition at line 72 of file `tree_policy.hpp`.

5.396.2.2 `template<typename Node_Cltr , typename Node_Itr , typename Cmp_Fn , typename _Alloc > tree_order_statistics_node_update< Node_Cltr, Node_Itr, Cmp_Fn, _Alloc >::iterator __gnu_pbds::tree_order_statistics_node_update< Node_Cltr, Node_Itr, Cmp_Fn, _Alloc >::find_by_order ( size_type order ) [inline]`

Finds an entry by `__order`. Returns an `iterator` to the entry with the `__order` order, or an `iterator` to the container object's end if order is at least the size of the container object.

Definition at line 45 of file `tree_policy.hpp`.

```
5.396.2.3 template<typename Node_Cltr , typename Node_Itr , typename Cmp_Fn , typename _Alloc > void
__gnu_pbds::tree_order_statistics_node_update< Node_Cltr, Node_Itr, Cmp_Fn, _Alloc >::operator() (
node_iterator node_it, node_const_iterator end_nd_it ) const [inline], [protected]
```

Updates the rank of a node through a node\_iterator node\_it; end\_nd\_it is the end node iterator.

Definition at line 108 of file tree\_policy.hpp.

```
5.396.2.4 template<typename Node_Cltr , typename Node_Itr , typename Cmp_Fn , typename _Alloc >
tree_order_statistics_node_update< Node_Cltr, Node_Itr, Cmp_Fn, _Alloc >::size_type
__gnu_pbds::tree_order_statistics_node_update< Node_Cltr, Node_Itr, Cmp_Fn, _Alloc >::order_of_key (
key_const_reference r_key ) const [inline]
```

Returns the order of a key within a sequence. For example, if r\_key is the smallest key, this method will return 0; if r\_key is a key between the smallest and next key, this method will return 1; if r\_key is a key larger than the largest key, this method will return the size of r\_c.

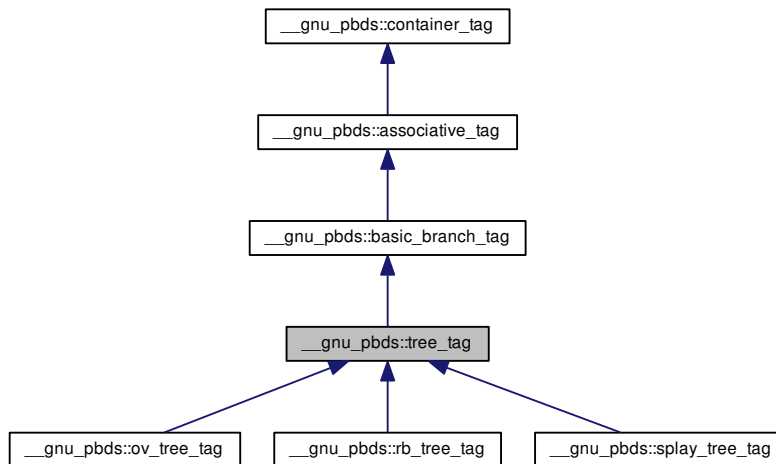

Definition at line 78 of file tree\_policy.hpp.

The documentation for this class was generated from the following files:

- [tree\\_policy.hpp](#)
- [tree\\_policy/order\\_statistics\\_imp.hpp](#)

## 5.397 \_\_gnu\_pbds::tree\_tag Struct Reference

Inheritance diagram for \_\_gnu\_pbds::tree\_tag:

### 5.397.1 Detailed Description

Basic tree structure.

Definition at line 150 of file tag\_and\_trait.hpp.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

## 5.398 `__gnu_pbds::trie< Key, Mapped, _ATraits, Tag, Node_Update, _Alloc >` Class Template Reference

Inheritance diagram for `__gnu_pbds::trie< Key, Mapped, _ATraits, Tag, Node_Update, _Alloc >`:

### Public Types

- typedef `_ATraits` [access\\_traits](#)
- typedef `detail::trie_traits`  
< `Key`, `Mapped`, `_ATraits`,  
`Node_Update`, `Tag`, `_Alloc` >  
`::node_update` **node\_update**

### Public Member Functions

- void **swap** ([trie](#) &other)

#### 5.398.1 Detailed Description

```

template<typename Key, typename Mapped, typename _ATraits = typename detail::default_trie_access_traits<Key>::type, typename
Tag = pat_trie_tag, template< typename Node_Cltr, typename Node_Itr, typename _ATraits_, typename _Alloc_ > class Node_Update
= null_node_update, typename _Alloc = std::allocator<char>>>class __gnu_pbds::trie< Key, Mapped, _ATraits, Tag, Node_Update,
_Alloc >
  
```

A trie-based container.

## Template Parameters

<i>Key</i>	Key type.
<i>Mapped</i>	Map type.
<i>_ATraits</i>	Element access traits.
<i>Tag</i>	Instantiating data structure type, see <code>container_tag</code> .
<i>Node_Update</i>	Updates trie internal-nodes, restores invariants when invalidated. XXX See design- ::tree-based-containersnode invariants.
<i>_Alloc</i>	Allocator type.

Base tag choice is `pat_trie_tag`.

Base is `basic_branch`.

Definition at line 731 of file `assoc_container.hpp`.

## 5.398.2 Member Typedef Documentation

5.398.2.1 `template<typename Key , typename Mapped , typename _ATraits = typename detail::default_trie_access_traits<Key>-  
::type, typename Tag = pat_trie_tag, template< typename Node_Cltr, typename Node_Itr, typename _ATraits_, typename  
_Alloc_ > class Node_Update = null_node_update, typename _Alloc = std::allocator<char>> typedef _ATraits  
__gnu_pbds::trie< Key, Mapped, _ATraits, Tag, Node_Update, _Alloc >::access_traits`

Element access traits type.

Definition at line 738 of file `assoc_container.hpp`.

## 5.398.3 Constructor &amp; Destructor Documentation

5.398.3.1 `template<typename Key , typename Mapped , typename _ATraits = typename detail::default_trie_access_traits<Key>-  
::type, typename Tag = pat_trie_tag, template< typename Node_Cltr, typename Node_Itr, typename _ATraits_, typename  
_Alloc_ > class Node_Update = null_node_update, typename _Alloc = std::allocator<char>> __gnu_pbds::trie<  
Key, Mapped, _ATraits, Tag, Node_Update, _Alloc >::trie ( const access_traits & t ) [inline]`

Constructor taking some policy objects. `r_access_traits` will be copied by the `_ATraits` object of the container object.

Definition at line 744 of file `assoc_container.hpp`.

5.398.3.2 `template<typename Key , typename Mapped , typename _ATraits = typename detail::default_trie_access_traits<Key>-  
::type, typename Tag = pat_trie_tag, template< typename Node_Cltr, typename Node_Itr, typename _ATraits_, typename  
_Alloc_ > class Node_Update = null_node_update, typename _Alloc = std::allocator<char>> template<typename It >  
__gnu_pbds::trie< Key, Mapped, _ATraits, Tag, Node_Update, _Alloc >::trie ( It first, It last ) [inline]`

Constructor taking `__iterators` to a range of `value_types`. The `value_types` between `first_it` and `last_it` will be inserted into the container object.

Definition at line 751 of file `assoc_container.hpp`.

5.398.3.3 `template<typename Key , typename Mapped , typename _ATraits = typename detail::default_trie_access_traits<Key>-  
::type, typename Tag = pat_trie_tag, template< typename Node_Cltr, typename Node_Itr, typename _ATraits_, typename  
_Alloc_ > class Node_Update = null_node_update, typename _Alloc = std::allocator<char>> template<typename It >  
__gnu_pbds::trie< Key, Mapped, _ATraits, Tag, Node_Update, _Alloc >::trie ( It first, It last, const access_traits &  
t ) [inline]`

Constructor taking `__iterators` to a range of `value_types` and some policy objects. The `value_types` between `first_it` and `last_it` will be inserted into the container object.

Definition at line 758 of file `assoc_container.hpp`.

**5.399.1 Detailed Description**

```
template<typename Node_Cltr, typename Node_Itr, typename _ATraits, typename _Alloc>class __gnu_pbds::trie_order_statistics_node_update< Node_Cltr, Node_Itr, _ATraits, _Alloc >
```

Functor updating ranks of entrees.

Definition at line 253 of file trie\_policy.hpp.

## 5.399.2 Member Function Documentation

5.399.2.1 `template<typename Node_Cltr , typename Node_Itr , typename _ATraits , typename _Alloc >`  
`trie_order_statistics_node_update< Node_Cltr, Node_Itr, _ATraits, _Alloc >::const_iterator`  
`__gnu_pbds::trie_order_statistics_node_update< Node_Cltr, Node_Itr, _ATraits, _Alloc >::find_by_order (`  
`size_type order ) const [inline]`

Finds an entry by `__order`. Returns a `const_iterator` to the entry with the `__order` order, or a `const_iterator` to the container object's end if `order` is at least the size of the container object.

Definition at line 79 of file `trie_policy.hpp`.

5.399.2.2 `template<typename Node_Cltr , typename Node_Itr , typename _ATraits , typename _Alloc`  
`> trie_order_statistics_node_update< Node_Cltr, Node_Itr, _ATraits, _Alloc >::iterator`  
`__gnu_pbds::trie_order_statistics_node_update< Node_Cltr, Node_Itr, _ATraits, _Alloc >::find_by_order (`  
`size_type order ) [inline]`

Finds an entry by `__order`. Returns an iterator to the entry with the `__order` order, or an iterator to the container object's end if `order` is at least the size of the container object.

Definition at line 45 of file `trie_policy.hpp`.

5.399.2.3 `template<typename Node_Cltr , typename Node_Itr , typename _ATraits , typename _Alloc > void`  
`__gnu_pbds::trie_order_statistics_node_update< Node_Cltr, Node_Itr, _ATraits, _Alloc >::operator() (`  
`node_iterator nd_it, node_const_iterator ) const [inline],[protected]`

Updates the rank of a node through a `node_iterator` `node_it`; `end_nd_it` is the end node iterator.

Definition at line 152 of file `trie_policy.hpp`.

5.399.2.4 `template<typename Node_Cltr , typename Node_Itr , typename _ATraits , typename _Alloc >`  
`trie_order_statistics_node_update< Node_Cltr, Node_Itr, _ATraits, _Alloc >::size_type`  
`__gnu_pbds::trie_order_statistics_node_update< Node_Cltr, Node_Itr, _ATraits, _Alloc >::order_of_key (`  
`key_const_reference r_key ) const [inline]`

Returns the order of a key within a sequence. For example, if `r_key` is the smallest key, this method will return 0; if `r_key` is a key between the smallest and next key, this method will return 1; if `r_key` is a key larger than the largest key, this method will return the size of `r_c`.

Definition at line 85 of file `trie_policy.hpp`.

5.399.2.5 `template<typename Node_Cltr , typename Node_Itr , typename _ATraits , typename _Alloc >`  
`trie_order_statistics_node_update< Node_Cltr, Node_Itr, _ATraits, _Alloc >::size_type`  
`__gnu_pbds::trie_order_statistics_node_update< Node_Cltr, Node_Itr, _ATraits, _Alloc >::order_of_prefix (`  
`a_const_iterator b, a_const_iterator e ) const [inline]`

Returns the order of a prefix within a sequence. For example, if `[b, e]` is the smallest prefix, this method will return 0; if `r_key` is a key between the smallest and next key, this method will return 1; if `r_key` is a key larger than the largest key, this method will return the size of `r_c`.

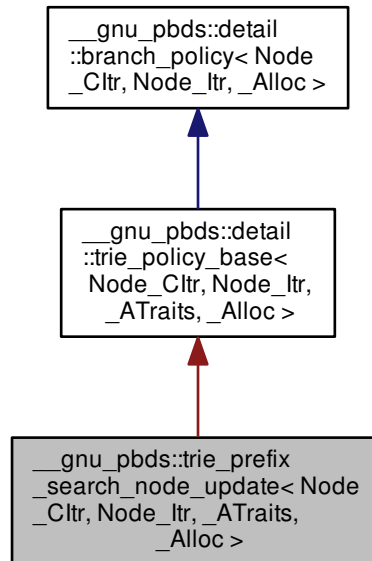

Definition at line 96 of file `trie_policy.hpp`.

#### 5.400.1 Detailed Description

`template<typename Node_Cltr, typename Node_Itr, typename _ATraits, typename _Alloc>class __gnu_pbds::trie_prefix_search_node_update< Node_Cltr, Node_Itr, _ATraits, _Alloc >`

A node updator that allows tries to be searched for the range of values that match a certain prefix.

Definition at line 155 of file `trie_policy.hpp`.

### 5.400.2 Member Typedef Documentation

5.400.2.1 `template<typename Node_Cltr, typename Node_Itr, typename _ATraits, typename _Alloc> typedef access_traits::const_iterator __gnu_pbds::trie_prefix_search_node_update< Node_Cltr, Node_Itr, _ATraits, _Alloc >::a_const_iterator`

Const element iterator.

Definition at line 168 of file `trie_policy.hpp`.

5.400.2.2 `template<typename Node_Cltr, typename Node_Itr, typename _ATraits, typename _Alloc> typedef _ATraits __gnu_pbds::trie_prefix_search_node_update< Node_Cltr, Node_Itr, _ATraits, _Alloc >::access_traits`

Element access traits.

Definition at line 165 of file `trie_policy.hpp`.

5.400.2.3 `template<typename Node_Cltr, typename Node_Itr, typename _ATraits, typename _Alloc> typedef _Alloc __gnu_pbds::trie_prefix_search_node_update< Node_Cltr, Node_Itr, _ATraits, _Alloc >::allocator_type`

`_Alloc` type.

Definition at line 171 of file `trie_policy.hpp`.

5.400.2.4 `template<typename Node_Cltr, typename Node_Itr, typename _ATraits, typename _Alloc> typedef allocator_type::size_type __gnu_pbds::trie_prefix_search_node_update< Node_Cltr, Node_Itr, _ATraits, _Alloc >::size_type`

Size type.

Definition at line 174 of file `trie_policy.hpp`.

### 5.400.3 Member Function Documentation

5.400.3.1 `template<typename Node_Cltr , typename Node_Itr , typename _ATraits , typename _Alloc > void __gnu_pbds::trie_prefix_search_node_update< Node_Cltr, Node_Itr, _ATraits, _Alloc >::operator() ( node_iterator node_it, node_const_iterator end_nd_it ) const` [`inline`], [`protected`]

Called to update a node's metadata.

Definition at line 139 of file `trie_policy.hpp`.

5.400.3.2 `template<typename Node_Cltr , typename Node_Itr , typename _ATraits , typename _Alloc > std::pair< typename trie_prefix_search_node_update< Node_Cltr, Node_Itr, _ATraits, _Alloc >::const_iterator, typename trie_prefix_search_node_update< Node_Cltr, Node_Itr, _ATraits, _Alloc >::const_iterator > __gnu_pbds::trie_prefix_search_node_update< Node_Cltr, Node_Itr, _ATraits, _Alloc >::prefix_range ( key_const_reference r_key ) const`

Finds the const iterator range corresponding to all values whose prefixes match `r_key`.

Definition at line 47 of file `trie_policy.hpp`.

5.400.3.3 `template<typename Node_Cltr , typename Node_Itr , typename _ATraits , typename _Alloc > std::pair< typename trie_prefix_search_node_update< Node_Cltr, Node_Itr, _ATraits, _Alloc >::iterator, typename trie_prefix_search_node_update< Node_Cltr, Node_Itr, _ATraits, _Alloc >::iterator > __gnu_pbds::trie_prefix_search_node_update< Node_Cltr, Node_Itr, _ATraits, _Alloc >::prefix_range ( key_const_reference r_key )`

Finds the iterator range corresponding to all values whose prefixes match `r_key`.

Definition at line 58 of file `trie_policy.hpp`.

5.400.3.4 `template<typename Node_Cltr , typename Node_Itr , typename _ATraits , typename _Alloc > std::pair< typename trie_prefix_search_node_update< Node_Cltr, Node_Itr, _ATraits, _Alloc >::const_iterator, typename trie_prefix_search_node_update< Node_Cltr, Node_Itr, _ATraits, _Alloc >::const_iterator > __gnu_pbds::trie_prefix_search_node_update< Node_Cltr, Node_Itr, _ATraits, _Alloc >::prefix_range ( a_const_iterator b, a_const_iterator e ) const`

Finds the const iterator range corresponding to all values whose prefixes match `[b, e)`.

Definition at line 69 of file `trie_policy.hpp`.

5.400.3.5 `template<typename Node_Cltr , typename Node_Itr , typename _ATraits , typename _Alloc > std::pair< typename trie_prefix_search_node_update< Node_Cltr, Node_Itr, _ATraits, _Alloc >::iterator, typename trie_prefix_search_node_update< Node_Cltr, Node_Itr, _ATraits, _Alloc >::iterator > __gnu_pbds::trie_prefix_search_node_update< Node_Cltr, Node_Itr, _ATraits, _Alloc >::prefix_range ( a_const_iterator b, a_const_iterator e )`

Finds the iterator range corresponding to all values whose prefixes match `[b, e)`.

Definition at line 84 of file `trie_policy.hpp`.

The documentation for this class was generated from the following files:

- [trie\\_policy.hpp](#)
- [prefix\\_search\\_node\\_update\\_imp.hpp](#)

## 5.401 `__gnu_pbds::trie_string_access_traits< String, Min_E_Val, Max_E_Val, Reverse, _Alloc >` Struct Template Reference

### Public Types

- enum { **reverse** }
- enum { **min\_e\_val, max\_e\_val, max\_size** }
- typedef `_Alloc::template rebind< key_type > __rebind_k`
- typedef `detail::__conditional_type < Reverse, typename String::const_reverse_iterator, typename String::const_iterator > ::__type const_iterator`
- typedef `std::iterator_traits < const_iterator >::value_type e_type`
- typedef `__rebind_k::other::const_reference key_const_reference`

- typedef String **key\_type**
- typedef \_Alloc::size\_type **size\_type**

#### Static Public Member Functions

- static [const\\_iterator begin](#) (key\_const\_reference)
- static [size\\_type e\\_pos](#) (e\_type e)
- static [const\\_iterator end](#) (key\_const\_reference)

#### 5.401.1 Detailed Description

```
template<typename String = std::string, typename String::value_type Min_E_Val = detail::__numeric_traits<typename String::value_type>::__min, typename String::value_type Max_E_Val = detail::__numeric_traits<typename String::value_type>::__max, bool Reverse = false, typename _Alloc = std::allocator<char>>struct __gnu_pbds::trie_string_access_traits< String, Min_E_Val, Max_E_Val, Reverse, _Alloc >
```

Element access traits for string types.

#### Template Parameters

<i>String</i>	String type.
<i>Min_E_Val</i>	Minimal element value.
<i>Max_E_Val</i>	Maximum element value.
<i>Reverse</i>	Reverse iteration should be used. Default: false.
<i>_Alloc</i>	Allocator type.

Definition at line 74 of file trie\_policy.hpp.

#### 5.401.2 Member Typedef Documentation

5.401.2.1 `template<typename String = std::string, typename String::value_type Min_E_Val = detail::__numeric_traits<typename String::value_type>::__min, typename String::value_type Max_E_Val = detail::__numeric_traits<typename String::value_type>::__max, bool Reverse = false, typename _Alloc = std::allocator<char>> typedef detail::__conditional_type<Reverse, typename String::const_reverse_iterator, typename String::const_iterator>::__type __gnu_pbds::trie_string_access_traits< String, Min_E_Val, Max_E_Val, Reverse, _Alloc >::__const_iterator`

Element const iterator type.

Definition at line 90 of file trie\_policy.hpp.

5.401.2.2 `template<typename String = std::string, typename String::value_type Min_E_Val = detail::__numeric_traits<typename String::value_type>::__min, typename String::value_type Max_E_Val = detail::__numeric_traits<typename String::value_type>::__max, bool Reverse = false, typename _Alloc = std::allocator<char>> typedef std::iterator_traits<const_iterator>::value_type __gnu_pbds::trie_string_access_traits< String, Min_E_Val, Max_E_Val, Reverse, _Alloc >::__e_type`

Element type.

Definition at line 93 of file trie\_policy.hpp.

#### 5.401.3 Member Function Documentation

5.401.3.1 `template<typename String, typename String::value_type Min_E_Val, typename String::value_type Max_E_Val, bool Reverse, typename _Alloc> trie_string_access_traits<String, Min_E_Val, Max_E_Val, Reverse, _Alloc>::const_iterator __gnu_pbds::trie_string_access_traits<String, Min_E_Val, Max_E_Val, Reverse, _Alloc>::begin( key_const_reference r_key ) [inline], [static]`

Returns a `const_iterator` to the first element of `key_const_reference` argument.

Definition at line 57 of file `trie_policy.hpp`.

5.401.3.2 `template<typename String, typename String::value_type Min_E_Val, typename String::value_type Max_E_Val, bool Reverse, typename _Alloc> trie_string_access_traits<String, Min_E_Val, Max_E_Val, Reverse, _Alloc>::size_type __gnu_pbds::trie_string_access_traits<String, Min_E_Val, Max_E_Val, Reverse, _Alloc>::e_pos( e_type e ) [inline], [static]`

Maps an element to a position.

Definition at line 49 of file `trie_policy.hpp`.

5.401.3.3 `template<typename String, typename String::value_type Min_E_Val, typename String::value_type Max_E_Val, bool Reverse, typename _Alloc> trie_string_access_traits<String, Min_E_Val, Max_E_Val, Reverse, _Alloc>::const_iterator __gnu_pbds::trie_string_access_traits<String, Min_E_Val, Max_E_Val, Reverse, _Alloc>::end( key_const_reference r_key ) [inline], [static]`

Returns a `const_iterator` to the after-last element of `key_const_reference` argument.

Definition at line 65 of file `trie_policy.hpp`.

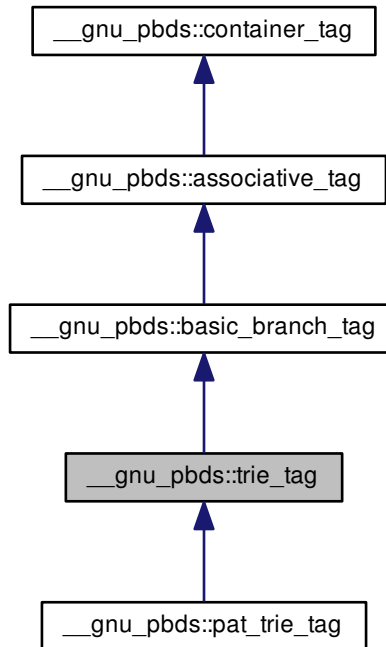

The documentation for this struct was generated from the following files:

- [trie\\_policy.hpp](#)

- [trie\\_string\\_access\\_traits\\_imp.hpp](#)

## 5.402 `__gnu_pbds::trie_tag` Struct Reference

Inheritance diagram for `__gnu_pbds::trie_tag`:

### 5.402.1 Detailed Description

Basic trie structure.

Definition at line 162 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

## 5.403 `__gnu_pbds::trivial_iterator_tag` Struct Reference

### 5.403.1 Detailed Description

A trivial iterator tag. Signifies that the iterators has none of `std::iterators`'s movement abilities.

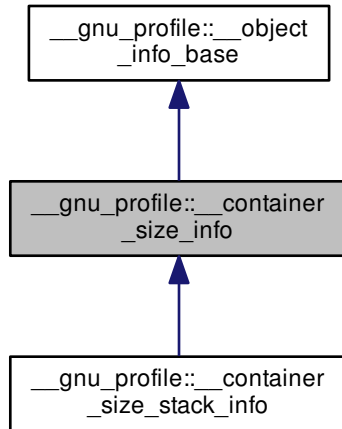

Definition at line 75 of file `tag_and_trait.hpp`.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

5.404 `__gnu_profile::__container_size_info` Class Reference

Inheritance diagram for `__gnu_profile::__container_size_info`:

## Public Member Functions

#### Protected Attributes

- `__stack_t _M_stack`
- `bool _M_valid`

#### 5.411.1 Detailed Description

Base class for a line in the object table.

Definition at line 127 of file `profiler_node.h`.

The documentation for this class was generated from the following file:

- [profiler\\_node.h](#)

## 5.412 `__gnu_profile::__reentrance_guard` Struct Reference

#### Static Public Member Functions

- `static bool __get_in ()`
- `static bool & __inside ()`

#### 5.412.1 Detailed Description

Reentrance guard.

Mechanism to protect all `__gnu_profile` operations against recursion, multithreaded and exception reentrance.

Definition at line 58 of file `profiler.h`.

The documentation for this struct was generated from the following file:

- [profiler.h](#)

## 5.413 `__gnu_profile::__stack_hash` Class Reference

#### Public Member Functions

- `std::size_t operator() (__stack_t __s) const`
- `bool operator() (__stack_t __stack1, __stack_t __stack2) const`

#### 5.413.1 Detailed Description

Hash function for summary trace using call stack as index.

Definition at line 93 of file `profiler_node.h`.

The documentation for this class was generated from the following file:

- [profiler\\_node.h](#)

## 5.414 `__gnu_profile::__trace_base< __object_info, __stack_info >` Class Template Reference

### Public Member Functions

- `__object_info * __add_object (__stack_t __stack)`
- `void __collect_warnings (__warning_vector_t & __warnings)`
- `void __free ()`
- `void __retire_object (__object_info * __info)`
- `void __write (FILE * __f)`

### Protected Attributes

- `const char * __id`

### 5.414.1 Detailed Description

```
template<typename __object_info, typename __stack_info>class __gnu_profile::__trace_base< __object_info, __stack_info >
```

Base class for all trace producers.

Definition at line 190 of file `profiler_trace.h`.

The documentation for this class was generated from the following file:

- [profiler\\_trace.h](#)

## 5.415 `__gnu_profile::__trace_container_size` Class Reference

Inheritance diagram for `__gnu_profile::__trace_container_size`:

### Public Member Functions

- `__container_size_info * __add_object (__stack_t __stack)`
- `void __collect_warnings (__warning_vector_t & __warnings)`
- `void __destruct (__container_size_info * __obj_info, std::size_t __num, std::size_t __inum)`
- `void __free ()`
- `__container_size_info * __insert (__stack_t __stack, std::size_t __num)`
- `void __retire_object (__container_size_info * __info)`
- `void __write (FILE * __f)`

## Protected Attributes

- `const char * __id`

## 5.415.1 Detailed Description

Container size instrumentation trace producer.

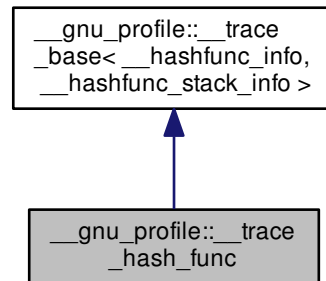

Definition at line 156 of file `profiler_container_size.h`.

The documentation for this class was generated from the following file:

- [profiler\\_container\\_size.h](#)

5.416 `__gnu_profile::__trace_hash_func` Class Reference

Inheritance diagram for `__gnu_profile::__trace_hash_func`:

## Public Member Functions

- [\\_\\_hashfunc\\_info \\* \\_\\_add\\_object](#) (`__stack_t __stack`)
- `void __collect_warnings` (`__warning_vector_t & __warnings`)
- `void __destruct` (`__hashfunc_info * __obj_info`, `std::size_t __chain`, `std::size_t __accesses`, `std::size_t __hops`)
- `void __free` ()
- `void __retire_object` (`__hashfunc_info * __info`)
- `void __write` (`FILE * __f`)

## Protected Attributes

- `const char * __id`

### 5.416.1 Detailed Description

Hash performance instrumentation producer.

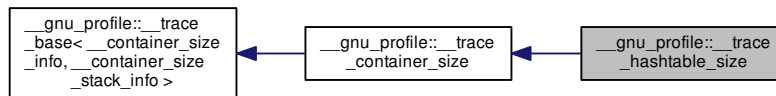

Definition at line 95 of file profiler\_hash\_func.h.

The documentation for this class was generated from the following file:

- [profiler\\_hash\\_func.h](#)

### 5.417 \_\_gnu\_profile::\_\_trace\_hashtable\_size Class Reference

Inheritance diagram for \_\_gnu\_profile::\_\_trace\_hashtable\_size:

#### Public Member Functions

- [\\_\\_container\\_size\\_info](#) \* **add\_object** (\_\_stack\_t \_\_stack)
- void **collect\_warnings** (\_\_warning\_vector\_t &\_\_warnings)
- void **destruct** (\_\_container\_size\_info \*\_\_obj\_info, std::size\_t \_\_num, std::size\_t \_\_inum)
- void **free** ()
- [\\_\\_container\\_size\\_info](#) \* **insert** (\_\_stack\_t \_\_stack, std::size\_t \_\_num)
- void **retire\_object** (\_\_container\_size\_info \*\_\_info)
- void **write** (FILE \*\_\_f)

#### Protected Attributes

- const char \* **id**

### 5.417.1 Detailed Description

Hashtable size instrumentation trace producer.

Definition at line 42 of file profiler\_hashtable\_size.h.

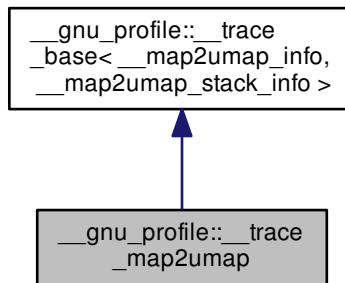

The documentation for this class was generated from the following file:

- [profiler\\_hashtable\\_size.h](#)

5.418 `__gnu_profile::__trace_map2umap` Class Reference

Inheritance diagram for `__gnu_profile::__trace_map2umap`:

#### Public Member Functions

- `__map2umap_info * __add_object (__stack_t __stack)`
- `void __collect_warnings (__warning_vector_t & __warnings)`
- `void __destruct (__map2umap_info * __obj_info)`
- `void __free ()`
- `void __retire_object (__map2umap_info * __info)`
- `void __write (FILE * __f)`

#### Protected Attributes

- `const char * __id`

#### 5.418.1 Detailed Description

Map-to-unordered\_map instrumentation producer.

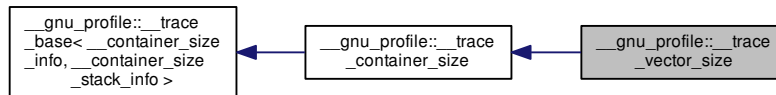

Definition at line 173 of file `profiler_map_to_unordered_map.h`.

The documentation for this class was generated from the following file:

- [profiler\\_map\\_to\\_unordered\\_map.h](#)

## 5.419 `__gnu_profile::__trace_vector_size` Class Reference

Inheritance diagram for `__gnu_profile::__trace_vector_size`:

### Public Member Functions

- `__container_size_info * __add_object (__stack_t __stack)`
- `void __collect_warnings (__warning_vector_t &__warnings)`
- `void __destruct (__container_size_info * __obj_info, std::size_t __num, std::size_t __inum)`
- `void __free ()`
- `__container_size_info * __insert (__stack_t __stack, std::size_t __num)`
- `void __retire_object (__container_size_info * __info)`
- `void __write (FILE * __f)`

### Protected Attributes

- `const char * __id`

#### 5.419.1 Detailed Description

Hashtable size instrumentation trace producer.

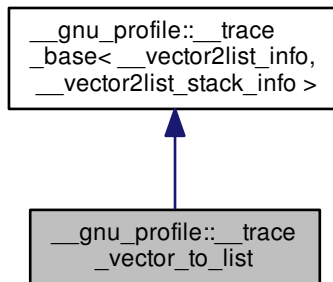

Definition at line 42 of file `profiler_vector_size.h`.

The documentation for this class was generated from the following file:

- [profiler\\_vector\\_size.h](#)

5.420 `__gnu_profile::__trace_vector_to_list` Class Reference

Inheritance diagram for `__gnu_profile::__trace_vector_to_list`:

## Public Member Functions

- [\\_\\_vector2list\\_info](#) \* **add\_object** (`__stack_t` \_\_stack)
- void **collect\_warnings** (`__warning_vector_t` &\_\_warnings)
- void **destruct** ([\\_\\_vector2list\\_info](#) \* \_\_obj\_info)
- void **free** ()
- float **list\_cost** (`std::size_t` \_\_shift, `std::size_t` \_\_iterate, `std::size_t` \_\_resize)
- void **retire\_object** ([\\_\\_vector2list\\_info](#) \* \_\_info)
- float **vector\_cost** (`std::size_t` \_\_shift, `std::size_t` \_\_iterate, `std::size_t` \_\_resize)
- void **write** (`FILE` \* \_\_f)

## Protected Attributes

- const char \* **id**

## 5.420.1 Detailed Description

Vector-to-list instrumentation producer.

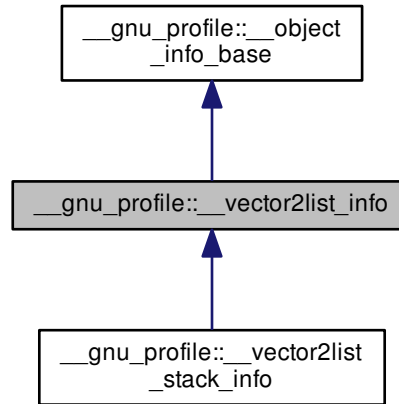

Definition at line 131 of file `profiler_vector_to_list.h`.

The documentation for this class was generated from the following file:

- [profiler\\_vector\\_to\\_list.h](#)

## 5.421 `__gnu_profile::__vector2list_info` Class Reference

Inheritance diagram for `__gnu_profile::__vector2list_info`:

### Public Member Functions

- `__vector2list_info` (`__stack_t __stack`)
- `std::string __advice` () const
- `bool __is_valid` () const
- `std::size_t __iterate` ()
- `float __list_cost` ()
- `float __magnitude` () const
- `void __merge` (const `__vector2list_info` &`__o`)
- `void __merge` (const `__object_info_base` &`__o`)
- `void __opr_insert` (`std::size_t __pos`, `std::size_t __num`)
- `void __opr_iterate` (`int __num`)
- `std::size_t __resize` ()
- `void __resize` (`std::size_t __from`, `std::size_t`)
- `void __set_invalid` ()
- `void __set_list_cost` (`float __lc`)
- `void __set_vector_cost` (`float __vc`)
- `std::size_t __shift_count` ()
- `__stack_t __stack` () const
- `void __write` (`FILE * __f`) const

### Protected Attributes

- `__stack_t _M_stack`
- `bool _M_valid`

## 5.421.1 Detailed Description

A vector-to-list instrumentation line in the object table.

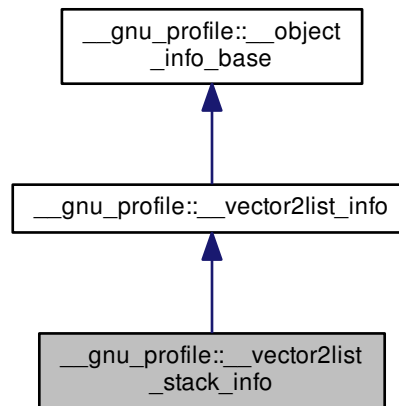

Definition at line 40 of file `profiler_vector_to_list.h`.

The documentation for this class was generated from the following file:

- [profiler\\_vector\\_to\\_list.h](#)

5.422 `__gnu_profile::__vector2list_stack_info` Class Reference

Inheritance diagram for `__gnu_profile::__vector2list_stack_info`:

## Public Member Functions

- `__vector2list_stack_info` (const `__vector2list_info` &\_\_o)
- `std::string __advice` () const
- `bool __is_valid` () const
- `std::size_t __iterate` ()
- `float __list_cost` ()
- `float __magnitude` () const
- `void __merge` (const `__vector2list_info` &\_\_o)
- `void __merge` (const `__object_info_base` &\_\_o)
- `void __opr_insert` (std::size\_t \_\_pos, std::size\_t \_\_num)
- `void __opr_iterate` (int \_\_num)
- `std::size_t __resize` ()
- `void __resize` (std::size\_t \_\_from, std::size\_t)
- `void __set_invalid` ()
- `void __set_list_cost` (float \_\_lc)
- `void __set_vector_cost` (float \_\_vc)

- `std::size_t __shift_count ()`
- `__stack_t __stack () const`
- `void __write (FILE *__f) const`

#### Protected Attributes

- `__stack_t __M_stack`
- `bool __M_valid`

#### 5.422.1 Detailed Description

A vector-to-list instrumentation line in the stack table.

Definition at line 121 of file `profiler_vector_to_list.h`.

The documentation for this class was generated from the following file:

- [profiler\\_vector\\_to\\_list.h](#)

#### 5.423 \_\_gnu\_profile::\_\_warning\_data Struct Reference

##### Public Member Functions

- `__warning_data (float __m, __stack_t __c, const char *__id, const std::string &__msg)`
- `bool operator< (const \_\_warning\_data &__other) const`

##### Public Attributes

- `__stack_t __context`
- `float __magnitude`
- `const char * __warning_id`
- `std::string __warning_message`

#### 5.423.1 Detailed Description

Representation of a warning.

Definition at line 73 of file `profiler_trace.h`.

The documentation for this struct was generated from the following file:

- [profiler\\_trace.h](#)

5.424 `const_iterator_` Class Reference

Inheritance diagram for `const_iterator_`:

#### Public Types

- typedef `const_pointer_` [const\\_pointer](#)

### Friends

- class [PB\\_DS\\_CLASS\\_C\\_DEC](#)

#### 5.424.1 Detailed Description

Const range-type iterator.

Definition at line 43 of file `unordered_iterator/const_iterator.hpp`.

#### 5.424.2 Member Typedef Documentation

##### 5.424.2.1 `typedef const_pointer_ const_iterator_::const_pointer`

Iterator's const pointer type.

Definition at line 60 of file `unordered_iterator/const_iterator.hpp`.

##### 5.424.2.2 `typedef const_reference_ const_iterator_::const_reference`

Iterator's const reference type.

Definition at line 66 of file `unordered_iterator/const_iterator.hpp`.

##### 5.424.2.3 `typedef _Alloc::difference_type const_iterator_::difference_type`

Difference type.

Definition at line 51 of file `unordered_iterator/const_iterator.hpp`.

##### 5.424.2.4 `typedef std::forward_iterator_tag const_iterator_::iterator_category`

Category.

Definition at line 48 of file `unordered_iterator/const_iterator.hpp`.

##### 5.424.2.5 `typedef pointer_ const_iterator_::pointer`

Iterator's pointer type.

Definition at line 57 of file `unordered_iterator/const_iterator.hpp`.

##### 5.424.2.6 `typedef reference_ const_iterator_::reference`

Iterator's reference type.

Definition at line 63 of file `unordered_iterator/const_iterator.hpp`.

#### 5.424.2.7 typedef value\_type\_const\_iterator\_::value\_type

Iterator's value type.

Definition at line 54 of file unordered\_iterator/const\_iterator.hpp.

### 5.424.3 Constructor & Destructor Documentation

#### 5.424.3.1 const\_iterator\_::const\_iterator\_( ) [inline]

Default constructor.

Definition at line 69 of file unordered\_iterator/const\_iterator.hpp.

#### 5.424.3.2 const\_iterator\_::const\_iterator\_( const\_pointer\_ p\_value, PB\_DS\_GEN\_POS pos, const PB\_DS\_CLASS\_C\_DEC \* p\_tbl ) [inline], [protected]

Constructor used by the table to initiate the generalized pointer and position (e.g., this is called from within a find()) of a table.

Definition at line 97 of file unordered\_iterator/const\_iterator.hpp.

### 5.424.4 Member Function Documentation

#### 5.424.4.1 bool point\_const\_iterator\_::operator!=( const point\_iterator\_ & other ) const [inline], [inherited]

Compares content (negatively) to a different iterator object.

Definition at line 118 of file unordered\_iterator/point\_const\_iterator.hpp.

#### 5.424.4.2 bool point\_const\_iterator\_::operator!=( const point\_const\_iterator\_ & other ) const [inline], [inherited]

Compares content (negatively) to a different iterator object.

Definition at line 123 of file unordered\_iterator/point\_const\_iterator.hpp.

#### 5.424.4.3 const\_reference point\_const\_iterator\_::operator\*( ) const [inline], [inherited]

Access.

Definition at line 100 of file unordered\_iterator/point\_const\_iterator.hpp.

#### 5.424.4.4 const\_iterator\_ & const\_iterator\_::operator++( ) [inline]

Increments.

Definition at line 74 of file unordered\_iterator/const\_iterator.hpp.

References m\_p\_tbl.

#### 5.424.4.5 const\_iterator\_const\_iterator\_::operator++( int ) [inline]

Increments.

Definition at line 82 of file unordered\_iterator/const\_iterator.hpp.

References m\_p\_tbl.

5.424.4.6 `const_pointer point_const_iterator::operator-> ( ) const` [inline],[inherited]

Access.

Definition at line 92 of file `unordered_iterator/point_const_iterator.hpp`.

5.424.4.7 `bool point_const_iterator::operator==( const point_iterator_ & other ) const` [inline],[inherited]

Compares content to a different iterator object.

Definition at line 108 of file `unordered_iterator/point_const_iterator.hpp`.

5.424.4.8 `bool point_const_iterator::operator==( const point_const_iterator_ & other ) const` [inline],[inherited]

Compares content to a different iterator object.

Definition at line 113 of file `unordered_iterator/point_const_iterator.hpp`.

#### 5.424.5 Member Data Documentation

5.424.5.1 `const PB_DS_CLASS_C_DEC* const_iterator_::m_p_tbl` [protected]

Pointer to the table object which created the iterator (used for incrementing its position).

Definition at line 106 of file `unordered_iterator/const_iterator.hpp`.

Referenced by `operator++()`, and `iterator_::operator++()`.

The documentation for this class was generated from the following file:

- [unordered\\_iterator/const\\_iterator.hpp](#)

#### 5.425 iterator\_ Class Reference

Inheritance diagram for `iterator_`:

### Public Types

- typedef `const_pointer_` `const_pointer`
- typedef `const_reference_` `const_reference`
- typedef `_Alloc::difference_type` `difference_type`
- typedef `std::forward_iterator_tag` `iterator_category`
- typedef `pointer_` `pointer`
- typedef `reference_` `reference`
- typedef `value_type_` `value_type`

### Public Member Functions

- `iterator_()`
- `operator const point_iterator_()` const
- `operator point_iterator_()`
- `bool operator!= (const point_iterator_ &other)` const
- `bool operator!= (const point_const_iterator_ &other)` const

### Protected Attributes

- `const PB_DS_CLASS_C_DEC * m_p_tbl`
- `const_pointer m_p_value`
- `PB_DS_GEN_POS m_pos`

### Friends

- class `PB_DS_CLASS_C_DEC`

#### 5.425.1 Detailed Description

Range-type iterator.

Definition at line 43 of file iterator.hpp.

## 5.425.2 Member Typedef Documentation

### 5.425.2.1 `typedef const_pointer_iterator_::const_pointer`

Iterator's const pointer type.

Definition at line 60 of file iterator.hpp.

### 5.425.2.2 `typedef const_reference_iterator_::const_reference`

Iterator's const reference type.

Definition at line 66 of file iterator.hpp.

### 5.425.2.3 `typedef _Alloc::difference_type iterator_::difference_type`

Difference type.

Definition at line 51 of file iterator.hpp.

### 5.425.2.4 `typedef std::forward_iterator_tag iterator_::iterator_category`

Category.

Definition at line 48 of file iterator.hpp.

### 5.425.2.5 `typedef pointer_iterator_::pointer`

Iterator's pointer type.

Definition at line 57 of file iterator.hpp.

### 5.425.2.6 `typedef reference_iterator_::reference`

Iterator's reference type.

Definition at line 63 of file iterator.hpp.

### 5.425.2.7 `typedef value_type_iterator_::value_type`

Iterator's value type.

Definition at line 54 of file iterator.hpp.

## 5.425.3 Constructor & Destructor Documentation

### 5.425.3.1 `iterator_::iterator_( ) [inline]`

Default constructor.

Definition at line 70 of file iterator.hpp.

### 5.425.3.2 `iterator_::iterator_( pointer p_value, PB_DS_GEN_POS pos, PB_DS_CLASS_C_DEC * p_tbl ) [inline], [protected]`

Constructor used by the table to initiate the generalized pointer and position (e.g., this is called from within a find()) of a table.

Definition at line 125 of file iterator.hpp.

#### 5.425.4 Member Function Documentation

##### 5.425.4.1 `iterator_::operator const point_iterator_( ) const` `[inline]`

Conversion to a point-type iterator.

Definition at line 80 of file iterator.hpp.

##### 5.425.4.2 `iterator_::operator point_iterator_( )` `[inline]`

Conversion to a point-type iterator.

Definition at line 75 of file iterator.hpp.

##### 5.425.4.3 `bool point_const_iterator_::operator!=( const point_iterator_ & other ) const` `[inline]`, `[inherited]`

Compares content (negatively) to a different iterator object.

Definition at line 118 of file unordered\_iterator/point\_const\_iterator.hpp.

##### 5.425.4.4 `bool point_const_iterator_::operator!=( const point_const_iterator_ & other ) const` `[inline]`, `[inherited]`

Compares content (negatively) to a different iterator object.

Definition at line 123 of file unordered\_iterator/point\_const\_iterator.hpp.

##### 5.425.4.5 `reference iterator_::operator*( ) const` `[inline]`

Access.

Definition at line 93 of file iterator.hpp.

##### 5.425.4.6 `iterator_ & iterator_::operator++( )` `[inline]`

Increments.

Definition at line 101 of file iterator.hpp.

References `const_iterator_::m_p_tbl`.

## 5.427 `point_iterator_` Class Reference

### Public Types

- `typedef const_pointer_ const_pointer`
- `typedef const_reference_ const_reference`
- `typedef trivial_iterator_difference_type difference_type`
- `typedef trivial_iterator_tag iterator_category`
- `typedef pointer_ pointer`
- `typedef reference_ reference`
- `typedef value_type_ value_type`

### Public Member Functions

- `point_iterator_ ( )`
- `point_iterator_ (const point_iterator_ &other)`
- `point_iterator_ (pointer p_value)`
- `bool operator!= (const point_iterator_ &other) const`
- `bool operator!= (const point_const_iterator_ &other) const`
- `reference operator* ( ) const`
- `pointer operator-> ( ) const`
- `bool operator==(const point_iterator_ &other) const`
- `bool operator==(const point_const_iterator_ &other) const`

### Protected Attributes

- `pointer m_p_value`

## Friends

- class **PB\_DS\_CLASS\_C\_DEC**
- class **point\_const\_iterator\_**

### 5.427.1 Detailed Description

Find type iterator.

Definition at line 43 of file point\_iterator.hpp.

### 5.427.2 Member Typedef Documentation

#### 5.427.2.1 typedef const\_pointer\_point\_iterator\_::const\_pointer

Iterator's const pointer type.

Definition at line 59 of file point\_iterator.hpp.

#### 5.427.2.2 typedef const\_reference\_point\_iterator\_::const\_reference

Iterator's const reference type.

Definition at line 65 of file point\_iterator.hpp.

#### 5.427.2.3 typedef trivial\_iterator\_difference\_type\_point\_iterator\_::difference\_type

Difference type.

Definition at line 50 of file point\_iterator.hpp.

#### 5.427.2.4 typedef trivial\_iterator\_tag\_point\_iterator\_::iterator\_category

Category.

Definition at line 47 of file point\_iterator.hpp.

#### 5.427.2.5 typedef pointer\_point\_iterator\_::pointer

Iterator's pointer type.

Definition at line 56 of file point\_iterator.hpp.

#### 5.427.2.6 typedef reference\_point\_iterator\_::reference

Iterator's reference type.

Definition at line 62 of file point\_iterator.hpp.

#### 5.427.2.7 typedef value\_type\_point\_iterator\_::value\_type

Iterator's value type.

Definition at line 53 of file point\_iterator.hpp.

### 5.427.3 Constructor & Destructor Documentation

#### 5.427.3.1 `point_iterator::point_iterator( )` [inline]

Default constructor.

Definition at line 69 of file `point_iterator.hpp`.

#### 5.427.3.2 `point_iterator::point_iterator( const point_iterator_ & other )` [inline]

Copy constructor.

Definition at line 75 of file `point_iterator.hpp`.

### 5.427.4 Member Function Documentation

#### 5.427.4.1 `bool point_iterator::operator!=( const point_iterator_ & other ) const` [inline]

Compares content to a different iterator object.

Definition at line 107 of file `point_iterator.hpp`.

#### 5.427.4.2 `bool point_iterator::operator!=( const point_const_iterator_ & other ) const` [inline]

Compares content (negatively) to a different iterator object.

Definition at line 112 of file `point_iterator.hpp`.

#### 5.427.4.3 `reference point_iterator::operator*( ) const` [inline]

Access.

Definition at line 89 of file `point_iterator.hpp`.

#### 5.427.4.4 `pointer point_iterator::operator->( ) const` [inline]

Access.

Definition at line 81 of file `point_iterator.hpp`.

#### 5.427.4.5 `bool point_iterator::operator==( const point_iterator_ & other ) const` [inline]

Compares content to a different iterator object.

Definition at line 97 of file `point_iterator.hpp`.

#### 5.427.4.6 `bool point_iterator::operator==( const point_const_iterator_ & other ) const` [inline]

Compares content to a different iterator object.

Definition at line 102 of file `point_iterator.hpp`.

### 5.429.1 Detailed Description

```
template<typename _Alloc>struct std::__allocated_ptr<_Alloc >
```

Non-standard RAII type for managing pointers obtained from allocators.

Definition at line 46 of file allocated\_ptr.h.

### 5.429.2 Constructor & Destructor Documentation

5.429.2.1 `template<typename _Alloc > std::__allocated_ptr<_Alloc >::__allocated_ptr ( _Alloc & __a, pointer __ptr ) [inline], [noexcept]`

Take ownership of \_\_ptr.

Definition at line 52 of file allocated\_ptr.h.

5.429.2.2 `template<typename _Alloc > template<typename _Ptr, typename _Req = _Require<is_same<_Ptr, value_type*>>> std::__allocated_ptr<_Alloc >::__allocated_ptr ( _Alloc & __a, _Ptr __ptr ) [inline]`

Convert \_\_ptr to allocator's pointer type and take ownership of it.

Definition at line 59 of file allocated\_ptr.h.

5.429.2.3 `template<typename _Alloc> std::__allocated_ptr<_Alloc>::__allocated_ptr( __allocated_ptr<_Alloc> && __gd ) [inline], [noexcept]`

Transfer ownership of the owned pointer.

Definition at line 65 of file `allocated_ptr.h`.

5.429.2.4 `template<typename _Alloc> std::__allocated_ptr<_Alloc>::~~__allocated_ptr( ) [inline]`

Deallocate the owned pointer.

Definition at line 70 of file `allocated_ptr.h`.

References `std::allocator_traits<_Alloc>::deallocate()`.

### 5.429.3 Member Function Documentation

5.429.3.1 `template<typename _Alloc> value_type* std::__allocated_ptr<_Alloc>::get( void ) [inline]`

Get the address that the owned pointer refers to.

Definition at line 85 of file `allocated_ptr.h`.

5.429.3.2 `template<typename _Alloc> __allocated_ptr& std::__allocated_ptr<_Alloc>::operator=( std::nullptr_t ) [inline], [noexcept]`

Release ownership of the owned pointer.

Definition at line 78 of file `allocated_ptr.h`.

### 5.431.1 Detailed Description

```
template<typename _PTp>struct std::__atomic_base<_PTp * >
```

Partial specialization for pointer types.

Definition at line 565 of file atomic\_base.h.

The documentation for this struct was generated from the following file:

- [atomic\\_base.h](#)

## 5.432 std::\_\_atomic\_flag\_base Struct Reference

Inheritance diagram for std::\_\_atomic\_flag\_base:

### Public Attributes

- `__atomic_flag_data_type _M_i`

### 5.432.1 Detailed Description

Base type for atomic\_flag.

