# 1 Mathematical Special Functions

## 1.1 Introduction and History

The first significant library upgrade on the road to C++2011, [TR1](#), included a set of 23 mathematical functions that significantly extended the standard transcendental functions inherited from C and declared in `<cmath>`.

Although most components from TR1 were eventually adopted for C++11 these math functions were left behind out of concern for implementability. The math functions were published as a separate international standard [IS 29124 - Extensions to the C++ Library to Support Mathematical Special Functions](#).

For C++17 these functions were incorporated into the main standard.

## 1.2 Contents

The following functions are implemented in namespace `std`:

- [assoc\\_laguerre](#) - Associated Laguerre functions
- [assoc\\_legendre](#) - Associated Legendre functions
- [beta](#) - Beta functions
- [comp\\_ellint\\_1](#) - Complete elliptic functions of the first kind
- [comp\\_ellint\\_2](#) - Complete elliptic functions of the second kind
- [comp\\_ellint\\_3](#) - Complete elliptic functions of the third kind
- [cyl\\_bessel\\_i](#) - Regular modified cylindrical Bessel functions
- [cyl\\_bessel\\_j](#) - Cylindrical Bessel functions of the first kind
- [cyl\\_bessel\\_k](#) - Irregular modified cylindrical Bessel functions
- [cyl\\_neumann](#) - Cylindrical Neumann functions or Cylindrical Bessel functions of the second kind
- [ellint\\_1](#) - Incomplete elliptic functions of the first kind
- [ellint\\_2](#) - Incomplete elliptic functions of the second kind
- [ellint\\_3](#) - Incomplete elliptic functions of the third kind
- [expint](#) - The exponential integral
- [hermite](#) - Hermite polynomials
- [laguerre](#) - Laguerre functions

- [legendre](#) - Legendre polynomials
- [riemann\\_zeta](#) - The Riemann zeta function
- [sph\\_bessel](#) - Spherical Bessel functions
- [sph\\_legendre](#) - Spherical Legendre functions
- [sph\\_neumann](#) - Spherical Neumann functions

The hypergeometric functions were stricken from the TR29124 and C++17 versions of this math library because of implementation concerns. However, since they were in the TR1 version and since they are popular we kept them as an extension in namespace `__gnu_cxx`:

- [conf\\_hyperg](#) - Confluent hypergeometric functions
- [hyperg](#) - Hypergeometric functions

## 1.3 General Features

### 1.3.1 Argument Promotion

The arguments supplied to the non-suffixed functions will be promoted according to the following rules: 1. If any argument intended to be floating point is given an integral value That integral value is promoted to double. 2. All floating point arguments are promoted up to the largest floating point precision among them.

### 1.3.2 NaN Arguments

If any of the floating point arguments supplied to these functions is invalid or NaN (`std::numeric_limits<Tp>::quiet_NaN`), the value NaN is returned.

## 1.4 Implementation

We strive to implement the underlying math with type generic algorithms to the greatest extent possible. In practice, the functions are thin wrappers that dispatch to function templates. Type dependence is controlled with `std::numeric_limits` and functions thereof.

We don't promote `float` to `double` or `double` to `long double` reflexively. The goal is for `float` functions to operate more quickly, at the cost of `float` accuracy and possibly a smaller domain of validity. Similarly, `long double` should give you more dynamic range and slightly more precision than `double` on many systems.

## 1.5 Testing

These functions have been tested against equivalent implementations from the [Gnu Scientific Library](#), [GSL](#) and [Boost](http://www.boost.org/doc/libs/1_60_0/libs/math/doc/html/index.-html) and the ratio

$$\frac{|f - f_{test}|}{|f_{test}|}$$

is generally found to be within  $10^{-15}$  for 64-bit double on linux-x86\_64 systems over most of the ranges of validity.

**Todo** Provide accuracy comparisons on a per-function basis for a small number of targets.

## 1.6 General Bibliography

### See Also

Abramowitz and Stegun: Handbook of Mathematical Functions, with Formulas, Graphs, and Mathematical Tables Edited by Milton Abramowitz and Irene A. Stegun, National Bureau of Standards Applied Mathematics Series - 55 Issued June 1964, Tenth Printing, December 1972, with corrections Electronic versions of A&S abound including both pdf and navigable html.

for example <http://people.math.sfu.ca/~cbm/aands/>

The old A&S has been redone as the NIST Digital Library of Mathematical Functions: <http://dlmf.nist.gov/> This version is far more navigable and includes more recent work.

## 2 Todo List

**Member `__gnu_cxx::distance`** (`_InputIterator __first`, `_InputIterator __last`, `_Distance &__n`)

Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-style.html>

**Class `__gnu_cxx::hash_map`**< `_Key`, `_Tp`, `_HashFn`, `_EqualKey`, `_Alloc` >

Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-style.html>

**Class `__gnu_cxx::hash_multimap`**< `_Key`, `_Tp`, `_HashFn`, `_EqualKey`, `_Alloc` >

Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-style.html>

**Class `__gnu_cxx::hash_multiset`**< `_Value`, `_HashFcn`, `_EqualKey`, `_Alloc` >

Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-style.html>

**Class `__gnu_cxx::hash_set`**< `_Value`, `_HashFcn`, `_EqualKey`, `_Alloc` >

Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-style.html>

**Member `__gnu_cxx::power`** (`_Tp __x`, `_Integer __n`, `_MonoidOperation __monoid_op`)

Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-style.html>

**Member `__gnu_cxx::power`** (`_Tp __x`, `_Integer __n`)

Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-style.html>

**Member `__gnu_cxx::random_sample`** (`_InputIterator __first`, `_InputIterator __last`, `_RandomAccessIterator __out_first`, `_RandomAccessIterator __out_last`)

Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-style.html>

**Member `__gnu_cxx::random_sample`** (`_InputIterator __first`, `_InputIterator __last`, `_RandomAccessIterator __out_first`, `_RandomAccessIterator __out_last`, `_RandomNumberGenerator &__rand`)

Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-style.html>

Member `__gnu_cxx::random_sample_n` (`_ForwardIterator __first`, `_ForwardIterator __last`, `_OutputIterator __out`, `const _Distance __n`)

Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-style.html>

Member `__gnu_cxx::random_sample_n` (`_ForwardIterator __first`, `_ForwardIterator __last`, `_OutputIterator __out`, `const _Distance __n`, `_RandomNumberGenerator &__rand`)

Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-style.html>

Class `__gnu_cxx::rb_tree< _Key, _Value, _KeyOfValue, _Compare, _Alloc >`

Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-style.html>

Class `__gnu_cxx::rope< _CharT, _Alloc >`

Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-style.html>

Class `__gnu_cxx::slist< _Tp, _Alloc >`

Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-style.html>

### page **Mathematical Special Functions**

Provide accuracy comparisons on a per-function basis for a small number of targets.

Class `std::basic_string< _CharT, _Traits, _Alloc >`

Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-style.html>

Member `std::regex_traits< _Ch_type >::transform_primary` (`_Fwd_iter __first`, `_Fwd_iter __last`) `const`

Implement this function correctly.

## 3 Module Documentation

### 3.1 Extensions

Collaboration diagram for Extensions:

### Modules

- [Dynamic Bitset](#).
- [Policy-Based Data Structures](#)
- [SGI](#)

### Classes

- class [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base >](#)

#### 3.1.1 Detailed Description

Components generally useful that are not part of any standard.

## 3.2 SGI

Collaboration diagram for SGI:

### Classes

- class `__gnu_cxx::binary_compose< _Operation1, _Operation2, _Operation3 >`
- struct `__gnu_cxx::constant_binary_fun< _Result, _Arg1, _Arg2 >`
- struct `__gnu_cxx::constant_unary_fun< _Result, _Argument >`
- struct `__gnu_cxx::constant_void_fun< _Result >`
- class `__gnu_cxx::hash_map< _Key, _Tp, _HashFn, _EqualKey, _Alloc >`
- class `__gnu_cxx::hash_multimap< _Key, _Tp, _HashFn, _EqualKey, _Alloc >`
- class `__gnu_cxx::hash_multiset< _Value, _HashFn, _EqualKey, _Alloc >`
- class `__gnu_cxx::hash_set< _Value, _HashFn, _EqualKey, _Alloc >`
- struct `__gnu_cxx::project1st< _Arg1, _Arg2 >`
- struct `__gnu_cxx::project2nd< _Arg1, _Arg2 >`
- struct `__gnu_cxx::rb_tree< _Key, _Value, _KeyOfValue, _Compare, _Alloc >`
- class `__gnu_cxx::rope< _CharT, _Alloc >`
- struct `__gnu_cxx::select1st< _Pair >`
- struct `__gnu_cxx::select2nd< _Pair >`

### 3.2.1 Detailed Description

Because libstdc++ based its implementation of the STL subsections of the library on the SGI 3.3 implementation, we inherited their extensions as well.

They are additionally documented in the [online documentation](#), a copy of which is also shipped with the library source code (in `.../docs/html/documentation.html`). You can also read the documentation [on SGI's site](#), which is still running even though the code is not maintained.

**NB** that the following notes are pulled from various comments all over the place, so they may seem stilted.

The `identity_element` functions are not part of the C++ standard; SGI provided them as an extension. Its argument is an operation, and its return value is the identity element for that operation. It is overloaded for addition and multiplication, and you can overload it for your own nefarious operations.

As an extension to the binders, SGI provided composition functors and wrapper functions to aid in their creation. The `unary_compose` functor is constructed from two functions/functors, `f` and `g`. Calling `operator()` with a single argument `x` returns `f(g(x))`. The function `compose1` takes the two functions and constructs a `unary_compose` variable for you.

`binary_compose` is constructed from three functors, `f`, `g1`, and `g2`. Its `operator()` returns `f(g1(x),g2(x))`. The function `compose2` takes `f`, `g1`, and `g2`, and constructs the `binary_compose` instance for you. For example, if `f` returns an `int`, then

```
* int answer = (compose2(f,g1,g2))(x);
*
```

is equivalent to

```
* int temp1 = g1(x);
* int temp2 = g2(x);
* int answer = f(temp1,temp2);
*
```

But the first form is more compact, and can be passed around as a functor to other algorithms.

As an extension, SGI provided a functor called `identity`. When a functor is required but no operations are desired, this can be used as a pass-through. Its `operator()` returns its argument unchanged.

`select1st` and `select2nd` are extensions provided by SGI. Their `operator()`s take a `std::pair` as an argument, and return either the first member or the second member, respectively. They can be used (especially with the composition functors) to *strip* data from a sequence before performing the remainder of an algorithm.

The `operator()` of the `project1st` functor takes two arbitrary arguments and returns the first one, while `project2nd` returns the second one. They are extensions provided by SGI.

These three functors are each constructed from a single arbitrary variable/value. Later, their `operator()`s completely ignore any arguments passed, and return the stored value.

- `constant_void_fun`'s `operator()` takes no arguments
- `constant_unary_fun`'s `operator()` takes one argument (ignored)
- `constant_binary_fun`'s `operator()` takes two arguments (ignored)

The helper creator functions `constant0`, `constant1`, and `constant2` each take a *result* argument and construct variables of the appropriate functor type.

## 3.2.2 Function Documentation

### 3.2.2.1 `template<typename Tp> const_Tp& __gnu_cxx::__median ( const_Tp & __a, const_Tp & __b, const_Tp & __c )`

Find the median of three values.

**Parameters**

<code>__a</code>	A value.
<code>__b</code>	A value.
<code>__c</code>	A value.

**Returns**

One of `a`, `b` or `c`.

If  $\{1,m,n\}$  is some convolution of  $\{a,b,c\}$  such that  $1 \leq m \leq n$  then the value returned will be `m`. This is an SGI extension.

Definition at line 546 of file `ext/algorithm`.

```
3.2.2.2 template<typename _Tp, typename _Compare > const _Tp& __gnu_cxx::__median ( const _Tp & __a, const _Tp & __b,
const _Tp & __c, _Compare __comp )
```

Find the median of three values using a predicate for comparison.

**Parameters**

<code>__a</code>	A value.
<code>__b</code>	A value.
<code>__c</code>	A value.
<code>__comp</code>	A binary predicate.

**Returns**

One of `a`, `b` or `c`.

If  $\{1,m,n\}$  is some convolution of  $\{a,b,c\}$  such that `comp(1, m)` and `comp(m, n)` are both true then the value returned will be `m`. This is an SGI extension.

Definition at line 580 of file `ext/algorithm`.

```
3.2.2.3 template<size_t _Nb> size_t std::bitset<_Nb>::_Find_first ( ) const [inline],[noexcept]
```

Finds the index of the first "on" bit.

**Returns**

The index of the first bit set, or `size()` if not found.

**See Also**

`_Find_next`

Definition at line 1367 of file `bitset`.

```
3.2.2.4 template<size_t _Nb> size_t std::bitset<_Nb>::_Find_next ( size_t __prev ) const [inline],[noexcept]
```

Finds the index of the next "on" bit after `prev`.

**Returns**

The index of the next bit set, or `size()` if not found.

## Parameters

<code>__prev</code>	Where to start searching.
---------------------	---------------------------

## See Also

`_Find_first`

Definition at line 1061 of file `bitset`.

```
3.2.2.10 template<class _Operation1, class _Operation2 > unary_compose<_Operation1, _Operation2> __gnu_cxx::compose1 (
      const _Operation1 & __fn1, const _Operation2 & __fn2 ) [inline]
```

An [SGI extension](#) .

Definition at line 145 of file `ext/functional`.

```
3.2.2.11 template<class _Operation1, class _Operation2, class _Operation3 > binary_compose<_Operation1, _Operation2,
      _Operation3> __gnu_cxx::compose2 ( const _Operation1 & __fn1, const _Operation2 & __fn2, const _Operation3 & __fn3
      ) [inline]
```

An [SGI extension](#) .

Definition at line 172 of file `ext/functional`.

3.2.2.12 `template<class _Result> constant_void_fun<_Result> __gnu_cxx::constant0 ( const _Result & __val ) [inline]`

An [SGI extension](#) .

Definition at line 330 of file ext/functional.

3.2.2.13 `template<class _Result> constant_unary_fun<_Result, _Result> __gnu_cxx::constant1 ( const _Result & __val ) [inline]`

An [SGI extension](#) .

Definition at line 336 of file ext/functional.

3.2.2.14 `template<class _Result> constant_binary_fun<_Result, _Result, _Result> __gnu_cxx::constant2 ( const _Result & __val ) [inline]`

An [SGI extension](#) .

Definition at line 342 of file ext/functional.

3.2.2.15 `template<typename _InputIterator, typename _Size, typename _OutputIterator> pair<_InputIterator, _OutputIterator> __gnu_cxx::copy_n ( _InputIterator __first, _Size __count, _OutputIterator __result ) [inline]`

Copies the range [first,first+count) into [result,result+count).

Parameters

<code>__first</code>	An input iterator.
<code>__count</code>	The number of elements to copy.
<code>__result</code>	An output iterator.

Returns

A `std::pair` composed of first+count and result+count.

This is an SGI extension. This inline function will boil down to a call to `memmove` whenever possible. Failing that, if random access iterators are passed, then the loop count will be known (and therefore a candidate for compiler optimizations such as unrolling).

Definition at line 120 of file ext/algorithm.

References `std::__iterator_category()`.

3.2.2.16 `template<typename _InputIterator, typename _Distance> void __gnu_cxx::distance ( _InputIterator __first, _InputIterator __last, _Distance & __n ) [inline]`

This is an SGI extension.

**Todo** Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-style.html>

Definition at line 105 of file ext/iterator.

References `std::__iterator_category()`.

3.2.2.17 `template<class _Tp> _Tp __gnu_cxx::identity_element ( std::plus<_Tp> ) [inline]`

An [SGI extension](#) .

Definition at line 87 of file ext/functional.

3.2.2.18 `template<class _Tp> _Tp __gnu_cxx::identity_element ( std::multiplies<_Tp> ) [inline]`

An SGI extension .

Definition at line 93 of file ext/functional.

3.2.2.19 `template<typename _InputIterator1, typename _InputIterator2 > int __gnu_cxx::lexicographical_compare_3way ( _InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2 __last2 )`

`memcmp` on steroids.

Parameters

<code>__first1</code>	An input iterator.
<code>__last1</code>	An input iterator.
<code>__first2</code>	An input iterator.
<code>__last2</code>	An input iterator.

Returns

An int, as with `memcmp`.

The return value will be less than zero if the first range is *lexigraphically less than* the second, greater than zero if the second range is *lexigraphically less than* the first, and zero otherwise. This is an SGI extension.

Definition at line 201 of file ext/algorithm.

3.2.2.20 `template<typename _Tp, typename _Integer, typename _MonoidOperation > _Tp __gnu_cxx::power ( _Tp __x, _Integer __n, _MonoidOperation __monoid_op ) [inline]`

This is an SGI extension.

**Todo** Needs documentation! See [http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-\\_style.html](http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-_style.html)

Definition at line 113 of file ext/numeric.

3.2.2.21 `template<typename _Tp, typename _Integer > _Tp __gnu_cxx::power ( _Tp __x, _Integer __n ) [inline]`

This is an SGI extension.

**Todo** Needs documentation! See [http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-\\_style.html](http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-_style.html)

Definition at line 123 of file ext/numeric.

3.2.2.22 `template<typename _InputIterator, typename _RandomAccessIterator > _RandomAccessIterator __gnu_cxx::random_sample ( _InputIterator __first, _InputIterator __last, _RandomAccessIterator __out_first, _RandomAccessIterator __out_last ) [inline]`

This is an SGI extension.

**Todo** Needs documentation! See [http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-\\_style.html](http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-_style.html)

Definition at line 388 of file ext/algorithm.

```
3.2.2.23 template<typename _InputIterator , typename _RandomAccessIterator , typename _RandomNumberGenerator >
    _RandomAccessIterator __gnu_cxx::random_sample ( _InputIterator __first, _InputIterator __last, _RandomAccessIterator
    __out_first, _RandomAccessIterator __out_last, _RandomNumberGenerator & __rand ) [inline]
```

This is an SGI extension.

**Todo** Needs documentation! See [http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-\\_style.html](http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-_style.html)

Definition at line 411 of file ext/algorithm.

```
3.2.2.24 template<typename _ForwardIterator , typename _OutputIterator , typename _Distance > _OutputIterator
    __gnu_cxx::random_sample_n ( _ForwardIterator __first, _ForwardIterator __last, _OutputIterator __out, const _Distance
    __n )
```

This is an SGI extension.

**Todo** Needs documentation! See [http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-\\_style.html](http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-_style.html)

Definition at line 267 of file ext/algorithm.

References `std::distance()`, and `std::min()`.

```
3.2.2.25 template<typename _ForwardIterator , typename _OutputIterator , typename _Distance , typename
    _RandomNumberGenerator > _OutputIterator __gnu_cxx::random_sample_n ( _ForwardIterator __first, _ForwardIterator
    __last, _OutputIterator __out, const _Distance __n, _RandomNumberGenerator & __rand )
```

This is an SGI extension.

**Todo** Needs documentation! See [http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-\\_style.html](http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-_style.html)

Definition at line 301 of file ext/algorithm.

References `std::distance()`, and `std::min()`.

```
3.2.2.26 template<typename _InputIter , typename _Size , typename _ForwardIter > pair<_InputIter, _ForwardIter>
    __gnu_cxx::uninitialized_copy_n ( _InputIter __first, _Size __count, _ForwardIter __result ) [inline]
```

Copies the range `[first,last)` into `result`.

Parameters

<code>__first</code>	An input iterator.
<code>__count</code>	Length
<code>__result</code>	An output iterator.

Returns

`__result + (__first + __count)`

Like `copy()`, but does not require an initialized output range.

Definition at line 122 of file ext/memory.

References `std::__iterator_category()`.

### 3.3 Containers

Collaboration diagram for Containers:

#### Modules

- [Associative](#)
- [Sequences](#)
- [Unordered Associative](#)

#### 3.3.1 Detailed Description

Containers are collections of objects.

A container may hold any type which meets certain requirements, but the type of contained object is chosen at compile time, and all objects in a given container must be of the same type. (Polymorphism is possible by declaring a container of pointers to a base class and then populating it with pointers to instances of derived classes. Variant value types such as the `any` class from `Boost` can also be used.

All contained types must be `Assignable` and `CopyConstructible`. Specific containers may place additional requirements on the types of their contained objects.

Containers manage memory allocation and deallocation themselves when storing your objects. The objects are destroyed when the container is itself destroyed. Note that if you are storing pointers in a container, `delete` is *not* automatically called on the pointers before destroying them.

All containers must meet certain requirements, summarized in [tables](#).

The standard containers are further refined into [Sequences](#) and [Associative Containers](#). [Unordered Associative Containers](#).

## 3.4 Sequences

Collaboration diagram for Sequences:

### Classes

- struct `std::array<_Tp, _Nm >`
- class `std::basic_string<_CharT, _Traits, _Alloc >`
- class `std::deque<_Tp, _Alloc >`
- class `std::experimental::fundamentals_v1::basic_string_view<_CharT, _Traits >`
- class `std::forward_list<_Tp, _Alloc >`
- class `std::list<_Tp, _Alloc >`
- class `std::priority_queue<_Tp, _Sequence, _Compare >`
- class `std::queue<_Tp, _Sequence >`
- class `std::stack<_Tp, _Sequence >`
- class `std::vector<_Tp, _Alloc >`
- class `std::vector<bool, _Alloc >`

### 3.4.1 Detailed Description

Sequences arrange a collection of objects into a strictly linear order.

The differences between sequences are usually due to one or both of the following:

- memory management
- algorithmic complexity

As an example of the first case, `vector` is required to use a contiguous memory layout, while other sequences such as `deque` are not.

The prime reason for choosing one sequence over another should be based on the second category of differences, algorithmic complexity. For example, if you need to perform many inserts and removals from the middle of a sequence, `list` would be ideal. But if you need to perform constant-time access to random elements of the sequence, then `list` should not be used.

All sequences must meet certain requirements, summarized in `tables`.

## 3.5 Associative

Collaboration diagram for Associative:

### Classes

- class `std::map<_Key, _Tp, _Compare, _Alloc >`
- class `std::multimap<_Key, _Tp, _Compare, _Alloc >`
- class `std::multiset<_Key, _Compare, _Alloc >`
- class `std::set<_Key, _Compare, _Alloc >`

### 3.5.1 Detailed Description

Associative containers allow fast retrieval of data based on keys.

Each container type is parameterized on a `Key` type, and an ordering relation used to sort the elements of the container.

All associative containers must meet certain requirements, summarized in [tables](#).

## 3.6 Unordered Associative

Collaboration diagram for Unordered Associative:

### Modules

- [Base and Implementation Classes](#)

### Classes

- class `std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc >`
- class `std::unordered_multimap<_Key, _Tp, _Hash, _Pred, _Alloc >`
- class `std::unordered_multiset<_Value, _Hash, _Pred, _Alloc >`
- class `std::unordered_set<_Value, _Hash, _Pred, _Alloc >`

### 3.6.1 Detailed Description

Unordered associative containers allow fast retrieval of data based on keys.

Each container type is parameterized on a `Key` type, a `Hash` type providing a hashing functor, and an ordering relation used to sort the elements of the container.

All unordered associative containers must meet certain requirements, summarized in [tables](#).

### 3.7 Diagnostics

Collaboration diagram for Diagnostics:

#### Modules

- [Exceptions](#)

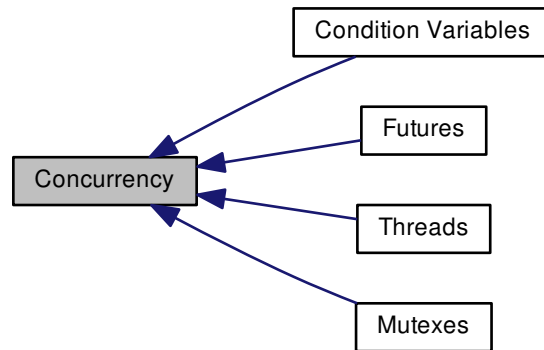

#### 3.7.1 Detailed Description

Components for error handling, reporting, and diagnostic operations.

### 3.8 Concurrency

Collaboration diagram for Concurrency:

#### Modules

- [Condition Variables](#)
- [Futures](#)
- [Mutexes](#)
- [Threads](#)

#### 3.8.1 Detailed Description

Components for concurrent operations, including threads, mutexes, and condition variables.

### 3.9 Time

Collaboration diagram for Time:

#### Namespaces

- [std::chrono](#)

#### Macros

- `#define __cpp_lib_chrono_udls`

#### 3.9.1 Detailed Description

Classes and functions for time.

## 3.10 Complex Numbers

### 3.10.1 Detailed Description

Classes and functions for complex numbers.

### 3.10.2 Function Documentation

#### 3.10.2.1 `template<typename _Tp > _Tp std::abs ( const complex< _Tp > &__z ) [inline]`

Return magnitude of  $z$ .

Definition at line 622 of file `complex`.

Referenced by `std::tr1::fabs()`, `std::fabs()`, `std::poisson_distribution< _IntType >::operator()()`, and `std::binomial_distribution< _IntType >::operator()()`.

#### 3.10.2.2 `template<typename _Tp > _Tp std::arg ( const complex< _Tp > &__z ) [inline]`

Return phase angle of  $z$ .

Definition at line 649 of file `complex`.

Referenced by `std::arg()`.

3.10.2.3 `template<typename _Tp> complex<_Tp> std::conj ( const complex<_Tp> &__z ) [inline]`

Return complex conjugate of  $z$ .

Definition at line 698 of file `complex`.

3.10.2.4 `template<typename _Tp> complex<_Tp> std::cos ( const complex<_Tp> &__z ) [inline]`

Return complex cosine of  $z$ .

Definition at line 730 of file `complex`.

Referenced by `std::polar()`.

3.10.2.5 `template<typename _Tp> complex<_Tp> std::cosh ( const complex<_Tp> &__z ) [inline]`

Return complex hyperbolic cosine of  $z$ .

Definition at line 760 of file `complex`.

3.10.2.6 `template<typename _Tp> complex<_Tp> std::exp ( const complex<_Tp> &__z ) [inline]`

Return complex base  $e$  exponential of  $z$ .

Definition at line 786 of file `complex`.

Referenced by `std::pow()`.

3.10.2.7 `template<typename _Tp> std::complex<_Tp> std::tr1::fabs ( const std::complex<_Tp> &__z ) [inline]`

`fabs(__z)` [8.1.8].

Definition at line 309 of file `tr1/complex`.

References `std::abs()`, and `std::fabs()`.

3.10.2.8 `template<typename _Tp> complex<_Tp> std::log ( const complex<_Tp> &__z ) [inline]`

Return complex natural logarithm of  $z$ .

Definition at line 813 of file `complex`.

Referenced by `std::generate_canonical()`, `std::log10()`, `std::poisson_distribution<_IntType>::operator()`, `std::binomial_distribution<_IntType>::operator()`, `std::normal_distribution<_RealType>::operator()`, `std::gamma_distribution<_RealType>::operator()`, and `std::pow()`.

3.10.2.9 `template<typename _Tp> complex<_Tp> std::log10 ( const complex<_Tp> &__z ) [inline]`

Return complex base 10 logarithm of  $z$ .

Definition at line 818 of file `complex`.

References `std::log()`.

3.10.2.10 `template<typename _Tp> _Tp std::norm ( const complex<_Tp> &__z ) [inline]`

Return  $z$  magnitude squared.

Definition at line 682 of file `complex`.

Referenced by `std::complex<_Tp>::operator/=(())`.

3.10.2.11 `template<typename _Tp> constexpr bool std::operator!=( const complex<_Tp> & __x, const complex<_Tp> & __y ) [inline]`

Return false if  $x$  is equal to  $y$ .

Definition at line 476 of file `complex`.

3.10.2.12 `template<typename _Tp> constexpr bool std::operator!=( const complex<_Tp> & __x, const _Tp & __y ) [inline]`

Return false if  $x$  is equal to  $y$ .

Definition at line 481 of file `complex`.

3.10.2.13 `template<typename _Tp> constexpr bool std::operator!=( const _Tp & __x, const complex<_Tp> & __y ) [inline]`

Return false if  $x$  is equal to  $y$ .

Definition at line 486 of file `complex`.

3.10.2.14 `template<typename _Tp> complex<_Tp> std::operator*( const complex<_Tp> & __x, const complex<_Tp> & __y ) [inline]`

Return new complex value  $x$  times  $y$ .

Definition at line 386 of file `complex`.

3.10.2.15 `template<typename _Tp> complex<_Tp> std::operator*( const complex<_Tp> & __x, const _Tp & __y ) [inline]`

Return new complex value  $x$  times  $y$ .

Definition at line 395 of file `complex`.

3.10.2.16 `template<typename _Tp> complex<_Tp> std::operator*( const _Tp & __x, const complex<_Tp> & __y ) [inline]`

Return new complex value  $x$  times  $y$ .

Definition at line 404 of file `complex`.

3.10.2.17 `template<typename _Tp> complex<_Tp> & std::complex<_Tp>::operator*=( const _Tp & __t )`

Multiply this complex number by a scalar.

Definition at line 245 of file `complex`.

3.10.2.18 `template<typename _Tp> template<typename _Up> complex<_Tp> & std::complex<_Tp>::operator*=( const complex<_Up> & __z )`

Multiply this complex number by another.

Definition at line 299 of file `complex`.

3.10.2.19 `template<typename _Tp> complex<_Tp> std::operator+( const complex<_Tp> & __x, const complex<_Tp> & __y ) [inline]`

Return new complex value  $x$  plus  $y$ .

Definition at line 326 of file `complex`.

3.10.2.20 `template<typename _Tp> complex<_Tp> std::operator+ ( const complex<_Tp> & __x, const _Tp & __y )`  
`[inline]`

Return new complex value  $x$  plus  $y$ .

Definition at line 335 of file `complex`.

3.10.2.21 `template<typename _Tp> complex<_Tp> std::operator+ ( const _Tp & __x, const complex<_Tp> & __y )`  
`[inline]`

Return new complex value  $x$  plus  $y$ .

Definition at line 344 of file `complex`.

3.10.2.22 `template<typename _Tp> complex<_Tp> std::operator+ ( const complex<_Tp> & __x )` `[inline]`

Return  $x$ .

Definition at line 445 of file `complex`.

3.10.2.23 `template<typename _Tp> template<typename _Up> complex<_Tp> & std::complex<_Tp>::operator+= ( const complex<_Up> & __z )`

Add another complex number to this one.

Definition at line 276 of file `complex`.

3.10.2.24 `template<typename _Tp> complex<_Tp> std::operator- ( const complex<_Tp> & __x, const complex<_Tp> & __y )` `[inline]`

Return new complex value  $x$  minus  $y$ .

Definition at line 356 of file `complex`.

3.10.2.25 `template<typename _Tp> complex<_Tp> std::operator- ( const complex<_Tp> & __x, const _Tp & __y )`  
`[inline]`

Return new complex value  $x$  minus  $y$ .

Definition at line 365 of file `complex`.

3.10.2.26 `template<typename _Tp> complex<_Tp> std::operator- ( const _Tp & __x, const complex<_Tp> & __y )`  
`[inline]`

Return new complex value  $x$  minus  $y$ .

Definition at line 374 of file `complex`.

3.10.2.27 `template<typename _Tp> complex<_Tp> std::operator- ( const complex<_Tp> & __x )` `[inline]`

Return complex negation of  $x$ .

Definition at line 451 of file `complex`.

3.10.2.28 `template<typename _Tp> template<typename _Up> complex<_Tp> & std::complex<_Tp>::operator-= ( const complex<_Up> & __z )`

Subtract another complex number from this one.

Definition at line 287 of file `complex`.

3.10.2.29 `template<typename _Tp> complex<_Tp> std::operator/ ( const complex<_Tp> & __x, const complex<_Tp> & __y ) [inline]`

Return new complex value  $x$  divided by  $y$ .

Definition at line 416 of file `complex`.

3.10.2.30 `template<typename _Tp> complex<_Tp> std::operator/ ( const complex<_Tp> & __x, const _Tp & __y ) [inline]`

Return new complex value  $x$  divided by  $y$ .

Definition at line 425 of file `complex`.

3.10.2.31 `template<typename _Tp> complex<_Tp> std::operator/ ( const _Tp & __x, const complex<_Tp> & __y ) [inline]`

Return new complex value  $x$  divided by  $y$ .

Definition at line 434 of file `complex`.

3.10.2.32 `template<typename _Tp> complex<_Tp> & std::complex<_Tp>::operator/= ( const _Tp & __t )`

Divide this complex number by a scalar.

Definition at line 255 of file `complex`.

3.10.2.33 `template<typename _Tp> template<typename _Up> complex<_Tp> & std::complex<_Tp>::operator/= ( const complex<_Up> & __z )`

Divide this complex number by another.

Definition at line 312 of file `complex`.

References `std::norm()`.

3.10.2.34 `template<typename _Tp, typename _CharT, class _Traits> basic_ostream<_CharT, _Traits> & std::operator<< ( basic_ostream<_CharT, _Traits> & __os, const complex<_Tp> & __x )`

Insertion operator for complex values.

Definition at line 547 of file `complex`.

References `std::ios_base::flags()`, `std::basic_ios<_CharT, _Traits>::imbue()`, `std::ios_base::precision()`, and `std::basic_ostringstream<_CharT, _Traits, _Alloc>::str()`.

3.10.2.35 `template<typename _Tp> complex<_Tp> & std::complex<_Tp>::operator= ( const _Tp & __t )`

Assign a scalar to this complex number.

Definition at line 235 of file `complex`.

3.10.2.36 `template<typename _Tp> template<typename _Up> complex<_Tp> & std::complex<_Tp>::operator= ( const complex<_Up> & __z )`

Assign another complex number to this one.

Definition at line 265 of file `complex`.

3.10.2.37 `template<typename _Tp> constexpr bool std::operator==( const complex<_Tp> &__x, const complex<_Tp> &__y ) [inline]`

Return true if  $x$  is equal to  $y$ .

Definition at line 458 of file `complex`.

3.10.2.38 `template<typename _Tp> constexpr bool std::operator==( const complex<_Tp> &__x, const _Tp &__y ) [inline]`

Return true if  $x$  is equal to  $y$ .

Definition at line 463 of file `complex`.

3.10.2.39 `template<typename _Tp> constexpr bool std::operator==( const _Tp &__x, const complex<_Tp> &__y ) [inline]`

Return true if  $x$  is equal to  $y$ .

Definition at line 468 of file `complex`.

3.10.2.40 `template<typename _Tp, typename _CharT, class _Traits> basic_istream<_CharT, _Traits>& std::operator>> ( basic_istream<_CharT, _Traits> &__is, complex<_Tp> &__x )`

Extraction operator for complex values.

Definition at line 493 of file `complex`.

References `std::ios_base::failbit`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_ios<_CharT, _Traits>::widen()`.

3.10.2.41 `template<typename _Tp> complex<_Tp> std::polar ( const _Tp &__rho, const _Tp &__theta = 0 ) [inline]`

Return complex with magnitude  $\rho$  and angle  $\theta$ .

Definition at line 690 of file `complex`.

References `std::cos()`, and `std::sin()`.

3.10.2.42 `template<typename _Tp> complex<_Tp> std::pow ( const complex<_Tp> &__z, int __n ) [inline]`

Return  $x$  to the  $y$ 'th power.

Definition at line 1008 of file `complex`.

Referenced by `std::gamma_distribution<_RealType>::operator()()`, `std::pow()`, and `std::tr1::pow()`.

3.10.2.43 `template<typename _Tp> complex<_Tp> std::pow ( const complex<_Tp> &__x, const _Tp &__y )`

Return  $x$  to the  $y$ 'th power.

Definition at line 1017 of file `complex`.

References `std::exp()`, `std::log()`, and `std::pow()`.

3.10.2.44 `template<typename _Tp> complex<_Tp> std::pow ( const complex<_Tp> &__x, const complex<_Tp> &__y ) [inline]`

Return  $x$  to the  $y$ 'th power.

Definition at line 1056 of file `complex`.

3.10.2.45 `template<typename _Tp> complex<_Tp> std::pow ( const _Tp & __x, const complex<_Tp> & __y ) [inline]`

Return  $x$  to the  $y$ 'th power.

Definition at line 1062 of file `complex`.

References `std::log()`, and `std::pow()`.

3.10.2.46 `template<typename _Tp, typename _Up> std::complex<typename __gnu_cxx::__promote_2<_Tp, _Up>::__type> std::tr1::pow ( const std::complex<_Tp> & __x, const _Up & __y ) [inline]`

Additional overloads [8.1.9].

Definition at line 350 of file `tr1/complex`.

References `std::pow()`.

3.10.2.47 `template<typename _Tp> complex<_Tp> std::sin ( const complex<_Tp> & __z ) [inline]`

Return complex sine of  $z$ .

Definition at line 848 of file `complex`.

Referenced by `std::polar()`.

3.10.2.48 `template<typename _Tp> complex<_Tp> std::sinh ( const complex<_Tp> & __z ) [inline]`

Return complex hyperbolic sine of  $z$ .

Definition at line 878 of file `complex`.

3.10.2.49 `template<typename _Tp> complex<_Tp> std::sqrt ( const complex<_Tp> & __z ) [inline]`

Return complex square root of  $z$ .

Definition at line 922 of file `complex`.

Referenced by `std::normal_distribution<_RealType>::operator()()`, and `std::student_t_distribution<_RealType>::operator()()`.

3.10.2.50 `template<typename _Tp> complex<_Tp> std::tan ( const complex<_Tp> & __z ) [inline]`

Return complex tangent of  $z$ .

Definition at line 949 of file `complex`.

3.10.2.51 `template<typename _Tp> complex<_Tp> std::tanh ( const complex<_Tp> & __z ) [inline]`

Return complex hyperbolic tangent of  $z$ .

Definition at line 977 of file `complex`.

## 3.11 Condition Variables

Collaboration diagram for Condition Variables:

### Classes

- class [std::condition\\_variable](#)

### Enumerations

- enum [std::cv\\_status](#) { **no\_timeout**, **timeout** }

### Functions

- void **std::notify\_all\_at\_thread\_exit** (condition\_variable &, unique\_lock< mutex >)

#### 3.11.1 Detailed Description

Classes for condition\_variable support.

#### 3.11.2 Enumeration Type Documentation

##### 3.11.2.1 enum [std::cv\\_status](#) [strong]

cv\_status

Definition at line 62 of file condition\_variable.

### 3.12 Futures

Collaboration diagram for Futures:

#### Classes

- class `std::__basic_future< _Res >`
- struct `std::__future_base`
- struct `std::__future_base::_Result< _Res & >`
- struct `std::__future_base::_Result< void >`
- class `std::future< _Res >`
- class `std::future< _Res & >`
- class `std::future< void >`
- class `std::future_error`
- struct `std::is_error_code_enum< future_errc >`
- class `std::packaged_task< _Res(_ArgTypes...)>`
- class `std::promise< _Res >`
- class `std::promise< _Res & >`
- class `std::promise< void >`
- class `std::shared_future< _Res >`
- class `std::shared_future< _Res & >`
- class `std::shared_future< void >`

#### Typedefs

- `template<typename _Fn, typename... _Args>`  
`using std::__async_result_of = typename result_of< typename decay< _Fn >::type(typename decay< _Args >::type...)>::type`

#### Enumerations

- enum `std::future_errc` { `future_already_retrieved`, `promise_already_satisfied`, `no_state`, `broken_promise` }
- enum `std::future_status` { `ready`, `timeout`, `deferred` }
- enum `std::launch` { `async`, `deferred` }

#### Functions

- `std::__basic_future< _Res >::__basic_future` (const shared\_future< \_Res > &) noexcept
- `std::__basic_future< _Res >::__basic_future` (shared\_future< \_Res > &&) noexcept
- `std::__basic_future< _Res >::__basic_future` (future< \_Res > &&) noexcept

- `template<typename _Signature, typename _Fn, typename _Alloc >`  
`static shared_ptr`  
`< _future_base::Task_state_base`  
`< _Signature > > std::create_task_state (_Fn &&__fn, const _Alloc &__a)`
- `template<typename _BoundFn >`  
`static std::shared_ptr`  
`< _State_base > std::future_base::S_make_async_state (_BoundFn &&__fn)`
- `template<typename _BoundFn >`  
`static std::shared_ptr`  
`< _State_base > std::future_base::S_make_deferred_state (_BoundFn &&__fn)`
- `template<typename _Fn, typename... _Args >`  
`future< __async_result_of< _Fn,`  
`_Args...> > std::async (launch __policy, _Fn &&__fn, _Args &&... __args)`
- `template<typename _Fn, typename... _Args >`  
`future< __async_result_of< _Fn,`  
`_Args...> > std::async (_Fn &&__fn, _Args &&... __args)`
- `const error_category & std::future_category () noexcept`
- `error_code std::make_error_code (future_errc __errc) noexcept`
- `error_condition std::make_error_condition (future_errc __errc) noexcept`
- `constexpr launch std::operator& (launch __x, launch __y)`
- `launch & std::operator&= (launch &__x, launch __y)`
- `constexpr launch std::operator^ (launch __x, launch __y)`
- `launch & std::operator^= (launch &__x, launch __y)`
- `constexpr launch std::operator| (launch __x, launch __y)`
- `launch & std::operator|= (launch &__x, launch __y)`
- `constexpr launch std::operator~ (launch __x)`
- `shared_future< _Res > std::future< _Res >::share () noexcept`
- `shared_future< _Res & > std::future< _Res & >::share () noexcept`
- `shared_future< void > std::future< void >::share () noexcept`
- `template<typename _Res >`  
`void std::swap (promise< _Res > &__x, promise< _Res > &__y) noexcept`
- `template<typename _Res, typename... _ArgTypes >`  
`void std::swap (packaged_task< _Res(_ArgTypes...) > &__x, packaged_task< _Res(_ArgTypes...) > &__y) noexcept`

### 3.12.1 Detailed Description

Classes for futures support.

### 3.12.2 Enumeration Type Documentation

#### 3.12.2.1 enum `std::future_errc` [`strong`]

Error code for futures.

Definition at line 66 of file future.

#### 3.12.2.2 enum `std::future_status` [`strong`]

Status code for futures.

Definition at line 174 of file future.

### 3.12.2.3 enum `std::launch` [`strong`]

Launch code for futures.

Definition at line 137 of file `future`.

### 3.12.3 Function Documentation

#### 3.12.3.1 `template<typename _Fn, typename... _Args> future< __async_result_of< _Fn, _Args...> > std::async ( launch __policy, _Fn && __fn, _Args &&... __args )`

`async`

Definition at line 1712 of file `future`.

#### 3.12.3.2 `template<typename _Fn, typename... _Args> future< __async_result_of< _Fn, _Args...> > std::async ( _Fn && __fn, _Args &&... __args )` [`inline`]

`async`, potential overload

Definition at line 1745 of file `future`.

References `std::async()`.

Referenced by `std::async()`.

#### 3.12.3.3 `const error_category& std::future_category ( )` [`noexcept`]

Points to a statically-allocated object derived from `error_category`.

Referenced by `std::make_error_code()`, and `std::make_error_condition()`.

#### 3.12.3.4 `error_code std::make_error_code ( future_errc __errc )` [`inline`], [`noexcept`]

Overload for `make_error_code`.

Definition at line 84 of file `future`.

References `std::future_category()`.

#### 3.12.3.5 `error_condition std::make_error_condition ( future_errc __errc )` [`inline`], [`noexcept`]

Overload for `make_error_condition`.

Definition at line 89 of file `future`.

References `std::future_category()`.

#### 3.12.3.6 `template<typename _Res, typename... _ArgTypes> void std::swap ( packaged_task< _Res(_ArgTypes...)> & __x, packaged_task< _Res(_ArgTypes...)> & __y )` [`inline`], [`noexcept`]

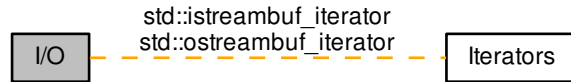

`swap`

Definition at line 1579 of file `future`.

`< wchar_t > std::wstringstream`

### 3.13.1 Detailed Description

Nearly all of the I/O classes are parameterized on the type of characters they read and write. (The major exception is `ios_base` at the top of the hierarchy.) This is a change from pre-Standard streams, which were not templates.

For ease of use and compatibility, all of the `basic_*` I/O-related classes are given typedef names for both of the builtin character widths (wide and narrow). The typedefs are the same as the pre-Standard names, for example:

```
*     typedef basic_ifstream<char> ifstream;
*
```

Because properly forward-declaring these classes can be difficult, you should not do it yourself. Instead, include the `<iosfwd>` header, which contains only declarations of all the I/O classes as well as the typedefs. Trying to forward-declare the typedefs themselves (e.g., `class ostream;`) is not valid ISO C++.

For more specific declarations, see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/io.-html#std.io.objects>

### 3.13.2 Typedef Documentation

#### 3.13.2.1 `typedef basic_filebuf<char> std::filebuf`

Class for `char` file buffers.

Definition at line 159 of file `iosfwd`.

#### 3.13.2.2 `typedef basic_fstream<char> std::fstream`

Class for `char` mixed input and output file streams.

Definition at line 168 of file `iosfwd`.

#### 3.13.2.3 `typedef basic_ifstream<char> std::ifstream`

Class for `char` input file streams.

Definition at line 162 of file `iosfwd`.

#### 3.13.2.4 `typedef basic_ios<char> std::ios`

Base class for `char` streams.

Definition at line 128 of file `iosfwd`.

#### 3.13.2.5 `typedef basic_iostream<char> std::iostream`

Base class for `char` mixed input and output streams.

Definition at line 144 of file `iosfwd`.

#### 3.13.2.6 `typedef basic_istream<char> std::istream`

Base class for `char` input streams.

Definition at line 138 of file `iosfwd`.

#### 3.13.2.7 `typedef basic_istream<char> std::istream`

Class for `char` input memory streams.

Definition at line 150 of file `iosfwd`.

#### 3.13.2.8 `typedef basic_ofstream<char> std::ofstream`

Class for `char` output file streams.

Definition at line 165 of file `iosfwd`.

#### 3.13.2.9 `typedef basic_ostream<char> std::ostream`

Base class for `char` output streams.

Definition at line 141 of file `iosfwd`.

#### 3.13.2.10 `typedef basic_ostringstream<char> std::ostringstream`

Class for `char` output memory streams.

Definition at line 153 of file `iosfwd`.

#### 3.13.2.11 `typedef basic_streambuf<char> std::streambuf`

Base class for `char` buffers.

Definition at line 135 of file `iosfwd`.

#### 3.13.2.12 `typedef basic_stringbuf<char> std::stringbuf`

Class for `char` memory buffers.

Definition at line 147 of file `iosfwd`.

#### 3.13.2.13 `typedef basic_stringstream<char> std::stringstream`

Class for `char` mixed input and output memory streams.

Definition at line 156 of file `iosfwd`.

**3.13.2.14 typedef basic\_filebuf<wchar\_t> std::wfilebuf**

Class for `wchar_t` file buffers.

Definition at line 199 of file `iosfwd`.

**3.13.2.15 typedef basic\_fstream<wchar\_t> std::wfstream**

Class for `wchar_t` mixed input and output file streams.

Definition at line 208 of file `iosfwd`.

**3.13.2.16 typedef basic\_ifstream<wchar\_t> std::wifstream**

Class for `wchar_t` input file streams.

Definition at line 202 of file `iosfwd`.

**3.13.2.17 typedef basic\_ios<wchar\_t> std::wios**

Base class for `wchar_t` streams.

Definition at line 172 of file `iosfwd`.

**3.13.2.18 typedef basic\_iostream<wchar\_t> std::wiostream**

Base class for `wchar_t` mixed input and output streams.

Definition at line 184 of file `iosfwd`.

**3.13.2.19 typedef basic\_istream<wchar\_t> std::wistream**

Base class for `wchar_t` input streams.

Definition at line 178 of file `iosfwd`.

**3.13.2.20 typedef basic\_istream<wchar\_t> std::wistream**

Class for `wchar_t` input memory streams.

Definition at line 190 of file `iosfwd`.

**3.13.2.21 typedef basic\_ofstream<wchar\_t> std::wofstream**

Class for `wchar_t` output file streams.

Definition at line 205 of file `iosfwd`.

**3.13.2.22 typedef basic\_ostream<wchar\_t> std::wostream**

Base class for `wchar_t` output streams.

Definition at line 181 of file `iosfwd`.

**3.13.2.23 typedef basic\_ostringstream<wchar\_t> std::wostringstream**

Class for `wchar_t` output memory streams.

Definition at line 193 of file `iosfwd`.

**3.13.2.24 typedef basic\_streambuf<wchar\_t> std::wstreambuf**

Base class for `wchar_t` buffers.

Definition at line 175 of file `iosfwd`.

**3.13.2.25 typedef basic\_stringbuf<wchar\_t> std::wstringbuf**

Class for `wchar_t` memory buffers.

Definition at line 187 of file `iosfwd`.

**3.13.2.26 typedef basic\_stringstream<wchar\_t> std::wstringstream**

Class for `wchar_t` mixed input and output memory streams.

Definition at line 196 of file `iosfwd`.

### 3.14 Memory

Collaboration diagram for Memory:

#### Modules

- [Allocators](#)
- [Pointer Abstractions](#)

#### 3.14.1 Detailed Description

Components for memory allocation, deallocation, and management.

### 3.15 Pointer Abstractions

### 3.15.1 Detailed Description

Smart pointers, etc.

## 3.15.2 Function Documentation

3.15.2.1 `template<typename _Tp, typename _Alloc, typename... _Args> shared_ptr<_Tp> std::allocate_shared ( const _Alloc & __a, _Args &&... __args ) [inline]`

Create an object that is owned by a `shared_ptr`.

## Parameters

<code>__a</code>	An allocator.
<code>__args</code>	Arguments for the <code>_Tp</code> object's constructor.

## Returns

A `shared_ptr` that owns the newly created object.

## Exceptions

<i>An</i>	exception thrown from <code>_Alloc::allocate</code> or from the constructor of <code>_Tp</code> .
-----------	---

A copy of `__a` will be used to allocate memory for the `shared_ptr` and the new object.

Definition at line 704 of file `bits/shared_ptr.h`.

**3.15.2.2** `template<typename _Tp> bool std::atomic_compare_exchange_strong ( shared_ptr<_Tp> * __p, shared_ptr<_Tp> * __v, shared_ptr<_Tp> __w ) [inline]`

Atomic compare-and-swap for `shared_ptr` objects.

## Parameters

<code>__p</code>	A non-null pointer to a <code>shared_ptr</code> object.
<code>__v</code>	A non-null pointer to a <code>shared_ptr</code> object.
<code>__w</code>	A non-null pointer to a <code>shared_ptr</code> object.

## Returns

True if `*__p` was equivalent to `*__v`, false otherwise.

The memory order for failure shall not be `memory_order_release` or `memory_order_acq_rel`, or stronger than the memory order for success.

Definition at line 242 of file `shared_ptr_atomic.h`.

References `std::atomic_compare_exchange_strong_explicit()`.

**3.15.2.3** `template<typename _Tp, _Lock_policy _Lp> bool std::atomic_compare_exchange_strong ( __shared_ptr<_Tp, _Lp> * __p, __shared_ptr<_Tp, _Lp> * __v, __shared_ptr<_Tp, _Lp> __w ) [inline]`

Atomic compare-and-swap for `shared_ptr` objects.

## Parameters

<code>__p</code>	A non-null pointer to a <code>shared_ptr</code> object.
<code>__v</code>	A non-null pointer to a <code>shared_ptr</code> object.
<code>__w</code>	A non-null pointer to a <code>shared_ptr</code> object.

## Returns

True if `*__p` was equivalent to `*__v`, false otherwise.

The memory order for failure shall not be `memory_order_release` or `memory_order_acq_rel`, or stronger than the memory order for success.

Definition at line 294 of file `shared_ptr_atomic.h`.

References `std::atomic_compare_exchange_strong_explicit()`.

```
3.15.2.4  template<typename _Tp > bool std::atomic_compare_exchange_strong_explicit ( shared_ptr<_Tp > * __p,  
    shared_ptr<_Tp > * __v, shared_ptr<_Tp > __w, memory_order, memory_order )
```

Atomic compare-and-swap for shared\_ptr objects.

**Parameters**

<code>__p</code>	A non-null pointer to a <code>shared_ptr</code> object.
<code>__v</code>	A non-null pointer to a <code>shared_ptr</code> object.
<code>__w</code>	A non-null pointer to a <code>shared_ptr</code> object.

**Returns**

True if `*__p` was equivalent to `*__v`, false otherwise.

The memory order for failure shall not be `memory_order_release` or `memory_order_acq_rel`, or stronger than the memory order for success.

Definition at line 220 of file `shared_ptr_atomic.h`.

```
3.15.2.5 template<typename _Tp, _Lock_policy _Lp> bool std::atomic_compare_exchange_strong_explicit ( __shared_ptr< _Tp,
    _Lp > * __p, __shared_ptr< _Tp, _Lp > * __v, __shared_ptr< _Tp, _Lp > __w, memory_order, memory_order )
```

Atomic compare-and-swap for `shared_ptr` objects.

**Parameters**

<code>__p</code>	A non-null pointer to a <code>shared_ptr</code> object.
<code>__v</code>	A non-null pointer to a <code>shared_ptr</code> object.
<code>__w</code>	A non-null pointer to a <code>shared_ptr</code> object.

**Returns**

True if `*__p` was equivalent to `*__v`, false otherwise.

The memory order for failure shall not be `memory_order_release` or `memory_order_acq_rel`, or stronger than the memory order for success.

Definition at line 272 of file `shared_ptr_atomic.h`.

Referenced by `std::atomic_compare_exchange_strong()`, and `std::atomic_compare_exchange_weak_explicit()`.

```
3.15.2.6 template<typename _Tp > bool std::atomic_compare_exchange_weak ( shared_ptr< _Tp > * __p, shared_ptr< _Tp > *
    __v, shared_ptr< _Tp > __w ) [inline]
```

Atomic compare-and-swap for `shared_ptr` objects.

**Parameters**

<code>__p</code>	A non-null pointer to a <code>shared_ptr</code> object.
<code>__v</code>	A non-null pointer to a <code>shared_ptr</code> object.
<code>__w</code>	A non-null pointer to a <code>shared_ptr</code> object.

**Returns**

True if `*__p` was equivalent to `*__v`, false otherwise.

The memory order for failure shall not be `memory_order_release` or `memory_order_acq_rel`, or stronger than the memory order for success.

Definition at line 263 of file `shared_ptr_atomic.h`.

References `std::atomic_compare_exchange_weak_explicit()`.

```
3.15.27 template<typename _Tp, _Lock_policy _Lp> bool std::atomic_compare_exchange_weak ( __shared_ptr<_Tp, _Lp > *  
    __p, __shared_ptr<_Tp, _Lp > * __v, __shared_ptr<_Tp, _Lp > __w ) [inline]
```

Atomic compare-and-swap for shared\_ptr objects.

**Parameters**

<code>__p</code>	A non-null pointer to a <code>shared_ptr</code> object.
<code>__v</code>	A non-null pointer to a <code>shared_ptr</code> object.
<code>__w</code>	A non-null pointer to a <code>shared_ptr</code> object.

**Returns**

True if `*__p` was equivalent to `*__v`, false otherwise.

The memory order for failure shall not be `memory_order_release` or `memory_order_acq_rel`, or stronger than the memory order for success.

Definition at line 316 of file `shared_ptr_atomic.h`.

References `std::atomic_compare_exchange_weak_explicit()`.

**3.15.2.8** `template<typename _Tp > bool std::atomic_compare_exchange_weak_explicit ( shared_ptr< _Tp > *__p, shared_ptr< _Tp > *__v, shared_ptr< _Tp > __w, memory_order __success, memory_order __failure ) [inline]`

Atomic compare-and-swap for `shared_ptr` objects.

**Parameters**

<code>__p</code>	A non-null pointer to a <code>shared_ptr</code> object.
<code>__v</code>	A non-null pointer to a <code>shared_ptr</code> object.
<code>__w</code>	A non-null pointer to a <code>shared_ptr</code> object.

**Returns**

True if `*__p` was equivalent to `*__v`, false otherwise.

The memory order for failure shall not be `memory_order_release` or `memory_order_acq_rel`, or stronger than the memory order for success.

Definition at line 251 of file `shared_ptr_atomic.h`.

References `std::atomic_compare_exchange_strong_explicit()`.

**3.15.2.9** `template<typename _Tp, _Lock_policy _Lp> bool std::atomic_compare_exchange_weak_explicit ( __shared_ptr< _Tp, _Lp > *__p, __shared_ptr< _Tp, _Lp > *__v, __shared_ptr< _Tp, _Lp > __w, memory_order __success, memory_order __failure ) [inline]`

Atomic compare-and-swap for `shared_ptr` objects.

**Parameters**

<code>__p</code>	A non-null pointer to a <code>shared_ptr</code> object.
<code>__v</code>	A non-null pointer to a <code>shared_ptr</code> object.
<code>__w</code>	A non-null pointer to a <code>shared_ptr</code> object.

**Returns**

True if `*__p` was equivalent to `*__v`, false otherwise.

The memory order for failure shall not be `memory_order_release` or `memory_order_acq_rel`, or stronger than the memory order for success.

Definition at line 304 of file `shared_ptr_atomic.h`.

References `std::atomic_compare_exchange_strong_explicit()`.

Referenced by `std::atomic_compare_exchange_weak()`.

**3.15.2.10** `template<typename _Tp> shared_ptr<_Tp> std::atomic_exchange ( shared_ptr<_Tp> * __p, shared_ptr<_Tp> __r ) [inline]`

Atomic exchange for `shared_ptr` objects.

Parameters

<code>__p</code>	A non-null pointer to a <code>shared_ptr</code> object.
<code>__r</code>	New value to store in <code>*__p</code> .

Returns

The original value of `*__p`

Definition at line 181 of file `shared_ptr_atomic.h`.

References `std::atomic_exchange_explicit()`.

**3.15.2.11** `template<typename _Tp, _Lock_policy _Lp> __shared_ptr<_Tp, _Lp> std::atomic_exchange ( __shared_ptr<_Tp, _Lp> * __p, __shared_ptr<_Tp, _Lp> __r ) [inline]`

Atomic exchange for `shared_ptr` objects.

Parameters

<code>__p</code>	A non-null pointer to a <code>shared_ptr</code> object.
<code>__r</code>	New value to store in <code>*__p</code> .

Returns

The original value of `*__p`

Definition at line 200 of file `shared_ptr_atomic.h`.

References `std::atomic_exchange_explicit()`.

**3.15.2.12** `template<typename _Tp> shared_ptr<_Tp> std::atomic_exchange_explicit ( shared_ptr<_Tp> * __p, shared_ptr<_Tp> __r, memory_order ) [inline]`

Atomic exchange for `shared_ptr` objects.

Parameters

<code>__p</code>	A non-null pointer to a <code>shared_ptr</code> object.
<code>__r</code>	New value to store in <code>*__p</code> .

Returns

The original value of `*__p`

Definition at line 171 of file `shared_ptr_atomic.h`.

**3.15.2.13** `template<typename _Tp, _Lock_policy _Lp> __shared_ptr<_Tp, _Lp> std::atomic_exchange_explicit ( __shared_ptr<_Tp, _Lp> * __p, __shared_ptr<_Tp, _Lp> __r, memory_order ) [inline]`

Atomic exchange for `shared_ptr` objects.

**Parameters**

<code>__p</code>	A non-null pointer to a <code>shared_ptr</code> object.
<code>__r</code>	New value to store in <code>*__p</code> .

**Returns**

The original value of `*__p`

Definition at line 189 of file `shared_ptr_atomic.h`.

Referenced by `std::atomic_exchange()`.

**3.15.2.14** `template<typename _Tp, _Lock_policy _Lp> bool std::atomic_is_lock_free ( const _shared_ptr<_Tp, _Lp> * __p )`  
`[inline]`

Report whether `shared_ptr` atomic operations are lock-free.

**Parameters**

<code>__p</code>	A non-null pointer to a <code>shared_ptr</code> object.
------------------	---

**Returns**

True if atomic access to `*__p` is lock-free, false otherwise.

Definition at line 71 of file `shared_ptr_atomic.h`.

**3.15.2.15** `template<typename _Tp> bool std::atomic_is_lock_free ( const shared_ptr<_Tp> * __p )` `[inline]`

Report whether `shared_ptr` atomic operations are lock-free.

**Parameters**

<code>__p</code>	A non-null pointer to a <code>shared_ptr</code> object.
------------------	---

**Returns**

True if atomic access to `*__p` is lock-free, false otherwise.

Definition at line 82 of file `shared_ptr_atomic.h`.

**3.15.2.16** `template<typename _Tp> shared_ptr<_Tp> std::atomic_load ( const shared_ptr<_Tp> * __p )` `[inline]`

Atomic load for `shared_ptr` objects.

**Parameters**

<code>__p</code>	A non-null pointer to a <code>shared_ptr</code> object.
------------------	---

**Returns**

`*__p`

The memory order shall not be `memory_order_release` or `memory_order_acq_rel`.

Definition at line 106 of file `shared_ptr_atomic.h`.

References `std::atomic_load_explicit()`.

---

3.15.2.17 `template<typename _Tp, _Lock_policy _Lp> __shared_ptr<_Tp, _Lp> std::atomic_load ( const __shared_ptr<_Tp, _Lp> * __p ) [inline]`

Atomic load for `shared_ptr` objects.

**Parameters**

<code>__p</code>	A non-null pointer to a <code>shared_ptr</code> object.
------------------	---

**Returns**

`*__p`

The memory order shall not be `memory_order_release` or `memory_order_acq_rel`.

Definition at line 119 of file `shared_ptr_atomic.h`.

References `std::atomic_load_explicit()`.

**3.15.2.18** `template<typename _Tp > shared_ptr<_Tp> std::atomic_load_explicit ( const shared_ptr<_Tp > * __p, memory_order ) [inline]`

Atomic load for `shared_ptr` objects.

**Parameters**

<code>__p</code>	A non-null pointer to a <code>shared_ptr</code> object.
------------------	---

**Returns**

`*__p`

The memory order shall not be `memory_order_release` or `memory_order_acq_rel`.

Definition at line 98 of file `shared_ptr_atomic.h`.

**3.15.2.19** `template<typename _Tp, _Lock_policy _Lp> __shared_ptr<_Tp, _Lp> std::atomic_load_explicit ( const __shared_ptr<_Tp, _Lp> * __p, memory_order ) [inline]`

Atomic load for `shared_ptr` objects.

**Parameters**

<code>__p</code>	A non-null pointer to a <code>shared_ptr</code> object.
------------------	---

**Returns**

`*__p`

The memory order shall not be `memory_order_release` or `memory_order_acq_rel`.

Definition at line 111 of file `shared_ptr_atomic.h`.

Referenced by `std::atomic_load()`.

**3.15.2.20** `template<typename _Tp > void std::atomic_store ( shared_ptr<_Tp > * __p, shared_ptr<_Tp > __r ) [inline]`

Atomic store for `shared_ptr` objects.

**Parameters**

\_\_\_\_\_

<code>__p</code>	A non-null pointer to a <code>shared_ptr</code> object.
<code>__r</code>	The value to store.

The memory order shall not be `memory_order_acquire` or `memory_order_acq_rel`.

Definition at line 143 of file `shared_ptr_atomic.h`.

References `std::atomic_store_explicit()`.

```
3.15.2.21 template<typename _Tp, _Lock_policy _Lp> void std::atomic_store ( __shared_ptr<_Tp, _Lp> * __p, __shared_ptr<_Tp, _Lp> __r ) [inline]
```

Atomic store for `shared_ptr` objects.

Parameters

<code>__p</code>	A non-null pointer to a <code>shared_ptr</code> object.
<code>__r</code>	The value to store.

The memory order shall not be `memory_order_acquire` or `memory_order_acq_rel`.

Definition at line 158 of file `shared_ptr_atomic.h`.

References `std::atomic_store_explicit()`.

```
3.15.2.22 template<typename _Tp > void std::atomic_store_explicit ( shared_ptr<_Tp> * __p, shared_ptr<_Tp> __r, memory_order ) [inline]
```

Atomic store for `shared_ptr` objects.

Parameters

<code>__p</code>	A non-null pointer to a <code>shared_ptr</code> object.
<code>__r</code>	The value to store.

The memory order shall not be `memory_order_acquire` or `memory_order_acq_rel`.

Definition at line 134 of file `shared_ptr_atomic.h`.

```
3.15.2.23 template<typename _Tp, _Lock_policy _Lp> void std::atomic_store_explicit ( __shared_ptr<_Tp, _Lp> * __p, __shared_ptr<_Tp, _Lp> __r, memory_order ) [inline]
```

Atomic store for `shared_ptr` objects.

Parameters

<code>__p</code>	A non-null pointer to a <code>shared_ptr</code> object.
<code>__r</code>	The value to store.

The memory order shall not be `memory_order_acquire` or `memory_order_acq_rel`.

Definition at line 148 of file `shared_ptr_atomic.h`.

Referenced by `std::atomic_store()`.

```
3.15.2.24 template<typename _Del, typename _Tp > _Del* std::get_deleter ( const shared_ptr<_Tp> & __p ) [inline], [noexcept]
```

20.7.2.2.10 `shared_ptr` `get_deleter`

Definition at line 87 of file `bits/shared_ptr.h`.

3.15.2.25 `template<typename _Tp, typename... _Args> shared_ptr<_Tp> std::make_shared ( _Args &&... __args )`  
`[inline]`

Create an object that is owned by a `shared_ptr`.

## Parameters

<code>__args</code>	Arguments for the <code>_Tp</code> object's constructor.
---------------------	--

## Returns

A `shared_ptr` that owns the newly created object.

## Exceptions

<code>std::bad_alloc</code> , or	an exception thrown from the constructor of <code>_Tp</code> .
----------------------------------	--

Definition at line 719 of file `bits/shared_ptr.h`.

3.15.2.26 `template<typename _Tp, typename... _Args> _MakeUniq<_Tp>::_single_object std::make_unique ( _Args &&...  
_args ) [inline]`

`std::make_unique` for single objects

Definition at line 830 of file `unique_ptr.h`.

3.15.2.27 `template<typename _Tp > _MakeUniq<_Tp>::_array std::make_unique ( size_t _num ) [inline]`

`std::make_unique` for arrays of unknown bound

Definition at line 836 of file `unique_ptr.h`.

3.15.2.28 `template<typename _Tp, typename... _Args> _MakeUniq<_Tp>::_invalid_type std::make_unique ( _Args && ... )  
[inline], [delete]`

Disable `std::make_unique` for arrays of known bound.

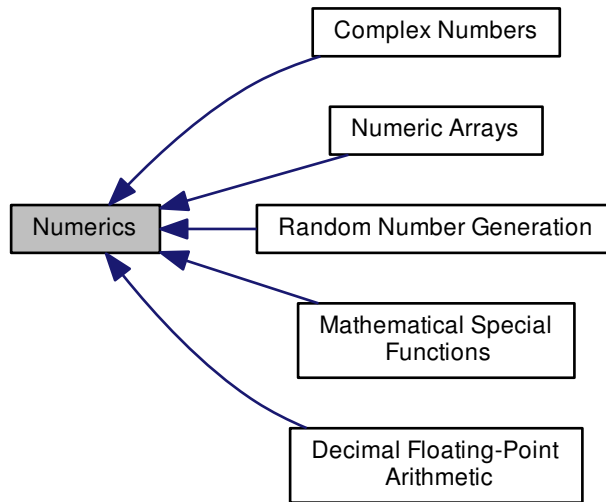

3.15.2.29 `template<typename _Ch, typename _Tr, typename _Tp, _Lock_policy _Lp> std::basic_ostream<_Ch, _Tr>&  
std::operator<<< ( std::basic_ostream<_Ch, _Tr > & __os, const _shared_ptr<_Tp, _Lp > & __p )  
[inline]`

20.7.2.2.11 `shared_ptr` I/O

Definition at line 66 of file `bits/shared_ptr.h`.

### 3.16 Numerics

Collaboration diagram for Numerics:

#### Modules

- [Complex Numbers](#)
- [Decimal Floating-Point Arithmetic](#)
- [Mathematical Special Functions](#)
- [Numeric Arrays](#)
- [Random Number Generation](#)

#### 3.16.1 Detailed Description

Components for performing numeric operations. Includes support for for complex number types, random number generation, numeric (n-at-a-time) arrays, generalized numeric algorithms, and special math functions.

## 3.17 Rational Arithmetic

Collaboration diagram for Rational Arithmetic:

### Classes

- struct `std::ratio< _Num, _Den >`
- struct `std::ratio_equal< _R1, _R2 >`
- struct `std::ratio_not_equal< _R1, _R2 >`

### Typedefs

- `template<typename _R1 , typename _R2 >`  
`using std::ratio\_divide = typename __ratio_divide< _R1, _R2 >::type`
- `template<typename _R1 , typename _R2 >`

- `typedef ratio< num, den > std::ratio< \_Num, \_Den >::type`
- `typedef ratio< __safe_multiply`  
`<(_R1::num/__gcd1),(_R2::num/__gcd2)>`  
`::value, __safe_multiply`  
`<(_R1::den/__gcd2),(_R2::den/__gcd1)>`  
`::value > std::\_\_ratio\_multiply< \_R1, \_R2 >::type`
- `typedef __ratio_multiply< _R1,`  
`ratio< _R2::den, _R2::num >`  
`>::type std::ratio\_divide< \_R1, \_R2 >::type`

### Variables

- `static constexpr uintmax_t std::\_\_big\_add< \_\_hi1, \_\_lo1, \_\_hi2, \_\_lo2 >::\_\_hi`
- `static constexpr uintmax_t std::\_\_big\_sub< \_\_hi1, \_\_lo1, \_\_hi2, \_\_lo2 >::\_\_hi`
- `static constexpr uintmax_t std::\_\_big\_mul< \_\_x, \_\_y >::\_\_hi`
- `static constexpr uintmax_t std::\_\_big\_add< \_\_hi1, \_\_lo1, \_\_hi2, \_\_lo2 >::\_\_lo`
- `static constexpr uintmax_t std::\_\_big\_sub< \_\_hi1, \_\_lo1, \_\_hi2, \_\_lo2 >::\_\_lo`
- `static constexpr uintmax_t std::\_\_big\_mul< \_\_x, \_\_y >::\_\_lo`
- `static constexpr uintmax_t std::\_\_big\_div\_impl< \_\_n1, \_\_n0, \_\_d >::\_\_quot`
- `static constexpr uintmax_t std::\_\_big\_div< \_\_n1, \_\_n0, \_\_d >::\_\_quot\_hi`
- `static constexpr uintmax_t std::\_\_big\_div< \_\_n1, \_\_n0, \_\_d >::\_\_quot\_lo`
- `static constexpr uintmax_t std::\_\_big\_div\_impl< \_\_n1, \_\_n0, \_\_d >::\_\_rem`
- `static constexpr uintmax_t std::\_\_big\_div< \_\_n1, \_\_n0, \_\_d >::\_\_rem`
- `static constexpr intmax_t std::ratio< \_Num, \_Den >::den`
- `static constexpr intmax_t std::\_\_ratio\_multiply< \_R1, \_R2 >::den`

- static constexpr intmax\_t **std::\_\_ratio\_divide<\_R1, \_R2 >::den**
- static constexpr intmax\_t **std::ratio<\_Num, \_Den >::num**
- static constexpr intmax\_t **std::\_\_ratio\_multiply<\_R1, \_R2 >::num**
- static constexpr intmax\_t **std::\_\_ratio\_divide<\_R1, \_R2 >::num**
- static const intmax\_t **std::\_\_safe\_multiply<\_Pn, \_Qn >::value**

### 3.17.1 Detailed Description

Compile time representation of finite rational numbers.

### 3.17.2 Typedef Documentation

3.17.2.1 `template<typename _R1, typename _R2 > using std::ratio_divide = typedef typename __ratio_divide<_R1, _R2>::type`

ratio\_divide

Definition at line 336 of file ratio.

3.17.2.2 `template<typename _R1, typename _R2 > using std::ratio_multiply = typedef typename __ratio_multiply<_R1, _R2>::type`

ratio\_multiply

Definition at line 313 of file ratio.

## 3.18 Threads

Collaboration diagram for Threads:

### Namespaces

- [std::this\\_thread](#)

### Classes

- struct [std::hash< thread::id >](#)
- class [std::thread](#)

### Functions

- bool **std::operator!=** (thread::id \_\_x, thread::id \_\_y) noexcept
- bool **std::operator<** (thread::id \_\_x, thread::id \_\_y) noexcept
- template<class \_CharT, class \_Traits >  
basic\_ostream< \_CharT, \_Traits > & **std::operator<<** (basic\_ostream< \_CharT, \_Traits > &\_\_out, thread::id \_\_id)
- bool **std::operator<=** (thread::id \_\_x, thread::id \_\_y) noexcept
- bool **std::operator==** (thread::id \_\_x, thread::id \_\_y) noexcept
- bool **std::operator>** (thread::id \_\_x, thread::id \_\_y) noexcept
- bool **std::operator>=** (thread::id \_\_x, thread::id \_\_y) noexcept
- void **std::swap** (thread &\_\_x, thread &\_\_y) noexcept

#### 3.18.1 Detailed Description

Classes for thread support.

### 3.19 Metaprogramming

Collaboration diagram for Metaprogramming:

#### 3.19.1 Detailed Description

Template utilities for compile-time introspection and modification, including type classification traits, type property inspection traits and type transformation traits.

#### 3.19.2 Typedef Documentation

##### 3.19.2.1 `template<typename _Tp > using std::add\_const\_t = typedef typename add_const< _Tp >::type`

Alias template for `add_const`.

Definition at line 1438 of file type\_traits.

**3.19.2.2** `template<typename _Tp > using std::add_cv_t = typedef typename add_cv<_Tp>::type`

Alias template for add\_cv.

Definition at line 1446 of file type\_traits.

**3.19.2.3** `template<typename _Tp > using std::add_lvalue_reference_t = typedef typename add_lvalue_reference<_Tp>::type`

Alias template for add\_lvalue\_reference.

Definition at line 1499 of file type\_traits.

**3.19.2.4** `template<typename _Tp > using std::add_pointer_t = typedef typename add_pointer<_Tp>::type`

Alias template for add\_pointer.

Definition at line 1817 of file type\_traits.

**3.19.2.5** `template<typename _Tp > using std::add_rvalue_reference_t = typedef typename add_rvalue_reference<_Tp>::type`

Alias template for add\_rvalue\_reference.

Definition at line 1503 of file type\_traits.

**3.19.2.6** `template<typename _Tp > using std::add_volatile_t = typedef typename add_volatile<_Tp>::type`

Alias template for add\_volatile.

Definition at line 1442 of file type\_traits.

**3.19.2.7** `template<size_t _Len, size_t _Align = __alignof__(typename __aligned_storage_msa<_Len>::__type)> using std::aligned_storage_t = typedef typename aligned_storage<_Len, _Align>::type`

Alias template for aligned\_storage.

Definition at line 2320 of file type\_traits.

**3.19.2.8** `template<typename... _Tp> using std::common_type_t = typedef typename common_type<_Tp...>::type`

Alias template for common\_type.

Definition at line 2339 of file type\_traits.

**3.19.2.9** `template<bool _Cond, typename _Iftrue, typename _Iffalse > using std::conditional_t = typedef typename conditional<_Cond, _Iftrue, _Iffalse>::type`

Alias template for conditional.

Definition at line 2335 of file type\_traits.

**3.19.2.10** `template<typename _Tp > using std::decay_t = typedef typename decay<_Tp>::type`

Alias template for decay.

Definition at line 2327 of file type\_traits.

**3.19.2.11** `template<bool _Cond, typename _Tp = void> using std::enable_if_t = typedef typename enable_if<_Cond, _Tp>::type`

Alias template for `enable_if`.

Definition at line 2331 of file `type_traits`.

**3.19.2.12** `typedef integral_constant<bool, false> std::false_type`

The type used as a compile-time boolean with false value.

Definition at line 78 of file `type_traits`.

**3.19.2.13** `template<typename _Tp > using std::make_signed_t = typedef typename make_signed<_Tp>::type`

Alias template for `make_signed`.

Definition at line 1734 of file `type_traits`.

**3.19.2.14** `template<typename _Tp > using std::make_unsigned_t = typedef typename make_unsigned<_Tp>::type`

Alias template for `make_unsigned`.

Definition at line 1738 of file `type_traits`.

**3.19.2.15** `template<typename _Tp > using std::remove_all_extents_t = typedef typename remove_all_extents<_Tp>::type`

Alias template for `remove_all_extents`.

Definition at line 1776 of file `type_traits`.

**3.19.2.16** `template<typename _Tp > using std::remove_const_t = typedef typename remove_const<_Tp>::type`

Alias template for `remove_const`.

Definition at line 1426 of file `type_traits`.

**3.19.2.17** `template<typename _Tp > using std::remove_cv_t = typedef typename remove_cv<_Tp>::type`

Alias template for `remove_cv`.

Definition at line 1434 of file `type_traits`.

**3.19.2.18** `template<typename _Tp > using std::remove_extent_t = typedef typename remove_extent<_Tp>::type`

Alias template for `remove_extent`.

Definition at line 1772 of file `type_traits`.

**3.19.2.19** `template<typename _Tp > using std::remove_pointer_t = typedef typename remove_pointer<_Tp>::type`

Alias template for `remove_pointer`.

Definition at line 1813 of file `type_traits`.

**3.19.2.20** `template<typename _Tp > using std::remove_reference_t = typedef typename remove_reference<_Tp>::type`

Alias template for `remove_reference`.

Definition at line 1495 of file `type_traits`.

**3.19.2.21** `template<typename _Tp> using std::remove_volatile_t = typedef typename remove_volatile<_Tp>::type`

Alias template for `remove_volatile`.

Definition at line 1430 of file `type_traits`.

**3.19.2.22** `template<typename _Tp> using std::result_of_t = typedef typename result_of<_Tp>::type`

Alias template for `result_of`.

Definition at line 2347 of file `type_traits`.

**3.19.2.23** `typedef integral_constant<bool, true> std::true_type`

The type used as a compile-time boolean with true value.

Definition at line 75 of file `type_traits`.

**3.19.2.24** `template<typename _Tp> using std::underlying_type_t = typedef typename underlying_type<_Tp>::type`

Alias template for `underlying_type`.

Definition at line 2343 of file `type_traits`.

**3.19.2.25** `template<typename...> using std::void_t = typedef void`

A metafunction that always yields `void`, used for detecting valid types.

Definition at line 2355 of file `type_traits`.

### 3.19.3 Variable Documentation

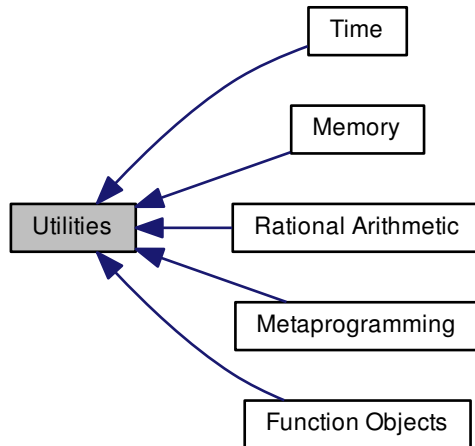

**3.19.3.1** `template<size_t _Len, typename... _Types> const size_t std::aligned_union<_Len, _Types>::alignment_value`  
`[static]`

The value of the strictest alignment of `_Types`.

Definition at line 1890 of file `type_traits`.

## 3.20 Utilities

Collaboration diagram for Utilities:

## Modules

- [Function Objects](#)
- [Memory](#)
- [Metaprogramming](#)
- [Rational Arithmetic](#)
- [Time](#)

## Classes

- `struct std::_Tuple_impl< _Idx, _Elements >`
- `struct std::_Tuple_impl< _Idx, _Head, _Tail...>`
- `class std::bitset< _Nb >`
- `struct std::pair< _T1, _T2 >`
- `struct std::piecewise_construct_t`
- `class std::tuple< _Elements >`
- `class std::tuple< _T1, _T2 >`
- `struct std::tuple_element< 0, tuple< _Head, _Tail...> >`
- `struct std::tuple_element< __i, tuple< _Head, _Tail...> >`
- `struct std::tuple_element< __i, tuple<> >`
- `struct std::tuple_size< tuple< _Elements...> >`
- `struct std::type_index`
- `struct std::uses_allocator< tuple< _Types...>, _Alloc >`

## Macros

- `#define __cpp_lib_tuples_by_type`

## Typedefs

- `typedef __tuple_concater`  
`< __ret, __idx, _Tpls...> std::__concater`
- `template<typename _Tp >`  
`using std::__empty_not_final = typename conditional< __is_final(_Tp), false_type, __is_empty_non_tuple< _`  
`Tp >>::type`

## 3.20.1 Detailed Description

Components deemed generally useful. Includes pair, tuple, forward/move helpers, ratio, function object, metaprogramming and type traits, time, date, and memory functions.

## 3.20.2 Typedef Documentation

3.20.2.1 `template<typename... _Tpls> constexpr auto std::__tuple_cat_result< _Tpls, typename >::__type`

`tuple_cat`

Definition at line 1534 of file tuple.

## 3.20.3 Function Documentation

3.20.3.1 `template<typename _Tp> constexpr _Tp* std::__addressof ( _Tp & __r ) [inline], [noexcept]`

Same as C++11 `std::addressof`.

Definition at line 47 of file move.h.

Referenced by `std::_Destroy()`, `std::addressof()`, `std::begin()`, `std::call_once()`, `std::end()`, `std::forward_list< _Tp, _Alloc >::operator=()`, `std::list< _Tp, _Alloc >::operator=()`, `std::forward_list< _Tp, _Alloc >::remove()`, `std::list< _Tp, _Alloc >::remove()`, `std::rethrow_if_nested()`, and `std::list< __inp, __rebind_inp >::splice()`.

3.20.3.2 `template<typename _Tp> _GLIBCXX17_CONSTEXPR _Tp* std::addressof ( _Tp & __r ) [inline], [noexcept]`

Returns the actual address of the object or function referenced by `r`, even in the presence of an overloaded operator&.

## Parameters

<code>__r</code>	Reference to an object or function.
------------------	-------------------------------------

## Returns

The actual address.

Definition at line 138 of file move.h.

References `std::__addressof()`.

Referenced by `std::pointer_traits< _Tp * >::pointer_to()`.

**3.20.3.3** `template<typename _Tp > constexpr _Tp&& std::forward ( typename std::remove_reference< _Tp >::type & __t )`  
`[noexcept]`

Forward an lvalue.

#### Returns

The parameter cast to the specified type.

This function is used to implement "perfect forwarding".

Definition at line 74 of file move.h.

**3.20.3.4** `template<typename _Tp > constexpr _Tp&& std::forward ( typename std::remove_reference< _Tp >::type && __t )`  
`[noexcept]`

Forward an rvalue.

#### Returns

The parameter cast to the specified type.

This function is used to implement "perfect forwarding".

Definition at line 85 of file move.h.

**3.20.3.5** `template<std::size_t _i, typename... _Elements> constexpr __tuple_element_t<_i, tuple<_Elements...> >& std::get (`  
`tuple<_Elements...> & __t ) [noexcept]`

Return a reference to the ith element of a tuple.

Definition at line 1314 of file tuple.

**3.20.3.6** `template<std::size_t _i, typename... _Elements> constexpr const __tuple_element_t<_i, tuple<_Elements...> >&`  
`std::get ( const tuple<_Elements...> & __t ) [noexcept]`

Return a const reference to the ith element of a const tuple.

Definition at line 1320 of file tuple.

**3.20.3.7** `template<std::size_t _i, typename... _Elements> constexpr __tuple_element_t<_i, tuple<_Elements...> >&& std::get (`  
`tuple<_Elements...> && __t ) [noexcept]`

Return an rvalue reference to the ith element of a tuple rvalue.

Definition at line 1326 of file tuple.

**3.20.3.8** `template<std::size_t _i, typename... _Elements> constexpr const __tuple_element_t<_i, tuple<_Elements...> >&&`  
`std::get ( const tuple<_Elements...> && __t ) [noexcept]`

Return a const rvalue reference to the ith element of a const tuple rvalue.

Definition at line 1335 of file tuple.

**3.20.3.9** `template<typename _Tp, typename... _Types> constexpr _Tp& std::get ( tuple<_Types...> & __t ) [noexcept]`

Return a reference to the unique element of type `_Tp` of a tuple.

Definition at line 1358 of file tuple.

3.20.3.10 `template<typename _Tp, typename... _Types> constexpr _Tp&& std::get ( tuple< _Types...> && _t )`  
`[noexcept]`

Return a reference to the unique element of type `_Tp` of a tuple rvalue.

Definition at line 1364 of file `tuple`.

3.20.3.11 `template<typename _Tp, typename... _Types> constexpr const _Tp& std::get ( const tuple< _Types...> & _t )`  
`[noexcept]`

Return a const reference to the unique element of type `_Tp` of a tuple.

Definition at line 1370 of file `tuple`.

3.20.3.12 `template<typename _Tp, typename... _Types> constexpr const _Tp&& std::get ( const tuple< _Types...> && _t )`  
`[noexcept]`

Return a const reference to the unique element of type `_Tp` of a const tuple rvalue.

Definition at line 1377 of file `tuple`.

3.20.3.13 `template<typename _T1, typename _T2 > constexpr pair<typename __decay_and_strip<_T1>::__type, typename __decay_and_strip<_T2>::__type> std::make_pair ( _T1 && __x, _T2 && __y )`

A convenience wrapper for creating a pair from two objects.

#### Parameters

<code>__x</code>	The first object.
<code>__y</code>	The second object.

#### Returns

A newly-constructed `pair<>` object of the appropriate type.

The standard requires that the objects be passed by reference-to-const, but LWG issue #181 says they should be passed by const value. We follow the LWG by default.

Definition at line 519 of file `stl_pair.h`.

Referenced by `__gnu_parallel::__find_template()`, `std::__gen_two_uniform_ints()`, `__gnu_debug::__get_distance()`, `__gnu_parallel::__parallel_merge_advance()`, `__gnu_parallel::__parallel_sort_qsb()`, `__gnu_parallel::__qsb_local_sort_with_helping()`, `__gnu_debug::__valid_range_aux()`, `__gnu_parallel::__find_if_selector::M_sequential_algorithm()`, `__gnu_parallel::__adjacent_find_selector::M_sequential_algorithm()`, `__gnu_parallel::__find_first_of_selector< _Filterator >::M_sequential_algorithm()`, `__gnu_parallel::multiseq_partition()`, `__gnu_parallel::multiseq_selection()`, `__gnu_parallel::parallel_multiway_merge()`, `__gnu_parallel::parallel_sort_mwms_pu()`, and `__gnu_pbds::detail::pat_trie_base::__Node_citer< Node, Leaf, Head, Inode, _Clterator, Iterator, _Alloc >::valid_prefix()`.

3.20.3.14 `template<typename _Tp > constexpr std::remove_reference<_Tp>::__type&& std::move ( _Tp && _t )`  
`[noexcept]`

Convert a value to an rvalue.

#### Parameters

<code>__t</code>	A thing of arbitrary type.
------------------	----------------------------

**Returns**

The parameter cast to an rvalue-reference to allow moving it.

Definition at line 99 of file `move.h`.

```
3.20.3.15 template<typename _Tp> constexpr conditional<__move_if_noexcept_cond<_Tp>::value, const _Tp&, _Tp&&>::type
std::move_if_noexcept ( _Tp & __x ) [noexcept]
```

Conditionally convert a value to an rvalue.

**Parameters**

<code>__x</code>	A thing of arbitrary type.
------------------	----------------------------

**Returns**

The parameter, possibly cast to an rvalue-reference.

Same as `std::move` unless the type's move constructor could throw and the type is copyable, in which case an lvalue-reference is returned instead.

Definition at line 119 of file `move.h`.

```
3.20.3.16 template<typename _Callable, typename... _Args> constexpr __invoke_result<_Callable, _Args...>::type std::noexcept
( __is_nothrow_invocable<_Callable, _Args...>::value )
```

Invoke a callable object.

Definition at line 90 of file `invoke.h`.

```
3.20.3.17 template<typename _T1, typename _T2> enable_if<__and<__is_swappable<_T1>, __is_swappable<_T2>
>::value>::type std::noexcept ( noexcept(__x.swap(__y)) ) [inline]
```

See `std::pair::swap()`.

Definition at line 491 of file `stl_pair.h`.

```
3.20.3.18 template<typename... _Elements> enable_if<__and<__is_swappable<_Elements>...>::value >::type std::noexcept (
noexcept(__x.swap(__y)) ) [inline]
```

**swap**

Definition at line 1619 of file `tuple`.

```
3.20.3.19 template<typename _Tp> enable_if<__and<__not<__is_tuple_like<_Tp>>, is_move_constructible<_Tp>,
is_move_assignable<_Tp>>::value >::type std::noexcept ( __and<__is_nothrow_move_constructible<_Tp>,
is_nothrow_move_assignable<_Tp>>::value ) [inline]
```

Swaps two values.

**Parameters**

---

<code>__a</code>	A thing of arbitrary type.
<code>__b</code>	Another thing of arbitrary type.

**Returns**

Nothing.

Definition at line 183 of file `move.h`.

```
3.20.3.20 template<typename _T1, typename _T2 > constexpr bool std::operator!=( const pair< _T1, _T2 > & __x, const pair<
    _T1, _T2 > & __y ) [inline]
```

Uses `operator==` to find the result.

Definition at line 456 of file `stl_pair.h`.

```
3.20.3.21 template<typename _T1, typename _T2 > constexpr bool std::operator< ( const pair< _T1, _T2 > & __x, const pair<
    _T1, _T2 > & __y ) [inline]
```

<http://gcc.gnu.org/onlinedocs/libstdc++/manual/utilities.html>

Definition at line 449 of file `stl_pair.h`.

```
3.20.3.22 template<typename _T1, typename _T2 > constexpr bool std::operator<= ( const pair< _T1, _T2 > & __x, const pair<
    _T1, _T2 > & __y ) [inline]
```

Uses `operator<` to find the result.

Definition at line 468 of file `stl_pair.h`.

```
3.20.3.23 template<typename _T1, typename _T2 > constexpr bool std::operator==( const pair< _T1, _T2 > & __x, const pair<
    _T1, _T2 > & __y ) [inline]
```

Two pairs of the same type are equal iff their members are equal.

Definition at line 443 of file `stl_pair.h`.

References `std::pair< _T1, _T2 >::first`, and `std::pair< _T1, _T2 >::second`.

```
3.20.3.24 template<typename _T1, typename _T2 > constexpr bool std::operator> ( const pair< _T1, _T2 > & __x, const pair<
    _T1, _T2 > & __y ) [inline]
```

Uses `operator<` to find the result.

Definition at line 462 of file `stl_pair.h`.

```
3.20.3.25 template<typename _T1, typename _T2 > constexpr bool std::operator>= ( const pair< _T1, _T2 > & __x, const pair<
    _T1, _T2 > & __y ) [inline]
```

Uses `operator<` to find the result.