Base type is POD with data, allowing atomic\_flag to derive from it and meet the standard layout type requirement. In addition to compatibility with a C interface, this allows different implementations of atomic\_flag to use the same atomic operation functions, via a standard conversion to the \_\_atomic\_flag\_base argument.

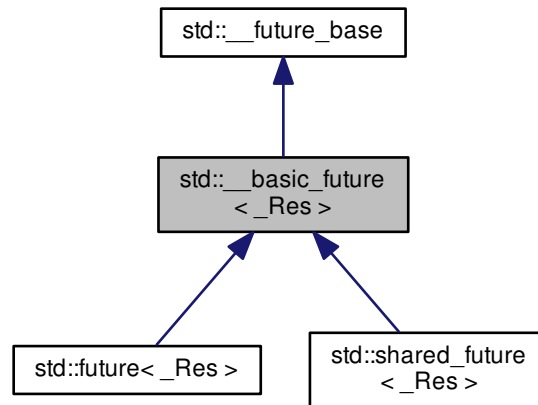

Definition at line 150 of file atomic\_base.h.

The documentation for this struct was generated from the following file:

- [atomic\\_base.h](#)

### 5.433 `std::__basic_future<_Res>` Class Template Reference

## 5.434.1 Detailed Description

```
template<typename _InternT, typename _ExternT, typename _StateT>class std::__codecvt_abstract_base<_InternT, _ExternT, _StateT >
```

Common base for `codecvt` functions.

This template class provides implementations of the public functions that forward to the protected virtual functions.

This template also provides abstract stubs for the protected virtual functions.

Definition at line 68 of file `codecvt.h`.

## 5.434.2 Member Function Documentation

5.434.2.1 `template<typename _InternT, typename _ExternT, typename _StateT> virtual result std::__codecvt_abstract_base<_InternT, _ExternT, _StateT >::do_out ( state_type & __state, const intern_type * __from, const intern_type * __from_end, const intern_type *& __from_next, extern_type * __to, extern_type * __to_end, extern_type *& __to_next ) const [protected], [pure virtual]`

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This function is a hook for derived classes to change the value returned.

**See Also**

out for more information.

Implemented in `std::codecvt< char32_t, char, mbstate_t >`, `std::codecvt< char16_t, char, mbstate_t >`, `std::codecvt< wchar_t, char, mbstate_t >`, `std::codecvt< char, char, mbstate_t >`, `std::codecvt< _InternT, _ExternT, _StateT >`, `std::codecvt< _Elem, char, mbstate_t >`, and `std::codecvt< _InternT, _ExternT, encoding_state >`.

Referenced by `std::__codecvt_abstract_base< char32_t, char, mbstate_t >::out()`.

```
5.434.2.2 template<typename _InternT, typename _ExternT, typename _StateT> result std::__codecvt_abstract_base<
    _InternT, _ExternT, _StateT >::in ( state_type & __state, const extern_type * __from, const extern_type * __from_end,
    const extern_type *& __from_next, intern_type * __to, intern_type * __to_end, intern_type *& __to_next ) const
    [inline]
```

Convert from external to internal character set.

Converts input string of `extern_type` to output string of `intern_type`. This is analogous to `mbsrtowcs`. It does this by calling `codecvt::do_in`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The `state` argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how `state` is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

**Parameters**

<code>__state</code>	Persistent conversion state data.
<code>__from</code>	Start of input.
<code>__from_end</code>	End of input.
<code>__from_next</code>	Returns start of unconverted data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

**Returns**

`codecvt_base::result`.

Definition at line 196 of file `codecvt.h`.

```
5.434.2.3 template<typename _InternT, typename _ExternT, typename _StateT> result std::__codecvt_abstract_base<
    _InternT, _ExternT, _StateT >::out ( state_type & __state, const intern_type * __from, const intern_type * __from_end,
    const intern_type *& __from_next, extern_type * __to, extern_type * __to_end, extern_type *& __to_next ) const
    [inline]
```

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This is analogous to `wcsrtombs`. It does this by calling `codecvt::do_out`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The `state` argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how `state` is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

#### Parameters

<code>__state</code>	Persistent conversion state data.
<code>__from</code>	Start of input.
<code>__from_end</code>	End of input.
<code>__from_next</code>	Returns start of unconverted data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

#### Returns

`codecvt_base::result`.

Definition at line 116 of file `codecvt.h`.

5.434.2.4 `template<typename _InternT, typename _ExternT, typename _StateT> result std::__codecvt_abstract_base<_InternT, _ExternT, _StateT>::unshift ( state_type & __state, extern_type * __to, extern_type * __to_end, extern_type *& __to_next ) const [inline]`

Reset conversion state.

Writes characters to output that would restore `state` to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling `codecvt::do_unshift()`.

For example, if 4 external characters always converted to 1 internal character, and input to `in()` had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of `codecvt_base::result`. If the state could be reset and data written, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the output has insufficient space, returns `codecvt_base::partial`. Otherwise the reset failed and `codecvt_base::error` is returned.

#### Parameters

<code>__state</code>	Persistent conversion state data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

#### Returns

`codecvt_base::result`.

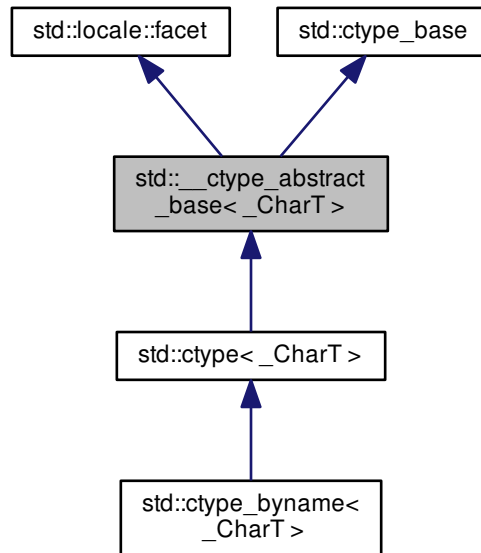

Definition at line 155 of file `codecvt.h`.

#### 5.435.1 Detailed Description

```
template<typename _CharT>class std::_ctype_abstract_base<_CharT >
```

Common base for ctype facet.

This template class provides implementations of the public functions that forward to the protected virtual functions.

This template also provides abstract stubs for the protected virtual functions.

Definition at line 150 of file locale\_facets.h.

### 5.435.2 Member Typedef Documentation

#### 5.435.2.1 `template<typename _CharT> typedef _CharT std::__ctype_abstract_base<_CharT>::char_type`

Typedef for the template parameter.

Definition at line 155 of file locale\_facets.h.

### 5.435.3 Member Function Documentation

#### 5.435.3.1 `template<typename _CharT> virtual bool std::__ctype_abstract_base<_CharT>::do_is ( mask __m, char_type __c ) const` [protected], [pure virtual]

Test `char_type` classification.

This function finds a mask `M` for `c` and compares it to mask `m`.

`do_is()` is a hook for a derived facet to change the behavior of classifying. `do_is()` must always return the same result for the same input.

#### Parameters

<code>__c</code>	The <code>char_type</code> to find the mask of.
<code>__m</code>	The mask to compare against.

#### Returns

$(M \& \_m) \neq 0$ .

Implemented in `std::ctype<wchar_t>`, and `std::ctype<_CharT>`.

Referenced by `std::__ctype_abstract_base<wchar_t>::is()`.

#### 5.435.3.2 `template<typename _CharT> virtual const char_type* std::__ctype_abstract_base<_CharT>::do_is ( const char_type * __lo, const char_type * __hi, mask * __vec ) const` [protected], [pure virtual]

Return a mask array.

This function finds the mask for each `char_type` in the range `[lo,hi)` and successively writes it to `vec`. `vec` must have as many elements as the input.

`do_is()` is a hook for a derived facet to change the behavior of classifying. `do_is()` must always return the same result for the same input.

#### Parameters

<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.
<code>__vec</code>	Pointer to an array of mask storage.

#### Returns

`__hi`.

Implemented in `std::ctype<wchar_t>`, and `std::ctype<_CharT>`.

#### 5.435.3.3 `template<typename _CharT> virtual char std::__ctype_abstract_base<_CharT>::do_narrow ( char_type __c, char __default ) const` [protected], [pure virtual]

Narrow `char_type` to `char`.

This virtual function converts the argument to char using the simplest reasonable transformation. If the conversion fails, `dfault` is returned instead.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

<code>__c</code>	The <code>char_type</code> to convert.
<code>__dfault</code>	Char to return if conversion fails.

#### Returns

The converted char.

Implemented in `std::ctype<wchar_t>`, and `std::ctype<_CharT>`.

Referenced by `std::__ctype_abstract_base<wchar_t>::narrow()`.

```
5.435.3.4 template<typename _CharT> virtual const char_type* std::__ctype_abstract_base<_CharT>::do_narrow (
    const char_type * __lo, const char_type * __hi, char __dfault, char * __to ) const [protected], [pure
    virtual]
```

Narrow `char_type` array to char.

This virtual function converts each `char_type` in the range `[__lo,__hi)` to char using the simplest reasonable transformation and writes the results to the destination array. For any element in the input that cannot be converted, `__dfault` is used instead.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.
<code>__dfault</code>	Char to use if conversion fails.
<code>__to</code>	Pointer to the destination array.

#### Returns

`__hi`.

Implemented in `std::ctype<wchar_t>`, and `std::ctype<_CharT>`.

```
5.435.3.5 template<typename _CharT> virtual const char_type* std::__ctype_abstract_base<_CharT>::do_scan_is (
    mask __m, const char_type * __lo, const char_type * __hi ) const [protected], [pure virtual]
```

Find `char_type` matching mask.

This function searches for and returns the first `char_type` `c` in `[__lo,__hi)` for which `is(__m,c)` is true.

`do_scan_is()` is a hook for a derived facet to change the behavior of match searching. `do_is()` must always return the same result for the same input.

## Parameters

<code>__m</code>	The mask to compare against.
<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.

## Returns

Pointer to a matching `char_type` if found, else `__hi`.

Implemented in [std::ctype< wchar\\_t >](#), and [std::ctype< \\_CharT >](#).

Referenced by `std::__ctype_abstract_base< wchar_t >::scan_is()`.

```
5.435.3.6 template<typename _CharT> virtual const char_type* std::__ctype_abstract_base<_CharT>::do_scan_not (
    mask __m, const char_type * __lo, const char_type * __hi ) const [protected],[pure virtual]
```

Find `char_type` not matching mask.

This function searches for and returns a pointer to the first `char_type` `c` of `[lo,hi)` for which `is(m,c)` is false.

`do_scan_is()` is a hook for a derived facet to change the behavior of match searching. `do_is()` must always return the same result for the same input.

## Parameters

<code>__m</code>	The mask to compare against.
<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.

## Returns

Pointer to a non-matching `char_type` if found, else `__hi`.

Implemented in [std::ctype< wchar\\_t >](#), and [std::ctype< \\_CharT >](#).

Referenced by `std::__ctype_abstract_base< wchar_t >::scan_not()`.

```
5.435.3.7 template<typename _CharT> virtual char_type std::__ctype_abstract_base<_CharT>::do_tolower (
    char_type __c ) const [protected],[pure virtual]
```

Convert to lowercase.

This virtual function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

`do_tolower()` is a hook for a derived facet to change the behavior of lowercasing. `do_tolower()` must always return the same result for the same input.

## Parameters

<code>__c</code>	The <code>char_type</code> to convert.
------------------	--

## Returns

The lowercase `char_type` if convertible, else `__c`.

Implemented in [std::ctype< wchar\\_t >](#), and [std::ctype< \\_CharT >](#).

Referenced by `std::__ctype_abstract_base< wchar_t >::tolower()`.

5.435.3.8 `template<typename _CharT> virtual const char_type* std::__ctype_abstract_base<_CharT>::do_tolower ( char_type * __lo, const char_type * __hi ) const` [protected], [pure virtual]

Convert array to lowercase.

This virtual function converts each `char_type` in the range `[__lo,__hi)` to lowercase if possible. Other elements remain untouched.

`do_tolower()` is a hook for a derived facet to change the behavior of lowercasing. `do_tolower()` must always return the same result for the same input.

#### Parameters

<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.

#### Returns

`__hi`.

Implemented in `std::ctype<wchar_t>`, and `std::ctype<_CharT>`.

5.435.3.9 `template<typename _CharT> virtual char_type std::__ctype_abstract_base<_CharT>::do_toupper ( char_type __c ) const` [protected], [pure virtual]

Convert to uppercase.

This virtual function converts the `char_type` argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

`do_toupper()` is a hook for a derived facet to change the behavior of uppercasing. `do_toupper()` must always return the same result for the same input.

#### Parameters

<code>__c</code>	The <code>char_type</code> to convert.
------------------	--

#### Returns

The uppercase `char_type` if convertible, else `__c`.

Implemented in `std::ctype<wchar_t>`, and `std::ctype<_CharT>`.

Referenced by `std::__ctype_abstract_base<wchar_t>::toupper()`.

5.435.3.10 `template<typename _CharT> virtual const char_type* std::__ctype_abstract_base<_CharT>::do_toupper ( char_type * __lo, const char_type * __hi ) const` [protected], [pure virtual]

Convert array to uppercase.

This virtual function converts each `char_type` in the range `[__lo,__hi)` to uppercase if possible. Other elements remain untouched.

`do_toupper()` is a hook for a derived facet to change the behavior of uppercasing. `do_toupper()` must always return the same result for the same input.

## Parameters

<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.

## Returns

`__hi`.

Implemented in [std::ctype< wchar\\_t >](#), and [std::ctype< \\_CharT >](#).

5.435.3.11 `template<typename _CharT> virtual char_type std::__ctype_abstract_base< _CharT >::do_widen ( char __c ) const [protected], [pure virtual]`

## Widen char.

This virtual function converts the char to char\_type using the simplest reasonable transformation.

do\_widen() is a hook for a derived facet to change the behavior of widening. do\_widen() must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See codecvt for that.

## Parameters

<code>__c</code>	The char to convert.
------------------	----------------------

## Returns

The converted char\_type

Implemented in [std::ctype< wchar\\_t >](#), and [std::ctype< \\_CharT >](#).

Referenced by `std::__ctype_abstract_base< wchar_t >::widen()`.

5.435.3.12 `template<typename _CharT> virtual const char* std::__ctype_abstract_base< _CharT >::do_widen ( const char * __lo, const char * __hi, char_type * __to ) const [protected], [pure virtual]`

## Widen char array.

This function converts each char in the input to char\_type using the simplest reasonable transformation.

do\_widen() is a hook for a derived facet to change the behavior of widening. do\_widen() must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See codecvt for that.

## Parameters

<code>__lo</code>	Pointer to start range.
<code>__hi</code>	Pointer to end of range.
<code>__to</code>	Pointer to the destination array.

## Returns

`__hi`.

Implemented in [std::ctype< wchar\\_t >](#), and [std::ctype< \\_CharT >](#).

```
5.435.3.13 template<typename _CharT> bool std::__ctype_abstract_base<_CharT>::is ( mask __m, char_type __c )
    const [inline]
```

Test char\_type classification.

This function finds a mask M for \_\_c and compares it to mask \_\_m. It does so by returning the value of ctype<char\_type>::do\_is().

#### Parameters

<code>__c</code>	The char_type to compare the mask of.
<code>__m</code>	The mask to compare against.

#### Returns

$(M \& \text{__m}) \neq 0$ .

Definition at line 169 of file locale\_facets.h.

Referenced by std::time\_get<\_CharT, \_InIter>::get(), std::ctype<char>::scan\_is(), std::ctype<char>::scan\_not(), and std::basic\_istream<\_CharT, \_Traits>::sentry::sentry().

```
5.435.3.14 template<typename _CharT> const char_type* std::__ctype_abstract_base<_CharT>::is ( const char_type
    * __lo, const char_type * __hi, mask * __vec ) const [inline]
```

Return a mask array.

This function finds the mask for each char\_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the char array. It does so by returning the value of ctype<char\_type>::do\_is().

#### Parameters

<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.
<code>__vec</code>	Pointer to an array of mask storage.

#### Returns

`__hi`.

Definition at line 186 of file locale\_facets.h.

```
5.435.3.15 template<typename _CharT> char std::__ctype_abstract_base<_CharT>::narrow ( char_type __c, char
    __dfault ) const [inline]
```

Narrow char\_type to char.

This function converts the char\_type to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead. It does so by returning ctype<char\_type>::do\_narrow(\_\_c).

Note: this is not what you want for codepage conversions. See codecvt for that.

#### Parameters

<code>__c</code>	The char_type to convert.
------------------	---------------------------

<code>__dfault</code>	Char to return if conversion fails.
-----------------------	-------------------------------------

**Returns**

The converted char.

Definition at line 331 of file locale\_facets.h.

Referenced by `std::time_get<_CharT, _InIter >::get()`, and `std::time_put<_CharT, _OutIter >::put()`.

```
5.435.3.16 template<typename _CharT> const char_type* std::__ctype_abstract_base<_CharT >::narrow ( const
char_type * __lo, const char_type * __hi, char __dfault, char * __to ) const [inline]
```

Narrow array to char array.

This function converts each `char_type` in the input to `char` using the simplest reasonable transformation and writes the results to the destination array. For any `char_type` in the input that cannot be converted, `dfault` is used instead. It does so by returning `ctype<char_type>::do_narrow(__lo, __hi, __dfault, __to)`.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

**Parameters**

<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.
<code>__dfault</code>	Char to use if conversion fails.
<code>__to</code>	Pointer to the destination array.

**Returns**

`__hi`.

Definition at line 353 of file locale\_facets.h.

```
5.435.3.17 template<typename _CharT> const char_type* std::__ctype_abstract_base<_CharT >::scan_is ( mask __m,
const char_type * __lo, const char_type * __hi ) const [inline]
```

Find `char_type` matching a mask.

This function searches for and returns the first `char_type` `c` in `[lo,hi)` for which `is(m,c)` is true. It does so by returning `ctype<char_type>::do_scan_is()`.

**Parameters**

<code>__m</code>	The mask to compare against.
<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.

**Returns**

Pointer to matching `char_type` if found, else `__hi`.

Definition at line 202 of file locale\_facets.h.

```
5.435.3.18 template<typename _CharT> const char_type* std::__ctype_abstract_base<_CharT >::scan_not ( mask __m,
const char_type * __lo, const char_type * __hi ) const [inline]
```

Find `char_type` not matching a mask.

This function searches for and returns the first `char_type` `c` in `[lo,hi)` for which `is(m,c)` is false. It does so by returning `ctype<char_type>::do_scan_not()`.

## Parameters

<code>__m</code>	The mask to compare against.
<code>__lo</code>	Pointer to first char in range.
<code>__hi</code>	Pointer to end of range.

## Returns

Pointer to non-matching char if found, else `__hi`.

Definition at line 218 of file `locale_facets.h`.

```
5.435.3.19 template<typename CharT> char_type std::__ctype_abstract_base< CharT >::tolower ( char_type __c )
          const [inline]
```

Convert to lowercase.

This function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning `ctype<char_type>::do_tolower(c)`.

## Parameters

<code>__c</code>	The <code>char_type</code> to convert.
------------------	--

## Returns

The lowercase `char_type` if convertible, else `__c`.

Definition at line 261 of file `locale_facets.h`.

Referenced by `std::time_get< CharT, InIter >::get()`.

```
5.435.3.20 template<typename CharT> const char_type* std::__ctype_abstract_base< CharT >::tolower ( char_type
          * __lo, const char_type * __hi ) const [inline]
```

Convert array to lowercase.

This function converts each `char_type` in the range `[__lo,__hi)` to lowercase if possible. Other elements remain untouched. It does so by returning `ctype<char_type>::do_tolower(__lo, __hi)`.

## Parameters

<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.

## Returns

`__hi`.

Definition at line 276 of file `locale_facets.h`.

```
5.435.3.21 template<typename CharT> char_type std::__ctype_abstract_base< CharT >::toupper ( char_type __c )
          const [inline]
```

Convert to uppercase.

This function converts the argument to uppercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning `ctype<char_type>::do_toupper()`.

## Parameters

<code>__c</code>	The char_type to convert.
------------------	---------------------------

## Returns

The uppercase char\_type if convertible, else `__c`.

Definition at line 232 of file locale\_facets.h.

Referenced by `std::time_get<_CharT, _InIter>::get()`.

**5.435.3.22** `template<typename _CharT> const char_type* std::__ctype_abstract_base<_CharT>::toupper ( char_type * __lo, const char_type * __hi ) const [inline]`

Convert array to uppercase.

This function converts each char\_type in the range [lo,hi) to uppercase if possible. Other elements remain untouched. It does so by returning `ctype<char_type>::do_toupper(lo, hi)`.

## Parameters

<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.

## Returns

`__hi`.

Definition at line 247 of file locale\_facets.h.

**5.435.3.23** `template<typename _CharT> char_type std::__ctype_abstract_base<_CharT>::widen ( char __c ) const [inline]`

Widen char to char\_type.

This function converts the char argument to char\_type using the simplest reasonable transformation. It does so by returning `ctype<char_type>::do_widen(c)`.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

## Parameters

<code>__c</code>	The char to convert.
------------------	----------------------

## Returns

The converted char\_type.

Definition at line 293 of file locale\_facets.h.

Referenced by `std::time_get<_CharT, _InIter>::do_get()`, `std::money_get<_CharT, _InIter>::do_get()`, `std::time_put<_CharT, _OutIter>::do_put()`, `std::money_put<_CharT, _OutIter>::do_put()`, `std::tr2::operator<<()`, and `std::operator<<()`.

**5.435.3.24** `template<typename _CharT> const char* std::__ctype_abstract_base<_CharT>::widen ( const char * __lo, const char * __hi, char_type * __to ) const [inline]`

Widen array to char\_type.

This function converts each char in the input to char\_type using the simplest reasonable transformation. It does so by returning ctype<char\_type>::do\_widen(c).

Note: this is not what you want for codepage conversions. See codecvt for that.

## Parameters

<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.
<code>__to</code>	Pointer to the destination array.

## Returns

`__hi`.

Definition at line 312 of file `locale_facets.h`.

## 5.437.1 Detailed Description

```
template<typename _Tp, typename _Allocator = std::allocator<_Tp>>class std::__debug::deque<_Tp, _Allocator >
```

Class `std::deque` with safety/checking/debug instrumentation.

Definition at line 45 of file `debug/deque`.

## 5.437.2 Member Function Documentation

5.437.2.1 void `__gnu_debug::Safe_sequence_base::M_detach_all` ( ) [protected], [inherited]

Detach all iterators, leaving them singular.

Referenced by `__gnu_debug::Safe_sequence_base::~~Safe_sequence_base`().

5.437.2.2 void `__gnu_debug::Safe_sequence_base::M_detach_singular` ( ) [protected], [inherited]

Detach all singular iterators.

## Postcondition

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

5.437.2.3 `__gnu_cxx::__mutex` & `__gnu_debug::Safe_sequence_base::M_get_mutex` ( ) throw () [protected], [inherited]

For use in `_Safe_sequence`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence >::M_transfer_from_if`().

**5.437.2.4** `void __gnu_debug::Safe_sequence_base::M_invalidate_all( ) const` [inline],[protected],[inherited]

Invalidates all iterators.

Definition at line 256 of file `safe_base.h`.

References `__gnu_debug::Safe_sequence_base::M_version`.

**5.437.2.5** `void __gnu_debug::Safe_sequence< deque< _Tp, _Allocator > >::M_invalidate_if( _Predicate __pred )` [inherited]

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

**5.437.2.6** `void __gnu_debug::Safe_sequence_base::M_revalidate_singular( )` [protected],[inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

**5.437.2.7** `void __gnu_debug::Safe_sequence_base::M_swap( _Safe_sequence_base & __x )` [protected],[noexcept],[inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

**5.437.2.8** `void __gnu_debug::Safe_sequence< deque< _Tp, _Allocator > >::M_transfer_from_if( _Safe_sequence< deque< _Tp, _Allocator > > & __from, _Predicate __pred )` [inherited]

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

### 5.437.3 Member Data Documentation

**5.437.3.1** `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::M_const_iterators` [inherited]

The list of constant iterators that reference this container.

Definition at line 197 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence< _Sequence >::M_transfer_from_if()`.

**5.437.3.2** `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::M_iterators` [inherited]

The list of mutable iterators that reference this container.

Definition at line 194 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence< _Sequence >::M_transfer_from_if()`.

**5.437.3.3** `unsigned int __gnu_debug::Safe_sequence_base::M_version` [mutable],[inherited]

The container version number. This number may never be 0.

Definition at line 200 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence_base::M_invalidate_all()`.

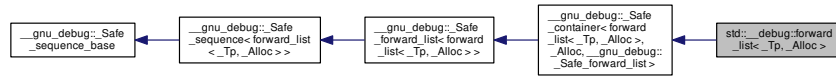

The documentation for this class was generated from the following file:

Detach all iterators, leaving them singular.

Referenced by \_\_gnu\_debug::Safe\_sequence\_base::~~Safe\_sequence\_base().

5.439.2.2 void \_\_gnu\_debug::Safe\_sequence\_base::\_M\_detach\_singular( ) [protected], [inherited]

Detach all singular iterators.

## Postcondition

for all iterators *i* attached to this sequence, *i*->\_M\_version == \_M\_version.

5.439.2.3 \_\_gnu\_cxx::mutex& \_\_gnu\_debug::Safe\_sequence\_base::\_M\_get\_mutex( ) throw() [protected], [inherited]

For use in \_Safe\_sequence.

Referenced by \_\_gnu\_debug::Safe\_sequence<\_Sequence >::\_M\_transfer\_from\_if().

5.439.2.4 void \_\_gnu\_debug::Safe\_sequence\_base::\_M\_invalidate\_all( ) const [inline], [protected], [inherited]

Invalidates all iterators.

Definition at line 256 of file safe\_base.h.

References \_\_gnu\_debug::Safe\_sequence\_base::\_M\_version.

5.439.2.5 void \_\_gnu\_debug::Safe\_sequence<list<\_Tp, \_Allocator > >::\_M\_invalidate\_if( \_Predicate \_\_pred ) [inherited]

Invalidates all iterators *x* that reference this sequence, are not singular, and for which \_\_pred(*x*) returns true. \_\_pred will be invoked with the normal iterators nested in the safe ones.

5.439.2.6 void \_\_gnu\_debug::Safe\_sequence\_base::\_M\_revalidate\_singular( ) [protected], [inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

5.439.2.7 void \_\_gnu\_debug::Safe\_sequence\_base::\_M\_swap( \_Safe\_sequence\_base & \_\_x ) [protected], [noexcept], [inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

5.439.2.8 `void __gnu_debug::Safe_sequence<list<_Tp, _Allocator>>::M_transfer_from_if( _Safe_sequence<list<_Tp, _Allocator>> & __from, _Predicate __pred )` [inherited]

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

### 5.439.3 Member Data Documentation

5.439.3.1 `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::M_const_iterators` [inherited]

The list of constant iterators that reference this container.

Definition at line 197 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence>::M_transfer_from_if()`.

5.439.3.2 `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::M_iterators` [inherited]

The list of mutable iterators that reference this container.

Definition at line 194 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence>::M_transfer_from_if()`.

5.439.3.3 `unsigned int __gnu_debug::Safe_sequence_base::M_version` [mutable], [inherited]

The container version number. This number may never be 0.

Definition at line 200 of file `safe_base.h`.

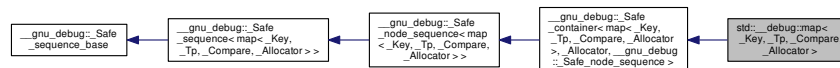

Referenced by `__gnu_debug::Safe_sequence_base::M_invalidate_all()`.

## 5.440.1 Detailed Description

```
template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Allocator = std::allocator<std-
::pair<const _Key, _Tp> >> class std::__debug::map<_Key, _Tp, _Compare, _Allocator >
```

Class std::map with safety/checking/debug instrumentation.

Definition at line 44 of file debug/map.h.

## 5.440.2 Member Function Documentation

5.440.2.1 void [\\_\\_gnu\\_debug::Safe\\_sequence\\_base::M\\_detach\\_all](#) ( ) [protected], [inherited]

Detach all iterators, leaving them singular.

Referenced by [\\_\\_gnu\\_debug::Safe\\_sequence\\_base::~~Safe\\_sequence\\_base](#)().

5.440.2.2 void [\\_\\_gnu\\_debug::Safe\\_sequence\\_base::M\\_detach\\_singular](#) ( ) [protected], [inherited]

Detach all singular iterators.

## Postcondition

for all iterators i attached to this sequence,  $i->_M\_version == \_M\_version$ .

5.440.2.3 [\\_\\_gnu\\_cxx::\\_\\_mutex & \\_\\_gnu\\_debug::Safe\\_sequence\\_base::M\\_get\\_mutex](#) ( ) throw () [protected], [inherited]

For use in [\\_Safe\\_sequence](#).

Referenced by [\\_\\_gnu\\_debug::Safe\\_sequence<\\_Sequence >::M\\_transfer\\_from\\_if](#)().

5.440.2.4 `void __gnu_debug::Safe_sequence_base::M_invalidate_all ( ) const` [inline],[protected],[inherited]

Invalidates all iterators.

Definition at line 256 of file `safe_base.h`.

References `__gnu_debug::Safe_sequence_base::M_version`.

5.440.2.5 `void __gnu_debug::Safe_sequence< map< _Key, _Tp, _Compare, _Allocator > >::M_invalidate_if ( _Predicate __pred )` [inherited]

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

5.440.2.6 `void __gnu_debug::Safe_sequence_base::M_revalidate_singular ( )` [protected],[inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

5.440.2.7 `void __gnu_debug::Safe_sequence_base::M_swap ( _Safe_sequence_base & __x )` [protected],[noexcept],[inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

5.440.2.8 `void __gnu_debug::Safe_sequence< map< _Key, _Tp, _Compare, _Allocator > >::M_transfer_from_if ( _Safe_sequence< map< _Key, _Tp, _Compare, _Allocator > > & __from, _Predicate __pred )` [inherited]

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

### 5.440.3 Member Data Documentation

5.440.3.1 `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::M_const_iterators` [inherited]

The list of constant iterators that reference this container.

Definition at line 197 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence< _Sequence >::M_transfer_from_if()`.

5.440.3.2 `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::M_iterators` [inherited]

The list of mutable iterators that reference this container.

Definition at line 194 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence< _Sequence >::M_transfer_from_if()`.

5.440.3.3 `unsigned int __gnu_debug::Safe_sequence_base::M_version` [mutable],[inherited]

The container version number. This number may never be 0.

Definition at line 200 of file `safe_base.h`.

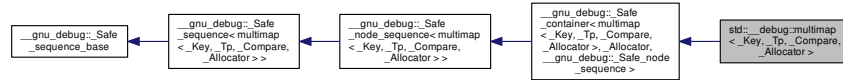

Referenced by `__gnu_debug::Safe_sequence_base::M_invalidate_all()`.

#### 5.441.1 Detailed Description

```
template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Allocator = std::allocator<std::pair<const _Key, _Tp> >>>class std::__debug::multimap<_Key, _Tp, _Compare, _Allocator >
```

Class `std::multimap` with safety/checking/debug instrumentation.

Definition at line 44 of file `debug/multimap.h`.

## 5.441.2 Member Function Documentation

5.441.2.1 `void __gnu_debug::Safe_sequence_base::M_detach_all( )` [protected],[inherited]

Detach all iterators, leaving them singular.

Referenced by `__gnu_debug::Safe_sequence_base::~~Safe_sequence_base()`.

5.441.2.2 `void __gnu_debug::Safe_sequence_base::M_detach_singular( )` [protected],[inherited]

Detach all singular iterators.

### Postcondition

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

5.441.2.3 `__gnu_cxx::mutex& __gnu_debug::Safe_sequence_base::M_get_mutex( ) throw` [protected],[inherited]

For use in `_Safe_sequence`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence>::M_transfer_from_if()`.

5.441.2.4 `void __gnu_debug::Safe_sequence_base::M_invalidate_all( ) const` [inline],[protected],[inherited]

Invalidates all iterators.

Definition at line 256 of file `safe_base.h`.

References `__gnu_debug::Safe_sequence_base::_M_version`.

5.441.2.5 `void __gnu_debug::Safe_sequence<multimap<_Key,_Tp,_Compare,_Allocator>>::M_invalidate_if( _Predicate __pred )` [inherited]

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

5.441.2.6 `void __gnu_debug::Safe_sequence_base::M_revalidate_singular( )` [protected],[inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

5.441.2.7 `void __gnu_debug::Safe_sequence_base::M_swap( _Safe_sequence_base & __x )` [protected],[noexcept],[inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

5.441.2.8 `void __gnu_debug::Safe_sequence<multimap<_Key,_Tp,_Compare,_Allocator>>::M_transfer_from_if( _Safe_sequence<multimap<_Key,_Tp,_Compare,_Allocator>> & __from, _Predicate __pred )` [inherited]

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

## 5.441.3 Member Data Documentation

5.441.3.1 `_Safe_iterator_base*` `__gnu_debug::Safe_sequence_base::M_const_iterators` [inherited]

The list of constant iterators that reference this container.

Definition at line 197 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence< _Sequence >::M_transfer_from_if()`.

5.441.3.2 `_Safe_iterator_base*` `__gnu_debug::Safe_sequence_base::M_iterators` [inherited]

The list of mutable iterators that reference this container.

Definition at line 194 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence< _Sequence >::M_transfer_from_if()`.

5.441.3.3 `unsigned int` `__gnu_debug::Safe_sequence_base::M_version` [mutable], [inherited]

The container version number. This number may never be 0.

Definition at line 200 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence_base::M_invalidate_all()`.

The documentation for this class was generated from the following file:

### 5.442.1 Detailed Description

```
template<typename _Key, typename _Compare = std::less<_Key>, typename _Allocator = std::allocator<_Key>>class std::__-
debug::multiset< _Key, _Compare, _Allocator >
```

Class std::multiset with safety/checking/debug instrumentation.

Definition at line 44 of file debug/multiset.h.

### 5.442.2 Member Function Documentation

5.442.2.1 void \_\_gnu\_debug::Safe\_sequence\_base::M\_detach\_all( ) [protected],[inherited]

Detach all iterators, leaving them singular.

Referenced by \_\_gnu\_debug::Safe\_sequence\_base::~~Safe\_sequence\_base().

5.442.2.2 void \_\_gnu\_debug::Safe\_sequence\_base::M\_detach\_singular( ) [protected],[inherited]

Detach all singular iterators.

#### Postcondition

for all iterators i attached to this sequence, i->\_M\_version == \_M\_version.

5.442.2.3 \_\_gnu\_cxx::mutex& \_\_gnu\_debug::Safe\_sequence\_base::M\_get\_mutex( ) throw() [protected],[inherited]

For use in \_Safe\_sequence.

Referenced by \_\_gnu\_debug::Safe\_sequence< \_Sequence >::M\_transfer\_from\_if().

5.442.2.4 void \_\_gnu\_debug::Safe\_sequence\_base::M\_invalidate\_all( ) const [inline],[protected],[inherited]

Invalidates all iterators.

Definition at line 256 of file safe\_base.h.

References \_\_gnu\_debug::Safe\_sequence\_base::\_M\_version.

5.442.2.5 void \_\_gnu\_debug::Safe\_sequence< multiset< \_Key, \_Compare, \_Allocator > >::M\_invalidate\_if( \_Predicate \_\_pred ) [inherited]

Invalidates all iterators x that reference this sequence, are not singular, and for which \_\_pred(x) returns true. \_\_pred will be invoked with the normal iterators nested in the safe ones.

5.442.2.6 void \_\_gnu\_debug::Safe\_sequence\_base::M\_revalidate\_singular( ) [protected],[inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

5.442.2.7 void \_\_gnu\_debug::Safe\_sequence\_base::M\_swap( \_Safe\_sequence\_base & \_\_x ) [protected],[noexcept],[inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

5.442.2.8 void \_\_gnu\_debug::Safe\_sequence< multiset<\_Key, \_Compare, \_Allocator > >::M\_transfer\_from\_if ( \_\_Safe\_sequence< multiset<\_Key, \_Compare, \_Allocator > > & \_\_from, \_Predicate \_\_pred ) [inherited]

Transfers all iterators  $x$  that reference `from` sequence, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

### 5.442.3 Member Data Documentation

5.442.3.1 \_\_Safe\_iterator\_base\* \_\_gnu\_debug::Safe\_sequence\_base::M\_const\_iterators [inherited]

The list of constant iterators that reference this container.

Definition at line 197 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence >::M_transfer_from_if()`.

5.442.3.2 \_\_Safe\_iterator\_base\* \_\_gnu\_debug::Safe\_sequence\_base::M\_iterators [inherited]

The list of mutable iterators that reference this container.

Definition at line 194 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence >::M_transfer_from_if()`.

5.442.3.3 unsigned int \_\_gnu\_debug::Safe\_sequence\_base::M\_version [mutable],[inherited]

The container version number. This number may never be 0.

Definition at line 200 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence_base::M_invalidate_all()`.

### 5.443.1 Detailed Description

```
template<typename _Key, typename _Compare = std::less<_Key>, typename _Allocator = std::allocator<_Key>> class std::__-
debug::set<_Key, _Compare, _Allocator >
```

Class `std::set` with safety/checking/debug instrumentation.

Definition at line 44 of file `debug/set.h`.

### 5.443.2 Member Function Documentation

5.443.2.1 void `__gnu_debug::Safe_sequence_base::M_detach_all()` [protected], [inherited]

Detach all iterators, leaving them singular.

Referenced by `__gnu_debug::Safe_sequence_base::~~Safe_sequence_base()`.

5.443.2.2 void `__gnu_debug::Safe_sequence_base::M_detach_singular()` [protected], [inherited]

Detach all singular iterators.

#### Postcondition

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

5.443.2.3 `__gnu_cxx::__mutex & __gnu_debug::Safe_sequence_base::M_get_mutex()` throw() [protected], [inherited]

For use in `_Safe_sequence`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence >::M_transfer_from_if()`.

5.443.2.4 void `__gnu_debug::Safe_sequence_base::M_invalidate_all()` const [inline], [protected], [inherited]

Invalidates all iterators.

Definition at line 256 of file `safe_base.h`.

References `__gnu_debug::Safe_sequence_base::M_version`.

5.443.2.5 void `__gnu_debug::Safe_sequence<set<_Key, _Compare, _Allocator >::M_invalidate_if(_Predicate __pred)` [inherited]

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

5.443.2.6 `void __gnu_debug::Safe_sequence_base::M_revalidate_singular ( )` [protected],[inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

5.443.2.7 `void __gnu_debug::Safe_sequence_base::M_swap ( _Safe_sequence_base & __x )` [protected],[noexcept],[inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

5.443.2.8 `void __gnu_debug::Safe_sequence<set<_Key,_Compare,_Allocator>>::M_transfer_from_if ( _Safe_sequence<set<_Key,_Compare,_Allocator>> & __from, Predicate __pred )` [inherited]

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

5.443.3 Member Data Documentation

5.443.3.1 `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::M_const_iterators` [inherited]

The list of constant iterators that reference this container.

Definition at line 197 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence>::M_transfer_from_if()`.

5.443.3.2 `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::M_iterators` [inherited]

The list of mutable iterators that reference this container.

Definition at line 194 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence>::M_transfer_from_if()`.

5.443.3.3 `unsigned int __gnu_debug::Safe_sequence_base::M_version` [mutable],[inherited]

The container version number. This number may never be 0.

Definition at line 200 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence_base::M_invalidate_all()`.

#### 5.444.1 Detailed Description

```
template<typename _Key, typename _Tp, typename _Hash = std::hash<_Key>, typename _Pred = std::equal_to<_Key>, typename
_Alloc = std::allocator<std::pair<const _Key, _Tp>>> class std::__debug::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc >
```

Class `std::unordered_map` with safety/checking/debug instrumentation.

Definition at line 53 of file `debug/unordered_map`.

#### 5.444.2 Member Function Documentation

5.444.2.1 void `__gnu_debug::Safe_unordered_container_base::_M_detach_all` ( ) [protected],[inherited]

Detach all iterators, leaving them singular.

5.444.2.2 void `__gnu_debug::Safe_sequence_base::_M_detach_singular` ( ) [protected],[inherited]

Detach all singular iterators.

#### Postcondition

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

5.444.2.3 `__gnu_cxx::__mutex & __gnu_debug::Safe_sequence_base::_M_get_mutex` ( ) throw ) [protected],[inherited]

For use in `_Safe_sequence`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence >::_M_transfer_from_if`().

5.444.2.4 void \_\_gnu\_debug::Safe\_sequence\_base::M\_invalidate\_all ( ) const [inline], [protected], [inherited]

Invalidates all iterators.

Definition at line 256 of file safe\_base.h.

References \_\_gnu\_debug::Safe\_sequence\_base::M\_version.

5.444.2.5 void \_\_gnu\_debug::Safe\_unordered\_container<unordered\_map<\_Key, \_Tp, \_Hash, \_Pred, \_Alloc >>::M\_invalidate\_if ( \_Predicate \_\_pred ) [protected], [inherited]

Invalidates all iterators  $x$  that reference this container, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

5.444.2.6 void \_\_gnu\_debug::Safe\_unordered\_container<unordered\_map<\_Key, \_Tp, \_Hash, \_Pred, \_Alloc >>::M\_invalidate\_local\_if ( \_Predicate \_\_pred ) [protected], [inherited]

Invalidates all local iterators  $x$  that reference this container, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal ilocal iterators nested in the safe ones.

5.444.2.7 void \_\_gnu\_debug::Safe\_sequence\_base::M\_revalidate\_singular ( ) [protected], [inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

5.444.2.8 void \_\_gnu\_debug::Safe\_unordered\_container\_base::M\_swap ( \_Safe\_unordered\_container\_base & \_\_x ) [protected], [noexcept], [inherited]

Swap this container with the given container. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

5.444.2.9 void \_\_gnu\_debug::Safe\_sequence\_base::M\_swap ( \_Safe\_sequence\_base & \_\_x ) [protected], [noexcept], [inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

### 5.444.3 Member Data Documentation

5.444.3.1 \_Safe\_iterator\_base\* \_\_gnu\_debug::Safe\_sequence\_base::M\_const\_iterators [inherited]

The list of constant iterators that reference this container.

Definition at line 197 of file safe\_base.h.

Referenced by \_\_gnu\_debug::Safe\_sequence<\_Sequence >::M\_transfer\_from\_if().

5.444.3.2 \_Safe\_iterator\_base\* \_\_gnu\_debug::Safe\_unordered\_container\_base::M\_const\_local\_iterators [inherited]

The list of constant local iterators that reference this container.

Definition at line 130 of file safe\_unordered\_base.h.

5.444.3.3 \_Safe\_iterator\_base\* \_\_gnu\_debug::Safe\_sequence\_base::M\_iterators [inherited]

The list of mutable iterators that reference this container.

Definition at line 194 of file safe\_base.h.

Referenced by `__gnu_debug::Safe_sequence<_Sequence >::M_transfer_from_if()`.

#### 5.444.3.4 `_Safe_iterator_base*` `__gnu_debug::Safe_unordered_container_base::M_local_iterators` [inherited]

The list of mutable local iterators that reference this container.

Definition at line 127 of file `safe_unordered_base.h`.

#### 5.444.3.5 `unsigned int` `__gnu_debug::Safe_sequence_base::M_version` [mutable],[inherited]

The container version number. This number may never be 0.

Definition at line 200 of file `safe_base.h`.

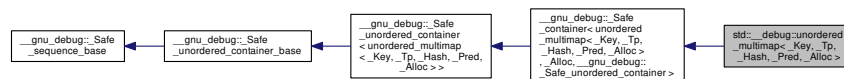

Referenced by `__gnu_debug::Safe_sequence_base::M_invalidate_all()`.

## 5.445 `std::__debug::unordered_multimap<_Key,_Tp,_Hash,_Pred,_Alloc>` Class Template Reference 1451

### 5.445.1 Detailed Description

```
template<typename _Key, typename _Tp, typename _Hash = std::hash<_Key>, typename _Pred = std::equal_to<_Key>, typename
_Alloc = std::allocator<std::pair<const _Key, _Tp>>> class std::__debug::unordered_multimap<_Key, _Tp, _Hash, _Pred, _Alloc
>
```

Class `std::unordered_multimap` with safety/checking/debug instrumentation.

Definition at line 740 of file `debug/unordered_map`.

### 5.445.2 Member Function Documentation

5.445.2.1 `void __gnu_debug::Safe_unordered_container_base::M_detach_all( )` [protected], [inherited]

Detach all iterators, leaving them singular.

5.445.2.2 `void __gnu_debug::Safe_sequence_base::M_detach_singular( )` [protected], [inherited]

Detach all singular iterators.

#### Postcondition

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

5.445.2.3 `__gnu_cxx::mutex& __gnu_debug::Safe_sequence_base::M_get_mutex( ) throw()` [protected], [inherited]

For use in `_Safe_sequence`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence>::M_transfer_from_if()`.

5.445.2.4 `void __gnu_debug::Safe_sequence_base::M_invalidate_all( ) const` [inline], [protected], [inherited]

Invalidates all iterators.

Definition at line 256 of file `safe_base.h`.

References `__gnu_debug::Safe_sequence_base::M_version`.

5.445.2.5 `void __gnu_debug::Safe_unordered_container<unordered_multimap<_Key,_Tp,_Hash,_Pred,_Alloc>>::M_invalidate_if( _Predicate __pred)` [protected], [inherited]

Invalidates all iterators `x` that reference this container, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

5.445.2.6 `void __gnu_debug::Safe_unordered_container<unordered_multimap<_Key,_Tp,_Hash,_Pred,_Alloc>>::M_invalidate_local_if( _Predicate __pred)` [protected], [inherited]

Invalidates all local iterators `x` that reference this container, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal ilocal iterators nested in the safe ones.

5.445.2.7 `void __gnu_debug::Safe_sequence_base::M_revalidate_singular( )` [protected], [inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

5.445.2.8 `void __gnu_debug::Safe_unordered_container_base::_M_swap ( _Safe_unordered_container_base & __x )`  
`[protected], [noexcept], [inherited]`

Swap this container with the given container. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

5.445.2.9 `void __gnu_debug::Safe_sequence_base::_M_swap ( _Safe_sequence_base & __x )` `[protected],`  
`[noexcept], [inherited]`

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

### 5.445.3 Member Data Documentation

5.445.3.1 `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::_M_const_iterators` `[inherited]`

The list of constant iterators that reference this container.

Definition at line 197 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence>::_M_transfer_from_if()`.

5.445.3.2 `_Safe_iterator_base* __gnu_debug::Safe_unordered_container_base::_M_const_local_iterators` `[inherited]`

The list of constant local iterators that reference this container.

Definition at line 130 of file `safe_unordered_base.h`.

5.445.3.3 `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::_M_iterators` `[inherited]`

The list of mutable iterators that reference this container.

Definition at line 194 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence>::_M_transfer_from_if()`.

5.445.3.4 `_Safe_iterator_base* __gnu_debug::Safe_unordered_container_base::_M_local_iterators` `[inherited]`

The list of mutable local iterators that reference this container.

Definition at line 127 of file `safe_unordered_base.h`.

5.445.3.5 `unsigned int __gnu_debug::Safe_sequence_base::_M_version` `[mutable], [inherited]`

The container version number. This number may never be 0.

Definition at line 200 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence_base::_M_invalidate_all()`.

**5.446.1 Detailed Description**

```
template<typename _Value, typename _Hash = std::hash<_Value>, typename _Pred = std::equal_to<_Value>, typename _Alloc =
std::allocator<_Value>>class std::__debug::unordered_multiset<_Value, _Hash, _Pred, _Alloc >
```

Class `std::unordered_multiset` with safety/checking/debug instrumentation.

Definition at line 616 of file `debug/unordered_set`.

**5.446.2 Member Function Documentation**

**5.446.2.1** `void __gnu_debug::Safe_unordered_container_base::_M_detach_all ( )` `[protected]`, `[inherited]`

Detach all iterators, leaving them singular.

**5.446.2.2** `void __gnu_debug::Safe_sequence_base::_M_detach_singular ( )` `[protected]`, `[inherited]`

Detach all singular iterators.

**Postcondition**

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

5.446.2.3 `__gnu_cxx::mutex& __gnu_debug::Safe_sequence_base::M_get_mutex ( ) throw` [protected],  
[inherited]

For use in `_Safe_sequence`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence>::M_transfer_from_if()`.

5.446.2.4 `void __gnu_debug::Safe_sequence_base::M_invalidate_all ( ) const` [inline], [protected],  
[inherited]

Invalidates all iterators.

Definition at line 256 of file `safe_base.h`.

References `__gnu_debug::Safe_sequence_base::M_version`.

5.446.2.5 `void __gnu_debug::Safe_unordered_container<unordered_multiset<_Value, _Hash, _Pred, _Alloc>  
>::M_invalidate_if ( _Predicate __pred )` [protected], [inherited]

Invalidates all iterators `x` that reference this container, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

5.446.2.6 `void __gnu_debug::Safe_unordered_container<unordered_multiset<_Value, _Hash, _Pred, _Alloc>  
>::M_invalidate_local_if ( _Predicate __pred )` [protected], [inherited]

Invalidates all local iterators `x` that reference this container, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal ilocal iterators nested in the safe ones.

5.446.2.7 `void __gnu_debug::Safe_sequence_base::M_revalidate_singular ( )` [protected], [inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

5.446.2.8 `void __gnu_debug::Safe_unordered_container_base::M_swap ( _Safe_unordered_container_base & __x )`  
[protected], [noexcept], [inherited]

Swap this container with the given container. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

5.446.2.9 `void __gnu_debug::Safe_sequence_base::M_swap ( _Safe_sequence_base & __x )` [protected],  
[noexcept], [inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

### 5.446.3 Member Data Documentation

5.446.3.1 `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::M_const_iterators` [inherited]

The list of constant iterators that reference this container.

Definition at line 197 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence>::M_transfer_from_if()`.

5.446.3.2 `_Safe_iterator_base* __gnu_debug::Safe_unordered_container_base::M_const_local_iterators` [inherited]

The list of constant local iterators that reference this container.

Definition at line 130 of file `safe_unordered_base.h`.

### 5.446.3.3 `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::M_iterators` [inherited]

The list of mutable iterators that reference this container.

Definition at line 194 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence>::_M_transfer_from_if()`.

### 5.446.3.4 `_Safe_iterator_base* __gnu_debug::Safe_unordered_container_base::M_local_iterators` [inherited]

The list of mutable local iterators that reference this container.

Definition at line 127 of file `safe_unordered_base.h`.

### 5.446.3.5 `unsigned int __gnu_debug::Safe_sequence_base::M_version` [mutable],[inherited]

The container version number. This number may never be 0.

Definition at line 200 of file `safe_base.h`.

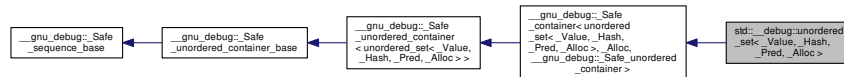

Referenced by `__gnu_debug::Safe_sequence_base::_M_invalidate_all()`.

## 5.447.1 Detailed Description

```
template<typename _Value, typename _Hash = std::hash<_Value>, typename _Pred = std::equal_to<_Value>, typename _Alloc =
std::allocator<_Value>> class std::__debug::unordered_set<_Value, _Hash, _Pred, _Alloc >
```

Class `std::unordered_set` with safety/checking/debug instrumentation.

Definition at line 53 of file `debug/unordered_set`.

## 5.447.2 Member Function Documentation

5.447.2.1 `void __gnu_debug::Safe_unordered_container_base::M_detach_all( )` [protected], [inherited]

Detach all iterators, leaving them singular.

5.447.2.2 `void __gnu_debug::Safe_sequence_base::M_detach_singular( )` [protected], [inherited]

Detach all singular iterators.

## Postcondition

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

5.447.2.3 `__gnu_cxx::mutex& __gnu_debug::Safe_sequence_base::M_get_mutex( ) throw` [protected], [inherited]

For use in `_Safe_sequence`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence >::M_transfer_from_if()`.

5.447.2.4 `void __gnu_debug::Safe_sequence_base::M_invalidate_all( ) const` [inline], [protected], [inherited]

Invalidates all iterators.

Definition at line 256 of file `safe_base.h`.

References `__gnu_debug::Safe_sequence_base::_M_version`.

5.447.2.5 `void __gnu_debug::Safe_unordered_container<unordered_set<_Value, _Hash, _Pred, _Alloc >
>::M_invalidate_if( _Predicate __pred )` [protected], [inherited]

Invalidates all iterators `x` that reference this container, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

5.447.2.6 `void __gnu_debug::Safe_unordered_container<unordered_set<_Value, _Hash, _Pred, _Alloc >
>::M_invalidate_local_if( _Predicate __pred )` [protected], [inherited]

Invalidates all local iterators `x` that reference this container, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal ilocal iterators nested in the safe ones.

5.447.2.7 `void __gnu_debug::Safe_sequence_base::M_revalidate_singular ( )` [protected],[inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

5.447.2.8 `void __gnu_debug::Safe_unordered_container_base::M_swap ( _Safe_unordered_container_base & __x )` [protected],[noexcept],[inherited]

Swap this container with the given container. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

5.447.2.9 `void __gnu_debug::Safe_sequence_base::M_swap ( _Safe_sequence_base & __x )` [protected],[noexcept],[inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

### 5.447.3 Member Data Documentation

5.447.3.1 `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::M_const_iterators` [inherited]

The list of constant iterators that reference this container.

Definition at line 197 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence >::M_transfer_from_if()`.

5.447.3.2 `_Safe_iterator_base* __gnu_debug::Safe_unordered_container_base::M_const_local_iterators` [inherited]

The list of constant local iterators that reference this container.

Definition at line 130 of file `safe_unordered_base.h`.

5.447.3.3 `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::M_iterators` [inherited]

The list of mutable iterators that reference this container.

Definition at line 194 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence >::M_transfer_from_if()`.

5.447.3.4 `_Safe_iterator_base* __gnu_debug::Safe_unordered_container_base::M_local_iterators` [inherited]

The list of mutable local iterators that reference this container.

Definition at line 127 of file `safe_unordered_base.h`.

5.447.3.5 `unsigned int __gnu_debug::Safe_sequence_base::M_version` [mutable],[inherited]

The container version number. This number may never be 0.

Definition at line 200 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence_base::M_invalidate_all()`.

The documentation for this class was generated from the following file:

#### 5.448.1 Detailed Description

```
template<typename _Tp, typename _Allocator = std::allocator<_Tp>>class std::__debug::vector< _Tp, _Allocator >
```

Class `std::vector` with safety/checking/debug instrumentation.

Definition at line 113 of file `debug/vector`.

## 5.448.2 Constructor &amp; Destructor Documentation

5.448.2.1 `template<typename _Tp, typename _Allocator = std::allocator<_Tp>> std::__debug::vector<_Tp, _Allocator>::vector ( const _Base & __x ) [inline]`

Construction from a normal-mode vector.

Definition at line 214 of file `debug/vector`.

## 5.448.3 Member Function Documentation

5.448.3.1 `void __gnu_debug::Safe_sequence_base::_M_detach_all ( ) [protected], [inherited]`

Detach all iterators, leaving them singular.

Referenced by `__gnu_debug::Safe_sequence_base::~~Safe_sequence_base()`.

5.448.3.2 `void __gnu_debug::Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]`

Detach all singular iterators.

## Postcondition

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

5.448.3.3 `__gnu_cxx::mutex& __gnu_debug::Safe_sequence_base::_M_get_mutex ( ) throw () [protected], [inherited]`

For use in `_Safe_sequence`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence >::_M_transfer_from_if()`.

5.448.3.4 `void __gnu_debug::Safe_sequence_base::_M_invalidate_all ( ) const [inline], [protected], [inherited]`

Invalidates all iterators.

Definition at line 256 of file `safe_base.h`.

References `__gnu_debug::Safe_sequence_base::_M_version`.

5.448.3.5 `void __gnu_debug::Safe_sequence<vector<_Tp, _Allocator >>::_M_invalidate_if ( _Predicate __pred ) [inherited]`

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

5.448.3.6 `void __gnu_debug::Safe_sequence_base::_M_revalidate_singular ( ) [protected], [inherited]`

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

5.448.3.7 `void __gnu_debug::Safe_sequence_base::_M_swap ( _Safe_sequence_base & __x ) [protected], [noexcept], [inherited]`

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

5.448.3.8 `void __gnu_debug::Safe_sequence<vector<Tp, Allocator>>::M_transfer_from_if( Safe_sequence<vector<Tp, Allocator>> &__from, Predicate __pred )` [inherited]

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

#### 5.448.4 Member Data Documentation

5.448.4.1 `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::M_const_iterators` [inherited]

The list of constant iterators that reference this container.

Definition at line 197 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence>::M_transfer_from_if()`.

5.448.4.2 `_Safe_iterator_base* __gnu_debug::Safe_sequence_base::M_iterators` [inherited]

The list of mutable iterators that reference this container.

Definition at line 194 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence<_Sequence>::M_transfer_from_if()`.

5.448.4.3 `unsigned int __gnu_debug::Safe_sequence_base::M_version` [mutable],[inherited]

The container version number. This number may never be 0.

Definition at line 200 of file `safe_base.h`.

Referenced by `__gnu_debug::Safe_sequence_base::M_invalidate_all()`.

The documentation for this class was generated from the following file:

- [debug/vector](#)

## 5.449 `std::__detail::BracketMatcher<typename, bool, bool>` Struct Template Reference

### Public Types

- `typedef _TraitsT::char_class_type _CharClassT`
- `typedef _TransT::_CharT _CharT`
- `typedef _TraitsT::string_type _StringT`
- `typedef _TransT::_StrTransT _StrTransT`
- `typedef _RegexTranslator`  
`<_TraitsT, __icase, __collate> _TransT`

### Public Member Functions

- `_BracketMatcher` (bool `__is_non_matching`, const `_TraitsT` & `__traits`)
- void `_M_add_char` (`_CharT` `__c`)
- void `_M_add_character_class` (const `_StringT` & `__s`, bool `__neg`)
- `_StringT` `_M_add_collate_element` (const `_StringT` & `__s`)

- [shared\\_ptr](#)< const `_RegexT` > `_M_get_nfa` ()

## 5.450.1 Detailed Description

```
template<typename _TraitsT>class std::__detail::_Compiler<_TraitsT >
```

Builds an NFA from an input iterator range.

The `_TraitsT` type should fulfill requirements [28.3].

Definition at line 57 of file `regex_compiler.h`.

The documentation for this class was generated from the following files:

- [regex\\_compiler.h](#)
- [regex\\_compiler.tcc](#)

5.451 `std::__detail::_Default_ranged_hash` Struct Reference

## 5.451.1 Detailed Description

Default ranged hash function `H`. In principle it should be a function object composed from objects of type `H1` and `H2` such that  $h(k, N) = h2(h1(k), N)$ , but that would mean making extra copies of `h1` and `h2`. So instead we'll just use a tag to tell class template `hashtable` to do that composition.

Definition at line 442 of file `hashtable_policy.h`.

The documentation for this struct was generated from the following file:

- [hashtable\\_policy.h](#)

#### 5.452 `std::__detail::Equal_helper< _Key, _Value, _ExtractKey, _Equal, _HashCodeType, __cache_hash_code >` Struct Template Reference

##### 5.452.1 Detailed Description

```
template<typename _Key, typename _Value, typename _ExtractKey, typename _Equal, typename _HashCodeType, bool __cache_hash_code>struct std::__detail::Equal_helper< _Key, _Value, _ExtractKey, _Equal, _HashCodeType, __cache_hash_code >
```

Primary class template `_Equal_helper`.

Definition at line 1442 of file `hashtable_policy.h`.

The documentation for this struct was generated from the following file:

- [hashtable\\_policy.h](#)

#### 5.453 `std::__detail::Equal_helper< _Key, _Value, _ExtractKey, _Equal, _HashCodeType, false >` Struct Template Reference

##### Static Public Member Functions

- static bool **`_S_equals`** (const `_Equal` &\_\_eq, const `_ExtractKey` &\_\_extract, const `_Key` &\_\_k, `_HashCodeType`, `_Hash_node`< `_Value`, false > \*\_\_n)

##### 5.453.1 Detailed Description

```
template<typename _Key, typename _Value, typename _ExtractKey, typename _Equal, typename _HashCodeType>struct std::__detail::Equal_helper< _Key, _Value, _ExtractKey, _Equal, _HashCodeType, false >
```

Specialization.

#### 5.459.1 Detailed Description

```
template<typename, typename, typename, bool>class std::__detail::_Executor< typename, typename, typename, bool >
```

Takes a regex and an input string and does the matching.

The `_Executor` class has two modes: DFS mode and BFS mode, controlled by the template parameter `__dfs_mode`.

Definition at line 60 of file `regex.h`.

The documentation for this class was generated from the following files:

- [regex.h](#)
  
- [regex\\_executor.h](#)
  
- [regex\\_executor.tcc](#)

**5.460** `std::__detail::_Hash_code_base<_Key, _Value, _ExtractKey, _H1, _H2, _Hash, __cache_hash_code >`  
**Struct Template Reference**

**5.460.1 Detailed Description**

```
template<typename _Key, typename _Value, typename _ExtractKey, typename _H1, typename _H2, typename _Hash, bool __cache_hash_code>struct std::__detail::_Hash_code_base<_Key, _Value, _ExtractKey, _H1, _H2, _Hash, __cache_hash_code >
```

Primary class template `_Hash_code_base`.

Encapsulates two policy issues that aren't quite orthogonal. (1) the difference between using a ranged hash function and using the combination of a hash function and a range-hashing function. In the former case we don't have such things as hash codes, so we have a dummy type as placeholder. (2) Whether or not we cache hash codes. Caching hash codes is meaningless if we have a ranged hash function.

We also put the key extraction objects here, for convenience. Each specialization derives from one or more of the template parameters to benefit from Ebo. This is important as this type is inherited in some cases by the `_Local_iterator_base` type used to implement `local_iterator` and `const_local_iterator`. As with any iterator type we prefer to make it as small as possible.

Primary template is unused except as a hook for specializations.

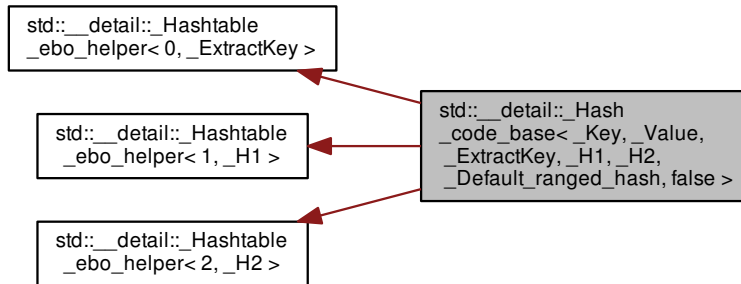

Definition at line 1179 of file `hashtable_policy.h`.

The documentation for this struct was generated from the following file:

- [hashtable\\_policy.h](#)

## 5.461 `std::__detail::_Hash_code_base<_Key, _Value, _ExtractKey, _H1, _H2, _Default_ranged_hash, false >` Struct Template Reference

#### 5.473.1 Detailed Description

`template<int _Nm, typename _Tp>struct std::__detail::_Hashtable_ebo_helper<_Nm, _Tp, true >`

Specialization using EBO.

Definition at line 1103 of file `hashtable_policy.h`.

The documentation for this struct was generated from the following file:

- [hashtable\\_policy.h](#)

## 5.474 `std::__detail::_Hashtable_traits<_Cache_hash_code, _Constant_iterators, _Unique_keys >` Struct Template Reference

### Public Types

- using `__constant_iterators` = `__bool_constant<_Constant_iterators >`
- using `__hash_cached` = `__bool_constant<_Cache_hash_code >`
- using `__unique_keys` = `__bool_constant<_Unique_keys >`

### 5.474.1 Detailed Description

```
template<bool _Cache_hash_code, bool _Constant_iterators, bool _Unique_keys>struct std::__detail::_Hashtable_traits<_Cache_hash_code, _Constant_iterators, _Unique_keys >
```

```
struct _Hashtable_traits
```

Important traits for hash tables.

#### Template Parameters

<code>_Cache_hash_code</code>	Boolean value. True if the value of the hash function is stored along with the value. This is a time-space tradeoff. Storing it may improve lookup speed by reducing the number of times we need to call the <code>_Equal</code> function.
<code>_Constant_iterators</code>	Boolean value. True if <code>iterator</code> and <code>const_iterator</code> are both constant iterator types. This is true for <code>unordered_set</code> and <code>unordered_multiset</code> , false for <code>unordered_map</code> and <code>unordered_multimap</code> .
<code>_Unique_keys</code>	Boolean value. True if the return value of <code>_Hashtable::count(k)</code> is always at most one, false if it may be an arbitrary number. This is true for <code>unordered_set</code> and <code>unordered_map</code> , false for <code>unordered_multiset</code> and <code>unordered_multimap</code> .

Definition at line 200 of file `hashtable_policy.h`.

#### 5.484.1 Detailed Description

template<typename \_Key, typename \_Value, typename \_ExtractKey, typename \_H1, typename \_H2, typename \_Hash>struct std::\_\_detail::Local\_iterator\_base<\_Key, \_Value, \_ExtractKey, \_H1, \_H2, \_Hash, true >

Partial specialization used when nodes contain a cached hash code.

Definition at line 1470 of file hashtable\_policy.h.

The documentation for this struct was generated from the following file:

- [hashtable\\_policy.h](#)

Inheritance diagram for `std::__detail::Map_base<_Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, _Unique_keys >`:

#### 5.485.1 Detailed Description

```
template<typename _Key, typename _Value, typename _Alloc, typename _ExtractKey, typename _Equal, typename _H1, typename
_H2, typename _Hash, typename _RehashPolicy, typename _Traits, bool _Unique_keys = _Traits::__unique_keys::value>struct std::_
_detail::_Map_base< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, _Unique_keys >
```

Primary class template `_Map_base`.

If the hashtable has a value type of the form `pair<T1, T2>` and a key extraction policy (`_ExtractKey`) that returns the first part of the pair, the hashtable gets a `mapped_type` typedef. If it satisfies those criteria and also has unique keys, then it also gets an `operator[]`.

Definition at line 643 of file `hashtable_policy.h`.

The documentation for this struct was generated from the following file:

- [hashtable\\_policy.h](#)

## 5.486 `std::_detail::_Map_base< _Key, _Pair, _Alloc, _Select1st, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, false >` Struct Template Reference

### Public Types

- using `mapped_type` = typename `std::tuple_element< 1, _Pair >::type`

#### 5.486.1 Detailed Description

```
template<typename _Key, typename _Pair, typename _Alloc, typename _Equal, typename _H1, typename _H2, typename _Hash, type-
name _RehashPolicy, typename _Traits>struct std::_detail::_Map_base< _Key, _Pair, _Alloc, _Select1st, _Equal, _H1, _H2, _Hash,
_RehashPolicy, _Traits, false >
```

Partial specialization, `__unique_keys` set to `false`.

Definition at line 649 of file `hashtable_policy.h`.

The documentation for this struct was generated from the following file:

- [hashtable\\_policy.h](#)

## 5.487 `std::_detail::_Map_base< _Key, _Pair, _Alloc, _Select1st, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, true >` Struct Template Reference

### Public Types

- using `iterator` = typename `__hashtable_base::iterator`
- using `key_type` = typename `__hashtable_base::key_type`
- using `mapped_type` = typename `std::tuple_element< 1, _Pair >::type`

### Public Member Functions

- `mapped_type & at` (const `key_type &__k`)
- const `mapped_type & at` (const `key_type &__k`) const
- `mapped_type & operator[]` (const `key_type &__k`)
- `mapped_type & operator[]` (`key_type &&__k`)

## 5.487.1 Detailed Description

```
template<typename _Key, typename _Pair, typename _Alloc, typename _Equal, typename _H1, typename _H2, typename _Hash, type-
name _RehashPolicy, typename _Traits> struct std::__detail::_Map_base< _Key, _Pair, _Alloc, _Select1st, _Equal, _H1, _H2, _Hash,
_RehashPolicy, _Traits, true >
```

Partial specialization, \_\_unique\_keys set to true.

Definition at line 659 of file hashtable\_policy.h.

The documentation for this struct was generated from the following file:

#### 5.499.1 Detailed Description

```
template<typename _CharT>class std::__detail::_Scanner<_CharT>
```

Scans an input range for regex tokens.

The `_Scanner` class interprets the regular expression pattern in the input range passed to its constructor as a sequence of parse tokens passed to the regular expression compiler. The sequence of tokens provided depends on the

flag settings passed to the constructor: different regular expression grammars will interpret the same input pattern in syntactically different ways.

Definition at line 210 of file `regex_scanner.h`.

## 5.499.2 Member Enumeration Documentation

### 5.499.2.1 enum `std::_detail::_ScannerBase::_TokenT` : unsigned [inherited]

Token types returned from the scanner.

Definition at line 46 of file `regex_scanner.h`.

The documentation for this class was generated from the following files:

- [regex\\_scanner.h](#)
- [regex\\_scanner.tcc](#)

## 5.500 `std::_detail::_StateSeq<_TraitsT>` Class Template Reference

### Public Types

- typedef `_NFA<_TraitsT>` **`_RegexT`**

## 5.517 std::\_\_iterator\_traits< \_Iterator, typename > Struct Template Reference

### 5.517.1 Detailed Description

```
template<typename _Iterator, typename = __void_t<>>struct std::__iterator_traits< _Iterator, typename >
```

Traits class for iterators.

This class does nothing but define nested typedefs. The general version simply *forwards* the nested typedefs from the Iterator argument. Specialized versions for pointers and pointers-to-const provide tighter, more correct semantics.

Definition at line 144 of file stl\_iterator\_base\_types.h.

The documentation for this struct was generated from the following file:

- [stl\\_iterator\\_base\\_types.h](#)

## 5.518 std::\_\_numeric\_limits\_base Struct Reference

- static constexpr `float_round_style` `round_style`
- static constexpr bool `tinyness_before`
- static constexpr bool `traps`

**5.518.1 Detailed Description**

Part of `std::numeric_limits`.

The `static const` members are usable as integral constant expressions.

**Note**

This is a separate class for purposes of efficiency; you should only access these members as part of an instantiation of the `std::numeric_limits` class.

Definition at line 202 of file `limits`.

**5.518.2 Member Data Documentation****5.518.2.1 `constexpr int std::_numeric_limits_base::digits` [static]**

The number of `radix` digits that be represented without change: for integer types, the number of non-sign bits in the mantissa; for floating types, the number of `radix` digits in the mantissa.

Definition at line 211 of file `limits`.

**5.518.2.2 `constexpr int std::_numeric_limits_base::digits10` [static]**

The number of base 10 digits that can be represented without change.

Definition at line 214 of file `limits`.

**5.518.2.3 `constexpr float_denorm_style std::_numeric_limits_base::has_denorm` [static]**

See `std::float_denorm_style` for more information.

Definition at line 266 of file `limits`.

**5.518.2.4 `constexpr bool std::_numeric_limits_base::has_denorm_loss` [static]**

True if loss of accuracy is detected as a denormalization loss, rather than as an inexact result.

Definition at line 270 of file `limits`.

**5.518.2.5 `constexpr bool std::_numeric_limits_base::has_infinity` [static]**

True if the type has a representation for positive infinity.

Definition at line 255 of file `limits`.

**5.518.2.6 `constexpr bool std::_numeric_limits_base::has_quiet_NaN` [static]**

True if the type has a representation for a quiet (non-signaling) Not a Number.

Definition at line 259 of file `limits`.

**5.518.2.7 `constexpr bool std::_numeric_limits_base::has_signaling_NaN` [static]**

True if the type has a representation for a signaling Not a Number.

Definition at line 263 of file `limits`.

**5.518.2.8 `constexpr bool std::_numeric_limits_base::is_bounded` [static]**

True if the set of values representable by the type is finite. All built-in types are bounded, this member would be false for arbitrary precision types.

Definition at line 279 of file `limits`.

**5.518.2.9** constexpr bool std::\_\_numeric\_limits\_base::is\_exact [static]

True if the type uses an exact representation. All integer types are exact, but not all exact types are integer. For example, rational and fixed-exponent representations are exact but not integer.

Definition at line 231 of file limits.

**5.518.2.10** constexpr bool std::\_\_numeric\_limits\_base::is\_iec559 [static]

True if-and-only-if the type adheres to the IEC 559 standard, also known as IEEE 754. (Only makes sense for floating point types.)

Definition at line 274 of file limits.

**5.518.2.11** constexpr bool std::\_\_numeric\_limits\_base::is\_integer [static]

True if the type is integer.

Definition at line 226 of file limits.

**5.518.2.12** constexpr bool std::\_\_numeric\_limits\_base::is\_modulo [static]

True if the type is *modulo*. A type is modulo if, for any operation involving +, -, or \* on values of that type whose result would fall outside the range [min(),max()], the value returned differs from the true value by an integer multiple of max() - min() + 1. On most machines, this is false for floating types, true for unsigned integers, and true for signed integers. See PR22200 about signed integers.

Definition at line 288 of file limits.

**5.518.2.13** constexpr bool std::\_\_numeric\_limits\_base::is\_signed [static]

True if the type is signed.

Definition at line 223 of file limits.

**5.518.2.14** constexpr bool std::\_\_numeric\_limits\_base::is\_specialized [static]

This will be true for all fundamental types (which have specializations), and false for everything else.

Definition at line 206 of file limits.

**5.518.2.15** constexpr int std::\_\_numeric\_limits\_base::max\_digits10 [static]

The number of base 10 digits required to ensure that values which differ are always differentiated.

Definition at line 219 of file limits.

**5.518.2.16** constexpr int std::\_\_numeric\_limits\_base::max\_exponent [static]

The maximum positive integer such that `radix` raised to the power of (one less than that integer) is a representable finite floating point number.

Definition at line 248 of file limits.

**5.518.2.17** constexpr int std::\_\_numeric\_limits\_base::max\_exponent10 [static]

The maximum positive integer such that 10 raised to that power is in the range of representable finite floating point numbers.

Definition at line 252 of file limits.

**5.518.2.18** `constexpr int std::__numeric_limits_base::min_exponent` `[static]`

The minimum negative integer such that `radix` raised to the power of (one less than that integer) is a normalized floating point number.

Definition at line 239 of file `limits`.

**5.518.2.19** `constexpr int std::__numeric_limits_base::min_exponent10` `[static]`

The minimum negative integer such that 10 raised to that power is in the range of normalized floating point numbers.

Definition at line 243 of file `limits`.

**5.518.2.20** `constexpr int std::__numeric_limits_base::radix` `[static]`

For integer types, specifies the base of the representation. For floating types, specifies the base of the exponent representation.

Definition at line 235 of file `limits`.

**5.518.2.21** `constexpr float_round_style std::__numeric_limits_base::round_style` `[static]`

See `std::float_round_style` for more information. This is only meaningful for floating types; integer types will all be `round_toward_zero`.

Definition at line 299 of file `limits`.

**5.518.2.22** `constexpr bool std::__numeric_limits_base::tinyness_before` `[static]`

True if tininess is detected before rounding. (see IEC 559)

Definition at line 294 of file `limits`.

**5.518.2.23** `constexpr bool std::__numeric_limits_base::traps` `[static]`

True if trapping is implemented for this type.

Definition at line 291 of file `limits`.

#### 5.538.1 Detailed Description

```
template<typename _Tp, typename _Alloc>class std::_Deque_base<_Tp, _Alloc >
```

Deque base class. This class provides the unified face for deque's allocation. This class's constructor and destructor allocate and deallocate (but do not initialize) storage. This makes exception safety easier.

Nothing in this class ever constructs or destroys an actual Tp element. (Deque handles that itself.) Only/All memory management is performed here.

Definition at line 461 of file stl\_deque.h.

#### 5.538.2 Member Function Documentation

5.538.2.1 `template<typename _Tp, typename _Alloc > void std::_Deque_base<_Tp, _Alloc >::_M_initialize_map ( size_t __num_elements )` [protected]

Layout storage.

#### Parameters

<code>__num_elements</code>	The count of T's for which to allocate space at first.
-----------------------------	--

## Returns

Nothing.

The initial underlying memory layout is a bit complicated...

Definition at line 683 of file `stl_deque.h`.

References `std::max()`.

### 5.539.1 Detailed Description

```
template<typename _Tp, typename _Ref, typename _Ptr> struct std::_Deque_iterator< _Tp, _Ref, _Ptr >
```

A deque::iterator.

Quite a bit of intelligence here. Much of the functionality of deque is actually passed off to this class. A deque holds two of these internally, marking its valid range. Access to elements is done as offsets of either of those two, relying on operator overloading in this class.

All the functions are op overloads except for `_M_set_node`.

Definition at line 109 of file `stl_deque.h`.

### 5.539.2 Member Function Documentation

```
5.539.2.1 template<typename _Tp, typename _Ref, typename _Ptr> void std::_Deque_iterator< _Tp, _Ref, _Ptr >::_M_set_node ( _Map_pointer __new_node ) [inline],[noexcept]
```

Prepares to traverse `new_node`. Sets everything except `_M_cur`, which should therefore be set by the caller immediately afterwards, based on `_M_first` and `_M_last`.

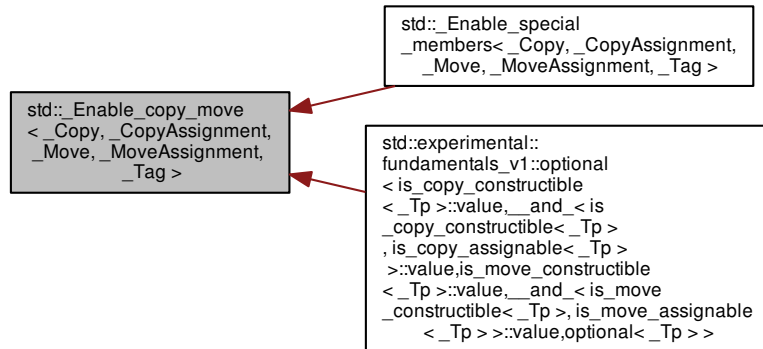

Definition at line 255 of file `stl_deque.h`.

The documentation for this struct was generated from the following file:

`struct __detail::Map_base`

5.550.1 Detailed Description

`template<typename _Key, typename _Value, typename _Alloc, typename _ExtractKey, typename _Equal, typename _H1, typename _H2, typename _Hash, typename _RehashPolicy, typename _Traits>class std::Hashtable<_Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits >`

Primary class template `_Hashtable`.

Template Parameters

<code>_Value</code>	CopyConstructible type.
<code>_Key</code>	CopyConstructible type.
<code>_Alloc</code>	An allocator type ([lib.allocator.requirements]) whose <code>_Alloc::value_type</code> is <code>_Value</code> . As a conforming extension, we allow for <code>_Alloc::value_type != _Value</code> .
<code>_ExtractKey</code>	Function object that takes an object of type <code>_Value</code> and returns a value of type <code>_Key</code> .
<code>_Equal</code>	Function object that takes two objects of type <code>k</code> and returns a bool-like value that is true if the two objects are considered equal.
<code>_H1</code>	The hash function. A unary function object with argument type <code>_Key</code> and result type <code>size_t</code> . Return values should be distributed over the entire range <code>[0, numeric_limits&lt;size_t&gt;:max()]</code> .

<code>_H2</code>	The range-hashing function (in the terminology of Tavori and Dreizin). A binary function object whose argument types and result type are all <code>size_t</code> . Given arguments <code>r</code> and <code>N</code> , the return value is in the range <code>[0, N)</code> .
<code>_Hash</code>	The ranged hash function (Tavori and Dreizin). A binary function whose argument types are <code>_Key</code> and <code>size_t</code> and whose result type is <code>size_t</code> . Given arguments <code>k</code> and <code>N</code> , the return value is in the range <code>[0, N)</code> . Default: <code>hash(k, N) = h2(h1(k), N)</code> . If <code>_Hash</code> is anything other than the default, <code>_H1</code> and <code>_H2</code> are ignored.
<code>_RehashPolicy</code>	Policy class with three members, all of which govern the bucket count. <code>_M_next_bkt(n)</code> returns a bucket count no smaller than <code>n</code> . <code>_M_bkt_for_elements(n)</code> returns a bucket count appropriate for an element count of <code>n</code> . <code>_M_need_rehash(n_bkt, n_elt, n_ins)</code> determines whether, if the current bucket count is <code>n_bkt</code> and the current element count is <code>n_elt</code> , we need to increase the bucket count. If so, returns <code>make_pair(true, n)</code> , where <code>n</code> is the new bucket count. If not, returns <code>make_pair(false, &lt;anything&gt;)</code>
<code>_Traits</code>	Compile-time class with three boolean <code>std::integral_constant</code> members: <code>__cache_hash_code</code> , <code>__constant_iterators</code> , <code>__unique_keys</code> .

Each `_Hashtable` data structure has:

- `_Bucket[] _M_buckets`
- `_Hash_node_base _M_before_begin`
- `size_type _M_bucket_count`
- `size_type _M_element_count`

with `_Bucket` being `_Hash_node*` and `_Hash_node` containing:

- `_Hash_node* _M_next`
- `Tp _M_value`
- `size_t _M_hash_code` if `cache_hash_code` is true

In terms of Standard containers the hashtable is like the aggregation of:

- `std::forward_list<_Node>` containing the elements
- `std::vector<std::forward_list<_Node>::iterator>` representing the buckets

The non-empty buckets contain the node before the first node in the bucket. This design makes it possible to implement something like `std::forward_list::insert_after` on container insertion and `std::forward_list::erase_after` on container erase calls. `_M_before_begin` is equivalent to `std::forward_list::before_begin`. Empty buckets contain `nullptr`. Note that one of the non-empty buckets contains `&_M_before_begin` which is not a dereferenceable node so the node pointer in a bucket shall never be dereferenced, only its next node can be.

Walking through a bucket's nodes requires a check on the hash code to see if each node is still in the bucket. Such a design assumes a quite efficient hash functor and is one of the reasons it is highly advisable to set `__cache_hash_code` to true.

The container iterators are simply built from nodes. This way incrementing the iterator is perfectly efficient independent of how many empty buckets there are in the container.

On insert we compute the element's hash code and use it to find the bucket index. If the element must be inserted in an empty bucket we add it at the beginning of the singly linked list and make the bucket point to `_M_before_begin`. The bucket that used to point to `_M_before_begin`, if any, is updated to point to its new before begin node.

On erase, the simple iterator design requires using the hash functor to get the index of the bucket to update. For this reason, when `__cache_hash_code` is set to false the hash functor must not throw and this is enforced by a static assertion.

Functionality is implemented by decomposition into base classes, where the derived `_Hashtable` class is used in `_Map_base`, `_Insert`, `_Rehash_base`, and `_Equality` base classes to access the "this" pointer. `_Hashtable_base` is used in the base classes as a non-recursive, fully-completed-type so that detailed nested type information, such as iterator type and node type, can be used. This is similar to the "Curiously Recurring Template Pattern" (CRTP) technique, but uses a reconstructed, not explicitly passed, template pattern.

Base class templates are:

- `__detail::_Hashtable_base`
- `__detail::_Map_base`
- `__detail::_Insert`
- `__detail::_Rehash_base`
- `__detail::_Equality`

Definition at line 173 of file `bits/hashtable.h`.

### 5.559 `std::_Mu< _Arg, _IsBindExp, _IsPlaceholder >` Class Template Reference

#### 5.559.1 Detailed Description

```
template<typename _Arg, bool _IsBindExp = is_bind_expression<_Arg>::value, bool _IsPlaceholder = (is_placeholder<_Arg>::value > 0)>class std::_Mu< _Arg, _IsBindExp, _IsPlaceholder >
```

Maps an argument to `bind()` into an actual argument to the bound function object [`func.bind.bind`]/10. Only the first parameter should be specified: the rest are used to determine among the various implementations. Note that, although this class is a function object, it isn't entirely normal because it takes only two parameters regardless of the number of parameters passed to the bind expression. The first parameter is the bound argument and the second parameter is a tuple containing references to the rest of the arguments.

Definition at line 278 of file `functional`.

The documentation for this class was generated from the following file:

- [functional](#)

### 5.560 `std::_Mu< _Arg, false, false >` Class Template Reference

## Public Member Functions

- `template<typename _CVArg, typename _Tuple > _CVArg && operator() (_CVArg &&__arg, _Tuple &) const volatile`

## 5.560.1 Detailed Description

`template<typename _Arg>class std::_Mu<_Arg, false, false >`

If the argument is just a value, returns a reference to that value. The cv-qualifiers on the reference are determined by the caller. C++11 [func.bind.bind] p10 bullet 4.

Definition at line 358 of file functional.

The documentation for this class was generated from the following file:

- [functional](#)

5.561 `std::_Mu<_Arg, false, true >` Class Template Reference

## Public Member Functions

- `template<typename _Tuple > _Safe_tuple_element_t <(is_placeholder<_Arg > ::value-1), _Tuple > && operator() (const volatile _Arg &, _Tuple &__tuple) const volatile`

## 5.561.1 Detailed Description

`template<typename _Arg>class std::_Mu<_Arg, false, true >`

If the argument is a placeholder for the Nth argument, returns a reference to the Nth argument to the bind function object. C++11 [func.bind.bind] p10 bullet 3.

Definition at line 340 of file functional.

The documentation for this class was generated from the following file:

- [functional](#)

5.562 `std::_Mu<_Arg, true, false >` Class Template Reference

## Public Member Functions

- `template<typename _CVArg, typename... _Args> auto operator() (_CVArg &__arg, tuple<_Args...> &__tuple) const volatile-> decltype(__arg(declval<_Args >()...))`

## 5.562.1 Detailed Description

```
template<typename _Arg>class std::_Mu< _Arg, true, false >
```

If the argument is a bind expression, we invoke the underlying function object with the same cv-qualifiers as we are given and pass along all of our arguments (unwrapped). C++11 [func.bind.bind] p10 bullet 2.

Definition at line 306 of file functional.

The documentation for this class was generated from the following file:

5.569 `std::_Temporary_buffer<_ForwardIterator, _Tp>` Class Template Reference

Inheritance diagram for `std::_Temporary_buffer<_ForwardIterator, _Tp>`:

## Public Types

- typedef pointer **iterator**
- typedef value\_type \* **pointer**
- typedef ptrdiff\_t **size\_type**
- typedef \_Tp **value\_type**

## Public Member Functions

- `_Temporary_buffer` (`_ForwardIterator __first`, `_ForwardIterator __last`)
- iterator `begin` ()
- iterator `end` ()
- size\_type `requested_size` () const
- size\_type `size` () const

## Protected Attributes

- pointer `_M_buffer`

- `size_type _M_len`
- `size_type _M_original_len`

### 5.569.1 Detailed Description

```
template<typename _ForwardIterator, typename _Tp> class std::_Temporary_buffer< _ForwardIterator, _Tp >
```

This class is used in two places: `stl_algo.h` and `ext/memory`, where it is wrapped as the `temporary_buffer` class. See `temporary_buffer` docs for more notes.

Definition at line 122 of file `stl_tempbuf.h`.

### 5.569.2 Constructor & Destructor Documentation

```
5.569.2.1 template<typename _ForwardIterator, typename _Tp > std::_Temporary_buffer< _ForwardIterator, _Tp >
::_Temporary_buffer ( _ForwardIterator __first, _ForwardIterator __last )
```

Constructs a temporary buffer of a size somewhere between zero and the size of the given range.

Definition at line 244 of file `stl_tempbuf.h`.

References `std::pair< _T1, _T2 >::first`, `std::get_temporary_buffer()`, `std::return_temporary_buffer()`, and `std::pair< _T1, _T2 >::second`.

### 5.569.3 Member Function Documentation

```
5.569.3.1 template<typename _ForwardIterator, typename _Tp > iterator std::_Temporary_buffer< _ForwardIterator, _Tp >
::begin ( ) [inline]
```

As per Table mumble.

Definition at line 151 of file `stl_tempbuf.h`.

```
5.569.3.2 template<typename _ForwardIterator, typename _Tp > iterator std::_Temporary_buffer< _ForwardIterator, _Tp >
::end ( ) [inline]
```

As per Table mumble.

Definition at line 156 of file `stl_tempbuf.h`.

```
5.569.3.3 template<typename _ForwardIterator, typename _Tp > size_type std::_Temporary_buffer< _ForwardIterator, _Tp >
::requested_size ( ) const [inline]
```

Returns the size requested by the constructor; may be `>size()`.

Definition at line 146 of file `stl_tempbuf.h`.

```
5.569.3.4 template<typename _ForwardIterator, typename _Tp > size_type std::_Temporary_buffer< _ForwardIterator, _Tp >
::size ( ) const [inline]
```

As per Table mumble.

Definition at line 141 of file `stl_tempbuf.h`.

5.570 `std::_Tuple_impl<_Idx, _Elements >` Struct Template Reference

## 5.570.1 Detailed Description

```
template<std::size_t _Idx, typename... _Elements>struct std::_Tuple_impl<_Idx, _Elements >
```

Contains the actual implementation of the `tuple` template, stored as a recursive inheritance hierarchy from the first element (most derived class) to the last (least derived class). The `Idx` parameter gives the 0-based index of the element stored at this point in the hierarchy; we use it to implement a constant-time `get()` operation.

Definition at line 177 of file `tuple`.

The documentation for this struct was generated from the following file:

- [tuple](#)

5.571 `std::_Tuple_impl<_Idx, _Head, _Tail...>` Struct Template Reference

### 5.593.1 Detailed Description

`template<typename _Alloc>struct std::allocator_traits< _Alloc >`

Uniform interface to all allocator types.

Definition at line 83 of file `bits/alloc_traits.h`.

### 5.593.2 Member Typedef Documentation

5.593.2.1 `template<typename _Alloc> typedef _Alloc std::allocator_traits< _Alloc >::allocator_type`

The allocator type.

Definition at line 86 of file `bits/alloc_traits.h`.

5.593.2.2 `template<typename _Alloc> using std::allocator_traits< _Alloc >::const_pointer = typename _Ptr<__c_pointer, const value_type>::type`

The allocator's const pointer type.

`Alloc::const_pointer` if that type exists, otherwise `pointer_traits<pointer>::rebind<const value_type>`

Definition at line 135 of file `bits/alloc_traits.h`.

5.593.2.3 `template<typename _Alloc> using std::allocator_traits< _Alloc >::const_void_pointer = typename _Ptr<__cv_pointer, const void>::type`

The allocator's const void pointer type.

`Alloc::const_void_pointer` if that type exists, otherwise `pointer_traits<pointer>::rebind<const void>`

Definition at line 151 of file `bits/alloc_traits.h`.

**5.593.2.4** `template<typename _Alloc> using std::allocator_traits<_Alloc>::difference_type = typename Diff<_Alloc, pointer>::type`

The allocator's difference type.

`Alloc::difference_type` if that type exists, otherwise `pointer_traits<pointer>::difference_type`

Definition at line 159 of file `bits/alloc_traits.h`.

**5.593.2.5** `template<typename _Alloc> using std::allocator_traits<_Alloc>::is_always_equal = __detected_or_t<typename is_empty<_Alloc>::type, __equal, _Alloc>`

Whether all instances of the allocator type compare equal.

`Alloc::is_always_equal` if that type exists, otherwise `is_empty<Alloc>::type`

Definition at line 203 of file `bits/alloc_traits.h`.

**5.593.2.6** `template<typename _Alloc> using std::allocator_traits<_Alloc>::pointer = __detected_or_t<value_type*, __pointer, _Alloc>`

The allocator's pointer type.

`Alloc::pointer` if that type exists, otherwise `value_type*`

Definition at line 95 of file `bits/alloc_traits.h`.

**5.593.2.7** `template<typename _Alloc> using std::allocator_traits<_Alloc>::propagate_on_container_copy_assignment = __detected_or_t<false_type, __pocca, _Alloc>`

How the allocator is propagated on copy assignment.

`Alloc::propagate_on_container_copy_assignment` if that type exists, otherwise `false_type`

Definition at line 176 of file `bits/alloc_traits.h`.

**5.593.2.8** `template<typename _Alloc> using std::allocator_traits<_Alloc>::propagate_on_container_move_assignment = __detected_or_t<false_type, __pocma, _Alloc>`

How the allocator is propagated on move assignment.

`Alloc::propagate_on_container_move_assignment` if that type exists, otherwise `false_type`

Definition at line 185 of file `bits/alloc_traits.h`.

**5.593.2.9** `template<typename _Alloc> using std::allocator_traits<_Alloc>::propagate_on_container_swap = __detected_or_t<false_type, __pocs, _Alloc>`

How the allocator is propagated on swap.

`Alloc::propagate_on_container_swap` if that type exists, otherwise `false_type`

Definition at line 194 of file `bits/alloc_traits.h`.

**5.593.2.10** `template<typename _Alloc> using std::allocator_traits<_Alloc>::size_type = typename Size<_Alloc, difference_type>::type`

The allocator's size type.

`Alloc::size_type` if that type exists, otherwise `make_unsigned<difference_type>::type`

Definition at line 167 of file `bits/alloc_traits.h`.

5.593.2.11 `template<typename _Alloc> typedef _Alloc::value_type std::allocator_traits<_Alloc>::value_type`

The allocated type.

Definition at line 88 of file bits/alloc\_traits.h.

5.593.2.12 `template<typename _Alloc> using std::allocator_traits<_Alloc>::void_pointer = typename _Ptr<_v_pointer, void>::type`

The allocator's void pointer type.

`Alloc::void_pointer` if that type exists, otherwise `pointer_traits<pointer>::rebind<void>`

Definition at line 143 of file bits/alloc\_traits.h.

### 5.593.3 Member Function Documentation

5.593.3.1 `template<typename _Alloc> static pointer std::allocator_traits<_Alloc>::allocate ( _Alloc & __a, size_type __n ) [inline],[static]`

Allocate memory.

#### Parameters

<code>__a</code>	An allocator.
<code>__n</code>	The number of objects to allocate space for.

Calls `a.allocate(n)`

Definition at line 300 of file bits/alloc\_traits.h.

5.593.3.2 `template<typename _Alloc> static pointer std::allocator_traits<_Alloc>::allocate ( _Alloc & __a, size_type __n, const_void_pointer __hint ) [inline],[static]`

Allocate memory.

#### Parameters

<code>__a</code>	An allocator.
<code>__n</code>	The number of objects to allocate space for.
<code>__hint</code>	Aid to locality.

#### Returns

Memory of suitable size and alignment for  $n$  objects of type `value_type`

Returns `a.allocate(n, hint)` if that expression is well-formed, otherwise returns `a.allocate(n)`

Definition at line 315 of file bits/alloc\_traits.h.

5.593.3.3 `template<typename _Alloc> template<typename _Tp, typename... _Args> static auto std::allocator_traits<_Alloc>::construct ( _Alloc & __a, _Tp * __p, _Args &&... __args )-> decltype(_S_construct(_a, __p, std::forward<_Args>(_args)...)) [inline],[static]`

Construct an object of type `_Tp`.

## Parameters

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to memory of suitable size and alignment for <code>Tp</code>
<code>__args</code>	Constructor arguments.

Calls `__a.construct(__p, std::forward<Args>(__args)...)`  if that expression is well-formed, otherwise uses placement-new to construct an object of type `Tp` at location `__p` from the arguments `__args...`

Definition at line 342 of file `bits/alloc_traits.h`.

**5.593.3.4** `template<typename _Alloc> static void std::allocator_traits<_Alloc>::deallocate ( _Alloc & __a, pointer __p, size_type __n ) [inline],[static]`

Deallocate memory.

## Parameters

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to the memory to deallocate.
<code>__n</code>	The number of objects space was allocated for.

Calls `a.deallocate(p, n)`

Definition at line 327 of file `bits/alloc_traits.h`.

Referenced by `std::__allocated_ptr<_Alloc>::~~__allocated_ptr()`.

**5.593.3.5** `template<typename _Alloc> template<typename _Tp> static void std::allocator_traits<_Alloc>::destroy ( _Alloc & __a, _Tp* __p ) [inline],[static]`

Destroy an object of type `Tp`.

## Parameters

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to the object to destroy

Calls `__a.destroy(__p)` if that expression is well-formed, otherwise calls `__p->~_Tp()`

Definition at line 355 of file `bits/alloc_traits.h`.

**5.593.3.6** `template<typename _Alloc> static size_type std::allocator_traits<_Alloc>::max_size ( const _Alloc & __a ) [inline],[static],[noexcept]`

The maximum supported allocation size.

## Parameters

<code>__a</code>	An allocator.
------------------	---------------

**Returns**

`__a.max_size()` or `numeric_limits<size_type>::max()`

Returns `__a.max_size()` if that expression is well-formed, otherwise returns `numeric_limits<size_type>::max()`

Definition at line 366 of file `bits/alloc_traits.h`.

Referenced by `std::forward_list<_Tp, _Alloc>::max_size()`, and `std::list<__inp, __rebind_inp>::max_size()`.

**5.593.3.7** `template<typename _Alloc> static _Alloc std::allocator_traits<_Alloc>::select_on_container_copy_construction ( const _Alloc &__rhs ) [inline], [static]`

Obtain an allocator to use when copying a container.

## Parameters

<code>__rhs</code>	An allocator.
--------------------	---------------

## Returns

`__rhs.select_on_container_copy_construction()` or `__rhs`

Returns `__rhs.select_on_container_copy_construction()` if that expression is well-formed, otherwise returns `__rhs`

Definition at line 378 of file `bits/alloc_traits.h`.

### 5.594.1 Detailed Description

```
template<typename _Tp>struct std::allocator_traits< allocator< _Tp > >
```

Partial specialization for std::allocator.

Definition at line 384 of file bits/alloc\_traits.h.

### 5.594.2 Member Typedef Documentation

```
5.594.2.1 template<typename _Tp > using std::allocator_traits< allocator< _Tp > >::allocator_type =  
allocator<_Tp>
```

The allocator type.

Definition at line 387 of file bits/alloc\_traits.h.

```
5.594.2.2 template<typename _Tp > using std::allocator_traits< allocator< _Tp > >::const_pointer = const _Tp*
```

The allocator's const pointer type.

Definition at line 395 of file bits/alloc\_traits.h.

```
5.594.2.3 template<typename _Tp > using std::allocator_traits< allocator< _Tp > >::const_void_pointer = const void*
```

The allocator's const void pointer type.

Definition at line 401 of file bits/alloc\_traits.h.

```
5.594.2.4 template<typename _Tp > using std::allocator_traits< allocator< _Tp > >::difference_type = std::ptrdiff_t
```

The allocator's difference type.

Definition at line 404 of file bits/alloc\_traits.h.

```
5.594.2.5 template<typename _Tp > using std::allocator_traits< allocator< _Tp > >::is_always_equal = true_type
```

Whether all instances of the allocator type compare equal.

Definition at line 419 of file bits/alloc\_traits.h.

```
5.594.2.6 template<typename _Tp > using std::allocator_traits< allocator< _Tp > >::pointer = _Tp*
```

The allocator's pointer type.

Definition at line 392 of file bits/alloc\_traits.h.

```
5.594.2.7 template<typename _Tp > using std::allocator_traits< allocator< _Tp > >::propagate_on_container_  
copy_assignment = false_type
```

How the allocator is propagated on copy assignment.

Definition at line 410 of file bits/alloc\_traits.h.

```
5.594.2.8 template<typename _Tp > using std::allocator_traits< allocator< _Tp > >::propagate_on_container_  
move_assignment = true_type
```

How the allocator is propagated on move assignment.

Definition at line 413 of file bits/alloc\_traits.h.

5.594.2.9 `template<typename _Tp > using std::allocator_traits< allocator< _Tp > >::propagate_on_container_swap = false_type`

How the allocator is propagated on swap.

Definition at line 416 of file `bits/alloc_traits.h`.

5.594.2.10 `template<typename _Tp > using std::allocator_traits< allocator< _Tp > >::size_type = std::size_t`

The allocator's size type.

Definition at line 407 of file `bits/alloc_traits.h`.

5.594.2.11 `template<typename _Tp > using std::allocator_traits< allocator< _Tp > >::value_type = _Tp`

The allocated type.

Definition at line 389 of file `bits/alloc_traits.h`.

5.594.2.12 `template<typename _Tp > using std::allocator_traits< allocator< _Tp > >::void_pointer = void*`

The allocator's void pointer type.

Definition at line 398 of file `bits/alloc_traits.h`.

### 5.594.3 Member Function Documentation

5.594.3.1 `template<typename _Tp > static pointer std::allocator_traits< allocator< _Tp > >::allocate ( allocator_type & __a, size_type __n ) [inline],[static]`

Allocate memory.

#### Parameters

<code>__a</code>	An allocator.
<code>__n</code>	The number of objects to allocate space for.

Calls `a.allocate(n)`

Definition at line 435 of file `bits/alloc_traits.h`.

5.594.3.2 `template<typename _Tp > static pointer std::allocator_traits< allocator< _Tp > >::allocate ( allocator_type & __a, size_type __n, const_void_pointer __hint ) [inline],[static]`

Allocate memory.

#### Parameters

<code>__a</code>	An allocator.
<code>__n</code>	The number of objects to allocate space for.
<code>__hint</code>	Aid to locality.

#### Returns

Memory of suitable size and alignment for `n` objects of type `value_type`

Returns `a.allocate(n, hint)`

Definition at line 449 of file `bits/alloc_traits.h`.

5.594.3.3 `template<typename _Tp > template<typename _Up, typename... _Args> static void std::allocator_traits< allocator< _Tp > >::construct ( allocator_type & _a, _Up * __p, _Args &&... _args ) [inline], [static]`

Construct an object of type `_Up`.

## Parameters

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to memory of suitable size and alignment for <code>Tp</code>
<code>__args</code>	Constructor arguments.

Calls `__a.construct(__p, std::forward<Args>(__args) ...)`

Definition at line 474 of file `bits/alloc_traits.h`.

5.594.3.4 `template<typename _Tp > static void std::allocator_traits< allocator< _Tp > >::deallocate ( allocator_type & __a, pointer __p, size_type __n ) [inline],[static]`

Deallocate memory.

## Parameters

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to the memory to deallocate.
<code>__n</code>	The number of objects space was allocated for.

Calls `a.deallocate(p, n)`

Definition at line 461 of file `bits/alloc_traits.h`.

5.594.3.5 `template<typename _Tp > template<typename _Up > static void std::allocator_traits< allocator< _Tp > >::destroy ( allocator_type & __a, _Up * __p ) [inline],[static]`

Destroy an object of type `_Up`.

## Parameters

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to the object to destroy

Calls `__a.destroy(__p)`.

Definition at line 486 of file `bits/alloc_traits.h`.

5.594.3.6 `template<typename _Tp > static size_type std::allocator_traits< allocator< _Tp > >::max_size ( const allocator_type & __a ) [inline],[static],[noexcept]`

The maximum supported allocation size.

## Parameters

<code>__a</code>	An allocator.
------------------	---------------

## Returns

`__a.max_size()`

Definition at line 495 of file `bits/alloc_traits.h`.