Definition at line 474 of file `stl_pair.h`.

```
3.20.3.26 template<typename _Tp, size_t _Nm> enable_if< __is_swappable< _Tp >::value >::type std::swap ( _Tp(&) __a[_Nm],
    _Tp(&) __b[_Nm] ) [inline],[noexcept]
```

Swap the contents of two arrays.

Definition at line 205 of file `move.h`.

3.20.3.27 `template<typename... _Elements> constexpr tuple<_Elements&...> std::tie ( _Elements &... __args ) [noexcept]`

tie

Definition at line 1605 of file tuple.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::lock()`, and `std::try_lock()`.

#### 3.20.4 Variable Documentation

3.20.4.1 `template<typename _Tp, std::size_t _Nm> enable_if<__and<__not<__is_tuple_like<_Tp>>, is_move_constructible<_Tp>, is_move_assignable<_Tp>>::value>::type std::noexcept(__and< is_nothrow_move_constructible<_Tp>, is_nothrow_move_assignable<_Tp>>::value) ( noexcept(__one.swap(__two)) ) [inline]`

swap

Definition at line 295 of file array.

Referenced by `std::__profile::swap()`.

3.20.4.2 `_GLIBCXX17_INLINE constexpr piecewise_construct_t std::piecewise_construct`

piecewise\_construct

Definition at line 79 of file stl\_pair.h.

Referenced by `std::map< _Key, _Tp, _Compare, _Alloc >::operator[]()`.

## 3.21 Numeric Arrays

Collaboration diagram for Numeric Arrays:

### Classes

- class [std::gslice](#)
- class [std::gslice\\_array<\\_Tp>](#)
- class [std::indirect\\_array<\\_Tp>](#)
- class [std::mask\\_array<\\_Tp>](#)

### 3.21.1 Detailed Description

Classes and functions for representing and manipulating arrays of elements.

### 3.21.2 Function Documentation

#### 3.21.2.1 `std::gslice::gslice ( )` `[inline]`

Construct an empty slice.

Definition at line 149 of file `gslice.h`.

#### 3.21.2.2 `std::gslice::gslice ( size_t __o, const valarray< size_t > & __l, const valarray< size_t > & __s )` `[inline]`

Construct a slice.

Constructs a slice with as many dimensions as the length of the `l` and `s` arrays.

#### Parameters

<code>__o</code>	Offset in array of first element.
<code>__l</code>	Array of dimension lengths.
<code>__s</code>	Array of dimension strides between array elements.

Definition at line 153 of file `gslice.h`.

#### 3.21.2.3 `std::gslice::gslice ( const gslice & __g )` `[inline]`

Copy constructor.

Definition at line 158 of file `gslice.h`.

#### 3.21.2.4 `template<typename _Tp > std::gslice_array< _Tp >::gslice_array ( const gslice_array< _Tp > & __a )` `[inline]`

Copy constructor. Both slices refer to the same underlying array.

Definition at line 143 of file `gslice_array.h`.

3.21.2.5 `template<typename _Tp> std::indirect_array<_Tp>::indirect_array ( const indirect_array<_Tp> &_a )`  
`[inline]`

Copy constructor. Both slices refer to the same underlying array.

Definition at line 143 of file `indirect_array.h`.

3.21.2.6 `template<typename _Tp> std::mask_array<_Tp>::mask_array ( const mask_array<_Tp> &_a )`  
`[inline]`

Copy constructor. Both slices refer to the same underlying array.

Definition at line 139 of file `mask_array.h`.

3.21.2.7 `std::slice::slice ( )` `[inline]`

Construct an empty slice.

Definition at line 90 of file `slice_array.h`.

3.21.2.8 `std::slice::slice ( size_t __o, size_t __d, size_t __s )` `[inline]`

Construct a slice.

Parameters

<code>__o</code>	Offset in array of first element.
<code>__d</code>	Number of elements in slice.
<code>__s</code>	Stride between array elements.

Definition at line 94 of file `slice_array.h`.

3.21.2.9 `template<typename _Tp> std::slice_array<_Tp>::slice_array ( const slice_array<_Tp> &_a )` `[inline]`

Copy constructor. Both slices refer to the same underlying array.

Definition at line 207 of file `slice_array.h`.

3.21.2.10 `template<typename _Tp> std::valarray<_Tp>::valarray ( )` `[inline]`

Construct an empty array.

Definition at line 610 of file `valarray`.

3.21.2.11 `template<typename _Tp> std::valarray<_Tp>::valarray ( size_t __n )` `[inline]`, `[explicit]`

Construct an array with  $n$  elements.

Definition at line 614 of file `valarray`.

3.21.2.12 `template<typename _Tp> std::valarray<_Tp>::valarray ( const _Tp &__t, size_t __n )` `[inline]`

Construct an array with  $n$  elements initialized to  $t$ .

Definition at line 620 of file `valarray`.

3.21.2.13 `template<typename _Tp> std::valarray<_Tp>::valarray ( const valarray<_Tp> &__v )` `[inline]`

Copy constructor.

Definition at line 635 of file `valarray`.

3.21.2.14 `template<typename _Tp> std::valarray<_Tp>::valarray ( valarray<_Tp> && __v ) [inline],  
[noexcept]`

Move constructor.

Definition at line 643 of file valarray.

3.21.2.15 `template<typename _Tp> std::valarray<_Tp>::valarray ( const slice_array<_Tp> & __sa ) [inline]`

Construct an array with the same size and values in *sa*.

Definition at line 653 of file valarray.

3.21.2.16 `template<typename _Tp> std::valarray<_Tp>::valarray ( const gslice_array<_Tp> & __ga ) [inline]`

Construct an array with the same size and values in *ga*.

Definition at line 662 of file valarray.

3.21.2.17 `template<typename _Tp> std::valarray<_Tp>::valarray ( const mask_array<_Tp> & __ma ) [inline]`

Construct an array with the same size and values in *ma*.

Definition at line 673 of file valarray.

3.21.2.18 `template<typename _Tp> std::valarray<_Tp>::valarray ( const indirect_array<_Tp> & __ia ) [inline]`

Construct an array with the same size and values in *ia*.

Definition at line 682 of file valarray.

3.21.2.19 `template<typename _Tp> std::valarray<_Tp>::valarray ( initializer_list<_Tp> __l ) [inline]`

Construct an array with an `initializer_list` of values.

Definition at line 692 of file valarray.

3.21.2.20 `std::gslice::~gslice ( ) [inline]`

Destructor.

Definition at line 163 of file gslice.h.

3.21.2.21 `template<class _Tp> _Expr<_ValFuncClos<_ValArray,_Tp>, _Tp> std::valarray<_Tp>::apply ( _Tp func_Tp )  
const [inline]`

Apply a function to the array.

Returns a new `valarray` with elements assigned to the result of applying `func` to the corresponding element of this array. The new array has the same size as this one.

Parameters

<i>func</i>	Function of <code>Tp</code> returning <code>Tp</code> to apply.
-------------	---

Returns

New `valarray` with transformed elements.

Definition at line 1054 of file valarray.

3.21.2.22 `template<class _Tp> _Expr<_RefFuncClos<_ValArray, _Tp>, _Tp> std::valarray<_Tp>::apply ( _Tp funcconst  
_Tp & ) const [inline]`

Apply a function to the array.

Returns a new valarray with elements assigned to the result of applying func to the corresponding element of this array. The new array has the same size as this one.

#### Parameters

<i>func</i>	Function of const Tp& returning Tp to apply.
-------------	--

#### Returns

New valarray with transformed elements.

Definition at line 1062 of file valarray.

3.21.2.23 `template<class _Tp> _Tp * std::begin ( valarray<_Tp> & __va ) [inline]`

Return an iterator pointing to the first element of the valarray.

#### Parameters

<i>__va</i>	valarray.
-------------	-----------

Definition at line 1201 of file valarray.

References `std::__addressof()`.

3.21.2.24 `template<class _Tp> const _Tp * std::begin ( const valarray<_Tp> & __va ) [inline]`

Return an iterator pointing to the first element of the const valarray.

#### Parameters

<i>__va</i>	valarray.
-------------	-----------

Definition at line 1211 of file valarray.

References `std::__addressof()`.

3.21.2.25 `template<class _Tp> valarray<_Tp> std::valarray<_Tp>::cshift ( int __n ) const [inline]`

Return a rotated array.

A new valarray is constructed as a copy of this array with elements in shifted positions. For an element with index *i*, the new position is  $(i - n) \% \text{size}()$ . The new valarray has the same size as the current one. Elements that are shifted beyond the array bounds are shifted into the other end of the array. No elements are lost.

Positive arguments shift toward index 0, wrapping around the top. Negative arguments shift towards the top, wrapping around to 0.

#### Parameters

<i>__n</i>	Number of element positions to rotate.
------------	--

#### Returns

New valarray with elements in shifted positions.

Definition at line 980 of file valarray.

3.21.2.26 `template<class _Tp > _Tp * std::end ( valarray<_Tp> & __va ) [inline]`

Return an iterator pointing to one past the last element of the valarray.

## Parameters

<code>__va</code>	<code>valarray.</code>
-------------------	------------------------

Definition at line 1221 of file `valarray.`

References `std::__addressof()`, and `std::valarray<_Tp>::size()`.

**3.21.2.27** `template<class _Tp > const _Tp * std::end ( const valarray<_Tp> &__va ) [inline]`

Return an iterator pointing to one past the last element of the `const valarray`.

## Parameters

<code>__va</code>	<code>valarray.</code>
-------------------	------------------------

Definition at line 1231 of file `valarray.`

References `std::__addressof()`, and `std::valarray<_Tp>::size()`.

**3.21.2.28** `template<typename _Tp > _Tp std::valarray<_Tp>::max ( ) const [inline]`

Return the maximum element using `operator<()`.

Definition at line 1046 of file `valarray.`

References `std::max_element()`.

**3.21.2.29** `template<typename _Tp > _Tp std::valarray<_Tp>::min ( ) const [inline]`

Return the minimum element using `operator<()`.

Definition at line 1038 of file `valarray.`

References `std::min_element()`.

Assign all slice elements to *t*.

Definition at line 158 of file `mask_array.h`.

**3.21.2.83** `template<typename _Tp> void std::indirect_array<_Tp>::operator=( const _Tp &__t ) const [inline]`

Assign all slice elements to *t*.

Definition at line 163 of file `indirect_array.h`.

**3.21.2.84** `template<typename _Tp> slice_array<_Tp> & std::slice_array<_Tp>::operator=( const slice_array<_Tp> &__a ) [inline]`

Assignment operator. Assigns slice elements to corresponding elements of *a*.

Definition at line 215 of file `slice_array.h`.

**3.21.2.85** `template<typename _Tp> void std::slice_array<_Tp>::operator=( const valarray<_Tp> &__v ) const [inline]`

Assign slice elements to corresponding elements of *v*.

Definition at line 229 of file `slice_array.h`.

**3.21.2.86** `template<typename _Tp> void std::slice_array<_Tp>::operator=( const _Tp &__t ) const [inline]`

Assign all slice elements to *t*.

Definition at line 224 of file `slice_array.h`.

**3.21.2.87** `template<typename _Tp> valarray<_Tp> & std::valarray<_Tp>::operator=( const valarray<_Tp> &__v ) [inline]`

Assign elements to an array.

Assign elements of array to values in *v*.

## Parameters

<code>__v</code>	Valarray to get values from.
------------------	------------------------------

Definition at line 713 of file valarray.

```
3.21.2.88 template<typename _Tp> valarray<_Tp> & std::valarray<_Tp>::operator= ( valarray<_Tp> && __v )
[inline], [noexcept]
```

Move assign elements to an array.

Move assign elements of array to values in *v*.

## Parameters

<code>__v</code>	Valarray to get values from.
------------------	------------------------------

Definition at line 737 of file valarray.

```
3.21.2.89 template<typename _Tp> valarray<_Tp> & std::valarray<_Tp>::operator= ( const _Tp & __t ) [inline]
```

Assign elements to a value.

Assign all elements of array to *t*.

## Parameters

<code>__t</code>	Value for elements.
------------------	---------------------

Definition at line 777 of file valarray.

```
3.21.2.90 template<typename _Tp> valarray<_Tp> & std::valarray<_Tp>::operator= ( const slice_array<_Tp> & __sa
) [inline]
```

Assign elements to an array subset.

Assign elements of array to values in *sa*. Results are undefined if *sa* does not have the same size as this array.

## Parameters

<code>__sa</code>	Array slice to get values from.
-------------------	---------------------------------

Definition at line 785 of file valarray.

```
3.21.2.91 template<typename _Tp> valarray<_Tp> & std::valarray<_Tp>::operator= ( const gslice_array<_Tp> &
__ga ) [inline]
```

Assign elements to an array subset.

Assign elements of array to values in *ga*. Results are undefined if *ga* does not have the same size as this array.

## Parameters

<code>__ga</code>	Array slice to get values from.
-------------------	---------------------------------

Definition at line 795 of file valarray.

References `std::valarray<_Tp>::size()`.

```
3.21.2.92 template<typename _Tp> valarray<_Tp> & std::valarray<_Tp>::operator= ( const mask_array<_Tp> &
__ma ) [inline]
```

Assign elements to an array subset.

---

Assign elements of array to values in *ma*. Results are undefined if *ma* does not have the same size as this array.

## Parameters

<code>__ma</code>	Array slice to get values from.
-------------------	---------------------------------

Definition at line 805 of file valarray.

**3.21.2.93** `template<typename _Tp> valarray<_Tp> & std::valarray<_Tp>::operator=( const indirect_array<_Tp> & __ia ) [inline]`

Assign elements to an array subset.

Assign elements of array to values in *ia*. Results are undefined if *ia* does not have the same size as this array.

## Parameters

<code>__ia</code>	Array slice to get values from.
-------------------	---------------------------------

Definition at line 815 of file valarray.

**3.21.2.94** `template<typename _Tp> valarray<_Tp> & std::valarray<_Tp>::operator=( initializer_list<_Tp> __l ) [inline]`

Assign elements to an initializer\_list.

Assign elements of array to values in *l*. Results are undefined if *l* does not have the same size as this array.

## Parameters

<code>__l</code>	initializer_list to get values from.
------------------	--------------------------------------

Definition at line 753 of file valarray.

**3.21.2.95** `template<typename _Tp> void std::gslice_array<_Tp>::operator>>= ( const valarray<_Tp> & __v ) const [inline]`

Right shift slice elements by corresponding elements of *v*.

Definition at line 209 of file gslice\_array.h.

**3.21.2.96** `template<typename _Tp> void std::mask_array<_Tp>::operator>>= ( const valarray<_Tp> & __v ) const [inline]`

Right shift slice elements by corresponding elements of *v*.

Definition at line 199 of file mask\_array.h.

**3.21.2.97** `template<typename _Tp> void std::indirect_array<_Tp>::operator>>= ( const valarray<_Tp> & __v ) const [inline]`

Right shift slice elements by corresponding elements of *v*.

Definition at line 203 of file indirect\_array.h.

**3.21.2.98** `template<typename _Tp> void std::slice_array<_Tp>::operator>>= ( const valarray<_Tp> & __v ) const [inline]`

Right shift slice elements by corresponding elements of *v*.

Definition at line 265 of file slice\_array.h.

3.21.2.99 `template<class _Tp> valarray<_Tp> & std::valarray<_Tp>::operator>>= ( const _Tp & __t ) [inline]`

Right shift each element *e* of array by *t* bits.

Definition at line 1113 of file valarray.

3.21.2.100 `template<class _Tp> valarray<_Tp> & std::valarray<_Tp>::operator>>= ( const valarray<_Tp> & __v ) [inline]`

Right shift elements of array by corresponding elements of *v*.

Definition at line 1113 of file valarray.

3.21.2.101 `template<typename _Tp> _Tp & std::valarray<_Tp>::operator[] ( size_t __i ) [inline]`

Return a reference to the *i*'th array element.

#### Parameters

<code>__i</code>	Index of element to return.
------------------	-----------------------------

#### Returns

Reference to the *i*'th element.

Definition at line 581 of file valarray.

3.21.2.102 `template<typename _Tp> _Expr<_SClos<_ValArray, _Tp>, _Tp> std::valarray<_Tp>::operator[] ( slice __s ) const [inline]`

Return an array subset.

Returns a new valarray containing the elements of the array indicated by the slice argument. The new valarray has the same size as the input slice.

#### See Also

slice.

#### Parameters

<code>__s</code>	The source slice.
------------------	-------------------

#### Returns

New valarray containing elements in `__s`.

Definition at line 847 of file valarray.

3.21.2.103 `template<typename _Tp> slice_array<_Tp> std::valarray<_Tp>::operator[] ( slice __s ) [inline]`

Return a reference to an array subset.

Returns a new valarray containing the elements of the array indicated by the slice argument. The new valarray has the same size as the input slice.

#### See Also

slice.

**Parameters**

<code>__s</code>	The source slice.
------------------	-------------------

**Returns**

New valarray containing elements in `__s`.

Definition at line 855 of file valarray.

```
3.21.2.104 template<typename _Tp > _Expr< _GClos< _ValArray, _Tp >, _Tp > std::valarray< _Tp >::operator[] ( const
    gslice & __s ) const [inline]
```

Return an array subset.

Returns a `slice_array` referencing the elements of the array indicated by the slice argument.

**See Also**

`gslice`.

**Parameters**

<code>__s</code>	The source slice.
------------------	-------------------

**Returns**

`Slice_array` referencing elements indicated by `__s`.

Definition at line 860 of file valarray.

```
3.21.2.105 template<typename _Tp > gslice_array< _Tp > std::valarray< _Tp >::operator[] ( const gslice & __s )
    [inline]
```

Return a reference to an array subset.

Returns a new valarray containing the elements of the array indicated by the `gslice` argument. The new valarray has the same size as the input `gslice`.

**See Also**

`gslice`.

**Parameters**

<code>__s</code>	The source <code>gslice</code> .
------------------	----------------------------------

**Returns**

New valarray containing elements in `__s`.

Definition at line 869 of file valarray.

```
3.21.2.106 template<typename _Tp > valarray< _Tp > std::valarray< _Tp >::operator[] ( const valarray< bool > & __m )
    const [inline]
```

Return an array subset.

Returns a new valarray containing the elements of the array indicated by the argument. The input is a valarray of `bool` which represents a bitmask indicating which elements should be copied into the new valarray. Each element of the array is added to the return valarray if the corresponding element of the argument is true.

## Parameters

<code>__m</code>	The valarray bitmask.
------------------	-----------------------

## Returns

New valarray containing elements indicated by `__m`.

Definition at line 877 of file valarray.

References `std::valarray<_Tp>::size()`.

```
3.21.2.107 template<typename _Tp> mask_array<_Tp> std::valarray<_Tp>::operator[] ( const valarray< bool > & __m
) [inline]
```

Return a reference to an array subset.

Returns a new `mask_array` referencing the elements of the array indicated by the argument. The input is a valarray of `bool` which represents a bitmask indicating which elements are part of the subset. Elements of the array are part of the subset if the corresponding element of the argument is true.

## Parameters

<code>__m</code>	The valarray bitmask.
------------------	-----------------------

## Returns

New valarray containing elements indicated by `__m`.

Definition at line 889 of file valarray.

References `std::valarray<_Tp>::size()`.

```
3.21.2.108 template<typename _Tp> _Expr<_IClos<_ValArray, _Tp>, _Tp> std::valarray<_Tp>::operator[] ( const
valarray< size_t > & __i ) const [inline]
```

Return an array subset.

Returns a new valarray containing the elements of the array indicated by the argument. The elements in the argument are interpreted as the indices of elements of this valarray to copy to the return valarray.

## Parameters

<code>__i</code>	The valarray element index list.
------------------	----------------------------------

## Returns

New valarray containing elements in `__s`.

Definition at line 900 of file valarray.

```
3.21.2.109 template<typename _Tp> indirect_array<_Tp> std::valarray<_Tp>::operator[] ( const valarray< size_t > &
__i ) [inline]
```

Return a reference to an array subset.

Returns an `indirect_array` referencing the elements of the array indicated by the argument. The elements in the argument are interpreted as the indices of elements of this valarray to include in the subset. The returned `indirect_array` refers to these elements.

## Parameters

<code>__i</code>	The valarray element index list.
------------------	----------------------------------

## Returns

Indirect\_array referencing elements in `__i`.

Definition at line 908 of file valarray.

References `std::valarray<_Tp>::size()`.

Logical or slice elements with corresponding elements of *v*.

Definition at line 197 of file `mask_array.h`.

3.21.2.118 `template<typename _Tp> void std::indirect_array<_Tp>::operator|=( const valarray<_Tp> &__v ) const [inline]`

Logical or slice elements with corresponding elements of *v*.

Definition at line 201 of file `indirect_array.h`.

3.21.2.119 `template<typename _Tp> void std::slice_array<_Tp>::operator|=( const valarray<_Tp> &__v ) const [inline]`

Logical or slice elements with corresponding elements of *v*.

Definition at line 263 of file `slice_array.h`.

3.21.2.120 `template<class _Tp> valarray<_Tp> & std::valarray<_Tp>::operator|=( const _Tp &__t ) [inline]`

Set each element *e* of array to  $e | t$ .

Definition at line 1111 of file `valarray`.

3.21.2.121 `template<class _Tp> valarray<_Tp> & std::valarray<_Tp>::operator|=( const valarray<_Tp> &__v ) [inline]`

Logical or corresponding elements of *v* with elements of array.

Definition at line 1111 of file `valarray`.

3.21.2.122 `template<typename _Tp> valarray<_Tp>::template _UnaryOp<__bitwise_not>::Rt std::valarray<_Tp>::operator~( ) const [inline]`

Return a new valarray by applying unary  $\sim$  to each element.

Definition at line 1080 of file `valarray`.

3.21.2.123 `template<class _Tp> void std::valarray<_Tp>::resize( size_t __size, _Tp __c = _Tp() ) [inline]`

Resize array.

Resize this array to *size* and set all elements to *c*. All references and iterators are invalidated.

Parameters

<code>__size</code>	New array size.
<code>__c</code>	New value for all elements.

Definition at line 1021 of file `valarray`.

3.21.2.124 `template<class _Tp> valarray<_Tp> std::valarray<_Tp>::shift( int __n ) const [inline]`

Return a shifted array.

A new valarray is constructed as a copy of this array with elements in shifted positions. For an element with index *i*, the new position is  $i - n$ . The new valarray has the same size as the current one. New elements without a value are set to 0. Elements whose new position is outside the bounds of the array are discarded.

Positive arguments shift toward index 0, discarding elements [0, n). Negative arguments discard elements from the top of the array.

#### Parameters

<code>__n</code>	Number of element positions to shift.
------------------	---------------------------------------

#### Returns

New valarray with elements in shifted positions.

Definition at line 939 of file valarray.

**3.21.2.125** `size_t std::slice::size ( ) const [inline]`

Return size of slice.

Definition at line 102 of file slice\_array.h.

**3.21.2.126** `valarray< size_t > std::gslice::size ( ) const [inline]`

Return array of sizes of slice dimensions.

Definition at line 139 of file gslice.h.

**3.21.2.127** `template<class _Tp > size_t std::valarray<_Tp >::size ( ) const [inline]`

Return the number of elements in array.

Definition at line 926 of file valarray.

Referenced by `std::end()`, `std::gslice_array<_Tp >::operator=()`, `std::valarray<_Tp >::operator=()`, and `std::valarray<_Tp >::operator[]()`.

**3.21.2.128** `size_t std::slice::start ( ) const [inline]`

Return array offset of first slice element.

Definition at line 98 of file slice\_array.h.

**3.21.2.129** `size_t std::gslice::start ( ) const [inline]`

Return array offset of first slice element.

Definition at line 135 of file gslice.h.

**3.21.2.130** `size_t std::slice::stride ( ) const [inline]`

Return array stride of slice.

Definition at line 106 of file slice\_array.h.

**3.21.2.131** `valarray< size_t > std::gslice::stride ( ) const [inline]`

Return array of array strides for each dimension.

Definition at line 143 of file gslice.h.

**3.21.2.132** `template<class _Tp > _Tp std::valarray<_Tp >::sum ( ) const [inline]`

Return the sum of all elements in the array.

Accumulates the sum of all elements into a `Tp` using `+=`. The order of adding the elements is unspecified.

Definition at line 931 of file `valarray`.

**3.21.2.133** `template<class _Tp> void std::valarray<_Tp>::swap ( valarray<_Tp> & __v ) [inline],  
[noexcept]`

Swap.

Definition at line 917 of file `valarray`.

## 3.22 Algorithms

Collaboration diagram for Algorithms:

### Modules

- [Mutating](#)
- [Non-Mutating](#)
- [Sorting](#)

### 3.22.1 Detailed Description

Components for performing algorithmic operations. Includes non-modifying sequence, modifying (mutating) sequence, sorting, searching, merge, partition, heap, set, minima, maxima, and permutation operations.

## 3.23 Mutating

## 3.23.1 Detailed Description

## 3.23.2 Function Documentation

3.23.2.1 `template<typename _II, typename _OI > _OI std::copy ( _II __first, _II __last, _OI __result ) [inline]`

Copies the range [first,last) into result.

## Parameters

<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.
<code>__result</code>	An output iterator.

## Returns

`result + (first - last)`

This inline function will boil down to a call to `memmove` whenever possible. Failing that, if random access iterators are passed, then the loop count will be known (and therefore a candidate for compiler optimizations such as unrolling). Result may not be contained within [first,last); the `copy_backward` function should be used instead.

Note that the end of the output range is permitted to be contained within [first,last).

Definition at line 446 of file `stl_algobase.h`.

3.23.2.2 `template<typename _BI1, typename _BI2 > _BI2 std::copy_backward ( _BI1 __first, _BI1 __last, _BI2 __result ) [inline]`

Copies the range [first,last) into result.

## Parameters

<code>__first</code>	A bidirectional iterator.
<code>__last</code>	A bidirectional iterator.
<code>__result</code>	A bidirectional iterator.

## Returns

`result - (first - last)`

The function has the same effect as `copy`, but starts at the end of the range and works its way to the start, returning the start of the result. This inline function will boil down to a call to `memmove` whenever possible. Failing that, if random access iterators are passed, then the loop count will be known (and therefore a candidate for compiler optimizations such as unrolling).

Result may not be in the range (first,last]. Use `copy` instead. Note that the start of the output range may overlap [first,last).

Definition at line 622 of file `stl_algobase.h`.

3.23.2.3 `template<typename _InputIterator, typename _OutputIterator, typename _Predicate > _OutputIterator std::copy_if ( _InputIterator __first, _InputIterator __last, _OutputIterator __result, _Predicate __pred )`

Copy the elements of a sequence for which a predicate is true.

## Parameters

<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.
<code>__result</code>	An output iterator.
<code>__pred</code>	A predicate.

## Returns

An iterator designating the end of the resulting sequence.

Copies each element in the range [`__first`,`__last`) for which `__pred` returns true to the range beginning at `__result`. `copy_if()` is stable, so the relative order of elements that are copied is unchanged.

Definition at line 737 of file `stl_algo.h`.

```
3.23.2.4 template<typename _InputIterator, typename _Size, typename _OutputIterator > _OutputIterator std::copy_n (
    _InputIterator __first, _Size __n, _OutputIterator __result ) [inline]
```

Copies the range [`first`,`first+n`) into [`result`,`result+n`).

## Parameters

<code>__first</code>	An input iterator.
<code>__n</code>	The number of elements to copy.
<code>__result</code>	An output iterator.

## Returns

`result+n`.

This inline function will boil down to a call to `memmove` whenever possible. Failing that, if random access iterators are passed, then the loop count will be known (and therefore a candidate for compiler optimizations such as unrolling).

Definition at line 799 of file `stl_algo.h`.

References `std::__iterator_category()`.

```
3.23.2.5 template<typename _ForwardIterator, typename _Tp > void std::fill ( _ForwardIterator __first, _ForwardIterator __last,
    const _Tp & __value ) [inline]
```

Fills the range [`first`,`last`) with copies of `value`.

## Parameters

<code>__first</code>	A forward iterator.
<code>__last</code>	A forward iterator.
<code>__value</code>	A reference-to-const of arbitrary type.

## Returns

Nothing.

This function fills a range with copies of the same value. For char types filling contiguous areas of memory, this becomes an inline call to `memset` or `wmemset`.

Definition at line 724 of file `stl_algobase.h`.

---

3.23.2.6 `template<typename _OI, typename _Size, typename _Tp > _OI std::fill_n ( _OI __first, _Size __n, const _Tp & __value )`  
`[inline]`

Fills the range `[first,first+n)` with copies of `value`.

**Parameters**

<code>__first</code>	An output iterator.
<code>__n</code>	The count of copies to perform.
<code>__value</code>	A reference-to-const of arbitrary type.

**Returns**

The iterator at `first+n`.

This function fills a range with copies of the same value. For char types filling contiguous areas of memory, this becomes an inline call to `memset` or `@ wmemset`.

`_GLIBCXX_RESOLVE_LIB_DEFECTS` DR 865. More algorithms that throw away information

Definition at line 784 of file `stl_algobase.h`.

```
3.23.2.7 template<typename _ForwardIterator, typename _Generator> void std::generate ( _ForwardIterator __first,
    _ForwardIterator __last, _Generator __gen )
```

Assign the result of a function object to each value in a sequence.

**Parameters**

<code>__first</code>	A forward iterator.
<code>__last</code>	A forward iterator.
<code>__gen</code>	A function object taking no arguments and returning <code>std::iterator_traits&lt;_ForwardIterator&gt;::value_type</code>

**Returns**

`generate()` returns no value.

Performs the assignment `*i = __gen()` for each `i` in the range `[__first, __last)`.

Definition at line 4426 of file `stl_algo.h`.

```
3.23.2.8 template<typename _OutputIterator, typename _Size, typename _Generator> _OutputIterator std::generate_n (
    _OutputIterator __first, _Size __n, _Generator __gen )
```

Assign the result of a function object to each value in a sequence.

**Parameters**

<code>__first</code>	A forward iterator.
<code>__n</code>	The length of the sequence.
<code>__gen</code>	A function object taking no arguments and returning <code>std::iterator_traits&lt;_ForwardIterator&gt;::value_type</code>

**Returns**

The end of the sequence, `__first+__n`

Performs the assignment `*i = __gen()` for each `i` in the range `[__first, __first+__n)`.

`_GLIBCXX_RESOLVE_LIB_DEFECTS` DR 865. More algorithms that throw away information

Definition at line 4457 of file `stl_algo.h`.

---

3.23.2.9 `template<typename _InputIterator, typename _Predicate > bool std::is_partitioned ( _InputIterator __first, _InputIterator __last, _Predicate __pred ) [inline]`

Checks whether the sequence is partitioned.

**Parameters**

<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.
<code>__pred</code>	A predicate.

**Returns**

True if the range `[__first,__last)` is partitioned by `__pred`, i.e. if all elements that satisfy `__pred` appear before those that do not.

Definition at line 582 of file `stl_algo.h`.

References `std::find_if_not()`, and `std::none_of()`.

3.23.2.10 `template<typename _ForwardIterator1 , typename _ForwardIterator2 > void std::iter_swap ( _ForwardIterator1 __a, _ForwardIterator2 __b ) [inline]`

Swaps the contents of two iterators.

**Parameters**

<code>__a</code>	An iterator.
<code>__b</code>	Another iterator.

**Returns**

Nothing.

This function swaps the values pointed to by two iterators, not the iterators themselves.

Definition at line 120 of file `stl_algobase.h`.

Referenced by `std::__merge_without_buffer()`, `std::__move_median_to_first()`, `std::__partition()`, `std::__reverse()`, `std::__unguarded_partition()`, `std::random_shuffle()`, `std::shuffle()`, and `std::swap_ranges()`.

3.23.2.11 `template<typename _II , typename _OI > _OI std::move ( _II __first, _II __last, _OI __result ) [inline]`

Moves the range `[first,last)` into `result`.

**Parameters**

<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.
<code>__result</code>	An output iterator.

**Returns**

`result + (first - last)`

This inline function will boil down to a call to `memmove` whenever possible. Failing that, if random access iterators are passed, then the loop count will be known (and therefore a candidate for compiler optimizations such as unrolling). Result may not be contained within `[first,last)`; the `move_backward` function should be used instead.

Note that the end of the output range is permitted to be contained within `[first,last)`.

Definition at line 479 of file `stl_algobase.h`.

---

3.23.2.12 `template<typename _BI1, typename _BI2 > _BI2 std::move_backward ( _BI1 __first, _BI1 __last, _BI2 __result )`  
`[inline]`

Moves the range [first,last) into result.

**Parameters**

<code>__first</code>	A bidirectional iterator.
<code>__last</code>	A bidirectional iterator.
<code>__result</code>	A bidirectional iterator.

**Returns**

result - (first - last)

The function has the same effect as `move`, but starts at the end of the range and works its way to the start, returning the start of the result. This inline function will boil down to a call to `memmove` whenever possible. Failing that, if random access iterators are passed, then the loop count will be known (and therefore a candidate for compiler optimizations such as unrolling).

Result may not be in the range `[first,last]`. Use `move` instead. Note that the start of the output range may overlap `[first,last]`.

Definition at line 658 of file `stl_algobase.h`.

```
3.23.2.13 template<typename _ForwardIterator, typename _Predicate> _ForwardIterator std::partition ( _ForwardIterator __first,
    _ForwardIterator __last, _Predicate __pred ) [inline]
```

Move elements for which a predicate is true to the beginning of a sequence.

**Parameters**

<code>__first</code>	A forward iterator.
<code>__last</code>	A forward iterator.
<code>__pred</code>	A predicate functor.

**Returns**

An iterator `middle` such that `__pred(i)` is true for each iterator `i` in the range `[__first,middle)` and false for each `i` in the range `[middle,__last)`.

`__pred` must not modify its operand. `partition()` does not preserve the relative ordering of elements in each group, use `stable_partition()` if this is needed.

Definition at line 4641 of file `stl_algo.h`.

References `std::iterator_category()`, and `std::__partition()`.

```
3.23.2.14 template<typename _InputIterator, typename _OutputIterator1, typename _OutputIterator2, typename _Predicate
    > pair<_OutputIterator1, _OutputIterator2> std::partition_copy ( _InputIterator __first, _InputIterator __last,
    _OutputIterator1 __out_true, _OutputIterator2 __out_false, _Predicate __pred )
```

Copy the elements of a sequence to separate output sequences depending on the truth value of a predicate.

**Parameters**

<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.
<code>__out_true</code>	An output iterator.

<code>__out_false</code>	An output iterator.
<code>__pred</code>	A predicate.

**Returns**

A pair designating the ends of the resulting sequences.

Copies each element in the range `[__first, __last)` for which `__pred` returns true to the range beginning at `out_true` and each element for which `__pred` returns false to `__out_false`.

Definition at line 828 of file `stl_algo.h`.

3.23.2.15 `template<typename _ForwardIterator, typename _Predicate > _ForwardIterator std::partition_point ( _ForwardIterator __first, _ForwardIterator __last, _Predicate __pred )`

Find the partition point of a partitioned range.

**Parameters**

<code>__first</code>	An iterator.
<code>__last</code>	Another iterator.
<code>__pred</code>	A predicate.

**Returns**

An iterator `mid` such that `all_of(__first, mid, __pred)` and `none_of(mid, __last, __pred)` are both true.

Definition at line 603 of file `stl_algo.h`.

References `std::advance()`, and `std::distance()`.

3.23.2.16 `template<typename _RandomAccessIterator, typename _RandomNumberGenerator > void std::random_shuffle ( _RandomAccessIterator __first, _RandomAccessIterator __last, _RandomNumberGenerator && __rand )`

Shuffle the elements of a sequence using a random number generator.

**Parameters**

<code>__first</code>	A forward iterator.
<code>__last</code>	A forward iterator.
<code>__rand</code>	The RNG functor or function.

**Returns**

Nothing.

Reorders the elements in the range `[__first, __last)` using `__rand` to provide a random distribution. Calling `__rand(-N)` for a positive integer `N` should return a randomly chosen integer from the range `[0,N)`.

Definition at line 4601 of file `stl_algo.h`.

References `std::iter_swap()`.

3.23.2.17 `template<typename _ForwardIterator, typename _Tp > _ForwardIterator std::remove ( _ForwardIterator __first, _ForwardIterator __last, const _Tp & __value ) [inline]`

Remove elements from a sequence.

**Parameters**

<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.
<code>__value</code>	The value to be removed.

**Returns**

An iterator designating the end of the resulting sequence.

All elements equal to `__value` are removed from the range `[__first,__last)`.

`remove()` is stable, so the relative order of elements that are not removed is unchanged.

Elements between the end of the resulting sequence and `__last` are still present, but their value is unspecified.

Definition at line 896 of file `stl_algo.h`.

```
3.23.2.18 template<typename _InputIterator , typename _OutputIterator , typename _Tp > _OutputIterator std::remove_copy (
    _InputIterator __first, _InputIterator __last, _OutputIterator __result, const _Tp & __value ) [inline]
```

Copy a sequence, removing elements of a given value.

**Parameters**

<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.
<code>__result</code>	An output iterator.
<code>__value</code>	The value to be removed.

**Returns**

An iterator designating the end of the resulting sequence.

Copies each element in the range `[__first,__last)` not equal to `__value` to the range beginning at `__result`. `remove_copy()` is stable, so the relative order of elements that are copied is unchanged.

Definition at line 670 of file `stl_algo.h`.

```
3.23.2.19 template<typename _InputIterator , typename _OutputIterator , typename _Predicate > _OutputIterator
std::remove_copy_if ( _InputIterator __first, _InputIterator __last, _OutputIterator __result, _Predicate __pred )
[inline]
```

Copy a sequence, removing elements for which a predicate is true.

**Parameters**

<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.
<code>__result</code>	An output iterator.
<code>__pred</code>	A predicate.

**Returns**

An iterator designating the end of the resulting sequence.

Copies each element in the range `[__first,__last)` for which `__pred` returns false to the range beginning at `__result`.

`remove_copy_if()` is stable, so the relative order of elements that are copied is unchanged.

Definition at line 703 of file `stl_algo.h`.

---

3.23.2.20 `template<typename _ForwardIterator, typename _Predicate> _ForwardIterator std::remove_if ( _ForwardIterator __first, _ForwardIterator __last, _Predicate __pred ) [inline]`

Remove elements from a sequence using a predicate.

**Parameters**

<code>__first</code>	A forward iterator.
<code>__last</code>	A forward iterator.
<code>__pred</code>	A predicate.

**Returns**

An iterator designating the end of the resulting sequence.

All elements for which `__pred` returns true are removed from the range `[__first,__last)`.

`remove_if()` is stable, so the relative order of elements that are not removed is unchanged.

Elements between the end of the resulting sequence and `__last` are still present, but their value is unspecified.

Definition at line 929 of file `stl_algo.h`.

```
3.23.2.21 template<typename _ForwardIterator, typename _Tp> void std::remove_if ( _ForwardIterator __first, _ForwardIterator
    __last, const _Tp & __old_value, const _Tp & __new_value )
```

Replace each occurrence of one value in a sequence with another value.

**Parameters**

<code>__first</code>	A forward iterator.
<code>__last</code>	A forward iterator.
<code>__old_value</code>	The value to be replaced.
<code>__new_value</code>	The replacement value.

**Returns**

`replace()` returns no value.

For each iterator `i` in the range `[__first,__last)` if `*i == __old_value` then the assignment `*i = __new_value` is performed.

Definition at line 4362 of file `stl_algo.h`.

```
3.23.2.22 template<typename _InputIterator, typename _OutputIterator, typename _Predicate, typename _Tp> _OutputIterator
    std::replace_copy_if ( _InputIterator __first, _InputIterator __last, _OutputIterator __result, _Predicate __pred, const _Tp
    & __new_value ) [inline]
```

Copy a sequence, replacing each value for which a predicate returns true with another value.

**Parameters**

<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.
<code>__result</code>	An output iterator.
<code>__pred</code>	A predicate.
<code>__new_value</code>	The replacement value.

**Returns**

The end of the output sequence, `__result+(__last-__first)`.

Copies each element in the range `[__first,__last)` to the range `[__result,__result+(__last-__first))` replacing elements for which `__pred` returns true with `__new_value`.

Definition at line 3171 of file `stl_algo.h`.

3.23.2.23 `template<typename _ForwardIterator, typename _Predicate, typename _Tp > void std::replace_if ( _ForwardIterator __first, _ForwardIterator __last, _Predicate __pred, const _Tp & __new_value )`

Replace each value in a sequence for which a predicate returns true with another value.

#### Parameters

<code>__first</code>	A forward iterator.
<code>__last</code>	A forward iterator.
<code>__pred</code>	A predicate.
<code>__new_value</code>	The replacement value.

#### Returns

`replace_if()` returns no value.

For each iterator `i` in the range `[__first, __last)` if `__pred(*i)` is true then the assignment `*i = __new_value` is performed.

Definition at line 4394 of file `stl_algo.h`.

3.23.2.24 `template<typename _BidirectionalIterator > void std::reverse ( _BidirectionalIterator __first, _BidirectionalIterator __last ) [inline]`

Reverse a sequence.

#### Parameters

<code>__first</code>	A bidirectional iterator.
<code>__last</code>	A bidirectional iterator.

#### Returns

`reverse()` returns no value.

Reverses the order of the elements in the range `[__first, __last)`, so that the first element becomes the last etc. For every `i` such that  $0 \leq i \leq (\_last - \_first) / 2$ , `reverse()` swaps `*(__first+i)` and `*(__last-(i+1))`

Definition at line 1180 of file `stl_algo.h`.

References `std::__iterator_category()`, and `std::__reverse()`.

3.23.2.25 `template<typename _BidirectionalIterator, typename _OutputIterator > _OutputIterator std::reverse_copy ( _BidirectionalIterator __first, _BidirectionalIterator __last, _OutputIterator __result )`

Copy a sequence, reversing its elements.

#### Parameters

<code>__first</code>	A bidirectional iterator.
<code>__last</code>	A bidirectional iterator.
<code>__result</code>	An output iterator.

#### Returns

An iterator designating the end of the resulting sequence.

Copies the elements in the range `[__first, __last)` to the range `[__result, __result+(__last-__first))` such that the order of the elements is reversed. For every `i` such that  $0 \leq i \leq (\_last - \_first)$ , `reverse_copy()` performs the assignment

$*(\_result+(\_last-\_first)-1-i) = *(\_first+i)$ . The ranges  $[\_first,\_last)$  and  $[\_result,\_result+(\_last-\_first))$  must not overlap.

Definition at line 1207 of file `stl_algo.h`.

**3.23.2.26** `template<typename _ForwardIterator > _ForwardIterator std::V2::rotate ( _ForwardIterator __first, _ForwardIterator __middle, _ForwardIterator __last ) [inline]`

Rotate the elements of a sequence.

#### Parameters

<code>__first</code>	A forward iterator.
<code>__middle</code>	A forward iterator.
<code>__last</code>	A forward iterator.

#### Returns

`first + (last - middle)`.

Rotates the elements of the range  $[\_first,\_last)$  by  $(\_middle - \_first)$  positions so that the element at `__middle` is moved to `__first`, the element at `__middle+1` is moved to `__first+1` and so on for each element in the range  $[\_first,\_last)$ .

This effectively swaps the ranges  $[\_first,\_middle)$  and  $[\_middle,\_last)$ .

Performs  $*(\_first+(n+(\_last-\_middle))\%(\_last-\_first))=*(\_first+n)$  for each  $n$  in the range  $[0,\_last-\_first)$ .

Definition at line 1434 of file `stl_algo.h`.

References `std::iterator_category()`.

**3.23.2.27** `template<typename _ForwardIterator, typename _OutputIterator > _OutputIterator std::rotate_copy ( _ForwardIterator __first, _ForwardIterator __middle, _ForwardIterator __last, _OutputIterator __result ) [inline]`

Copy a sequence, rotating its elements.

#### Parameters

<code>__first</code>	A forward iterator.
<code>__middle</code>	A forward iterator.
<code>__last</code>	A forward iterator.
<code>__result</code>	An output iterator.

#### Returns

An iterator designating the end of the resulting sequence.

Copies the elements of the range  $[\_first,\_last)$  to the range beginning at

#### Returns

, rotating the copied elements by  $(\_middle-\_first)$  positions so that the element at `__middle` is moved to `__result`, the element at `__middle+1` is moved to `__result+1` and so on for each element in the range  $[\_first,\_last)$ .

Performs  $*(\_result+(n+(\_last-\_middle))\%(\_last-\_first))=*(\_first+n)$  for each  $n$  in the range  $[0,\_last-\_first)$ .

Definition at line 1471 of file `stl_algo.h`.

```
3.23.2.28 template<typename _RandomAccessIterator, typename _UniformRandomNumberGenerator > void std::shuffle (
    _RandomAccessIterator __first, _RandomAccessIterator __last, _UniformRandomNumberGenerator && __g )
```

Shuffle the elements of a sequence using a uniform random number generator.

**Parameters**

<code>__first</code>	A forward iterator.
<code>__last</code>	A forward iterator.
<code>__g</code>	A UniformRandomNumberGenerator (26.5.1.3).

**Returns**

Nothing.

Reorders the elements in the range `[__first,__last)` using `__g` to provide random numbers.

Definition at line 3792 of file `stl_algo.h`.

References `std::__gen_two_uniform_ints()`, `std::pair<_T1, _T2 >::first`, `std::iter_swap()`, and `std::pair<_T1, _T2 >::second`.

**3.23.2.29** `template<typename _ForwardIterator, typename _Predicate > _ForwardIterator std::stable_partition ( _ForwardIterator __first, _ForwardIterator __last, _Predicate __pred ) [inline]`

Move elements for which a predicate is true to the beginning of a sequence, preserving relative ordering.

**Parameters**

<code>__first</code>	A forward iterator.
<code>__last</code>	A forward iterator.
<code>__pred</code>	A predicate functor.

**Returns**

An iterator `middle` such that `__pred(i)` is true for each iterator `i` in the range `[first,middle)` and false for each `i` in the range `[middle,last)`.

Performs the same function as `partition()` with the additional guarantee that the relative ordering of elements in each group is preserved, so any two elements `x` and `y` in the range `[__first,__last)` such that `__pred(x) == __pred(y)` will have the same relative ordering after calling `stable_partition()`.

Definition at line 1651 of file `stl_algo.h`.

**3.23.2.30** `template<typename _ForwardIterator1, typename _ForwardIterator2 > _ForwardIterator2 std::swap_ranges ( _ForwardIterator1 __first1, _ForwardIterator1 __last1, _ForwardIterator2 __first2 )`

Swap the elements of two sequences.

**Parameters**

<code>__first1</code>	A forward iterator.
<code>__last1</code>	A forward iterator.
<code>__first2</code>	A forward iterator.

**Returns**

An iterator equal to `first2+(last1-first1)`.

Swaps each element in the range `[first1,last1)` with the corresponding element in the range `[first2,(last1-first1))`. The ranges must not overlap.

Definition at line 166 of file `stl_algobase.h`.

References `std::iter_swap()`.

```
3.23.2.31 template<typename _InputIterator , typename _OutputIterator , typename _UnaryOperation > _OutputIterator  
std::transform ( _InputIterator __first, _InputIterator __last, _OutputIterator __result, _UnaryOperation __unary_op )
```

Perform an operation on a sequence.

## Parameters

<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.
<code>__result</code>	An output iterator.
<code>__unary_op</code>	A unary operator.

## Returns

An output iterator equal to `__result+(__last-__first)`.

Applies the operator to each element in the input range and assigns the results to successive elements of the output sequence. Evaluates `*(__result+N)=unary_op(*(__first+N))` for each `N` in the range `[0,__last-__first)`.

`unary_op` must not alter its argument.

Definition at line 4293 of file `stl_algo.h`.

```
3.23.2.32 template<typename _InputIterator1, typename _InputIterator2, typename _OutputIterator, typename _BinaryOperation >
    _OutputIterator std::transform ( _InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _OutputIterator
    __result, _BinaryOperation __binary_op )
```

Perform an operation on corresponding elements of two sequences.

## Parameters

<code>__first1</code>	An input iterator.
<code>__last1</code>	An input iterator.
<code>__first2</code>	An input iterator.
<code>__result</code>	An output iterator.
<code>__binary_op</code>	A binary operator.

## Returns

An output iterator equal to `result+(last-first)`.

Applies the operator to the corresponding elements in the two input ranges and assigns the results to successive elements of the output sequence. Evaluates `*(__result+N)=__binary_op(*(__first1+N),*(__first2+N))` for each `N` in the range `[0,__last1-__first1)`.

`binary_op` must not alter either of its arguments.

Definition at line 4330 of file `stl_algo.h`.

```
3.23.2.33 template<typename _ForwardIterator > _ForwardIterator std::unique ( _ForwardIterator __first, _ForwardIterator __last )
    [inline]
```

Remove consecutive duplicate values from a sequence.

## Parameters

<code>__first</code>	A forward iterator.
<code>__last</code>	A forward iterator.

**Returns**

An iterator designating the end of the resulting sequence.

Removes all but the first element from each group of consecutive values that compare equal. `unique()` is stable, so the relative order of elements that are not removed is unchanged. Elements between the end of the resulting sequence and `__last` are still present, but their value is unspecified.

Definition at line 995 of file `stl_algo.h`.

```
3.23.2.34 template<typename _ForwardIterator, typename _BinaryPredicate > _ForwardIterator std::unique ( _ForwardIterator
    __first, _ForwardIterator __last, _BinaryPredicate __binary_pred ) [inline]
```

Remove consecutive values from a sequence using a predicate.

**Parameters**

<code>__first</code>	A forward iterator.
<code>__last</code>	A forward iterator.
<code>__binary_pred</code>	A binary predicate.

**Returns**

An iterator designating the end of the resulting sequence.

Removes all but the first element from each group of consecutive values for which `__binary_pred` returns true. `unique()` is stable, so the relative order of elements that are not removed is unchanged. Elements between the end of the resulting sequence and `__last` are still present, but their value is unspecified.

Definition at line 1025 of file `stl_algo.h`.

```
3.23.2.35 template<typename _InputIterator, typename _OutputIterator > _OutputIterator std::unique_copy ( _InputIterator __first,
    _InputIterator __last, _OutputIterator __result ) [inline]
```

Copy a sequence, removing consecutive duplicate values.

**Parameters**

<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.
<code>__result</code>	An output iterator.

**Returns**

An iterator designating the end of the resulting sequence.

Copies each element in the range `[__first, __last)` to the range beginning at `__result`, except that only the first element is copied from groups of consecutive elements that compare equal. `unique_copy()` is stable, so the relative order of elements that are copied is unchanged.

`__GLIBCXX_RESOLVE_LIB_DEFECTS` DR 241. Does `unique_copy()` require `CopyConstructible` and `Assignable`?

`__GLIBCXX_RESOLVE_LIB_DEFECTS` DR 538. 241 again: Does `unique_copy()` require `CopyConstructible` and `Assignable`?

Definition at line 4493 of file `stl_algo.h`.

References `std::__iterator_category()`, and `std::__unique_copy()`.

```
3.23.2.36 template<typename _InputIterator, typename _OutputIterator, typename _BinaryPredicate > _OutputIterator  
std::unique_copy ( _InputIterator __first, _InputIterator __last, _OutputIterator __result, _BinaryPredicate __binary_pred  
) [inline]
```

Copy a sequence, removing consecutive values using a predicate.

## Parameters

<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.
<code>__result</code>	An output iterator.
<code>__binary_pred</code>	A binary predicate.

## Returns

An iterator designating the end of the resulting sequence.

Copies each element in the range `[__first, __last)` to the range beginning at `__result`, except that only the first element is copied from groups of consecutive elements for which `__binary_pred` returns true. `unique_copy()` is stable, so the relative order of elements that are copied is unchanged.

`_GLIBCXX_RESOLVE_LIB_DEFECTS DR 241`. Does `unique_copy()` require CopyConstructible and Assignable?

Definition at line 4534 of file `stl_algo.h`.

References `std::__iterator_category()`, and `std::__unique_copy()`.

### 3.24.1 Detailed Description

### 3.24.2 Function Documentation

3.24.2.1 `template<typename _ForwardIterator > _ForwardIterator std::adjacent_find ( _ForwardIterator __first, _ForwardIterator __last ) [inline]`

Find two adjacent values in a sequence that are equal.

## Parameters

<code>__first</code>	A forward iterator.
<code>__last</code>	A forward iterator.

## Returns

The first iterator `i` such that `i` and `i+1` are both valid iterators in `[__first,__last)` and such that `*i == *(i+1)`, or `__last` if no such iterator exists.

Definition at line 4024 of file `stl_algo.h`.

```
3.24.2.2 template<typename _ForwardIterator, typename _BinaryPredicate> _ForwardIterator std::adjacent_find (
    _ForwardIterator __first, _ForwardIterator __last, _BinaryPredicate __binary_pred ) [inline]
```

Find two adjacent values in a sequence using a predicate.

## Parameters

<code>__first</code>	A forward iterator.
<code>__last</code>	A forward iterator.
<code>__binary_pred</code>	A binary predicate.

## Returns

The first iterator `i` such that `i` and `i+1` are both valid iterators in `[__first,__last)` and such that `__binary_pred(*i,*(i+1))` is true, or `__last` if no such iterator exists.

Definition at line 4049 of file `stl_algo.h`.

```
3.24.2.3 template<typename _InputIterator, typename _Predicate> bool std::all_of ( _InputIterator __first, _InputIterator __last,
    _Predicate __pred ) [inline]
```

Checks that a predicate is true for all the elements of a sequence.

## Parameters

<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.
<code>__pred</code>	A predicate.

## Returns

True if the check is true, false otherwise.

Returns true if `__pred` is true for each element in the range `[__first,__last)`, and false otherwise.

Definition at line 508 of file `stl_algo.h`.

References `std::find_if_not()`.

```
3.24.2.4 template<typename _InputIterator, typename _Predicate> bool std::any_of ( _InputIterator __first, _InputIterator __last,
    _Predicate __pred ) [inline]
```

Checks that a predicate is false for at least an element of a sequence.

## Parameters

<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.
<code>__pred</code>	A predicate.

## Returns

True if the check is true, false otherwise.

Returns true if an element exists in the range `[__first,__last)` such that `__pred` is true, and false otherwise.

Definition at line 543 of file `stl_algo.h`.

References `std::none_of()`.

```
3.24.2.5 template<typename _InputIterator, typename _Tp > iterator_traits<_InputIterator>::difference_type std::count (
    _InputIterator __first, _InputIterator __last, const _Tp & __value ) [inline]
```

Count the number of copies of a value in a sequence.

## Parameters

<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.
<code>__value</code>	The value to be counted.

## Returns

The number of iterators `i` in the range `[__first,__last)` for which `*i == __value`

Definition at line 4074 of file `stl_algo.h`.

```
3.24.2.6 template<typename _InputIterator, typename _Predicate > iterator_traits<_InputIterator>::difference_type std::count_if (
    _InputIterator __first, _InputIterator __last, _Predicate __pred ) [inline]
```

Count the elements of a sequence for which a predicate is true.

## Parameters

<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.
<code>__pred</code>	A predicate.

## Returns

The number of iterators `i` in the range `[__first,__last)` for which `__pred(*i)` is true.

Definition at line 4097 of file `stl_algo.h`.

```
3.24.2.7 template<typename _lIter1, typename _lIter2, typename _BinaryPredicate > bool std::equal ( _lIter1 __first1, _lIter1
    __last1, _lIter2 __first2, _BinaryPredicate __binary_pred ) [inline]
```

Tests a range for element-wise equality.

## Parameters

<code>__first1</code>	An input iterator.
<code>__last1</code>	An input iterator.
<code>__first2</code>	An input iterator.
<code>__binary_pred</code>	A binary predicate <a href="#">functor</a> .

## Returns

A boolean true or false.

This compares the elements of two ranges using the `binary_pred` parameter, and returns true or false depending on whether all of the corresponding elements of the ranges are equal.

Definition at line 1071 of file `stl_algobase.h`.

```
3.24.2.8 template<typename _I1, typename _I2 > bool std::equal ( _I1 __first1, _I1 __last1, _I2 __first2 ) [inline]
```

Tests a range for element-wise equality.

## Parameters

<code>__first1</code>	An input iterator.
<code>__last1</code>	An input iterator.
<code>__first2</code>	An input iterator.

## Returns

A boolean true or false.

This compares the elements of two ranges using `==` and returns true or false depending on whether all of the corresponding elements of the ranges are equal.

Definition at line 1039 of file `stl_algobase.h`.

```
3.24.2.9 template<typename _I1, typename _I2 > bool std::equal ( _I1 __first1, _I1 __last1, _I2 __first2, _I2 __last2 ) [inline]
```

Tests a range for element-wise equality.

## Parameters

<code>__first1</code>	An input iterator.
<code>__last1</code>	An input iterator.
<code>__first2</code>	An input iterator.
<code>__last2</code>	An input iterator.

## Returns

A boolean true or false.

This compares the elements of two ranges using `==` and returns true or false depending on whether all of the corresponding elements of the ranges are equal.

Definition at line 1158 of file `stl_algobase.h`.

```
3.24.2.10 template<typename _Iiter1, typename _Iiter2, typename _BinaryPredicate > bool std::equal ( _Iiter1 __first1, _Iiter1 __last1, _Iiter2 __first2, _Iiter2 __last2, _BinaryPredicate __binary_pred ) [inline]
```

Tests a range for element-wise equality.

## Parameters

<code>__first1</code>	An input iterator.
<code>__last1</code>	An input iterator.
<code>__first2</code>	An input iterator.
<code>__last2</code>	An input iterator.
<code>__binary_pred</code>	A binary predicate <a href="#">functor</a> .

## Returns

A boolean true or false.

This compares the elements of two ranges using the `binary_pred` parameter, and returns true or false depending on whether all of the corresponding elements of the ranges are equal.

Definition at line 1190 of file `stl_algobase.h`.

Referenced by `std::operator==(())`.

```
3.24.2.11 template<typename _InputIterator, typename _Tp > _InputIterator std::find ( _InputIterator __first, _InputIterator __last,
const _Tp & __val ) [inline]
```

Find the first occurrence of a value in a sequence.

## Parameters

<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.
<code>__val</code>	The value to find.

## Returns

The first iterator `i` in the range `[__first, __last)` such that `*i == __val`, or `__last` if no such iterator exists.

Definition at line 3897 of file `stl_algo.h`.

References `std::__find_if()`.

```
3.24.2.12 template<typename _ForwardIterator1, typename _ForwardIterator2 > _ForwardIterator1 std::find_end (
_FowardIterator1 __first1, _ForwardIterator1 __last1, _ForwardIterator2 __first2, _ForwardIterator2 __last2 )
[inline]
```

Find last matching subsequence in a sequence.

## Parameters

<code>__first1</code>	Start of range to search.
<code>__last1</code>	End of range to search.
<code>__first2</code>	Start of sequence to match.
<code>__last2</code>	End of sequence to match.

## Returns

The last iterator `i` in the range `[__first1, __last1-(__last2-__first2))` such that `*(i+N) == *(__first2+N)` for each `N` in the range `[0, __last2-__first2)`, or `__last1` if no such iterator exists.

Searches the range `[__first1, __last1)` for a sub-sequence that compares equal value-by-value with the sequence given by `[__first2, __last2)` and returns an iterator to the `__first` element of the sub-sequence, or `__last1` if the sub-sequence is not found. The sub-sequence will be the last such subsequence contained in `[__first1, __last1)`.

Because the sub-sequence must lie completely within the range  $[\_first1, \_last1)$  it must start at a position less than  $\_last1 - (\_last2 - \_first2)$  where  $\_last2 - \_first2$  is the length of the sub-sequence. This means that the returned iterator  $i$  will be in the range  $[\_first1, \_last1 - (\_last2 - \_first2))$

Definition at line 425 of file `stl_algo.h`.

References `std::iterator_category()`.

```
3.24.2.13 template<typename _ForwardIterator1, typename _ForwardIterator2, typename _BinaryPredicate > _ForwardIterator1
std::find_end ( _ForwardIterator1 __first1, _ForwardIterator1 __last1, _ForwardIterator2 __first2, _ForwardIterator2
__last2, _BinaryPredicate __comp ) [inline]
```

Find last matching subsequence in a sequence using a predicate.

#### Parameters

<code>__first1</code>	Start of range to search.
<code>__last1</code>	End of range to search.
<code>__first2</code>	Start of sequence to match.
<code>__last2</code>	End of sequence to match.
<code>__comp</code>	The predicate to use.

#### Returns

The last iterator  $i$  in the range  $[\_first1, \_last1 - (\_last2 - \_first2))$  such that `predicate(*(i+N), (_first2+N))` is true for each  $N$  in the range  $[0, \_last2 - \_first2)$ , or `__last1` if no such iterator exists.

Searches the range  $[\_first1, \_last1)$  for a sub-sequence that compares equal value-by-value with the sequence given by  $[\_first2, \_last2)$  using `comp` as a predicate and returns an iterator to the first element of the sub-sequence, or `__last1` if the sub-sequence is not found. The sub-sequence will be the last such subsequence contained in  $[\_first1, \_last1)$ .

Because the sub-sequence must lie completely within the range  $[\_first1, \_last1)$  it must start at a position less than  $\_last1 - (\_last2 - \_first2)$  where  $\_last2 - \_first2$  is the length of the sub-sequence. This means that the returned iterator  $i$  will be in the range  $[\_first1, \_last1 - (\_last2 - \_first2))$

Definition at line 474 of file `stl_algo.h`.

References `std::iterator_category()`.

```
3.24.2.14 template<typename _InputIterator, typename _ForwardIterator > _InputIterator std::find_first_of ( _InputIterator __first1,
_InputIterator __last1, _ForwardIterator __first2, _ForwardIterator __last2 )
```

Find element from a set in a sequence.

#### Parameters

<code>__first1</code>	Start of range to search.
<code>__last1</code>	End of range to search.
<code>__first2</code>	Start of match candidates.
<code>__last2</code>	End of match candidates.

#### Returns

The first iterator  $i$  in the range  $[\_first1, \_last1)$  such that `*i == *(i2)` such that  $i2$  is an iterator in  $[\_first2, \_last2)$ , or `__last1` if no such iterator exists.

Searches the range  $[\_first1, \_last1)$  for an element that is equal to some element in the range  $[\_first2, \_last2)$ . If found, returns an iterator in the range  $[\_first1, \_last1)$ , otherwise returns `__last1`.

Definition at line 3952 of file `stl_algo.h`.

```
3.24.2.15 template<typename _InputIterator, typename _ForwardIterator, typename _BinaryPredicate > _InputIterator
std::find_first_of ( _InputIterator __first1, _InputIterator __last1, _ForwardIterator __first2, _ForwardIterator __last2,
    _BinaryPredicate __comp )
```

Find element from a set in a sequence using a predicate.

Parameters

<code>__first1</code>	Start of range to search.
<code>__last1</code>	End of range to search.
<code>__first2</code>	Start of match candidates.
<code>__last2</code>	End of match candidates.
<code>__comp</code>	Predicate to use.

Returns

The first iterator `i` in the range `[__first1, __last1)` such that `comp(*i, *(i2))` is true and `i2` is an iterator in `[__first2, __last2)`, or `__last1` if no such iterator exists.

Searches the range `[__first1, __last1)` for an element that is equal to some element in the range `[__first2, __last2)`. If found, returns an iterator in the range `[__first1, __last1)`, otherwise returns `__last1`.

Definition at line 3993 of file `stl_algo.h`.

```
3.24.2.16 template<typename _InputIterator, typename _Predicate > _InputIterator std::find_if ( _InputIterator __first,
    _InputIterator __last, _Predicate __pred ) [inline]
```

Find the first element in a sequence for which a predicate is true.

Parameters

<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.
<code>__pred</code>	A predicate.

Returns

The first iterator `i` in the range `[__first, __last)` such that `__pred(*i)` is true, or `__last` if no such iterator exists.

Definition at line 3921 of file `stl_algo.h`.

References `std::__find_if()`.

```
3.24.2.17 template<typename _InputIterator, typename _Predicate > _InputIterator std::find_if_not ( _InputIterator __first,
    _InputIterator __last, _Predicate __pred ) [inline]
```

Find the first element in a sequence for which a predicate is false.

Parameters

<code>__first</code>	An input iterator.
----------------------	--------------------

<code>__last</code>	An input iterator.
<code>__pred</code>	A predicate.

**Returns**

The first iterator `i` in the range `[__first, __last)` such that `__pred(*i)` is false, or `__last` if no such iterator exists.

Definition at line 558 of file `stl_algo.h`.

References `std::__find_if_not()`.

3.24.2.18 `template<typename _InputIterator, typename _Function> _Function std::for_each ( _InputIterator __first, _InputIterator __last, _Function __f )`

Apply a function to every element of a sequence.

**Parameters**

<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.
<code>__f</code>	A unary function object.

**Returns**

`__f`

Applies the function object `__f` to each element in the range `[first, last)`. `__f` must not modify the order of the sequence. If `__f` has a return value it is ignored.

Definition at line 3876 of file `stl_algo.h`.

3.24.2.19 `template<typename _ForwardIterator1, typename _ForwardIterator2> bool std::is_permutation ( _ForwardIterator1 __first1, _ForwardIterator1 __last1, _ForwardIterator2 __first2 ) [inline]`

Checks whether a permutation of the second sequence is equal to the first sequence.

**Parameters**

<code>__first1</code>	Start of first range.
<code>__last1</code>	End of first range.
<code>__first2</code>	Start of second range.

**Returns**

true if there exists a permutation of the elements in the range `[__first2, __first2 + (__last1 - __first1))`, beginning with `ForwardIterator2` begin, such that `equal(__first1, __last1, begin)` returns true; otherwise, returns false.

Definition at line 3542 of file `stl_algo.h`.

3.24.2.20 `template<typename _ForwardIterator1, typename _ForwardIterator2, typename _BinaryPredicate> bool std::is_permutation ( _ForwardIterator1 __first1, _ForwardIterator1 __last1, _ForwardIterator2 __first2, _BinaryPredicate __pred ) [inline]`

Checks whether a permutation of the second sequence is equal to the first sequence.

**Parameters**

<code>__first1</code>	Start of first range.
<code>__last1</code>	End of first range.
<code>__first2</code>	Start of second range.
<code>__pred</code>	A binary predicate.

**Returns**

true if there exists a permutation of the elements in the range `[__first2, __first2 + (__last1 - __first1))`, beginning with `ForwardIterator2` begin, such that `equal(__first1, __last1, __begin, __pred)` returns true; otherwise, returns false.

Definition at line 3574 of file `stl_algo.h`.

```
3.24.2.21 template<typename _ForwardIterator1, typename _ForwardIterator2 > bool std::is_permutation ( _ForwardIterator1
    __first1, _ForwardIterator1 __last1, _ForwardIterator2 __first2, _ForwardIterator2 __last2 ) [inline]
```

Checks whether a permutation of the second sequence is equal to the first sequence.

**Parameters**

<code>__first1</code>	Start of first range.
<code>__last1</code>	End of first range.
<code>__first2</code>	Start of second range.
<code>__last2</code>	End of first range.

**Returns**

true if there exists a permutation of the elements in the range `[__first2, __last2)`, beginning with `ForwardIterator2` begin, such that `equal(__first1, __last1, begin)` returns true; otherwise, returns false.

Definition at line 3666 of file `stl_algo.h`.

```
3.24.2.22 template<typename _ForwardIterator1, typename _ForwardIterator2, typename _BinaryPredicate > bool
    std::is_permutation ( _ForwardIterator1 __first1, _ForwardIterator1 __last1, _ForwardIterator2 __first2, _ForwardIterator2
    __last2, _BinaryPredicate __pred ) [inline]
```

Checks whether a permutation of the second sequence is equal to the first sequence.

**Parameters**

<code>__first1</code>	Start of first range.
<code>__last1</code>	End of first range.
<code>__first2</code>	Start of second range.
<code>__last2</code>	End of first range.
<code>__pred</code>	A binary predicate.

**Returns**

true if there exists a permutation of the elements in the range `[__first2, __last2)`, beginning with `ForwardIterator2` begin, such that `equal(__first1, __last1, __begin, __pred)` returns true; otherwise, returns false.

Definition at line 3694 of file `stl_algo.h`.

---

3.24.2.23 `template<typename _InputIterator1, typename _InputIterator2> pair<_InputIterator1, _InputIterator2> std::mismatch (`  
`_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2 ) [inline]`

Finds the places in ranges which don't match.

**Parameters**

<code>__first1</code>	An input iterator.
<code>__last1</code>	An input iterator.
<code>__first2</code>	An input iterator.

**Returns**

A pair of iterators pointing to the first mismatch.

This compares the elements of two ranges using `==` and returns a pair of iterators. The first iterator points into the first range, the second iterator points into the second range, and the elements pointed to by the iterators are not equal.

Definition at line 1300 of file `stl_algobase.h`.

```
3.24.2.24 template<typename _InputIterator1, typename _InputIterator2, typename _BinaryPredicate > pair<_InputIterator1,
    _InputIterator2> std::mismatch ( _InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2,
    _BinaryPredicate __binary_pred ) [inline]
```

Finds the places in ranges which don't match.

**Parameters**

<code>__first1</code>	An input iterator.
<code>__last1</code>	An input iterator.
<code>__first2</code>	An input iterator.
<code>__binary_pred</code>	A binary predicate <a href="#">functor</a> .

**Returns**

A pair of iterators pointing to the first mismatch.

This compares the elements of two ranges using the `binary_pred` parameter, and returns a pair of iterators. The first iterator points into the first range, the second iterator points into the second range, and the elements pointed to by the iterators are not equal.

Definition at line 1334 of file `stl_algobase.h`.

```
3.24.2.25 template<typename _InputIterator1, typename _InputIterator2 > pair<_InputIterator1, _InputIterator2> std::mismatch (
    _InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2 __last2 ) [inline]
```

Finds the places in ranges which don't match.

**Parameters**

<code>__first1</code>	An input iterator.
<code>__last1</code>	An input iterator.
<code>__first2</code>	An input iterator.
<code>__last2</code>	An input iterator.

**Returns**

A pair of iterators pointing to the first mismatch.

This compares the elements of two ranges using `==` and returns a pair of iterators. The first iterator points into the first range, the second iterator points into the second range, and the elements pointed to by the iterators are not equal.

Definition at line 1380 of file `stl_algobase.h`.

```
3.24.2.26 template<typename _InputIterator1 , typename _InputIterator2 , typename _BinaryPredicate > pair<_InputIterator1,
    _InputIterator2> std::mismatch ( _InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2
    __last2, _BinaryPredicate __binary_pred ) [inline]
```

Finds the places in ranges which don't match.

## Parameters

<code>__first1</code>	An input iterator.
<code>__last1</code>	An input iterator.
<code>__first2</code>	An input iterator.
<code>__last2</code>	An input iterator.
<code>__binary_pred</code>	A binary predicate <a href="#">functor</a> .

## Returns

A pair of iterators pointing to the first mismatch.

This compares the elements of two ranges using the `binary_pred` parameter, and returns a pair of iterators. The first iterator points into the first range, the second iterator points into the second range, and the elements pointed to by the iterators are not equal.

Definition at line 1416 of file `stl_algobase.h`.

```
3.24.2.27 template<typename _InputIterator, typename _Predicate> bool std::none_of(
    _InputIterator __first, _InputIterator __last, _Predicate __pred) [inline]
```

Checks that a predicate is false for all the elements of a sequence.

## Parameters

<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.
<code>__pred</code>	A predicate.

## Returns

True if the check is true, false otherwise.

Returns true if `__pred` is false for each element in the range `[__first, __last)`, and false otherwise.

Definition at line 525 of file `stl_algo.h`.

Referenced by `std::any_of()`, and `std::is_partitioned()`.

```
3.24.2.28 template<typename _ForwardIterator1, typename _ForwardIterator2>
    _ForwardIterator1 std::search(
    _ForwardIterator1 __first1, _ForwardIterator1 __last1,
    _ForwardIterator2 __first2, _ForwardIterator2 __last2) [inline]
```

Search a sequence for a matching sub-sequence.

## Parameters

<code>__first1</code>	A forward iterator.
<code>__last1</code>	A forward iterator.
<code>__first2</code>	A forward iterator.
<code>__last2</code>	A forward iterator.

## Returns

The first iterator `i` in the range `[__first1, __last1 - (__last2 - __first2))` such that `*(i+N) == *(__first2+N)` for each `N` in the range `[0, __last2 - __first2)`, or `__last1` if no such iterator exists.

Searches the range `[__first1, __last1)` for a sub-sequence that compares equal value-by-value with the sequence given by `[__first2, __last2)` and returns an iterator to the first element of the sub-sequence, or `__last1` if the sub-sequence is not found.

Because the sub-sequence must lie completely within the range  $[\_first1, \_last1)$  it must start at a position less than  $\_last1 - (\_last2 - \_first2)$  where  $\_last2 - \_first2$  is the length of the sub-sequence.

This means that the returned iterator  $i$  will be in the range  $[\_first1, \_last1 - (\_last2 - \_first2))$

Definition at line 4137 of file `stl_algo.h`.

```
3.24.2.29 template<typename _ForwardIterator1, typename _ForwardIterator2, typename _BinaryPredicate > _ForwardIterator1
std::search( _ForwardIterator1 __first1, _ForwardIterator1 __last1, _ForwardIterator2 __first2, _ForwardIterator2 __last2,
    _BinaryPredicate __predicate ) [inline]
```

Search a sequence for a matching sub-sequence using a predicate.

#### Parameters

<code>__first1</code>	A forward iterator.
<code>__last1</code>	A forward iterator.
<code>__first2</code>	A forward iterator.
<code>__last2</code>	A forward iterator.
<code>__predicate</code>	A binary predicate.

#### Returns

The first iterator  $i$  in the range  $[\_first1, \_last1 - (\_last2 - \_first2))$  such that `__predicate(*(i+N),*(\_first2+N))` is true for each  $N$  in the range  $[0, \_last2 - \_first2)$ , or `__last1` if no such iterator exists.

Searches the range  $[\_first1, \_last1)$  for a sub-sequence that compares equal value-by-value with the sequence given by  $[\_first2, \_last2)$ , using `__predicate` to determine equality, and returns an iterator to the first element of the sub-sequence, or `__last1` if no such iterator exists.

```
3.24.2.30 template<typename _ForwardIterator, typename _Integer, typename _Tp > _ForwardIterator std::search_n(
    _ForwardIterator __first, _ForwardIterator __last, _Integer __count, const _Tp & __val ) [inline]
```

Search a sequence for a number of consecutive values.

#### Parameters

<code>__first</code>	A forward iterator.
<code>__last</code>	A forward iterator.
<code>__count</code>	The number of consecutive values.
<code>__val</code>	The value to find.

#### Returns

The first iterator  $i$  in the range  $[\_first, \_last - \_count)$  such that `*(i+N) == __val` for each  $N$  in the range  $[0, \_count)$ , or `__last` if no such iterator exists.

Searches the range  $[\_first, \_last)$  for `count` consecutive elements equal to `__val`.

Definition at line 4211 of file `stl_algo.h`.

```
3.24.2.31 template<typename _ForwardIterator, typename _Integer, typename _Tp, typename _BinaryPredicate > _ForwardIterator
std::search_n( _ForwardIterator __first, _ForwardIterator __last, _Integer __count, const _Tp & __val, _BinaryPredicate
__binary_pred ) [inline]
```

Search a sequence for a number of consecutive values using a predicate.

## Parameters

<code>__first</code>	A forward iterator.
<code>__last</code>	A forward iterator.
<code>__count</code>	The number of consecutive values.
<code>__val</code>	The value to find.
<code>__binary_pred</code>	A binary predicate.

## Returns

The first iterator `i` in the range `[__first, __last - __count)` such that `__binary_pred(*(i+N), __val)` is true for each `N` in the range `[0, __count)`, or `__last` if no such iterator exists.

Searches the range `[__first, __last)` for `__count` consecutive elements for which the predicate returns true.

Definition at line 4245 of file `stl_algo.h`.

### 3.25.1 Detailed Description

### 3.25.2 Function Documentation

#### 3.25.2.1 `template<typename _BidirectionalIterator > void std::inplace_merge ( _BidirectionalIterator __first, _BidirectionalIterator __middle, _BidirectionalIterator __last ) [inline]`

Merges two sorted ranges in place.

#### Parameters

<code>__first</code>	An iterator.
<code>__middle</code>	Another iterator.
<code>__last</code>	Another iterator.

#### Returns

Nothing.

Merges two sorted and consecutive ranges, [`__first`, `__middle`) and [`__middle`, `__last`), and puts the result in [`__first`, `__last`). The output will be sorted. The sort is *stable*, that is, for equivalent elements in the two ranges, elements from the first range will always come before elements from the second.

If enough additional memory is available, this takes (`__last` - `__first`) - 1 comparisons. Otherwise an NlogN algorithm is used, where N is `distance(__first, __last)`.

Definition at line 2574 of file `stl_algo.h`.

#### 3.25.2.2 `template<typename _BidirectionalIterator, typename _Compare > void std::inplace_merge ( _BidirectionalIterator __first, _BidirectionalIterator __middle, _BidirectionalIterator __last, _Compare __comp ) [inline]`

Merges two sorted ranges in place.

## Parameters

<code>__first</code>	An iterator.
<code>__middle</code>	Another iterator.
<code>__last</code>	Another iterator.
<code>__comp</code>	A functor to use for comparisons.

## Returns

Nothing.

Merges two sorted and consecutive ranges, [`__first`,`__middle`) and [`middle`,`last`), and puts the result in [`__first`,`__last`). The output will be sorted. The sort is *stable*, that is, for equivalent elements in the two ranges, elements from the first range will always come before elements from the second.

If enough additional memory is available, this takes  $(\text{__last} - \text{__first}) - 1$  comparisons. Otherwise an  $N \log N$  algorithm is used, where  $N$  is  $\text{distance}(\text{__first}, \text{__last})$ .

The comparison function should have the same effects on ordering as the function used for the initial sort.

Definition at line 2615 of file `stl_algo.h`.

```
3.25.2.3 template<typename _ForwardIterator > bool std::is_sorted ( _ForwardIterator __first, _ForwardIterator __last )
[inline]
```

Determines whether the elements of a sequence are sorted.

## Parameters

<code>__first</code>	An iterator.
<code>__last</code>	Another iterator.

## Returns

True if the elements are sorted, false otherwise.

Definition at line 3209 of file `stl_algo.h`.

References `std::is_sorted_until()`.

```
3.25.2.4 template<typename _ForwardIterator , typename _Compare > bool std::is_sorted ( _ForwardIterator __first,
_FForwardIterator __last, _Compare __comp ) [inline]
```

Determines whether the elements of a sequence are sorted according to a comparison functor.

## Parameters

<code>__first</code>	An iterator.
<code>__last</code>	Another iterator.
<code>__comp</code>	A comparison functor.

## Returns

True if the elements are sorted, false otherwise.

Definition at line 3223 of file `stl_algo.h`.

References `std::is_sorted_until()`.

3.25.2.5 `template<typename _ForwardIterator > _ForwardIterator std::is_sorted_until ( _ForwardIterator __first, _ForwardIterator __last ) [inline]`

Determines the end of a sorted sequence.

## Parameters

<code>__first</code>	An iterator.
<code>__last</code>	Another iterator.

## Returns

An iterator pointing to the last iterator `i` in `[__first, __last)` for which the range `[__first, i)` is sorted.

Definition at line 3252 of file `stl_algo.h`.

3.25.2.6 `template<typename _ForwardIterator, typename _Compare > _ForwardIterator std::is_sorted_until ( _ForwardIterator __first, _ForwardIterator __last, _Compare __comp ) [inline]`

Determines the end of a sorted sequence using comparison functor.

## Parameters

<code>__first</code>	An iterator.
<code>__last</code>	Another iterator.
<code>__comp</code>	A comparison functor.

## Returns

An iterator pointing to the last iterator `i` in `[__first, __last)` for which the range `[__first, i)` is sorted.

Definition at line 3276 of file `stl_algo.h`.

Referenced by `std::is_sorted()`.

3.25.2.7 `template<typename _II1, typename _II2 > bool std::lexicographical_compare ( _II1 __first1, _II1 __last1, _II2 __first2, _II2 __last2 ) [inline]`

Performs **dictionary** comparison on ranges.

## Parameters

<code>__first1</code>	An input iterator.
<code>__last1</code>	An input iterator.
<code>__first2</code>	An input iterator.
<code>__last2</code>	An input iterator.

## Returns

A boolean true or false.

*Returns true if the sequence of elements defined by the range `[first1,last1)` is lexicographically less than the sequence of elements defined by the range `[first2,last2)`. Returns false otherwise.* (Quoted from [25.3.8]/1.) If the iterators are all character pointers, then this is an inline call to `memcmp`.

Definition at line 1221 of file `stl_algobase.h`.

3.25.2.8 `template<typename _II1, typename _II2, typename _Compare > bool std::lexicographical_compare ( _II1 __first1, _II1 __last1, _II2 __first2, _II2 __last2, _Compare __comp ) [inline]`

Performs **dictionary** comparison on ranges.

## Parameters

<code>__first1</code>	An input iterator.
<code>__last1</code>	An input iterator.
<code>__first2</code>	An input iterator.
<code>__last2</code>	An input iterator.
<code>__comp</code>	A <a href="#">comparison functor</a> .

## Returns

A boolean true or false.

The same as the four-parameter `lexicographical_compare`, but uses the `comp` parameter instead of `<`.

Definition at line 1257 of file `stl_algobase.h`.

Referenced by `std::operator<()`.

3.25.2.9 `template<typename _Tp > _GLIBCXX14_CONSTEXPR const _Tp & std::max ( const _Tp & __a, const _Tp & __b )`  
`[inline]`

This does what you think it does.

## Parameters

<code>__a</code>	A thing of arbitrary type.
<code>__b</code>	Another thing of arbitrary type.

## Returns

The greater of the parameters.

This is the simple classic generic implementation. It will work on temporary expressions, since they are only evaluated once, unlike a preprocessor macro.

Definition at line 219 of file `stl_algobase.h`.

Referenced by `__gnu_parallel::__parallel_nth_element()`, `std::_Deque_base< _Tp, _Alloc >::_M_initialize_map()`, `std::deque< _Tp, _Alloc >::_M_reallocate_map()`, `std::discard_block_engine< _RandomNumberEngine, __p, __r >::max()`, `std::shuffle_order_engine< _RandomNumberEngine, __k >::max()`, `__gnu_parallel::multiseq_partition()`, and `__gnu_parallel::multiseq_selection()`.

3.25.2.10 `template<typename _Tp, typename _Compare > _GLIBCXX14_CONSTEXPR const _Tp & std::max ( const _Tp & __a, const _Tp & __b, _Compare __comp )` `[inline]`

This does what you think it does.

## Parameters

<code>__a</code>	A thing of arbitrary type.
<code>__b</code>	Another thing of arbitrary type.
<code>__comp</code>	A <a href="#">comparison functor</a> .

## Returns

The greater of the parameters.

This will work on temporary expressions, since they are only evaluated once, unlike a preprocessor macro.

Definition at line 265 of file `stl_algobase.h`.

---

3.25.2.11 `template<typename _ForwardIterator > _GLIBCXX14_CONSTEXPR _ForwardIterator std::max_element ( _ForwardIterator  
__first, _ForwardIterator __last ) [inline]`

Return the maximum element in a range.

## Parameters

<code>__first</code>	Start of range.
<code>__last</code>	End of range.

## Returns

Iterator referencing the first instance of the largest value.

Definition at line 5674 of file `stl_algo.h`.

```
3.25.2.12 template<typename _ForwardIterator, typename _Compare> _GLIBCXX14_CONSTEXPR _ForwardIterator
std::max_element ( _ForwardIterator __first, _ForwardIterator __last, _Compare __comp ) [inline]
```

Return the maximum element in a range using comparison functor.

## Parameters

<code>__first</code>	Start of range.
<code>__last</code>	End of range.
<code>__comp</code>	Comparison functor.

## Returns

Iterator referencing the first instance of the largest value according to `__comp`.

Definition at line 5699 of file `stl_algo.h`.

Referenced by `std::valarray<_Tp>::max()`.

```
3.25.2.13 template<typename _InputIterator1, typename _InputIterator2, typename _OutputIterator> _OutputIterator std::merge (
    _InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2 __last2, _OutputIterator __result )
[inline]
```

Merges two sorted ranges.

## Parameters

<code>__first1</code>	An iterator.
<code>__first2</code>	Another iterator.
<code>__last1</code>	Another iterator.
<code>__last2</code>	Another iterator.
<code>__result</code>	An iterator pointing to the end of the merged range.

## Returns

An iterator pointing to the first element *not less than* *val*.

Merges the ranges `[__first1, __last1)` and `[__first2, __last2)` into the sorted range `[__result, __result + (__last1 - __first1) + (__last2 - __first2))`. Both input ranges must be sorted, and the output range must not overlap with either of the input ranges. The sort is *stable*, that is, for equivalent elements in the two ranges, elements from the first range will always come before elements from the second.

Definition at line 4916 of file `stl_algo.h`.

```
3.25.2.14 template<typename _InputIterator1 , typename _InputIterator2 , typename _OutputIterator , typename _Compare >
           _OutputIterator std::merge ( _InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2
           __last2, _OutputIterator __result, _Compare __comp ) [inline]
```

Merges two sorted ranges.

## Parameters

<code>__first1</code>	An iterator.
<code>__first2</code>	Another iterator.
<code>__last1</code>	Another iterator.
<code>__last2</code>	Another iterator.
<code>__result</code>	An iterator pointing to the end of the merged range.
<code>__comp</code>	A functor to use for comparisons.

## Returns

An iterator pointing to the first element "not less than" *val*.

Merges the ranges [`__first1`, `__last1`) and [`__first2`, `__last2`) into the sorted range [`__result`, `__result` + (`__last1` - `__first1`) + (`__last2` - `__first2`)). Both input ranges must be sorted, and the output range must not overlap with either of the input ranges. The sort is *stable*, that is, for equivalent elements in the two ranges, elements from the first range will always come before elements from the second.

The comparison function should have the same effects on ordering as the function used for the initial sort.

Definition at line 4966 of file `stl_algo.h`.

```
3.25.2.15 template<typename _Tp > _GLIBCXX14_CONSTEXPR const _Tp & std::min ( const _Tp & __a, const _Tp & __b )
[inline]
```

This does what you think it does.

## Parameters

<code>__a</code>	A thing of arbitrary type.
<code>__b</code>	Another thing of arbitrary type.

## Returns

The lesser of the parameters.

This is the simple classic generic implementation. It will work on temporary expressions, since they are only evaluated once, unlike a preprocessor macro.

Definition at line 195 of file `stl_algobase.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, `__gnu_parallel::__parallel_sort_qs_divide()`, `__gnu__profile::__report()`, `std::__sample()`, `__gnu_parallel::__search_template()`, `__gnu_parallel::__sequential_random_shuffle()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::compare()`, `std::basic_string<char >::compare()`, `std::basic_string<_CharT, _Traits, _Alloc >::compare()`, `std::generate_canonical()`, `std::discard_block_engine<_RandomNumberEngine, __p, __r >::min()`, `std::shuffle_order_engine<_RandomNumberEngine, __k >::min()`, `__gnu_parallel::multiseq_partition()`, `__gnu_parallel::multiseq_selection()`, `__gnu_cxx::random_sample_n()`, `std::basic_istream<_CharT, _Traits >::readsome()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::rfind()`, `std::basic_string<_CharT, _Traits, _Alloc >::rfind()`, `std::basic_filebuf<_CharT, _Traits >::underflow()`, `std::basic_streambuf<_CharT, _Traits >::xsgetn()`, `std::basic_filebuf<_CharT, _Traits >::xsputn()`, and `std::basic_streambuf<_CharT, _Traits >::xsputn()`.

```
3.25.2.16 template<typename _Tp, typename _Compare > _GLIBCXX14_CONSTEXPR const _Tp & std::min ( const _Tp & __a,
const _Tp & __b, _Compare __comp ) [inline]
```

This does what you think it does.

## Parameters

<code>__a</code>	A thing of arbitrary type.
<code>__b</code>	Another thing of arbitrary type.
<code>__comp</code>	A <a href="#">comparison functor</a> .

## Returns

The lesser of the parameters.

This will work on temporary expressions, since they are only evaluated once, unlike a preprocessor macro.

Definition at line 243 of file `stl_algobase.h`.

```
3.25.2.17 template<typename _ForwardIterator > _GLIBCXX14_CONSTEXPR _ForwardIterator std::min_element ( _ForwardIterator
    __first, _ForwardIterator __last ) [inline]
```

Return the minimum element in a range.

## Parameters

<code>__first</code>	Start of range.
<code>__last</code>	End of range.

## Returns

Iterator referencing the first instance of the smallest value.

Definition at line 5610 of file `stl_algo.h`.

```
3.25.2.18 template<typename _ForwardIterator, typename _Compare > _GLIBCXX14_CONSTEXPR _ForwardIterator
    std::min_element ( _ForwardIterator __first, _ForwardIterator __last, _Compare __comp ) [inline]
```

Return the minimum element in a range using comparison functor.

## Parameters

<code>__first</code>	Start of range.
<code>__last</code>	End of range.
<code>__comp</code>	Comparison functor.

## Returns

Iterator referencing the first instance of the smallest value according to `__comp`.

Definition at line 5635 of file `stl_algo.h`.

Referenced by `std::valarray<_Tp>::min()`.

```
3.25.2.19 template<typename _Tp > _GLIBCXX14_CONSTEXPR pair< const _Tp &, const _Tp & > std::minmax ( const _Tp & __a,
    const _Tp & __b ) [inline]
```

Determines min and max at once as an ordered pair.

## Parameters

<code>__a</code>	A thing of arbitrary type.
<code>__b</code>	Another thing of arbitrary type.

## Returns

A pair(`__b`, `__a`) if `__b` is smaller than `__a`, pair(`__a`, `__b`) otherwise.

Definition at line 3302 of file `stl_algo.h`.

```
3.25.2.20 template<typename _Tp, typename _Compare > _GLIBCXX14_CONSTEXPR pair< const _Tp &, const _Tp & >
std::minmax ( const _Tp & __a, const _Tp & __b, _Compare __comp ) [inline]
```

Determines min and max at once as an ordered pair.

## Parameters

<code>__a</code>	A thing of arbitrary type.
<code>__b</code>	Another thing of arbitrary type.
<code>__comp</code>	A <a href="#">comparison functor</a> .

## Returns

A pair(`__b`, `__a`) if `__b` is smaller than `__a`, pair(`__a`, `__b`) otherwise.

Definition at line 3323 of file `stl_algo.h`.

```
3.25.2.21 template<typename _ForwardIterator > _GLIBCXX14_CONSTEXPR pair<_ForwardIterator, _ForwardIterator>
std::minmax_element ( _ForwardIterator __first, _ForwardIterator __last ) [inline]
```

Return a pair of iterators pointing to the minimum and maximum elements in a range.