5.594.3.7 `template<typename _Tp > static allocator_type std::allocator_traits< allocator< _Tp > >::select_on_container_copy_construction ( const allocator_type & __rhs ) [inline],[static]`

Obtain an allocator to use when copying a container.

## Parameters

<code>__rhs</code>	An allocator.
--------------------	---------------

## Returns

`__rhs`

Definition at line 504 of file `bits/alloc_traits.h`.

#### Public Attributes

- `_AT_Type::Type M_elems`

#### 5.595.1 Detailed Description

`template<typename _Tp, std::size_t Nm>struct std::array<_Tp, Nm >`

A standard container for storing a fixed size sequence of elements.

Meets the requirements of a [container](#), a [reversible container](#), and a [sequence](#).

Sets support random access iterators.

#### Template Parameters

<i>Tp</i>	Type of element. Required to be a complete type.
<i>N</i>	Number of elements.

Definition at line 94 of file `array`.

The documentation for this struct was generated from the following file:

- [array](#)

- `void reset (element_type * __p=0) throw ()`

#### 5.614.1 Detailed Description

`template<typename _Tp>class std::auto_ptr< _Tp >`

A simple smart pointer providing strict ownership semantics.

The Standard says:

An `auto_ptr` owns the object it holds a pointer to. Copying an `auto_ptr` copies the pointer and transfers ownership to the destination. If more than one `auto_ptr` owns the same object at the same time the behavior of the program is undefined.

The uses of `auto_ptr` include providing temporary exception-safety for dynamically allocated memory, passing ownership of dynamically allocated memory to a function, and returning dynamically allocated memory from a function. `auto_ptr` does not meet the CopyConstructible requirements for Standard Library `container` elements and thus instantiating a Standard Library container with an `auto_ptr` results in undefined behavior.

Quoted from [20.4.5]/3.

Good examples of what can and cannot be done with `auto_ptr` can be found in the libstdc++ testsuite.

`_GLIBCXX_RESOLVE_LIB_DEFECTS 127. auto_ptr<> conversion issues` These resolutions have all been incorporated.

Definition at line 89 of file `auto_ptr.h`.

#### 5.614.2 Member Typedef Documentation

##### 5.614.2.1 `template<typename _Tp> typedef _Tp std::auto_ptr< _Tp >::element_type`

The pointed-to type.

Definition at line 96 of file `auto_ptr.h`.

## 5.614.3 Constructor &amp; Destructor Documentation

5.614.3.1 `template<typename _Tp> std::auto_ptr<_Tp>::auto_ptr ( element_type * __p = 0 ) throw () [inline], [explicit]`

An `auto_ptr` is usually constructed from a raw pointer.

## Parameters

<code>__p</code>	A pointer (defaults to NULL).
------------------	-------------------------------

This object now *owns* the object pointed to by `__p`.

Definition at line 105 of file `auto_ptr.h`.

5.614.3.2 `template<typename _Tp> std::auto_ptr<_Tp>::auto_ptr ( auto_ptr<_Tp> & __a ) throw () [inline]`

An `auto_ptr` can be constructed from another `auto_ptr`.

## Parameters

<code>__a</code>	Another <code>auto_ptr</code> of the same type.
------------------	---

This object now *owns* the object previously owned by `__a`, which has given up ownership.

Definition at line 114 of file `auto_ptr.h`.

5.614.3.3 `template<typename _Tp> template<typename _Tp1 > std::auto_ptr<_Tp>::auto_ptr ( auto_ptr<_Tp1 > & __a ) throw () [inline]`

An `auto_ptr` can be constructed from another `auto_ptr`.

## Parameters

<code>__a</code>	Another <code>auto_ptr</code> of a different but related type.
------------------	--

A pointer-to-`Tp1` must be convertible to a pointer-to-`Tp/element_type`.

This object now *owns* the object previously owned by `__a`, which has given up ownership.

Definition at line 127 of file `auto_ptr.h`.

5.614.3.4 `template<typename _Tp> std::auto_ptr<_Tp>::~~auto_ptr ( ) [inline]`

When the `auto_ptr` goes out of scope, the object it owns is deleted. If it no longer owns anything (i.e., `get ()` is NULL), then this has no effect.

The C++ standard says there is supposed to be an empty throw specification here, but omitting it is standard conforming. Its presence can be detected only if `_Tp::~~_Tp()` throws, but this is prohibited. [17.4.3.6]/2

Definition at line 172 of file `auto_ptr.h`.

5.614.3.5 `template<typename _Tp> std::auto_ptr<_Tp>::auto_ptr ( auto_ptr_ref< element_type > __ref ) throw () [inline]`

Automatic conversions.

These operations are supposed to convert an `auto_ptr` into and from an `auto_ptr_ref` automatically as needed. This would allow constructs such as

```
* auto_ptr<Derived> func_returning_auto_ptr(.....);
* ...
* auto_ptr<Base> ptr = func_returning_auto_ptr(.....);
*
```

But it doesn't work, and won't be fixed. For further details see <http://cplusplus.github.io/LWG/lwg-closed.html#463>

Definition at line 266 of file auto\_ptr.h.

#### 5.614.4 Member Function Documentation

5.614.4.1 `template<typename _Tp> element_type* std::auto_ptr<_Tp>::get( void ) const throw` `[inline]`

Bypassing the smart pointer.

##### Returns

The raw pointer being managed.

You can get a copy of the pointer that this object owns, for situations such as passing to a function which only accepts a raw pointer.

##### Note

This auto\_ptr still owns the memory.

Definition at line 213 of file auto\_ptr.h.

5.614.4.2 `template<typename _Tp> element_type& std::auto_ptr<_Tp>::operator*( ) const throw` `[inline]`

Smart pointer dereferencing.

If this auto\_ptr no longer owns anything, then this operation will crash. (For a smart pointer, *no longer owns anything* is the same as being a null pointer, and you know what happens when you dereference one of those...)

Definition at line 183 of file auto\_ptr.h.

5.614.4.3 `template<typename _Tp> element_type* std::auto_ptr<_Tp>::operator->( ) const throw` `[inline]`

Smart pointer dereferencing.

This returns the pointer itself, which the language then will automatically cause to be dereferenced.

Definition at line 196 of file auto\_ptr.h.

5.614.4.4 `template<typename _Tp> auto_ptr& std::auto_ptr<_Tp>::operator=( auto_ptr<_Tp> & __a ) throw` `[inline]`

auto\_ptr assignment operator.

##### Parameters

<code>__a</code>	Another auto_ptr of the same type.
------------------	------------------------------------

This object now *owns* the object previously owned by `__a`, which has given up ownership. The object that this one *used* to own and track has been deleted.

Definition at line 138 of file auto\_ptr.h.

References `std::auto_ptr<_Tp>::reset()`.

5.614.4.5 `template<typename _Tp> template<typename _Tp1> auto_ptr& std::auto_ptr<_Tp>::operator=( auto_ptr<_Tp1> & __a ) throw` `[inline]`

auto\_ptr assignment operator.

**Parameters**

<code>__a</code>	Another <code>auto_ptr</code> of a different but related type.
------------------	--

A pointer-to-Tp1 must be convertible to a pointer-to-Tp/element\_type.

This object now *owns* the object previously owned by `__a`, which has given up ownership. The object that this one *used* to own and track has been deleted.

Definition at line 156 of file `auto_ptr.h`.

References `std::auto_ptr<_Tp>::reset()`.

**5.614.4.6** `template<typename _Tp> element_type* std::auto_ptr<_Tp>::release ( ) throw` [inline]

Bypassing the smart pointer.

**Returns**

The raw pointer being managed.

You can get a copy of the pointer that this object owns, for situations such as passing to a function which only accepts a raw pointer.

**Note**

This `auto_ptr` no longer owns the memory. When this object goes out of scope, nothing will happen.

Definition at line 227 of file `auto_ptr.h`.

**5.614.4.7** `template<typename _Tp> void std::auto_ptr<_Tp>::reset ( element_type * __p = 0 ) throw` [inline]

Forcibly deletes the managed object.

**Parameters**

<code>__p</code>	A pointer (defaults to NULL).
------------------	-------------------------------

This object now *owns* the object pointed to by `__p`. The previous object has been deleted.

Definition at line 242 of file `auto_ptr.h`.

Referenced by `std::auto_ptr<_Tp>::operator=()`.

The documentation for this class was generated from the following file:

- [auto\\_ptr.h](#)

**5.615 std::auto\_ptr\_ref<\_Tp1> Struct Template Reference****Public Member Functions**

- `auto_ptr_ref` (`_Tp1 * __p`)

**Public Attributes**

- `_Tp1 * _M_ptr`

## 5.615.1 Detailed Description

```
template<typename _Tp1>struct std::auto_ptr_ref<_Tp1 >
```

A wrapper class to provide `auto_ptr` with reference semantics. For example, an `auto_ptr` can be assigned (or constructed from) the result of a function which returns an `auto_ptr` by value.

All the `auto_ptr_ref` stuff should happen behind the scenes.

Definition at line 48 of file `auto_ptr.h`.

The documentation for this struct was generated from the following file:

- [auto\\_ptr.h](#)

5.616 `std::back_insert_iterator<_Container>` Class Template Reference

Inheritance diagram for `std::back_insert_iterator<_Container>`:

## Public Types

- typedef `_Container` `container_type`
- typedef void `difference_type`
- typedef `output_iterator_tag` `iterator_category`
- typedef void `pointer`
- typedef void `reference`
- typedef void `value_type`

## Public Member Functions

- `back_insert_iterator` (`_Container &__x`)
- `back_insert_iterator` & `operator*` ()
- `back_insert_iterator` & `operator++` ()
- `back_insert_iterator` `operator++` (int)
- `back_insert_iterator` & `operator=` (const typename `_Container::value_type` &\_\_value)
- `back_insert_iterator` & `operator=` (typename `_Container::value_type` &&\_\_value)

## Protected Attributes

- `_Container * container`

### 5.616.1 Detailed Description

```
template<typename _Container>class std::back_insert_iterator< _Container >
```

Turns assignment into insertion.

These are output iterators, constructed from a container-of-T. Assigning a T to the iterator appends it to the container using `push_back`.

Tip: Using the `back_inserter` function to create these iterators can save typing.

Definition at line 452 of file `bits/stl_iterator.h`.

### 5.616.2 Member Typedef Documentation

5.616.2.1 `template<typename _Container > typedef _Container std::back_insert_iterator< _Container >::container_type`

A nested typedef for the type of whatever container you used.

Definition at line 460 of file `bits/stl_iterator.h`.

5.616.2.2 `typedef void std::iterator< output_iterator_tag , void , void , void , void >::difference_type` `[inherited]`

Distance between iterators is represented as this type.

Definition at line 125 of file `stl_iterator_base_types.h`.

5.616.2.3 `typedef output_iterator_tag std::iterator< output_iterator_tag , void , void , void , void >::iterator_category` `[inherited]`

One of the [tag types](#).

Definition at line 121 of file `stl_iterator_base_types.h`.

5.616.2.4 `typedef void std::iterator< output_iterator_tag , void , void , void , void >::pointer` `[inherited]`

This type represents a `pointer-to-value_type`.

Definition at line 127 of file `stl_iterator_base_types.h`.

5.616.2.5 `typedef void std::iterator< output_iterator_tag , void , void , void , void >::reference` `[inherited]`

This type represents a `reference-to-value_type`.

Definition at line 129 of file `stl_iterator_base_types.h`.

5.616.2.6 `typedef void std::iterator< output_iterator_tag , void , void , void , void >::value_type` `[inherited]`

The type "pointed to" by the iterator.

Definition at line 123 of file `stl_iterator_base_types.h`.

### 5.616.3 Constructor & Destructor Documentation

5.616.3.1 `template<typename _Container > std::back_insert_iterator<_Container >::back_insert_iterator ( _Container &_x ) [inline],[explicit]`

The only way to create this iterator is with a container.

Definition at line 464 of file bits/stl\_iterator.h.

#### 5.616.4 Member Function Documentation

5.616.4.1 `template<typename _Container > back_insert_iterator& std::back_insert_iterator<_Container >::operator* ( ) [inline]`

Simply returns `*this`.

Definition at line 503 of file bits/stl\_iterator.h.

5.616.4.2 `template<typename _Container > back_insert_iterator& std::back_insert_iterator<_Container >::operator++ ( ) [inline]`

Simply returns `*this`. (This iterator does not *move*.)

Definition at line 508 of file bits/stl\_iterator.h.

5.616.4.3 `template<typename _Container > back_insert_iterator std::back_insert_iterator<_Container >::operator++ ( int ) [inline]`

Simply returns `*this`. (This iterator does not *move*.)

Definition at line 513 of file bits/stl\_iterator.h.

5.616.4.4 `template<typename _Container > back_insert_iterator& std::back_insert_iterator<_Container >::operator= ( const typename _Container::value_type &__value ) [inline]`

#### Parameters

<code>__value</code>	An instance of whatever type <code>container_type::const_reference</code> is; presumably a reference-to-const T for <code>container&lt;T&gt;</code> .
----------------------	---

#### Returns

This iterator, for chained operations.

This kind of iterator doesn't really have a *position* in the container (you can think of the position as being permanently at the end, if you like). Assigning a value to the iterator will always append the value to the end of the container.

Definition at line 487 of file bits/stl\_iterator.h.

The documentation for this class was generated from the following file:

- [bits/stl\\_iterator.h](#)

## 5.617 std::bad\_alloc Class Reference

Inheritance diagram for std::bad\_alloc:

### Public Member Functions

- virtual const char \* [what](#) () const throw ()

#### 5.617.1 Detailed Description

Exception possibly thrown by `new`.

`bad_alloc` (or classes derived from it) is used to report allocation errors from the throwing forms of `new`.

Definition at line 54 of file `new`.

#### 5.617.2 Member Function Documentation

##### 5.617.2.1 virtual const char\* std::bad\_alloc::what ( ) const throw () [virtual]

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [new](#)

## 5.618 `std::bad_cast` Class Reference

Inheritance diagram for `std::bad_cast`:

### Public Member Functions

- virtual const char \* [what](#) () const `noexcept`

#### 5.618.1 Detailed Description

Thrown during incorrect typecasting.

If you attempt an invalid `dynamic_cast` expression, an instance of this class (or something derived from this class) is thrown.

Definition at line 187 of file `typeinfo`.

#### 5.618.2 Member Function Documentation

##### 5.618.2.1 virtual const char\* `std::bad_cast::what` ( ) const [virtual], [noexcept]

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

Reimplemented in [std::experimental::fundamentals\\_v1::bad\\_any\\_cast](#).

The documentation for this class was generated from the following file:

- [typeinfo](#)

## 5.619 std::bad\_exception Class Reference

Inheritance diagram for std::bad\_exception:

### Public Member Functions

- virtual const char \* [what](#) () const `_GLIBCXX_TXN_SAFE_DYN` `noexcept`

#### 5.619.1 Detailed Description

If an exception is thrown which is not listed in a function's exception specification, one of these may be thrown.

Definition at line 46 of file exception.

#### 5.619.2 Member Function Documentation

##### 5.619.2.1 virtual const char\* std::bad\_exception::what ( ) const [virtual], [noexcept]

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [exception](#)

## 5.620 `std::bad_function_call` Class Reference

Inheritance diagram for `std::bad_function_call`:

### Public Member Functions

- `const char * what () const noexcept`

#### 5.620.1 Detailed Description

Exception class thrown when class template function's `operator()` is called with an empty target.

Definition at line 56 of file `std_function.h`.

#### 5.620.2 Member Function Documentation

**5.620.2.1** `const char* std::bad_function_call::what ( ) const` `[virtual]`, `[noexcept]`

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [std\\_function.h](#)

## 5.621 `std::bad_typeid` Class Reference

Inheritance diagram for `std::bad_typeid`:

### Public Member Functions

- virtual const char \* [what](#) () const `noexcept`

#### 5.621.1 Detailed Description

Thrown when a NULL pointer in a `typeid` expression is used.

Definition at line 204 of file `typeinfo`.

#### 5.621.2 Member Function Documentation

5.621.2.1 virtual const char\* `std::bad_typeid::what` ( ) const `[virtual], [noexcept]`

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [typeinfo](#)

## 5.622 `std::bad_weak_ptr` Class Reference

Inheritance diagram for `std::bad_weak_ptr`:

### Public Member Functions

- virtual `char const * what () const noexcept`

#### 5.622.1 Detailed Description

Exception possibly thrown by `shared_ptr`.

Definition at line 73 of file `shared_ptr_base.h`.

#### 5.622.2 Member Function Documentation

##### 5.622.2.1 `virtual char const* std::bad_weak_ptr::what ( ) const` `[virtual]`, `[noexcept]`

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [shared\\_ptr\\_base.h](#)

### 5.623 `std::basic_filebuf<_CharT,_Traits>` Class Template Reference

Inheritance diagram for `std::basic_filebuf<_CharT,_Traits>`:

#### Public Types

#### Friends

- class `ios_base`

## 5.623.1 Detailed Description

```
template<typename _CharT, typename _Traits>class std::basic_filebuf<_CharT, _Traits >
```

The actual work of input and output (for files).

### Template Parameters

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> .

This class associates both its input and output sequence with an external disk file, and maintains a joint file position for both sequences. Many of its semantics are described in terms of similar behavior in the Standard C Library's `FILE` streams.

Requirements on `traits_type`, specific to this class:

- `traits_type::pos_type` must be `fpos<traits_type::state_type>`
- `traits_type::off_type` must be `streamoff`
- `traits_type::state_type` must be Assignable and DefaultConstructible,
- `traits_type::state_type()` must be the initial state for `codecvt`.

Definition at line 80 of file `fstream`.

### 5.623.2 Constructor & Destructor Documentation

5.623.2.1 `template<typename _CharT, typename _Traits > std::basic_filebuf< _CharT, _Traits >::basic_filebuf ( )`

Does not open any files.

The default constructor initializes the parent class using its own default ctor.

Definition at line 80 of file `fstream.tcc`.

References `std::basic_streambuf< _CharT, _Traits >::_M_buf_locale`.

5.623.2.2 `template<typename _CharT, typename _Traits > virtual std::basic_filebuf< _CharT, _Traits >::~~basic_filebuf ( )`  
`[inline], [virtual]`

The destructor closes the file first.

Definition at line 246 of file `fstream`.

### 5.623.3 Member Function Documentation

5.623.3.1 `template<typename _CharT, typename _Traits > void std::basic_filebuf< _CharT, _Traits >::_M_create_pback ( )`  
`[inline], [protected]`

Initializes pback buffers, and moves normal buffers to safety. Assumptions: `_M_in_cur` has already been moved back

Definition at line 199 of file `fstream`.

5.623.3.2 `template<typename _CharT, typename _Traits > void std::basic_filebuf< _CharT, _Traits >::_M_destroy_pback ( )`  
`throw) [inline], [protected]`

Deactivates pback buffer contents, and restores normal buffer. Assumptions: The pback buffer has only moved forward.

Definition at line 216 of file `fstream`.

5.623.3.3 `template<typename _CharT, typename _Traits > void std::basic_filebuf< _CharT, _Traits >::_M_set_buffer (`  
`streamsize __off) [inline], [protected]`

This function sets the pointers of the internal buffer, both get and put areas. Typically:

`__off == egptr() - eback()` upon underflow/uflow (**read** mode); `__off == 0` upon overflow (**write** mode); `__off == -1` upon open, `setbuf`, `seekoff/pos` (**uncommitted** mode).

NB: `eptr() - pbase() == _M_buf_size - 1`, since `_M_buf_size` reflects the actual allocated memory and the last cell is reserved for the overflow char of a full put area.

Definition at line 443 of file `fstream`.

5.623.3.4 `template<typename _CharT, typename _Traits> basic_filebuf<_CharT, _Traits>::__filebuf_type * std::basic_filebuf<_CharT, _Traits>::close ( )`

Closes the currently associated file.

#### Returns

`this` on success, `NULL` on failure

If no file is currently open, this function immediately fails.

If a *put buffer area* exists, `overflow(eof)` is called to flush all the characters. The file is then closed.

If any operations fail, this function also fails.

Definition at line 213 of file `fstream.tcc`.

Referenced by `std::basic_ifstream<_CharT, _Traits>::close()`, `std::basic_ofstream<_CharT, _Traits>::close()`, `std::basic_fstream<_CharT, _Traits>::close()`, and `std::basic_filebuf<char_type, traits_type>::~~basic_filebuf()`.

5.623.3.5 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::eback ( ) const [inline], [protected], [inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 489 of file `streambuf`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_destroy_pback()`, `std::basic_streambuf<_Elem, _Tr>::sputbackc()`, and `std::basic_streambuf<_Elem, _Tr>::sungetc()`.

5.623.3.6 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::egptr ( ) const [inline], [protected], [inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 495 of file `streambuf`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_create_pback()`, `std::basic_streambuf< _Elem, _Tr >::in_avail()`, `std::basic_streambuf< _Elem, _Tr >::sbumpc()`, `std::basic_streambuf< _Elem, _Tr >::sgetc()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc()`, and `std::basic_stringbuf< _CharT, _Traits, _Alloc >::str()`.

**5.623.3.7** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf< _CharT, _Traits >::eptr ( ) const` `[inline]`, `[protected]`, `[inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `pptr()` returns the end pointer for the output sequence

Definition at line 542 of file `streambuf`.

Referenced by `std::basic_streambuf< _Elem, _Tr >::sputc()`.

**5.623.3.8** `template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf< _CharT, _Traits >::gbump ( int __n )` `[inline]`, `[protected]`, `[inherited]`

Moving the read position.

Parameters

<code>__n</code>	The delta by which to move.
------------------	-----------------------------

This just advances the read position without returning any data.

Definition at line 505 of file `streambuf`.

Referenced by `std::basic_streambuf< _Elem, _Tr >::sbumpc()`, `std::basic_streambuf< _Elem, _Tr >::sputbackc()`, `std::basic_streambuf< _Elem, _Tr >::sungetc()`, and `std::basic_streambuf< _Elem, _Tr >::uflow()`.

**5.623.3.9** `template<typename _CharT, typename _Traits = char_traits<_CharT>> locale std::basic_streambuf< _CharT, _Traits >::getloc ( ) const` `[inline]`, `[inherited]`

Locale access.

Returns

The current locale in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

Definition at line 233 of file `streambuf`.

Referenced by `std::basic_streambuf< _Elem, _Tr >::pubimbue()`.

**5.623.3.10** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf< _CharT, _Traits >::gptr ( ) const` `[inline]`, `[protected]`, `[inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence

- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 492 of file streambuf.

Referenced by std::basic\_filebuf< char\_type, traits\_type >::\_M\_create\_pback(), std::basic\_filebuf< char\_type, traits\_type >::\_M\_destroy\_pback(), std::basic\_streambuf< \_Elem, \_Tr >::in\_avail(), std::basic\_streambuf< \_Elem, \_Tr >::sbumpc(), std::basic\_streambuf< \_Elem, \_Tr >::sgetc(), std::basic\_stringbuf< \_CharT, \_Traits, \_Alloc >::showmanyc(), std::basic\_streambuf< \_Elem, \_Tr >::sputbackc(), std::basic\_streambuf< \_Elem, \_Tr >::sungetc(), and std::basic\_streambuf< \_Elem, \_Tr >::uflow().

5.623.3.11 `template<typename _CharT, typename _Traits = char_traits<_CharT>> virtual void std::basic_streambuf<_CharT, _Traits>::imbue ( const locale &__loc __attribute__((unused)) ) [inline],[protected],[virtual],[inherited]`

Changes translations.

Parameters

<code>__loc</code>	A new locale.
--------------------	---------------

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

Note

Base class version does nothing.

Definition at line 583 of file streambuf.

Referenced by std::basic\_streambuf< \_Elem, \_Tr >::pubimbue().

5.623.3.12 `template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_streambuf<_CharT, _Traits>::in_avail ( ) [inline],[inherited]`

Looking ahead into the stream.

Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

Definition at line 291 of file streambuf.

5.623.3.13 `template<typename _CharT, typename _Traits> bool std::basic_filebuf<_CharT, _Traits>::is_open ( ) const throw ( ) [inline]`

Returns true if the external file is open.

Definition at line 260 of file fstream.

Referenced by std::basic\_ifstream< \_CharT, \_Traits >::is\_open(), std::basic\_ofstream< \_CharT, \_Traits >::is\_open(), and std::basic\_fstream< \_CharT, \_Traits >::is\_open().

5.623.3.14 `template<typename _CharT, typename _Traits > basic_filebuf<_CharT, _Traits>::_filebuf_type * std::basic_filebuf<_CharT, _Traits>::open ( const char * __s, ios_base::openmode __mode )`

Opens an external file.

**Parameters**

<code>__s</code>	The name of the file.
<code>__mode</code>	The open mode flags.

**Returns**

`this` on success, `NULL` on failure

If a file is already open, this function immediately fails. Otherwise it tries to open the file named `__s` using the flags given in `__mode`.

Table 92, adapted here, gives the relation between openmode combinations and the equivalent `fopen()` flags. (NB: lines `app`, `in|out|app`, `in|app`, `binary|app`, `binary|in|out|app`, and `binary|in|app` per DR 596)

ios_base Flag combination					stdio equivalent
binary	in	out	trunc	app	
		+			w
		+		+	a
				+	a
		+	+		w
	+				r
	+	+			r+
	+	+	+		w+
	+	+		+	a+
	+			+	a+
+		+			wb
+		+		+	ab
+				+	ab
+		+	+		wb
+	+				rb
+	+	+			r+b
+	+	+	+		w+b
+	+	+		+	a+b
+	+			+	a+b

Definition at line 179 of file `fstream.tcc`.

References `std::ios_base::ate`, `std::ios_base::end`, and `std::basic_filebuf<_CharT, _Traits>::open()`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`, `std::basic_filebuf<char_type, traits_type>::open()`, `std::basic_ifstream<_CharT, _Traits>::open()`, `std::basic_ofstream<_CharT, _Traits>::open()`, and `std::basic_fstream<_CharT, _Traits>::open()`.

**5.623.3.15** `template<typename _CharT, typename _Traits> __filebuf_type* std::basic_filebuf<_CharT, _Traits>::open ( const std::string & __s, ios_base::openmode __mode ) [inline]`

Opens an external file.

**Parameters**

<code>__s</code>	The name of the file.
<code>__mode</code>	The open mode flags.

**Returns**

`this` on success, NULL on failure

Definition at line 315 of file `fstream`.

5.623.3.16 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::pbase ( ) const` `[inline], [protected], [inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Definition at line 536 of file `streambuf`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::str()`.

5.623.3.17 `template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf<_CharT, _Traits>::pbump ( int __n )` `[inline], [protected], [inherited]`

Moving the write position.

**Parameters**

<code>__n</code>	The delta by which to move.
------------------	-----------------------------

This just advances the write position without returning any data.

Definition at line 552 of file `streambuf`.

Referenced by `std::basic_streambuf<_Elem, _Tr>::sputc()`.

5.623.3.18 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::pptr ( ) const` `[inline], [protected], [inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Definition at line 539 of file `streambuf`.

Referenced by `std::basic_streambuf<_Elem, _Tr>::sputc()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::str()`.

5.623.3.19 `template<typename _CharT, typename _Traits = char_traits<_CharT>> locale std::basic_streambuf<_CharT, _Traits>::pubimbue ( const locale & __loc )` `[inline], [inherited]`

Entry point for `imbue()`.

## Parameters

<code>__loc</code>	The new locale.
--------------------	-----------------

## Returns

The previous locale.

Calls the derived `imbue(__loc)`.

Definition at line 216 of file `streambuf`.

```
5.623.3.20 template<typename _CharT, typename _Traits = char_traits<_CharT>> pos_type std::basic_streambuf<
    _CharT, _Traits >::pubseekoff ( off_type __off, ios_base::seekdir __way, ios_base::openmode __mode =
    ios_base::in | ios_base::out ) [inline],[inherited]
```

Alters the stream position.

## Parameters

<code>__off</code>	Offset.
<code>__way</code>	Value for <code>ios_base::seekdir</code> .
<code>__mode</code>	Value for <code>ios_base::openmode</code> .

Calls virtual `seekoff` function.

Definition at line 258 of file `streambuf`.

```
5.623.3.21 template<typename _CharT, typename _Traits = char_traits<_CharT>> pos_type std::basic_streambuf< _CharT,
    _Traits >::pubseekpos ( pos_type __sp, ios_base::openmode __mode = ios_base::in | ios_base::out )
    [inline],[inherited]
```

Alters the stream position.

## Parameters

<code>__sp</code>	Position
<code>__mode</code>	Value for <code>ios_base::openmode</code> .

Calls virtual `seekpos` function.

Definition at line 270 of file `streambuf`.

```
5.623.3.22 template<typename _CharT, typename _Traits = char_traits<_CharT>> basic_streambuf*
    std::basic_streambuf< _CharT, _Traits >::pubsetbuf ( char_type * __s, streamsize __n ) [inline],
    [inherited]
```

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 246 of file `streambuf`.

```
5.623.3.23 template<typename _CharT, typename _Traits = char_traits<_CharT>> int std::basic_streambuf< _CharT, _Traits
    >::pubsync ( ) [inline],[inherited]
```

Calls virtual `sync` function.

Definition at line 278 of file `streambuf`.

Referenced by `std::wbuffer_convert< _Codecvt, _Elem, _Tr >::sync()`, and `std::basic_istream< _CharT, _Traits >::sync()`.

5.623.3.24 `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf< _CharT, _Traits >::sbumpc ( ) [inline], [inherited]`

Getting the next character.

#### Returns

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 323 of file `streambuf`.

Referenced by `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::istreambuf_iterator< _CharT, _Traits >::operator++()`, and `std::basic_streambuf< _Elem, _Tr >::snextc()`.

5.623.3.25 `template<typename _CharT, typename _Traits > basic_filebuf< _CharT, _Traits >::pos_type std::basic_filebuf< _CharT, _Traits >::seekoff ( off_type, ios_base::seekdir, ios_base::openmode = ios_base::in | ios_base::out ) [protected], [virtual]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

#### Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

Definition at line 798 of file `fstream.tcc`.

References `std::ios_base::cur`.

5.623.3.26 `template<typename _CharT, typename _Traits > basic_filebuf< _CharT, _Traits >::pos_type std::basic_filebuf< _CharT, _Traits >::seekpos ( pos_type, ios_base::openmode = ios_base::in | ios_base::out ) [protected], [virtual]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

#### Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

Definition at line 858 of file `fstream.tcc`.

References `std::ios_base::beg`.

5.623.3.27 `template<typename _CharT, typename _Traits > basic_filebuf< _CharT, _Traits >::__streambuf_type * std::basic_filebuf< _CharT, _Traits >::setbuf ( char_type * __s, streamsize __n ) [protected], [virtual]`

Manipulates the buffer.

## Parameters

<code>__s</code>	Pointer to a buffer area.
<code>__n</code>	Size of <code>__s</code> .

## Returns

`this`

If no file has been opened, and both `__s` and `__n` are zero, then the stream becomes unbuffered. Otherwise, `__s` is used as a buffer; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html#io.-streambuf.buffering> for more.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 769 of file `fstream.tcc`.

```
5.623.3.28 template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf<_CharT,
    _Traits>::setg ( char_type * __gbeg, char_type * __gnext, char_type * __gend ) [inline],
    [protected], [inherited]
```

Setting the three read area pointers.

## Parameters

<code>__gbeg</code>	A pointer.
<code>__gnext</code>	A pointer.
<code>__gend</code>	A pointer.

## Postcondition

`__gbeg == eback()`, `__gnext == gptr()`, and `__gend == egptr()`

Definition at line 516 of file `streambuf`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_create_pback()`, `std::basic_filebuf<char_type, traits_type>::_M_destroy_pback()`, and `std::basic_filebuf<char_type, traits_type>::_M_set_buffer()`.

```
5.623.3.29 template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_streambuf<_CharT,
    _Traits>::setp ( char_type * __pbeg, char_type * __pend ) [inline], [protected], [inherited]
```

Setting the three write area pointers.

## Parameters

<code>__pbeg</code>	A pointer.
<code>__pend</code>	A pointer.

## Postcondition

`__pbeg == pbase()`, `__pbeg == pptr()`, and `__pend == epptr()`

Definition at line 562 of file `streambuf`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_set_buffer()`.

```
5.623.3.30 template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT,
    _Traits>::sgetc ( ) [inline], [inherited]
```

Getting the next character.

**Returns**

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 345 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::istreambuf_iterator<_CharT, _Traits>::operator++()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_streambuf<_Elem, _Tr>::snextc()`.

**5.623.3.31** `template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_streambuf<_CharT, _Traits>::sgetn ( char_type * __s, streamsize __n ) [inline], [inherited]`

Entry point for `xsggetn`.

**Parameters**

<code>__s</code>	A buffer area.
<code>__n</code>	A count.

Returns `xsggetn(__s, __n)`. The effect is to fill `__s[0]` through `__s[__n-1]` with characters from the input sequence, if possible.

Definition at line 364 of file `streambuf`.

**5.623.3.32** `template<typename _CharT, typename _Traits> streamsize std::basic_filebuf<_CharT, _Traits>::showmanyc ( ) [protected], [virtual]`

Investigating the data available.

**Returns**

An estimate of the number of characters available in the input sequence, or -1.

*If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail.* [27.5.2.4.3]/1

**Note**

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to `underflow` or `uflow`] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 263 of file `fstream.tcc`.

References `std::ios_base::binary`, and `std::ios_base::in`.

**5.623.3.33** `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::snextc ( ) [inline], [inherited]`

Getting the next character.

**Returns**

The next character, or eof.

Calls `sputc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 305 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

**5.623.3.34** `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::sputback( char_type __c ) [inline], [inherited]`

Pushing characters back into the input stream.

**Parameters**

<code>__c</code>	The character to push back.
------------------	-----------------------------

**Returns**

The previous character, if possible.

Similar to `sungetc()`, but `__c` is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be `__c`.

Definition at line 379 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::putback()`.

**5.623.3.35** `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::sputc( char_type __c ) [inline], [inherited]`

Entry point for all single-character output functions.

**Parameters**

<code>__c</code>	A character to output.
------------------	------------------------

**Returns**

`__c`, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores `__c` in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(-__c)`.

Definition at line 431 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, and `std::ostreambuf_iterator<_CharT, _Traits>::operator=()`.

**5.623.3.36** `template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_streambuf<_CharT, _Traits>::sputn( const char_type * __s, streamsize __n ) [inline], [inherited]`

Entry point for all single-character output functions.

## Parameters

<code>__s</code>	A buffer read area.
<code>__n</code>	A count.

One of two public output functions.

Returns `xspn(__s, __n)`. The effect is to write `__s[0]` through `__s[__n-1]` to the output sequence, if possible.

Definition at line 457 of file `streambuf`.

**5.623.3.37** `template<typename _CharT, typename _Traits = char_traits<_CharT>> int_type std::basic_streambuf<_CharT, _Traits>::sungetc ( ) [inline], [inherited]`

Moving backwards in the input stream.

## Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns `pbackfail()`. The effect is to *unget* the last character *gotten*.

Definition at line 404 of file `streambuf`.

Referenced by `std::basic_istream<_CharT, _Traits>::unget()`.

**5.623.3.38** `template<typename _CharT, typename _Traits> int std::basic_filebuf<_CharT, _Traits>::sync ( ) [protected], [virtual]`

Synchronizes the buffer arrays with the controlled sequences.

## Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

## Note

Base class version does nothing, returns zero.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Definition at line 978 of file `fstream.tcc`.

**5.623.3.39** `template<typename _CharT, typename _Traits = char_traits<_CharT>> virtual int_type return std::basic_streambuf<_CharT, _Traits>::traits_type::eof ( ) [protected], [virtual], [inherited]`

Tries to back up the input sequence.

## Parameters

<code>__c</code>	The character to be inserted back into the sequence.
------------------	--

## Returns

`eof()` on failure, *some other value* on success

**Postcondition**

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

**Note**

Base class version does nothing, returns `eof()`.

**5.623.3.40** `template<typename _CharT, typename _Traits = char_traits<_CharT>> virtual int_type std::basic_streambuf<_CharT, _Traits>::uflow( ) [inline], [protected], [virtual], [inherited]`

Fetches more data from the controlled sequence.

**Returns**

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>`.

Definition at line 707 of file `streambuf`.

Referenced by `std::basic_streambuf<_Elem, _Tr>::sbumpc()`.

**5.623.3.41** `template<typename _CharT, typename _Traits> basic_filebuf<_CharT, _Traits>::int_type std::basic_filebuf<_CharT, _Traits>::underflow( ) [protected], [virtual]`

Fetches more data from the controlled sequence.

**Returns**

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input `streambuf` can be created by overriding only this function (no buffer area will be used). For an example, see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html>

**Note**

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

Definition at line 289 of file `fstream.tcc`.

References `std::ios_base::in`, and `std::min()`.

**5.623.3.42** `template<typename _CharT, typename _Traits> streamsize std::basic_filebuf<_CharT, _Traits>::xsgetn( char_type* __s, streamsize __n ) [protected], [virtual]`

Multiple character extraction.

## Parameters

<code>__s</code>	A buffer area.
<code>__n</code>	Maximum number of characters to assign.

## Returns

The number of characters assigned.

Fills `__s[0]` through `__s[__n-1]` with characters from the input sequence, as if by `sbumpc()`. Stops when either `__n` characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Definition at line 635 of file `fstream.tcc`.

References `std::ios_base::in`.

**5.623.3.43** `template<typename _CharT, typename _Traits> streamsize std::basic_filebuf<_CharT, _Traits>::xsputn ( const char_type * __s, streamsize __n )` `[protected]`, `[virtual]`

Multiple character insertion.

## Parameters

<code>__s</code>	A buffer area.
<code>__n</code>	Maximum number of characters to write.

## Returns

The number of characters written.

Writes `__s[0]` through `__s[__n-1]` to the output sequence, as if by `sputc()`. Stops when either `n` characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

Definition at line 721 of file `fstream.tcc`.

References `std::ios_base::app`, `std::min()`, and `std::ios_base::out`.

## 5.623.4 Member Data Documentation

**5.623.4.1** `template<typename _CharT, typename _Traits> char_type* std::basic_filebuf<_CharT, _Traits>::_M_buf` `[protected]`

Pointer to the beginning of internal buffer.

Definition at line 136 of file `fstream`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_destroy_pback()`, and `std::basic_filebuf<char_type, traits_type>::_M_set_buffer()`.

**5.623.4.2** `template<typename _CharT, typename _Traits = char_traits<_CharT>> locale std::basic_streambuf<_CharT, _Traits>::_M_buf_locale` `[protected]`, `[inherited]`

Current locale setting.

Definition at line 199 of file streambuf.

Referenced by `std::basic_filebuf<_CharT, _Traits>::basic_filebuf()`, `std::basic_streambuf<_Elem, _Tr>::getloc()`, and `std::basic_streambuf<_Elem, _Tr>::pubimbue()`.

**5.623.4.3** `template<typename _CharT, typename _Traits> size_t std::basic_filebuf<_CharT, _Traits>::_M_buf_size`  
[protected]

Actual size of internal buffer. This number is equal to the size of the put area + 1 position, reserved for the overflow char of a full area.

Definition at line 143 of file fstream.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_set_buffer()`.

**5.623.4.4** `template<typename _CharT, typename _Traits> char* std::basic_filebuf<_CharT, _Traits>::_M_ext_buf`  
[protected]

Buffer for external characters. Used for input when `codecvt::always_noconv() == false`. When valid, this corresponds to `eback()`.

Definition at line 178 of file fstream.

**5.623.4.5** `template<typename _CharT, typename _Traits> streamsize std::basic_filebuf<_CharT, _Traits>::_M_ext_buf_size`  
[protected]

Size of buffer held by `_M_ext_buf`.

Definition at line 183 of file fstream.

**5.623.4.6** `template<typename _CharT, typename _Traits> const char* std::basic_filebuf<_CharT, _Traits>::_M_ext_next`  
[protected]

Pointers into the buffer held by `_M_ext_buf` that delimit a subsequence of bytes that have been read but not yet converted. When valid, `_M_ext_next` corresponds to `egptr()`.

Definition at line 190 of file fstream.

**5.623.4.7** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::_M_in_beg` [protected], [inherited]

Start of get area.

Definition at line 191 of file streambuf.

Referenced by `std::basic_streambuf<_Elem, _Tr>::eback()`, and `std::basic_streambuf<_Elem, _Tr>::setg()`.

**5.623.4.8** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::_M_in_cur` [protected], [inherited]

Current read area.

Definition at line 192 of file streambuf.

Referenced by `std::basic_streambuf<_Elem, _Tr>::gbump()`, `std::basic_streambuf<_Elem, _Tr>::gptr()`, and `std::basic_streambuf<_Elem, _Tr>::setg()`.

**5.623.4.9** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::_M_in_end` [protected], [inherited]

End of get area.

Definition at line 193 of file streambuf.

Referenced by std::basic\_streambuf<\_Elem, \_Tr>::egptr(), and std::basic\_streambuf<\_Elem, \_Tr>::setg().

5.623.4.10 `template<typename _CharT, typename _Traits> ios_base::openmode std::basic_filebuf<_CharT, _Traits>::_M_mode` [protected]

Place to stash in || out || in | out settings for current filebuf.

Definition at line 121 of file fstream.

Referenced by std::basic\_filebuf<char\_type, traits\_type>::\_M\_set\_buffer().

5.623.4.11 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::_M_out_beg` [protected], [inherited]

Start of put area.

Definition at line 194 of file streambuf.

Referenced by std::basic\_streambuf<\_Elem, \_Tr>::pbase(), and std::basic\_streambuf<\_Elem, \_Tr>::setp().

5.623.4.12 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::_M_out_cur` [protected], [inherited]

Current put area.

Definition at line 195 of file streambuf.

Referenced by std::basic\_streambuf<\_Elem, \_Tr>::pbump(), std::basic\_streambuf<\_Elem, \_Tr>::pptr(), and std::basic\_streambuf<\_Elem, \_Tr>::setp().

5.623.4.13 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type* std::basic_streambuf<_CharT, _Traits>::_M_out_end` [protected], [inherited]

End of put area.

Definition at line 196 of file streambuf.

Referenced by std::basic\_streambuf<\_Elem, \_Tr>::epptr(), and std::basic\_streambuf<\_Elem, \_Tr>::setp().

5.623.4.14 `template<typename _CharT, typename _Traits> char_type std::basic_filebuf<_CharT, _Traits>::_M_pback` [protected]

Necessary bits for putback buffer management.

#### Note

pbacks of over one character are not currently supported.

Definition at line 164 of file fstream.

Referenced by std::basic\_filebuf<char\_type, traits\_type>::\_M\_create\_pback().

5.623.4.15 `template<typename _CharT, typename _Traits> char_type* std::basic_filebuf<_CharT, _Traits>::_M_pback_cur_save` [protected]

Necessary bits for putback buffer management.

**Note**

pbacks of over one character are not currently supported.

Definition at line 165 of file `fstream`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_create_pback()`, and `std::basic_filebuf< char_type, traits_type >::_M_destroy_pback()`.

```
5.623.4.16 template<typename _CharT, typename _Traits> char_type* std::basic_filebuf< _CharT, _Traits
           >::_M_pback_end_save [protected]
```

Necessary bits for putback buffer management.

**Note**

pbacks of over one character are not currently supported.

Definition at line 166 of file `fstream`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_create_pback()`, and `std::basic_filebuf< char_type, traits_type >::_M_destroy_pback()`.

```
5.623.4.17 template<typename _CharT, typename _Traits> bool std::basic_filebuf< _CharT, _Traits >::_M_pback_init
           [protected]
```

Necessary bits for putback buffer management.

**Note**

pbacks of over one character are not currently supported.

Definition at line 167 of file `fstream`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_create_pback()`, and `std::basic_filebuf< char_type, traits_type >::_M_destroy_pback()`.

```
5.623.4.18 template<typename _CharT, typename _Traits> bool std::basic_filebuf< _CharT, _Traits >::_M_reading
           [protected]
```

`_M_reading == false` && `_M_writing == false` for **uncommitted** mode; `_M_reading == true` for **read** mode; `_M_writing == true` for **write** mode;

NB: `_M_reading == true` && `_M_writing == true` is unused.

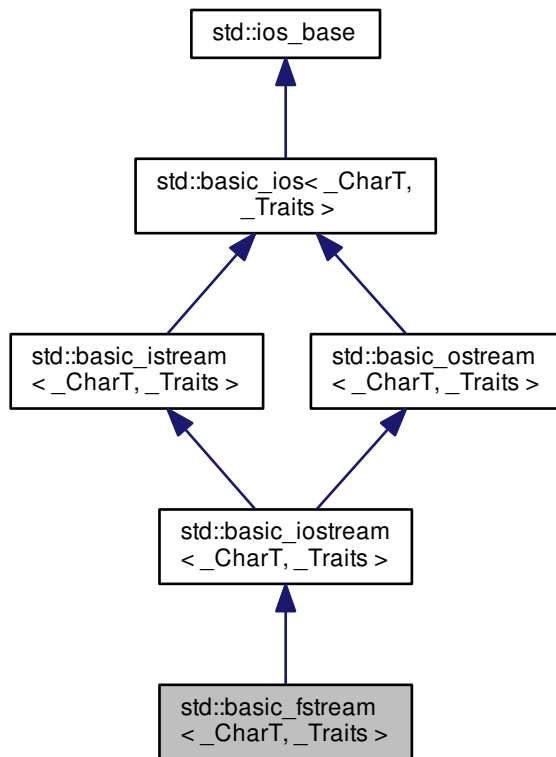

Definition at line 155 of file `fstream`.

### Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- `__istream_type & operator>>` (`bool &__n`)
- `__istream_type & operator>>` (`short &__n`)
- `__istream_type & operator>>` (`unsigned short &__n`)
- `__istream_type & operator>>` (`int &__n`)
- `__istream_type & operator>>` (`unsigned int &__n`)
- `__istream_type & operator>>` (`long &__n`)
- `__istream_type & operator>>` (`unsigned long &__n`)
- `__istream_type & operator>>` (`long long &__n`)
- `__istream_type & operator>>` (`unsigned long long &__n`)
- `__istream_type & operator>>` (`float &__f`)
- `__istream_type & operator>>` (`double &__f`)
- `__istream_type & operator>>` (`long double &__f`)

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- `int_type get` ()

- `__istream_type & get` (`char_type *__s`, `streamsize __n`, `char_type __delim`)
- `__istream_type & get` (`char_type *__s`, `streamsize __n`)
- `__istream_type & get` (`__streambuf_type &__sb`, `char_type __delim`)
- `__istream_type & get` (`__streambuf_type &__sb`)
- `__istream_type & getline` (`char_type *__s`, `streamsize __n`, `char_type __delim`)
- `__istream_type & getline` (`char_type *__s`, `streamsize __n`)
- `__istream_type & ignore` (`streamsize __n`, `int_type __delim`)
- `__istream_type & ignore` (`streamsize __n`)
- `__istream_type & ignore` ()

- `int_type peek ()`
  - `__istream_type & read (char_type *_s, streamsize __n)`
  - `streamsize readsome (char_type *_s, streamsize __n)`
  - `__istream_type & putback (char_type __c)`
  - `__istream_type & unget ()`
  - `int sync ()`
  - `pos_type tellg ()`
  - `__istream_type & seekg (pos_type)`
  - `__istream_type & seekg (off_type, ios_base::seekdir)`
- `operator bool () const`
  - `bool operator! () const`
- `__ostream_type & operator<< (__ostream_type &(*__pf)(__ostream_type &))`
  - `__ostream_type & operator<< (__ios_type &(*__pf)(__ios_type &))`
  - `__ostream_type & operator<< (ios_base &(*__pf)(ios_base &))`

### Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the `sentry` documentation for more.

If the `sentry` status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `__ostream_type & operator<< (long __n)`
  - `__ostream_type & operator<< (unsigned long __n)`
  - `__ostream_type & operator<< (bool __n)`
  - `__ostream_type & operator<< (short __n)`
  - `__ostream_type & operator<< (unsigned short __n)`
  - `__ostream_type & operator<< (int __n)`
  - `__ostream_type & operator<< (unsigned int __n)`
  - `__ostream_type & operator<< (long long __n)`
  - `__ostream_type & operator<< (unsigned long long __n)`
- `__ostream_type & operator<< (double __f)`
  - `__ostream_type & operator<< (float __f)`
  - `__ostream_type & operator<< (long double __f)`

### Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the `sentry` documentation for more.

If the `sentry` status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

## 5.624.1 Detailed Description

```
template<typename _CharT, typename _Traits>class std::basic_fstream< _CharT, _Traits >
```

Controlling input and output for files.

### Template Parameters

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> .

This class supports reading from and writing to named files, using the inherited functions from `std::basic_iostream`. To control the associated sequence, an instance of `std::basic_filebuf` is used, which this page refers to as `sb`.

Definition at line 927 of file `fstream`.

### 5.624.2 Member Typedef Documentation

5.624.2.1 `template<typename _CharT, typename _Traits = char_traits<_CharT>> typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios<_CharT, _Traits>::__num_put_type [inherited]`

These are non-standard types.

Definition at line 89 of file `basic_ios.h`.

5.624.2.2 `typedef void(* std::ios_base::event_callback)(event __e, ios_base &__b, int __i) [inherited]`

The type of an event callback function.

#### Parameters

<code>__e</code>	One of the members of the event enum.
<code>__b</code>	Reference to the <code>ios_base</code> object.
<code>__i</code>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 506 of file `ios_base.h`.

5.624.2.3 `typedef _ios_Fmtflags std::ios_base::fmtflags [inherited]`

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`

- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

Definition at line 323 of file `ios_base.h`.

#### 5.624.2.4 `typedef _ios_iostate std::ios_base::iostate` [inherited]

This is a bitmask type.

`__Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 398 of file `ios_base.h`.

#### 5.624.2.5 `typedef _ios_Openmode std::ios_base::openmode` [inherited]

This is a bitmask type.

`__Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 429 of file `ios_base.h`.

### 5.624.2.6 typedef `_Ios_Seekdir` `std::ios_base::seekdir` [inherited]

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 461 of file `ios_base.h`.

## 5.624.3 Member Enumeration Documentation

### 5.624.3.1 enum `std::ios_base::event` [inherited]

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

Definition at line 489 of file `ios_base.h`.

## 5.624.4 Constructor & Destructor Documentation

### 5.624.4.1 template<typename `_CharT`, typename `_Traits`> `std::basic_fstream<_CharT, _Traits>::basic_fstream ( )` [inline]

Default constructor.

Initializes `sb` using its default constructor, and passes `&sb` to the base class initializer. Does not open any files (you haven't given it a filename to open).

Definition at line 954 of file `fstream`.

References `std::basic_ios<_CharT, _Traits>::init()`.

### 5.624.4.2 template<typename `_CharT`, typename `_Traits`> `std::basic_fstream<_CharT, _Traits>::basic_fstream ( const char * _s, ios_base::openmode _mode = ios_base::in | ios_base::out )` [inline], [explicit]

Create an input/output file stream.

Parameters

<code>__s</code>	Null terminated string specifying the filename.
<code>__mode</code>	Open file in specified mode (see <code>std::ios_base</code> ).

Definition at line 964 of file `fstream`.

References `std::basic_ios<_CharT, _Traits>::init()`, and `std::basic_fstream<_CharT, _Traits>::open()`.

### 5.624.4.3 template<typename `_CharT`, typename `_Traits`> `std::basic_fstream<_CharT, _Traits>::basic_fstream ( const std::string & _s, ios_base::openmode _mode = ios_base::in | ios_base::out )` [inline], [explicit]

Create an input/output file stream.

## Parameters

<code>__s</code>	Null terminated string specifying the filename.
<code>__mode</code>	Open file in specified mode (see <code>std::ios_base</code> ).