## Parameters

<code>__first</code>	Start of range.
<code>__last</code>	End of range.

## Returns

make\_pair(m, M), where m is the first iterator i in [`__first`, `__last`) such that no other element in the range is smaller, and where M is the last iterator i in [`__first`, `__last`) such that no other element in the range is larger.

Definition at line 3403 of file `stl_algo.h`.

```
3.25.2.22 template<typename _ForwardIterator, typename _Compare > _GLIBCXX14_CONSTEXPR pair<_ForwardIterator,
_FForwardIterator> std::minmax_element ( _ForwardIterator __first, _ForwardIterator __last, _Compare __comp )
[inline]
```

Return a pair of iterators pointing to the minimum and maximum elements in a range.

## Parameters

<code>__first</code>	Start of range.
<code>__last</code>	End of range.
<code>__comp</code>	Comparison functor.

**Returns**

make\_pair(m, M), where m is the first iterator i in [`__first`, `__last`) such that no other element in the range is smaller, and where M is the last iterator i in [`__first`, `__last`) such that no other element in the range is larger.

Definition at line 3431 of file `stl_algo.h`.

3.25.2.23 `template<typename _BidirectionalIterator > bool std::next_permutation ( _BidirectionalIterator __first, _BidirectionalIterator __last ) [inline]`

Permute range into the next *dictionary* ordering.

**Parameters**

<code>__first</code>	Start of range.
<code>__last</code>	End of range.

**Returns**

False if wrapped to first permutation, true otherwise.

Treats all permutations of the range as a set of *dictionary* sorted sequences. Permutes the current sequence into the next one of this set. Returns true if there are more sequences to generate. If the sequence is the largest of the set, the smallest is generated and false returned.

Definition at line 2954 of file `stl_algo.h`.

3.25.2.24 `template<typename _BidirectionalIterator, typename _Compare > bool std::next_permutation ( _BidirectionalIterator __first, _BidirectionalIterator __last, _Compare __comp ) [inline]`

Permute range into the next *dictionary* ordering using comparison functor.

**Parameters**

<code>__first</code>	Start of range.
<code>__last</code>	End of range.
<code>__comp</code>	A comparison functor.

**Returns**

False if wrapped to first permutation, true otherwise.

Treats all permutations of the range [`__first`, `__last`) as a set of *dictionary* sorted sequences ordered by `__comp`. Permutes the current sequence into the next one of this set. Returns true if there are more sequences to generate. If the sequence is the largest of the set, the smallest is generated and false returned.

Definition at line 2986 of file `stl_algo.h`.

3.25.2.25 `template<typename _RandomAccessIterator > void std::nth_element ( _RandomAccessIterator __first, _RandomAccessIterator __nth, _RandomAccessIterator __last ) [inline]`

Sort a sequence just enough to find a particular position.

## Parameters

<code>__first</code>	An iterator.
<code>__nth</code>	Another iterator.
<code>__last</code>	Another iterator.

## Returns

Nothing.

Rearranges the elements in the range `[__first,__last)` so that `*__nth` is the same element that would have been in that position had the whole sequence been sorted. The elements either side of `*__nth` are not completely sorted, but for any iterator `i` in the range `[__first,__nth)` and any iterator `j` in the range `[__nth,__last)` it holds that `*j < *i` is false.

Definition at line 4748 of file `stl_algo.h`.

References `std::__lg()`.

```
3.25.2.26 template<typename _RandomAccessIterator, typename _Compare> void std::nth_element ( _RandomAccessIterator
    __first, _RandomAccessIterator __nth, _RandomAccessIterator __last, _Compare __comp ) [inline]
```

Sort a sequence just enough to find a particular position using a predicate for comparison.

## Parameters

<code>__first</code>	An iterator.
<code>__nth</code>	Another iterator.
<code>__last</code>	Another iterator.
<code>__comp</code>	A comparison functor.

## Returns

Nothing.

Rearranges the elements in the range `[__first,__last)` so that `*__nth` is the same element that would have been in that position had the whole sequence been sorted. The elements either side of `*__nth` are not completely sorted, but for any iterator `i` in the range `[__first,__nth)` and any iterator `j` in the range `[__nth,__last)` it holds that `__comp(*j, *i)` is false.

Definition at line 4787 of file `stl_algo.h`.

References `std::__lg()`.

```
3.25.2.27 template<typename _RandomAccessIterator> void std::partial_sort ( _RandomAccessIterator __first,
    _RandomAccessIterator __middle, _RandomAccessIterator __last ) [inline]
```

Sort the smallest elements of a sequence.

## Parameters

<code>__first</code>	An iterator.
<code>__middle</code>	Another iterator.
<code>__last</code>	Another iterator.

**Returns**

Nothing.

Sorts the smallest (`__middle-__first`) elements in the range `[first,last)` and moves them to the range `[__first,__middle)`. The order of the remaining elements in the range `[__middle,__last)` is undefined. After the sort if *i* and *j* are iterators in the range `[__first,__middle)` such that *i* precedes *j* and *k* is an iterator in the range `[__middle,__last)` then `*j<*i` and `*k<*i` are both false.

Definition at line 4674 of file `stl_algo.h`.

```
3.25.2.28 template<typename _RandomAccessIterator, typename _Compare> void std::partial_sort (
    _RandomAccessIterator __first, _RandomAccessIterator __middle, _RandomAccessIterator __last, _Compare __comp ) [inline]
```

Sort the smallest elements of a sequence using a predicate for comparison.

**Parameters**

<code>__first</code>	An iterator.
<code>__middle</code>	Another iterator.
<code>__last</code>	Another iterator.
<code>__comp</code>	A comparison functor.

**Returns**

Nothing.

Sorts the smallest (`__middle-__first`) elements in the range `[__first,__last)` and moves them to the range `[__first,__middle)`. The order of the remaining elements in the range `[__middle,__last)` is undefined. After the sort if *i* and *j* are iterators in the range `[__first,__middle)` such that *i* precedes *j* and *k* is an iterator in the range `[__middle,__last)` then `*__comp(j,*i)` and `*__comp(*k,*i)` are both false.

Definition at line 4712 of file `stl_algo.h`.

```
3.25.2.29 template<typename _InputIterator, typename _RandomAccessIterator> _RandomAccessIterator std::partial_sort_copy (
    _InputIterator __first, _InputIterator __last, _RandomAccessIterator __result_first, _RandomAccessIterator __result_last )
    [inline]
```

Copy the smallest elements of a sequence.

**Parameters**

<code>__first</code>	An iterator.
<code>__last</code>	Another iterator.
<code>__result_first</code>	A random-access iterator.
<code>__result_last</code>	Another random-access iterator.

**Returns**

An iterator indicating the end of the resulting sequence.

Copies and sorts the smallest *N* values from the range `[__first,__last)` to the range beginning at `__result_first`, where the number of elements to be copied, *N*, is the smaller of `(__last-__first)` and `(__result_last-__result_first)`. After the sort if *i* and *j* are iterators in the range `[__result_first,__result_first+N)` such that *i* precedes *j* then `*j<*i` is false. The value returned is `__result_first+N`.

Definition at line 1737 of file `stl_algo.h`.

```
3.25.2.30 template<typename _InputIterator, typename _RandomAccessIterator, typename _Compare > _RandomAccessIterator  
std::partial_sort_copy ( _InputIterator __first, _InputIterator __last, _RandomAccessIterator __result_first,  
_RandomAccessIterator __result_last, _Compare __comp ) [inline]
```

Copy the smallest elements of a sequence using a predicate for comparison.

## Parameters

<code>__first</code>	An input iterator.
<code>__last</code>	Another input iterator.
<code>__result_first</code>	A random-access iterator.
<code>__result_last</code>	Another random-access iterator.
<code>__comp</code>	A comparison functor.

## Returns

An iterator indicating the end of the resulting sequence.

Copies and sorts the smallest N values from the range `[__first,__last)` to the range beginning at `result_first`, where the number of elements to be copied, N, is the smaller of `(__last-__first)` and `(__result_last-__result_first)`. After the sort if *i* and *j* are iterators in the range `[__result_first,__result_first+N)` such that *i* precedes *j* then `__comp(*j,*i)` is false. The value returned is `__result_first+N`.

Definition at line 1787 of file `stl_algo.h`.

```
3.25.2.31 template<typename _BidirectionalIterator > bool std::prev_permutation ( _BidirectionalIterator __first,
    _BidirectionalIterator __last ) [inline]
```

Permute range into the previous *dictionary* ordering.

## Parameters

<code>__first</code>	Start of range.
<code>__last</code>	End of range.

## Returns

False if wrapped to last permutation, true otherwise.

Treats all permutations of the range as a set of *dictionary* sorted sequences. Permutes the current sequence into the previous one of this set. Returns true if there are more sequences to generate. If the sequence is the smallest of the set, the largest is generated and false returned.

Definition at line 3054 of file `stl_algo.h`.

```
3.25.2.32 template<typename _BidirectionalIterator, typename _Compare > bool std::prev_permutation ( _BidirectionalIterator
    __first, _BidirectionalIterator __last, _Compare __comp ) [inline]
```

Permute range into the previous *dictionary* ordering using comparison functor.

## Parameters

<code>__first</code>	Start of range.
<code>__last</code>	End of range.
<code>__comp</code>	A comparison functor.

## Returns

False if wrapped to last permutation, true otherwise.

Treats all permutations of the range `[__first,__last)` as a set of *dictionary* sorted sequences ordered by `__comp`. Permutes the current sequence into the previous one of this set. Returns true if there are more sequences to generate. If the sequence is the smallest of the set, the largest is generated and false returned.

Definition at line 3086 of file `stl_algo.h`.

3.25.2.33 `template<typename _RandomAccessIterator > void std::sort ( _RandomAccessIterator __first, _RandomAccessIterator __last ) [inline]`

Sort the elements of a sequence.

## Parameters

<code>__first</code>	An iterator.
<code>__last</code>	Another iterator.

## Returns

Nothing.

Sorts the elements in the range `[__first,__last)` in ascending order, such that for each iterator  $i$  in the range `[__first,__last-1)`,  $*(i+1) < *i$  is false.

The relative ordering of equivalent elements is not preserved, use `stable_sort()` if this is needed.

Definition at line 4824 of file `stl_algo.h`.

```
3.25.2.34 template<typename _RandomAccessIterator, typename _Compare> void std::sort ( _RandomAccessIterator __first,
    _RandomAccessIterator __last, _Compare __comp ) [inline]
```

Sort the elements of a sequence using a predicate for comparison.

## Parameters

<code>__first</code>	An iterator.
<code>__last</code>	Another iterator.
<code>__comp</code>	A comparison functor.

## Returns

Nothing.

Sorts the elements in the range `[__first,__last)` in ascending order, such that `__comp(*(i+1),*i)` is false for every iterator  $i$  in the range `[__first,__last-1)`.

The relative ordering of equivalent elements is not preserved, use `stable_sort()` if this is needed.

Definition at line 4854 of file `stl_algo.h`.

```
3.25.2.35 template<typename _RandomAccessIterator> void std::stable_sort ( _RandomAccessIterator __first,
    _RandomAccessIterator __last ) [inline]
```

Sort the elements of a sequence, preserving the relative order of equivalent elements.

## Parameters

<code>__first</code>	An iterator.
<code>__last</code>	Another iterator.

## Returns

Nothing.

Sorts the elements in the range `[__first,__last)` in ascending order, such that for each iterator  $i$  in the range `[__first,__last-1)`,  $*(i+1) < *i$  is false.

The relative ordering of equivalent elements is preserved, so any two elements  $x$  and  $y$  in the range `[__first,__last)` such that  $x < y$  is false and  $y < x$  is false will have the same relative ordering after calling `stable_sort()`.

Definition at line 5029 of file `stl_algo.h`.

3.25.2.36 `template<typename _RandomAccessIterator, typename _Compare > void std::stable_sort ( _RandomAccessIterator  
__first, _RandomAccessIterator __last, _Compare __comp ) [inline]`

Sort the elements of a sequence using a predicate for comparison, preserving the relative order of equivalent elements.

## Parameters

<code>__first</code>	An iterator.
<code>__last</code>	Another iterator.
<code>__comp</code>	A comparison functor.

## Returns

Nothing.

Sorts the elements in the range `[__first,__last)` in ascending order, such that for each iterator `i` in the range `[__first,__last-1)`, `__comp(*(i+1),*i)` is false.

The relative ordering of equivalent elements is preserved, so any two elements `x` and `y` in the range `[__first,__last)` such that `__comp(x,y)` is false and `__comp(y,x)` is false will have the same relative ordering after calling `stable_sort()`.

Definition at line 5063 of file `stl_algo.h`.

### 3.26 Set Operation

#### 3.26.1 Detailed Description

These algorithms are common set operations performed on sequences that are already sorted. The number of comparisons will be linear.

## 3.26.2 Function Documentation

3.26.2.1 `template<typename _InputIterator1, typename _InputIterator2 > bool std::includes ( _InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2 __last2 ) [inline]`

Determines whether all elements of a sequence exists in a range.

## Parameters

<code>__first1</code>	Start of search range.
<code>__last1</code>	End of search range.
<code>__first2</code>	Start of sequence
<code>__last2</code>	End of sequence.

## Returns

True if each element in [`__first2`,`__last2`) is contained in order within [`__first1`,`__last1`). False otherwise.

This operation expects both [`__first1`,`__last1`) and [`__first2`,`__last2`) to be sorted. Searches for the presence of each element in [`__first2`,`__last2`) within [`__first1`,`__last1`). The iterators over each range only move forward, so this is a linear algorithm. If an element in [`__first2`,`__last2`) is not found before the search iterator reaches `__last2`, false is returned.

Definition at line 2826 of file `stl_algo.h`.

3.26.2.2 `template<typename _InputIterator1, typename _InputIterator2, typename _Compare > bool std::includes ( _InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2 __last2, _Compare __comp ) [inline]`

Determines whether all elements of a sequence exists in a range using comparison.

## Parameters

<code>__first1</code>	Start of search range.
<code>__last1</code>	End of search range.
<code>__first2</code>	Start of sequence
<code>__last2</code>	End of sequence.
<code>__comp</code>	Comparison function to use.

## Returns

True if each element in [`__first2`,`__last2`) is contained in order within [`__first1`,`__last1`) according to `comp`. False otherwise.

This operation expects both [`__first1`,`__last1`) and [`__first2`,`__last2`) to be sorted. Searches for the presence of each element in [`__first2`,`__last2`) within [`__first1`,`__last1`), using `comp` to decide. The iterators over each range only move forward, so this is a linear algorithm. If an element in [`__first2`,`__last2`) is not found before the search iterator reaches `__last2`, false is returned.

Definition at line 2871 of file `stl_algo.h`.

3.26.2.3 `template<typename _InputIterator1, typename _InputIterator2, typename _OutputIterator > _OutputIterator std::set_difference ( _InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2 __last2, _OutputIterator __result ) [inline]`

Return the difference of two sorted ranges.

**Parameters**

<code>__first1</code>	Start of first range.
<code>__last1</code>	End of first range.
<code>__first2</code>	Start of second range.
<code>__last2</code>	End of second range.
<code>__result</code>	Start of output range.

**Returns**

End of the output range.

This operation iterates over both ranges, copying elements present in the first range but not the second in order to the output range. Iterators increment for each range. When the current element of the first range is less than the second, that element is copied and the iterator advances. If the current element of the second range is less, the iterator advances, but no element is copied. If an element is contained in both ranges, no elements are copied and both ranges advance. The output range may not overlap either input range.

Definition at line 5376 of file `stl_algo.h`.

```
3.26.2.4 template<typename _InputIterator1, typename _InputIterator2, typename _OutputIterator, typename _Compare
> _OutputIterator std::set_difference ( _InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2,
    _InputIterator2 __last2, _OutputIterator __result, _Compare __comp ) [inline]
```

Return the difference of two sorted ranges using comparison functor.

**Parameters**

<code>__first1</code>	Start of first range.
<code>__last1</code>	End of first range.
<code>__first2</code>	Start of second range.
<code>__last2</code>	End of second range.
<code>__result</code>	Start of output range.
<code>__comp</code>	The comparison functor.

**Returns**

End of the output range.

This operation iterates over both ranges, copying elements present in the first range but not the second in order to the output range. Iterators increment for each range. When the current element of the first range is less than the second according to `__comp`, that element is copied and the iterator advances. If the current element of the second range is less, no element is copied and the iterator advances. If an element is contained in both ranges according to `__comp`, no elements are copied and both ranges advance. The output range may not overlap either input range.

Definition at line 5427 of file `stl_algo.h`.

```
3.26.2.5 template<typename _InputIterator1, typename _InputIterator2, typename _OutputIterator > _OutputIterator
std::set_intersection ( _InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2 __last2,
    _OutputIterator __result ) [inline]
```

Return the intersection of two sorted ranges.

## Parameters

<code>__first1</code>	Start of first range.
<code>__last1</code>	End of first range.
<code>__first2</code>	Start of second range.
<code>__last2</code>	End of second range.
<code>__result</code>	Start of output range.

## Returns

End of the output range.

This operation iterates over both ranges, copying elements present in both ranges in order to the output range. Iterators increment for each range. When the current element of one range is less than the other, that iterator advances. If an element is contained in both ranges, the element from the first range is copied and both ranges advance. The output range may not overlap either input range.

Definition at line 5254 of file `stl_algo.h`.

```
3.26.2.6 template<typename _InputIterator1, typename _InputIterator2, typename _OutputIterator, typename _Compare
> _OutputIterator std::set_intersection( _InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2,
    _InputIterator2 __last2, _OutputIterator __result, _Compare __comp ) [inline]
```

Return the intersection of two sorted ranges using comparison functor.

## Parameters

<code>__first1</code>	Start of first range.
<code>__last1</code>	End of first range.
<code>__first2</code>	Start of second range.
<code>__last2</code>	End of second range.
<code>__result</code>	Start of output range.
<code>__comp</code>	The comparison functor.

## Returns

End of the output range.

This operation iterates over both ranges, copying elements present in both ranges in order to the output range. Iterators increment for each range. When the current element of one range is less than the other according to `__comp`, that iterator advances. If an element is contained in both ranges according to `__comp`, the element from the first range is copied and both ranges advance. The output range may not overlap either input range.

Definition at line 5303 of file `stl_algo.h`.

```
3.26.2.7 template<typename _InputIterator1, typename _InputIterator2, typename _OutputIterator > _OutputIterator
std::set_symmetric_difference( _InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2
    __last2, _OutputIterator __result ) [inline]
```

Return the symmetric difference of two sorted ranges.

## Parameters

<code>__first1</code>	Start of first range.
<code>__last1</code>	End of first range.
<code>__first2</code>	Start of second range.
<code>__last2</code>	End of second range.
<code>__result</code>	Start of output range.

**Returns**

End of the output range.

This operation iterates over both ranges, copying elements present in one range but not the other in order to the output range. Iterators increment for each range. When the current element of one range is less than the other, that element is copied and the iterator advances. If an element is contained in both ranges, no elements are copied and both ranges advance. The output range may not overlap either input range.

Definition at line 5506 of file `stl_algo.h`.

```
3.26.2.8 template<typename _InputIterator1, typename _InputIterator2, typename _OutputIterator, typename _Compare >
    _OutputIterator std::set_symmetric_difference ( _InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2,
    _InputIterator2 __last2, _OutputIterator __result, _Compare __comp ) [inline]
```

Return the symmetric difference of two sorted ranges using comparison functor.

**Parameters**

<code>__first1</code>	Start of first range.
<code>__last1</code>	End of first range.
<code>__first2</code>	Start of second range.
<code>__last2</code>	End of second range.
<code>__result</code>	Start of output range.
<code>__comp</code>	The comparison functor.

**Returns**

End of the output range.

This operation iterates over both ranges, copying elements present in one range but not the other in order to the output range. Iterators increment for each range. When the current element of one range is less than the other according to `comp`, that element is copied and the iterator advances. If an element is contained in both ranges according to `__comp`, no elements are copied and both ranges advance. The output range may not overlap either input range.

Definition at line 5557 of file `stl_algo.h`.

```
3.26.2.9 template<typename _InputIterator1, typename _InputIterator2, typename _OutputIterator > _OutputIterator std::set_union
    ( _InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2 __last2, _OutputIterator __result
    ) [inline]
```

Return the union of two sorted ranges.

**Parameters**

<code>__first1</code>	Start of first range.
-----------------------	-----------------------

<code>__last1</code>	End of first range.
<code>__first2</code>	Start of second range.
<code>__last2</code>	End of second range.
<code>__result</code>	Start of output range.

**Returns**

End of the output range.

This operation iterates over both ranges, copying elements present in each range in order to the output range. Iterators increment for each range. When the current element of one range is less than the other, that element is copied and the iterator advanced. If an element is contained in both ranges, the element from the first range is copied and both ranges advance. The output range may not overlap either input range.

Definition at line 5133 of file `stl_algo.h`.

```
3.26.2.10 template<typename _InputIterator1, typename _InputIterator2, typename _OutputIterator, typename _Compare >
    _OutputIterator std::set_union ( _InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2
    __last2, _OutputIterator __result, _Compare __comp ) [inline]
```

Return the union of two sorted ranges using a comparison functor.

**Parameters**

<code>__first1</code>	Start of first range.
<code>__last1</code>	End of first range.
<code>__first2</code>	Start of second range.
<code>__last2</code>	End of second range.
<code>__result</code>	Start of output range.
<code>__comp</code>	The comparison functor.

**Returns**

End of the output range.

This operation iterates over both ranges, copying elements present in each range in order to the output range. Iterators increment for each range. When the current element of one range is less than the other according to `__comp`, that element is copied and the iterator advanced. If an equivalent element according to `__comp` is contained in both ranges, the element from the first range is copied and both ranges advance. The output range may not overlap either input range.

Definition at line 5183 of file `stl_algo.h`.

### 3.27 Binary Search

- `template<typename _ForwardIterator, typename _Tp, typename _Compare >`  
`_ForwardIterator std::upper\_bound (_ForwardIterator __first, _ForwardIterator __last, const _Tp &__val, _`  
`Compare __comp)`

#### 3.27.1 Detailed Description

These algorithms are variations of a classic binary search, and all assume that the sequence being searched is already sorted.

The number of comparisons will be logarithmic (and as few as possible). The number of steps through the sequence will be logarithmic for random-access iterators (e.g., pointers), and linear otherwise.

The LWG has passed Defect Report 270, which notes: *The proposed resolution reinterprets binary search. Instead of thinking about searching for a value in a sorted range, we view that as an important special case of a more general algorithm: searching for the partition point in a partitioned range. We also add a guarantee that the old wording did not: we ensure that the upper bound is no earlier than the lower bound, that the pair returned by equal\_range is a valid range, and that the first part of that pair is the lower bound.*

The actual effect of the first sentence is that a comparison functor passed by the user doesn't necessarily need to induce a strict weak ordering relation. Rather, it partitions the range.

## 3.27.2 Function Documentation

3.27.2.1 `template<typename _ForwardIterator, typename _Tp > bool std::binary_search ( _ForwardIterator __first, _ForwardIterator __last, const _Tp & __val )`

Determines whether an element exists in a range.

## Parameters

<code>__first</code>	An iterator.
<code>__last</code>	Another iterator.
<code>__val</code>	The search term.

## Returns

True if `__val` (or its equivalent) is in `[__first,__last]`.

Note that this does not actually return an iterator to `__val`. For that, use `std::find` or a container's specialized find member functions.

Definition at line 2247 of file `stl_algo.h`.

3.27.2.2 `template<typename _ForwardIterator, typename _Tp, typename _Compare > bool std::binary_search ( _ForwardIterator __first, _ForwardIterator __last, const _Tp & __val, _Compare __comp )`

Determines whether an element exists in a range.

## Parameters

<code>__first</code>	An iterator.
<code>__last</code>	Another iterator.
<code>__val</code>	The search term.
<code>__comp</code>	A functor to use for comparisons.

## Returns

True if `__val` (or its equivalent) is in `[__first,__last]`.

Note that this does not actually return an iterator to `__val`. For that, use `std::find` or a container's specialized find member functions.

The comparison function should have the same effects on ordering as the function used for the initial sort.

Definition at line 2280 of file `stl_algo.h`.

3.27.2.3 `template<typename _ForwardIterator, typename _Tp > pair<_ForwardIterator, _ForwardIterator> std::equal_range ( _ForwardIterator __first, _ForwardIterator __last, const _Tp & __val ) [inline]`

Finds the largest subrange in which `__val` could be inserted at any place in it without changing the ordering.

## Parameters

<code>__first</code>	An iterator.
<code>__last</code>	Another iterator.

<code>__val</code>	The search term.
--------------------	------------------

**Returns**

An pair of iterators defining the subrange.

This is equivalent to

```
*   std::make_pair(lower_bound(__first, __last, __val),
*                   upper_bound(__first, __last, __val))
*
```

but does not actually call those functions.

Definition at line 2178 of file stl\_algo.h.

```
3.27.2.4 template<typename _ForwardIterator, typename _Tp, typename _Compare > pair<_ForwardIterator, _ForwardIterator>
std::equal_range ( _ForwardIterator __first, _ForwardIterator __last, const _Tp & __val, _Compare __comp )
[inline]
```

Finds the largest subrange in which `__val` could be inserted at any place in it without changing the ordering.

**Parameters**

<code>__first</code>	An iterator.
<code>__last</code>	Another iterator.
<code>__val</code>	The search term.
<code>__comp</code>	A functor to use for comparisons.

**Returns**

An pair of iterators defining the subrange.

This is equivalent to

```
*   std::make_pair(lower_bound(__first, __last, __val, __comp),
*                   upper_bound(__first, __last, __val, __comp))
*
```

but does not actually call those functions.

Definition at line 2214 of file stl\_algo.h.

```
3.27.2.5 template<typename _ForwardIterator, typename _Tp > _ForwardIterator std::lower_bound ( _ForwardIterator __first,
_FForwardIterator __last, const _Tp & __val ) [inline]
```

Finds the first position in which `val` could be inserted without changing the ordering.

**Parameters**

<code>__first</code>	An iterator.
<code>__last</code>	Another iterator.
<code>__val</code>	The search term.

**Returns**

An iterator pointing to the first element *not less than* `val`, or `end()` if every element is less than `val`.

Definition at line 984 of file stl\_algobase.h.

```
3.27.2.6 template<typename _ForwardIterator, typename _Tp, typename _Compare > _ForwardIterator std::lower_bound (
    _ForwardIterator __first, _ForwardIterator __last, const _Tp & __val, _Compare __comp ) [inline]
```

Finds the first position in which `__val` could be inserted without changing the ordering.

**Parameters**

<code>__first</code>	An iterator.
<code>__last</code>	Another iterator.
<code>__val</code>	The search term.
<code>__comp</code>	A functor to use for comparisons.

**Returns**

An iterator pointing to the first element *not less than* `__val`, or `end()` if every element is less than `__val`.

The comparison function should have the same effects on ordering as the function used for the initial sort.

Definition at line 2023 of file `stl_algo.h`.

```
3.27.2.7 template<typename _ForwardIterator, typename _Tp > _ForwardIterator std::upper_bound ( _ForwardIterator __first,
    _ForwardIterator __last, const _Tp & __val ) [inline]
```

Finds the last position in which `__val` could be inserted without changing the ordering.

**Parameters**

<code>__first</code>	An iterator.
<code>__last</code>	Another iterator.
<code>__val</code>	The search term.

**Returns**

An iterator pointing to the first element greater than `__val`, or `end()` if no elements are greater than `__val`.

Definition at line 2077 of file `stl_algo.h`.

```
3.27.2.8 template<typename _ForwardIterator, typename _Tp, typename _Compare > _ForwardIterator std::upper_bound (
    _ForwardIterator __first, _ForwardIterator __last, const _Tp & __val, _Compare __comp ) [inline]
```

Finds the last position in which `__val` could be inserted without changing the ordering.

**Parameters**

<code>__first</code>	An iterator.
<code>__last</code>	Another iterator.
<code>__val</code>	The search term.
<code>__comp</code>	A functor to use for comparisons.

**Returns**

An iterator pointing to the first element greater than `__val`, or `end()` if no elements are greater than `__val`.

The comparison function should have the same effects on ordering as the function used for the initial sort.

Definition at line 2107 of file `stl_algo.h`.

## 3.28 Atomics

### 3.28.1 Detailed Description

Components for performing atomic operations.

### 3.28.2 Macro Definition Documentation

#### 3.28.2.1 `#define ATOMIC_BOOL_LOCK_FREE`

Lock-free property.

0 indicates that the types are never lock-free. 1 indicates that the types are sometimes lock-free. 2 indicates that the types are always lock-free.

Definition at line 49 of file `atomic_lockfree_defines.h`.

### 3.28.3 Typedef Documentation

#### 3.28.3.1 `typedef atomic<bool> std::atomic_bool`

`atomic_bool`

Definition at line 868 of file `atomic`.

**3.28.3.2 typedef atomic<char> std::atomic\_char**

atomic\_char

Definition at line 871 of file atomic.

**3.28.3.3 typedef atomic<char16\_t> std::atomic\_char16\_t**

atomic\_char16\_t

Definition at line 907 of file atomic.

**3.28.3.4 typedef atomic<char32\_t> std::atomic\_char32\_t**

atomic\_char32\_t

Definition at line 910 of file atomic.

**3.28.3.5 typedef atomic<int> std::atomic\_int**

atomic\_int

Definition at line 886 of file atomic.

**3.28.3.6 typedef atomic<int16\_t> std::atomic\_int16\_t**

atomic\_int16\_t

Definition at line 923 of file atomic.

**3.28.3.7 typedef atomic<int32\_t> std::atomic\_int32\_t**

atomic\_int32\_t

Definition at line 929 of file atomic.

**3.28.3.8 typedef atomic<int64\_t> std::atomic\_int64\_t**

atomic\_int64\_t

Definition at line 935 of file atomic.

**3.28.3.9 typedef atomic<int8\_t> std::atomic\_int8\_t**

atomic\_int8\_t

Definition at line 917 of file atomic.

**3.28.3.10 typedef atomic<int\_fast16\_t> std::atomic\_int\_fast16\_t**

atomic\_int\_fast16\_t

Definition at line 973 of file atomic.

**3.28.3.11 typedef atomic<int\_fast32\_t> std::atomic\_int\_fast32\_t**

atomic\_int\_fast32\_t

Definition at line 979 of file atomic.

**3.28.3.12** `typedef atomic<int_fast64_t> std::atomic_int_fast64_t`

`atomic_int_fast64_t`

Definition at line 985 of file `atomic`.

**3.28.3.13** `typedef atomic<int_fast8_t> std::atomic_int_fast8_t`

`atomic_int_fast8_t`

Definition at line 967 of file `atomic`.

**3.28.3.14** `typedef atomic<int_least16_t> std::atomic_int_least16_t`

`atomic_int_least16_t`

Definition at line 948 of file `atomic`.

**3.28.3.15** `typedef atomic<int_least32_t> std::atomic_int_least32_t`

`atomic_int_least32_t`

Definition at line 954 of file `atomic`.

**3.28.3.16** `typedef atomic<int_least64_t> std::atomic_int_least64_t`

`atomic_int_least64_t`

Definition at line 960 of file `atomic`.

**3.28.3.17** `typedef atomic<int_least8_t> std::atomic_int_least8_t`

`atomic_int_least8_t`

Definition at line 942 of file `atomic`.

**3.28.3.18** `typedef atomic<intmax_t> std::atomic_intmax_t`

`atomic_intmax_t`

Definition at line 1006 of file `atomic`.

**3.28.3.19** `typedef atomic<intptr_t> std::atomic_intptr_t`

`atomic_intptr_t`

Definition at line 993 of file `atomic`.

**3.28.3.20** `typedef atomic<long long> std::atomic_llong`

`atomic_llong`

Definition at line 898 of file `atomic`.

**3.28.3.21** `typedef atomic<long> std::atomic_long`

`atomic_long`

Definition at line 892 of file `atomic`.

**3.28.3.22 typedef atomic<ptrdiff\_t> std::atomic\_ptrdiff\_t**

atomic\_ptrdiff\_t

Definition at line 1002 of file atomic.

**3.28.3.23 typedef atomic<signed char> std::atomic\_schar**

atomic\_schar

Definition at line 874 of file atomic.

**3.28.3.24 typedef atomic<short> std::atomic\_short**

atomic\_short

Definition at line 880 of file atomic.

**3.28.3.25 typedef atomic<size\_t> std::atomic\_size\_t**

atomic\_size\_t

Definition at line 999 of file atomic.

**3.28.3.26 typedef atomic<unsigned char> std::atomic\_uchar**

atomic\_uchar

Definition at line 877 of file atomic.

**3.28.3.27 typedef atomic<unsigned int> std::atomic\_uint**

atomic\_uint

Definition at line 889 of file atomic.

**3.28.3.28 typedef atomic<uint16\_t> std::atomic\_uint16\_t**

atomic\_uint16\_t

Definition at line 926 of file atomic.

**3.28.3.29 typedef atomic<uint32\_t> std::atomic\_uint32\_t**

atomic\_uint32\_t

Definition at line 932 of file atomic.

**3.28.3.30 typedef atomic<uint64\_t> std::atomic\_uint64\_t**

atomic\_uint64\_t

Definition at line 938 of file atomic.

**3.28.3.31 typedef atomic<uint8\_t> std::atomic\_uint8\_t**

atomic\_uint8\_t

Definition at line 920 of file atomic.

3.28.3.32 `typedef atomic<uint_fast16_t> std::atomic_uint_fast16_t`

`atomic_uint_fast16_t`

Definition at line 976 of file `atomic`.

3.28.3.33 `typedef atomic<uint_fast32_t> std::atomic_uint_fast32_t`

`atomic_uint_fast32_t`

Definition at line 982 of file `atomic`.

3.28.3.34 `typedef atomic<uint_fast64_t> std::atomic_uint_fast64_t`

`atomic_uint_fast64_t`

Definition at line 988 of file `atomic`.

3.28.3.35 `typedef atomic<uint_fast8_t> std::atomic_uint_fast8_t`

`atomic_uint_fast8_t`

Definition at line 970 of file `atomic`.

3.28.3.36 `typedef atomic<uint_least16_t> std::atomic_uint_least16_t`

`atomic_uint_least16_t`

Definition at line 951 of file `atomic`.

3.28.3.37 `typedef atomic<uint_least32_t> std::atomic_uint_least32_t`

`atomic_uint_least32_t`

Definition at line 957 of file `atomic`.

3.28.3.38 `typedef atomic<uint_least64_t> std::atomic_uint_least64_t`

`atomic_uint_least64_t`

Definition at line 963 of file `atomic`.

3.28.3.39 `typedef atomic<uint_least8_t> std::atomic_uint_least8_t`

`atomic_uint_least8_t`

Definition at line 945 of file `atomic`.

3.28.3.40 `typedef atomic<uintmax_t> std::atomic_uintmax_t`

`atomic_uintmax_t`

Definition at line 1009 of file `atomic`.

3.28.3.41 `typedef atomic<uintptr_t> std::atomic_uintptr_t`

`atomic_uintptr_t`

Definition at line 996 of file `atomic`.

**3.28.3.42 typedef atomic<unsigned long long> std::atomic\_ullong**

atomic\_ullong

Definition at line 901 of file atomic.

**3.28.3.43 typedef atomic<unsigned long> std::atomic\_ulong**

atomic\_ulong

Definition at line 895 of file atomic.

**3.28.3.44 typedef atomic<unsigned short> std::atomic\_ushort**

atomic\_ushort

Definition at line 883 of file atomic.

**3.28.3.45 typedef atomic<wchar\_t> std::atomic\_wchar\_t**

atomic\_wchar\_t

Definition at line 904 of file atomic.

**3.28.3.46 typedef enum std::memory\_order std::memory\_order**

Enumeration for memory\_order.

**3.28.4 Enumeration Type Documentation****3.28.4.1 enum std::memory\_order**

Enumeration for memory\_order.

Definition at line 55 of file atomic\_base.h.

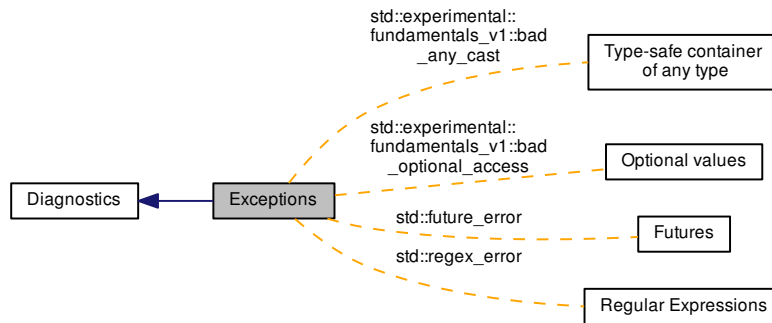

**3.28.5 Function Documentation****3.28.5.1 template<typename \_Tp > \_Tp std::kill\_dependency ( \_Tp \_\_y ) [inline],[noexcept]**

kill\_dependency

Definition at line 111 of file atomic\_base.h.

## 3.29 Exceptions

Collaboration diagram for Exceptions:

## Classes

- class `__cxxabiv1::__forced_unwind`
- struct `__gnu_cxx::forced_error`
- class `__gnu_cxx::recursive_init_error`
- class `std::__exception_ptr::exception_ptr`
- class `std::bad_alloc`
- class `std::bad_cast`
- class `std::bad_function_call`
- class `std::bad_typeid`
- class `std::bad_weak_ptr`
- class `std::domain_error`
- class `std::exception`
- class `std::experimental::fundamentals_v1::bad_any_cast`
- class `std::experimental::fundamentals_v1::bad_optional_access`
- class `std::future_error`
- class `std::invalid_argument`
- class `std::ios_base::failure`
- class `std::length_error`
- class `std::logic_error`
- class `std::nested_exception`
- class `std::out_of_range`
- class `std::overflow_error`
- class `std::range_error`
- class `std::regex_error`
- class `std::runtime_error`
- class `std::system_error`
- class `std::underflow_error`

## Typedefs

- `template<typename _Tp >`  
`using std::__rethrow_if_nested_cond = typename enable_if< __and_< is_polymorphic< _Tp >, __or_< __-`  
`not_< is_base_of< nested_exception, _Tp >>, is_convertible< _Tp *, nested_exception * >>>::value >::type`

## Functions

- `template<typename _Ex >`  
`__rethrow_if_nested_cond< _Ex > std::__rethrow_if_nested_impl (const _Ex * __ptr)`
- `void std::__rethrow_if_nested_impl (const void *)`
- `template<typename _Tp >`  
`void std::__throw_with_nested_impl (_Tp && __t, true_type)`
- `template<typename _Tp >`  
`void std::__throw_with_nested_impl (_Tp && __t, false_type)`
- `void \_\_gnu\_cxx::\_\_verbose\_terminate\_handler ()`
- `exception_ptr std::current\_exception () noexcept`
- `template<typename _Ex >`  
`exception_ptr std::make\_exception\_ptr (_Ex __ex) noexcept`
- `void std::rethrow\_exception (exception_ptr) \_\_attribute\_\_\(\(\_\_noreturn\_\_\)\)`
- `template<typename _Ex >`  
`void std::rethrow\_if\_nested (const _Ex & __ex)`
- `template<typename _Tp >`  
`void std::throw\_with\_nested (_Tp && __t)`
- `virtual const char * std::exception::what () const _GLIBCXX_TXN_SAFE_DYN noexcept`

### 3.29.1 Detailed Description

Classes and functions for reporting errors via exception classes.

### 3.29.2 Function Documentation

#### 3.29.2.1 `void __gnu_cxx::__verbose_terminate_handler ( )`

A replacement for the standard `terminate_handler` which prints more information about the terminating exception (if any) on `stderr`.

#### Call

```
* std::set\_terminate(  
* \_\_gnu\_cxx::\_\_verbose\_terminate\_handler)  
*
```

to use. For more info, see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt02ch06s02.-html>

In 3.4 and later, this is on by default.

#### 3.29.2.2 `exception_ptr std::current_exception ( ) [noexcept]`

Obtain an `exception_ptr` to the currently handled exception. If there is none, or the currently handled exception is foreign, return the null value.

Referenced by `std::make_exception_ptr()`.

**3.29.2.3** `template<typename _Ex > exception_ptr std::make_exception_ptr ( _Ex __ex ) [noexcept]`

Obtain an `exception_ptr` pointing to a copy of the supplied object.

Definition at line 179 of file `exception_ptr.h`.

References `std::current_exception()`.

**3.29.2.4** `void std::rethrow_exception ( exception_ptr )`

Throw the object pointed to by the `exception_ptr`.

Referenced by `std::__basic_future< _Res & >::_M_get_result()`.

**3.29.2.5** `template<typename _Ex > void std::rethrow_if_nested ( const _Ex & __ex ) [inline]`

If `__ex` is derived from `nested_exception`, `__ex.rethrow_nested()`.

Definition at line 151 of file `nested_exception.h`.

References `std::__addressof()`.

**3.29.2.6** `template<typename _Tp > void std::throw_with_nested ( _Tp && __t ) [inline]`

If `__t` is derived from `nested_exception`, throws `__t`. Else, throws an implementation-defined object derived from both.

Definition at line 114 of file `nested_exception.h`.

**3.29.2.7** `virtual const char* std::exception::what ( ) const [virtual],[noexcept]`

Returns a C-style character string describing the general cause of the current error.

Reimplemented in `std::ios_base::failure`, `std::runtime_error`, `std::bad_typeid`, `std::bad_cast`, `std::logic_error`, `std::future_error`, `std::bad_weak_ptr`, `std::experimental::fundamentals_v1::bad_any_cast`, `std::bad_alloc`, `std::bad_function_call`, and `std::bad_exception`.

### 3.30 Hashes

Collaboration diagram for Hashes:

#### Classes

- struct `std::hash< _Tp >`
- struct `std::hash< _Tp * >`
- struct `std::hash< bool >`
- struct `std::hash< char >`
- struct `std::hash< char16_t >`
- struct `std::hash< char32_t >`
- struct `std::hash< double >`
- struct `std::hash< float >`
- struct `std::hash< int >`
- struct `std::hash< long >`
- struct `std::hash< long double >`
- struct `std::hash< long long >`
- struct `std::hash< short >`
- struct `std::hash< signed char >`
- struct `std::hash< unsigned char >`
- struct `std::hash< unsigned int >`
- struct `std::hash< unsigned long >`
- struct `std::hash< unsigned long long >`
- struct `std::hash< unsigned short >`
- struct `std::hash< wchar_t >`

#### Macros

- `#define _Cxx_hashtable_define_trivial_hash(_Tp)`

#### 3.30.1 Detailed Description

Hashing functors taking a variable type and returning a `std::size_t`.

## 3.31 Base and Implementation Classes

Collaboration diagram for Base and Implementation Classes:

## Classes

- struct `std::__detail::Default_ranged_hash`
- struct `std::__detail::Equal_helper<_Key, _Value, _ExtractKey, _Equal, _HashCodeType, __cache_hash_code >`
- struct `std::__detail::Equal_helper<_Key, _Value, _ExtractKey, _Equal, _HashCodeType, false >`
- struct `std::__detail::Equal_helper<_Key, _Value, _ExtractKey, _Equal, _HashCodeType, true >`
- struct `std::__detail::Equality<_Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, _Unique_keys >`
- struct `std::__detail::Equality<_Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, false >`
- struct `std::__detail::Equality<_Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, true >`
- struct `std::__detail::Equality_base`
- struct `std::__detail::Hash_code_base<_Key, _Value, _ExtractKey, _H1, _H2, _Hash, __cache_hash_code >`
- struct `std::__detail::Hash_code_base<_Key, _Value, _ExtractKey, _H1, _H2, Default_ranged_hash, false >`
- struct `std::__detail::Hash_code_base<_Key, _Value, _ExtractKey, _H1, _H2, Default_ranged_hash, true >`
- struct `std::__detail::Hash_code_base<_Key, _Value, _ExtractKey, _H1, _H2, _Hash, false >`
- struct `std::__detail::Hash_node<_Value, _Cache_hash_code >`

- `template<typename _Facet >`  
`bool std::has_facet (const locale & __loc) throw ()`
- `template<typename _Facet >`  
`const _Facet & std::use_facet (const locale & __loc)`

#### 3.32.1 Detailed Description

Classes and functions for internationalization and localization.

### 3.32.2 Function Documentation

#### 3.32.2.1 `template<typename _Facet > bool std::has_facet ( const locale & __loc ) throw ()`

Test for the presence of a facet.

`has_facet` tests the locale argument for the presence of the facet type provided as the template parameter. Facets derived from the facet parameter will also return true.

##### Template Parameters

<code>_Facet</code>	The facet type to test the presence of.
---------------------	---

##### Parameters

<code>__loc</code>	The locale to test.
--------------------	---------------------

##### Returns

true if `__loc` contains a facet of type `_Facet`, else false.

Definition at line 104 of file `locale_classes.tcc`.

#### 3.32.2.2 `template<typename _Facet > const _Facet & std::use_facet ( const locale & __loc )`

Return a facet.

`use_facet` looks for and returns a reference to a facet of type `Facet` where `Facet` is the template parameter. If `has_facet(locale)` is true, there is a suitable facet to return. It throws `std::bad_cast` if the locale doesn't contain a facet of type `Facet`.

##### Template Parameters

<code>_Facet</code>	The facet type to access.
---------------------	---------------------------

##### Parameters

<code>__loc</code>	The locale to use.
--------------------	--------------------

##### Returns

Reference to facet of type `Facet`.

##### Exceptions

<code>std::bad_cast</code>	if <code>__loc</code> doesn't contain a facet of type <code>_Facet</code> .
----------------------------	---

Definition at line 132 of file `locale_classes.tcc`.

### 3.33 Allocators

Collaboration diagram for Allocators:

#### Classes

- struct `__gnu_cxx::__alloc_traits<_Alloc, typename >`
- class `__gnu_cxx::__mt_alloc<_Tp, _Poolp >`
- class `__gnu_cxx::__pool_alloc<_Tp >`
- class `__gnu_cxx::__ExtPtr_allocator<_Tp >`
- class `__gnu_cxx::array_allocator<_Tp, _Array >`
- class `__gnu_cxx::bitmap_allocator<_Tp >`
- class `__gnu_cxx::debug_allocator<_Alloc >`
- class `__gnu_cxx::malloc_allocator<_Tp >`
- class `__gnu_cxx::new_allocator<_Tp >`
- class `__gnu_cxx::throw_allocator_base<_Tp, _Cond >`
- class `std::allocator<_Tp >`
- class `std::allocator<void >`
- struct `std::allocator_traits<_Alloc >`
- class `std::scoped_allocator_adaptor<_OuterAlloc, _InnerAllocs >`
- struct `std::uses_allocator<typename, typename >`

#### Typedefs

- `template<typename _Tp >`  
`using std::__allocator_base = __gnu_cxx::new_allocator<_Tp >`
- `template<typename _Alloc >`  
`using std::__outer_allocator_t = decltype(std::declval<_Alloc >().outer_allocator())`

#### Functions

- `template<typename _Alloc >`  
`__outermost_type<_Alloc >::type & std::__outermost (_Alloc &__a)`
- `template<typename _T1, typename _T2 >`  
`bool std::operator!= (const allocator<_T1 > &, const allocator<_T2 > &) noexcept`
- `template<typename _Tp >`  
`bool std::operator!= (const allocator<_Tp > &, const allocator<_Tp > &) noexcept`
- `template<typename _OutA1, typename _OutA2, typename... _InA >`  
`bool std::operator!= (const scoped_allocator_adaptor<_OutA1, _InA... > &__a, const scoped_allocator_adaptor<_OutA2, _InA... > &__b) noexcept`

- `template<typename _T1 , typename _T2 >`  
`bool std::operator== (const allocator< _T1 > &, const allocator< _T2 > &) noexcept`
- `template<typename _Tp >`  
`bool std::operator== (const allocator< _Tp > &, const allocator< _Tp > &) noexcept`
- `template<typename _OutA1 , typename _OutA2 , typename... _InA>`  
`bool std::operator== (const scoped_allocator_adaptor< _OutA1, _InA...> &__a, const scoped_allocator_adaptor< _OutA2, _InA...> &__b) noexcept`

### 3.33.1 Detailed Description

Classes encapsulating memory operations.

### 3.33.2 Typedef Documentation

#### 3.33.2.1 `template<typename _Tp > using std::__allocator_base = typedef __gnu_cxx::new_allocator<_Tp>`

An alias to the base class for `std::allocator`.

Used to set the `std::allocator` base class to `__gnu_cxx::new_allocator`.

#### Template Parameters

<code>_Tp</code>	Type of allocated object.
------------------	---------------------------

Definition at line 48 of file `c++/allocator.h`.

### 3.34 Random Number Generation

Collaboration diagram for Random Number Generation:

#### Modules

- [Random Number Distributions](#)
- [Random Number Generators](#)
- [Random Number Utilities](#)

#### Namespaces

- [std::\\_\\_detail](#)

#### Functions

- `template<typename _RealType, size_t __bits, typename _UniformRandomNumberGenerator > _RealType std::generate\_canonical (_UniformRandomNumberGenerator &__g)`

#### 3.34.1 Detailed Description

A facility for generating random numbers on selected distributions.

#### 3.34.2 Function Documentation

##### 3.34.2.1 `template<typename _RealType, size_t __bits, typename _UniformRandomNumberGenerator > _RealType std::generate\_canonical (_UniformRandomNumberGenerator &__g)`

A function template for converting the output of a (integral) uniform random number generator to a floating point result in the range [0-1).

Definition at line 3315 of file `bits/random.tcc`.

References `std::numeric_limits< _Tp >::epsilon()`, `std::log()`, and `std::min()`.

### 3.35 Base and Implementation Classes

Collaboration diagram for Base and Implementation Classes:

#### Classes

- struct `std::__detail::_BracketMatcher< typename, bool, bool >`
- class `std::__detail::_Compiler< _TraitsT >`
- class `std::__detail::_Executor< typename, typename, typename, bool >`
- class `std::__detail::_Scanner< _CharT >`
- class `std::__detail::_StateSeq< _TraitsT >`

#### Typedefs

- template<typename `_Iter`, typename `_TraitsT` >  
using `std::__detail::_disable_if_contiguous_normal_iter` = typename enable\_if< !\_\_is\_contiguous\_normal\_iter< `_Iter` >::value, `std::shared_ptr`< const `_NFA`< `_TraitsT` >> >::type
- template<typename `_Iter`, typename `_TraitsT` >  
using `std::__detail::_enable_if_contiguous_normal_iter` = typename enable\_if< \_\_is\_contiguous\_normal\_iter< `_Iter` >::value, `std::shared_ptr`< const `_NFA`< `_TraitsT` >> >::type
- template<typename `_CharT` >  
using `std::__detail::_Matcher` = std::function< bool(`_CharT`)>
- typedef long `std::__detail::_StateldT`

#### Enumerations

- enum `std::__detail::_Opcode` : int {  
`_S_opcode_unknown`, `_S_opcode_alternative`, `_S_opcode_repeat`, `_S_opcode_backref`,  
`_S_opcode_line_begin_assertion`, `_S_opcode_line_end_assertion`, `_S_opcode_word_boundary`, `_S_opcode_subexpr_lookahead`,  
`_S_opcode_subexpr_begin`, `_S_opcode_subexpr_end`, `_S_opcode_dummy`, `_S_opcode_match`,  
`_S_opcode_accept` }

#### Functions

- template<typename `_TraitsT`, typename `_FwdIter` >  
`__enable_if_contiguous_normal_iter`  
< `_FwdIter`, `_TraitsT` > `std::__detail::_compile_nfa` (`_FwdIter` `__first`, `_FwdIter` `__last`, const typename `_TraitsT`::`locale_type` & `__loc`, `regex_constants::syntax_option_type` `__flags`)

## Variables

- static const `_StateIdT std::__detail::_S_invalid_state_id`

## 3.35.1 Detailed Description

## 3.35.2 Enumeration Type Documentation

3.35.2.1 enum `std::__detail::_Opcode` : int

Operation codes that define the type of transitions within the base NFA that represents the regular expression.

Definition at line 56 of file `regex_automaton.h`.

### 3.36 Regular Expressions

Collaboration diagram for Regular Expressions:

### 3.36.1 Detailed Description

A facility for performing regular expression pattern matching.

### 3.36.2 Typedef Documentation

#### 3.36.2.1 typedef `regex_token_iterator`<const char\*> `std::cregex_token_iterator`

Token iterator for C-style NULL-terminated strings.

Definition at line 2820 of file `regex.h`.

### 3.36.2.2 `typedef sub_match<const char*> std::csub_match`

Standard regex submatch over a C-style null-terminated string.

Definition at line 957 of file regex.h.

### 3.36.2.3 `typedef basic_regex<char> std::regex`

Standard regular expressions.

Definition at line 829 of file regex.h.

### 3.36.2.4 `typedef regex_token_iterator<string::const_iterator> std::sregex_token_iterator`

Token iterator for standard strings.

Definition at line 2823 of file regex.h.

### 3.36.2.5 `typedef sub_match<string::const_iterator> std::ssub_match`

Standard regex submatch over a standard string.

Definition at line 960 of file regex.h.

### 3.36.2.6 `typedef regex_token_iterator<const wchar_t*> std::wcregex_token_iterator`

Token iterator for C-style NULL-terminated wide strings.

Definition at line 2827 of file regex.h.

### 3.36.2.7 `typedef sub_match<const wchar_t*> std::wcsub_match`

Regex submatch over a C-style null-terminated wide string.

Definition at line 964 of file regex.h.

### 3.36.2.8 `typedef basic_regex<wchar_t> std::wregex`

Standard wide-character regular expressions.

Definition at line 833 of file regex.h.

### 3.36.2.9 `typedef regex_token_iterator<wstring::const_iterator> std::wsregex_token_iterator`

Token iterator for standard wide-character strings.

Definition at line 2830 of file regex.h.

### 3.36.2.10 `typedef sub_match<wstring::const_iterator> std::wssub_match`

Regex submatch over a standard wide string.

Definition at line 967 of file regex.h.

## 3.36.3 Function Documentation

### 3.36.3.1 `template<typename _Bilter > bool std::operator!=( const sub_match<_Bilter > & __lhs, const sub_match<_Bilter > & __rhs ) [inline]`

Tests the inequivalence of two regular expression submatches.

## Parameters

|                    |                                     |
|--------------------|-------------------------------------|
| <code>__lhs</code> | First regular expression submatch.  |
| <code>__rhs</code> | Second regular expression submatch. |

## Returns

true if `__lhs` is not equivalent to `__rhs`, false otherwise.

Definition at line 991 of file `regex.h`.

References `std::sub_match<_Bilter >::compare()`.

```
3.36.3.2 template<typename _Bi_iter , typename _Ch_traits , typename _Ch_alloc > bool std::operator!=( const
    __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & __lhs, const sub_match< _Bi_iter > & __rhs ) [inline]
```

Tests the inequivalence of a string and a regular expression submatch.

## Parameters

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A string.                      |
| <code>__rhs</code> | A regular expression submatch. |

## Returns

true if `__lhs` is not equivalent to `__rhs`, false otherwise.

Definition at line 1069 of file `regex.h`.

```
3.36.3.3 template<typename _Bi_iter , typename _Ch_traits , typename _Ch_alloc > bool std::operator!=( const sub_match<
    _Bi_iter > & __lhs, const __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & __rhs ) [inline]
```

Tests the inequivalence of a regular expression submatch and a string.

## Parameters

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A string.                      |

## Returns

true if `__lhs` is not equivalent to `__rhs`, false otherwise.

Definition at line 1149 of file `regex.h`.

```
3.36.3.4 template<typename _Bi_iter > bool std::operator!=( typename iterator_traits< _Bi_iter >::value_type const * __lhs,
    const sub_match< _Bi_iter > & __rhs ) [inline]
```

Tests the inequivalence of an iterator value and a regular expression submatch.

## Parameters

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
|--------------------|--------------------------------|

|                    |           |
|--------------------|-----------|
| <code>__rhs</code> | A string. |
|--------------------|-----------|

**Returns**

true if `__lhs` is not equivalent to `__rhs`, false otherwise.

Definition at line 1226 of file `regex.h`.

```
3.36.3.5 template<typename _Bi_iter > bool std::operator!=( const sub_match< _Bi_iter > & __lhs, typename iterator_traits<
    _Bi_iter >::value_type const * __rhs ) [inline]
```

Tests the inequivalence of a regular expression submatch and a string.

**Parameters**

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A pointer to a string.         |

**Returns**

true if `__lhs` is not equivalent to `__rhs`, false otherwise.

Definition at line 1300 of file `regex.h`.

```
3.36.3.6 template<typename _Bi_iter > bool std::operator!=( typename iterator_traits< _Bi_iter >::value_type const & __lhs,
    const sub_match< _Bi_iter > & __rhs ) [inline]
```

Tests the inequivalence of a string and a regular expression submatch.

**Parameters**

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A string.                      |
| <code>__rhs</code> | A regular expression submatch. |

**Returns**

true if `__lhs` is not equivalent to `__rhs`, false otherwise.

Definition at line 1377 of file `regex.h`.

```
3.36.3.7 template<typename _Bi_iter > bool std::operator!=( const sub_match< _Bi_iter > & __lhs, typename iterator_traits<
    _Bi_iter >::value_type const & __rhs ) [inline]
```

Tests the inequivalence of a regular expression submatch and a string.

**Parameters**

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A const string reference.      |

**Returns**

true if `__lhs` is not equivalent to `__rhs`, false otherwise.

Definition at line 1457 of file `regex.h`.

3.36.3.8 `template<typename _Bi_iter, class _Alloc> bool std::operator!=( const match_results< _Bi_iter, _Alloc > & __m1, const match_results< _Bi_iter, _Alloc > & __m2 ) [inline]`

Compares two `match_results` for inequality.

#### Returns

true if the two objects do not refer to the same match, false otherwise.

Definition at line 1981 of file `regex.h`.

3.36.3.9 `template<typename _Bilter> bool std::operator<( const sub_match< _Bilter > & __lhs, const sub_match< _Bilter > & __rhs ) [inline]`

Tests the ordering of two regular expression submatches.

#### Parameters

|                    |                                     |
|--------------------|-------------------------------------|
| <code>__lhs</code> | First regular expression submatch.  |
| <code>__rhs</code> | Second regular expression submatch. |

#### Returns

true if `__lhs` precedes `__rhs`, false otherwise.

Definition at line 1002 of file `regex.h`.

References `std::sub_match< _Bilter >::compare()`.

3.36.3.10 `template<typename _Bi_iter, typename _Ch_traits, typename _Ch_alloc> bool std::operator<( const __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & __lhs, const sub_match< _Bi_iter > & __rhs ) [inline]`

Tests the ordering of a string and a regular expression submatch.

#### Parameters

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A string.                      |
| <code>__rhs</code> | A regular expression submatch. |

#### Returns

true if `__lhs` precedes `__rhs`, false otherwise.

Definition at line 1081 of file `regex.h`.

References `std::sub_match< _Bilter >::compare()`.

3.36.3.11 `template<typename _Bi_iter, class _Ch_traits, class _Ch_alloc> bool std::operator<( const sub_match< _Bi_iter > & __lhs, const __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & __rhs ) [inline]`

Tests the ordering of a regular expression submatch and a string.

#### Parameters

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A string.                      |

**Returns**

true if `__lhs` precedes `__rhs`, false otherwise.

Definition at line 1161 of file `regex.h`.

References `std::sub_match<_Bilter>::compare()`.

**3.36.3.12** `template<typename _Bi_iter> bool std::operator<( typename iterator_traits<_Bi_iter>::value_type const * __lhs, const sub_match<_Bi_iter> & __rhs ) [inline]`

Tests the ordering of a string and a regular expression submatch.

**Parameters**

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A string.                      |
| <code>__rhs</code> | A regular expression submatch. |

**Returns**

true if `__lhs` precedes `__rhs`, false otherwise.

Definition at line 1238 of file `regex.h`.

References `std::sub_match<_Bilter>::compare()`.

**3.36.3.13** `template<typename _Bi_iter> bool std::operator<( const sub_match<_Bi_iter> & __lhs, typename iterator_traits<_Bi_iter>::value_type const * __rhs ) [inline]`

Tests the ordering of a regular expression submatch and a string.

**Parameters**

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A string.                      |

**Returns**

true if `__lhs` precedes `__rhs`, false otherwise.

Definition at line 1312 of file `regex.h`.

**3.36.3.14** `template<typename _Bi_iter> bool std::operator<( typename iterator_traits<_Bi_iter>::value_type const & __lhs, const sub_match<_Bi_iter> & __rhs ) [inline]`

Tests the ordering of a string and a regular expression submatch.

**Parameters**

|                    |           |
|--------------------|-----------|
| <code>__lhs</code> | A string. |
|--------------------|-----------|

|                    |                                |
|--------------------|--------------------------------|
| <code>__rhs</code> | A regular expression submatch. |
|--------------------|--------------------------------|

**Returns**

true if `__lhs` precedes `__rhs`, false otherwise.

Definition at line 1389 of file `regex.h`.

References `std::sub_match<_Biliter>::compare()`.

**3.36.3.15** `template<typename _Bi_iter> bool std::operator<( const sub_match<_Bi_iter> & __lhs, typename iterator_traits<_Bi_iter>::value_type const & __rhs ) [inline]`

Tests the ordering of a regular expression submatch and a string.

**Parameters**

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A const string reference.      |

**Returns**

true if `__lhs` precedes `__rhs`, false otherwise.

Definition at line 1469 of file `regex.h`.

References `std::sub_match<_Biliter>::compare()`.

**3.36.3.16** `template<typename _Ch_type, typename _Ch_traits, typename _Bi_iter> basic_ostream<_Ch_type, _Ch_traits> & std::operator<<( basic_ostream<_Ch_type, _Ch_traits> & __os, const sub_match<_Bi_iter> & __m ) [inline]`

Inserts a matched string into an output stream.

**Parameters**

|                   |                    |
|-------------------|--------------------|
| <code>__os</code> | The output stream. |
| <code>__m</code>  | A submatch string. |

**Returns**

the output stream with the submatch string inserted.

Definition at line 1523 of file `regex.h`.

References `std::sub_match<_Biliter>::str()`.

**3.36.3.17** `template<typename _Biliter> bool std::operator<=( const sub_match<_Biliter> & __lhs, const sub_match<_Biliter> & __rhs ) [inline]`

Tests the ordering of two regular expression submatches.

**Parameters**

|                    |                                     |
|--------------------|-------------------------------------|
| <code>__lhs</code> | First regular expression submatch.  |
| <code>__rhs</code> | Second regular expression submatch. |

**Returns**

true if `__lhs` does not succeed `__rhs`, false otherwise.

Definition at line 1013 of file `regex.h`.

References `std::sub_match<_Bilter >::compare()`.

3.36.3.18 `template<typename _Bi_iter, typename _Ch_traits, typename _Ch_alloc > bool std::operator<= ( const  
__sub_match_string<_Bi_iter, _Ch_traits, _Ch_alloc > & __lhs, const sub_match<_Bi_iter > & __rhs ) [inline]`

Tests the ordering of a string and a regular expression submatch.

**Parameters**

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A string.                      |
| <code>__rhs</code> | A regular expression submatch. |

**Returns**

true if `__lhs` does not succeed `__rhs`, false otherwise.

Definition at line 1120 of file `regex.h`.

3.36.3.19 `template<typename _Bi_iter, class _Ch_traits, class _Ch_alloc > bool std::operator<= ( const sub_match<_Bi_iter >  
& __lhs, const __sub_match_string<_Bi_iter, _Ch_traits, _Ch_alloc > & __rhs ) [inline]`

Tests the ordering of a regular expression submatch and a string.

**Parameters**

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A string.                      |

**Returns**

true if `__lhs` does not succeed `__rhs`, false otherwise.

Definition at line 1200 of file `regex.h`.

3.36.3.20 `template<typename _Bi_iter > bool std::operator<= ( typename iterator_traits<_Bi_iter >::value_type const * __lhs,  
const sub_match<_Bi_iter > & __rhs ) [inline]`

Tests the ordering of a string and a regular expression submatch.

**Parameters**

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A string.                      |
| <code>__rhs</code> | A regular expression submatch. |

**Returns**

true if `__lhs` does not succeed `__rhs`, false otherwise.

Definition at line 1274 of file `regex.h`.

```
3.36.3.21 template<typename _Bi_iter > bool std::operator<= ( const sub_match< _Bi_iter > & __lhs, typename iterator_traits<
    _Bi_iter >::value_type const * __rhs ) [inline]
```

Tests the ordering of a regular expression submatch and a string.

## Parameters

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A string.                      |

## Returns

true if `__lhs` does not succeed `__rhs`, false otherwise.

Definition at line 1348 of file `regex.h`.

3.36.3.22 `template<typename _Bi_iter> bool std::operator<= ( typename iterator_traits< _Bi_iter >::value_type const & __lhs, const sub_match< _Bi_iter > & __rhs ) [inline]`

Tests the ordering of a string and a regular expression submatch.

## Parameters

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A string.                      |
| <code>__rhs</code> | A regular expression submatch. |

## Returns

true if `__lhs` does not succeed `__rhs`, false otherwise.

Definition at line 1428 of file `regex.h`.

3.36.3.23 `template<typename _Bi_iter> bool std::operator<= ( const sub_match< _Bi_iter > & __lhs, typename iterator_traits< _Bi_iter >::value_type const & __rhs ) [inline]`

Tests the ordering of a regular expression submatch and a string.

## Parameters

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A const string reference.      |

## Returns

true if `__lhs` does not succeed `__rhs`, false otherwise.

Definition at line 1508 of file `regex.h`.

3.36.3.24 `template<typename _Bilter> bool std::operator== ( const sub_match< _Bilter > & __lhs, const sub_match< _Bilter > & __rhs ) [inline]`

Tests the equivalence of two regular expression submatches.

## Parameters

|                    |                                     |
|--------------------|-------------------------------------|
| <code>__lhs</code> | First regular expression submatch.  |
| <code>__rhs</code> | Second regular expression submatch. |

## Returns

true if `__lhs` is equivalent to `__rhs`, false otherwise.

Definition at line 980 of file `regex.h`.

References `std::sub_match< _Bilter >::compare()`.

```
3.36.3.25 template<typename _Bi_iter , typename _Ch_traits , typename _Ch_alloc > bool std::operator==( const  
    __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & __lhs, const sub_match< _Bi_iter > & __rhs ) [inline]
```

Tests the equivalence of a string and a regular expression submatch.

## Parameters

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A string.                      |
| <code>__rhs</code> | A regular expression submatch. |

## Returns

true if `__lhs` is equivalent to `__rhs`, false otherwise.

Definition at line 1053 of file `regex.h`.

References `std::sub_match<_Bilter>::compare()`, `std::basic_string<_CharT, _Traits, _Alloc>::data()`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

**3.36.3.26** `template<typename _Bi_iter, typename _Ch_traits, typename _Ch_alloc > bool std::operator==( const sub_match<_Bi_iter> & __lhs, const sub_match_string<_Bi_iter, _Ch_traits, _Ch_alloc> & __rhs ) [inline]`

Tests the equivalence of a regular expression submatch and a string.

## Parameters

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A string.                      |

## Returns

true if `__lhs` is equivalent to `__rhs`, false otherwise.

Definition at line 1133 of file `regex.h`.

References `std::sub_match<_Bilter>::compare()`, `std::basic_string<_CharT, _Traits, _Alloc>::data()`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

**3.36.3.27** `template<typename _Bi_iter > bool std::operator==( typename iterator_traits<_Bi_iter>::value_type const * __lhs, const sub_match<_Bi_iter> & __rhs ) [inline]`

Tests the equivalence of a C string and a regular expression submatch.

## Parameters

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A C string.                    |
| <code>__rhs</code> | A regular expression submatch. |

## Returns

true if `__lhs` is equivalent to `__rhs`, false otherwise.

Definition at line 1213 of file `regex.h`.

References `std::sub_match<_Bilter>::compare()`.

**3.36.3.28** `template<typename _Bi_iter > bool std::operator==( const sub_match<_Bi_iter> & __lhs, typename iterator_traits<_Bi_iter>::value_type const * __rhs ) [inline]`

Tests the equivalence of a regular expression submatch and a string.

## Parameters

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A pointer to a string?         |

## Returns

true if `__lhs` is equivalent to `__rhs`, false otherwise.

Definition at line 1287 of file `regex.h`.

References `std::sub_match<_Bilter>::compare()`.

**3.36.3.29** `template<typename _Bi_iter> bool std::operator==( typename iterator_traits<_Bi_iter>::value_type const & __lhs, const sub_match<_Bi_iter> & __rhs ) [inline]`

Tests the equivalence of a string and a regular expression submatch.

## Parameters

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A string.                      |
| <code>__rhs</code> | A regular expression submatch. |

## Returns

true if `__lhs` is equivalent to `__rhs`, false otherwise.

Definition at line 1361 of file `regex.h`.

References `std::sub_match<_Bilter>::compare()`.

**3.36.3.30** `template<typename _Bi_iter> bool std::operator==( const sub_match<_Bi_iter> & __lhs, typename iterator_traits<_Bi_iter>::value_type const & __rhs ) [inline]`

Tests the equivalence of a regular expression submatch and a string.

## Parameters

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A const string reference.      |

## Returns

true if `__lhs` is equivalent to `__rhs`, false otherwise.

Definition at line 1441 of file `regex.h`.

References `std::sub_match<_Bilter>::compare()`.

**3.36.3.31** `template<typename _Bi_iter, typename _Alloc> bool std::operator==( const match_results<_Bi_iter, _Alloc> & __m1, const match_results<_Bi_iter, _Alloc> & __m2 ) [inline]`

Compares two `match_results` for equality.

## Returns

true if the two objects refer to the same match, false otherwise.

Definition at line 1957 of file `regex.h`.

References `std::equal()`.

3.36.3.32 `template<typename _Bilter > bool std::operator> ( const sub_match<_Bilter > & __lhs, const sub_match<_Bilter > & __rhs ) [inline]`

Tests the ordering of two regular expression submatches.

## Parameters

|                    |                                     |
|--------------------|-------------------------------------|
| <code>__lhs</code> | First regular expression submatch.  |
| <code>__rhs</code> | Second regular expression submatch. |

## Returns

true if `__lhs` succeeds `__rhs`, false otherwise.

Definition at line 1035 of file `regex.h`.

References `std::sub_match<_Bilter >::compare()`.

```
3.36.3.33 template<typename _Bi_iter, typename _Ch_traits, typename _Ch_alloc > bool std::operator> ( const
    __sub_match_string<_Bi_iter, _Ch_traits, _Ch_alloc > & __lhs, const sub_match<_Bi_iter > & __rhs ) [inline]
```

Tests the ordering of a string and a regular expression submatch.

## Parameters

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A string.                      |
| <code>__rhs</code> | A regular expression submatch. |

## Returns

true if `__lhs` succeeds `__rhs`, false otherwise.

Definition at line 1096 of file `regex.h`.

```
3.36.3.34 template<typename _Bi_iter, class _Ch_traits, class _Ch_alloc > bool std::operator> ( const sub_match<_Bi_iter > &
    __lhs, const __sub_match_string<_Bi_iter, _Ch_traits, _Ch_alloc > & __rhs ) [inline]
```

Tests the ordering of a regular expression submatch and a string.

## Parameters

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A string.                      |

## Returns

true if `__lhs` succeeds `__rhs`, false otherwise.

Definition at line 1176 of file `regex.h`.

```
3.36.3.35 template<typename _Bi_iter > bool std::operator> ( typename iterator_traits<_Bi_iter >::value_type const * __lhs,
    const sub_match<_Bi_iter > & __rhs ) [inline]
```

Tests the ordering of a string and a regular expression submatch.

## Parameters

|                    |           |
|--------------------|-----------|
| <code>__lhs</code> | A string. |
|--------------------|-----------|

|                    |                                |
|--------------------|--------------------------------|
| <code>__rhs</code> | A regular expression submatch. |
|--------------------|--------------------------------|

**Returns**

true if `__lhs` succeeds `__rhs`, false otherwise.

Definition at line 1250 of file `regex.h`.

```
3.36.3.36 template<typename _Bi_iter > bool std::operator> ( const sub_match<_Bi_iter > & __lhs, typename iterator_traits<_Bi_iter >::value_type const * __rhs ) [inline]
```

Tests the ordering of a regular expression submatch and a string.

**Parameters**

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A string.                      |

**Returns**

true if `__lhs` succeeds `__rhs`, false otherwise.

Definition at line 1324 of file `regex.h`.

```
3.36.3.37 template<typename _Bi_iter > bool std::operator> ( typename iterator_traits<_Bi_iter >::value_type const & __lhs, const sub_match<_Bi_iter > & __rhs ) [inline]
```

Tests the ordering of a string and a regular expression submatch.

**Parameters**

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A string.                      |
| <code>__rhs</code> | A regular expression submatch. |

**Returns**

true if `__lhs` succeeds `__rhs`, false otherwise.

Definition at line 1404 of file `regex.h`.

```
3.36.3.38 template<typename _Bi_iter > bool std::operator> ( const sub_match<_Bi_iter > & __lhs, typename iterator_traits<_Bi_iter >::value_type const & __rhs ) [inline]
```

Tests the ordering of a regular expression submatch and a string.

**Parameters**

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A const string reference.      |

**Returns**

true if `__lhs` succeeds `__rhs`, false otherwise.

Definition at line 1484 of file `regex.h`.

```
3.36.3.39 template<typename _Bilter > bool std::operator>= ( const sub_match<_Bilter > &__lhs, const sub_match<_Bilter > &__rhs ) [inline]
```

Tests the ordering of two regular expression submatches.

## Parameters

|                    |                                     |
|--------------------|-------------------------------------|
| <code>__lhs</code> | First regular expression submatch.  |
| <code>__rhs</code> | Second regular expression submatch. |

## Returns

true if `__lhs` does not precede `__rhs`, false otherwise.

Definition at line 1024 of file `regex.h`.

References `std::sub_match<_Biter>::compare()`.

3.36.3.40 `template<typename _Bi_iter, typename _Ch_traits, typename _Ch_alloc> bool std::operator>= ( const __sub_match_string<_Bi_iter, _Ch_traits, _Ch_alloc> & __lhs, const sub_match<_Bi_iter> & __rhs ) [inline]`

Tests the ordering of a string and a regular expression submatch.

## Parameters

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A string.                      |
| <code>__rhs</code> | A regular expression submatch. |

## Returns

true if `__lhs` does not precede `__rhs`, false otherwise.

Definition at line 1108 of file `regex.h`.

3.36.3.41 `template<typename _Bi_iter, class _Ch_traits, class _Ch_alloc> bool std::operator>= ( const sub_match<_Bi_iter> & __lhs, const __sub_match_string<_Bi_iter, _Ch_traits, _Ch_alloc> & __rhs ) [inline]`

Tests the ordering of a regular expression submatch and a string.

## Parameters

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A string.                      |

## Returns

true if `__lhs` does not precede `__rhs`, false otherwise.

Definition at line 1188 of file `regex.h`.

3.36.3.42 `template<typename _Bi_iter> bool std::operator>= ( typename iterator_traits<_Bi_iter>::value_type const * __lhs, const sub_match<_Bi_iter> & __rhs ) [inline]`

Tests the ordering of a string and a regular expression submatch.

## Parameters

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A string.                      |
| <code>__rhs</code> | A regular expression submatch. |

## Returns

true if `__lhs` does not precede `__rhs`, false otherwise.

Definition at line 1262 of file `regex.h`.

```
3.36.3.43 template<typename _Bi_iter > bool std::operator>= ( const sub_match< _Bi_iter > & __lhs, typename iterator_traits<
    _Bi_iter >::value_type const * __rhs ) [inline]
```

Tests the ordering of a regular expression submatch and a string.

## Parameters

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A string.                      |

## Returns

true if `__lhs` does not precede `__rhs`, false otherwise.

Definition at line 1336 of file `regex.h`.

```
3.36.3.44 template<typename _Bi_iter > bool std::operator>= ( typename iterator_traits< _Bi_iter >::value_type const & __lhs,
const sub_match< _Bi_iter > & __rhs ) [inline]
```

Tests the ordering of a string and a regular expression submatch.

## Parameters

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A string.                      |
| <code>__rhs</code> | A regular expression submatch. |

## Returns

true if `__lhs` does not precede `__rhs`, false otherwise.

Definition at line 1416 of file `regex.h`.

```
3.36.3.45 template<typename _Bi_iter > bool std::operator>= ( const sub_match< _Bi_iter > & __lhs, typename iterator_traits<
_Bi_iter >::value_type const & __rhs ) [inline]
```

Tests the ordering of a regular expression submatch and a string.

## Parameters

|                    |                                |
|--------------------|--------------------------------|
| <code>__lhs</code> | A regular expression submatch. |
| <code>__rhs</code> | A const string reference.      |

## Returns

true if `__lhs` does not precede `__rhs`, false otherwise.

Definition at line 1496 of file `regex.h`.

```
3.36.3.46 template<typename _Bi_iter , typename _Alloc , typename _Ch_type , typename _Rx_traits > bool std::regex_match (
_Bi_iter __s, _Bi_iter __e, match_results< _Bi_iter, _Alloc > & __m, const basic_regex< _Ch_type, _Rx_traits > & __re,
regex_constants::match_flag_type __flags = regex_constants::match_default ) [inline]
```

Determines if there is a match between the regular expression `e` and all of the character sequence `[first, last)`.

## Parameters

|                      |                                                      |
|----------------------|------------------------------------------------------|
| <code>__s</code>     | Start of the character sequence to match.            |
| <code>__e</code>     | One-past-the-end of the character sequence to match. |
| <code>__m</code>     | The match results.                                   |
| <code>__re</code>    | The regular expression.                              |
| <code>__flags</code> | Controls how the regular expression is matched.      |

## Return values

|              |                 |
|--------------|-----------------|
| <i>true</i>  | A match exists. |
| <i>false</i> | Otherwise.      |

## Exceptions

|           |                                              |
|-----------|----------------------------------------------|
| <i>an</i> | exception of type <code>regex_error</code> . |
|-----------|----------------------------------------------|

Definition at line 2025 of file `regex.h`.

Referenced by `std::regex_match()`.

```
3.36.3.47 template<typename _Bi_iter, typename _Ch_type, typename _Rx_traits > bool std::regex_match ( _Bi_iter __first,
  _Bi_iter __last, const basic_regex< _Ch_type, _Rx_traits > & __re, regex_constants::match_flag_type __flags =
  regex_constants::match_default ) [inline]
```

Indicates if there is a match between the regular expression `e` and all of the character sequence `[first, last)`.

## Parameters

|                |                                                      |
|----------------|------------------------------------------------------|
| <i>__first</i> | Beginning of the character sequence to match.        |
| <i>__last</i>  | One-past-the-end of the character sequence to match. |
| <i>__re</i>    | The regular expression.                              |
| <i>__flags</i> | Controls how the regular expression is matched.      |

## Return values

|              |                 |
|--------------|-----------------|
| <i>true</i>  | A match exists. |
| <i>false</i> | Otherwise.      |

## Exceptions

|           |                                              |
|-----------|----------------------------------------------|
| <i>an</i> | exception of type <code>regex_error</code> . |
|-----------|----------------------------------------------|

Definition at line 2053 of file `regex.h`.

References `std::regex_match()`.

```
3.36.3.48 template<typename _Ch_type, typename _Alloc, typename _Rx_traits > bool std::regex_match ( const _Ch_type
  * __s, match_results< const _Ch_type *, _Alloc > & __m, const basic_regex< _Ch_type, _Rx_traits > & __re,
  regex_constants::match_flag_type __f = regex_constants::match_default ) [inline]
```

Determines if there is a match between the regular expression `e` and a C-style null-terminated string.

## Parameters

|             |                                                 |
|-------------|-------------------------------------------------|
| <i>__s</i>  | The C-style null-terminated string to match.    |
| <i>__m</i>  | The match results.                              |
| <i>__re</i> | The regular expression.                         |
| <i>__f</i>  | Controls how the regular expression is matched. |

## Return values

|              |                 |
|--------------|-----------------|
| <i>true</i>  | A match exists. |
| <i>false</i> | Otherwise.      |

## Exceptions

|           |                                              |

basic_string< _Ch_type, _Ch_traits, _Ch_alloc >::const_iterator, _Alloc > & __m, const basic_regex< _Ch_type,
_Rx_traits > & __re, regex_constants::match_flag_type __flags = regex_constants::match_default )
[inline]
```

Determines if there is a match between the regular expression `e` and a string.

## Parameters

|                      |                                                 |
|----------------------|-------------------------------------------------|
| <code>__s</code>     | The string to match.                            |
| <code>__m</code>     | The match results.                              |
| <code>__re</code>    | The regular expression.                         |
| <code>__flags</code> | Controls how the regular expression is matched. |

## Return values

|                    |                 |
|--------------------|-----------------|
| <code>true</code>  | A match exists. |
| <code>false</code> | Otherwise.      |

## Exceptions

|           |                                              |

_Rx_traits > & __e, const basic_string< _Ch_type, _St, _Sa > & __fmt, regex_constants::match_flag_type __flags =
regex_constants::match_default ) [inline]
```

Search for a regular expression within a range for multiple times, and replace the matched parts through filling a format string.

## Parameters

|                      |                                                |
|----------------------|------------------------------------------------|
| <code>__out</code>   | [OUT] The output iterator.                     |
| <code>__first</code> | [IN] The start of the string to search.        |
| <code>__last</code>  | [IN] One-past-the-end of the string to search. |
| <code>__e</code>     | [IN] The regular expression to search for.     |
| <code>__fmt</code>   | [IN] The format string.                        |
| <code>__flags</code> | [IN] Search and replace policy flags.          |

## Returns

`__out`

## Exceptions

|                 |                                              |

const _Ch_type * __fmt, regex_constants::match_flag_type __flags = regex_constants::match_default )
```

Search for a regular expression within a range for multiple times, and replace the matched parts through filling a format C-string.

## Parameters

|                      |                                                |
|----------------------|------------------------------------------------|
| <code>__out</code>   | [OUT] The output iterator.                     |
| <code>__first</code> | [IN] The start of the string to search.        |
| <code>__last</code>  | [IN] One-past-the-end of the string to search. |
| <code>__e</code>     | [IN] The regular expression to search for.     |
| <code>__fmt</code>   | [IN] The format C-string.                      |
| <code>__flags</code> | [IN] Search and replace policy flags.          |

## Returns

`__out`

## Exceptions

|                 |                                              |

regex_constants::match_flag_type __flags = regex_constants::match_default ) [inline]
```

Search for a regular expression within a string for multiple times, and replace the matched parts through filling a format string.

## Parameters

|                      |                                            |
|----------------------|--------------------------------------------|
| <code>__s</code>     | [IN] The string to search and replace.     |
| <code>__e</code>     | [IN] The regular expression to search for. |
| <code>__fmt</code>   | [IN] The format string.                    |
| <code>__flags</code> | [IN] Search and replace policy flags.      |

**Returns**

The string after replacing.

**Exceptions**

|           |                                              |

  regex_constants::match_flag_type __f = regex_constants::match_default ) [inline]
```

Searches for a regular expression within a C-string.

#### Parameters

|                  |                                                  |
|------------------|--------------------------------------------------|
| <code>__s</code> | [IN] A C-string to search for the regex.         |
| <code>__m</code> | [OUT] The set of regex matches.                  |
| <code>__e</code> | [IN] The regex to search for in <code>s</code> . |
| <code>__f</code> | [IN] The search flags.                           |

#### Return values

|                    |                                                                                   |
|--------------------|-----------------------------------------------------------------------------------|
| <code>true</code>  | A match was found within the string.                                              |
| <code>false</code> | No match was found within the string, the content of <code>m</code> is undefined. |

#### Exceptions

|                 |                                              |
|-----------------|----------------------------------------------|
| <code>an</code> | exception of type <code>regex_error</code> . |
|-----------------|----------------------------------------------|

Definition at line 2230 of file `regex.h`.

References `std::regex_search()`.

```
3.36.3.62 template<typename _Ch_type, typename _Rx_traits > bool std::regex_search ( const _Ch_type *
  __s, const basic_regex< _Ch_type, _Rx_traits > & __e, regex_constants::match_flag_type __f =
  regex_constants::match_default ) [inline]
```

Searches for a regular expression within a C-string.

## Parameters

|                  |                                            |
|------------------|--------------------------------------------|
| <code>__s</code> | [IN] The C-string to search.               |
| <code>__e</code> | [IN] The regular expression to search for. |
| <code>__f</code> | [IN] Search policy flags.                  |

## Return values

|                    |                                       |
|--------------------|---------------------------------------|
| <code>true</code>  | A match was found within the string.  |
| <code>false</code> | No match was found within the string. |

## Exceptions

|                 |                                              |
|-----------------|----------------------------------------------|
| <code>an</code> | exception of type <code>regex_error</code> . |
|-----------------|----------------------------------------------|

Definition at line 2249 of file `regex.h`.

References `std::regex_search()`.

```
3.36.3.63 template<typename _Ch_traits , typename _String_allocator , typename _Ch_type , typename _Rx_traits > bool
std::regex_search ( const basic_string< _Ch_type, _Ch_traits, _String_allocator > & __s, const basic_regex< _Ch_type,
_Rx_traits > & __e, regex_constants::match_flag_type __flags = regex_constants::match_default )
[inline]
```

Searches for a regular expression within a string.

## Parameters

|                      |                                            |
|----------------------|--------------------------------------------|
| <code>__s</code>     | [IN] The string to search.                 |
| <code>__e</code>     | [IN] The regular expression to search for. |
| <code>__flags</code> | [IN] Search policy flags.                  |

## Return values

|                    |                                       |
|--------------------|---------------------------------------|
| <code>true</code>  | A match was found within the string.  |
| <code>false</code> | No match was found within the string. |

## Exceptions

|                 |                                              |
|-----------------|----------------------------------------------|
| <code>an</code> | exception of type <code>regex_error</code> . |
|-----------------|----------------------------------------------|

Definition at line 2268 of file `regex.h`.

References `std::regex_search()`.

```
3.36.3.64 template<typename _Ch_traits , typename _Ch_alloc , typename _Alloc , typename _Ch_type , typename _Rx_traits >
bool std::regex_search ( const basic_string< _Ch_type, _Ch_traits, _Ch_alloc > & __s, match_results< typename
basic_string< _Ch_type, _Ch_traits, _Ch_alloc >::const_iterator, _Alloc > & __m, const basic_regex< _Ch_type,
_Rx_traits > & __e, regex_constants::match_flag_type __f = regex_constants::match_default )
[inline]
```

Searches for a regular expression within a string.

## Parameters

|                  |                                                  |
|------------------|--------------------------------------------------|
| <code>__s</code> | [IN] A C++ string to search for the regex.       |
| <code>__m</code> | [OUT] The set of regex matches.                  |
| <code>__e</code> | [IN] The regex to search for in <code>s</code> . |
| <code>__f</code> | [IN] The search flags.                           |

## Return values

|              |                                                                             |
|--------------|-----------------------------------------------------------------------------|
| <i>true</i>  | A match was found within the string.                                        |
| <i>false</i> | No match was found within the string, the content of <i>m</i> is undefined. |

## Exceptions

|           |                                              |
|-----------|----------------------------------------------|
| <i>an</i> | exception of type <code>regex_error</code> . |
|-----------|----------------------------------------------|

Definition at line 2291 of file `regex.h`.

References `std::basic_string<_CharT, _Traits, _Alloc >::begin()`, `std::basic_string<_CharT, _Traits, _Alloc >::end()`, and `std::regex_search()`.

```
3.36.3.65 template<typename _Ch_traits , typename _Ch_alloc , typename _Alloc , typename _Ch_type , typename _Rx_traits
> bool std::regex_search ( const basic_string<_Ch_type, _Ch_traits, _Ch_alloc > && , match_results< typename
basic_string<_Ch_type, _Ch_traits, _Ch_alloc >::const_iterator, _Alloc > & , const basic_regex<_Ch_type, _Rx_traits
> & , regex_constants::match_flag_type = regex_constants::match_default ) [delete]
```

Prevent unsafe attempts to get `match_results` from a temporary string.

```
3.36.3.66 template<typename _Ch_type , typename _Rx_traits > void std::swap ( basic_regex<_Ch_type, _Rx_traits > & __lhs,
basic_regex<_Ch_type, _Rx_traits > & __rhs ) [inline]
```

Swaps the contents of two regular expression objects.

## Parameters

|              |                            |
|--------------|----------------------------|
| <i>__lhs</i> | First regular expression.  |
| <i>__rhs</i> | Second regular expression. |

Definition at line 845 of file `regex.h`.