Definition at line 979 of file `fstream`.

References `std::basic_ios<_CharT, _Traits>::init()`, and `std::basic_fstream<_CharT, _Traits>::open()`.

5.624.4.4 `template<typename _CharT, typename _Traits> std::basic_fstream<_CharT, _Traits>::~basic_fstream ( )`  
`[inline]`

The destructor does nothing.

The file is closed by the filebuf object, not the formatting stream.

Definition at line 1014 of file `fstream`.

## 5.624.5 Member Function Documentation

5.624.5.1 `const locale& std::ios_base::M_getloc ( ) const` `[inline]`, `[inherited]`

Locale access.

## Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 776 of file `ios_base.h`.

Referenced by `std::time_get<_CharT, _InIter>::do_get()`, `std::money_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_date()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_time()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_put<_CharT, _OutIter>::do_put()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::time_get<_CharT, _InIter>::get()`, and `std::time_put<_CharT, _OutIter>::put()`.

5.624.5.2 `template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_ostream<_CharT, _Traits>::M_write ( const char_type * __s, streamsize __n )` `[inline]`, `[inherited]`

Core write functionality, without sentry.

## Parameters

<code>__s</code>	The array to insert.
<code>__n</code>	Maximum number of characters to insert.

Definition at line 311 of file `ostream`.

Referenced by `std::basic_ostream<_CharT, _Traits>::write()`.

5.624.5.3 `template<typename _CharT, typename _Traits = char_traits<_CharT>> bool std::basic_ios<_CharT, _Traits>::bad ( ) const` `[inline]`, `[inherited]`

Fast error checking.

**Returns**

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 211 of file basic\_ios.h.

5.624.5.4 `template<typename _CharT, typename _Traits > void std::basic_ios< _CharT, _Traits >::clear ( iostate __state = goodbit ) [inherited]`

[Re]sets the error state.

**Parameters**

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See `std::ios_base::iostate` for the possible bit values. Most users will not need to pass an argument.

Definition at line 41 of file basic\_ios.tcc.

Referenced by `std::basic_ios< char, char_traits< char > >::exceptions()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::__detail::operator>>()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ios< char, char_traits< char > >::setstate()`, and `std::basic_istream< _CharT, _Traits >::unset()`.

5.624.5.5 `template<typename _CharT, typename _Traits> void std::basic_fstream< _CharT, _Traits >::close ( ) [inline]`

Close the file.

Calls `std::basic_filebuf::close()`. If that function fails, `failbit` is set in the stream's error state.

Definition at line 1129 of file fstream.

References `std::basic_filebuf< _CharT, _Traits >::close()`, `std::ios_base::failbit`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.624.5.6 `template<typename _CharT, typename _Traits > basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt ( const basic_ios< _CharT, _Traits > & __rhs ) [inherited]`

Copies fields of `__rhs` into this.

**Parameters**

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

**Returns**

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy exceptions().

Definition at line 63 of file basic\_ios.tcc.

References `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ios< _CharT, _Traits >::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios< _CharT, _Traits >::tie()`, `std::tie()`, and `std::ios_base::width()`.

5.624.5.7 `template<typename _CharT, typename _Traits = char_traits<_CharT>> bool std::basic_ios<_CharT, _Traits >::eof ( ) const [inline],[inherited]`

Fast error checking.

#### Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 190 of file basic\_ios.h.

5.624.5.8 `template<typename _CharT, typename _Traits = char_traits<_CharT>> iostate std::basic_ios<_CharT, _Traits >::exceptions ( ) const [inline],[inherited]`

Throwing exceptions on errors.

#### Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.

Definition at line 222 of file basic\_ios.h.

Referenced by std::basic\_ios<\_CharT, \_Traits >::copyfmt().

5.624.5.9 `template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_ios<_CharT, _Traits >::exceptions ( iostate __except ) [inline],[inherited]`

Throwing exceptions on errors.

#### Parameters

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios\_base::failure is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
* #include <iostream>
* #include <fstream>
* #include <exception>
*
* int main()
* {
*     std::set_terminate (
*         __gnu_cxx::__verbose_terminate_handler);
*
*     std::ifstream f ("/etc/motd");
*
*     std::cerr << "Setting badbit\n";
*     f.setstate (std::ios_base::badbit);
*
*     std::cerr << "Setting exception mask\n";
*     f.exceptions (std::ios_base::badbit);
* }
*
```

Definition at line 257 of file basic\_ios.h.

5.624.5.10 `template<typename _CharT, typename _Traits = char_traits<_CharT>> bool std::basic_ios<_CharT, _Traits>::fail ( ) const [inline],[inherited]`

Fast error checking.

#### Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.

Definition at line 201 of file basic\_ios.h.

Referenced by `std::basic_ios<char, char_traits<char>>::operator bool()`, `std::basic_ios<char, char_traits<char>>::operator!()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_ostream<_CharT, _Traits>::tellp()`, and `std::regex_traits<_CharT, _Traits>::value()`.

5.624.5.11 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type std::basic_ios<_CharT, _Traits>::fill ( ) const [inline],[inherited]`

Retrieves the *empty* character.

#### Returns

The current fill character.

It defaults to a space ( ' ') in the current locale.

Definition at line 370 of file basic\_ios.h.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, and `std::basic_ios<char, char_traits<char>>::fill()`.

5.624.5.12 `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type std::basic_ios<_CharT, _Traits>::fill ( char_type __ch ) [inline],[inherited]`

Sets a new *empty* character.

#### Parameters

<code>__ch</code>	The new character.
-------------------	--------------------

#### Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current locale.

Definition at line 390 of file basic\_ios.h.

5.624.5.13 `fmtflags std::ios_base::flags ( ) const [inline],[inherited]`

Access to format flags.

**Returns**

The format control flags for both input and output.

Definition at line 621 of file ios\_base.h.

Referenced by std::basic\_ios< \_CharT, \_Traits >::copyfmt(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::num\_put< \_CharT, \_OutIter >::do\_put(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::operator<<(), std::\_\_detail::operator>>(), std::operator>>(), and std::basic\_istream< \_CharT, \_Traits >::sentry::sentry().

#### 5.624.5.14 fmtflags std::ios\_base::flags( fmtflags \_\_fmtfl ) [inline],[inherited]

Setting new format flags all at once.

**Parameters**

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

**Returns**

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

Definition at line 632 of file ios\_base.h.

#### 5.624.5.15 template<typename \_CharT, typename \_Traits > basic\_ostream< \_CharT, \_Traits > & std::basic\_ostream< \_CharT, \_Traits >::flush( ) [inherited]

Synchronizing the stream buffer.

**Returns**

\*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets `badbit`.

Definition at line 211 of file ostream.tcc.

References std::ios\_base::badbit, std::ios\_base::goodbit, std::basic\_ios< \_CharT, \_Traits >::rdbuf(), and std::basic\_ios< \_CharT, \_Traits >::setstate().

#### 5.624.5.16 template<typename \_CharT, typename \_Traits = char\_traits<\_CharT>> streamsize std::basic\_istream< \_CharT, \_Traits >::gcount( ) const [inline],[inherited]

Character counting.

**Returns**

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 269 of file istream.

#### 5.624.5.17 template<typename \_CharT, typename \_Traits > basic\_istream< \_CharT, \_Traits >::int\_type std::basic\_istream< \_CharT, \_Traits >::get( void ) [inherited]

Simple extraction.

**Returns**

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 244 of file istream.tcc.

References std::basic\_istream<\_CharT, \_Traits>::\_M\_gcount, std::ios\_base::badbit, std::ios\_base::eofbit, std::ios\_base::failbit, std::ios\_base::goodbit, std::basic\_ios<\_CharT, \_Traits>::rdbuf(), and std::basic\_ios<\_CharT, \_Traits>::setstate().

**5.624.5.18** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get ( char_type & __c ) [inherited]`

Simple extraction.

**Parameters**

<code>__c</code>	The character in which to store data.
------------------	---------------------------------------

**Returns**

\*this

Tries to extract a character and store it in `__c`. If none are available, sets failbit and returns traits::eof().

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 280 of file istream.tcc.

References std::basic\_istream<\_CharT, \_Traits>::\_M\_gcount, std::ios\_base::badbit, std::ios\_base::eofbit, std::ios\_base::failbit, std::ios\_base::goodbit, std::basic\_ios<\_CharT, \_Traits>::rdbuf(), and std::basic\_ios<\_CharT, \_Traits>::setstate().

**5.624.5.19** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get ( char_type * __s, streamsize __n, char_type __delim ) [inherited]`

Simple multiple-character extraction.

**Parameters**

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>__s</code> .
<code>__delim</code>	A "stop" character.

**Returns**

\*this

Characters are extracted and stored into `__s` until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals `__delim`, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

#### Note

This function is not overloaded on signed char and unsigned char.

Definition at line 317 of file istream.tcc.

References std::basic\_istream< \_CharT, \_Traits >::\_M\_gcount, std::ios\_base::badbit, std::ios\_base::eofbit, std::ios\_base::failbit, std::ios\_base::goodbit, std::basic\_ios< \_CharT, \_Traits >::rdbuf(), std::basic\_ios< \_CharT, \_Traits >::setstate(), std::basic\_streambuf< \_CharT, \_Traits >::sgetc(), and std::basic\_streambuf< \_CharT, \_Traits >::snextc().

5.624.5.20 `template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<_CharT, _Traits >::get ( char_type * __s, streamsize __n )` `[inline],[inherited]`

Simple multiple-character extraction.

#### Parameters

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>s</code> .

#### Returns

\*this

Returns `get(__s,__n,widen('\n'))`.

Definition at line 354 of file istream.

5.624.5.21 `template<typename _CharT, typename _Traits > basic_istream<_CharT, _Traits > & std::basic_istream<_CharT, _Traits >::get ( __streambuf_type & __sb, char_type __delim )` `[inherited]`

Extraction into another streambuf.

#### Parameters

<code>__sb</code>	A streambuf in which to store data.
<code>__delim</code>	A "stop" character.

#### Returns

\*this

Characters are extracted and inserted into `__sb` until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals `__delim` (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

Definition at line 364 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, `std::basic_streambuf<_CharT, _Traits>::snextc()`, and `std::basic_streambuf<_CharT, _Traits>::sputc()`.

5.624.5.22 `template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<_CharT, _Traits>::get( __streambuf_type & __sb ) [inline], [inherited]`

Extraction into another streambuf.

Parameters

<code>__sb</code>	A streambuf in which to store data.
-------------------	-------------------------------------

Returns

\*this

Returns `get(__sb, widen("\n"))`.

Definition at line 387 of file `istream`.

5.624.5.23 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::getline( char_type * __s, streamsize __n, char_type __delim ) [inherited]`

String extraction.

Parameters

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.
<code>__delim</code>	A "stop" character.

Returns

\*this

Extracts and stores characters into `__s` until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the `__s` array without setting failbit.

1. the input sequence reaches end-of-file, in which case `eofbit` is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case `failbit` is set in the stream error state

If no characters are extracted, `failbit` is set. (An empty line of input should therefore not cause `failbit` to be set.)

In any case, a null character is stored in the next location in the array.

Definition at line 408 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

Referenced by `std::basic_istream<char>::getline()`.

5.624.5.24 `template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<_CharT, _Traits >::getline ( char_type * __s, streamsize __n ) [inline], [inherited]`

String extraction.

## Parameters

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.

## Returns

`*this`

Returns `getline(__s,__n,widen('\n'))`.

Definition at line 427 of file `istream`.

#### 5.624.5.25 locale `std::ios_base::getloc ( ) const` `[inline],[inherited]`

Locale access.

## Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 765 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _Outiter>::do_put()`, `std::operator>>()`, and `std::ws()`.

#### 5.624.5.26 `template<typename _CharT, typename _Traits = char_traits<_CharT>> bool std::basic_ios<_CharT, _Traits>::good ( ) const` `[inline],[inherited]`

Fast error checking.

## Returns

True if no error flags are set.

A wrapper around `rdstate`.

Definition at line 180 of file `basic_ios.h`.

Referenced by `std::__detail::operator>>()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

#### 5.624.5.27 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore ( streamsize __n, int_type __delim )` `[inherited]`

Discarding characters.

## Parameters

<code>__n</code>	Number of characters to discard.
<code>__delim</code>	A "stop" character.

## Returns

`*this`

Extracts characters and throws them away until one of the following happens:

- if `__n != std::numeric_limits<int>::max()`, `__n` characters are extracted
- the input sequence reaches end-of-file
- the next character equals `__delim` (in this case, the character is extracted); note that this condition will never occur if `__delim` equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 563 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

**5.624.5.28** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore ( streamsize __n )` [inherited]

Simple extraction.

Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 501 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

**5.624.5.29** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore ( void )` [inherited]

Simple extraction.

Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 468 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.624.5.30** `template<typename _CharT, typename _Traits> locale std::basic_ios<_CharT, _Traits>::imbue ( const locale & __loc )` [inherited]

Moves to a new locale.

**Parameters**

<code>__loc</code>	The new locale.
--------------------	-----------------

**Returns**

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 114 of file `basic_ios.tcc`.

References `std::ios_base::imbue()`.

Referenced by `std::operator<<()`.

**5.624.5.31** `template<typename _CharT, typename _Traits> void std::basic_ios<_CharT, _Traits>::init ( basic_streambuf<_CharT, _Traits> * __sb )` `[protected]`, `[inherited]`

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 126 of file `basic_ios.tcc`.

Referenced by `std::basic_fstream<_CharT, _Traits>::basic_fstream()`, `std::basic_ifstream<_CharT, _Traits>::basic_ifstream()`, `std::basic_ios<char, char_traits<char>>::basic_ios()`, `std::basic_istream<char>::basic_istream()`, `std::basic_istreamstream<_CharT, _Traits, _Alloc>::basic_istreamstream()`, `std::basic_ofstream<_CharT, _Traits>::basic_ofstream()`, `std::basic_ostream<char>::basic_ostream()`, `std::basic_ostringstream<_CharT, _Traits, _Alloc>::basic_ostringstream()`, and `std::basic_stringstream<_CharT, _Traits, _Alloc>::basic_stringstream()`.

**5.624.5.32** `template<typename _CharT, typename _Traits> bool std::basic_fstream<_CharT, _Traits>::is_open ( )` `[inline]`

Wrapper to test for an open file.

**Returns**

`rdbuf() -> is_open()`

Definition at line 1055 of file `fstream`.

References `std::basic_filebuf<_CharT, _Traits>::is_open()`.

**5.624.5.33** `long& std::ios_base::iword ( int __ix )` `[inline]`, `[inherited]`

Access to integer array.

**Parameters**

<code>__ix</code>	Index into the array.
-------------------	-----------------------

**Returns**

A reference to an integer associated with the index.

The `word` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 811 of file `ios_base.h`.

**5.624.5.34** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char std::basic_ios<_CharT, _Traits >::narrow ( char_type __c, char __default ) const` `[inline]`, `[inherited]`

Squeezes characters.

**Parameters**

<code>__c</code>	The character to narrow.
<code>__default</code>	The character to narrow.

**Returns**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
* std::use_facet<ctype<char_type> > (getloc()) .narrow(c, default)
*
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.-html>

Definition at line 430 of file `basic_ios.h`.

**5.624.5.35** `template<typename _CharT, typename _Traits> void std::basic_fstream<_CharT, _Traits >::open ( const char * __s, ios_base::openmode __mode = ios_base::in | ios_base::out )` `[inline]`

Opens an external file.

**Parameters**

<code>__s</code>	The name of the file.
<code>__mode</code>	The open mode flags.

Calls `std::basic_filebuf::open (__s, __mode)`. If that function fails, `failbit` is set in the stream's error state.

Definition at line 1073 of file `fstream`.

References `std::basic_ios<_CharT, _Traits >::clear()`, `std::ios_base::failbit`, `std::basic_filebuf<_CharT, _Traits >::open()`, and `std::basic_ios<_CharT, _Traits >::setstate()`.

Referenced by `std::basic_fstream<_CharT, _Traits >::basic_fstream()`.

**5.624.5.36** `template<typename _CharT, typename _Traits> void std::basic_fstream<_CharT, _Traits >::open ( const std::string & __s, ios_base::openmode __mode = ios_base::in | ios_base::out )` `[inline]`

Opens an external file.

## Parameters

<code>__s</code>	The name of the file.
<code>__mode</code>	The open mode flags.

Calls `std::basic_filebuf::open(__s, __mode)`. If that function fails, `failbit` is set in the stream's error state.

Definition at line 1094 of file `fstream`.

References `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::failbit`, `std::basic_filebuf<_CharT, _Traits>::open()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.624.5.37** `template<typename _CharT, typename _Traits = char_traits<_CharT>> std::basic_ios<_CharT, _Traits>::operator bool ( ) const [inline], [explicit], [inherited]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

Definition at line 117 of file `basic_ios.h`.

**5.624.5.38** `template<typename _CharT, typename _Traits = char_traits<_CharT>> bool std::basic_ios<_CharT, _Traits>::operator! ( ) const [inline], [inherited]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

Definition at line 125 of file `basic_ios.h`.

**5.624.5.39** `template<typename _CharT, typename _Traits = char_traits<_CharT>> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< ( __ostream_type &(*)(__ostream_type &) __pf ) [inline], [inherited]`

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

Definition at line 108 of file `ostream`.

**5.624.5.40** `template<typename _CharT, typename _Traits = char_traits<_CharT>> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<< ( __ios_type &(*)(__ios_type &) __pf ) [inline], [inherited]`

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

Definition at line 127 of file `ostream`.

5.624.5.42 `template<typename _CharT, typename _Traits = char_traits<_CharT>> __ostream_type& std::basic_ostream<_CharT, _Traits >::operator<<( long __n ) [inline], [inherited]`

Integer arithmetic inserters.

## Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 166 of file `ostream`.

5.624.5.43 `template<typename _CharT, typename _Traits = char_traits<_CharT>> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<<( unsigned long __n ) [inline],[inherited]`

Integer arithmetic inserters.

## Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 170 of file `ostream`.

5.624.5.44 `template<typename _CharT, typename _Traits = char_traits<_CharT>> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<<( bool __n ) [inline],[inherited]`

Integer arithmetic inserters.

## Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 174 of file `ostream`.

5.624.5.45 `template<typename _CharT, typename _Traits > basic_ostream<_CharT, _Traits > & std::basic_ostream<_CharT, _Traits >::operator<<( short __n ) [inherited]`

Integer arithmetic inserters.

## Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

Definition at line 92 of file ostream.tcc.

References std::ios\_base::basefield, std::ios\_base::flags(), std::ios\_base::hex, and std::ios\_base::oct.

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 201 of file ostream.

**5.624.5.50** `template<typename _CharT, typename _Traits = char_traits<_CharT>> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<<( unsigned long long __n ) [inline],[inherited]`

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 205 of file ostream.

**5.624.5.51** `template<typename _CharT, typename _Traits = char_traits<_CharT>> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<<( double __f ) [inline],[inherited]`

Floating point arithmetic inserters.

**Parameters**

<code>__f</code>	A variable of builtin floating point type.
------------------	--

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 220 of file ostream.

**5.624.5.52** `template<typename _CharT, typename _Traits = char_traits<_CharT>> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<<( float __f ) [inline],[inherited]`

Floating point arithmetic inserters.

**Parameters**

<code>__f</code>	A variable of builtin floating point type.
------------------	--

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 224 of file ostream.

5.624.5.53 `template<typename _CharT, typename _Traits = char_traits<_CharT>> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<<( long double __f ) [inline],[inherited]`

Floating point arithmetic inserters.

## Parameters

<code>__f</code>	A variable of builtin floating point type.
------------------	--

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 232 of file `ostream`.

5.624.5.54 `template<typename _CharT, typename _Traits = char_traits<_CharT>> __ostream_type& std::basic_ostream<_CharT, _Traits >::operator<<( const void * __p ) [inline], [inherited]`

Pointer arithmetic inserters.

## Parameters

<code>__p</code>	A variable of pointer type.
------------------	-----------------------------

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 245 of file `ostream`.

5.624.5.55 `template<typename _CharT, typename _Traits > basic_ostream<_CharT, _Traits > & std::basic_ostream<_CharT, _Traits >::operator<<( __streambuf_type * __sb ) [inherited]`

Extracting from another streambuf.

## Parameters

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

Definition at line 120 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits >::rdbuf()`, and `std::basic_ios<_CharT, _Traits >::setstate()`.

```
5.624.5.56  template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<
    _CharT, _Traits >::operator>> ( __istream_type &(*)(__istream_type &) __pf ) [inline],
    [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `iomanip` header.

Definition at line 120 of file `istream`.

```
5.624.5.57  template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<
    _CharT, _Traits >::operator>> ( __ios_type &(*)(__ios_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `iomanip` header.

Definition at line 124 of file `istream`.

```
5.624.5.58  template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<
    _CharT, _Traits >::operator>> ( ios_base &(*)(ios_base &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `iomanip` header.

Definition at line 131 of file `istream`.

```
5.624.5.59  template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<
    _CharT, _Traits >::operator>> ( bool & __n ) [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 168 of file `istream`.

```
5.624.5.60  template<typename _CharT, typename _Traits > basic_istream<_CharT, _Traits > & std::basic_istream<
    _CharT, _Traits >::operator>> ( short & __n ) [inherited]
```

Integer arithmetic extractors.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 122 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::num_get<_CharT, _InIter >::get()`, `std::ios_base::goodbit`, and `std::basic_ios<_CharT, _Traits >::setstate()`.

**5.624.5.61** `template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<_CharT, _Traits >::operator>>( unsigned short & __n ) [inline],[inherited]`

Integer arithmetic extractors.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 175 of file `istream`.

Integer arithmetic extractors.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 167 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::num_get<_CharT, _InIter >::get()`, `std::ios_base::goodbit`, and `std::basic_ios<_CharT, _Traits >::setstate()`.

**5.624.5.63** `template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<_CharT, _Traits >::operator>>( unsigned int & __n ) [inline],[inherited]`

Integer arithmetic extractors.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 182 of file `istream`.

```
5.624.5.64  template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<
    _CharT, _Traits >::operator>> ( long &__n ) [inline],[inherited]
```

Integer arithmetic extractors.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 186 of file `istream`.

```
5.624.5.65  template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<
    _CharT, _Traits >::operator>> ( unsigned long &__n ) [inline],[inherited]
```

Integer arithmetic extractors.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 190 of file `istream`.

```
5.624.5.66  template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<
    _CharT, _Traits >::operator>> ( long long &__n ) [inline],[inherited]
```

Integer arithmetic extractors.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 195 of file `istream`.

5.624.5.67 `template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<_CharT, _Traits >::operator>> ( unsigned long long &__n ) [inline], [inherited]`

Integer arithmetic extractors.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 199 of file `istream`.

```
5.624.5.68 template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<
    _CharT, _Traits >::operator>>( float & __f ) [inline],[inherited]
```

Floating point arithmetic extractors.

**Parameters**

<code>__f</code>	A variable of builtin floating point type.
------------------	--

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 214 of file `istream`.

```
5.624.5.69 template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<
    _CharT, _Traits >::operator>>( double & __f ) [inline],[inherited]
```

Floating point arithmetic extractors.

**Parameters**

<code>__f</code>	A variable of builtin floating point type.
------------------	--

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 218 of file `istream`.

```
5.624.5.70 template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<
    _CharT, _Traits >::operator>>( long double & __f ) [inline],[inherited]
```

Floating point arithmetic extractors.

**Parameters**

<code>__f</code>	A variable of builtin floating point type.
------------------	--

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 222 of file `istream`.

5.624.5.71 `template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<_CharT, _Traits >::operator>> ( void *&__p ) [inline], [inherited]`

Basic arithmetic extractors.

## Parameters

<code>__p</code>	A variable of pointer type.
------------------	-----------------------------

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 235 of file `istream`.

```
5.624.5.72 template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream<
    _CharT, _Traits >::operator>> ( __streambuf_type * __sb ) [inherited]
```

Extracting into another streambuf.

## Parameters

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

Definition at line 212 of file `istream.tcc`.

References `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

```
5.624.5.73 template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits >::int_type
    std::basic_istream< _CharT, _Traits >::peek ( void ) [inherited]
```

Looking ahead in the stream.

## Returns

The next character, or `eof()`.

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 628 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

```
5.624.5.74 streamsize std::ios_base::precision ( ) const [inline],[inherited]
```

Flags access.

**Returns**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 691 of file ios\_base.h.

Referenced by std::basic\_ios< \_CharT, \_Traits >::copyfmt(), and std::operator<<().

5.624.5.75 **streamsize** std::ios\_base::precision ( **streamsize** *\_\_prec* ) [inline],[inherited]

Changing flags.

**Parameters**

<i>__prec</i>	The new precision value.
---------------	--------------------------

**Returns**

The previous value of precision().

Definition at line 700 of file ios\_base.h.

5.624.5.76 **template**<typename *\_CharT*, typename *\_Traits* > **basic\_ostream**< *\_CharT*, *\_Traits* > & std::basic\_ostream< *\_CharT*, *\_Traits* >::put ( **char\_type** *\_\_c* ) [inherited]

Simple insertion.

**Parameters**

<i>__c</i>	The character to insert.
------------	--------------------------

**Returns**

\*this

Tries to insert *\_\_c*.

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 149 of file ostream.tcc.

References std::ios\_base::badbit, std::ios\_base::goodbit, std::basic\_ios< \_CharT, \_Traits >::rdbuf(), and std::basic\_ios< \_CharT, \_Traits >::setstate().

5.624.5.77 **template**<typename *\_CharT*, typename *\_Traits* > **basic\_istream**< *\_CharT*, *\_Traits* > & std::basic\_istream< *\_CharT*, *\_Traits* >::putback ( **char\_type** *\_\_c* ) [inherited]

Unextracting a single character.

**Parameters**

<code>__c</code>	The character to push back into the input stream.
------------------	---

**Returns**

`*this`

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

**Note**

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 719 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::rdstate()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_streambuf<_CharT, _Traits>::sputbackc()`.

Referenced by `std::operator>>()`.

5.624.5.78 `void*& std::ios_base::pword( int __ix ) [inline], [inherited]`

Access to void pointer array.

**Parameters**

<code>__ix</code>	Index into the array.
-------------------	-----------------------

**Returns**

A reference to a `void*` associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 832 of file `ios_base.h`.

5.624.5.79 `template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::rdbuf( basic_streambuf<_CharT, _Traits> * __sb ) [inherited]`

Changing the underlying buffer.

**Parameters**

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

**Returns**

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
* std::fstream    foo;           // or some other derived type
* std::streambuf* p = .....;
*
* foo.ios::rdbuf(p);           // ios == basic_ios<char>
*
```

Definition at line 53 of file `basic_ios.tcc`.

**5.624.5.80** `template<typename _CharT, typename _Traits> __filebuf_type* std::basic_fstream<_CharT, _Traits>::rdbuf( ) const [inline]`

Accessing the underlying buffer.

#### Returns

The current `basic_filebuf` buffer.

This hides both signatures of `std::basic_ios::rdbuf()`.

Definition at line 1047 of file `fstream`.

**5.624.5.81** `template<typename _CharT, typename _Traits = char_traits<_CharT>> iostate std::basic_ios<_CharT, _Traits>::rdstate( ) const [inline], [inherited]`

Returns the error state of the stream buffer.

#### Returns

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Definition at line 137 of file `basic_ios.h`.

Referenced by `std::basic_ios<char, char_traits<char>>::bad()`, `std::basic_ios<char, char_traits<char>>::eof()`, `std::basic_ios<char, char_traits<char>>::fail()`, `std::basic_ios<char, char_traits<char>>::good()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ios<char, char_traits<char>>::setstate()`, and `std::basic_istream<_CharT, _Traits>::unget()`.

**5.624.5.82** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::read( char_type * __s, streamsize __n ) [inherited]`

Extraction without delimiters.

#### Parameters

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

#### Returns

\*this

If the stream state is `good()`, extracts characters and stores them into `__s` until one of the following happens:

- `__n` characters are stored

- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

#### Note

This function is not overloaded on signed char and unsigned char.

Definition at line 658 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.624.5.83** `template<typename _CharT, typename _Traits> streamsize std::basic_istream<_CharT, _Traits>::readsome ( char_type* __s, streamsize __n ) [inherited]`

Extraction until the buffer is exhausted, but no more.

#### Parameters

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

#### Returns

The number of characters extracted.

Extracts characters and stores them into `__s` depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called `A` here:

- if `A == -1`, sets `eofbit` and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

Definition at line 687 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::min()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.624.5.84** `void std::ios_base::register_callback ( event_callback __fn, int __index ) [inherited]`

Add the callback `__fn` with parameter `__index`.

#### Parameters

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**5.624.5.85** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::seekg ( pos_type __pos ) [inherited]`

Changing the current read position.

## Parameters

<code>__pos</code>	A file position object.
--------------------	-------------------------

## Returns

\*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets `failbit`.

## Note

This function first clears `eofbit`. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 853 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::eofbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::rdstate()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.624.5.86** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::seekg ( off_type __off, ios_base::seekdir __dir )` [inherited]

Changing the current read position.

## Parameters

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

## Returns

\*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off, __dir)`. If that function fails, sets `failbit`.

## Note

This function first clears `eofbit`. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 892 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::eofbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::rdstate()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.624.5.87** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp ( pos_type __pos )` [inherited]

Changing the current write position.

**Parameters**

<code>__pos</code>	A file position object.
--------------------	-------------------------

**Returns**

\*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets `failbit`.

Definition at line 258 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.624.5.88** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp( off_type __off, ios_base::seekdir __dir )` `[inherited]`

Changing the current write position.

**Parameters**

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

**Returns**

\*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets `failbit`.

Definition at line 290 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.624.5.89** `fmtflags std::ios_base::setf( fmtflags __fmtfl )` `[inline], [inherited]`

Setting new format flags.

**Parameters**

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

**Returns**

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 648 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::dec()`, `std::fixed()`, `std::hex()`, `std::hexfloat()`, `std::left()`, `std::oct()`, `std::__detail::operator>>()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

**5.624.5.90** `fmtflags std::ios_base::setf( fmtflags __fmtfl, fmtflags __mask )` `[inline], [inherited]`

Setting new format flags.

## Parameters

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <code>fmtfl</code> .

## Returns

The previous format control flags.

This function clears `mask` in the format flags, then sets `fmtfl` & `mask`. An example mask is `ios_base::adjustfield`.

Definition at line 665 of file `ios_base.h`.

```
5.624.5.91 template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_ios<_CharT, _Traits>::setstate ( iostate __state ) [inline], [inherited]
```

Sets additional flags in the error state.

## Parameters

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

Definition at line 157 of file `basic_ios.h`.

Referenced by `std::basic_ostream<char>::M_write()`, `std::basic_ifstream<_CharT, _Traits>::close()`, `std::basic_ofstream<_CharT, _Traits>::close()`, `std::basic_fstream<_CharT, _Traits>::close()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_ifstream<_CharT, _Traits>::open()`, `std::basic_ofstream<_CharT, _Traits>::open()`, `std::basic_fstream<_CharT, _Traits>::open()`, `std::operator<<()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::tr2::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<_CharT, _Traits>::unget()`, and `std::ws()`.

```
5.624.5.92 template<typename _CharT, typename _Traits> int std::basic_istream<_CharT, _Traits>::sync ( void ) [inherited]
```

Synchronizing the stream buffer.

## Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

## Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 789 of file istream.tcc.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_streambuf<_CharT, _Traits >::pubsync()`, `std::basic_ios<_CharT, _Traits >::rdbuf()`, and `std::basic_ios<_CharT, _Traits >::setstate()`.

**5.624.5.93** `static bool std::ios_base::sync_with_stdio ( bool __sync = true )` `[static]`, `[inherited]`

Interaction with the standard C I/O objects.

#### Parameters

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

#### Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

**5.624.5.94** `template<typename _CharT, typename _Traits > basic_istream<_CharT, _Traits >::pos_type`  
`std::basic_istream<_CharT, _Traits >::tellg ( void )` `[inherited]`

Getting the current read position.

#### Returns

A file position object.

If `fail ()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf ()->pubseekoff (0, cur, in)`.

#### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount ()`. At variance with `putback`, `unget` and `seekg`, `eofbit` is not cleared first.

Definition at line 825 of file istream.tcc.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits >::fail()`, `std::ios_base::in`, and `std::basic_ios<_CharT, _Traits >::rdbuf()`.

**5.624.5.95** `template<typename _CharT, typename _Traits > basic_ostream<_CharT, _Traits >::pos_type`  
`std::basic_ostream<_CharT, _Traits >::tellp ( )` `[inherited]`

Getting the current write position.

#### Returns

A file position object.

If `fail ()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf ()->pubseekoff (0, cur, out)`.

Definition at line 237 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits >::fail()`, `std::ios_base::out`, and `std::basic_ios<_CharT, _Traits >::rdbuf()`.

5.624.5.96 `template<typename _CharT, typename _Traits = char_traits<_CharT>> basic_ostream<_CharT, _Traits>*  
std::basic_ios<_CharT, _Traits>::tie( ) const [inline], [inherited]`

Fetches the current *tied* stream.

#### Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 295 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

5.624.5.97 `template<typename _CharT, typename _Traits = char_traits<_CharT>> basic_ostream<_CharT, _Traits>*  
std::basic_ios<_CharT, _Traits>::tie( basic_ostream<_CharT, _Traits> * __tiestr ) [inline],  
[inherited]`

Ties this stream to an output stream.

#### Parameters

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

#### Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 307 of file `basic_ios.h`.

5.624.5.98 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<  
_CharT, _Traits>::ungetc( void ) [inherited]`

Unextracting the previous character.

#### Returns

\*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

#### Note

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 754 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::rdstate()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_streambuf<_CharT, _Traits>::sungetc()`.

Referenced by `std::__detail::operator>>()`.

5.624.5.99 `void std::ios_base::unsetf ( fmtflags __mask )` [inline],[inherited]

Clearing format flags.

## Parameters

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

Definition at line 680 of file `ios_base.h`.

Referenced by `std::defaultfloat()`, `std::noboolalpha()`, `std::noshowbase()`, `std::noshowpoint()`, `std::noshowpos()`, `std::noskipws()`, `std::nounitbuf()`, and `std::nouppercase()`.

**5.624.5.100** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type std::basic_ios<_CharT, _Traits>::widen ( char __c ) const` `[inline], [inherited]`

Widens characters.

## Parameters

<code>__c</code>	The character to widen.
------------------	-------------------------

## Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
* std::use_facet<ctype<char_type>> >(getloc()).widen(c)
*
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.-html>

Definition at line 449 of file `basic_ios.h`.

Referenced by `std::basic_ios<char, char_traits<char>>::fill()`, `std::basic_istream<char>::get()`, `std::basic_istream<char>::getline()`, `std::getline()`, `std::tr2::operator>>()`, and `std::operator>>()`.

**5.624.5.101** `streamsize std::ios_base::width ( ) const` `[inline], [inherited]`

Flags access.

## Returns

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 714 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _Outiter>::do_put()`, and `std::operator>>()`.

**5.624.5.102** `streamsize std::ios_base::width ( streamsize __wide )` `[inline], [inherited]`

Changing flags.

**Parameters**

<code>__wide</code>	The new width value.
---------------------	----------------------

**Returns**

The previous value of `width()`.

Definition at line 723 of file `ios_base.h`.

5.624.5.103 `template<typename _CharT, typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::write ( const char_type * __s, streamsize __n )` [inherited]

Character string insertion.

**Parameters**

<code>__s</code>	The array to insert.
<code>__n</code>	Maximum number of characters to insert.

**Returns**

\*this

Characters are copied from `__s` and inserted into the stream until one of the following happens:

- `__n` characters are inserted
- inserting into the output sequence fails (in this case, `badbit` will be set in the stream's error state)

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 183 of file `ostream.tcc`.

References `std::basic_ostream< _CharT, _Traits >::_M_write()`, and `std::ios_base::badbit`.

5.624.5.104 `static int std::ios_base::xalloc ( ) throw` [static],[inherited]

Access to unique indices.

**Returns**

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pwdword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pwdword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pwdword` arrays.

**5.624.6 Member Data Documentation**

**5.624.6.1** `template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_istream<_CharT, _Traits>::_M_gcount` [protected], [inherited]

The number of characters extracted in the previous unformatted function; see `gcount()`.

Definition at line 82 of file `istream`.

Referenced by `std::basic_istream<char>::gcount()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::unget()`, and `std::basic_istream<char>::~~basic_istream()`.

**5.624.6.2** `const fmtflags std::ios_base::adjustfield` [static], [inherited]

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Definition at line 378 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _Outiter>::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

**5.624.6.3** `const openmode std::ios_base::app` [static], [inherited]

Seek to end before each write.

Definition at line 432 of file `ios_base.h`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_set_buffer()`, and `std::basic_filebuf<_CharT, _Traits>::xsputn()`.

**5.624.6.4** `const openmode std::ios_base::ate` [static], [inherited]

Open and seek to end immediately after opening.

Definition at line 435 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`.

**5.624.6.5** `const iostate std::ios_base::badbit` [static], [inherited]

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 402 of file `ios_base.h`.

Referenced by `std::basic_ostream<char>::_M_write()`, `std::basic_ios<char, char_traits<char>>::bad()`, `std::basic_ios<char, char_traits<char>>::fail()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::operator<<<()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_ostream<_CharT, _Traits>::tellp()`, `std::basic_istream<_CharT, _Traits>::unget()`, `std::basic_ostream<_CharT, _Traits>::write()`, and `std::basic_ostream<_CharT, _Traits>::sentry::~~sentry()`.

**5.624.6.6** `const fmtflags std::ios_base::basefield` [static], [inherited]

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Definition at line 381 of file `ios_base.h`.

Referenced by `std::dec()`, `std::num_get<_CharT, _InIter >::do_get()`, `std::hex()`, `std::oct()`, and `std::basic_ostream<_CharT, _Traits >::operator<<()`.

#### 5.624.6.7 `const seekdir std::ios_base::beg` [static],[inherited]

Request a seek relative to the beginning of the stream.

Definition at line 464 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits >::seekpos()`.

#### 5.624.6.8 `const openmode std::ios_base::binary` [static],[inherited]

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.-binary>.

Definition at line 440 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits >::showmanyc()`.

#### 5.624.6.9 `const fmtflags std::ios_base::boolalpha` [static],[inherited]

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 326 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::num_get<_CharT, _InIter >::do_get()`, `std::num_put<_CharT, _OutIter >::do_put()`, and `std::noboolalpha()`.

#### 5.624.6.10 `const seekdir std::ios_base::cur` [static],[inherited]

Request a seek relative to the current position within the sequence.

Definition at line 467 of file `ios_base.h`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc >::seekoff()`, `std::basic_filebuf<_CharT, _Traits >::seekoff()`, `std::basic_istream<_CharT, _Traits >::tellg()`, and `std::basic_ostream<_CharT, _Traits >::tellp()`.

#### 5.624.6.11 `const fmtflags std::ios_base::dec` [static],[inherited]

Converts integer input or generates integer output in decimal base.

Definition at line 329 of file `ios_base.h`.

Referenced by `std::dec()`.

#### 5.624.6.12 `const seekdir std::ios_base::end` [static],[inherited]

Request a seek relative to the current end of the sequence.

Definition at line 470 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits >::open()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc >::seekoff()`.

#### 5.624.6.13 `const iostate std::ios_base::eofbit` [static],[inherited]

Indicates that an input operation reached the end of an input sequence.

Definition at line 405 of file `ios_base.h`.

Referenced by `std::time_get<_CharT, _InIter >::do_get()`, `std::num_get<_CharT, _InIter >::do_get()`, `std::time_get<`

`_CharT, _InIter >::do_get_date()`, `std::time_get<_CharT, _InIter >::do_get_monthname()`, `std::time_get<_CharT, _InIter >::do_get_time()`, `std::time_get<_CharT, _InIter >::do_get_weekday()`, `std::time_get<_CharT, _InIter >::do_get_year()`, `std::basic_ios<char, char_traits<char>>::eof()`, `std::basic_istream<_CharT, _Traits >::get()`, `std::time_get<_CharT, _InIter >::get()`, `std::basic_istream<_CharT, _Traits >::getline()`, `std::basic_istream<_CharT, _Traits >::ignore()`, `std::basic_istream<_CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits >::peek()`, `std::basic_istream<_CharT, _Traits >::putback()`, `std::basic_istream<_CharT, _Traits >::read()`, `std::basic_istream<_CharT, _Traits >::readsome()`, `std::basic_istream<_CharT, _Traits >::seekg()`, `std::basic_istream<_CharT, _Traits >::sentry::sentry()`, `std::basic_istream<_CharT, _Traits >::unget()`, and `std::ws()`.

#### 5.624.6.14 `const ios_base::failbit` [static],[inherited]

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 410 of file `ios_base.h`.

Referenced by `std::basic_ifstream<_CharT, _Traits >::close()`, `std::basic_ofstream<_CharT, _Traits >::close()`, `std::basic_fstream<_CharT, _Traits >::close()`, `std::num_get<_CharT, _InIter >::do_get()`, `std::time_get<_CharT, _InIter >::do_get_monthname()`, `std::time_get<_CharT, _InIter >::do_get_weekday()`, `std::time_get<_CharT, _InIter >::do_get_year()`, `std::basic_ios<char, char_traits<char>>::fail()`, `std::basic_istream<_CharT, _Traits >::get()`, `std::time_get<_CharT, _InIter >::get()`, `std::basic_istream<_CharT, _Traits >::getline()`, `std::basic_ifstream<_CharT, _Traits >::open()`, `std::basic_ofstream<_CharT, _Traits >::open()`, `std::basic_fstream<_CharT, _Traits >::open()`, `std::basic_ostream<_CharT, _Traits >::operator<<()`, `std::basic_istream<_CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits >::read()`, `std::basic_istream<_CharT, _Traits >::seekg()`, `std::basic_ostream<_CharT, _Traits >::seekp()`, `std::basic_ostream<_CharT, _Traits >::sentry::sentry()`, and `std::basic_istream<_CharT, _Traits >::sentry::sentry()`.

#### 5.624.6.15 `const fmtflags std::ios_base::fixed` [static],[inherited]

Generate floating-point output in fixed-point notation.

Definition at line 332 of file `ios_base.h`.

Referenced by `std::fixed()`, and `std::hexfloat()`.

#### 5.624.6.16 `const fmtflags std::ios_base::floatfield` [static],[inherited]

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 384 of file `ios_base.h`.

Referenced by `std::defaultfloat()`, `std::fixed()`, `std::hexfloat()`, and `std::scientific()`.

#### 5.624.6.17 `const ios_base::goodbit` [static],[inherited]

Indicates all is well.

Definition at line 413 of file `ios_base.h`.

Referenced by `std::time_get<_CharT, _InIter >::do_get()`, `std::num_get<_CharT, _InIter >::do_get()`, `std::time_get<_CharT, _InIter >::do_get_monthname()`, `std::time_get<_CharT, _InIter >::do_get_weekday()`, `std::time_get<_CharT, _InIter >::do_get_year()`, `std::basic_ostream<_CharT, _Traits >::flush()`, `std::basic_istream<_CharT, _Traits >::get()`, `std::time_get<_CharT, _InIter >::get()`, `std::basic_istream<_CharT, _Traits >::getline()`, `std::basic_istream<_CharT, _Traits >::ignore()`, `std::basic_ostream<_CharT, _Traits >::operator<<()`, `std::basic_istream<_CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits >::peek()`, `std::basic_ostream<_CharT, _Traits >::put()`, `std::basic_istream<_CharT, _Traits >::putback()`, `std::basic_istream<_CharT, _Traits >::read()`, `std::basic_istream<_CharT, _Traits >::readsome()`, `std::basic_istream<_CharT, _Traits >::seekg()`, `std::basic_ostream<_CharT, _Traits >::seekp()`, `std::basic_istream<_CharT, _Traits >::sentry::sentry()`, `std::basic_istream<_CharT, _Traits >::sync()`, and `std::basic_istream<_CharT, _Traits >::unget()`.

**5.624.6.18** `const fmtflags std::ios_base::hex` `[static], [inherited]`

Converts integer input or generates integer output in hexadecimal base.

Definition at line 335 of file `ios_base.h`.

Referenced by `std::num_get<_CharT, _InIter >::do_get()`, `std::num_put<_CharT, _OutIter >::do_put()`, `std::hex()`, and `std::basic_ostream<_CharT, _Traits >::operator<<()`.

**5.624.6.19** `const openmode std::ios_base::in` `[static], [inherited]`

Open for input. Default for `ifstream` and `fstream`.

Definition at line 443 of file `ios_base.h`.

Referenced by `std::basic_filebuf<char_type, traits_type >::_M_set_buffer()`, `std::basic_ifstream<_CharT, _Traits >::open()`, `std::basic_istream<_CharT, _Traits >::seekg()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc >::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc >::seekpos()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc >::showmanyc()`, `std::basic_filebuf<_CharT, _Traits >::showmanyc()`, `std::basic_istream<_CharT, _Traits >::tellg()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc >::underflow()`, `std::basic_filebuf<_CharT, _Traits >::underflow()`, and `std::basic_filebuf<_CharT, _Traits >::xsgetn()`.

**5.624.6.20** `const fmtflags std::ios_base::internal` `[static], [inherited]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 340 of file `ios_base.h`.

Referenced by `std::internal()`.

**5.624.6.21** `const fmtflags std::ios_base::left` `[static], [inherited]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 344 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _OutIter >::do_put()`, and `std::left()`.

**5.624.6.22** `const fmtflags std::ios_base::oct` `[static], [inherited]`

Converts integer input or generates integer output in octal base.

Definition at line 347 of file `ios_base.h`.

Referenced by `std::oct()`, and `std::basic_ostream<_CharT, _Traits >::operator<<()`.

**5.624.6.23** `const openmode std::ios_base::out` `[static], [inherited]`

Open for output. Default for `ofstream` and `fstream`.

Definition at line 446 of file `ios_base.h`.

Referenced by `std::basic_filebuf<char_type, traits_type >::_M_set_buffer()`, `std::basic_ofstream<_CharT, _Traits >::open()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc >::seekoff()`, `std::basic_ostream<_CharT, _Traits >::seekp()`, `std::basic_ostream<_CharT, _Traits >::tellp()`, and `std::basic_filebuf<_CharT, _Traits >::xsputn()`.

**5.624.6.24** `const fmtflags std::ios_base::right` `[static], [inherited]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 351 of file `ios_base.h`.

Referenced by `std::right()`.

**5.624.6.25** `const fmtflags std::ios_base::scientific` `[static], [inherited]`

Generates floating-point output in scientific notation.

Definition at line 354 of file `ios_base.h`.

Referenced by `std::hexfloat()`, and `std::scientific()`.

**5.624.6.26** `const fmtflags std::ios_base::showbase` `[static], [inherited]`

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 358 of file `ios_base.h`.

Referenced by `std::noshowbase()`, and `std::showbase()`.

**5.624.6.27** `const fmtflags std::ios_base::showpoint` `[static], [inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 362 of file `ios_base.h`.

Referenced by `std::noshowpoint()`, and `std::showpoint()`.

**5.624.6.28** `const fmtflags std::ios_base::showpos` `[static], [inherited]`

Generates a + sign in non-negative generated numeric output.

Definition at line 365 of file `ios_base.h`.

Referenced by `std::noshowpos()`, and `std::showpos()`.

**5.624.6.29** `const fmtflags std::ios_base::skipws` `[static], [inherited]`

Skips leading white space before certain input operations.

Definition at line 368 of file `ios_base.h`.

Referenced by `std::noskipws()`, `std::basic_istream<_CharT, _Traits >::sentry::sentry()`, and `std::skipws()`.

**5.624.6.30** `const openmode std::ios_base::trunc` `[static], [inherited]`

Open for input. Default for `ofstream`.

Definition at line 449 of file `ios_base.h`.

**5.624.6.31** `const fmtflags std::ios_base::unitbuf` `[static], [inherited]`

Flushes output after each output operation.

Definition at line 371 of file `ios_base.h`.

Referenced by `std::nounitbuf()`, `std::unitbuf()`, and `std::basic_ostream<_CharT, _Traits >::sentry::~sentry()`.

**5.624.6.32** `const fmtflags std::ios_base::uppercase` `[static], [inherited]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 375 of file `ios_base.h`.

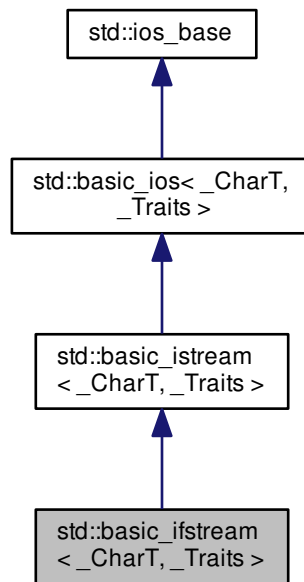

Referenced by `std::num_put<_CharT, _Outiter >::do_put()`, `std::nouppercase()`, and `std::uppercase()`.

The documentation for this class was generated from the following file:

- `__istream_type & operator>> (__ios_type & (* __pf)(__ios_type &))`
- `__istream_type & operator>> (ios_base & (* __pf)(ios_base &))`

### Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to `false`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- `__istream_type & operator>> (bool & __n)`
- `__istream_type & operator>> (short & __n)`
- `__istream_type & operator>> (unsigned short & __n)`
- `__istream_type & operator>> (int & __n)`

- `__istream_type & operator>>` (unsigned int &\_\_n)
- `__istream_type & operator>>` (long &\_\_n)
- `__istream_type & operator>>` (unsigned long &\_\_n)
- `__istream_type & operator>>` (long long &\_\_n)
- `__istream_type & operator>>` (unsigned long long &\_\_n)
  
- `__istream_type & operator>>` (float &\_\_f)
- `__istream_type & operator>>` (double &\_\_f)
- `__istream_type & operator>>` (long double &\_\_f)

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

#### 5.625.1 Detailed Description

```
template<typename _CharT, typename _Traits>class std::basic_ifstream<_CharT, _Traits>
```

Controlling input for files.

#### Template Parameters

<a href="#">_CharT</a>	Type of character stream.
<a href="#">_Traits</a>	Traits for character type, defaults to <a href="#">char_traits</a> <_CharT>.

This class supports reading from named files, using the inherited functions from [std::basic\\_istream](#). To control the associated sequence, an instance of [std::basic\\_filebuf](#) is used, which this page refers to as *sb*.

Definition at line 476 of file [fstream](#).

#### 5.625.2 Member Typedef Documentation

5.625.2.1 `template<typename _CharT, typename _Traits = char\_traits<_CharT>> typedef num\_put<_CharT, ostreambuf\_iterator<_CharT, _Traits>> std::basic\_ios<_CharT, _Traits>::__num_put_type`  
[*inherited*]

These are non-standard types.

Definition at line 89 of file [basic\\_ios.h](#).

5.625.2.2 `typedef void(* std::ios_base::event_callback)(event __e, ios_base &__b, int __i)` [inherited]

The type of an event callback function.

## Parameters

<code>__e</code>	One of the members of the event enum.
<code>__b</code>	Reference to the <code>ios_base</code> object.
<code>__i</code>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 506 of file `ios_base.h`.

### 5.625.2.3 `typedef _Ios_Fmtflags std::ios_base::fmtflags` `[inherited]`

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

Definition at line 323 of file `ios_base.h`.

#### 5.625.2.4 `typedef _ios_iostate std::ios_base::iostate` [inherited]

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 398 of file `ios_base.h`.

#### 5.625.2.5 `typedef _ios_Openmode std::ios_base::openmode` [inherited]

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 429 of file `ios_base.h`.

#### 5.625.2.6 `typedef _ios_Seekdir std::ios_base::seekdir` [inherited]

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 461 of file `ios_base.h`.

### 5.625.3 Member Enumeration Documentation

#### 5.625.3.1 `enum std::ios_base::event` [inherited]

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

Definition at line 489 of file `ios_base.h`.

## 5.625.4 Constructor &amp; Destructor Documentation

5.625.4.1 `template<typename _CharT, typename _Traits> std::basic_ifstream<_CharT, _Traits>::basic_ifstream ( )`  
`[inline]`

Default constructor.

Initializes `sb` using its default constructor, and passes `&sb` to the base class initializer. Does not open any files (you haven't given it a filename to open).

Definition at line 502 of file `fstream`.

References `std::basic_ios<_CharT, _Traits>::init()`.

5.625.4.2 `template<typename _CharT, typename _Traits> std::basic_ifstream<_CharT, _Traits>::basic_ifstream ( const char * __s, ios_base::openmode __mode = ios_base::in )` `[inline], [explicit]`

Create an input file stream.

## Parameters

<code>__s</code>	Null terminated string specifying the filename.
<code>__mode</code>	Open file in specified mode (see <code>std::ios_base</code> ).

`ios_base::in` is automatically included in `__mode`.

Definition at line 513 of file `fstream`.

References `std::basic_ios<_CharT, _Traits>::init()`, and `std::basic_ifstream<_CharT, _Traits>::open()`.

5.625.4.3 `template<typename _CharT, typename _Traits> std::basic_ifstream<_CharT, _Traits>::basic_ifstream ( const std::string & __s, ios_base::openmode __mode = ios_base::in )` `[inline], [explicit]`

Create an input file stream.

## Parameters

<code>__s</code>	<code>std::string</code> specifying the filename.
<code>__mode</code>	Open file in specified mode (see <code>std::ios_base</code> ).

`ios_base::in` is automatically included in `__mode`.

Definition at line 529 of file `fstream`.

References `std::basic_ios<_CharT, _Traits>::init()`, and `std::basic_ifstream<_CharT, _Traits>::open()`.

5.625.4.4 `template<typename _CharT, typename _Traits> std::basic_ifstream<_CharT, _Traits>::~~basic_ifstream ( )`  
`[inline]`

The destructor does nothing.

The file is closed by the `filebuf` object, not the formatting stream.

Definition at line 566 of file `fstream`.

## 5.625.5 Member Function Documentation

5.625.5.1 `const locale& std::ios_base::_M_getloc ( ) const` `[inline], [inherited]`

Locale access.

**Returns**

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 776 of file `ios_base.h`.

Referenced by `std::time_get<_CharT, _Inlter>::do_get()`, `std::money_get<_CharT, _Inlter>::do_get()`, `std::num_get<_CharT, _Inlter>::do_get()`, `std::time_get<_CharT, _Inlter>::do_get_date()`, `std::time_get<_CharT, _Inlter>::do_get_monthname()`, `std::time_get<_CharT, _Inlter>::do_get_time()`, `std::time_get<_CharT, _Inlter>::do_get_weekday()`, `std::time_put<_CharT, _Outlter>::do_put()`, `std::num_put<_CharT, _Outlter>::do_put()`, `std::time_get<_CharT, _Inlter>::get()`, and `std::time_put<_CharT, _Outlter>::put()`.

```
5.625.5.2 template<typename _CharT, typename _Traits = char_traits<_CharT>> bool std::basic_ios<_CharT, _Traits>::bad
( ) const [inline], [inherited]
```

Fast error checking.

**Returns**

True if the `badbit` is set.

Note that other `iostate` flags may also be set.

Definition at line 211 of file `basic_ios.h`.

```
5.625.5.3 template<typename _CharT, typename _Traits > void std::basic_ios<_CharT, _Traits>::clear ( iostate __state =
goodbit ) [inherited]
```

[Re]sets the error state.

**Parameters**

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See `std::ios_base::iostate` for the possible bit values. Most users will not need to pass an argument.

Definition at line 41 of file `basic_ios.tcc`.

Referenced by `std::basic_ios<char, char_traits<char>>::exceptions()`, `std::basic_ifstream<_CharT, _Traits>::open()`, `std::basic_ofstream<_CharT, _Traits>::open()`, `std::basic_fstream<_CharT, _Traits>::open()`, `std::__detail::operator>>()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ios<char, char_traits<char>>::setstate()`, and `std::basic_istream<_CharT, _Traits>::unsetg()`.

```
5.625.5.4 template<typename _CharT, typename _Traits> void std::basic_ifstream<_CharT, _Traits>::close ( )
[inline]
```

Close the file.

Calls `std::basic_filebuf::close()`. If that function fails, `failbit` is set in the stream's error state.

Definition at line 678 of file `fstream`.

References `std::basic_filebuf<_CharT, _Traits>::close()`, `std::ios_base::failbit`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

```
5.625.5.5 template<typename _CharT, typename _Traits > basic_ios<_CharT, _Traits > & std::basic_ios<_CharT, _Traits
>::copyfmt ( const basic_ios<_CharT, _Traits > & __rhs ) [inherited]
```

Copies fields of `__rhs` into this.

## Parameters

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

## Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy exceptions().

Definition at line 63 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::exceptions()`, `std::basic_ios<_CharT, _Traits>::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios<_CharT, _Traits>::tie()`, `std::tie()`, and `std::ios_base::width()`.

**5.625.5.6** `template<typename _CharT, typename _Traits = char_traits<_CharT>> bool std::basic_ios<_CharT, _Traits>::eof ( ) const [inline], [inherited]`

Fast error checking.

## Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 190 of file `basic_ios.h`.

**5.625.5.7** `template<typename _CharT, typename _Traits = char_traits<_CharT>> iostate std::basic_ios<_CharT, _Traits>::exceptions ( ) const [inline], [inherited]`

Throwing exceptions on errors.

## Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Definition at line 222 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

**5.625.5.8** `template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_ios<_CharT, _Traits>::exceptions ( iostate __except ) [inline], [inherited]`

Throwing exceptions on errors.

## Parameters

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```

* #include <iostream>
* #include <fstream>
* #include <exception>
*
* int main()
* {
*     std::set_terminate (
*         __gnu_cxx::__verbose_terminate_handler);
*
*     std::ifstream f ("/etc/motd");
*
*     std::cerr << "Setting badbit\n";
*     f.setstate (std::ios_base::badbit);
*
*     std::cerr << "Setting exception mask\n";
*     f.exceptions (std::ios_base::badbit);
* }
*

```

Definition at line 257 of file `basic_ios.h`.

**5.625.5.9** `template<typename _CharT, typename _Traits = char_traits<_CharT>> bool std::basic_ios<_CharT, _Traits>::fail( ) const` `[inline], [inherited]`

Fast error checking.

#### Returns

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other `iostate` flags may also be set.

Definition at line 201 of file `basic_ios.h`.

Referenced by `std::basic_ios<char, char_traits<char>>::operator bool()`, `std::basic_ios<char, char_traits<char>>::operator!()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_ostream<_CharT, _Traits>::tellp()`, and `std::regex_traits<_CharT, _Traits>::value()`.

**5.625.5.10** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type std::basic_ios<_CharT, _Traits>::fill( ) const` `[inline], [inherited]`

Retrieves the *empty* character.

#### Returns

The current fill character.

It defaults to a space (' ') in the current locale.

Definition at line 370 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, and `std::basic_ios<char, char_traits<char>>::fill()`.

**5.625.5.11** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type std::basic_ios<_CharT, _Traits>::fill( char_type __ch )` `[inline], [inherited]`

Sets a new *empty* character.

## Parameters

<code>__ch</code>	The new character.
-------------------	--------------------

## Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current locale.

Definition at line 390 of file `basic_ios.h`.

**5.625.5.12** `fmtflags std::ios_base::flags( ) const` `[inline],[inherited]`

Access to format flags.

## Returns

The format control flags for both input and output.

Definition at line 621 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits >::copyfmt()`, `std::num_get<_CharT, _InIter >::do_get()`, `std::num_put<_CharT, _OutIter >::do_put()`, `std::basic_ostream<_CharT, _Traits >::operator<<()`, `std::operator<<()`, `std::__detail::operator>>()`, `std::operator>>()`, and `std::basic_istream<_CharT, _Traits >::sentry::sentry()`.

**5.625.5.13** `fmtflags std::ios_base::flags( fmtflags __fmtfl )` `[inline],[inherited]`

Setting new format flags all at once.

## Parameters

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

## Returns

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

Definition at line 632 of file `ios_base.h`.

**5.625.5.14** `template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_istream<_CharT, _Traits >::gcount( ) const` `[inline],[inherited]`

Character counting.

## Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 269 of file `istream`.

**5.625.5.15** `template<typename _CharT, typename _Traits > basic_istream<_CharT, _Traits >::int_type std::basic_istream<_CharT, _Traits >::get( void )` `[inherited]`

Simple extraction.

**Returns**

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 244 of file istream.tcc.

References std::basic\_istream<\_CharT, \_Traits>::\_M\_gcount, std::ios\_base::badbit, std::ios\_base::eofbit, std::ios\_base::failbit, std::ios\_base::goodbit, std::basic\_ios<\_CharT, \_Traits>::rdbuf(), and std::basic\_ios<\_CharT, \_Traits>::setstate().

5.625.5.16 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get ( char_type & __c ) [inherited]`

Simple extraction.

**Parameters**

<code>__c</code>	The character in which to store data.
------------------	---------------------------------------

**Returns**

\*this

Tries to extract a character and store it in `__c`. If none are available, sets failbit and returns traits::eof().

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 280 of file istream.tcc.

References std::basic\_istream<\_CharT, \_Traits>::\_M\_gcount, std::ios\_base::badbit, std::ios\_base::eofbit, std::ios\_base::failbit, std::ios\_base::goodbit, std::basic\_ios<\_CharT, \_Traits>::rdbuf(), and std::basic\_ios<\_CharT, \_Traits>::setstate().

5.625.5.17 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get ( char_type * __s, streamsize __n, char_type __delim ) [inherited]`

Simple multiple-character extraction.

**Parameters**

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>__s</code> .
<code>__delim</code>	A "stop" character.

**Returns**

\*this

Characters are extracted and stored into `__s` until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals `__delim`, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

#### Note

This function is not overloaded on signed char and unsigned char.

Definition at line 317 of file istream.tcc.

References std::basic\_ifstream< \_CharT, \_Traits >::\_M\_gcount, std::ios\_base::badbit, std::ios\_base::eofbit, std::ios\_base::failbit, std::ios\_base::goodbit, std::basic\_ios< \_CharT, \_Traits >::rdbuf(), std::basic\_ios< \_CharT, \_Traits >::setstate(), std::basic\_streambuf< \_CharT, \_Traits >::sgetc(), and std::basic\_streambuf< \_CharT, \_Traits >::snextc().

5.625.5.18 `template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_ifstream<_CharT, _Traits >::get ( char_type * __s, streamsize __n )` `[inline],[inherited]`

Simple multiple-character extraction.

#### Parameters

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>s</code> .

#### Returns

\*this

Returns `get(__s,__n,widen('\n'))`.

Definition at line 354 of file istream.

5.625.5.19 `template<typename _CharT, typename _Traits > basic_ifstream<_CharT, _Traits > & std::basic_ifstream<_CharT, _Traits >::get ( __streambuf_type & __sb, char_type __delim )` `[inherited]`

Extraction into another streambuf.

#### Parameters

<code>__sb</code>	A streambuf in which to store data.
<code>__delim</code>	A "stop" character.

#### Returns

\*this

Characters are extracted and inserted into `__sb` until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals `__delim` (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

Definition at line 364 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::setstate()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, `std::basic_streambuf< _CharT, _Traits >::snextc()`, and `std::basic_streambuf< _CharT, _Traits >::sputc()`.

5.625.5.20 `template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream< _CharT, _Traits >::get ( __streambuf_type & __sb ) [inline],[inherited]`

Extraction into another streambuf.

Parameters

<code>__sb</code>	A streambuf in which to store data.
-------------------	-------------------------------------

Returns

\*this

Returns `get(__sb,widen("\n"))`.

Definition at line 387 of file `istream`.

5.625.5.21 `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline ( char_type * __s, streamsize __n, char_type __delim ) [inherited]`

String extraction.

Parameters

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.
<code>__delim</code>	A "stop" character.

Returns

\*this

Extracts and stores characters into `__s` until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the `__s` array without setting failbit.

1. the input sequence reaches end-of-file, in which case `eofbit` is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case `failbit` is set in the stream error state

If no characters are extracted, `failbit` is set. (An empty line of input should therefore not cause `failbit` to be set.)

In any case, a null character is stored in the next location in the array.

Definition at line 408 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_streambuf< _CharT, _Traits >::sbumpc()`, `std::basic_ios< _CharT, _Traits >::setstate()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, and `std::basic_streambuf< _CharT, _Traits >::snextc()`.

Referenced by `std::basic_istream< char >::getline()`.

5.625.5.22 `template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_ifstream<_CharT, _Traits>::getline ( char_type * __s, streamsize __n ) [inline], [inherited]`

String extraction.

## Parameters

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.

## Returns

`*this`

Returns `getline(__s,__n,widen('\n'))`.

Definition at line 427 of file `istream`.

**5.625.5.23** `locale std::ios_base::getloc ( ) const [inline],[inherited]`

Locale access.

## Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 765 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT,_Traits>::copyfmt()`, `std::money_put<_CharT,_Outiter>::do_put()`, `std::operator>>()`, and `std::ws()`.

**5.625.5.24** `template<typename _CharT,typename _Traits = char_traits<_CharT>> bool std::basic_ios<_CharT,_Traits>::good ( ) const [inline],[inherited]`

Fast error checking.

## Returns

True if no error flags are set.

A wrapper around `rdstate`.

Definition at line 180 of file `basic_ios.h`.

Referenced by `std::__detail::operator>>()`, `std::basic_ostream<_CharT,_Traits>::sentry::sentry()`, and `std::basic_istream<_CharT,_Traits>::sentry::sentry()`.

**5.625.5.25** `template<typename _CharT,typename _Traits> basic_istream<_CharT,_Traits> & std::basic_istream<_CharT,_Traits>::ignore ( streamsize __n, int_type __delim ) [inherited]`

Discarding characters.

## Parameters

<code>__n</code>	Number of characters to discard.
<code>__delim</code>	A "stop" character.

## Returns

`*this`

Extracts characters and throws them away until one of the following happens:

- if `__n != std::numeric_limits<int>::max()`, `__n` characters are extracted
- the input sequence reaches end-of-file
- the next character equals `__delim` (in this case, the character is extracted); note that this condition will never occur if `__delim` equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 563 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

**5.625.5.26** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore ( streamsize __n )` [inherited]

Simple extraction.

Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 501 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

**5.625.5.27** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore ( void )` [inherited]

Simple extraction.

Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 468 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.625.5.28** `template<typename _CharT, typename _Traits> locale std::basic_ios<_CharT, _Traits>::imbue ( const locale & __loc )` [inherited]

Moves to a new locale.

**Parameters**

<code>__loc</code>	The new locale.
--------------------	-----------------

**Returns**

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Definition at line 114 of file `basic_ios.tcc`.

References `std::ios_base::imbue()`.

Referenced by `std::operator<<()`.

**5.625.5.29** `template<typename _CharT, typename _Traits> void std::basic_ios<_CharT, _Traits>::init ( basic_streambuf<_CharT, _Traits> * __sb )` `[protected]`, `[inherited]`

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 126 of file `basic_ios.tcc`.

Referenced by `std::basic_fstream<_CharT, _Traits>::basic_fstream()`, `std::basic_ifstream<_CharT, _Traits>::basic_ifstream()`, `std::basic_ios<char, char_traits<char>>::basic_ios()`, `std::basic_istream<char>::basic_istream()`, `std::basic_istreamstream<_CharT, _Traits, _Alloc>::basic_istreamstream()`, `std::basic_ofstream<_CharT, _Traits>::basic_ofstream()`, `std::basic_ostream<char>::basic_ostream()`, `std::basic_ostringstream<_CharT, _Traits, _Alloc>::basic_ostringstream()`, and `std::basic_stringstream<_CharT, _Traits, _Alloc>::basic_stringstream()`.

**5.625.5.30** `template<typename _CharT, typename _Traits> bool std::basic_ifstream<_CharT, _Traits>::is_open ( )` `[inline]`

Wrapper to test for an open file.

**Returns**

`rdbuf() -> is_open()`

Definition at line 607 of file `fstream`.

References `std::basic_filebuf<_CharT, _Traits>::is_open()`.

**5.625.5.31** `long& std::ios_base::iword ( int __ix )` `[inline]`, `[inherited]`

Access to integer array.

**Parameters**

<code>__ix</code>	Index into the array.
-------------------	-----------------------

**Returns**

A reference to an integer associated with the index.

The `word` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 811 of file `ios_base.h`.

**5.625.5.32** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char std::basic_ios<_CharT, _Traits>::narrow ( char_type __c, char __dfault ) const` `[inline]`, `[inherited]`

Squeezes characters.

**Parameters**

<code>__c</code>	The character to narrow.
<code>__dfault</code>	The character to narrow.

**Returns**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
* std::use_facet<ctype<char_type>> >(getloc()).narrow(c, dfault)
*
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.-html>

Definition at line 430 of file `basic_ios.h`.

**5.625.5.33** `template<typename _CharT, typename _Traits> void std::basic_ifstream<_CharT, _Traits>::open ( const char * __s, ios_base::openmode __mode = ios_base::in )` `[inline]`

Opens an external file.

**Parameters**

<code>__s</code>	The name of the file.
<code>__mode</code>	The open mode flags.

Calls `std::basic_filebuf::open(s, __mode|in)`. If that function fails, `failbit` is set in the stream's error state.

Definition at line 625 of file `fstream`.

References `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::failbit`, `std::ios_base::in`, `std::basic_filebuf<_CharT, _Traits>::open()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

Referenced by `std::basic_ifstream<_CharT, _Traits>::basic_ifstream()`.

**5.625.5.34** `template<typename _CharT, typename _Traits> void std::basic_ifstream<_CharT, _Traits>::open ( const std::string & __s, ios_base::openmode __mode = ios_base::in )` `[inline]`

Opens an external file.

## Parameters

<code>__s</code>	The name of the file.
<code>__mode</code>	The open mode flags.

Calls `std::basic_filebuf::open(__s,__mode|in)`. If that function fails, `failbit` is set in the stream's error state.

Definition at line 645 of file `fstream`.

References `std::basic_ios<_CharT,_Traits>::clear()`, `std::ios_base::failbit`, `std::ios_base::in`, `std::basic_filebuf<_CharT,_Traits>::open()`, and `std::basic_ios<_CharT,_Traits>::setstate()`.

**5.625.5.35** `template<typename _CharT, typename _Traits = char_traits<_CharT>> std::basic_ios<_CharT,_Traits>::operator bool ( ) const [inline],[explicit],[inherited]`

    _CharT, _Traits >::operator>> ( unsigned long long &__n ) [inline],[inherited]
```

Integer arithmetic extractors.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 199 of file `istream`.

```
5.625.5.49 template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<
    _CharT, _Traits >::operator>> ( float &__f ) [inline],[inherited]
```

Floating point arithmetic extractors.

**Parameters**

<code>__f</code>	A variable of builtin floating point type.
------------------	--

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 214 of file `istream`.

5.625.5.50 `template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_ifstream<_CharT, _Traits >::operator>> ( double & __f ) [inline], [inherited]`

Floating point arithmetic extractors.

**Parameters**

<code>__f</code>	A variable of builtin floating point type.
------------------	--

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 218 of file `istream`.

```
5.625.5.51 template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<
    _CharT, _Traits >::operator>> ( long double & __f ) [inline], [inherited]
```

Floating point arithmetic extractors.

**Parameters**

<code>__f</code>	A variable of builtin floating point type.
------------------	--

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 222 of file `istream`.

```
5.625.5.52 template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<
    _CharT, _Traits >::operator>> ( void *& __p ) [inline], [inherited]
```

Basic arithmetic extractors.

**Parameters**

<code>__p</code>	A variable of pointer type.
------------------	-----------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 235 of file `istream`.

```
5.625.5.53 template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream<
    _CharT, _Traits >::operator>> ( __streambuf_type * __sb ) [inherited]
```

Extracting into another streambuf.

**Parameters**

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

Definition at line 212 of file istream.tcc.

References `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.625.5.54** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::int_type  
std::basic_istream<_CharT, _Traits>::peek( void ) [inherited]`

Looking ahead in the stream.

#### Returns

The next character, or eof().

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 628 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.625.5.55** `streamsize std::ios_base::precision( ) const [inline], [inherited]`

Flags access.

#### Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 691 of file ios\_base.h.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, and `std::operator<<()`.

**5.625.5.56** `streamsize std::ios_base::precision( streamsize __prec ) [inline], [inherited]`

Changing flags.

#### Parameters

<code>__prec</code>	The new precision value.
---------------------	--------------------------

#### Returns

The previous value of `precision()`.

Definition at line 700 of file ios\_base.h.

**5.625.5.57** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> &std::basic_istream<  
_CharT, _Traits>::putback( char_type __c ) [inherited]`

Unextracting a single character.

**Parameters**

<code>__c</code>	The character to push back into the input stream.
------------------	---

**Returns**

\*this

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

**Note**

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 719 of file `istream.tcc`.

References `std::basic_istream<_CharT,_Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT,_Traits>::clear()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT,_Traits>::rdbuf()`, `std::basic_ios<_CharT,_Traits>::rdstate()`, `std::basic_ios<_CharT,_Traits>::setstate()`, and `std::basic_streambuf<_CharT,_Traits>::sputbackc()`.

Referenced by `std::operator>>()`.

5.625.5.58 `void*& std::ios_base::pword( int __ix ) [inline],[inherited]`

Access to void pointer array.

**Parameters**

<code>__ix</code>	Index into the array.
-------------------	-----------------------

**Returns**

A reference to a `void*` associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 832 of file `ios_base.h`.

5.625.5.59 `template<typename _CharT,typename _Traits> basic_streambuf<_CharT,_Traits> * std::basic_ios<_CharT,_Traits>::rdbuf( basic_streambuf<_CharT,_Traits> * __sb ) [inherited]`

Changing the underlying buffer.

**Parameters**

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

**Returns**

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
* std::fstream    foo;           // or some other derived type
* std::streambuf* p = .....;
*
* foo.ios::rdbuf(p);           // ios == basic_ios<char>
*
```

Definition at line 53 of file `basic_ios.tcc`.

```
5.625.5.60 template<typename _CharT, typename _Traits> __filebuf_type* std::basic_ifstream<_CharT, _Traits>::rdbuf(
    ) const [inline]
```

Accessing the underlying buffer.

**Returns**

The current `basic_filebuf` buffer.

This hides both signatures of `std::basic_ios::rdbuf()`.

Definition at line 599 of file `fstream`.

```
5.625.5.61 template<typename _CharT, typename _Traits = char_traits<_CharT>> iosstate std::basic_ios<_CharT, _Traits>::rdstate( ) const [inline], [inherited]
```

Returns the error state of the stream buffer.

**Returns**

A bit pattern (well, isn't everything?)

See `std::ios_base::iosstate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Definition at line 137 of file `basic_ios.h`.

Referenced by `std::basic_ios<char, char_traits<char>>::bad()`, `std::basic_ios<char, char_traits<char>>::eof()`, `std::basic_ios<char, char_traits<char>>::fail()`, `std::basic_ios<char, char_traits<char>>::good()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ios<char, char_traits<char>>::setstate()`, and `std::basic_istream<_CharT, _Traits>::unget()`.

```
5.625.5.62 template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::read( char_type * _s, streamsize _n ) [inherited]
```

Extraction without delimiters.

**Parameters**

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

**Returns**

\*this

If the stream state is `good()`, extracts characters and stores them into `__s` until one of the following happens:

- `__n` characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 658 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.625.5.63** `template<typename _CharT, typename _Traits> streamsize std::basic_istream<_CharT, _Traits>::readsome ( char_type * __s, streamsize __n ) [inherited]`

Extraction until the buffer is exhausted, but no more.

**Parameters**

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

**Returns**

The number of characters extracted.

Extracts characters and stores them into `__s` depending on the number of characters remaining in the `streambuf`'s buffer, `rdbuf()->in_avail()`, called `A` here:

- if `A == -1`, sets `eofbit` and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the `streambuf`.

Definition at line 687 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::min()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.625.5.64** `void std::ios_base::register_callback ( event_callback __fn, int __index ) [inherited]`

Add the callback `__fn` with parameter `__index`.

## Parameters

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

5.625.5.65 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::seekg ( pos_type __pos ) [inherited]`

Changing the current read position.

## Parameters

<code>__pos</code>	A file position object.
--------------------	-------------------------

## Returns

\*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets `failbit`.

## Note

This function first clears `eofbit`. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 853 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::eofbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::rdstate()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.625.5.66 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::seekg ( off_type __off, ios_base::seekdir __dir ) [inherited]`

Changing the current read position.

## Parameters

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

## Returns

\*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off, __dir)`. If that function fails, sets `failbit`.

## Note

This function first clears `eofbit`. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 892 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::eofbit`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::rdstate()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.625.5.67 **fmtflags** `std::ios_base::setf ( fmtflags __fmtfl )` [inline],[inherited]

Setting new format flags.

## Parameters

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

## Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 648 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::dec()`, `std::fixed()`, `std::hex()`, `std::hexfloat()`, `std::left()`, `std::oct()`, `std::__detail::operator>>()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

**5.625.5.68** `fmtflags std::ios_base::setf ( fmtflags __fmtfl, fmtflags __mask )` `[inline]`, `[inherited]`

Setting new format flags.

## Parameters

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <code>fmtfl</code> .

## Returns

The previous format control flags.

This function clears `mask` in the format flags, then sets `fmtfl & mask`. An example mask is `ios_base::adjustfield`.

Definition at line 665 of file `ios_base.h`.

**5.625.5.69** `template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_ios<_CharT, _Traits>::setstate ( iostate __state )` `[inline]`, `[inherited]`

Sets additional flags in the error state.

## Parameters

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

Definition at line 157 of file `basic_ios.h`.

Referenced by `std::basic_ostream<char>::_M_write()`, `std::basic_ifstream<_CharT, _Traits>::close()`, `std::basic_ofstream<_CharT, _Traits>::close()`, `std::basic_fstream<_CharT, _Traits>::close()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_ifstream<_CharT, _Traits>::open()`, `std::basic_ofstream<_CharT, _Traits>::open()`, `std::basic_fstream<_CharT, _Traits>::open()`, `std::operator<<()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::tr2::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<_CharT, _Traits>::unget()`, and `std::ws()`.

**5.625.5.70** `template<typename _CharT, typename _Traits > int std::basic_istream< _CharT, _Traits >::sync ( void )`  
`[inherited]`

Synchronizing the stream buffer.

#### Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf() ->pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

#### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 789 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_streambuf< _CharT, _Traits >::pubsync()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.625.5.71** `static bool std::ios_base::sync_with_stdio ( bool __sync = true )` `[static], [inherited]`

Interaction with the standard C I/O objects.

#### Parameters

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

#### Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

**5.625.5.72** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits >::pos_type`  
`std::basic_istream< _CharT, _Traits >::tellg ( void )` `[inherited]`

Getting the current read position.

#### Returns

A file position object.

If `fail()` is not `false`, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf() ->pubseekoff(0, cur, in)`.

#### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with `putback`, `unget` and `seekg`, `eofbit` is not cleared first.

Definition at line 825 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::in`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

5.625.5.73 `template<typename _CharT, typename _Traits = char_traits<_CharT>> basic_ostream<_CharT, _Traits>*  
std::basic_ios<_CharT, _Traits>::tie( ) const` `[inline]`, `[inherited]`

Fetches the current *tied* stream.

#### Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 295 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_ifstream<_CharT, _Traits>::sentry::sentry()`.

5.625.5.74 `template<typename _CharT, typename _Traits = char_traits<_CharT>> basic_ostream<_CharT, _Traits>*  
std::basic_ios<_CharT, _Traits>::tie( basic_ostream<_CharT, _Traits> * __tiestr )` `[inline]`,  
`[inherited]`

Ties this stream to an output stream.

#### Parameters

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

#### Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 307 of file `basic_ios.h`.

5.625.5.75 `template<typename _CharT, typename _Traits> basic_ifstream<_CharT, _Traits> & std::basic_ifstream<  
_CharT, _Traits>::ungetc( void )` `[inherited]`

Unextracting the previous character.

#### Returns

`*this`

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

#### Note

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 754 of file `istream.tcc`.

References `std::basic_ifstream<_CharT, _Traits>::M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::rdstate()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_streambuf<_CharT, _Traits>::sungetc()`.

Referenced by `std::__detail::operator>>()`.

5.625.5.76 `void std::ios_base::unsetf ( fmtflags __mask )` [inline],[inherited]

Clearing format flags.

## Parameters

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

Definition at line 680 of file `ios_base.h`.

Referenced by `std::defaultfloat()`, `std::noboolalpha()`, `std::noshowbase()`, `std::noshowpoint()`, `std::noshowpos()`, `std::noskipws()`, `std::nounitbuf()`, and `std::nouppercase()`.

**5.625.5.77** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type std::basic_ios<_CharT, _Traits>::widen ( char __c ) const [inline], [inherited]`

Widens characters.

## Parameters

<code>__c</code>	The character to widen.
------------------	-------------------------

## Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
* std::use_facet<ctype<char_type>> >(getloc()).widen(c)
*
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.-html>

Definition at line 449 of file `basic_ios.h`.

Referenced by `std::basic_ios<char, char_traits<char>>::fill()`, `std::basic_istream<char>::get()`, `std::basic_istream<char>::getline()`, `std::getline()`, `std::tr2::operator>>()`, and `std::operator>>()`.

**5.625.5.78** `streamsize std::ios_base::width ( ) const [inline], [inherited]`

Flags access.

## Returns

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 714 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _Outiter>::do_put()`, and `std::operator>>()`.

**5.625.5.79** `streamsize std::ios_base::width ( streamsize __wide ) [inline], [inherited]`

Changing flags.

## Parameters

<code>__wide</code>	The new width value.
---------------------	----------------------

## Returns

The previous value of `width()`.

Definition at line 723 of file `ios_base.h`.

**5.625.5.80** `static int std::ios_base::xalloc ( ) throw` `[static], [inherited]`

Access to unique indices.

## Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

**5.625.6 Member Data Documentation**

**5.625.6.1** `template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_istream<_CharT, _Traits>::_M_gcount` `[protected], [inherited]`

The number of characters extracted in the previous unformatted function; see `gcount()`.

Definition at line 82 of file `istream`.

Referenced by `std::basic_istream<char>::gcount()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::unget()`, and `std::basic_istream<char>::~~basic_istream()`.

**5.625.6.2** `const fmtflags std::ios_base::adjustfield` `[static], [inherited]`

A mask of `left|right|internal`. Useful for the 2-arg form of `setf`.

Definition at line 378 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _Outiter>::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

**5.625.6.3** `const openmode std::ios_base::app` `[static], [inherited]`

Seek to end before each write.

Definition at line 432 of file `ios_base.h`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_set_buffer()`, and `std::basic_filebuf<_CharT, _Traits>::xspn()`.

**5.625.6.4** `const openmode std::ios_base::ate` `[static], [inherited]`

Open and seek to end immediately after opening.

Definition at line 435 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`.

#### 5.625.6.5 `const iostate std::ios_base::badbit` `[static]`, `[inherited]`

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 402 of file `ios_base.h`.

Referenced by `std::basic_ostream<char>::M_write()`, `std::basic_ios<char, char_traits<char>>::bad()`, `std::basic_ios<char, char_traits<char>>::fail()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::operator<<()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_ostream<_CharT, _Traits>::tellp()`, `std::basic_istream<_CharT, _Traits>::unget()`, `std::basic_ostream<_CharT, _Traits>::write()`, and `std::basic_ostream<_CharT, _Traits>::sentry::~sentry()`.

#### 5.625.6.6 `const fmtflags std::ios_base::basefield` `[static]`, `[inherited]`

A mask of `dec|oct|hex`. Useful for the 2-arg form of `setf`.

Definition at line 381 of file `ios_base.h`.

Referenced by `std::dec()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::hex()`, `std::oct()`, and `std::basic_ostream<_CharT, _Traits>::operator<<()`.

#### 5.625.6.7 `const seekdir std::ios_base::beg` `[static]`, `[inherited]`

Request a seek relative to the beginning of the stream.

Definition at line 464 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::seekpos()`.

#### 5.625.6.8 `const openmode std::ios_base::binary` `[static]`, `[inherited]`

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.-binary>.

Definition at line 440 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::showmanyc()`.

#### 5.625.6.9 `const fmtflags std::ios_base::boolalpha` `[static]`, `[inherited]`

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 326 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::noboolalpha()`.

#### 5.625.6.10 `const seekdir std::ios_base::cur` `[static]`, `[inherited]`

Request a seek relative to the current position within the sequence.

Definition at line 467 of file ios\_base.h.

Referenced by `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_filebuf< _CharT, _Traits >::seekoff()`, `std::basic_istream< _CharT, _Traits >::tellg()`, and `std::basic_ostream< _CharT, _Traits >::tellp()`.

#### 5.625.6.11 `const fmtflags std::ios_base::dec` [static], [inherited]

Converts integer input or generates integer output in decimal base.

Definition at line 329 of file ios\_base.h.

Referenced by `std::dec()`.

#### 5.625.6.12 `const seekdir std::ios_base::end` [static], [inherited]

Request a seek relative to the current end of the sequence.

Definition at line 470 of file ios\_base.h.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`, and `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`.

#### 5.625.6.13 `const iostate std::ios_base::eofbit` [static], [inherited]

Indicates that an input operation reached the end of an input sequence.

Definition at line 405 of file ios\_base.h.

Referenced by `std::time_get< _CharT, _InIter >::do_get()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_date()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_time()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_ios< char, char_traits< char > >::eof()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::time_get< _CharT, _InIter >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

#### 5.625.6.14 `const iostate std::ios_base::failbit` [static], [inherited]

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 410 of file ios\_base.h.

Referenced by `std::basic_ifstream< _CharT, _Traits >::close()`, `std::basic_ofstream< _CharT, _Traits >::close()`, `std::basic_fstream< _CharT, _Traits >::close()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_ios< char, char_traits< char > >::fail()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::time_get< _CharT, _InIter >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

#### 5.625.6.15 `const fmtflags std::ios_base::fixed` [static], [inherited]

Generate floating-point output in fixed-point notation.

Definition at line 332 of file ios\_base.h.

Referenced by `std::fixed()`, and `std::hexfloat()`.

#### 5.625.6.16 `const fmtflags std::ios_base::floatfield` `[static]`, `[inherited]`

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 384 of file `ios_base.h`.

Referenced by `std::defaultfloat()`, `std::fixed()`, `std::hexfloat()`, and `std::scientific()`.

#### 5.625.6.17 `const iostate std::ios_base::goodbit` `[static]`, `[inherited]`

Indicates all is well.

Definition at line 413 of file `ios_base.h`.

Referenced by `std::time_get<_CharT, _Inlter>::do_get()`, `std::num_get<_CharT, _Inlter>::do_get()`, `std::time_get<_CharT, _Inlter>::do_get_monthname()`, `std::time_get<_CharT, _Inlter>::do_get_weekday()`, `std::time_get<_CharT, _Inlter>::do_get_year()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::time_get<_CharT, _Inlter>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_istream<_CharT, _Traits>::sync()`, and `std::basic_istream<_CharT, _Traits>::unget()`.

#### 5.625.6.18 `const fmtflags std::ios_base::hex` `[static]`, `[inherited]`

Converts integer input or generates integer output in hexadecimal base.

Definition at line 335 of file `ios_base.h`.

Referenced by `std::num_get<_CharT, _Inlter>::do_get()`, `std::num_put<_CharT, _Outlter>::do_put()`, `std::hex()`, and `std::basic_ostream<_CharT, _Traits>::operator<<()`.

#### 5.625.6.19 `const openmode std::ios_base::in` `[static]`, `[inherited]`

Open for input. Default for `ifstream` and `fstream`.

Definition at line 443 of file `ios_base.h`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_set_buffer()`, `std::basic_ifstream<_CharT, _Traits>::open()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::showmanyc()`, `std::basic_filebuf<_CharT, _Traits>::showmanyc()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::underflow()`, `std::basic_filebuf<_CharT, _Traits>::underflow()`, and `std::basic_filebuf<_CharT, _Traits>::xsgetn()`.

#### 5.625.6.20 `const fmtflags std::ios_base::internal` `[static]`, `[inherited]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 340 of file `ios_base.h`.

Referenced by `std::internal()`.

#### 5.625.6.21 `const fmtflags std::ios_base::left` `[static]`, `[inherited]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 344 of file ios\_base.h.

Referenced by `std::num_put<_CharT, _Outiter >::do_put()`, and `std::left()`.

**5.625.6.22** `const fmtflags std::ios_base::oct` [static],[inherited]

Converts integer input or generates integer output in octal base.

Definition at line 347 of file ios\_base.h.

Referenced by `std::oct()`, and `std::basic_ostream<_CharT, _Traits >::operator<<()`.

**5.625.6.23** `const openmode std::ios_base::out` [static],[inherited]

Open for output. Default for `ofstream` and `fstream`.

Definition at line 446 of file ios\_base.h.

Referenced by `std::basic_filebuf<char_type, traits_type >::_M_set_buffer()`, `std::basic_ofstream<_CharT, _Traits >::open()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc >::seekoff()`, `std::basic_ostream<_CharT, _Traits >::seekp()`, `std::basic_ostream<_CharT, _Traits >::tellp()`, and `std::basic_filebuf<_CharT, _Traits >::xsputn()`.

**5.625.6.24** `const fmtflags std::ios_base::right` [static],[inherited]

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 351 of file ios\_base.h.

Referenced by `std::right()`.

**5.625.6.25** `const fmtflags std::ios_base::scientific` [static],[inherited]

Generates floating-point output in scientific notation.

Definition at line 354 of file ios\_base.h.

Referenced by `std::hexfloat()`, and `std::scientific()`.

**5.625.6.26** `const fmtflags std::ios_base::showbase` [static],[inherited]

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 358 of file ios\_base.h.

Referenced by `std::noshowbase()`, and `std::showbase()`.

**5.625.6.27** `const fmtflags std::ios_base::showpoint` [static],[inherited]

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 362 of file ios\_base.h.

Referenced by `std::noshowpoint()`, and `std::showpoint()`.

**5.625.6.28** `const fmtflags std::ios_base::showpos` [static],[inherited]

Generates a + sign in non-negative generated numeric output.

Definition at line 365 of file ios\_base.h.

Referenced by `std::noshowpos()`, and `std::showpos()`.

5.625.6.29 `const fmtflags std::ios_base::skipws` [static], [inherited]

Skips leading white space before certain input operations.

Definition at line 368 of file `ios_base.h`.

Referenced by `std::noskipws()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, and `std::skipws()`.

5.625.6.30 `const openmode std::ios_base::trunc` [static], [inherited]

Open for input. Default for `ofstream`.

Definition at line 449 of file `ios_base.h`.

5.625.6.31 `const fmtflags std::ios_base::unitbuf` [static], [inherited]

Flushes output after each output operation.

Definition at line 371 of file `ios_base.h`.

Referenced by `std::nounitbuf()`, `std::unitbuf()`, and `std::basic_ostream<_CharT, _Traits>::sentry::~sentry()`.

5.625.6.32 `const fmtflags std::ios_base::uppercase` [static], [inherited]

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 375 of file `ios_base.h`.

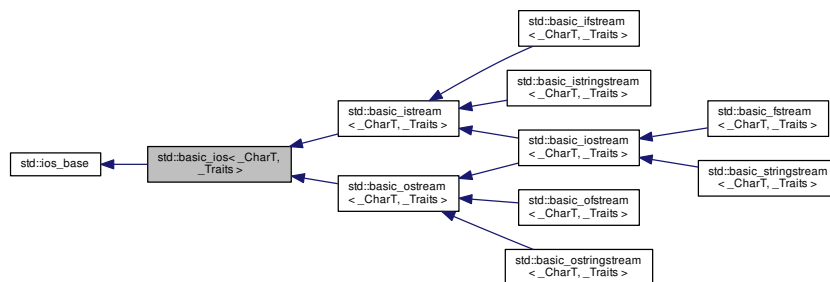

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`, `std::nouppercase()`, and `std::uppercase()`.

The documentation for this class was generated from the following file:

## 5.626.1 Detailed Description

```
template<typename _CharT, typename _Traits = char_traits<_CharT>>class std::basic_ios<_CharT, _Traits >
```

Template class `basic_ios`, virtual base class for all stream classes.

## Template Parameters

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> .

Most of the member functions called dispatched on stream objects (e.g., `std::cout.foo(bar)`;) are consolidated in this class.

Definition at line 77 of file `iosfwd`.

## 5.626.2 Member Typedef Documentation

5.626.2.1 `template<typename _CharT, typename _Traits = char_traits<_CharT>> typedef ctype<_CharT> std::basic_ios<_CharT, _Traits>::__ctype_type`

These are non-standard types.

Definition at line 87 of file `basic_ios.h`.

5.626.2.2 `template<typename _CharT, typename _Traits = char_traits<_CharT>> typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits>> std::basic_ios<_CharT, _Traits>::__num_get_type`

These are non-standard types.

Definition at line 91 of file `basic_ios.h`.

5.626.2.3 `template<typename _CharT, typename _Traits = char_traits<_CharT>> typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits>> std::basic_ios<_CharT, _Traits>::__num_put_type`

These are non-standard types.

Definition at line 89 of file `basic_ios.h`.

5.626.2.4 `template<typename _CharT, typename _Traits = char_traits<_CharT>> typedef _CharT std::basic_ios<_CharT, _Traits>::char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 76 of file `basic_ios.h`.

5.626.2.5 `typedef void(* std::ios_base::event_callback)(event _e, ios_base &_b, int _i) [inherited]`

The type of an event callback function.

## Parameters

<code>_e</code>	One of the members of the event enum.
<code>_b</code>	Reference to the <code>ios_base</code> object.
<code>_i</code>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 506 of file `ios_base.h`.

5.626.2.6 `typedef _ios_Fmtflags std::ios_base::fmtflags [inherited]`

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

Definition at line 323 of file `ios_base.h`.

**5.626.2.7** `template<typename _CharT, typename _Traits = char_traits<_CharT>> typedef _Traits::int_type std::basic_ios<_CharT, _Traits>::int_type`

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 77 of file `basic_ios.h`.

**5.626.2.8** `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 398 of file `ios_base.h`.

5.626.2.9 `template<typename _CharT, typename _Traits = char_traits<_CharT>> typedef _Traits::off_type std::basic_ios<_CharT, _Traits>::off_type`

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 79 of file `basic_ios.h`.

5.626.2.10 `typedef _Ios_Openmode std::ios_base::openmode` `[inherited]`

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 429 of file `ios_base.h`.

5.626.2.11 `template<typename _CharT, typename _Traits = char_traits<_CharT>> typedef _Traits::pos_type std::basic_ios<_CharT, _Traits>::pos_type`

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 78 of file `basic_ios.h`.

5.626.2.12 `typedef _Ios_Seekdir std::ios_base::seekdir` `[inherited]`

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 461 of file `ios_base.h`.

5.626.2.13 `template<typename _CharT, typename _Traits = char_traits<_CharT>> typedef _Traits std::basic_ios<_CharT, _Traits>::traits_type`

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 80 of file `basic_ios.h`.

### 5.626.3 Member Enumeration Documentation

#### 5.626.3.1 enum `std::ios_base::event` `[inherited]`

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

Definition at line 489 of file `ios_base.h`.

### 5.626.4 Constructor & Destructor Documentation

#### 5.626.4.1 `template<typename _CharT, typename _Traits = char_traits<_CharT>> std::basic_ios<_CharT, _Traits>::basic_ios( basic_streambuf<_CharT, _Traits> * __sb )` `[inline]`, `[explicit]`

Constructor performs initialization.

The parameter is passed by derived streams.

Definition at line 270 of file `basic_ios.h`.

#### 5.626.4.2 `template<typename _CharT, typename _Traits = char_traits<_CharT>> virtual std::basic_ios<_CharT, _Traits>::~~basic_ios( )` `[inline]`, `[virtual]`

Empty.

The destructor does nothing. More specifically, it does not destroy the streambuf held by `rdbuf()`.

Definition at line 282 of file `basic_ios.h`.

#### 5.626.4.3 `template<typename _CharT, typename _Traits = char_traits<_CharT>> std::basic_ios<_CharT, _Traits>::~basic_ios( )` `[inline]`, `[protected]`

Empty.

The default constructor does nothing and is not normally accessible to users.

Definition at line 460 of file `basic_ios.h`.

### 5.626.5 Member Function Documentation

#### 5.626.5.1 `const locale& std::ios_base::M_getloc( ) const` `[inline]`, `[inherited]`

Locale access.

#### Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 776 of file `ios_base.h`.

Referenced by `std::time_get<_CharT, _InIter>::do_get()`, `std::money_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_date()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_time()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_put<_CharT, _OutIter>::do_put()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::time_get<_CharT, _InIter>::get()`, and `std::time_put<_CharT, _OutIter>::put()`.

5.626.5.2 `template<typename _CharT, typename _Traits = char_traits<_CharT>> bool std::basic_ios<_CharT, _Traits >::bad ( ) const [inline]`

Fast error checking.

#### Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 211 of file basic\_ios.h.

5.626.5.3 `template<typename _CharT, typename _Traits > void std::basic_ios<_CharT, _Traits >::clear ( iostate __state = goodbit )`

[Re]sets the error state.

#### Parameters

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See std::ios\_base::iostate for the possible bit values. Most users will not need to pass an argument.

Definition at line 41 of file basic\_ios.tcc.

Referenced by std::basic\_ios< char, char\_traits< char > >::exceptions(), std::basic\_ifstream< \_CharT, \_Traits >::open(), std::basic\_ofstream< \_CharT, \_Traits >::open(), std::basic\_fstream< \_CharT, \_Traits >::open(), std::\_detail::operator>>(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_ios< char, char\_traits< char > >::setstate(), and std::basic\_istream< \_CharT, \_Traits >::unset().

5.626.5.4 `template<typename _CharT, typename _Traits > basic_ios<_CharT, _Traits > & std::basic_ios<_CharT, _Traits >::copyfmt ( const basic_ios<_CharT, _Traits > & __rhs )`

Copies fields of `__rhs` into this.

#### Parameters

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

#### Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy `exceptions()`.

Definition at line 63 of file basic\_ios.tcc.

References std::basic\_ios< \_CharT, \_Traits >::exceptions(), std::basic\_ios< \_CharT, \_Traits >::fill(), std::ios\_base::flags(), std::ios\_base::getloc(), std::ios\_base::precision(), std::basic\_ios< \_CharT, \_Traits >::tie(), std::tie(), and std::ios\_base::width().

5.626.5.5 `template<typename _CharT, typename _Traits = char_traits<_CharT>> bool std::basic_ios<_CharT, _Traits >::eof ( ) const [inline]`

Fast error checking.

**Returns**

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 190 of file basic\_ios.h.

```
5.626.5.6 template<typename _CharT, typename _Traits = char_traits<_CharT>> iostate std::basic_ios<_CharT, _Traits>::exceptions ( ) const [inline]
```

Throwing exceptions on errors.

**Returns**

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.

Definition at line 222 of file basic\_ios.h.

Referenced by std::basic\_ios<\_CharT, \_Traits >::copyfmt().

```
5.626.5.7 template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_ios<_CharT, _Traits>::exceptions ( iostate __except ) [inline]
```

Throwing exceptions on errors.

**Parameters**

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios\_base::failure is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
* #include <iostream>
* #include <fstream>
* #include <exception>
*
* int main()
* {
*     std::set_terminate (
*         __gnu_cxx::__verbose_terminate_handler);
*
*     std::ifstream f ("/etc/motd");
*
*     std::cerr << "Setting badbit\n";
*     f.setstate (std::ios_base::badbit);
*
*     std::cerr << "Setting exception mask\n";
*     f.exceptions (std::ios_base::badbit);
* }
*
```

Definition at line 257 of file basic\_ios.h.

```
5.626.5.8 template<typename _CharT, typename _Traits = char_traits<_CharT>> bool std::basic_ios<_CharT, _Traits >::fail ( ) const [inline]
```

Fast error checking.

**Returns**

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.

Definition at line 201 of file basic\_ios.h.

Referenced by std::basic\_ios< char, char\_traits< char > >::operator bool(), std::basic\_ios< char, char\_traits< char > >::operator!(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), std::basic\_istream< \_CharT, \_Traits >::tellg(), std::basic\_ostream< \_CharT, \_Traits >::tellp(), and std::regex\_traits< \_CharT, \_Traits >::value().

**5.626.5.9** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type std::basic_ios< _CharT, _Traits >::fill ( ) const [inline]`

Retrieves the *empty* character.

**Returns**

The current fill character.

It defaults to a space ( ' ') in the current locale.

Definition at line 370 of file basic\_ios.h.

Referenced by std::basic\_ios< \_CharT, \_Traits >::copyfmt(), and std::basic\_ios< char, char\_traits< char > >::fill().

**5.626.5.10** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type std::basic_ios< _CharT, _Traits >::fill ( char_type __ch ) [inline]`

Sets a new *empty* character.

**Parameters**

<code>__ch</code>	The new character.
-------------------	--------------------

**Returns**

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current locale.

Definition at line 390 of file basic\_ios.h.

**5.626.5.11** `fmtflags std::ios_base::flags ( ) const [inline],[inherited]`

Access to format flags.

**Returns**

The format control flags for both input and output.

Definition at line 621 of file ios\_base.h.

Referenced by std::basic\_ios< \_CharT, \_Traits >::copyfmt(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::num\_put< \_CharT, \_OutIter >::do\_put(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::operator<<(), std::\_\_detail::operator>>(), std::operator>>(), and std::basic\_istream< \_CharT, \_Traits >::sentry::sentry().

5.626.5.12 `fmtflags std::ios_base::flags( fmtflags __fmtfl )` [inline],[inherited]

Setting new format flags all at once.

**Parameters**

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

**Returns**

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

Definition at line 632 of file `ios_base.h`.

**5.626.5.13 locale std::ios\_base::getloc( ) const [inline],[inherited]**

Locale access.

**Returns**

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 765 of file `ios_base.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::money_put< _CharT, _Outiter >::do_put()`, `std::operator>>()`, and `std::ws()`.

**5.626.5.14 template<typename \_CharT, typename \_Traits = char\_traits<\_CharT>> bool std::basic\_ios< \_CharT, \_Traits >::good( ) const [inline]**

Fast error checking.

**Returns**

True if no error flags are set.

A wrapper around `rdstate`.

Definition at line 180 of file `basic_ios.h`.

Referenced by `std::__detail::operator>>()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

**5.626.5.15 template<typename \_CharT, typename \_Traits > locale std::basic\_ios< \_CharT, \_Traits >::imbue( const locale & \_\_loc )**

Moves to a new locale.

**Parameters**

<code>__loc</code>	The new locale.
--------------------	-----------------

**Returns**

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.-html>

Definition at line 114 of file basic\_ios.tcc.

References std::ios\_base::imbue().

Referenced by std::operator<<().

**5.626.5.16** `template<typename _CharT, typename _Traits> void std::basic_ios<_CharT, _Traits>::init( basic_streambuf<_CharT, _Traits> * __sb ) [protected]`

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 126 of file basic\_ios.tcc.

Referenced by std::basic\_fstream<\_CharT, \_Traits>::basic\_fstream(), std::basic\_ifstream<\_CharT, \_Traits>::basic\_ifstream(), std::basic\_ios<char, char\_traits<char>>::basic\_ios(), std::basic\_istream<char>::basic\_istream(), std::basic\_istreamstream<\_CharT, \_Traits, \_Alloc>::basic\_istreamstream(), std::basic\_ofstream<\_CharT, \_Traits>::basic\_ofstream(), std::basic\_ostream<char>::basic\_ostream(), std::basic\_ostringstream<\_CharT, \_Traits, \_Alloc>::basic\_ostringstream(), and std::basic\_stringstream<\_CharT, \_Traits, \_Alloc>::basic\_stringstream().