```
3.36.3.67 template<typename _Bi_iter , typename _Alloc > void std::swap ( match_results<_Bi_iter, _Alloc > & __lhs,
match_results<_Bi_iter, _Alloc > & __rhs ) [inline]
```

Swaps two match results.

## Parameters

|              |                 |
|--------------|-----------------|
| <i>__lhs</i> | A match result. |
| <i>__rhs</i> | A match result. |

The contents of the two `match_results` objects are swapped.

Definition at line 1995 of file `regex.h`.

### 3.37 Mathematical Special Functions

Collaboration diagram for Mathematical Special Functions:

#### Functions

- `template<typename _Tp >`  
`__gnu_cxx::__promote< _Tp >::__type std::assoc_laguerre` (unsigned int \_\_n, unsigned int \_\_m, \_Tp \_\_x)

### 3.37.1 Detailed Description

A collection of advanced mathematical special functions, defined by ISO/IEC IS 29124.

### 3.37.2 Function Documentation

**3.37.2.1** `template<typename _Tp > __gnu_cxx::__promote<_Tp >::__type std::assoc_laguerre ( unsigned int __n, unsigned int __m, _Tp __x ) [inline]`

Return the associated Laguerre polynomial of nonnegative order `n`, nonnegative degree `m` and real argument `x`:  $L_n^m(x)$ .

The associated Laguerre function of real degree  $\alpha$ ,  $L_n^\alpha(x)$ , is defined by

$$L_n^\alpha(x) = \frac{(\alpha + 1)_n}{n!} {}_1F_1(-n; \alpha + 1; x)$$

where  $(\alpha)_n$  is the Pochhammer symbol and  ${}_1F_1(a; c; x)$  is the confluent hypergeometric function.

The associated Laguerre polynomial is defined for integral degree  $\alpha = m$  by:

$$L_n^m(x) = (-1)^m \frac{d^m}{dx^m} L_{n+m}(x)$$

where the Laguerre polynomial is defined by:

$$L_n(x) = \frac{e^x}{n!} \frac{d^n}{dx^n} (x^n e^{-x})$$

and  $x \geq 0$ .

#### See Also

`laguerre` for details of the Laguerre function of degree `n`

#### Template Parameters

|                  |                                                            |
|------------------|------------------------------------------------------------|
| <code>_Tp</code> | The floating-point type of the argument <code>__x</code> . |
|------------------|------------------------------------------------------------|

#### Parameters

|                  |                                                                    |
|------------------|--------------------------------------------------------------------|
| <code>__n</code> | The order of the Laguerre function, <code>__n</code> $\geq 0$ .    |
| <code>__m</code> | The degree of the Laguerre function, <code>__m</code> $\geq 0$ .   |
| <code>__x</code> | The argument of the Laguerre function, <code>__x</code> $\geq 0$ . |

#### Exceptions

|                                |                              |
|--------------------------------|------------------------------|
| <code>std::domain_error</code> | if <code>__x &lt; 0</code> . |
|--------------------------------|------------------------------|

Definition at line 252 of file `specfun.h`.

**3.37.2.2** `float std::assoc_laguerref ( unsigned int __n, unsigned int __m, float __x ) [inline]`

Return the associated Laguerre polynomial of order `n`, degree `m`:  $L_n^m(x)$  for `float` argument.

#### See Also

`assoc_laguerre` for more details.

Definition at line 206 of file `specfun.h`.

**3.37.2.3** `long double std::assoc_laguerrel ( unsigned int __n, unsigned int __m, long double __x ) [inline]`

Return the associated Laguerre polynomial of order `n`, degree `m`:  $L_n^m(x)$ .

#### See Also

`assoc_laguerre` for more details.

Definition at line 216 of file `specfun.h`.

**3.37.2.4** `template<typename _Tp> __gnu_cxx::__promote<_Tp>::__type std::assoc_legendre ( unsigned int __l, unsigned int __m, _Tp __x ) [inline]`

Return the associated Legendre function of degree `l` and order `m`.

The associated Legendre function is derived from the Legendre function  $P_l(x)$  by the Rodrigues formula:

$$P_l^m(x) = (1-x^2)^{m/2} \frac{d^m}{dx^m} P_l(x)$$

#### See Also

`legendre` for details of the Legendre function of degree `l`

#### Template Parameters

|                  |                                                            |
|------------------|------------------------------------------------------------|
| <code>_Tp</code> | The floating-point type of the argument <code>__x</code> . |
|------------------|------------------------------------------------------------|

#### Parameters

|                  |                                                |
|------------------|------------------------------------------------|
| <code>__l</code> | The degree <code>__l</code> $\geq 0$ .         |
| <code>__m</code> | The order <code>__m</code> $\leq l$ .          |
| <code>__x</code> | The argument, <code>abs(__x)</code> $\leq 1$ . |

#### Exceptions

|                                |                                   |
|--------------------------------|-----------------------------------|
| <code>std::domain_error</code> | if <code>abs(__x) &gt; 1</code> . |
|--------------------------------|-----------------------------------|

Definition at line 298 of file `specfun.h`.

**3.37.2.5** `float std::assoc_legendref ( unsigned int __l, unsigned int __m, float __x ) [inline]`

Return the associated Legendre function of degree `l` and order `m` for `float` argument.

**See Also**

assoc\_legendre for more details.

Definition at line 267 of file specfun.h.

**3.37.2.6** `long double std::assoc_legendrel ( unsigned int __l, unsigned int __m, long double __x ) [inline]`

Return the associated Legendre function of degree  $l$  and order  $m$ .

**See Also**

assoc\_legendre for more details.

Definition at line 276 of file specfun.h.

**3.37.2.7** `template<typename _Tpa, typename _Tpb > __gnu_cxx::__promote_2<_Tpa, _Tpb>::__type std::beta ( _Tpa __a, _Tpb __b ) [inline]`

Return the beta function,  $B(a, b)$ , for real parameters  $a, b$ .

The beta function is defined by

$$B(a, b) = \int_0^1 t^{a-1} (1-t)^{b-1} dt = \frac{\Gamma(a)\Gamma(b)}{\Gamma(a+b)}$$

where  $a > 0$  and  $b > 0$

**Template Parameters**

|                   |                                                             |
|-------------------|-------------------------------------------------------------|
| <code>_Tpa</code> | The floating-point type of the parameter <code>__a</code> . |
| <code>_Tpb</code> | The floating-point type of the parameter <code>__b</code> . |

**Parameters**

|                  |                                                                     |
|------------------|---------------------------------------------------------------------|
| <code>__a</code> | The first argument of the beta function, <code>__a &gt; 0</code> .  |
| <code>__b</code> | The second argument of the beta function, <code>__b &gt; 0</code> . |

**Exceptions**

|                                |                                                         |
|--------------------------------|---------------------------------------------------------|
| <code>std::domain_error</code> | if <code>__a &lt; 0</code> or <code>__b &lt; 0</code> . |
|--------------------------------|---------------------------------------------------------|

Definition at line 343 of file specfun.h.

**3.37.2.8** `float std::betaf ( float __a, float __b ) [inline]`

Return the beta function,  $B(a, b)$ , for `float` parameters  $a, b$ .

**See Also**

beta for more details.

Definition at line 312 of file specfun.h.

**3.37.2.9** `long double std::betal ( long double __a, long double __b ) [inline]`

Return the beta function,  $B(a, b)$ , for long double parameters  $a, b$ .

**See Also**

beta for more details.

Definition at line 322 of file specfun.h.

3.37.2.10 `template<typename _Tp> __gnu_cxx::__promote<_Tp>::__type std::comp_ellint_1 ( _Tp __k ) [inline]`

Return the complete elliptic integral of the first kind  $K(k)$  for real modulus  $k$ .

The complete elliptic integral of the first kind is defined as

$$K(k) = F(k, \pi/2) = \int_0^{\pi/2} \frac{d\theta}{\sqrt{1 - k^2 \sin^2 \theta}}$$

where  $F(k, \phi)$  is the incomplete elliptic integral of the first kind and the modulus  $|k| \leq 1$ .

#### See Also

`ellint_1` for details of the incomplete elliptic function of the first kind.

#### Template Parameters

|                  |                                                           |
|------------------|-----------------------------------------------------------|
| <code>_Tp</code> | The floating-point type of the modulus <code>__k</code> . |
|------------------|-----------------------------------------------------------|

#### Parameters

|                  |                                             |
|------------------|---------------------------------------------|
| <code>__k</code> | The modulus, <code>abs (__k) &lt;= 1</code> |
|------------------|---------------------------------------------|

#### Exceptions

|                                |                                    |
|--------------------------------|------------------------------------|
| <code>std::domain_error</code> | if <code>abs (__k) &gt; 1</code> . |
|--------------------------------|------------------------------------|

Definition at line 391 of file `specfun.h`.

3.37.2.11 `float std::comp_ellint_1f ( float __k ) [inline]`

Return the complete elliptic integral of the first kind  $E(k)$  for `float` modulus  $k$ .

#### See Also

`comp_ellint_1` for details.

Definition at line 358 of file `specfun.h`.

3.37.2.12 `long double std::comp_ellint_1l ( long double __k ) [inline]`

Return the complete elliptic integral of the first kind  $E(k)$  for long double modulus  $k$ .

#### See Also

`comp_ellint_1` for details.

Definition at line 368 of file `specfun.h`.

3.37.2.13 `template<typename _Tp> __gnu_cxx::__promote<_Tp>::__type std::comp_ellint_2 ( _Tp __k ) [inline]`

Return the complete elliptic integral of the second kind  $E(k)$  for real modulus  $k$ .

The complete elliptic integral of the second kind is defined as

$$E(k) = E(k, \pi/2) = \int_0^{\pi/2} \sqrt{1 - k^2 \sin^2 \theta}$$

where  $E(k, \phi)$  is the incomplete elliptic integral of the second kind and the modulus  $|k| \leq 1$ .

**See Also**

`ellint_2` for details of the incomplete elliptic function of the second kind.

**Template Parameters**

|                  |                                                           |
|------------------|-----------------------------------------------------------|
| <code>_Tp</code> | The floating-point type of the modulus <code>__k</code> . |
|------------------|-----------------------------------------------------------|

**Parameters**

|                  |                                             |
|------------------|---------------------------------------------|
| <code>__k</code> | The modulus, <code>abs (__k) &lt;= 1</code> |
|------------------|---------------------------------------------|

**Exceptions**

|                                |                                    |
|--------------------------------|------------------------------------|
| <code>std::domain_error</code> | if <code>abs (__k) &gt; 1</code> . |
|--------------------------------|------------------------------------|

Definition at line 438 of file `specfun.h`.

**3.37.2.14** `float std::comp_ellint_2f ( float __k ) [inline]`

Return the complete elliptic integral of the second kind  $E(k)$  for `float` modulus `k`.

**See Also**

`comp_ellint_2` for details.

Definition at line 406 of file `specfun.h`.

**3.37.2.15** `long double std::comp_ellint_2l ( long double __k ) [inline]`

Return the complete elliptic integral of the second kind  $E(k)$  for long double modulus `k`.

**See Also**

`comp_ellint_2` for details.

Definition at line 416 of file `specfun.h`.

**3.37.2.16** `template<typename _Tp, typename _Tpn > __gnu_cxx::__promote_2<_Tp, _Tpn>::__type std::comp_ellint_3 ( _Tp __k, _Tpn __nu ) [inline]`

Return the complete elliptic integral of the third kind  $\Pi(k, v) = \Pi(k, v, \pi/2)$  for real modulus `k`.

The complete elliptic integral of the third kind is defined as

$$\Pi(k, v) = \Pi(k, v, \pi/2) = \int_0^{\pi/2} \frac{d\theta}{(1 - v \sin^2 \theta) \sqrt{1 - k^2 \sin^2 \theta}}$$

where  $\Pi(k, v, \phi)$  is the incomplete elliptic integral of the second kind and the modulus  $|k| \leq 1$ .

**See Also**

`ellint_3` for details of the incomplete elliptic function of the third kind.

## Template Parameters

|                    |                                                             |
|--------------------|-------------------------------------------------------------|
| <code>__Tp</code>  | The floating-point type of the modulus <code>__k</code> .   |
| <code>__Tpn</code> | The floating-point type of the argument <code>__nu</code> . |

## Parameters

|                   |                                             |
|-------------------|---------------------------------------------|
| <code>__k</code>  | The modulus, <code>abs (__k) &lt;= 1</code> |
| <code>__nu</code> | The argument                                |

## Exceptions

|                                |                                    |
|--------------------------------|------------------------------------|
| <code>std::domain_error</code> | if <code>abs (__k) &gt; 1</code> . |
|--------------------------------|------------------------------------|

Definition at line 489 of file `specfun.h`.

**3.37.2.17** `float std::comp_ellint_3f ( float __k, float __nu ) [inline]`

Return the complete elliptic integral of the third kind  $\Pi(k, \nu)$  for `float` modulus `k`.

## See Also

`comp_ellint_3` for details.

Definition at line 453 of file `specfun.h`.

**3.37.2.18** `long double std::comp_ellint_3l ( long double __k, long double __nu ) [inline]`

Return the complete elliptic integral of the third kind  $\Pi(k, \nu)$  for `long double` modulus `k`.

## See Also

`comp_ellint_3` for details.

Definition at line 463 of file `specfun.h`.

**3.37.2.19** `template<typename _Tpnu, typename _Tp> __gnu_cxx::__promote_2<_Tpnu, _Tp>::__type std::cyl_bessel_i ( _Tpnu __nu, _Tp __x ) [inline]`

Return the regular modified Bessel function  $I_\nu(x)$  for real order `\nu` and argument `x >= 0`.

The regular modified cylindrical Bessel function is:

$$I_\nu(x) = i^{-\nu} J_\nu(ix) = \sum_{k=0}^{\infty} \frac{(x/2)^{\nu+2k}}{k! \Gamma(\nu+k+1)}$$

## Template Parameters

|                     |                                                            |
|---------------------|------------------------------------------------------------|
| <code>__Tpnu</code> | The floating-point type of the order <code>__nu</code> .   |
| <code>__Tp</code>   | The floating-point type of the argument <code>__x</code> . |

## Parameters

|                   |                                        |
|-------------------|----------------------------------------|
| <code>__nu</code> | The order                              |
| <code>__x</code>  | The argument, <code>__x &gt;= 0</code> |

**Exceptions**

|                                |                              |
|--------------------------------|------------------------------|
| <code>std::domain_error</code> | if <code>__x &lt; 0</code> . |
|--------------------------------|------------------------------|

Definition at line 535 of file `specfun.h`.

**3.37.2.20** `float std::cyl_bessel_if ( float __nu, float __x ) [inline]`

Return the regular modified Bessel function  $I_\nu(x)$  for `float` order  $\nu$  and argument  $x \geq 0$ .

**See Also**

`cyl_bessel_i` for details.

Definition at line 504 of file `specfun.h`.

**3.37.2.21** `long double std::cyl_bessel_il ( long double __nu, long double __x ) [inline]`

Return the regular modified Bessel function  $I_\nu(x)$  for `long double` order  $\nu$  and argument  $x \geq 0$ .

**See Also**

`cyl_bessel_i` for details.

Definition at line 514 of file `specfun.h`.

**3.37.2.22** `template<typename _Tpnu, typename _Tp> __gnu_cxx::__promote_2<_Tpnu, _Tp>::__type std::cyl_bessel_j ( _Tpnu __nu, _Tp __x ) [inline]`

Return the Bessel function  $J_\nu(x)$  of real order  $\nu$  and argument  $x \geq 0$ .

The cylindrical Bessel function is:

$$J_\nu(x) = \sum_{k=0}^{\infty} \frac{(-1)^k (x/2)^{\nu+2k}}{k! \Gamma(\nu+k+1)}$$

**Template Parameters**

|                    |                                                            |
|--------------------|------------------------------------------------------------|
| <code>_Tpnu</code> | The floating-point type of the order <code>__nu</code> .   |
| <code>_Tp</code>   | The floating-point type of the argument <code>__x</code> . |

**Parameters**

|                   |                                        |
|-------------------|----------------------------------------|
| <code>__nu</code> | The order                              |
| <code>__x</code>  | The argument, <code>__x &gt;= 0</code> |

**Exceptions**

|                                |                              |
|--------------------------------|------------------------------|
| <code>std::domain_error</code> | if <code>__x &lt; 0</code> . |
|--------------------------------|------------------------------|

Definition at line 581 of file `specfun.h`.

**3.37.2.23** `float std::cyl_bessel_jf ( float __nu, float __x ) [inline]`

Return the Bessel function of the first kind  $J_\nu(x)$  for `float` order  $\nu$  and argument  $x \geq 0$ .

## See Also

`cyl_bessel_j` for details.

Definition at line 550 of file `specfun.h`.

**3.37.2.24** `long double std::cyl_bessel_jl( long double __nu, long double __x ) [inline]`

Return the Bessel function of the first kind  $J_\nu(x)$  for `long double` order  $\nu$  and argument  $x \geq 0$ .

## See Also

`cyl_bessel_j` for details.

Definition at line 560 of file `specfun.h`.

**3.37.2.25** `template<typename _Tpnu, typename _Tp> __gnu_cxx::__promote_2<_Tpnu, _Tp>::__type std::cyl_bessel_k( _Tpnu __nu, _Tp __x ) [inline]`

Return the irregular modified Bessel function  $K_\nu(x)$  of real order  $\nu$  and argument  $x$ .

The irregular modified Bessel function is defined by:

$$K_\nu(x) = \frac{\pi I_{-\nu}(x) - I_\nu(x)}{2 \sin \nu\pi}$$

where for integral  $\nu = n$  a limit is taken:  $\lim_{\nu \rightarrow n}$ . For negative argument we have simply:

$$K_{-\nu}(x) = K_\nu(x)$$

## Template Parameters

|                    |                                                            |
|--------------------|------------------------------------------------------------|
| <code>_Tpnu</code> | The floating-point type of the order <code>__nu</code> .   |
| <code>_Tp</code>   | The floating-point type of the argument <code>__x</code> . |

## Parameters

|                   |                                         |
|-------------------|-----------------------------------------|
| <code>__nu</code> | The order                               |
| <code>__x</code>  | The argument, <code>__x</code> $\geq 0$ |

## Exceptions

|                                |                             |
|--------------------------------|-----------------------------|
| <code>std::domain_error</code> | if <code>__x</code> $< 0$ . |
|--------------------------------|-----------------------------|

Definition at line 633 of file `specfun.h`.

**3.37.2.26** `float std::cyl_bessel_kf( float __nu, float __x ) [inline]`

Return the irregular modified Bessel function  $K_\nu(x)$  for `float` order  $\nu$  and argument  $x \geq 0$ .

## See Also

`cyl_bessel_k` for details.

Definition at line 596 of file `specfun.h`.

**3.37.2.27** `long double std::cyl_bessel_kl( long double __nu, long double __x ) [inline]`

Return the irregular modified Bessel function  $K_\nu(x)$  for `long double` order  $\nu$  and argument  $x \geq 0$ .

**See Also**

`cyl_bessel_k` for details.

Definition at line 606 of file `specfun.h`.

**3.37.2.28** `template<typename _Tpnu, typename _Tp> __gnu_cxx::__promote_2<_Tpnu, _Tp>::__type std::cyl_neumann ( _Tpnu __nu, _Tp __x ) [inline]`

Return the Neumann function  $N_\nu(x)$  of real order  $\nu$  and argument  $x \geq 0$ .

The Neumann function is defined by:

$$N_\nu(x) = \frac{J_\nu(x) \cos \nu\pi - J_{-\nu}(x)}{\sin \nu\pi}$$

where  $x \geq 0$  and for integral order  $\nu = n$  a limit is taken:  $\lim_{\nu \rightarrow n}$ .

**Template Parameters**

|                    |                                                            |
|--------------------|------------------------------------------------------------|
| <code>_Tpnu</code> | The floating-point type of the order <code>__nu</code> .   |
| <code>_Tp</code>   | The floating-point type of the argument <code>__x</code> . |

**Parameters**

|                   |                                         |
|-------------------|-----------------------------------------|
| <code>__nu</code> | The order                               |
| <code>__x</code>  | The argument, <code>__x</code> $\geq 0$ |

**Exceptions**

|                                |                             |
|--------------------------------|-----------------------------|
| <code>std::domain_error</code> | if <code>__x</code> $< 0$ . |
|--------------------------------|-----------------------------|

Definition at line 681 of file `specfun.h`.

**3.37.2.29** `float std::cyl_neumannf ( float __nu, float __x ) [inline]`

Return the Neumann function  $N_\nu(x)$  of `float` order  $\nu$  and argument  $x$ .

**See Also**

`cyl_neumann` for details.

Definition at line 648 of file `specfun.h`.

**3.37.2.30** `long double std::cyl_neumannl ( long double __nu, long double __x ) [inline]`

Return the Neumann function  $N_\nu(x)$  of `long double` order  $\nu$  and argument  $x$ .

**See Also**

`cyl_neumann` for details.

Definition at line 658 of file `specfun.h`.

**3.37.2.31** `template<typename _Tp, typename _Tpp> __gnu_cxx::__promote_2<_Tp, _Tpp>::__type std::ellint_1 ( _Tp __k, _Tpp __phi ) [inline]`

Return the incomplete elliptic integral of the first kind  $F(k, \phi)$  for real modulus  $k$  and angle  $\phi$ .

The incomplete elliptic integral of the first kind is defined as

$$F(k, \phi) = \int_0^\phi \frac{d\theta}{\sqrt{1 - k^2 \sin^2 \theta}}$$

For  $\phi = \pi/2$  this becomes the complete elliptic integral of the first kind,  $K(k)$ .

#### See Also

`comp_ellint_1`.

#### Template Parameters

|                   |                                                           |
|-------------------|-----------------------------------------------------------|
| <code>_Tp</code>  | The floating-point type of the modulus <code>__k</code> . |
| <code>_Tpp</code> | The floating-point type of the angle <code>__phi</code> . |

#### Parameters

|                    |                                            |
|--------------------|--------------------------------------------|
| <code>__k</code>   | The modulus, <code>abs(__k) &lt;= 1</code> |
| <code>__phi</code> | The integral limit argument in radians     |

#### Exceptions

|                                |                                   |
|--------------------------------|-----------------------------------|
| <code>std::domain_error</code> | if <code>abs(__k) &gt; 1</code> . |
|--------------------------------|-----------------------------------|

Definition at line 729 of file `specfun.h`.

**3.37.2.32** `float std::ellint_1f( float __k, float __phi ) [inline]`

Return the incomplete elliptic integral of the first kind  $E(k, \phi)$  for `float` modulus  $k$  and angle  $\phi$ .

#### See Also

`ellint_1` for details.

Definition at line 696 of file `specfun.h`.

**3.37.2.33** `long double std::ellint_1l( long double __k, long double __phi ) [inline]`

Return the incomplete elliptic integral of the first kind  $E(k, \phi)$  for `long double` modulus  $k$  and angle  $\phi$ .

#### See Also

`ellint_1` for details.

Definition at line 706 of file `specfun.h`.

**3.37.2.34** `template<typename _Tp, typename _Tpp> __gnu_cxx::__promote_2<_Tp, _Tpp>::__type std::ellint_2( _Tp __k, _Tpp __phi ) [inline]`

Return the incomplete elliptic integral of the second kind  $E(k, \phi)$ .

The incomplete elliptic integral of the second kind is defined as

$$E(k, \phi) = \int_0^\phi \sqrt{1 - k^2 \sin^2 \theta}$$

For  $\phi = \pi/2$  this becomes the complete elliptic integral of the second kind,  $E(k)$ .

#### See Also

`comp_ellint_2`.

| <code>__Tp</code> | The floating-point type of the argument <code>__x</code> . |
|-------------------|------------------------------------------------------------|

## Parameters

|                  |                                                    |
|------------------|----------------------------------------------------|
| <code>__x</code> | The argument of the exponential integral function. |
|------------------|----------------------------------------------------|

Definition at line 870 of file `specfun.h`.

**3.37.2.41** `float std::expintf ( float __x ) [inline]`

Return the exponential integral  $Ei(x)$  for `float` argument `x`.

## See Also

`expint` for details.

Definition at line 844 of file `specfun.h`.

**3.37.2.42** `long double std::expintl ( long double __x ) [inline]`

Return the exponential integral  $Ei(x)$  for `long double` argument `x`.

## See Also

`expint` for details.

Definition at line 854 of file `specfun.h`.

**3.37.2.43** `template<typename _Tp > __gnu_cxx::__promote<_Tp>::__type std::hermite ( unsigned int __n, _Tp __x ) [inline]`

Return the Hermite polynomial  $H_n(x)$  of order `n` and `real` argument `x`.

The Hermite polynomial is defined by:

$$H_n(x) = (-1)^n e^{x^2} \frac{d^n}{dx^n} e^{-x^2}$$

The Hermite polynomial obeys a reflection formula:

$$H_n(-x) = (-1)^n H_n(x)$$

## Template Parameters

|                  |                                                            |
|------------------|------------------------------------------------------------|
| <code>_Tp</code> | The floating-point type of the argument <code>__x</code> . |
|------------------|------------------------------------------------------------|

## Parameters

|                  |              |
|------------------|--------------|
| <code>__n</code> | The order    |
| <code>__x</code> | The argument |

Definition at line 918 of file `specfun.h`.

**3.37.2.44** `float std::hermitef ( unsigned int __n, float __x ) [inline]`

Return the Hermite polynomial  $H_n(x)$  of nonnegative order `n` and `float` argument `x`.

## See Also

`hermite` for details.

Definition at line 885 of file `specfun.h`.

3.37.2.45 `long double std::hermitel ( unsigned int __n, long double __x ) [inline]`

Return the Hermite polynomial  $H_n(x)$  of nonnegative order  $n$  and `long double` argument  $x$ .

#### See Also

`hermite` for details.

Definition at line 895 of file `specfun.h`.

3.37.2.46 `template<typename _Tp > __gnu_cxx::__promote<_Tp>::__type std::laguerre ( unsigned int __n, _Tp __x ) [inline]`

Returns the Laguerre polynomial  $L_n(x)$  of nonnegative degree  $n$  and real argument  $x \geq 0$ .

The Laguerre polynomial is defined by:

$$L_n(x) = \frac{e^x}{n!} \frac{d^n}{dx^n} (x^n e^{-x})$$

#### Template Parameters

|                  |                                                            |
|------------------|------------------------------------------------------------|
| <code>_Tp</code> | The floating-point type of the argument <code>__x</code> . |
|------------------|------------------------------------------------------------|

#### Parameters

|                  |                                        |
|------------------|----------------------------------------|
| <code>__n</code> | The nonnegative order                  |
| <code>__x</code> | The argument <code>__x</code> $\geq 0$ |

#### Exceptions

|                                |                             |
|--------------------------------|-----------------------------|
| <code>std::domain_error</code> | if <code>__x</code> $< 0$ . |
|--------------------------------|-----------------------------|

Definition at line 962 of file `specfun.h`.

3.37.2.47 `float std::laguerref ( unsigned int __n, float __x ) [inline]`

Returns the Laguerre polynomial  $L_n(x)$  of nonnegative degree  $n$  and `float` argument  $x \geq 0$ .

#### See Also

`laguerre` for more details.

Definition at line 933 of file `specfun.h`.

3.37.2.48 `long double std::laguerrel ( unsigned int __n, long double __x ) [inline]`

Returns the Laguerre polynomial  $L_n(x)$  of nonnegative degree  $n$  and `long double` argument  $x \geq 0$ .

#### See Also

`laguerre` for more details.

Definition at line 943 of file `specfun.h`.

3.37.2.49 `template<typename _Tp > __gnu_cxx::__promote<_Tp>::__type std::legendre ( unsigned int __l, _Tp __x ) [inline]`

Return the Legendre polynomial  $P_l(x)$  of nonnegative degree  $l$  and real argument  $|x| \leq 1$ .

The Legendre function of order  $l$  and argument  $x$ ,  $P_l(x)$ , is defined by:

$$P_l(x) = \frac{1}{2^l l!} \frac{d^l}{dx^l} (x^2 - 1)^l$$

#### Template Parameters

|                  |                                                            |
|------------------|------------------------------------------------------------|
| <code>_Tp</code> | The floating-point type of the argument <code>__x</code> . |
|------------------|------------------------------------------------------------|

#### Parameters

|                  |                                              |
|------------------|----------------------------------------------|
| <code>__l</code> | The degree $l \geq 0$                        |
| <code>__x</code> | The argument $\text{abs}(\text{__x}) \leq 1$ |

#### Exceptions

|                                |                                 |
|--------------------------------|---------------------------------|
| <code>std::domain_error</code> | if $\text{abs}(\text{__x}) > 1$ |
|--------------------------------|---------------------------------|

Definition at line 1007 of file `specfun.h`.

**3.37.2.50** `float std::legendrf ( unsigned int __l, float __x ) [inline]`

Return the Legendre polynomial  $P_l(x)$  of nonnegative degree  $l$  and `float` argument  $|x| \leq 0$ .

#### See Also

`legendre` for more details.

Definition at line 977 of file `specfun.h`.

**3.37.2.51** `long double std::legendrel ( unsigned int __l, long double __x ) [inline]`

Return the Legendre polynomial  $P_l(x)$  of nonnegative degree  $l$  and `long double` argument  $|x| \leq 0$ .

#### See Also

`legendre` for more details.

Definition at line 987 of file `specfun.h`.

**3.37.2.52** `template<typename _Tp> __gnu_cxx::__promote<_Tp>::__type std::riemann_zeta ( _Tp __s ) [inline]`

Return the Riemann zeta function  $\zeta(s)$  for real argument  $s$ .

The Riemann zeta function is defined by:

$$\zeta(s) = \sum_{k=1}^{\infty} k^{-s} \text{ for } s > 1$$

and

$$\zeta(s) = \frac{1}{1-2^{1-s}} \sum_{k=1}^{\infty} (-1)^{k-1} k^{-s} \text{ for } 0 \leq s \leq 1$$

For  $s < 1$  use the reflection formula:

$$\zeta(s) = 2^s \pi^{s-1} \sin\left(\frac{\pi s}{2}\right) \Gamma(1-s) \zeta(1-s)$$

## Template Parameters

|                  |                                                            |
|------------------|------------------------------------------------------------|
| <code>_Tp</code> | The floating-point type of the argument <code>__s</code> . |
|------------------|------------------------------------------------------------|

## Parameters

|                  |                         |
|------------------|-------------------------|
| <code>__s</code> | The argument $s \neq 1$ |
|------------------|-------------------------|

Definition at line 1058 of file `specfun.h`.

**3.37.2.53** `float std::riemann_zetaf ( float __s ) [inline]`

Return the Riemann zeta function  $\zeta(s)$  for `float` argument  $s$ .

## See Also

`riemann_zeta` for more details.

Definition at line 1022 of file `specfun.h`.

**3.37.2.54** `long double std::riemann_zetal ( long double __s ) [inline]`

Return the Riemann zeta function  $\zeta(s)$  for `long double` argument  $s$ .

## See Also

`riemann_zeta` for more details.

Definition at line 1032 of file `specfun.h`.

**3.37.2.55** `template<typename _Tp > __gnu_cxx::__promote<_Tp>::__type std::sph_bessel ( unsigned int __n, _Tp __x ) [inline]`

Return the spherical Bessel function  $j_n(x)$  of nonnegative order  $n$  and real argument  $x \geq 0$ .

The spherical Bessel function is defined by:

$$j_n(x) = \left(\frac{\pi}{2x}\right)^{1/2} J_{n+1/2}(x)$$

## Template Parameters

|                  |                                                            |
|------------------|------------------------------------------------------------|
| <code>_Tp</code> | The floating-point type of the argument <code>__x</code> . |
|------------------|------------------------------------------------------------|

## Parameters

|                  |                               |
|------------------|-------------------------------|
| <code>__n</code> | The integral order $n \geq 0$ |
| <code>__x</code> | The real argument $x \geq 0$  |

## Exceptions

|                                |                              |
|--------------------------------|------------------------------|
| <code>std::domain_error</code> | if <code>__x &lt; 0</code> . |
|--------------------------------|------------------------------|

Definition at line 1102 of file `specfun.h`.

**3.37.2.56** `float std::sph_besself ( unsigned int __n, float __x ) [inline]`

Return the spherical Bessel function  $j_n(x)$  of nonnegative order  $n$  and `float` argument  $x \geq 0$ .

**See Also**

`sph_bessel` for more details.

Definition at line 1073 of file `specfun.h`.

**3.37.2.57** `long double std::sph_bessell ( unsigned int __n, long double __x ) [inline]`

Return the spherical Bessel function  $j_n(x)$  of nonnegative order `n` and `long double` argument  $x \geq 0$ .

**See Also**

`sph_bessel` for more details.

Definition at line 1083 of file `specfun.h`.

**3.37.2.58** `template<typename _Tp > __gnu_cxx::__promote<_Tp>::__type std::sph_legendre ( unsigned int __l, unsigned int __m, _Tp __theta ) [inline]`

Return the spherical Legendre function of nonnegative integral degree `l` and order `m` and real angle  $\theta$  in radians.

The spherical Legendre function is defined by

$$Y_l^m(\theta, \phi) = (-1)^m \left[ \frac{(2l+1)}{4\pi} \frac{(l-m)!}{(l+m)!} \right] P_l^m(\cos \theta) \exp^{im\phi}$$

**Template Parameters**

|                  |                                                             |
|------------------|-------------------------------------------------------------|
| <code>_Tp</code> | The floating-point type of the angle <code>__theta</code> . |
|------------------|-------------------------------------------------------------|

**Parameters**

|                      |                                                                                   |
|----------------------|-----------------------------------------------------------------------------------|
| <code>__l</code>     | The order <code>__l</code> $\geq 0$                                               |
| <code>__m</code>     | The degree <code>__m</code> $\geq 0$ and <code>__m</code> $\leq$ <code>__l</code> |
| <code>__theta</code> | The radian polar angle argument                                                   |

Definition at line 1149 of file `specfun.h`.

**3.37.2.59** `float std::sph_legendref ( unsigned int __l, unsigned int __m, float __theta ) [inline]`

Return the spherical Legendre function of nonnegative integral degree `l` and order `m` and float angle  $\theta$  in radians.

**See Also**

`sph_legendre` for details.

Definition at line 1117 of file `specfun.h`.

**3.37.2.60** `long double std::sph_legendrel ( unsigned int __l, unsigned int __m, long double __theta ) [inline]`

Return the spherical Legendre function of nonnegative integral degree `l` and order `m` and `long double` angle  $\theta$  in radians.

**See Also**

`sph_legendre` for details.

Definition at line 1128 of file `specfun.h`.

3.37.2.61 `template<typename _Tp> __gnu_cxx::__promote<_Tp>::__type std::sph_neumann ( unsigned int __n, _Tp __x )`  
`[inline]`

Return the spherical Neumann function of integral order  $n \geq 0$  and real argument  $x \geq 0$ .

The spherical Neumann function is defined by

$$n_n(x) = \left(\frac{\pi}{2x}\right)^{1/2} N_{n+1/2}(x)$$

#### Template Parameters

|                  |                                                            |
|------------------|------------------------------------------------------------|
| <code>_Tp</code> | The floating-point type of the argument <code>__x</code> . |
|------------------|------------------------------------------------------------|

#### Parameters

|                  |                                             |
|------------------|---------------------------------------------|
| <code>__n</code> | The integral order $n \geq 0$               |
| <code>__x</code> | The real argument <code>__x</code> $\geq 0$ |

#### Exceptions

|                                |                              |
|--------------------------------|------------------------------|
| <code>std::domain_error</code> | if <code>__x &lt; 0</code> . |
|--------------------------------|------------------------------|

Definition at line 1193 of file `specfun.h`.

3.37.2.62 `float std::sph_neumannf ( unsigned int __n, float __x )` `[inline]`

Return the spherical Neumann function of integral order  $n \geq 0$  and `float` argument  $x \geq 0$ .

#### See Also

`sph_neumann` for details.

Definition at line 1164 of file `specfun.h`.

3.37.2.63 `long double std::sph_neumannl ( unsigned int __n, long double __x )` `[inline]`

Return the spherical Neumann function of integral order  $n \geq 0$  and `long double`  $x \geq 0$ .

#### See Also

`sph_neumann` for details.

Definition at line 1174 of file `specfun.h`.

### 3.38 Mutexes

Collaboration diagram for Mutexes:

#### Classes

- struct [std::adopt\\_lock\\_t](#)
- struct [std::defer\\_lock\\_t](#)
- class [std::lock\\_guard< \\_Mutex >](#)
- class [std::mutex](#)
- struct [std::try\\_to\\_lock\\_t](#)
- class [std::unique\\_lock< \\_Mutex >](#)

#### Functions

- `template<typename _Mutex >`  
`void std::swap (unique_lock< _Mutex > &__x, unique_lock< _Mutex > &__y) noexcept`

#### Variables

- `_GLIBCXX17_INLINE constexpr`  
`adopt_lock_t std::adopt\_lock`
- `_GLIBCXX17_INLINE constexpr`  
`defer_lock_t std::defer\_lock`
- `_GLIBCXX17_INLINE constexpr`  
`try_to_lock_t std::try\_to\_lock`
- `template<typename _Mutex >`  
`void std::swap (shared_lock< _Mutex > &__x, shared_lock< _Mutex > &__y) noexcept`
- `#define \_\_cpp\_lib\_shared\_timed\_mutex`
- `using std::\_\_shared\_timed\_mutex\_base = __shared_mutex_cv`

#### 3.38.1 Detailed Description

Classes for mutex support.

### 3.38.2 Macro Definition Documentation

#### 3.38.2.1 `#define __cpp_lib_shared_timed_mutex`

Swap specialization for `shared_lock`.

Definition at line 57 of file `shared_mutex`.

### 3.38.3 Typedef Documentation

#### 3.38.3.1 `using std::__shared_timed_mutex_base = typedef __shared_mutex_cv`

Swap specialization for `shared_lock`.

Definition at line 355 of file `shared_mutex`.

### 3.38.4 Function Documentation

#### 3.38.4.1 `template<typename _Mutex > void std::swap ( unique_lock< _Mutex > & __x, unique_lock< _Mutex > & __y )` `[inline], [noexcept]`

Swap overload for `unique_lock` objects.

Definition at line 363 of file `std_mutex.h`.

#### 3.38.4.2 `template<typename _Mutex > void std::swap ( shared_lock< _Mutex > & __x, shared_lock< _Mutex > & __y )` `[noexcept]`

Swap specialization for `shared_lock`.

Definition at line 676 of file `shared_mutex`.

### 3.38.5 Variable Documentation

#### 3.38.5.1 `_GLIBCXX17_INLINE constexpr adopt_lock_t std::adopt_lock`

Tag used to make a scoped lock take ownership of a locked mutex.

Definition at line 148 of file `std_mutex.h`.

#### 3.38.5.2 `_GLIBCXX17_INLINE constexpr defer_lock_t std::defer_lock`

Tag used to prevent a scoped lock from acquiring ownership of a mutex.

Definition at line 142 of file `std_mutex.h`.

#### 3.38.5.3 `_GLIBCXX17_INLINE constexpr try_to_lock_t std::try_to_lock`

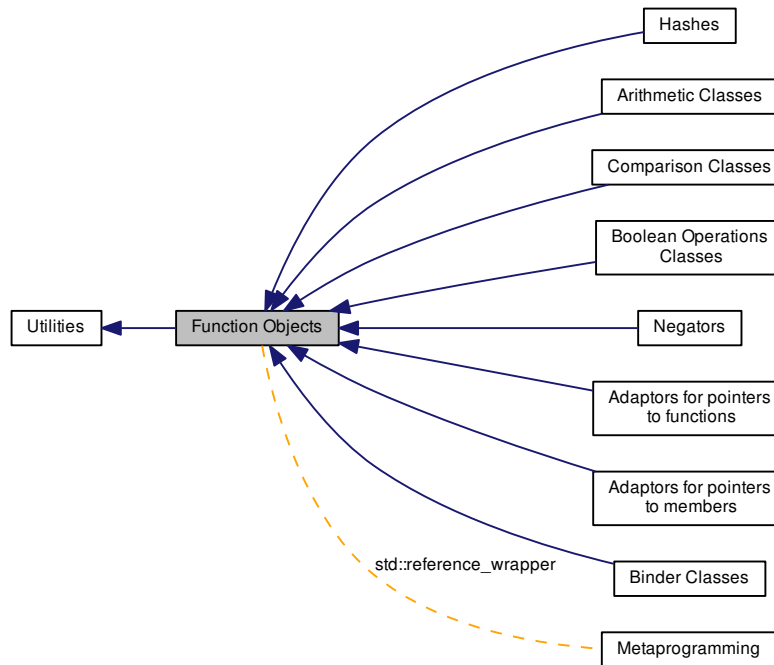

Tag used to prevent a scoped lock from blocking if a mutex is locked.

Definition at line 145 of file `std_mutex.h`.

Referenced by `std::__try_to_lock()`.

### 3.39 Function Objects

Collaboration diagram for Function Objects:

#### Modules

- [Adaptors for pointers to functions](#)
- [Adaptors for pointers to members](#)
- [Arithmetic Classes](#)
- [Binder Classes](#)
- [Boolean Operations Classes](#)
- [Comparison Classes](#)
- [Hashes](#)
- [Negators](#)

#### Classes

- `struct std::binary_function< _Arg1, _Arg2, _Result >`
- `class std::function< _Res(_ArgTypes...)>`
- `class std::reference_wrapper< _Tp >`
- `struct std::unary_function< _Arg, _Result >`

## Functions

- `template<typename _Tp, typename _Class >`  
`_Mem_fn<_Tp _Class::* > std::mem_fn (_Tp _Class::* __pm) noexcept`

### 3.39.1 Detailed Description

Function objects, or *functors*, are objects with an `operator()` defined and accessible. They can be passed as arguments to algorithm templates and used in place of a function pointer. Not only is the resulting expressiveness of the library increased, but the generated code can be more efficient than what you might write by hand. When we refer to *functors*, then, generally we include function pointers in the description as well.

Often, functors are only created as temporaries passed to algorithm calls, rather than being created as named variables.

Two examples taken from the standard itself follow. To perform a by-element addition of two vectors `a` and `b` containing `double`, and put the result in `a`, use

```
* transform (a.begin(), a.end(), b.begin(), a.begin(), plus<double>());
*
```

To negate every element in `a`, use

```
* transform(a.begin(), a.end(), a.begin(), negate<double>());
*
```

The addition and negation functions will be inlined directly.

The standard functors are derived from structs named `unary_function` and `binary_function`. These two classes contain nothing but typedefs, to aid in generic (template) programming. If you write your own functors, you might consider doing the same.

### 3.39.2 Function Documentation

**3.39.2.1** `template<typename _Tp, typename _Class > _Mem_fn<_Tp _Class::* > std::mem_fn ( _Tp _Class::* __pm )`  
`[inline], [noexcept]`

Returns a function object that forwards to the member pointer `pm`.

Definition at line 160 of file `functional`.

### 3.40 Arithmetic Classes

Collaboration diagram for Arithmetic Classes:

#### Classes

- struct [std::divides< \\_Tp >](#)
- struct [std::divides< void >](#)
- struct [std::minus< \\_Tp >](#)
- struct [std::minus< void >](#)
- struct [std::modulus< \\_Tp >](#)
- struct [std::modulus< void >](#)
- struct [std::multiplies< \\_Tp >](#)
- struct [std::multiplies< void >](#)
- struct [std::negate< \\_Tp >](#)
- struct [std::negate< void >](#)
- struct [std::plus< \\_Tp >](#)

#### Macros

- `#define \_\_cpp\_lib\_transparent\_operators`

#### 3.40.1 Detailed Description

Because basic math often needs to be done during an algorithm, the library provides functors for those operations. See the documentation for [the base classes](#) for examples of their use.

### 3.41 Comparison Classes

Collaboration diagram for Comparison Classes:

#### Classes

- struct `std::equal_to< _Tp >`
- struct `std::equal_to< void >`
- struct `std::greater< _Tp >`
- struct `std::greater< void >`
- struct `std::greater_equal< _Tp >`
- struct `std::greater_equal< void >`
- struct `std::less< _Tp >`
- struct `std::less< void >`
- struct `std::less_equal< _Tp >`
- struct `std::less_equal< void >`
- struct `std::not_equal_to< _Tp >`
- struct `std::not_equal_to< void >`

#### 3.41.1 Detailed Description

The library provides six wrapper functors for all the basic comparisons in C++, like `<`.

### 3.42 Boolean Operations Classes

Collaboration diagram for Boolean Operations Classes:

#### Classes

- struct [std::logical\\_and< \\_Tp >](#)
- struct [std::logical\\_and< void >](#)
- struct [std::logical\\_not< \\_Tp >](#)
- struct [std::logical\\_not< void >](#)
- struct [std::logical\\_or< \\_Tp >](#)
- struct [std::logical\\_or< void >](#)

#### 3.42.1 Detailed Description

Here are wrapper functors for Boolean operations: `&&`, `||`, and `!`.

### 3.43 Negators

Collaboration diagram for Negators:

#### Classes

- class `std::binary_negate<_Predicate >`
- class `std::unary_negate<_Predicate >`

#### Functions

- `template<typename _Predicate >`  
`_GLIBCXX14_CONSTEXPR`  
`unary_negate<_Predicate > std::not1 (const _Predicate &__pred)`
- `template<typename _Predicate >`  
`_GLIBCXX14_CONSTEXPR`  
`binary_negate<_Predicate > std::not2 (const _Predicate &__pred)`

#### 3.43.1 Detailed Description

The functions `not1` and `not2` each take a predicate functor and return an instance of `unary_negate` or `binary_negate`, respectively. These classes are functors whose `operator()` performs the stored predicate function and then returns the negation of the result.

For example, given a vector of integers and a trivial predicate,

```

* struct IntGreaterThanThree
*   : public std::unary_function<int, bool>
*   {
*     bool operator() (int x) { return x > 3; }
*   };
*
* std::find_if (v.begin(), v.end(), not1(IntGreaterThanThree()));
*

```

The call to `find_if` will locate the first index (*i*) of `v` for which `!(v[i] > 3)` is true.

The `not1/unary_negate` combination works on predicates taking a single argument. The `not2/binary_negate` combination works on predicates which take two arguments.

#### 3.43.2 Function Documentation

3.43.2.1 `template<typename _Predicate > _GLIBCXX14_CONSTEXPR unary_negate<_Predicate> std::not1 ( const _Predicate & __pred ) [inline]`

One of the [negation functors](#).

Definition at line 1000 of file `stl_function.h`.

3.43.2.2 `template<typename _Predicate > _GLIBCXX14_CONSTEXPR binary_negate<_Predicate> std::not2 ( const _Predicate & __pred ) [inline]`

One of the [negation functors](#).

Definition at line 1028 of file `stl_function.h`.

### 3.44 Adaptors for pointers to functions

Collaboration diagram for Adaptors for pointers to functions:

#### Classes

- class `std::pointer_to_binary_function<_Arg1, _Arg2, _Result >`
- class `std::pointer_to_unary_function<_Arg, _Result >`

#### Functions

- `template<typename _Arg, typename _Result >`  
`pointer_to_unary_function`  
`<_Arg, _Result > std::ptr_fun (_Result(*_x)(_Arg))`
- `template<typename _Arg1, typename _Arg2, typename _Result >`  
`pointer_to_binary_function`  
`<_Arg1, _Arg2, _Result > std::ptr_fun (_Result(*_x)(_Arg1, _Arg2))`

#### 3.44.1 Detailed Description

The advantage of function objects over pointers to functions is that the objects in the standard library declare nested typedefs describing their argument and result types with uniform names (e.g., `result_type` from the base classes `unary_function` and `binary_function`). Sometimes those typedefs are required, not just optional.

Adaptors are provided to turn pointers to unary (single-argument) and binary (double-argument) functions into function objects. The long-winded functor `pointer_to_unary_function` is constructed with a function pointer `f`, and its `operator()` called with argument `x` returns `f(x)`. The functor `pointer_to_binary_function` does the same thing, but with a double-argument `f` and `operator()`.

The function `ptr_fun` takes a pointer-to-function `f` and constructs an instance of the appropriate functor.

#### 3.44.2 Function Documentation

3.44.2.1 `template<typename _Arg, typename _Result > pointer_to_unary_function<_Arg, _Result> std::ptr_fun (`  
`_Result(*)(_Arg) _x ) [inline]`

One of the [adaptors for function pointers](#).

Definition at line 1076 of file `stl_function.h`.

---

3.44.2.2 `template<typename _Arg1, typename _Arg2, typename _Result > pointer_to_binary_function<_Arg1, _Arg2, _Result>`  
`std::ptr_fun ( _Result(*)( _Arg1, _Arg2) __x ) [inline]`

One of the [adaptors for function pointers](#).

Definition at line 1102 of file `stl_function.h`.

### 3.45 Adaptors for pointers to members

Collaboration diagram for Adaptors for pointers to members:

#### Classes

- class `std::const_mem_fun1_ref_t<_Ret, _Tp, _Arg >`
- class `std::const_mem_fun1_t<_Ret, _Tp, _Arg >`
- class `std::const_mem_fun_ref_t<_Ret, _Tp >`
- class `std::const_mem_fun_t<_Ret, _Tp >`
- class `std::mem_fun1_ref_t<_Ret, _Tp, _Arg >`
- class `std::mem_fun1_t<_Ret, _Tp, _Arg >`
- class `std::mem_fun_ref_t<_Ret, _Tp >`
- class `std::mem_fun_t<_Ret, _Tp >`

#### Functions

- `template<typename _Ret, typename _Tp >`  
`mem_fun_t<_Ret, _Tp > std::mem_fun (_Ret(_Tp::*_f)())`
- `template<typename _Ret, typename _Tp, typename _Arg >`  
`mem_fun1_t<_Ret, _Tp, _Arg > std::mem_fun (_Ret(_Tp::*_f)(_Arg))`
- `template<typename _Ret, typename _Tp >`  
`mem_fun_ref_t<_Ret, _Tp > std::mem_fun_ref (_Ret(_Tp::*_f)())`
- `template<typename _Ret, typename _Tp, typename _Arg >`  
`mem_fun1_ref_t<_Ret, _Tp, _Arg > std::mem_fun_ref (_Ret(_Tp::*_f)(_Arg))`

#### 3.45.1 Detailed Description

There are a total of  $8 = 2^3$  function objects in this family. (1) Member functions taking no arguments vs member functions taking one argument. (2) Call through pointer vs call through reference. (3) Const vs non-const member function.

All of this complexity is in the function objects themselves. You can ignore it by using the helper function `mem_fun` and `mem_fun_ref`, which create whichever type of adaptor is appropriate.

### 3.46 Heap

Collaboration diagram for Heap:

#### Functions

- `template<typename _RandomAccessIterator >`  
`bool std::is_heap ( _RandomAccessIterator __first, _RandomAccessIterator __last)`
- `template<typename _RandomAccessIterator , typename _Compare >`  
`bool std::is_heap ( _RandomAccessIterator __first, _RandomAccessIterator __last, _Compare __comp)`

`void std::sort_heap ( _RandomAccessIterator __first, _RandomAccessIterator __last, _Compare __comp)`

#### 3.46.1 Detailed Description

#### 3.46.2 Function Documentation

- 3.46.2.1 `template<typename _RandomAccessIterator > bool std::is_heap ( _RandomAccessIterator __first, _RandomAccessIterator __last ) [inline]`

Determines whether a range is a heap.

## Parameters

|                      |                 |
|----------------------|-----------------|
| <code>__first</code> | Start of range. |
| <code>__last</code>  | End of range.   |

## Returns

True if range is a heap, false otherwise.

Definition at line 529 of file `stl_heap.h`.

References `std::is_heap_until()`.

**3.46.2.2** `template<typename _RandomAccessIterator, typename _Compare > bool std::is_heap ( _RandomAccessIterator __first, _RandomAccessIterator __last, _Compare __comp ) [inline]`

Determines whether a range is a heap using comparison functor.

## Parameters

|                      |                            |
|----------------------|----------------------------|
| <code>__first</code> | Start of range.            |
| <code>__last</code>  | End of range.              |
| <code>__comp</code>  | Comparison functor to use. |

## Returns

True if range is a heap, false otherwise.

Definition at line 542 of file `stl_heap.h`.

References `std::distance()`.

**3.46.2.3** `template<typename _RandomAccessIterator > _RandomAccessIterator std::is_heap_until ( _RandomAccessIterator __first, _RandomAccessIterator __last ) [inline]`

Search the end of a heap.

## Parameters

|                      |                 |
|----------------------|-----------------|
| <code>__first</code> | Start of range. |
| <code>__last</code>  | End of range.   |

## Returns

An iterator pointing to the first element not in the heap.

This operation returns the last iterator `i` in `[__first, __last)` for which the range `[__first, i)` is a heap.

Definition at line 477 of file `stl_heap.h`.

References `std::distance()`.

**3.46.2.4** `template<typename _RandomAccessIterator, typename _Compare > _RandomAccessIterator std::is_heap_until ( _RandomAccessIterator __first, _RandomAccessIterator __last, _Compare __comp ) [inline]`

Search the end of a heap using comparison functor.

**Parameters**

|                      |                            |
|----------------------|----------------------------|
| <code>__first</code> | Start of range.            |
| <code>__last</code>  | End of range.              |
| <code>__comp</code>  | Comparison functor to use. |

**Returns**

An iterator pointing to the first element not in the heap.

This operation returns the last iterator *i* in [`__first`, `__last`) for which the range [`__first`, *i*) is a heap. Comparisons are made using `__comp`.

Definition at line 505 of file `stl_heap.h`.

References `std::distance()`.

Referenced by `std::is_heap()`.