**5.626.5.17** `long& std::ios_base::iword( int __ix ) [inline], [inherited]`

Access to integer array.

Parameters

<code>__ix</code>	Index into the array.
-------------------	-----------------------

Returns

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 811 of file ios\_base.h.

**5.626.5.18** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char std::basic_ios<_CharT, _Traits>::narrow( char_type __c, char __dfault ) const [inline]`

Squeezes characters.

Parameters

<code>__c</code>	The character to narrow.
<code>__dfault</code>	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
* std::use_facet<ctype<char_type>> >(getloc()).narrow(c, default)
*
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.-html>

Definition at line 430 of file basic\_ios.h.

**5.626.5.19** `template<typename _CharT, typename _Traits = char_traits<_CharT>> std::basic_ios<_CharT, _Traits>::operator bool( ) const [inline], [explicit]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

Definition at line 117 of file basic\_ios.h.

**5.626.5.20** `template<typename _CharT, typename _Traits = char_traits<_CharT>> bool std::basic_ios<_CharT, _Traits>::operator!( ) const [inline]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

Definition at line 125 of file basic\_ios.h.

**5.626.5.21** `streamsize std::ios_base::precision( ) const [inline], [inherited]`

Flags access.

#### Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 691 of file ios\_base.h.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, and `std::operator<<()`.

**5.626.5.22** `streamsize std::ios_base::precision( streamsize __prec ) [inline], [inherited]`

Changing flags.

#### Parameters

<code>__prec</code>	The new precision value.
---------------------	--------------------------

#### Returns

The previous value of `precision()`.

Definition at line 700 of file ios\_base.h.

**5.626.5.23** `void*& std::ios_base::pword( int __ix ) [inline], [inherited]`

Access to void pointer array.

## Parameters

<code>__ix</code>	Index into the array.
-------------------	-----------------------

## Returns

A reference to a `void*` associated with the index.

The `pwdord` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 832 of file `ios_base.h`.

```
5.626.5.24 template<typename _CharT, typename _Traits = char_traits<_CharT>> basic_streambuf<_CharT, _Traits>*
        std::basic_ios<_CharT, _Traits >::rdbuf ( ) const [inline]
```

Accessing the underlying buffer.

## Returns

The current stream buffer.

This does not change the state of the stream.

Definition at line 321 of file `basic_ios.h`.

Referenced by `std::basic_ostream< char >::M_write()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::tr2::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

```
5.626.5.25 template<typename _CharT, typename _Traits> basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT,
        _Traits >::rdbuf ( basic_streambuf< _CharT, _Traits > * __sb )
```

Changing the underlying buffer.

## Parameters

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

## Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
* std::fstream foo; // or some other derived type
```

```
* std::streambuf* p = .....;
*
* foo.ios::rdbuf(p);          // ios == basic_ios<char>
*
```

Definition at line 53 of file basic\_ios.tcc.

**5.626.5.26** `template<typename _CharT, typename _Traits = char_traits<_CharT>> iostate std::basic_ios<_CharT, _Traits>::rdstate( ) const [inline]`

Returns the error state of the stream buffer.

#### Returns

A bit pattern (well, isn't everything?)

See std::ios\_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().

Definition at line 137 of file basic\_ios.h.

Referenced by std::basic\_ios<char, char\_traits<char>>::bad(), std::basic\_ios<char, char\_traits<char>>::eof(), std::basic\_ios<char, char\_traits<char>>::fail(), std::basic\_ios<char, char\_traits<char>>::good(), std::basic\_istream<\_CharT, \_Traits>::putback(), std::basic\_istream<\_CharT, \_Traits>::seekg(), std::basic\_ios<char, char\_traits<char>>::setstate(), and std::basic\_istream<\_CharT, \_Traits>::unget().

**5.626.5.27** `void std::ios_base::register_callback( event_callback __fn, int __index ) [inherited]`

Add the callback \_\_fn with parameter \_\_index.

#### Parameters

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**5.626.5.28** `fmtflags std::ios_base::setf( fmtflags __fmtfl ) [inline],[inherited]`

Setting new format flags.

#### Parameters

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

#### Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 648 of file ios\_base.h.

Referenced by std::boolalpha(), std::dec(), std::fixed(), std::hex(), std::hexfloat(), std::left(), std::oct(), std::\_\_detail::operator>>(), std::right(), std::scientific(), std::showbase(), std::showpoint(), std::showpos(), std::skipws(), std::unitbuf(), and std::uppercase().

**5.626.5.29** `fmtflags std::ios_base::setf( fmtflags __fmtfl, fmtflags __mask ) [inline],[inherited]`

Setting new format flags.

## Parameters

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <code>fmtfl</code> .

## Returns

The previous format control flags.

This function clears `mask` in the format flags, then sets `fmtfl` & `mask`. An example mask is `ios_base::adjustfield`.

Definition at line 665 of file `ios_base.h`.

```
5.626.5.30 template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_ios<_CharT, _Traits>::setstate ( iostate __state ) [inline]
```

Sets additional flags in the error state.

## Parameters

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

Definition at line 157 of file `basic_ios.h`.

Referenced by `std::basic_ostream< char >::_M_write()`, `std::basic_ifstream< _CharT, _Traits >::close()`, `std::basic_ofstream< _CharT, _Traits >::close()`, `std::basic_fstream< _CharT, _Traits >::close()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::operator<<()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::tr2::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

```
5.626.5.31 static bool std::ios_base::sync_with_stdio ( bool __sync = true ) [static],[inherited]
```

Interaction with the standard C I/O objects.

## Parameters

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

## Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

```
5.626.5.32 template<typename _CharT, typename _Traits = char_traits<_CharT>> basic_ostream<_CharT, _Traits>*& std::basic_ios<_CharT, _Traits >::tie ( ) const [inline]
```

Fetches the current *tied* stream.

**Returns**

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 295 of file `basic_ios.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

```
5.626.5.33 template<typename _CharT, typename _Traits = char_traits<_CharT>> basic_ostream<_CharT, _Traits>*
        std::basic_ios<_CharT, _Traits >::tie ( basic_ostream<_CharT, _Traits > * __tiestr ) [inline]
```

Ties this stream to an output stream.

**Parameters**

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

**Returns**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 307 of file `basic_ios.h`.

```
5.626.5.34 void std::ios_base::unsetf ( fmtflags __mask ) [inline], [inherited]
```

Clearing format flags.

**Parameters**

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

Definition at line 680 of file `ios_base.h`.

Referenced by `std::defaultfloat()`, `std::noboolalpha()`, `std::noshowbase()`, `std::noshowpoint()`, `std::noshowpos()`, `std::noskipws()`, `std::nounitbuf()`, and `std::nouppercase()`.

```
5.626.5.35 template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type std::basic_ios<_CharT, _Traits
        >::widen ( char __c ) const [inline]
```

Widens characters.

**Parameters**

<code>__c</code>	The character to widen.
------------------	-------------------------

**Returns**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
* std::use_facet<ctype<char_type> > (getloc()).widen(c)
*
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.-html>

Definition at line 449 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, char_traits< char > >::fill()`, `std::basic_istream< char >::get()`, `std::basic_istream< char >::getline()`, `std::getline()`, `std::tr2::operator>>()`, and `std::operator>>()`.

**5.626.5.36** `streamsize std::ios_base::width( ) const` `[inline],[inherited]`

Flags access.

#### Returns

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 714 of file `ios_base.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::operator>>()`.

**5.626.5.37** `streamsize std::ios_base::width( streamsize __wide )` `[inline],[inherited]`

Changing flags.

#### Parameters

<code>__wide</code>	The new width value.
---------------------	----------------------

#### Returns

The previous value of `width()`.

Definition at line 723 of file `ios_base.h`.

**5.626.5.38** `static int std::ios_base::xalloc( ) throw` `[static],[inherited]`

Access to unique indices.

#### Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pwdword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pwdword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pwdword` arrays.

### 5.626.6 Member Data Documentation

**5.626.6.1** `const fmtflags std::ios_base::adjustfield` `[static],[inherited]`

A mask of `left|right|internal`. Useful for the 2-arg form of `setf`.

Definition at line 378 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

**5.626.6.2 const openmode std::ios\_base::app** [static],[inherited]

Seek to end before each write.

Definition at line 432 of file ios\_base.h.

Referenced by std::basic\_filebuf< char\_type, traits\_type >::\_M\_set\_buffer(), and std::basic\_filebuf< \_CharT, \_Traits >::xsputn().

**5.626.6.3 const openmode std::ios\_base::ate** [static],[inherited]

Open and seek to end immediately after opening.

Definition at line 435 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::open().

**5.626.6.4 const iostate std::ios\_base::badbit** [static],[inherited]

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 402 of file ios\_base.h.

Referenced by std::basic\_ostream< char >::\_M\_write(), std::basic\_ios< char, char\_traits< char > >::bad(), std::basic\_ios< char, char\_traits< char > >::fail(), std::basic\_ostream< \_CharT, \_Traits >::flush(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< \_CharT, \_Traits >::getline(), std::basic\_istream< \_CharT, \_Traits >::ignore(), std::operator<<(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::peek(), std::basic\_ostream< \_CharT, \_Traits >::put(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::readsome(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_ostream< \_CharT, \_Traits >::seekp(), std::basic\_istream< \_CharT, \_Traits >::sentry::sentry(), std::basic\_istream< \_CharT, \_Traits >::sync(), std::basic\_istream< \_CharT, \_Traits >::tellg(), std::basic\_ostream< \_CharT, \_Traits >::tellp(), std::basic\_istream< \_CharT, \_Traits >::unget(), std::basic\_ostream< \_CharT, \_Traits >::write(), and std::basic\_ostream< \_CharT, \_Traits >::sentry::~sentry().

**5.626.6.5 const fmtflags std::ios\_base::basefield** [static],[inherited]

A mask of dec|oct|hex. Useful for the 2-arg form of setf.

Definition at line 381 of file ios\_base.h.

Referenced by std::dec(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::hex(), std::oct(), and std::basic\_ostream< \_CharT, \_Traits >::operator<<().

**5.626.6.6 const seekdir std::ios\_base::beg** [static],[inherited]

Request a seek relative to the beginning of the stream.

Definition at line 464 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::seekpos().

**5.626.6.7 const openmode std::ios\_base::binary** [static],[inherited]

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.-binary>.

Definition at line 440 of file ios\_base.h.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::showmanyc().

**5.626.6.8 const fmtflags std::ios\_base::boolalpha** [static],[inherited]

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 326 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::num_get<_CharT, _InIter >::do_get()`, `std::num_put<_CharT, _OutIter >::do_put()`, and `std::noboolalpha()`.

**5.626.6.9 const seekdir std::ios\_base::cur** [static],[inherited]

Request a seek relative to the current position within the sequence.

Definition at line 467 of file `ios_base.h`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc >::seekoff()`, `std::basic_filebuf<_CharT, _Traits >::seekoff()`, `std::basic_istream<_CharT, _Traits >::tellg()`, and `std::basic_ostream<_CharT, _Traits >::tellp()`.

**5.626.6.10 const fmtflags std::ios\_base::dec** [static],[inherited]

Converts integer input or generates integer output in decimal base.

Definition at line 329 of file `ios_base.h`.

Referenced by `std::dec()`.

**5.626.6.11 const seekdir std::ios\_base::end** [static],[inherited]

Request a seek relative to the current end of the sequence.

Definition at line 470 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits >::open()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc >::seekoff()`.

**5.626.6.12 const iostate std::ios\_base::eofbit** [static],[inherited]

Indicates that an input operation reached the end of an input sequence.

Definition at line 405 of file `ios_base.h`.

Referenced by `std::time_get<_CharT, _InIter >::do_get()`, `std::num_get<_CharT, _InIter >::do_get()`, `std::time_get<_CharT, _InIter >::do_get_date()`, `std::time_get<_CharT, _InIter >::do_get_monthname()`, `std::time_get<_CharT, _InIter >::do_get_time()`, `std::time_get<_CharT, _InIter >::do_get_weekday()`, `std::time_get<_CharT, _InIter >::do_get_year()`, `std::basic_ios<char, char_traits<char > >::eof()`, `std::basic_istream<_CharT, _Traits >::get()`, `std::time_get<_CharT, _InIter >::get()`, `std::basic_istream<_CharT, _Traits >::getline()`, `std::basic_istream<_CharT, _Traits >::ignore()`, `std::basic_istream<_CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits >::peek()`, `std::basic_istream<_CharT, _Traits >::putback()`, `std::basic_istream<_CharT, _Traits >::read()`, `std::basic_istream<_CharT, _Traits >::readsome()`, `std::basic_istream<_CharT, _Traits >::seekg()`, `std::basic_istream<_CharT, _Traits >::sentry::sentry()`, `std::basic_istream<_CharT, _Traits >::unget()`, and `std::ws()`.

**5.626.6.13 const iostate std::ios\_base::failbit** [static],[inherited]

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 410 of file `ios_base.h`.

Referenced by `std::basic_ifstream<_CharT, _Traits >::close()`, `std::basic_ofstream<_CharT, _Traits >::close()`, `std::basic_fstream<_CharT, _Traits >::close()`, `std::num_get<_CharT, _InIter >::do_get()`, `std::time_get<_CharT, _InIter >::do_get_monthname()`, `std::time_get<_CharT, _InIter >::do_get_weekday()`, `std::time_get<_CharT, _InIter >::do_get_year()`, `std::basic_ios<char, char_traits<char > >::fail()`, `std::basic_istream<_CharT, _Traits >::get()`, `std::time-`

`_get< _CharT, _Inlter >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

#### 5.626.6.14 `const fmtflags std::ios_base::fixed` [static], [inherited]

Generate floating-point output in fixed-point notation.

Definition at line 332 of file `ios_base.h`.

Referenced by `std::fixed()`, and `std::hexfloat()`.

#### 5.626.6.15 `const fmtflags std::ios_base::floatfield` [static], [inherited]

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 384 of file `ios_base.h`.

Referenced by `std::defaultfloat()`, `std::fixed()`, `std::hexfloat()`, and `std::scientific()`.

#### 5.626.6.16 `const iostate std::ios_base::goodbit` [static], [inherited]

Indicates all is well.

Definition at line 413 of file `ios_base.h`.

Referenced by `std::time_get< _CharT, _Inlter >::do_get()`, `std::num_get< _CharT, _Inlter >::do_get()`, `std::time_get< _CharT, _Inlter >::do_get_monthname()`, `std::time_get< _CharT, _Inlter >::do_get_weekday()`, `std::time_get< _CharT, _Inlter >::do_get_year()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::time_get< _CharT, _Inlter >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< _CharT, _Traits >::sync()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

#### 5.626.6.17 `const fmtflags std::ios_base::hex` [static], [inherited]

Converts integer input or generates integer output in hexadecimal base.

Definition at line 335 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _Inlter >::do_get()`, `std::num_put< _CharT, _Outlter >::do_put()`, `std::hex()`, and `std::basic_ostream< _CharT, _Traits >::operator<<()`.

#### 5.626.6.18 `const openmode std::ios_base::in` [static], [inherited]

Open for input. Default for `ifstream` and `fstream`.

Definition at line 443 of file `ios_base.h`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_set_buffer()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`, `std::basic_filebuf< _CharT, _Traits >::underflow()`, and `std::basic_filebuf< _CharT, _Traits >::xsgetn()`.

**5.626.6.19** `const fmtflags std::ios_base::internal` `[static], [inherited]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 340 of file `ios_base.h`.

Referenced by `std::internal()`.

**5.626.6.20** `const fmtflags std::ios_base::left` `[static], [inherited]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 344 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _Outiter >::do_put()`, and `std::left()`.

**5.626.6.21** `const fmtflags std::ios_base::oct` `[static], [inherited]`

Converts integer input or generates integer output in octal base.

Definition at line 347 of file `ios_base.h`.

Referenced by `std::oct()`, and `std::basic_ostream<_CharT, _Traits >::operator<<()`.

**5.626.6.22** `const openmode std::ios_base::out` `[static], [inherited]`

Open for output. Default for `ofstream` and `fstream`.

Definition at line 446 of file `ios_base.h`.

Referenced by `std::basic_filebuf<char_type, traits_type >::M_set_buffer()`, `std::basic_ofstream<_CharT, _Traits >::open()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc >::seekoff()`, `std::basic_ostream<_CharT, _Traits >::seekp()`, `std::basic_ostream<_CharT, _Traits >::tellp()`, and `std::basic_filebuf<_CharT, _Traits >::xsputn()`.

**5.626.6.23** `const fmtflags std::ios_base::right` `[static], [inherited]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 351 of file `ios_base.h`.

Referenced by `std::right()`.

**5.626.6.24** `const fmtflags std::ios_base::scientific` `[static], [inherited]`

Generates floating-point output in scientific notation.

Definition at line 354 of file `ios_base.h`.

Referenced by `std::hexfloat()`, and `std::scientific()`.

**5.626.6.25** `const fmtflags std::ios_base::showbase` `[static], [inherited]`

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 358 of file `ios_base.h`.

Referenced by `std::noshowbase()`, and `std::showbase()`.

**5.626.6.26** `const fmtflags std::ios_base::showpoint` `[static], [inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 362 of file `ios_base.h`.

Referenced by `std::noshowpoint()`, and `std::showpoint()`.

**5.626.6.27** `const fmtflags std::ios_base::showpos` `[static], [inherited]`

Generates a + sign in non-negative generated numeric output.

Definition at line 365 of file `ios_base.h`.

Referenced by `std::noshowpos()`, and `std::showpos()`.

**5.626.6.28** `const fmtflags std::ios_base::skipws` `[static], [inherited]`

Skips leading white space before certain input operations.

Definition at line 368 of file `ios_base.h`.

Referenced by `std::noskipws()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, and `std::skipws()`.

**5.626.6.29** `const openmode std::ios_base::trunc` `[static], [inherited]`

Open for input. Default for `ofstream`.

Definition at line 449 of file `ios_base.h`.

**5.626.6.30** `const fmtflags std::ios_base::unitbuf` `[static], [inherited]`

Flushes output after each output operation.

Definition at line 371 of file `ios_base.h`.

Referenced by `std::nounitbuf()`, `std::unitbuf()`, and `std::basic_ostream< _CharT, _Traits >::sentry::~sentry()`.

**5.626.6.31** `const fmtflags std::ios_base::uppercase` `[static], [inherited]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 375 of file `ios_base.h`.

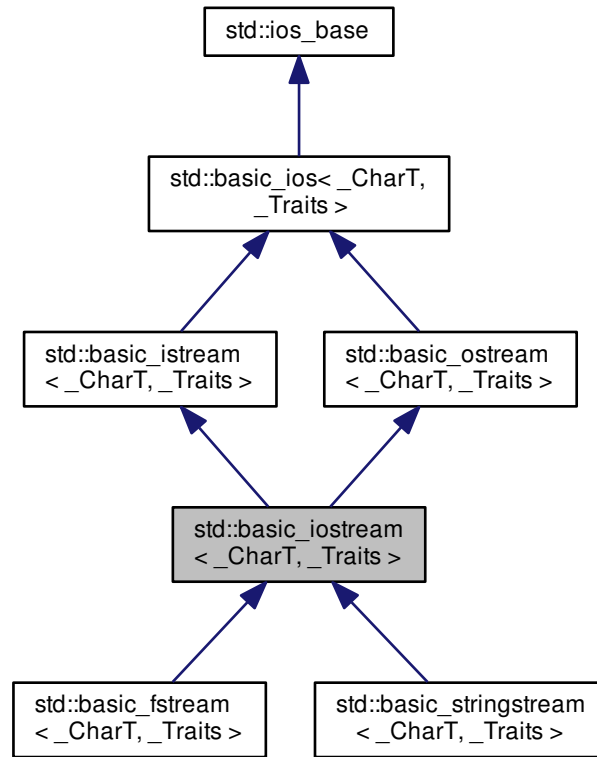

Referenced by `std::num_put< _CharT, _Outiter >::do_put()`, `std::nouppercase()`, and `std::uppercase()`.

The documentation for this class was generated from the following files:

- [iosfwd](#)
- [basic\\_ios.h](#)
- [basic\\_ios.tcc](#)

## 5.627 `std::basic_iostream<_CharT, _Traits>` Class Template Reference

Inheritance diagram for `std::basic_iostream<_CharT, _Traits>`:

### Public Types

- `__istream_type & operator>> (ios_base & (* __pf) (ios_base &))`

### Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- `__istream_type & operator>>` (`bool &__n`)
- `__istream_type & operator>>` (`short &__n`)
- `__istream_type & operator>>` (`unsigned short &__n`)
- `__istream_type & operator>>` (`int &__n`)
- `__istream_type & operator>>` (`unsigned int &__n`)
- `__istream_type & operator>>` (`long &__n`)
- `__istream_type & operator>>` (`unsigned long &__n`)
- `__istream_type & operator>>` (`long long &__n`)
- `__istream_type & operator>>` (`unsigned long long &__n`)
  
- `__istream_type & operator>>` (`float &__f`)
- `__istream_type & operator>>` (`double &__f`)
- `__istream_type & operator>>` (`long double &__f`)

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- [\\_\\_ostream\\_type](#) & [operator<<](#) ([ios\\_base](#) &(\*\_\_pf)([ios\\_base](#) &))

### Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the [sentry](#) documentation for more.

If the `sentry` status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- [\\_\\_ostream\\_type](#) & [operator<<](#) (long \_\_n)
  - [\\_\\_ostream\\_type](#) & [operator<<](#) (unsigned long \_\_n)
  - [\\_\\_ostream\\_type](#) & [operator<<](#) (bool \_\_n)
  - [\\_\\_ostream\\_type](#) & [operator<<](#) (short \_\_n)
  - [\\_\\_ostream\\_type](#) & [operator<<](#) (unsigned short \_\_n)
  - [\\_\\_ostream\\_type](#) & [operator<<](#) (int \_\_n)
  - [\\_\\_ostream\\_type](#) & [operator<<](#) (unsigned int \_\_n)
  - [\\_\\_ostream\\_type](#) & [operator<<](#) (long long \_\_n)
  - [\\_\\_ostream\\_type](#) & [operator<<](#) (unsigned long long \_\_n)
- 
- [\\_\\_ostream\\_type](#) & [operator<<](#) (double \_\_f)
  - [\\_\\_ostream\\_type](#) & [operator<<](#) (float \_\_f)
  - [\\_\\_ostream\\_type](#) & [operator<<](#) (long double \_\_f)

### Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the [sentry](#) documentation for more.

If the `sentry` status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

## 5.627.1 Detailed Description

```
template<typename _CharT, typename _Traits = char_traits<_CharT>> class std::basic_istream<_CharT, _Traits>
```

Template class `basic_istream`.

## Template Parameters

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> .

This class multiply inherits from the input and output stream classes simply to provide a single interface.

Definition at line 89 of file `iosfwd`.

## 5.627.2 Member Typedef Documentation

5.627.2.1 `template<typename _CharT, typename _Traits = char_traits<_CharT>> typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits>> std::basic_ios<_CharT, _Traits>::__num_put_type` [inherited]

These are non-standard types.

Definition at line 89 of file `basic_ios.h`.

5.627.2.2 `typedef void(* std::ios_base::event_callback)(event __e, ios_base & __b, int __i)` [inherited]

The type of an event callback function.

## Parameters

<code>__e</code>	One of the members of the event enum.
<code>__b</code>	Reference to the <code>ios_base</code> object.
<code>__i</code>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 506 of file `ios_base.h`.

### 5.627.2.3 `typedef _Ios_Fmtflags std::ios_base::fmtflags` [inherited]

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

Definition at line 323 of file `ios_base.h`.

#### 5.627.2.4 `typedef _ios_iostate std::ios_base::iostate` [inherited]

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 398 of file `ios_base.h`.

#### 5.627.2.5 `typedef _ios_Openmode std::ios_base::openmode` [inherited]

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 429 of file `ios_base.h`.

#### 5.627.2.6 `typedef _ios_Seekdir std::ios_base::seekdir` [inherited]

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 461 of file `ios_base.h`.

### 5.627.3 Member Enumeration Documentation

#### 5.627.3.1 `enum std::ios_base::event` [inherited]

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

Definition at line 489 of file `ios_base.h`.

## 5.627.4 Constructor &amp; Destructor Documentation

5.627.4.1 `template<typename _CharT, typename _Traits = char_traits<_CharT>> std::basic_ostream<_CharT, _Traits>::basic_ostream ( basic_streambuf<_CharT, _Traits> * __sb ) [inline], [explicit]`

Constructor does nothing.

Both of the parent classes are initialized with the same streambuf pointer passed to this constructor.

Definition at line 849 of file istream.

5.627.4.2 `template<typename _CharT, typename _Traits = char_traits<_CharT>> virtual std::basic_ostream<_CharT, _Traits>::~basic_ostream ( ) [inline], [virtual]`

Destructor does nothing.

Definition at line 856 of file istream.

## 5.627.5 Member Function Documentation

5.627.5.1 `const locale& std::ios_base::_M_getloc ( ) const [inline], [inherited]`

Locale access.

## Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 776 of file `ios_base.h`.

Referenced by `std::time_get<_CharT, _InIter>::do_get()`, `std::money_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_date()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_time()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_put<_CharT, _OutIter>::do_put()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::time_get<_CharT, _InIter>::get()`, and `std::time_put<_CharT, _OutIter>::put()`.

5.627.5.2 `template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_ostream<_CharT, _Traits>::_M_write ( const char_type * __s, streamsize __n ) [inline], [inherited]`

Core write functionality, without sentry.

## Parameters

<code>__s</code>	The array to insert.
<code>__n</code>	Maximum number of characters to insert.

Definition at line 311 of file `ostream`.

Referenced by `std::basic_ostream<_CharT, _Traits>::write()`.

5.627.5.3 `template<typename _CharT, typename _Traits = char_traits<_CharT>> bool std::basic_ios<_CharT, _Traits>::bad ( ) const [inline], [inherited]`

Fast error checking.

**Returns**

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 211 of file basic\_ios.h.

```
5.627.5.4 template<typename _CharT, typename _Traits > void std::basic_ios< _CharT, _Traits >::clear ( iostate __state =
    goodbit ) [inherited]
```

[Re]sets the error state.

**Parameters**

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See `std::ios_base::iostate` for the possible bit values. Most users will not need to pass an argument.

Definition at line 41 of file basic\_ios.tcc.

Referenced by `std::basic_ios< char, char_traits< char > >::exceptions()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::__detail::operator>>()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ios< char, char_traits< char > >::setstate()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

```
5.627.5.5 template<typename _CharT, typename _Traits > basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits
    >::copyfmt ( const basic_ios< _CharT, _Traits > & __rhs ) [inherited]
```

Copies fields of `__rhs` into this.

**Parameters**

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

**Returns**

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pwd` and `iwor` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy `exceptions()`.

Definition at line 63 of file basic\_ios.tcc.

References `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ios< _CharT, _Traits >::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios< _CharT, _Traits >::tie()`, `std::tie()`, and `std::ios_base::width()`.

```
5.627.5.6 template<typename _CharT, typename _Traits = char_traits<_CharT>> bool std::basic_ios< _CharT, _Traits >::eof (
    ) const [inline],[inherited]
```

Fast error checking.

**Returns**

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 190 of file basic\_ios.h.

5.627.5.7 `template<typename _CharT, typename _Traits = char_traits<_CharT>> iostate std::basic_ios< _CharT, _Traits >::exceptions ( ) const` [inline],[inherited]

Throwing exceptions on errors.

#### Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Definition at line 222 of file `basic_ios.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`.

5.627.5.8 `template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_ios< _CharT, _Traits >::exceptions ( iostate __except )` [inline],[inherited]

Throwing exceptions on errors.

#### Parameters

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
* #include <iostream>
* #include <fstream>
* #include <exception>
*
* int main()
* {
*     std::set_terminate (
*         __gnu_cxx::__verbose_terminate_handler);
*
*     std::ifstream f ("/etc/motd");
*
*     std::cerr << "Setting badbit\n";
*     f.setstate (std::ios_base::badbit);
*
*     std::cerr << "Setting exception mask\n";
*     f.exceptions (std::ios_base::badbit);
* }
*
```

Definition at line 257 of file `basic_ios.h`.

5.627.5.9 `template<typename _CharT, typename _Traits = char_traits<_CharT>> bool std::basic_ios< _CharT, _Traits >::fail ( ) const` [inline],[inherited]

Fast error checking.

#### Returns

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other `iostate` flags may also be set.

Definition at line 201 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, char_traits< char > >::operator bool()`, `std::basic_ios< char, char_traits< char > >::operator!()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::regex_traits< _CharT, _Traits >::value()`.

**5.627.5.10** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type std::basic_ios< _CharT, _Traits >::fill ( ) const` `[inline],[inherited]`

Retrieves the *empty* character.

#### Returns

The current fill character.

It defaults to a space ( ' ') in the current locale.

Definition at line 370 of file `basic_ios.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, and `std::basic_ios< char, char_traits< char > >::fill()`.

**5.627.5.11** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type std::basic_ios< _CharT, _Traits >::fill ( char_type __ch )` `[inline],[inherited]`

Sets a new *empty* character.

#### Parameters

<code>__ch</code>	The new character.
-------------------	--------------------

#### Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current locale.

Definition at line 390 of file `basic_ios.h`.

**5.627.5.12** `fmtflags std::ios_base::flags ( ) const` `[inline],[inherited]`

Access to format flags.

#### Returns

The format control flags for both input and output.

Definition at line 621 of file `ios_base.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator<<()`, `std::__detail::operator>>()`, `std::operator>>()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

**5.627.5.13** `fmtflags std::ios_base::flags ( fmtflags __fmtfl )` `[inline],[inherited]`

Setting new format flags all at once.

## Parameters

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

## Returns

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

Definition at line 632 of file `ios_base.h`.

**5.627.5.14** `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::flush( ) [inherited]`

Synchronizing the stream buffer.

## Returns

`*this`

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns `-1`, sets `badbit`.

Definition at line 211 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.627.5.15** `template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_istream<_CharT, _Traits>::gcount( ) const [inline], [inherited]`

Character counting.

## Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 269 of file `istream`.

**5.627.5.16** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::get( void ) [inherited]`

Simple extraction.

## Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets `failbit` and returns `traits::eof()`.

Definition at line 244 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.627.5.17** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get( char_type & __c ) [inherited]`

Simple extraction.

**Parameters**

<code>__c</code>	The character in which to store data.
------------------	---------------------------------------

**Returns**

\*this

Tries to extract a character and store it in `__c`. If none are available, sets failbit and returns `traits::eof()`.

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 280 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.627.5.18** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get ( char_type * __s, streamsize __n, char_type __delim )` [inherited]

Simple multiple-character extraction.

**Parameters**

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>__s</code> .
<code>__delim</code>	A "stop" character.

**Returns**

\*this

Characters are extracted and stored into `__s` until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals `__delim`, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 317 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

**5.627.5.19** `template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<_CharT, _Traits>::get ( char_type * __s, streamsize __n )` [inline], [inherited]

Simple multiple-character extraction.

## Parameters

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>s</code> .

## Returns

`*this`

Returns `get(__s,__n,widen("\n"))`.

Definition at line 354 of file `istream`.

5.627.5.20 `template<typename _CharT, typename _Traits> basic_istream<_CharT,_Traits> & std::basic_istream<_CharT,_Traits>::get( __streambuf_type & __sb, char_type __delim )` `[inherited]`

Extraction into another streambuf.

## Parameters

<code>__sb</code>	A streambuf in which to store data.
<code>__delim</code>	A "stop" character.

## Returns

`*this`

Characters are extracted and inserted into `__sb` until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals `__delim` (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, `failbit` is set in the stream's error state.

Definition at line 364 of file `istream.tcc`.

References `std::basic_istream<_CharT,_Traits>::M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT,_Traits>::rdbuf()`, `std::basic_ios<_CharT,_Traits>::setstate()`, `std::basic_streambuf<_CharT,_Traits>::sgetc()`, `std::basic_streambuf<_CharT,_Traits>::snextc()`, and `std::basic_streambuf<_CharT,_Traits>::sputc()`.

5.627.5.21 `template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<_CharT,_Traits>::get( __streambuf_type & __sb )` `[inline],[inherited]`

Extraction into another streambuf.

## Parameters

<code>__sb</code>	A streambuf in which to store data.
-------------------	-------------------------------------

## Returns

`*this`

Returns `get(__sb,widen("\n"))`.

Definition at line 387 of file `istream`.

5.627.5.22 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::getline ( char_type * __s, streamsize __n, char_type __delim ) [inherited]`

String extraction.

## Parameters

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.
<code>__delim</code>	A "stop" character.

## Returns

`*this`

Extracts and stores characters into `__s` until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the `__s` array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

Definition at line 408 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_streambuf< _CharT, _Traits >::sbumpc()`, `std::basic_ios< _CharT, _Traits >::setstate()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, and `std::basic_streambuf< _CharT, _Traits >::snextc()`.

Referenced by `std::basic_istream< char >::getline()`.

**5.627.5.23** `template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream< _CharT, _Traits >::getline( char_type * __s, streamsize __n )` `[inline]`, `[inherited]`

String extraction.

## Parameters

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.

## Returns

`*this`

Returns `getline(__s,__n,widen('\n'))`.

Definition at line 427 of file `istream`.

**5.627.5.24** `locale std::ios_base::getloc( ) const` `[inline]`, `[inherited]`

Locale access.

**Returns**

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 765 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _Outiter>::do_put()`, `std::operator>>()`, and `std::ws()`.

**5.627.5.25** `template<typename _CharT, typename _Traits = char_traits<_CharT>> bool std::basic_ios<_CharT, _Traits>::good( ) const` `[inline], [inherited]`

Fast error checking.

**Returns**

True if no error flags are set.

A wrapper around `rdstate`.

Definition at line 180 of file `basic_ios.h`.

Referenced by `std::__detail::operator>>()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

**5.627.5.26** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore( streamsize __n, int_type __delim )` `[inherited]`

Discarding characters.

**Parameters**

<code>__n</code>	Number of characters to discard.
<code>__delim</code>	A "stop" character.

**Returns**

\*this

Extracts characters and throws them away until one of the following happens:

- if `__n != std::numeric_limits<int>::max()`, `__n` characters are extracted
- the input sequence reaches end-of-file
- the next character equals `__delim` (in this case, the character is extracted); note that this condition will never occur if `__delim` equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 563 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

5.627.5.27 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore ( streamsize __n )` [inherited]

Simple extraction.

#### Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 501 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

5.627.5.28 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore ( void )` [inherited]

Simple extraction.

#### Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 468 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.627.5.29 `template<typename _CharT, typename _Traits> locale std::basic_ios<_CharT, _Traits>::imbue ( const locale & __loc )` [inherited]

Moves to a new locale.

#### Parameters

<code>__loc</code>	The new locale.
--------------------	-----------------

#### Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.-html>

Definition at line 114 of file `basic_ios.tcc`.

References `std::ios_base::imbue()`.

Referenced by `std::operator<<()`.

**5.627.5.30** `template<typename _CharT, typename _Traits> void std::basic_ios<_CharT, _Traits>::init ( basic_streambuf<_CharT, _Traits> * __sb )` [protected], [inherited]

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 126 of file basic\_ios.tcc.

Referenced by `std::basic_fstream<_CharT, _Traits>::basic_fstream()`, `std::basic_ifstream<_CharT, _Traits>::basic_ifstream()`, `std::basic_ios<char, char_traits<char>>::basic_ios()`, `std::basic_istream<char>::basic_istream()`, `std::basic_istreamstream<_CharT, _Traits, _Alloc>::basic_istreamstream()`, `std::basic_ofstream<_CharT, _Traits>::basic_ofstream()`, `std::basic_ostringstream<_CharT, _Traits, _Alloc>::basic_ostringstream()`, and `std::basic_stringstream<_CharT, _Traits, _Alloc>::basic_stringstream()`.

**5.627.5.31** `long& std::ios_base::iword ( int __ix )` [inline], [inherited]

Access to integer array.

Parameters

<code>__ix</code>	Index into the array.
-------------------	-----------------------

Returns

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 811 of file ios\_base.h.

**5.627.5.32** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char std::basic_ios<_CharT, _Traits>::narrow ( char_type __c, char __dfault ) const` [inline], [inherited]

Squeezes characters.

Parameters

<code>__c</code>	The character to narrow.
<code>__dfault</code>	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
* std::use_facet<ctype<char_type>> >(getloc()).narrow(c, dfault)
*
```

5.627.5.38 `template<typename _CharT, typename _Traits = char_traits<_CharT>> __ostream_type& std::basic_ostream<_CharT,_Traits>::operator<<( long __n )` `[inline],[inherited]`

Integer arithmetic inserters.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 166 of file ostream.

```
5.627.5.39 template<typename _CharT, typename _Traits = char_traits<_CharT>> __ostream_type& std::basic_ostream<
    _CharT, _Traits >::operator<<( unsigned long __n ) [inline],[inherited]
```

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 170 of file ostream.

```
5.627.5.40 template<typename _CharT, typename _Traits = char_traits<_CharT>> __ostream_type& std::basic_ostream<
    _CharT, _Traits >::operator<<( bool __n ) [inline],[inherited]
```

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 174 of file ostream.

```
5.627.5.41 template<typename _CharT, typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream<
    _CharT, _Traits >::operator<<( short __n ) [inherited]
```

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 92 of file ostream.tcc.

References `std::ios_base::basefield`, `std::ios_base::flags()`, `std::ios_base::hex`, and `std::ios_base::oct`.

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 181 of file `ostream`.

**5.627.5.43** `template<typename _CharT, typename _Traits> basic_ostream< _CharT, _Traits> & std::basic_ostream< _CharT, _Traits>::operator<<( int __n ) [inherited]`

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 106 of file `ostream.tcc`.

References `std::ios_base::basefield`, `std::ios_base::flags()`, `std::ios_base::hex`, and `std::ios_base::oct`.

**5.627.5.44** `template<typename _CharT, typename _Traits = char_traits<_CharT>> __ostream_type& std::basic_ostream< _CharT, _Traits>::operator<<( unsigned int __n ) [inline], [inherited]`

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 192 of file `ostream`.

**5.627.5.45** `template<typename _CharT, typename _Traits = char_traits<_CharT>> __ostream_type& std::basic_ostream< _CharT, _Traits>::operator<<( long long __n ) [inline], [inherited]`

Integer arithmetic inserters.

**Parameters**

---

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 201 of file `ostream`.

**5.627.5.46** `template<typename _CharT, typename _Traits = char_traits<_CharT>> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<<( unsigned long long __n ) [inline],[inherited]`

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 205 of file `ostream`.

**5.627.5.47** `template<typename _CharT, typename _Traits = char_traits<_CharT>> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<<( double __f ) [inline],[inherited]`

Floating point arithmetic inserters.

**Parameters**

<code>__f</code>	A variable of builtin floating point type.
------------------	--

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 220 of file `ostream`.

**5.627.5.48** `template<typename _CharT, typename _Traits = char_traits<_CharT>> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<<( float __f ) [inline],[inherited]`

Floating point arithmetic inserters.

**Parameters**

<code>__f</code>	A variable of builtin floating point type.
------------------	--

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 224 of file `ostream`.

5.627.5.49 `template<typename _CharT, typename _Traits = char_traits<_CharT>> __ostream_type& std::basic_ostream<_CharT, _Traits>::operator<<( long double __f ) [inline],[inherited]`

Floating point arithmetic inserters.

## Parameters

<code>__f</code>	A variable of builtin floating point type.
------------------	--

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 232 of file ostream.

```
5.627.5.50 template<typename _CharT, typename _Traits = char_traits<_CharT>> __ostream_type& std::basic_ostream<
    _CharT, _Traits >::operator<<( const void * __p ) [inline], [inherited]
```

Pointer arithmetic inserters.

## Parameters

<code>__p</code>	A variable of pointer type.
------------------	-----------------------------

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 245 of file ostream.

```
5.627.5.51 template<typename _CharT, typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream<
    _CharT, _Traits >::operator<<( __streambuf_type * __sb ) [inherited]
```

Extracting from another streambuf.

## Parameters

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

Definition at line 120 of file ostream.tcc.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

```
5.627.5.52 template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<
    _CharT, _Traits >::operator>> ( __istream_type &(*)(__istream_type &) __pf ) [inline],
    [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `iosmanip` header.

Definition at line 120 of file `istream`.

```
5.627.5.53 template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<
    _CharT, _Traits >::operator>> ( __ios_type &(*)(__ios_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `iosmanip` header.

Definition at line 124 of file `istream`.

```
5.627.5.54 template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<
    _CharT, _Traits >::operator>> ( ios_base &(*)(ios_base &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `iosmanip` header.

Definition at line 131 of file `istream`.

```
5.627.5.55 template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<
    _CharT, _Traits >::operator>> ( bool & __n ) [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 168 of file `istream`.

```
5.627.5.56 template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream<
    _CharT, _Traits >::operator>> ( short & __n ) [inherited]
```

Integer arithmetic extractors.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 122 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::num_get<_CharT,_InIter>::get()`, `std::ios_base::goodbit`, and `std::basic_ios<_CharT,_Traits>::setstate()`.

Definition at line 199 of file `istream`.

5.627.5.64 `template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<_CharT, _Traits>::operator>>( float & __f ) [inline], [inherited]`

Floating point arithmetic extractors.

**Parameters**

<code>__f</code>	A variable of builtin floating point type.
------------------	--

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 214 of file `istream`.

5.627.5.65 `template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<_CharT, _Traits>::operator>>( double & __f ) [inline], [inherited]`

Floating point arithmetic extractors.

**Parameters**

<code>__f</code>	A variable of builtin floating point type.
------------------	--

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 218 of file `istream`.

5.627.5.66 `template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<_CharT, _Traits>::operator>>( long double & __f ) [inline], [inherited]`

Floating point arithmetic extractors.

**Parameters**

<code>__f</code>	A variable of builtin floating point type.
------------------	--

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 222 of file `istream`.

5.627.5.67 `template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<_CharT, _Traits>::operator>>( void *&__p ) [inline], [inherited]`

Basic arithmetic extractors.

## Parameters

<code>__p</code>	A variable of pointer type.
------------------	-----------------------------

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 235 of file `istream`.

```
5.627.5.68 template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream<
    _CharT, _Traits >::operator>> ( __streambuf_type * __sb ) [inherited]
```

Extracting into another streambuf.

## Parameters

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

Definition at line 212 of file `istream.tcc`.

References `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

```
5.627.5.69 template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits >::int_type
    std::basic_istream< _CharT, _Traits >::peek ( void ) [inherited]
```

Looking ahead in the stream.

## Returns

The next character, or `eof()`.

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 628 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

```
5.627.5.70 streamsize std::ios_base::precision ( ) const [inline],[inherited]
```

Flags access.

**Returns**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 691 of file `ios_base.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, and `std::operator<<()`.

**5.627.5.71** `streamsize std::ios_base::precision ( streamsize __prec )` `[inline]`, `[inherited]`

Changing flags.

**Parameters**

<code>__prec</code>	The new precision value.
---------------------	--------------------------

**Returns**

The previous value of `precision()`.

Definition at line 700 of file `ios_base.h`.

**5.627.5.72** `template<typename _CharT, typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put ( char_type __c )` `[inherited]`

Simple insertion.

**Parameters**

<code>__c</code>	The character to insert.
------------------	--------------------------

**Returns**

`*this`

Tries to insert `__c`.

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 149 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.627.5.73** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback ( char_type __c )` `[inherited]`

Unextracting a single character.

**Parameters**

<code>__c</code>	The character to push back into the input stream.
------------------	---

**Returns**

`*this`

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

**Note**

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 719 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::rdstate()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_streambuf<_CharT, _Traits>::sputbackc()`.

Referenced by `std::operator>>()`.

**5.627.5.74** `void*& std::ios_base::pword ( int __ix )` `[inline]`, `[inherited]`

Access to void pointer array.

**Parameters**

<code>__ix</code>	Index into the array.
-------------------	-----------------------

**Returns**

A reference to a `void*` associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 832 of file `ios_base.h`.

**5.627.5.75** `template<typename _CharT, typename _Traits = char_traits<_CharT>> basic_streambuf<_CharT, _Traits>*`  
`std::basic_ios<_CharT, _Traits>::rdbuf ( ) const` `[inline]`, `[inherited]`

Accessing the underlying buffer.

**Returns**

The current stream buffer.

This does not change the state of the stream.

Definition at line 321 of file `basic_ios.h`.

Referenced by `std::basic_ostream<char>::M_write()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::getline()`, `std::basic_istream<`

`_CharT, _Traits >::ignore()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::tr2::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

**5.627.5.76** `template<typename _CharT, typename _Traits> basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf ( basic_streambuf< _CharT, _Traits > * __sb )` [inherited]

Changing the underlying buffer.

Parameters

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
* std::fstream    foo;           // or some other derived type
* std::streambuf* p = .....;
*
* foo.ios::rdbuf(p);           // ios == basic_ios<char>
*
```

Definition at line 53 of file `basic_ios.tcc`.

**5.627.5.77** `template<typename _CharT, typename _Traits = char_traits<_CharT>> iosstate std::basic_ios< _CharT, _Traits >::rdstate ( ) const` [inline],[inherited]

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See `std::ios_base::iosstate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Definition at line 137 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, char_traits< char > >::bad()`, `std::basic_ios< char, char_traits< char > >::eof()`, `std::basic_ios< char, char_traits< char > >::fail()`, `std::basic_ios< char, char_traits< char > >::good()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ios< char, char_traits< char > >::setstate()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

**5.627.5.78** `template<typename _CharT, typename _Traits> basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read ( char_type * __s, streamsize __n )` [inherited]

Extraction without delimiters.

**Parameters**

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

**Returns**

\*this

If the stream state is `good()`, extracts characters and stores them into `__s` until one of the following happens:

- `__n` characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 658 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.627.5.79** `template<typename _CharT, typename _Traits> streamsize std::basic_istream<_CharT, _Traits>::readsome ( char_type * __s, streamsize __n ) [inherited]`

Extraction until the buffer is exhausted, but no more.

**Parameters**

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

**Returns**

The number of characters extracted.

Extracts characters and stores them into `__s` depending on the number of characters remaining in the `streambuf`'s buffer, `rdbuf()->in_avail()`, called `A` here:

- if `A == -1`, sets `eofbit` and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the `streambuf`.

Definition at line 687 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::min()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.627.5.80** `void std::ios_base::register_callback ( event_callback __fn, int __index ) [inherited]`

Add the callback `__fn` with parameter `__index`.

## Parameters

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

5.627.5.81 `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg ( pos_type __pos )` [inherited]

Changing the current read position.

## Parameters

<code>__pos</code>	A file position object.
--------------------	-------------------------

## Returns

\*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets `failbit`.

## Note

This function first clears `eofbit`. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 853 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::ios_base::eofbit`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::rdstate()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.627.5.82 `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg ( off_type __off, ios_base::seekdir __dir )` [inherited]

Changing the current read position.

## Parameters

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

## Returns

\*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off, __dir)`. If that function fails, sets `failbit`.

## Note

This function first clears `eofbit`. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 892 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::ios_base::eofbit`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::rdstate()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

5.627.5.83 `template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp ( pos_type __pos ) [inherited]`

Changing the current write position.

## Parameters

<code>__pos</code>	A file position object.
--------------------	-------------------------

## Returns

\*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets `failbit`.

Definition at line 258 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.627.5.84** `template<typename _CharT, typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp( off_type __off, ios_base::seekdir __dir )` `[inherited]`

Changing the current write position.

## Parameters

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

## Returns

\*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets `failbit`.

Definition at line 290 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::out`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.627.5.85** `fmtflags std::ios_base::setf( fmtflags __fmtfl )` `[inline]`, `[inherited]`

Setting new format flags.

## Parameters

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

## Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 648 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::dec()`, `std::fixed()`, `std::hex()`, `std::hexfloat()`, `std::left()`, `std::oct()`, `std::__detail::operator>>()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

**5.627.5.86** `fmtflags std::ios_base::setf( fmtflags __fmtfl, fmtflags __mask )` `[inline]`, `[inherited]`

Setting new format flags.

## Parameters

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <code>fmtfl</code> .

## Returns

The previous format control flags.

This function clears `mask` in the format flags, then sets `fmtfl` & `mask`. An example mask is `ios_base::adjustfield`.

Definition at line 665 of file `ios_base.h`.

```
5.627.5.87 template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_ios<_CharT, _Traits>::setstate ( iostate __state ) [inline], [inherited]
```

Sets additional flags in the error state.

## Parameters

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

Definition at line 157 of file `basic_ios.h`.

Referenced by `std::basic_ostream< char >::M_write()`, `std::basic_ifstream< _CharT, _Traits >::close()`, `std::basic_ofstream< _CharT, _Traits >::close()`, `std::basic_fstream< _CharT, _Traits >::close()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::operator<<()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::tr2::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

```
5.627.5.88 template<typename _CharT, typename _Traits > int std::basic_istream< _CharT, _Traits >::sync ( void ) [inherited]
```

Synchronizing the stream buffer.

## Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf() ->pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

## Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 789 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_streambuf< _CharT, _Traits >::pubsync()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.627.5.89** `static bool std::ios_base::sync_with_stdio ( bool __sync = true )` `[static]`, `[inherited]`

Interaction with the standard C I/O objects.

#### Parameters

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

#### Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

**5.627.5.90** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits >::pos_type`  
`std::basic_istream< _CharT, _Traits >::tellg ( void )` `[inherited]`

Getting the current read position.

#### Returns

A file position object.

If `fail ()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf ()->pubseekoff (0, cur, in)`.

#### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount ()`. At variance with `putback`, `unget` and `seekg`, `eofbit` is not cleared first.

Definition at line 825 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::in`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

**5.627.5.91** `template<typename _CharT, typename _Traits > basic_ostream< _CharT, _Traits >::pos_type`  
`std::basic_ostream< _CharT, _Traits >::tellp ( )` `[inherited]`

Getting the current write position.

#### Returns

A file position object.

If `fail ()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf ()->pubseekoff (0, cur, out)`.

Definition at line 237 of file `ostream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::out`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

5.627.5.92 `template<typename _CharT, typename _Traits = char_traits<_CharT>> basic_ostream<_CharT, _Traits>*  
std::basic_ios<_CharT, _Traits >::tie ( ) const [inline], [inherited]`

Fetches the current *tied* stream.

#### Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 295 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits >::copyfmt()`, `std::basic_ostream<_CharT, _Traits >::sentry::sentry()`, and `std::basic_istream<_CharT, _Traits >::sentry::sentry()`.

5.627.5.93 `template<typename _CharT, typename _Traits = char_traits<_CharT>> basic_ostream<_CharT, _Traits>*  
std::basic_ios<_CharT, _Traits >::tie ( basic_ostream<_CharT, _Traits > * __tiestr ) [inline],  
[inherited]`

Ties this stream to an output stream.

#### Parameters

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

#### Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 307 of file `basic_ios.h`.

5.627.5.94 `template<typename _CharT, typename _Traits > basic_istream<_CharT, _Traits > & std::basic_istream<  
_CharT, _Traits >::unget ( void ) [inherited]`

Unextracting the previous character.

#### Returns

\*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

#### Note

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 754 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits >::M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits >::clear()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits >::rdbuf()`, `std::basic_ios<_CharT, _Traits >::rdstate()`, `std::basic_ios<_CharT, _Traits >::setstate()`, and `std::basic_streambuf<_CharT, _Traits >::sungetc()`.

Referenced by `std::__detail::operator>>()`.

5.627.5.95 `void std::ios_base::unsetf ( fmtflags __mask )` [inline],[inherited]

Clearing format flags.

## Parameters

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

Definition at line 680 of file `ios_base.h`.

Referenced by `std::defaultfloat()`, `std::noboolalpha()`, `std::noshowbase()`, `std::noshowpoint()`, `std::noshowpos()`, `std::noskipws()`, `std::nounitbuf()`, and `std::nouppercase()`.

**5.627.5.96** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type std::basic_ios<_CharT, _Traits>::widen ( char __c ) const [inline], [inherited]`

Widens characters.

## Parameters

<code>__c</code>	The character to widen.
------------------	-------------------------

## Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
* std::use_facet<ctype<char_type>> >(getloc()).widen(c)
*
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.-html>

Definition at line 449 of file `basic_ios.h`.

Referenced by `std::basic_ios<char, char_traits<char>>::fill()`, `std::basic_istream<char>::get()`, `std::basic_istream<char>::getline()`, `std::getline()`, `std::tr2::operator>>()`, and `std::operator>>()`.

**5.627.5.97** `streamsize std::ios_base::width ( ) const [inline], [inherited]`

Flags access.

## Returns

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 714 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _Outiter>::do_put()`, and `std::operator>>()`.

**5.627.5.98** `streamsize std::ios_base::width ( streamsize __wide ) [inline], [inherited]`

Changing flags.

## Parameters

<code>__wide</code>	The new width value.
---------------------	----------------------

## Returns

The previous value of width().

Definition at line 723 of file ios\_base.h.

5.627.5.99 `template<typename _CharT, typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::write ( const char_type * __s, streamsize __n ) [inherited]`

Character string insertion.

## Parameters

<code>__s</code>	The array to insert.
<code>__n</code>	Maximum number of characters to insert.

## Returns

\*this

Characters are copied from `__s` and inserted into the stream until one of the following happens:

- `__n` characters are inserted
- inserting into the output sequence fails (in this case, `badbit` will be set in the stream's error state)

## Note

This function is not overloaded on signed char and unsigned char.

Definition at line 183 of file ostream.tcc.

References `std::basic_ostream< _CharT, _Traits >::_M_write()`, and `std::ios_base::badbit`.

5.627.5.100 `static int std::ios_base::xalloc ( ) throw ) [static],[inherited]`

Access to unique indices.

## Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pwdword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pwdword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pwdword` arrays.

## 5.627.6 Member Data Documentation

**5.627.6.1** `template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_istream<_CharT, _Traits>::_M_gcount` [protected], [inherited]

The number of characters extracted in the previous unformatted function; see `gcount()`.

Definition at line 82 of file `istream`.

Referenced by `std::basic_istream<char>::gcount()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::unget()`, and `std::basic_istream<char>::~~basic_istream()`.

**5.627.6.2** `const fmtflags std::ios_base::adjustfield` [static], [inherited]

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Definition at line 378 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _Outiter>::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

**5.627.6.3** `const openmode std::ios_base::app` [static], [inherited]

Seek to end before each write.

Definition at line 432 of file `ios_base.h`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_set_buffer()`, and `std::basic_filebuf<_CharT, _Traits>::xsputn()`.

**5.627.6.4** `const openmode std::ios_base::ate` [static], [inherited]

Open and seek to end immediately after opening.

Definition at line 435 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`.

**5.627.6.5** `const iostate std::ios_base::badbit` [static], [inherited]

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 402 of file `ios_base.h`.

Referenced by `std::basic_ostream<char>::_M_write()`, `std::basic_ios<char, char_traits<char>>::bad()`, `std::basic_ios<char, char_traits<char>>::fail()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::operator<<()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_ostream<_CharT, _Traits>::tellp()`, `std::basic_istream<_CharT, _Traits>::unget()`, `std::basic_ostream<_CharT, _Traits>::write()`, and `std::basic_ostream<_CharT, _Traits>::sentry::~~sentry()`.

**5.627.6.6** `const fmtflags std::ios_base::basefield` [static], [inherited]

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Definition at line 381 of file `ios_base.h`.

Referenced by `std::dec()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::hex()`, `std::oct()`, and `std::basic_ostream< _CharT, _Traits >::operator<<()`.

#### 5.627.6.7 `const seekdir std::ios_base::beg` [static],[inherited]

Request a seek relative to the beginning of the stream.

Definition at line 464 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::seekpos()`.

#### 5.627.6.8 `const openmode std::ios_base::binary` [static],[inherited]

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.-binary>.

Definition at line 440 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::showmanyc()`.

#### 5.627.6.9 `const fmtflags std::ios_base::boolalpha` [static],[inherited]

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 326 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::noboolalpha()`.

#### 5.627.6.10 `const seekdir std::ios_base::cur` [static],[inherited]

Request a seek relative to the current position within the sequence.

Definition at line 467 of file `ios_base.h`.

Referenced by `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_filebuf< _CharT, _Traits >::seekoff()`, `std::basic_istream< _CharT, _Traits >::tellg()`, and `std::basic_ostream< _CharT, _Traits >::tellp()`.

#### 5.627.6.11 `const fmtflags std::ios_base::dec` [static],[inherited]

Converts integer input or generates integer output in decimal base.

Definition at line 329 of file `ios_base.h`.

Referenced by `std::dec()`.

#### 5.627.6.12 `const seekdir std::ios_base::end` [static],[inherited]

Request a seek relative to the current end of the sequence.

Definition at line 470 of file `ios_base.h`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`, and `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`.

#### 5.627.6.13 `const iostate std::ios_base::eofbit` [static],[inherited]

Indicates that an input operation reached the end of an input sequence.

Definition at line 405 of file `ios_base.h`.

Referenced by `std::time_get< _CharT, _InIter >::do_get()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get<`

`_CharT, _InIter >::do_get_date()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_time()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_ios< char, char_traits< char > >::eof()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::time_get< _CharT, _InIter >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

#### 5.627.6.14 `const iostate std::ios_base::failbit` [static], [inherited]

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 410 of file `ios_base.h`.

Referenced by `std::basic_ifstream< _CharT, _Traits >::close()`, `std::basic_ofstream< _CharT, _Traits >::close()`, `std::basic_fstream< _CharT, _Traits >::close()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_ios< char, char_traits< char > >::fail()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::time_get< _CharT, _InIter >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_istream< _CharT, _Traits >::sentry::sentry()`.

#### 5.627.6.15 `const fmtflags std::ios_base::fixed` [static], [inherited]

Generate floating-point output in fixed-point notation.

Definition at line 332 of file `ios_base.h`.

Referenced by `std::fixed()`, and `std::hexfloat()`.

#### 5.627.6.16 `const fmtflags std::ios_base::floatfield` [static], [inherited]

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 384 of file `ios_base.h`.

Referenced by `std::defaultfloat()`, `std::fixed()`, `std::hexfloat()`, and `std::scientific()`.

#### 5.627.6.17 `const iostate std::ios_base::goodbit` [static], [inherited]

Indicates all is well.

Definition at line 413 of file `ios_base.h`.

Referenced by `std::time_get< _CharT, _InIter >::do_get()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::time_get< _CharT, _InIter >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< _CharT, _Traits >::sync()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

**5.627.6.18** `const fmtflags std::ios_base::hex` `[static], [inherited]`

Converts integer input or generates integer output in hexadecimal base.

Definition at line 335 of file `ios_base.h`.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::hex()`, and `std::basic_ostream< _CharT, _Traits >::operator<<()`.

**5.627.6.19** `const openmode std::ios_base::in` `[static], [inherited]`

Open for input. Default for `ifstream` and `fstream`.

Definition at line 443 of file `ios_base.h`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_set_buffer()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`, `std::basic_filebuf< _CharT, _Traits >::underflow()`, and `std::basic_filebuf< _CharT, _Traits >::xsgetn()`.

**5.627.6.20** `const fmtflags std::ios_base::internal` `[static], [inherited]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 340 of file `ios_base.h`.

Referenced by `std::internal()`.

**5.627.6.21** `const fmtflags std::ios_base::left` `[static], [inherited]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 344 of file `ios_base.h`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, and `std::left()`.

**5.627.6.22** `const fmtflags std::ios_base::oct` `[static], [inherited]`

Converts integer input or generates integer output in octal base.

Definition at line 347 of file `ios_base.h`.

Referenced by `std::oct()`, and `std::basic_ostream< _CharT, _Traits >::operator<<()`.

**5.627.6.23** `const openmode std::ios_base::out` `[static], [inherited]`

Open for output. Default for `ofstream` and `fstream`.

Definition at line 446 of file `ios_base.h`.

Referenced by `std::basic_filebuf< char_type, traits_type >::_M_set_buffer()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

**5.627.6.24** `const fmtflags std::ios_base::right` `[static], [inherited]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 351 of file `ios_base.h`.

Referenced by `std::right()`.

**5.627.6.25** `const fmtflags std::ios_base::scientific` `[static], [inherited]`

Generates floating-point output in scientific notation.

Definition at line 354 of file `ios_base.h`.

Referenced by `std::hexfloat()`, and `std::scientific()`.

**5.627.6.26** `const fmtflags std::ios_base::showbase` `[static], [inherited]`

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 358 of file `ios_base.h`.

Referenced by `std::noshowbase()`, and `std::showbase()`.

**5.627.6.27** `const fmtflags std::ios_base::showpoint` `[static], [inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 362 of file `ios_base.h`.

Referenced by `std::noshowpoint()`, and `std::showpoint()`.

**5.627.6.28** `const fmtflags std::ios_base::showpos` `[static], [inherited]`

Generates a + sign in non-negative generated numeric output.

Definition at line 365 of file `ios_base.h`.

Referenced by `std::noshowpos()`, and `std::showpos()`.

**5.627.6.29** `const fmtflags std::ios_base::skipws` `[static], [inherited]`

Skips leading white space before certain input operations.

Definition at line 368 of file `ios_base.h`.

Referenced by `std::noskipws()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, and `std::skipws()`.

**5.627.6.30** `const openmode std::ios_base::trunc` `[static], [inherited]`

Open for input. Default for `ofstream`.

Definition at line 449 of file `ios_base.h`.

**5.627.6.31** `const fmtflags std::ios_base::unitbuf` `[static], [inherited]`

Flushes output after each output operation.

Definition at line 371 of file `ios_base.h`.

Referenced by `std::nounitbuf()`, `std::unitbuf()`, and `std::basic_ostream<_CharT, _Traits>::sentry::~sentry()`.

**5.627.6.32** `const fmtflags std::ios_base::uppercase` `[static], [inherited]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 375 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _Outiter>::do_put()`, `std::nouppercase()`, and `std::uppercase()`.

The documentation for this class was generated from the following files:

  - `__istream_type` & `operator>>` (`__ios_type` &(\*\_\_pf)(\_\_ios\_type &))
  - `__istream_type` & `operator>>` (`ios_base` &(\*\_\_pf)(`ios_base` &))

### Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- `__istream_type` & `operator>>` (bool &\_\_n)
  - `__istream_type` & `operator>>` (short &\_\_n)
  - `__istream_type` & `operator>>` (unsigned short &\_\_n)
  - `__istream_type` & `operator>>` (int &\_\_n)
  - `__istream_type` & `operator>>` (unsigned int &\_\_n)
  - `__istream_type` & `operator>>` (long &\_\_n)
  - `__istream_type` & `operator>>` (unsigned long &\_\_n)
  - `__istream_type` & `operator>>` (long long &\_\_n)
  - `__istream_type` & `operator>>` (unsigned long long &\_\_n)
- 
- `__istream_type` & `operator>>` (float &\_\_f)
  - `__istream_type` & `operator>>` (double &\_\_f)
  - `__istream_type` & `operator>>` (long double &\_\_f)

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

#### 5.628.1 Detailed Description

```
template<typename _CharT, typename _Traits = char_traits<_CharT>>class std::basic_istream<_CharT, _Traits >
```

Template class `basic_istream`.

##### Template Parameters

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> .

This is the base class for all input streams. It provides text formatting of all builtin types, and communicates with any class derived from `basic_streambuf` to do the actual input.

Definition at line 83 of file `iosfwd`.

#### 5.628.2 Member Typedef Documentation

5.628.2.1 `template<typename _CharT, typename _Traits = char_traits<_CharT>> typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios<_CharT, _Traits>::__num_put_type` [inherited]

These are non-standard types.

Definition at line 89 of file `basic_ios.h`.

5.628.2.2 `typedef void(* std::ios_base::event_callback)(event _e, ios_base & _b, int _i)` [inherited]

The type of an event callback function.

##### Parameters

<code>__e</code>	One of the members of the event enum.
<code>__b</code>	Reference to the <code>ios_base</code> object.
<code>__i</code>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

Definition at line 506 of file `ios_base.h`.

5.628.2.3 `typedef _Ios_Fmtflags std::ios_base::fmtflags` [inherited]

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

Definition at line 323 of file `ios_base.h`.

#### 5.628.2.4 `typedef _Ios_Iostate std::ios_base::iostate` [inherited]

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

Definition at line 398 of file `ios_base.h`.

**5.628.2.5** `typedef _Ios_Openmode std::ios_base::openmode` [inherited]

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

Definition at line 429 of file `ios_base.h`.

**5.628.2.6** `typedef _Ios_Seekdir std::ios_base::seekdir` [inherited]

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

Definition at line 461 of file `ios_base.h`.

**5.628.3 Member Enumeration Documentation****5.628.3.1** `enum std::ios_base::event` [inherited]

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

Definition at line 489 of file `ios_base.h`.

**5.628.4 Constructor & Destructor Documentation****5.628.4.1** `template<typename _CharT, typename _Traits = char_traits<_CharT>> std::basic_istream<_CharT, _Traits>::basic_istream( __streambuf_type * __sb )` [inline],[explicit]

Base constructor.

This ctor is almost never called by the user directly, rather from derived classes' initialization lists, which pass a pointer to their own stream buffer.

Definition at line 93 of file `istream`.

5.628.4.2 `template<typename _CharT, typename _Traits = char_traits<_CharT>> virtual std::basic_istream< _CharT, _Traits >::~basic_istream ( ) [inline], [virtual]`

Base destructor.

This does very little apart from providing a virtual base dtor.

Definition at line 103 of file istream.

## 5.628.5 Member Function Documentation

5.628.5.1 `const locale& std::ios_base::_M_getloc ( ) const [inline], [inherited]`

Locale access.

### Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Definition at line 776 of file `ios_base.h`.

Referenced by `std::time_get< _CharT, _InIter >::do_get()`, `std::money_get< _CharT, _InIter >::do_get()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_date()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_time()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_put< _CharT, _OutIter >::do_put()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::time_get< _CharT, _InIter >::get()`, and `std::time_put< _CharT, _OutIter >::put()`.

5.628.5.2 `template<typename _CharT, typename _Traits = char_traits<_CharT>> bool std::basic_ios< _CharT, _Traits >::bad ( ) const [inline], [inherited]`

Fast error checking.

### Returns

True if the badbit is set.

Note that other `iostate` flags may also be set.

Definition at line 211 of file `basic_ios.h`.

5.628.5.3 `template<typename _CharT, typename _Traits > void std::basic_ios< _CharT, _Traits >::clear ( iostate __state = goodbit ) [inherited]`

[Re]sets the error state.

### Parameters

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See `std::ios_base::iostate` for the possible bit values. Most users will not need to pass an argument.

Definition at line 41 of file `basic_ios.tcc`.

Referenced by `std::basic_ios< char, char_traits< char > >::exceptions()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::_detail::operator>>()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ios< char, char_traits< char > >::setstate()`, and `std::basic_istream< _CharT, _Traits >::unset()`.

5.628.5.4 `template<typename _CharT, typename _Traits > basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt ( const basic_ios< _CharT, _Traits > & __rhs ) [inherited]`

Copies fields of `__rhs` into this.

## Parameters

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

## Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy exceptions().

Definition at line 63 of file `basic_ios.tcc`.

References `std::basic_ios<_CharT, _Traits>::exceptions()`, `std::basic_ios<_CharT, _Traits>::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios<_CharT, _Traits>::tie()`, `std::tie()`, and `std::ios_base::width()`.

**5.628.5.5** `template<typename _CharT, typename _Traits = char_traits<_CharT>> bool std::basic_ios<_CharT, _Traits>::eof ( ) const [inline], [inherited]`

Fast error checking.

## Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 190 of file `basic_ios.h`.

**5.628.5.6** `template<typename _CharT, typename _Traits = char_traits<_CharT>> iostate std::basic_ios<_CharT, _Traits>::exceptions ( ) const [inline], [inherited]`

Throwing exceptions on errors.

## Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Definition at line 222 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

**5.628.5.7** `template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_ios<_CharT, _Traits>::exceptions ( iostate __except ) [inline], [inherited]`

Throwing exceptions on errors.

## Parameters

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```

* #include <iostream>
* #include <fstream>
* #include <exception>
*
* int main()
* {
*     std::set_terminate (
*         __gnu_cxx::__verbose_terminate_handler);
*
*     std::ifstream f ("/etc/motd");
*
*     std::cerr << "Setting badbit\n";
*     f.setstate (std::ios_base::badbit);
*
*     std::cerr << "Setting exception mask\n";
*     f.exceptions (std::ios_base::badbit);
* }
*

```

Definition at line 257 of file `basic_ios.h`.

**5.628.5.8** `template<typename _CharT, typename _Traits = char_traits<_CharT>> bool std::basic_ios<_CharT, _Traits>::fail ( ) const` `[inline], [inherited]`

Fast error checking.

#### Returns

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other `iostate` flags may also be set.

Definition at line 201 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, char_traits< char >>::operator bool()`, `std::basic_ios< char, char_traits< char >>::operator!()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::regex_traits< _CharT, _Traits >::value()`.

**5.628.5.9** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type std::basic_ios<_CharT, _Traits>::fill ( ) const` `[inline], [inherited]`

Retrieves the *empty* character.

#### Returns

The current fill character.

It defaults to a space ( ' ' ) in the current locale.

Definition at line 370 of file `basic_ios.h`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, and `std::basic_ios< char, char_traits< char >>::fill()`.

**5.628.5.10** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type std::basic_ios<_CharT, _Traits>::fill ( char_type __ch )` `[inline], [inherited]`

Sets a new *empty* character.

## Parameters

<code>__ch</code>	The new character.
-------------------	--------------------

## Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current locale.

Definition at line 390 of file `basic_ios.h`.

**5.628.5.11** `fmtflags std::ios_base::flags( ) const` `[inline]`, `[inherited]`

Access to format flags.

## Returns

The format control flags for both input and output.

Definition at line 621 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator<<()`, `std::__detail::operator>>()`, `std::operator>>()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

**5.628.5.12** `fmtflags std::ios_base::flags( fmtflags __fmtfl )` `[inline]`, `[inherited]`

Setting new format flags all at once.

## Parameters

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

## Returns

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

Definition at line 632 of file `ios_base.h`.

**5.628.5.13** `template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_istream<_CharT, _Traits>::gcount( ) const` `[inline]`

Character counting.

## Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 269 of file `istream`.

**5.628.5.14** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::get( void )`

Simple extraction.

**Returns**

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 244 of file istream.tcc.

References std::basic\_istream<\_CharT, \_Traits>::\_M\_gcount, std::ios\_base::badbit, std::ios\_base::eofbit, std::ios\_base::failbit, std::ios\_base::goodbit, std::basic\_ios<\_CharT, \_Traits>::rdbuf(), and std::basic\_ios<\_CharT, \_Traits>::setstate().

**5.628.5.15** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get ( char_type & __c )`

Simple extraction.

**Parameters**

<code>__c</code>	The character in which to store data.
------------------	---------------------------------------

**Returns**

\*this

Tries to extract a character and store it in `__c`. If none are available, sets failbit and returns traits::eof().

**Note**

This function is not overloaded on signed char and unsigned char.

Definition at line 280 of file istream.tcc.

References std::basic\_istream<\_CharT, \_Traits>::\_M\_gcount, std::ios\_base::badbit, std::ios\_base::eofbit, std::ios\_base::failbit, std::ios\_base::goodbit, std::basic\_ios<\_CharT, \_Traits>::rdbuf(), and std::basic\_ios<\_CharT, \_Traits>::setstate().

**5.628.5.16** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get ( char_type * __s, streamsize __n, char_type __delim )`

Simple multiple-character extraction.

**Parameters**

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>__s</code> .
<code>__delim</code>	A "stop" character.

**Returns**

\*this

Characters are extracted and stored into `__s` until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals `__delim`, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

#### Note

This function is not overloaded on signed char and unsigned char.

Definition at line 317 of file istream.tcc.

References std::basic\_istream< \_CharT, \_Traits >::\_M\_gcount, std::ios\_base::badbit, std::ios\_base::eofbit, std::ios\_base::failbit, std::ios\_base::goodbit, std::basic\_ios< \_CharT, \_Traits >::rdbuf(), std::basic\_ios< \_CharT, \_Traits >::setstate(), std::basic\_streambuf< \_CharT, \_Traits >::sgetc(), and std::basic\_streambuf< \_CharT, \_Traits >::snextc().

5.628.5.17 `template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<_CharT, _Traits >::get ( char_type * __s, streamsize __n ) [inline]`

Simple multiple-character extraction.

#### Parameters

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>s</code> .

#### Returns

\*this

Returns `get(__s,__n,widen('\n'))`.

Definition at line 354 of file istream.

5.628.5.18 `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream<_CharT, _Traits >::get ( __streambuf_type & __sb, char_type __delim )`

Extraction into another streambuf.

#### Parameters

<code>__sb</code>	A streambuf in which to store data.
<code>__delim</code>	A "stop" character.

#### Returns

\*this

Characters are extracted and inserted into `__sb` until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals `__delim` (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

Definition at line 364 of file istream.tcc.

References `std::basic_istream<_CharT, _Traits>::M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, `std::basic_streambuf<_CharT, _Traits>::snextc()`, and `std::basic_streambuf<_CharT, _Traits>::sputc()`.

5.628.5.19 `template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<_CharT, _Traits>::get( __streambuf_type & __sb ) [inline]`

Extraction into another streambuf.

Parameters

<code>__sb</code>	A streambuf in which to store data.
-------------------	-------------------------------------

Returns

`*this`

Returns `get(__sb, widen("\n"))`.

Definition at line 387 of file `istream`.

5.628.5.20 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::getline( char_type * __s, streamsize __n, char_type __delim )`

String extraction.

Parameters

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.
<code>__delim</code>	A "stop" character.

Returns

`*this`

Extracts and stores characters into `__s` until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the `__s` array without setting failbit.

1. the input sequence reaches end-of-file, in which case `eofbit` is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case `failbit` is set in the stream error state

If no characters are extracted, `failbit` is set. (An empty line of input should therefore not cause `failbit` to be set.)

In any case, a null character is stored in the next location in the array.

Definition at line 408 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

Referenced by `std::basic_istream<char>::getline()`.

5.628.5.21 `template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<_CharT, _Traits>::getline ( char_type * __s, streamsize __n ) [inline]`

String extraction.

## Parameters

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.

## Returns

`*this`

Returns `getline(__s,__n,widen('\n'))`.

Definition at line 427 of file `istream`.

#### 5.628.5.22 locale `std::ios_base::getloc( ) const` `[inline],[inherited]`

Locale access.

## Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 765 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT,_Traits>::copyfmt()`, `std::money_put<_CharT,_Outiter>::do_put()`, `std::operator>>()`, and `std::ws()`.

#### 5.628.5.23 `template<typename _CharT,typename _Traits = char_traits<_CharT>> bool std::basic_ios<_CharT,_Traits>::good( ) const` `[inline],[inherited]`

Fast error checking.

## Returns

True if no error flags are set.

A wrapper around `rdstate`.

Definition at line 180 of file `basic_ios.h`.

Referenced by `std::__detail::operator>>()`, `std::basic_ostream<_CharT,_Traits>::sentry::sentry()`, and `std::basic_istream<_CharT,_Traits>::sentry::sentry()`.

#### 5.628.5.24 `template<typename _CharT,typename _Traits> basic_istream<_CharT,_Traits> & std::basic_istream<_CharT,_Traits>::ignore( streamsize __n, int_type __delim )`

Discarding characters.

## Parameters

<code>__n</code>	Number of characters to discard.
<code>__delim</code>	A "stop" character.

## Returns

`*this`

Extracts characters and throws them away until one of the following happens:

- if `__n != std::numeric_limits<int>::max()`, `__n` characters are extracted
- the input sequence reaches end-of-file
- the next character equals `__delim` (in this case, the character is extracted); note that this condition will never occur if `__delim` equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 563 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

**5.628.5.25** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore ( streamsize __n )`

Simple extraction.

Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 501 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::snextc()`.

**5.628.5.26** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore ( void )`

Simple extraction.

Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

Definition at line 468 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_streambuf<_CharT, _Traits>::sbumpc()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**5.628.5.27** `template<typename _CharT, typename _Traits> locale std::basic_ios<_CharT, _Traits>::imbue ( const locale & __loc ) [inherited]`

Moves to a new locale.

**Parameters**

<code>__loc</code>	The new locale.
--------------------	-----------------

**Returns**

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.-html>

Definition at line 114 of file `basic_ios.tcc`.

References `std::ios_base::imbue()`.

Referenced by `std::operator<<()`.

**5.628.5.28** `template<typename _CharT, typename _Traits> void std::basic_ios<_CharT, _Traits>::init ( basic_streambuf<_CharT, _Traits> * __sb )` `[protected]`, `[inherited]`

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 126 of file `basic_ios.tcc`.

Referenced by `std::basic_fstream<_CharT, _Traits>::basic_fstream()`, `std::basic_ifstream<_CharT, _Traits>::basic_ifstream()`, `std::basic_ios<char, char_traits<char>>::basic_ios()`, `std::basic_istream<char>::basic_istream()`, `std::basic_istreamstream<_CharT, _Traits, _Alloc>::basic_istreamstream()`, `std::basic_ofstream<_CharT, _Traits>::basic_ofstream()`, `std::basic_ostream<char>::basic_ostream()`, `std::basic_ostringstream<_CharT, _Traits, _Alloc>::basic_ostringstream()`, and `std::basic_stringstream<_CharT, _Traits, _Alloc>::basic_stringstream()`.

**5.628.5.29** `long& std::ios_base::iword ( int __ix )` `[inline]`, `[inherited]`

Access to integer array.

**Parameters**

<code>__ix</code>	Index into the array.
-------------------	-----------------------

**Returns**

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

**5.628.5.30** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char std::basic_ios<_CharT, _Traits>::narrow ( char_type __c, char __default ) const` `[inline]`, `[inherited]`

Squeezes characters.

## Parameters

<code>__c</code>	The character to narrow.
<code>__default</code>	The character to narrow.

## Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
* std::use_facet<ctype<char_type>> (>getloc()).narrow(c, default)
*
```

5.628.5.47 `template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<_CharT, _Traits>::operator>>( long double & __f ) [inline]`

Floating point arithmetic extractors.

**Parameters**

<code>__f</code>	A variable of builtin floating point type.
------------------	--

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 222 of file `istream`.

5.628.5.48 `template<typename _CharT, typename _Traits = char_traits<_CharT>> __istream_type& std::basic_istream<_CharT, _Traits>::operator>>( void *& __p ) [inline]`

Basic arithmetic extractors.

**Parameters**

<code>__p</code>	A variable of pointer type.
------------------	-----------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 235 of file `istream`.

5.628.5.49 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::operator>>( __streambuf_type * __sb )`

Extracting into another streambuf.

**Parameters**

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

Definition at line 212 of file istream.tcc.

References `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.628.5.50** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits >::int_type  
std::basic_istream< _CharT, _Traits >::peek( void )`

Looking ahead in the stream.

#### Returns

The next character, or eof().

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 628 of file istream.tcc.

References `std::basic_istream< _CharT, _Traits >::M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.628.5.51** `streamsize std::ios_base::precision( ) const [inline],[inherited]`

Flags access.

#### Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 691 of file ios\_base.h.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, and `std::operator<<()`.

**5.628.5.52** `streamsize std::ios_base::precision( streamsize __prec ) [inline],[inherited]`

Changing flags.

#### Parameters

<code>__prec</code>	The new precision value.
---------------------	--------------------------

#### Returns

The previous value of `precision()`.

Definition at line 700 of file ios\_base.h.

**5.628.5.53** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream<  
_CharT, _Traits >::putback( char_type __c )`

Unextracting a single character.

**Parameters**

<code>__c</code>	The character to push back into the input stream.
------------------	---

**Returns**

\*this

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

**Note**

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 719 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits >::clear()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits >::rdbuf()`, `std::basic_ios<_CharT, _Traits >::rdstate()`, `std::basic_ios<_CharT, _Traits >::setstate()`, and `std::basic_streambuf<_CharT, _Traits >::sputbackc()`.

Referenced by `std::operator>>()`.

**5.628.5.54** `void*& std::ios_base::pword ( int __ix )` `[inline]`, `[inherited]`

Access to void pointer array.

**Parameters**

<code>__ix</code>	Index into the array.
-------------------	-----------------------

**Returns**

A reference to a `void*` associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 832 of file `ios_base.h`.

**5.628.5.55** `template<typename _CharT, typename _Traits = char_traits<_CharT>> basic_streambuf<_CharT, _Traits>*`  
`std::basic_ios<_CharT, _Traits >::rdbuf ( ) const` `[inline]`, `[inherited]`

Accessing the underlying buffer.

**Returns**

The current stream buffer.

This does not change the state of the stream.

Definition at line 321 of file `basic_ios.h`.

Referenced by `std::basic_ostream<char >::_M_write()`, `std::basic_ostream<_CharT, _Traits >::flush()`, `std::basic_istream<_CharT, _Traits >::get()`, `std::basic_istream<_CharT, _Traits >::getline()`, `std::getline()`, `std::basic_istream<`

`_CharT, _Traits >::ignore()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::tr2::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

**5.628.5.56** `template<typename _CharT, typename _Traits> basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf ( basic_streambuf< _CharT, _Traits > * __sb ) [inherited]`

Changing the underlying buffer.

Parameters

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
* std::fstream    foo;           // or some other derived type
* std::streambuf* p = .....;
*
* foo.ios::rdbuf(p);           // ios == basic_ios<char>
*
```

Definition at line 53 of file `basic_ios.tcc`.

**5.628.5.57** `template<typename _CharT, typename _Traits = char_traits<_CharT>> iostate std::basic_ios< _CharT, _Traits >::rdstate ( ) const [inline],[inherited]`

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Definition at line 137 of file `basic_ios.h`.

Referenced by `std::basic_ios< char, char_traits< char > >::bad()`, `std::basic_ios< char, char_traits< char > >::eof()`, `std::basic_ios< char, char_traits< char > >::fail()`, `std::basic_ios< char, char_traits< char > >::good()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ios< char, char_traits< char > >::setstate()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

**5.628.5.58** `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read ( char_type * __s, streamsize __n )`

Extraction without delimiters.

## Parameters

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

## Returns

\*this

If the stream state is `good()`, extracts characters and stores them into `__s` until one of the following happens:

- `__n` characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

## Note

This function is not overloaded on signed char and unsigned char.

Definition at line 658 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.628.5.59** `template<typename _CharT, typename _Traits > streamsize std::basic_istream< _CharT, _Traits >::readsome ( char_type * __s, streamsize __n )`

Extraction until the buffer is exhausted, but no more.

## Parameters

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

## Returns

The number of characters extracted.

Extracts characters and stores them into `__s` depending on the number of characters remaining in the `streambuf`'s buffer, `rdbuf()->in_avail()`, called `A` here:

- if `A == -1`, sets `eofbit` and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the `streambuf`.

Definition at line 687 of file `istream.tcc`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::min()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**5.628.5.60** `void std::ios_base::register_callback ( event_callback __fn, int __index ) [inherited]`

Add the callback `__fn` with parameter `__index`.

**Parameters**

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

5.628.5.61 `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg ( pos_type __pos )`

Changing the current read position.

**Parameters**

<code>__pos</code>	A file position object.
--------------------	-------------------------

**Returns**

\*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets `failbit`.

**Note**

This function first clears `eofbit`. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 853 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::basic_istream< _CharT, _Traits >::clear()`, `std::ios_base::eofbit`, `std::basic_istream< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_istream< _CharT, _Traits >::rdbuf()`, `std::basic_istream< _CharT, _Traits >::rdstate()`, and `std::basic_istream< _CharT, _Traits >::setstate()`.

5.628.5.62 `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg ( off_type __off, ios_base::seekdir __dir )`

Changing the current read position.

**Parameters**

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

**Returns**

\*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off, __dir)`. If that function fails, sets `failbit`.

**Note**

This function first clears `eofbit`. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 892 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::basic_istream< _CharT, _Traits >::clear()`, `std::ios_base::eofbit`, `std::basic_istream< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_istream< _CharT, _Traits >::rdbuf()`, `std::basic_istream< _CharT, _Traits >::rdstate()`, and `std::basic_istream< _CharT, _Traits >::setstate()`.

5.628.5.63 `fmtflags` `std::ios_base::setf( fmtflags __fmtfl )` [inline],[inherited]

Setting new format flags.

## Parameters

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

## Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 648 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::dec()`, `std::fixed()`, `std::hex()`, `std::hexfloat()`, `std::left()`, `std::oct()`, `std::__detail::operator>>()`, `std::right()`, `std::scientific()`, `std::showbase()`, `std::showpoint()`, `std::showpos()`, `std::skipws()`, `std::unitbuf()`, and `std::uppercase()`.

**5.628.5.64** `fmtflags std::ios_base::setf ( fmtflags __fmtfl, fmtflags __mask )` `[inline]`, `[inherited]`

Setting new format flags.

## Parameters

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <code>fmtfl</code> .

## Returns

The previous format control flags.

This function clears `mask` in the format flags, then sets `fmtfl & mask`. An example mask is `ios_base::adjustfield`.

Definition at line 665 of file `ios_base.h`.

**5.628.5.65** `template<typename _CharT, typename _Traits = char_traits<_CharT>> void std::basic_ios<_CharT, _Traits>::setstate ( iostate __state )` `[inline]`, `[inherited]`

Sets additional flags in the error state.

## Parameters

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

Definition at line 157 of file `basic_ios.h`.

Referenced by `std::basic_ostream< char >::_M_write()`, `std::basic_ifstream< _CharT, _Traits >::close()`, `std::basic_ofstream< _CharT, _Traits >::close()`, `std::basic_fstream< _CharT, _Traits >::close()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::operator<<()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::tr2::operator>>()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::unset()`, and `std::ws()`.

5.628.5.66 `template<typename _CharT, typename _Traits> int std::basic_istream<_CharT, _Traits>::sync ( void )`

Synchronizing the stream buffer.

#### Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

#### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 789 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_streambuf<_CharT, _Traits>::pubsync()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

5.628.5.67 `static bool std::ios_base::sync_with_stdio ( bool __sync = true )` `[static]`, `[inherited]`

Interaction with the standard C I/O objects.

#### Parameters

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

#### Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

5.628.5.68 `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits>::pos_type std::basic_istream<_CharT, _Traits>::tellg ( void )`

Getting the current read position.

#### Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, in)`.

#### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with `putback`, `unget` and `seekg`, `eofbit` is not cleared first.

Definition at line 825 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::in`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

5.628.5.69 `template<typename _CharT, typename _Traits = char_traits<_CharT>> basic_ostream<_CharT, _Traits>*`  
`std::basic_ios<_CharT, _Traits >::tie ( ) const [inline], [inherited]`

Fetches the current *tied* stream.

#### Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 295 of file `basic_ios.h`.

Referenced by `std::basic_ios<_CharT, _Traits >::copyfmt()`, `std::basic_ostream<_CharT, _Traits >::sentry::sentry()`, and `std::basic_istream<_CharT, _Traits >::sentry::sentry()`.

5.628.5.70 `template<typename _CharT, typename _Traits = char_traits<_CharT>> basic_ostream<_CharT, _Traits>*`  
`std::basic_ios<_CharT, _Traits >::tie ( basic_ostream<_CharT, _Traits > * __tiestr ) [inline],`  
`[inherited]`

Ties this stream to an output stream.

#### Parameters

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

#### Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

Definition at line 307 of file `basic_ios.h`.

5.628.5.71 `template<typename _CharT, typename _Traits > basic_istream<_CharT, _Traits > & std::basic_istream<`  
`_CharT, _Traits >::ungetc ( void )`

Unextracting the previous character.

#### Returns

\*this

If `rdbuf()` is not null, calls `rdbuf() ->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

#### Note

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 754 of file `istream.tcc`.

References `std::basic_istream<_CharT, _Traits >::M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits >::clear()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits >::rdbuf()`, `std::basic_ios<_CharT, _Traits >::rdstate()`, `std::basic_ios<_CharT, _Traits >::setstate()`, and `std::basic_streambuf<_CharT, _Traits >::sungetc()`.

Referenced by `std::__detail::operator>>()`.

5.628.5.72 `void std::ios_base::unsetf ( fmtflags __mask )` [inline],[inherited]

Clearing format flags.

## Parameters

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

Definition at line 680 of file `ios_base.h`.

Referenced by `std::defaultfloat()`, `std::noboolalpha()`, `std::noshowbase()`, `std::noshowpoint()`, `std::noshowpos()`, `std::noskipws()`, `std::nounitbuf()`, and `std::nouppercase()`.

**5.628.5.73** `template<typename _CharT, typename _Traits = char_traits<_CharT>> char_type std::basic_ios<_CharT, _Traits>::widen ( char __c ) const` `[inline]`, `[inherited]`

Widens characters.

## Parameters

<code>__c</code>	The character to widen.
------------------	-------------------------

## Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
* std::use_facet<ctype<char_type>> >(getloc()).widen(c)
*
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.-html>

Definition at line 449 of file `basic_ios.h`.

Referenced by `std::basic_ios<char, char_traits<char>>::fill()`, `std::basic_istream<char>::get()`, `std::basic_istream<char>::getline()`, `std::getline()`, `std::tr2::operator>>()`, and `std::operator>>()`.

**5.628.5.74** `streamsize std::ios_base::width ( ) const` `[inline]`, `[inherited]`

Flags access.

## Returns

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Definition at line 714 of file `ios_base.h`.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _Outiter>::do_put()`, and `std::operator>>()`.

**5.628.5.75** `streamsize std::ios_base::width ( streamsize __wide )` `[inline]`, `[inherited]`

Changing flags.

## Parameters

<code>__wide</code>	The new width value.
---------------------	----------------------

## Returns

The previous value of `width()`.

Definition at line 723 of file `ios_base.h`.

**5.628.5.76** `static int std::ios_base::xalloc ( ) throw` `[static]`, `[inherited]`

Access to unique indices.

## Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `isword` and `isword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `isword` and `isword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `isword` and `isword` arrays.

**5.628.6 Member Data Documentation**

**5.628.6.1** `template<typename _CharT, typename _Traits = char_traits<_CharT>> streamsize std::basic_istream<_CharT, _Traits>::_M_gcount` `[protected]`

The number of characters extracted in the previous unformatted function; see `gcount()`.

Definition at line 82 of file `istream`.

Referenced by `std::basic_istream<char>::gcount()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::unget()`, and `std::basic_istream<char>::~~basic_istream()`.

**5.628.6.2** `const fmtflags std::ios_base::adjustfield` `[static]`, `[inherited]`

A mask of `left|right|internal`. Useful for the 2-arg form of `setf`.

Definition at line 378 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _Outiter>::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

**5.628.6.3** `const openmode std::ios_base::app` `[static]`, `[inherited]`

Seek to end before each write.

Definition at line 432 of file `ios_base.h`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_set_buffer()`, and `std::basic_filebuf<_CharT, _Traits>::xspn()`.

**5.628.6.4** `const openmode std::ios_base::ate` `[static]`, `[inherited]`

Open and seek to end immediately after opening.

Definition at line 435 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits >::open()`.

#### 5.628.6.5 `const iostate std::ios_base::badbit` `[static]`, `[inherited]`

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 402 of file `ios_base.h`.

Referenced by `std::basic_ostream<char >::M_write()`, `std::basic_ios<char, char_traits<char >>::bad()`, `std::basic_ios<char, char_traits<char >>::fail()`, `std::basic_ostream<_CharT, _Traits >::flush()`, `std::basic_istream<_CharT, _Traits >::get()`, `std::basic_istream<_CharT, _Traits >::getline()`, `std::basic_istream<_CharT, _Traits >::ignore()`, `std::operator<<()`, `std::basic_ostream<_CharT, _Traits >::operator<<()`, `std::basic_istream<_CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits >::peek()`, `std::basic_ostream<_CharT, _Traits >::put()`, `std::basic_istream<_CharT, _Traits >::putback()`, `std::basic_istream<_CharT, _Traits >::read()`, `std::basic_istream<_CharT, _Traits >::readsome()`, `std::basic_istream<_CharT, _Traits >::seekg()`, `std::basic_ostream<_CharT, _Traits >::seekp()`, `std::basic_istream<_CharT, _Traits >::sentry::sentry()`, `std::basic_istream<_CharT, _Traits >::sync()`, `std::basic_istream<_CharT, _Traits >::tellg()`, `std::basic_ostream<_CharT, _Traits >::tellp()`, `std::basic_istream<_CharT, _Traits >::unget()`, `std::basic_ostream<_CharT, _Traits >::write()`, and `std::basic_ostream<_CharT, _Traits >::sentry::~~sentry()`.

#### 5.628.6.6 `const fmtflags std::ios_base::basefield` `[static]`, `[inherited]`

A mask of `dec|oct|hex`. Useful for the 2-arg form of `setf`.

Definition at line 381 of file `ios_base.h`.

Referenced by `std::dec()`, `std::num_get<_CharT, _InIter >::do_get()`, `std::hex()`, `std::oct()`, and `std::basic_ostream<_CharT, _Traits >::operator<<()`.

#### 5.628.6.7 `const seekdir std::ios_base::beg` `[static]`, `[inherited]`

Request a seek relative to the beginning of the stream.

Definition at line 464 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits >::seekpos()`.

#### 5.628.6.8 `const openmode std::ios_base::binary` `[static]`, `[inherited]`

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.-binary>.

Definition at line 440 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits >::showmanyc()`.

#### 5.628.6.9 `const fmtflags std::ios_base::boolalpha` `[static]`, `[inherited]`

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 326 of file `ios_base.h`.

Referenced by `std::boolalpha()`, `std::num_get<_CharT, _InIter >::do_get()`, `std::num_put<_CharT, _OutIter >::do_put()`, and `std::noboolalpha()`.

#### 5.628.6.10 `const seekdir std::ios_base::cur` `[static]`, `[inherited]`

Request a seek relative to the current position within the sequence.

Definition at line 467 of file `ios_base.h`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_filebuf<_CharT, _Traits>::seekoff()`, `std::basic_istream<_CharT, _Traits>::tellg()`, and `std::basic_ostream<_CharT, _Traits>::tellp()`.

#### 5.628.6.11 `const fmtflags std::ios_base::dec` `[static]`, `[inherited]`

Converts integer input or generates integer output in decimal base.

Definition at line 329 of file `ios_base.h`.

Referenced by `std::dec()`.

#### 5.628.6.12 `const seekdir std::ios_base::end` `[static]`, `[inherited]`

Request a seek relative to the current end of the sequence.

Definition at line 470 of file `ios_base.h`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`.

#### 5.628.6.13 `const iostate std::ios_base::eofbit` `[static]`, `[inherited]`

Indicates that an input operation reached the end of an input sequence.

Definition at line 405 of file `ios_base.h`.

Referenced by `std::time_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_date()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_time()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_ios<char, char_traits<char>>::eof()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::time_get<_CharT, _InIter>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_istream<_CharT, _Traits>::unget()`, and `std::ws()`.

#### 5.628.6.14 `const iostate std::ios_base::failbit` `[static]`, `[inherited]`

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 410 of file `ios_base.h`.

Referenced by `std::basic_ifstream<_CharT, _Traits>::close()`, `std::basic_ofstream<_CharT, _Traits>::close()`, `std::basicfstream<_CharT, _Traits>::close()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_ios<char, char_traits<char>>::fail()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::time_get<_CharT, _InIter>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_ifstream<_CharT, _Traits>::open()`, `std::basic_ofstream<_CharT, _Traits>::open()`, `std::basicfstream<_CharT, _Traits>::open()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_istream<_CharT, _Traits>::sentry::sentry()`.

#### 5.628.6.15 `const fmtflags std::ios_base::fixed` `[static]`, `[inherited]`

Generate floating-point output in fixed-point notation.

Definition at line 332 of file `ios_base.h`.

Referenced by `std::fixed()`, and `std::hexfloat()`.

**5.628.6.16** `const fmtflags std::ios_base::floatfield` `[static],[inherited]`

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 384 of file `ios_base.h`.

Referenced by `std::defaultfloat()`, `std::fixed()`, `std::hexfloat()`, and `std::scientific()`.

**5.628.6.17** `const iostate std::ios_base::goodbit` `[static],[inherited]`

Indicates all is well.

Definition at line 413 of file `ios_base.h`.

Referenced by `std::time_get<_CharT,_Inlter>::do_get()`, `std::num_get<_CharT,_Inlter>::do_get()`, `std::time_get<_CharT,_Inlter>::do_get_monthname()`, `std::time_get<_CharT,_Inlter>::do_get_weekday()`, `std::time_get<_CharT,_Inlter>::do_get_year()`, `std::basic_ostream<_CharT,_Traits>::flush()`, `std::basic_istream<_CharT,_Traits>::get()`, `std::time_get<_CharT,_Inlter>::get()`, `std::basic_istream<_CharT,_Traits>::getline()`, `std::basic_istream<_CharT,_Traits>::ignore()`, `std::basic_ostream<_CharT,_Traits>::operator<<()`, `std::basic_istream<_CharT,_Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT,_Traits>::peek()`, `std::basic_ostream<_CharT,_Traits>::put()`, `std::basic_istream<_CharT,_Traits>::putback()`, `std::basic_istream<_CharT,_Traits>::read()`, `std::basic_istream<_CharT,_Traits>::readsome()`, `std::basic_istream<_CharT,_Traits>::seekg()`, `std::basic_ostream<_CharT,_Traits>::seekp()`, `std::basic_istream<_CharT,_Traits>::sentry::sentry()`, `std::basic_istream<_CharT,_Traits>::sync()`, and `std::basic_istream<_CharT,_Traits>::unget()`.

**5.628.6.18** `const fmtflags std::ios_base::hex` `[static],[inherited]`

Converts integer input or generates integer output in hexadecimal base.

Definition at line 335 of file `ios_base.h`.

Referenced by `std::num_get<_CharT,_Inlter>::do_get()`, `std::num_put<_CharT,_Outlter>::do_put()`, `std::hex()`, and `std::basic_ostream<_CharT,_Traits>::operator<<()`.

**5.628.6.19** `const openmode std::ios_base::in` `[static],[inherited]`

Open for input. Default for `ifstream` and `fstream`.

Definition at line 443 of file `ios_base.h`.

Referenced by `std::basic_filebuf<char_type,traits_type>::_M_set_buffer()`, `std::basic_ifstream<_CharT,_Traits>::open()`, `std::basic_istream<_CharT,_Traits>::seekg()`, `std::basic_stringbuf<_CharT,_Traits,_Alloc>::seekoff()`, `std::basic_stringbuf<_CharT,_Traits,_Alloc>::seekpos()`, `std::basic_stringbuf<_CharT,_Traits,_Alloc>::showmanyc()`, `std::basic_filebuf<_CharT,_Traits>::showmanyc()`, `std::basic_istream<_CharT,_Traits>::tellg()`, `std::basic_stringbuf<_CharT,_Traits,_Alloc>::underflow()`, `std::basic_filebuf<_CharT,_Traits>::underflow()`, and `std::basic_filebuf<_CharT,_Traits>::xsgetn()`.

**5.628.6.20** `const fmtflags std::ios_base::internal` `[static],[inherited]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 340 of file `ios_base.h`.

Referenced by `std::internal()`.

**5.628.6.21** `const fmtflags std::ios_base::left` `[static],[inherited]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 344 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _Outiter>::do_put()`, and `std::left()`.

**5.628.6.22** `const fmtflags std::ios_base::oct` `[static], [inherited]`

Converts integer input or generates integer output in octal base.

Definition at line 347 of file `ios_base.h`.

Referenced by `std::oct()`, and `std::basic_ostream<_CharT, _Traits>::operator<<()`.

**5.628.6.23** `const openmode std::ios_base::out` `[static], [inherited]`

Open for output. Default for `ofstream` and `fstream`.

Definition at line 446 of file `ios_base.h`.

Referenced by `std::basic_filebuf<char_type, traits_type>::_M_set_buffer()`, `std::basic_ofstream<_CharT, _Traits>::open()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_ostream<_CharT, _Traits>::tellp()`, and `std::basic_filebuf<_CharT, _Traits>::xsputn()`.

**5.628.6.24** `const fmtflags std::ios_base::right` `[static], [inherited]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 351 of file `ios_base.h`.

Referenced by `std::right()`.

**5.628.6.25** `const fmtflags std::ios_base::scientific` `[static], [inherited]`

Generates floating-point output in scientific notation.

Definition at line 354 of file `ios_base.h`.

Referenced by `std::hexfloat()`, and `std::scientific()`.

**5.628.6.26** `const fmtflags std::ios_base::showbase` `[static], [inherited]`

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 358 of file `ios_base.h`.

Referenced by `std::noshowbase()`, and `std::showbase()`.

**5.628.6.27** `const fmtflags std::ios_base::showpoint` `[static], [inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 362 of file `ios_base.h`.

Referenced by `std::noshowpoint()`, and `std::showpoint()`.

**5.628.6.28** `const fmtflags std::ios_base::showpos` `[static], [inherited]`

Generates a + sign in non-negative generated numeric output.

Definition at line 365 of file `ios_base.h`.

Referenced by `std::noshowpos()`, and `std::showpos()`.

**5.628.6.29** `const fmtflags std::ios_base::skipws` [static],[inherited]

Skips leading white space before certain input operations.

Definition at line 368 of file `ios_base.h`.

Referenced by `std::noskipws()`, `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, and `std::skipws()`.

**5.628.6.30** `const openmode std::ios_base::trunc` [static],[inherited]

Open for input. Default for `ofstream`.

Definition at line 449 of file `ios_base.h`.

**5.628.6.31** `const fmtflags std::ios_base::unitbuf` [static],[inherited]

Flushes output after each output operation.

Definition at line 371 of file `ios_base.h`.

Referenced by `std::noinitbuf()`, `std::unitbuf()`, and `std::basic_ostream<_CharT, _Traits>::sentry::~sentry()`.

**5.628.6.32** `const fmtflags std::ios_base::uppercase` [static],[inherited]

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 375 of file `ios_base.h`.

Referenced by `std::num_put<_CharT, _Outiter>::do_put()`, `std::nouppercase()`, and `std::uppercase()`.

The documentation for this class was generated from the following files:

**5.629.1** Detailed Description

```
template<typename _CharT, typename _Traits = char_traits<_CharT>> class std::basic_istream<_CharT, _Traits>::sentry
```

Performs setup work for input streams.

Objects of this class are created before all of the standard extractors are run. It is responsible for *exception-safe prefix and suffix operations*, although only prefix actions are currently required by the standard.

Definition at line 686 of file istream.

### 5.629.2 Member Typedef Documentation

5.629.2.1 `template<typename _CharT, typename _Traits = char_traits<_CharT>> typedef _Traits std::basic_istream<_CharT, _Traits>::traits_type`

Easy access to dependent types.

Definition at line 693 of file istream.

### 5.629.3 Constructor & Destructor Documentation

5.629.3.1 `template<typename _CharT, typename _Traits> std::basic_istream<_CharT, _Traits>::sentry::sentry ( basic_istream<_CharT, _Traits> & __is, bool __noskipws = false ) [explicit]`

The constructor performs all the work.

Parameters

<code>__is</code>	The input stream to guard.
<code>__noskipws</code>	Whether to consume whitespace or not.