```
3.46.2.5 template<typename _RandomAccessIterator > void std::make_heap ( _RandomAccessIterator __first,
    _RandomAccessIterator __last ) [inline]
```

Construct a heap over a range.

**Parameters**

|                      |                |
|----------------------|----------------|
| <code>__first</code> | Start of heap. |
| <code>__last</code>  | End of heap.   |

This operation makes the elements in [`__first`,`__last`) into a heap.

Definition at line 360 of file `stl_heap.h`.

```
3.46.2.6 template<typename _RandomAccessIterator , typename _Compare > void std::make_heap ( _RandomAccessIterator
    __first, _RandomAccessIterator __last, _Compare __comp ) [inline]
```

Construct a heap over a range using comparison functor.

**Parameters**

|                      |                            |
|----------------------|----------------------------|
| <code>__first</code> | Start of heap.             |
| <code>__last</code>  | End of heap.               |
| <code>__comp</code>  | Comparison functor to use. |

This operation makes the elements in [`__first`,`__last`) into a heap. Comparisons are made using `__comp`.

Definition at line 386 of file `stl_heap.h`.

Referenced by `std::priority_queue< _Tp, _Sequence, _Compare >::priority_queue()`.

```
3.46.2.7 template<typename _RandomAccessIterator > void std::pop_heap ( _RandomAccessIterator __first,
    _RandomAccessIterator __last ) [inline]
```

Pop an element off a heap.

**Parameters**

|                      |                |
|----------------------|----------------|
| <code>__first</code> | Start of heap. |
|----------------------|----------------|

|                     |              |
|---------------------|--------------|
| <code>__last</code> | End of heap. |
|---------------------|--------------|

**Precondition**

`[__first, __last)` is a valid, non-empty range.

This operation pops the top of the heap. The elements `__first` and `__last-1` are swapped and `[__first, __last-1)` is made into a heap.

Definition at line 271 of file `stl_heap.h`.

**3.46.2.8** `template<typename _RandomAccessIterator, typename _Compare > void std::pop_heap ( _RandomAccessIterator __first, _RandomAccessIterator __last, _Compare __comp ) [inline]`

Pop an element off a heap using comparison functor.

**Parameters**

|                      |                            |
|----------------------|----------------------------|
| <code>__first</code> | Start of heap.             |
| <code>__last</code>  | End of heap.               |
| <code>__comp</code>  | Comparison functor to use. |

This operation pops the top of the heap. The elements `__first` and `__last-1` are swapped and `[__first, __last-1)` is made into a heap. Comparisons are made using `comp`.

Definition at line 304 of file `stl_heap.h`.

Referenced by `std::priority_queue<_Tp, _Sequence, _Compare >::pop()`.

**3.46.2.9** `template<typename _RandomAccessIterator > void std::push_heap ( _RandomAccessIterator __first, _RandomAccessIterator __last ) [inline]`

Push an element onto a heap.

**Parameters**

|                      |                        |
|----------------------|------------------------|
| <code>__first</code> | Start of heap.         |
| <code>__last</code>  | End of heap + element. |

This operation pushes the element at `last-1` onto the valid heap over the range `[__first, __last-1)`. After completion, `[__first, __last)` is a valid heap.

Definition at line 154 of file `stl_heap.h`.

**3.46.2.10** `template<typename _RandomAccessIterator, typename _Compare > void std::push_heap ( _RandomAccessIterator __first, _RandomAccessIterator __last, _Compare __comp ) [inline]`

Push an element onto a heap using comparison functor.

**Parameters**

|                      |                        |
|----------------------|------------------------|
| <code>__first</code> | Start of heap.         |
| <code>__last</code>  | End of heap + element. |
| <code>__comp</code>  | Comparison functor.    |

This operation pushes the element at `__last-1` onto the valid heap over the range `[__first, __last-1)`. After completion, `[__first, __last)` is a valid heap. Compare operations are performed using `comp`.

Definition at line 189 of file `stl_heap.h`.

Referenced by `std::priority_queue<_Tp, _Sequence, _Compare >::push()`.

3.46.2.11 `template<typename _RandomAccessIterator > void std::sort_heap ( _RandomAccessIterator __first,  
_RandomAccessIterator __last ) [inline]`

Sort a heap.

## Parameters

|                      |                |
|----------------------|----------------|
| <code>__first</code> | Start of heap. |
| <code>__last</code>  | End of heap.   |

This operation sorts the valid heap in the range [`__first`,`__last`).

Definition at line 422 of file `stl_heap.h`.

```
3.46.2.12 template<typename _RandomAccessIterator , typename _Compare > void std::sort_heap ( _RandomAccessIterator  
    __first, _RandomAccessIterator __last, _Compare __comp ) [inline]
```

Sort a heap using comparison functor.

## Parameters

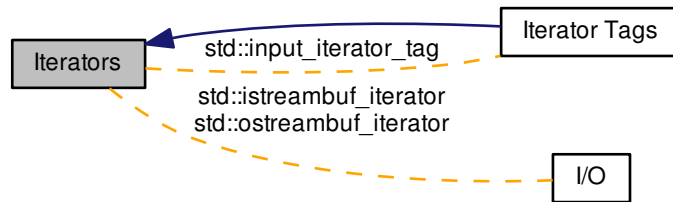

|                      |                            |
|----------------------|----------------------------|
| <code>__first</code> | Start of heap.             |
| <code>__last</code>  | End of heap.               |
| <code>__comp</code>  | Comparison functor to use. |

This operation sorts the valid heap in the range [`__first`,`__last`). Comparisons are made using `__comp`.

Definition at line 449 of file `stl_heap.h`.

#### Variables

- `template<typename _Iterator >`  
`decltype(__make_reverse_iterator(__niter_base(__it.base()))) std::auto`

#### 3.47.1 Detailed Description

Abstractions for uniform iterating through various underlying types.

### 3.47.2 Function Documentation

**3.47.2.1** `template<typename _Iter > constexpr iterator_traits<_Iter>::iterator_category std::__iterator_category ( const _Iter & )`  
`[inline]`

This function is not a part of the C++ standard but is syntactic sugar for internal library use only.

Definition at line 205 of file `stl_iterator_base_types.h`.

Referenced by `std::__find_if_not()`, `std::advance()`, `__gnu_cxx::copy_n()`, `std::copy_n()`, `__gnu_cxx::distance()`, `std::distance()`, `std::find_end()`, `std::partition()`, `std::reverse()`, `std::_V2::rotate()`, `__gnu_cxx::uninitialized_copy_n()`, `std::uninitialized_copy_n()`, and `std::unique_copy()`.

**3.47.2.2** `template<typename _Container > back_insert_iterator<_Container> std::back_inserter ( _Container & __x )`  
`[inline]`

#### Parameters

|                  |                                |
|------------------|--------------------------------|
| <code>__x</code> | A container of arbitrary type. |
|------------------|--------------------------------|

#### Returns

An instance of `back_insert_iterator` working on `__x`.

This wrapper function helps in creating `back_insert_iterator` instances. Typing the name of the iterator requires knowing the precise full type of the container, which can be tedious and impedes generic programming. Using this function lets you take advantage of automatic template parameter deduction, making the compiler match the correct types for you.

Definition at line 530 of file `bits/stl_iterator.h`.

Referenced by `std::match_results<_Bi_iter >::format()`, and `std::regex_replace()`.

**3.47.2.3** `template<typename _Container > front_insert_iterator<_Container> std::front_inserter ( _Container & __x )`  
`[inline]`

#### Parameters

|                  |                                |
|------------------|--------------------------------|
| <code>__x</code> | A container of arbitrary type. |
|------------------|--------------------------------|

#### Returns

An instance of `front_insert_iterator` working on `x`.

This wrapper function helps in creating `front_insert_iterator` instances. Typing the name of the iterator requires knowing the precise full type of the container, which can be tedious and impedes generic programming. Using this function lets you take advantage of automatic template parameter deduction, making the compiler match the correct types for you.

Definition at line 621 of file `bits/stl_iterator.h`.

**3.47.2.4** `template<typename _Container, typename _Iterator > insert_iterator<_Container> std::inserter ( _Container & __x, _Iterator __i )` `[inline]`

#### Parameters

|                  |                                 |
|------------------|---------------------------------|
| <code>__x</code> | A container of arbitrary type.  |
| <code>__i</code> | An iterator into the container. |

**Returns**

An instance of `insert_iterator` working on `__x`.

This wrapper function helps in creating `insert_iterator` instances. Typing the name of the iterator requires knowing the precise full type of the container, which can be tedious and impedes generic programming. Using this function lets you take advantage of automatic template parameter deduction, making the compiler match the correct types for you.

Definition at line 736 of file `bits/stl_iterator.h`.

```
3.47.2.5 template<typename _Iterator > _GLIBCXX17_CONSTEXPR reverse_iterator<_Iterator> std::make_reverse_iterator (
    _Iterator __i ) [inline]
```

Generator function for `reverse_iterator`.

Definition at line 416 of file `bits/stl_iterator.h`.

```
3.47.2.6 template<class _Tp, class _CharT, class _Traits, class _Dist > bool std::operator!=( const istream_iterator<_Tp,
    _CharT, _Traits, _Dist > &__x, const istream_iterator<_Tp, _CharT, _Traits, _Dist > &__y ) [inline]
```

Return false if `x` and `y` are both end or not end, or `x` and `y` are the same.

Definition at line 137 of file `stream_iterator.h`.

```
3.47.2.7 template<typename _Tp, typename _CharT, typename _Traits, typename _Dist > bool std::operator==( const
    istream_iterator<_Tp, _CharT, _Traits, _Dist > &__x, const istream_iterator<_Tp, _CharT, _Traits, _Dist > &__y )
    [inline]
```

Return true if `x` and `y` are both end or not end, or `x` and `y` are the same.

Definition at line 130 of file `stream_iterator.h`.

```
3.47.2.8 template<typename _Iterator > _GLIBCXX17_CONSTEXPR bool std::operator==( const reverse_iterator<_Iterator > &
    __x, const reverse_iterator<_Iterator > &__y ) [inline]
```

**Parameters**

|                  |                                   |
|------------------|-----------------------------------|
| <code>__x</code> | A <code>reverse_iterator</code> . |
| <code>__y</code> | A <code>reverse_iterator</code> . |

**Returns**

A simple `bool`.

Reverse iterators forward many operations to their underlying `base()` iterators. Others are implemented in terms of one another.

Definition at line 299 of file `bits/stl_iterator.h`.

References `std::reverse_iterator<_Iterator >::base()`.

### 3.48 Iterator Tags

Collaboration diagram for Iterator Tags:

#### Classes

- struct [std::bidirectional\\_iterator\\_tag](#)
- struct [std::forward\\_iterator\\_tag](#)
- struct [std::input\\_iterator\\_tag](#)
- struct [std::output\\_iterator\\_tag](#)
- struct [std::random\\_access\\_iterator\\_tag](#)

#### 3.48.1 Detailed Description

These are empty types, used to distinguish different iterators. The distinction is not made by what they contain, but simply by what they are. Different underlying algorithms can then be used based on the different operations supported by different iterator types.

## 3.49 Strings

Collaboration diagram for Strings:

### 3.50.1 Detailed Description

Binders turn functions/functors with two arguments into functors with a single argument, storing an argument to be applied later. For example, a variable `B` of type `binder1st` is constructed from a functor `f` and an argument `x`. Later, `B`'s `operator()` is called with a single argument `y`. The return value is the value of `f(x, y)`. `B` can be *called* with various arguments (`y1, y2, ...`) and will in turn call `f(x, y1), f(x, y2), ...`

The function `binder1st` is provided to save some typing. It takes the function and an argument as parameters, and returns an instance of `binder1st`.

The type `binder2nd` and its creator function `binder2nd` do the same thing, but the stored argument is passed as the second parameter instead of the first, e.g., `binder2nd(std::minus<float>(), 1.3)` will create a functor whose `operator()` accepts a floating-point number, subtracts 1.3 from it, and returns the result. (If `binder1st` had been used, the functor would perform `1.3 - x` instead.

Creator-wrapper functions like `binder1st` are intended to be used in calling algorithms. Their return values will be temporary objects. (The goal is to not require you to type names like `std::binder1st<std::plus<int>>` for declaring a variable to hold the return value from `binder1st(std::plus<int>(), 5)`).

These become more useful when combined with the composition functions.

These functions are deprecated in C++11 and can be replaced by `std::bind` (or `std::tr1::bind`) which is more powerful and flexible, supporting functions with any number of arguments. Uses of `binder1st` can be replaced by `std::bind(f, x, std::placeholders::_1)` and `binder2nd` by `std::bind(f, std::placeholders::_1, x)`.

### 3.50.2 Function Documentation

**3.50.2.1** `template<typename _Func, typename... _BoundArgs> _Bind_helper<__is_socketlike<_Func>::value, _Func, _BoundArgs...>::type std::bind( _Func && __f, _BoundArgs &&... __args ) [inline]`

Function template for `std::bind`.

Definition at line 808 of file `functional`.

**3.50.2.2** `template<typename _Result, typename _Func, typename... _BoundArgs> _Bindres_helper<_Result, _Func, _BoundArgs...>::type std::bind( _Func && __f, _BoundArgs &&... __args ) [inline]`

Function template for `std::bind<R>`.

Definition at line 832 of file `functional`.

**3.50.2.3** `template<typename _Operation, typename _Tp> binder1st<_Operation> std::binder1st( const _Operation & __fn, const _Tp & __x ) [inline]`

One of the [binder functors](#).

Definition at line 135 of file `binders.h`.

**3.50.2.4** `template<typename _Operation, typename _Tp> binder2nd<_Operation> std::binder2nd( const _Operation & __fn, const _Tp & __x ) [inline]`

One of the [binder functors](#).

Definition at line 170 of file `binders.h`.

```

5.2.1.22 Spherical associated Legendre functions.

Definition at line 1597 of file tr1/cmath.

```
3.51.2.21 template<typename _Tp> __gnu_cxx::__promote<_Tp>::__type std::tr1::sph_neumann ( unsigned int __n, _Tp __x )  
    [inline]
```

5.2.1.23 Spherical Neumann functions.

Definition at line 1614 of file tr1/cmath.

### 3.52 Dynamic Bitset.

Collaboration diagram for Dynamic Bitset.:

#### Classes

- struct `std::tr2::__dynamic_bitset_base< _WordT, _Alloc >`
- class `std::tr2::dynamic_bitset< _WordT, _Alloc >`

#### Functions

- template<typename \_CharT, typename \_Traits, typename \_Alloc1 >  
void `std::tr2::dynamic_bitset< _WordT, _Alloc >::M_copy_to_string` (`std::basic_string< _CharT, _Traits, _Alloc1 >` &\_\_str, \_CharT \_\_zero=\_CharT('0'), \_CharT \_\_one=\_CharT('1')) const
- template<typename \_CharT, typename \_Traits, typename \_WordT, typename \_Alloc >  
`std::basic_ostream< _CharT, _Traits >` & `std::tr2::operator<<` (`std::basic_ostream< _CharT, _Traits >` &\_\_os, const dynamic\_bitset< \_WordT, \_Alloc > &\_\_x)
- template<typename \_CharT, typename \_Traits, typename \_WordT, typename \_Alloc >  
`std::basic_istream< _CharT, _Traits >` & `std::tr2::operator>>` (`std::basic_istream< _CharT, _Traits >` &\_\_is, dynamic\_bitset< \_WordT, \_Alloc > &\_\_x)
- template<typename \_WordT, typename \_Alloc >  
bool `std::tr2::operator!=` (const dynamic\_bitset< \_WordT, \_Alloc > &\_\_lhs, const dynamic\_bitset< \_WordT, \_Alloc > &\_\_rhs)
- template<typename \_WordT, typename \_Alloc >  
bool `std::tr2::operator<=` (const dynamic\_bitset< \_WordT, \_Alloc > &\_\_lhs, const dynamic\_bitset< \_WordT, \_Alloc > &\_\_rhs)
- template<typename \_WordT, typename \_Alloc >  
bool `std::tr2::operator>` (const dynamic\_bitset< \_WordT, \_Alloc > &\_\_lhs, const dynamic\_bitset< \_WordT, \_Alloc > &\_\_rhs)
- template<typename \_WordT, typename \_Alloc >  
bool `std::tr2::operator>=` (const dynamic\_bitset< \_WordT, \_Alloc > &\_\_lhs, const dynamic\_bitset< \_WordT, \_Alloc > &\_\_rhs)
- template<typename \_WordT, typename \_Alloc >  
dynamic\_bitset< \_WordT, \_Alloc > `std::tr2::operator&` (const dynamic\_bitset< \_WordT, \_Alloc > &\_\_x, const dynamic\_bitset< \_WordT, \_Alloc > &\_\_y)
- template<typename \_WordT, typename \_Alloc >  
dynamic\_bitset< \_WordT, \_Alloc > `std::tr2::operator|` (const dynamic\_bitset< \_WordT, \_Alloc > &\_\_x, const dynamic\_bitset< \_WordT, \_Alloc > &\_\_y)

- `template<typename _WordT, typename _Alloc >`  
`dynamic_bitset< _WordT, _Alloc > std::tr2::operator^ (const dynamic_bitset< _WordT, _Alloc > &__x, const dynamic_bitset< _WordT, _Alloc > &__y)`
- `template<typename _WordT, typename _Alloc >`  
`dynamic_bitset< _WordT, _Alloc > std::tr2::operator- (const dynamic_bitset< _WordT, _Alloc > &__x, const dynamic_bitset< _WordT, _Alloc > &__y)`

### 3.52.1 Detailed Description

### 3.52.2 Function Documentation

3.52.2.1 `template<typename _WordT, typename _Alloc > bool std::tr2::operator!= ( const dynamic_bitset< _WordT, _Alloc > &__lhs, const dynamic_bitset< _WordT, _Alloc > &__rhs ) [inline]`

These comparisons for equality/inequality are, well, *bitwise*.

Definition at line 1133 of file `dynamic_bitset`.

3.52.2.2 `template<typename _WordT, typename _Alloc > dynamic_bitset<_WordT, _Alloc> std::tr2::operator& ( const dynamic_bitset< _WordT, _Alloc > &__x, const dynamic_bitset< _WordT, _Alloc > &__y ) [inline]`

Global bitwise operations on bitsets.

#### Parameters

|                  |                                                 |
|------------------|-------------------------------------------------|
| <code>__x</code> | A bitset.                                       |
| <code>__y</code> | A bitset of the same size as <code>__x</code> . |

#### Returns

A new bitset.

These should be self-explanatory.

Definition at line 1168 of file `dynamic_bitset`.

3.52.2.3 `template<typename _WordT, typename _Alloc > dynamic_bitset<_WordT, _Alloc> std::tr2::operator- ( const dynamic_bitset< _WordT, _Alloc > &__x, const dynamic_bitset< _WordT, _Alloc > &__y ) [inline]`

Global bitwise operations on bitsets.

#### Parameters

|                  |                                                 |
|------------------|-------------------------------------------------|
| <code>__x</code> | A bitset.                                       |
| <code>__y</code> | A bitset of the same size as <code>__x</code> . |

#### Returns

A new bitset.

These should be self-explanatory.

Definition at line 1198 of file `dynamic_bitset`.

3.52.2.4 `template<typename _CharT, typename _Traits, typename _WordT, typename _Alloc> std::basic_ostream<_CharT, _Traits>& std::tr2::operator<<( std::basic_ostream<_CharT, _Traits> & __os, const dynamic_bitset<_WordT, _Alloc> & __x ) [inline]`

Stream output operator for `dynamic_bitset`.

Definition at line 1211 of file `dynamic_bitset`.

References `std::__ctype_abstract_base<_CharT>::widen()`.

3.52.2.5 `template<typename _WordT, typename _Alloc> bool std::tr2::operator<=( const dynamic_bitset<_WordT, _Alloc> & __lhs, const dynamic_bitset<_WordT, _Alloc> & __rhs ) [inline]`

These comparisons for equality/inequality are, well, *bitwise*.

Definition at line 1139 of file `dynamic_bitset`.

3.52.2.6 `template<typename _WordT, typename _Alloc> bool std::tr2::operator>( const dynamic_bitset<_WordT, _Alloc> & __lhs, const dynamic_bitset<_WordT, _Alloc> & __rhs ) [inline]`

These comparisons for equality/inequality are, well, *bitwise*.

Definition at line 1145 of file `dynamic_bitset`.

3.52.2.7 `template<typename _WordT, typename _Alloc> bool std::tr2::operator>=( const dynamic_bitset<_WordT, _Alloc> & __lhs, const dynamic_bitset<_WordT, _Alloc> & __rhs ) [inline]`

These comparisons for equality/inequality are, well, *bitwise*.

Definition at line 1151 of file `dynamic_bitset`.

3.52.2.8 `template<typename _CharT, typename _Traits, typename _WordT, typename _Alloc> std::basic_istream<_CharT, _Traits>& std::tr2::operator>>( std::basic_istream<_CharT, _Traits> & __is, dynamic_bitset<_WordT, _Alloc> & __x )`

Stream input operator for `dynamic_bitset`.

Input will skip whitespace and only accept '0' and '1' characters. The `dynamic_bitset` will grow as necessary to hold the string of bits.

Definition at line 207 of file `dynamic_bitset.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc>::empty()`, `std::basic_string<_CharT, _Traits, _Alloc>::push_back()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_string<_CharT, _Traits, _Alloc>::reserve()`, `std::tr2::dynamic_bitset<_WordT, _Alloc>::resize()`, `std::basic_ios<_CharT, _Traits>::setstate()`, `std::tr2::dynamic_bitset<_WordT, _Alloc>::size()`, `std::basic_string<_CharT, _Traits, _Alloc>::size()`, and `std::basic_ios<_CharT, _Traits>::widen()`.

3.52.2.9 `template<typename _WordT, typename _Alloc> dynamic_bitset<_WordT, _Alloc> std::tr2::operator^( const dynamic_bitset<_WordT, _Alloc> & __x, const dynamic_bitset<_WordT, _Alloc> & __y ) [inline]`

Global bitwise operations on bitsets.

Parameters

|                  |                                                 |
|------------------|-------------------------------------------------|
| <code>__x</code> | A bitset.                                       |
| <code>__y</code> | A bitset of the same size as <code>__x</code> . |

**Returns**

A new bitset.

These should be self-explanatory.

Definition at line 1188 of file `dynamic_bitset`.

```
3.52.2.10 template<typename _WordT, typename _Alloc > dynamic_bitset<_WordT, _Alloc> std::tr2::operator| ( const  
dynamic_bitset< _WordT, _Alloc > & __x, const dynamic_bitset< _WordT, _Alloc > & __y ) [inline]
```

Global bitwise operations on bitsets.

**Parameters**

|                  |                                                 |
|------------------|-------------------------------------------------|
| <code>__x</code> | A bitset.                                       |
| <code>__y</code> | A bitset of the same size as <code>__x</code> . |

**Returns**

A new bitset.

These should be self-explanatory.

Definition at line 1178 of file `dynamic_bitset`.

### 3.53 Decimal Floating-Point Arithmetic

Collaboration diagram for Decimal Floating-Point Arithmetic:

#### Namespaces

- [std::decimal](#)

#### 3.53.1 Detailed Description

Classes and functions for decimal floating-point arithmetic.

### 3.54 Type-safe container of any type

Collaboration diagram for Type-safe container of any type:

#### Classes

- class `std::experimental::fundamentals_v1::any`
- class `std::experimental::fundamentals_v1::bad_any_cast`

#### Macros

- `#define __cpp_lib_experimental_any`

#### Functions

- `template<typename _Tp >`  
`void * std::experimental::fundamentals_v1::__any_caster (const any *__any)`
- `void std::experimental::fundamentals_v1::__throw_bad_any_cast ()`
- `static void std::experimental::fundamentals_v1::any::Manager_internal< _Tp >::S_manage (_Op __which, const any *__anyp, _Arg *__arg)`
- `static void std::experimental::fundamentals_v1::any::Manager_external< _Tp >::S_manage (_Op __which, const any *__anyp, _Arg *__arg)`
- `template<typename _ValueType >`  
`_ValueType std::experimental::fundamentals_v1::any_cast (const any &__any)`
- `void std::experimental::fundamentals_v1::swap (any &__x, any &__y) noexcept`
- `template<typename _ValueType >`  
`_ValueType std::experimental::fundamentals_v1::any_cast (any &__any)`
- `template<typename _ValueType, typename enable_if<!is_move_constructible< _ValueType >::value||is_lvalue_reference< _ValueType >::value, bool >::type = true>`  
`_ValueType std::experimental::fundamentals_v1::any_cast (any &&__any)`
- `template<typename _ValueType >`  
`const _ValueType * std::experimental::fundamentals_v1::any_cast (const any *__any) noexcept`
- `template<typename _ValueType >`  
`_ValueType * std::experimental::fundamentals_v1::any_cast (any *__any) noexcept`

#### 3.54.1 Detailed Description

A type-safe container for single values of value types, as described in n3804 "Any Library Proposal (Revision 3)".

## 3.54.2 Function Documentation

3.54.2.1 `template<typename _ValueType > _ValueType std::experimental::fundamentals_v1::any_cast ( const any & __any )`  
`[inline]`

Access the contained object.

## Template Parameters

|                         |                                              |
|-------------------------|----------------------------------------------|
| <code>_ValueType</code> | A const-reference or CopyConstructible type. |
|-------------------------|----------------------------------------------|

## Parameters

|                    |                       |
|--------------------|-----------------------|
| <code>__any</code> | The object to access. |
|--------------------|-----------------------|

## Returns

The contained object.

## Exceptions

|                           |                                                                              |
|---------------------------|------------------------------------------------------------------------------|
| <code>bad_any_cast</code> | If <code>__any.type() != typeid(remove_reference_t&lt;_ValueType&gt;)</code> |
|---------------------------|------------------------------------------------------------------------------|

Definition at line 351 of file any.

Referenced by `std::experimental::fundamentals_v1::any_cast()`.

3.54.2.2 `template<typename _ValueType > _ValueType std::experimental::fundamentals_v1::any_cast ( any & __any )`  
`[inline]`

Access the contained object.

## Template Parameters

|                         |                                        |
|-------------------------|----------------------------------------|
| <code>_ValueType</code> | A reference or CopyConstructible type. |
|-------------------------|----------------------------------------|

## Parameters

|                    |                       |
|--------------------|-----------------------|
| <code>__any</code> | The object to access. |
|--------------------|-----------------------|

## Returns

The contained object.

## Exceptions

|                           |                                                                              |
|---------------------------|------------------------------------------------------------------------------|
| <code>bad_any_cast</code> | If <code>__any.type() != typeid(remove_reference_t&lt;_ValueType&gt;)</code> |
|---------------------------|------------------------------------------------------------------------------|

Definition at line 374 of file any.

References `std::experimental::fundamentals_v1::any_cast()`.

3.54.2.3 `template<typename _ValueType , typename enable_if<!is_move_constructible<_ValueType >::value||is_lvalue_reference<_ValueType >::value, bool >::type = true> _ValueType std::experimental::fundamentals_v1::any_cast ( any && __any )` `[inline]`

Access the contained object.

## Template Parameters

|                         |                                        |
|-------------------------|----------------------------------------|
| <code>_ValueType</code> | A reference or CopyConstructible type. |
|-------------------------|----------------------------------------|

## Parameters

|                    |                       |
|--------------------|-----------------------|
| <code>__any</code> | The object to access. |
|--------------------|-----------------------|

## Returns

The contained object.

## Exceptions

|                           |                                                                              |
|---------------------------|------------------------------------------------------------------------------|
| <code>bad_any_cast</code> | If <code>__any.type() != typeid(remove_reference_t&lt;_ValueType&gt;)</code> |
|---------------------------|------------------------------------------------------------------------------|

Definition at line 388 of file any.

References `std::experimental::fundamentals_v1::any_cast()`.

```
3.54.2.4 template<typename _ValueType > const _ValueType* std::experimental::fundamentals_v1::any_cast ( const any * __any ) [inline], [noexcept]
```

Access the contained object.

## Template Parameters

|                         |                                   |
|-------------------------|-----------------------------------|
| <code>_ValueType</code> | The type of the contained object. |
|-------------------------|-----------------------------------|

## Parameters

|                    |                                    |
|--------------------|------------------------------------|
| <code>__any</code> | A pointer to the object to access. |
|--------------------|------------------------------------|

## Returns

The address of the contained object if `__any != nullptr && __any.type() == typeid(_ValueType)` , otherwise a null pointer.

Definition at line 438 of file any.

```
3.54.2.5 template<typename _ValueType > _ValueType* std::experimental::fundamentals_v1::any_cast ( any * __any ) [inline], [noexcept]
```

Access the contained object.

## Template Parameters

|                         |                                   |
|-------------------------|-----------------------------------|
| <code>_ValueType</code> | The type of the contained object. |
|-------------------------|-----------------------------------|

## Parameters

|                    |                                    |
|--------------------|------------------------------------|
| <code>__any</code> | A pointer to the object to access. |
|--------------------|------------------------------------|

## Returns

The address of the contained object if `__any != nullptr && __any.type() == typeid(_ValueType)` , otherwise a null pointer.

Definition at line 446 of file any.

3.54.2.6 `void std::experimental::fundamentals_v1::swap ( any & __x, any & __y ) [inline],[noexcept]`

Exchange the states of two `any` objects.

Definition at line 338 of file `any`.

### 3.55 Array creation functions

Collaboration diagram for Array creation functions:

#### Functions

- `template<typename _Dest = void, typename... _Types>`  
`constexpr array< typename`  
`__make_array_elem< _Dest,`  
`_Types...>::type, sizeof...(_Types)> std::experimental::fundamentals_v2::make_array (_Types &&...__t)`
- `template<typename _Tp, size_t _Nm>`  
`constexpr array< remove_cv_t`  
`< _Tp >, _Nm > std::experimental::fundamentals_v2::noexcept (is_nothrow_constructible< remove_cv_t<`  
`_Tp >, _Tp & >::value)`

#### Variables

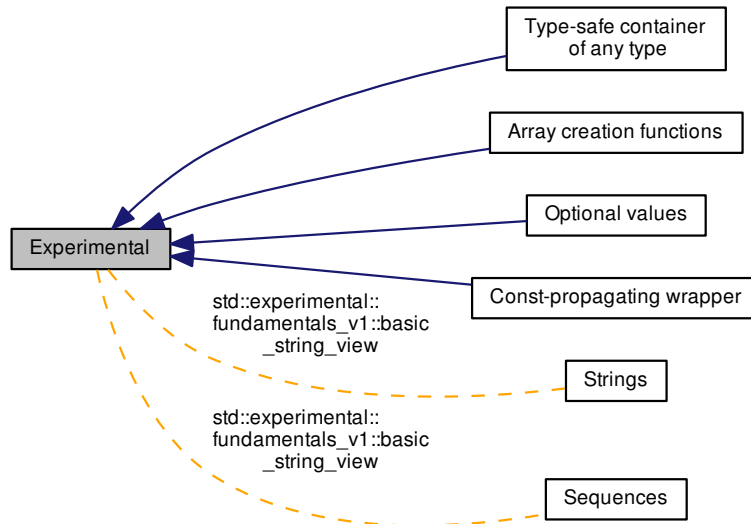

- `template<typename _Tp, size_t _Nm, size_t... _Idx>`  
`constexpr std::experimental::fundamentals_v2::array< remove_cv_t< _Tp >, _Nm >`

#### 3.55.1 Detailed Description

Array creation functions as described in N4529, Working Draft, C++ Extensions for Library Fundamentals, Version 2

### 3.56 Experimental

Collaboration diagram for Experimental:

#### Modules

- [Array creation functions](#)
- [Const-propagating wrapper](#)
- [Optional values](#)
- [Type-safe container of any type](#)

#### Classes

- class [std::experimental::fundamentals\\_v1::basic\\_string\\_view<\\_CharT, \\_Traits>](#)

#### 3.56.1 Detailed Description

Components specified by various Technical Specifications.

As indicated by the `std::experimental` namespace and the header paths, the contents of these Technical Specifications are experimental and not part of the C++ standard. As such the interfaces and implementations may change in the future, and there is **no guarantee of compatibility between different GCC releases** for these features.

## 3.57 Optional values

Collaboration diagram for Optional values:

### Classes

- struct `std::experimental::fundamentals_v1::_Has_addressof< _Tp >`
- class `std::experimental::fundamentals_v1::_Optional_base< _Tp, _ShouldProvideDestructor >`
- class `std::experimental::fundamentals_v1::_Optional_base< _Tp, false >`
- class `std::experimental::fundamentals_v1::bad_optional_access`
- struct `std::experimental::fundamentals_v1::in_place_t`
- struct `std::experimental::fundamentals_v1::nullopt_t`
- class `std::experimental::fundamentals_v1::optional< _Tp >`

### Macros

- `#define __cpp_lib_experimental_optional`

### Typedefs

- `template<typename _Tp, typename _Up >`  
using `std::experimental::fundamentals_v1::_assigns_from_optional` = `__or_< is_assignable< _Tp &, const optional< _Up > & >, is_assignable< _Tp &, optional< _Up > & >, is_assignable< _Tp &, const optional< _Up > && >, is_assignable< _Tp &, optional< _Up > && >>`
- `template<typename _Tp, typename _Up >`  
using `std::experimental::fundamentals_v1::_converts_from_optional` = `__or_< is_constructible< _Tp, const optional< _Up > & >, is_constructible< _Tp, optional< _Up > & >, is_constructible< _Tp, const optional< _Up > && >, is_constructible< _Tp, optional< _Up > && >, is_convertible< const optional< _Up > &, _Tp >, is_convertible< optional< _Up > &, _Tp >, is_convertible< const optional< _Up > &&, _Tp >, is_convertible< optional< _Up > &&, _Tp >>`

### Functions

- void `std::experimental::fundamentals_v1::_attribute__` (`((__noreturn__))`)
- `template<typename _Tp >`  
`constexpr enable_if_t`  
`<!_Has_addressof< _Tp >::value,`  
`_Tp * > std::experimental::fundamentals_v1::_constexpr_addressof` (`_Tp &_t`)
- void `std::experimental::fundamentals_v1::_throw_bad_optional_access` (`const char *__s`)
- `template<typename _Tp >`  
`constexpr optional< decay_t`  
`< _Tp > > std::experimental::fundamentals_v1::make_optional` (`_Tp &&_t`)

- `template<typename _Tp >`  
`void std::experimental::fundamentals_v1::noexcept (noexcept(__lhs.swap(__rhs)))`
- `template<typename _Tp >`  
`constexpr bool std::experimental::fundamentals_v1::operator!= (const optional< _Tp > &__lhs, const optional< _Tp > &__rhs)`
- `template<typename _Tp >`  
`constexpr bool std::experimental::fundamentals_v1::operator!= (const optional< _Tp > &__lhs, nullopt_t) noexcept`
- `template<typename _Tp >`  
`constexpr bool std::experimental::fundamentals_v1::operator!= (nullopt_t, const optional< _Tp > &__rhs) noexcept`
- `template<typename _Tp >`  
`constexpr bool std::experimental::fundamentals_v1::operator!= (const optional< _Tp > &__lhs, _Tp const &__rhs)`
- `template<typename _Tp >`  
`constexpr bool std::experimental::fundamentals_v1::operator!= (const _Tp &__lhs, const optional< _Tp > &__rhs)`
- `template<typename _Tp >`  
`constexpr bool std::experimental::fundamentals_v1::operator< (const optional< _Tp > &__lhs, const optional< _Tp > &__rhs)`
- `template<typename _Tp >`  
`constexpr bool std::experimental::fundamentals_v1::operator< (const optional< _Tp > &, nullopt_t) noexcept`
- `template<typename _Tp >`  
`constexpr bool std::experimental::fundamentals_v1::operator< (nullopt_t, const optional< _Tp > &__rhs) noexcept`

`&__rhs)`

### Variables

- `constexpr in_place_t std::experimental::fundamentals_v1::in_place`
- `constexpr nullopt_t std::experimental::fundamentals_v1::nullopt`

#### 3.57.1 Detailed Description

Class template for optional values and surrounding facilities, as described in n3793 "A proposal to add a utility class to represent optional objects (Revision 5)".

### 3.57.2 Function Documentation

#### 3.57.2.1 `template<typename _Tp > constexpr enable_if_t<!_Has_addressof<_Tp>::value, _Tp*> std::experimental::fundamentals_v1::__constexpr_addressof ( _Tp & __t )`

An overload that attempts to take the address of an lvalue as a constant expression. Falls back to `__addressof` in the presence of an overloaded `addressof` operator (unary operator`&`), in which case the call will not be a constant expression.

Definition at line 175 of file optional.

### 3.57.3 Variable Documentation

#### 3.57.3.1 `constexpr in_place_t std::experimental::fundamentals_v1::in_place`

Tag for in-place construction.

Definition at line 88 of file optional.

#### 3.57.3.2 `constexpr nullopt_t std::experimental::fundamentals_v1::nullopt`

Tag to disengage optional objects.

Definition at line 107 of file optional.

### 3.58 Const-propagating wrapper

Collaboration diagram for Const-propagating wrapper:

- `priority_queue & __gnu_pbds::priority_queue<_Tv, Cmp_Fn, Tag, _Alloc >::operator=` (`const priority_queue &other`)
- `void __gnu_pbds::priority_queue<_Tv, Cmp_Fn, Tag, _Alloc >::swap` (`priority_queue &other`)

### 3.66.1 Detailed Description

### 3.66.2 Function Documentation

3.66.2.1 `template<typename _Tv, typename Cmp_Fn = std::less<_Tv>, typename Tag = pairing_heap_tag, typename _Alloc = std::allocator<char>> __gnu_pbds::priority_queue<_Tv, Cmp_Fn, Tag, _Alloc >::priority_queue ( const cmp_fn & r_cmp_fn ) [inline]`

Constructor taking some policy objects. `r_cmp_fn` will be copied by the `Cmp_Fn` object of the container object.

Definition at line 116 of file `priority_queue.hpp`.

3.66.2.2 `template<typename _Tv, typename Cmp_Fn = std::less<_Tv>, typename Tag = pairing_heap_tag, typename _Alloc = std::allocator<char>> template<typename It > __gnu_pbds::priority_queue<_Tv, Cmp_Fn, Tag, _Alloc >::priority_queue ( It first_it, It last_it ) [inline]`

Constructor taking `__iterators` to a range of `value_types`. The `value_types` between `first_it` and `last_it` will be inserted into the container object.

Definition at line 122 of file `priority_queue.hpp`.

3.66.2.3 `template<typename _Tv, typename Cmp_Fn = std::less<_Tv>, typename Tag = pairing_heap_tag, typename _Alloc = std::allocator<char>> template<typename It > __gnu_pbds::priority_queue<_Tv, Cmp_Fn, Tag, _Alloc >::priority_queue ( It first_it, It last_it, const cmp_fn & r_cmp_fn ) [inline]`

Constructor taking `__iterators` to a range of `value_types` and some policy objects The `value_types` between `first_it` and `last_it` will be inserted into the container object. `r_cmp_fn` will be copied by the `cmp_fn` object of the container object.

Definition at line 130 of file `priority_queue.hpp`.

### 3.67 Base and Policy Classes

Collaboration diagram for Base and Policy Classes:

#### Classes

- class `__gnu_pbds::detail::binary_heap< Value_Type, Cmp_Fn, _Alloc >`
- class `__gnu_pbds::detail::binomial_heap< Value_Type, Cmp_Fn, _Alloc >`
- class `__gnu_pbds::detail::pairing_heap< Value_Type, Cmp_Fn, _Alloc >`
- class `__gnu_pbds::detail::rc_binomial_heap< Value_Type, Cmp_Fn, _Alloc >`
- class `__gnu_pbds::detail::thin_heap< Value_Type, Cmp_Fn, _Alloc >`

#### 3.67.1 Detailed Description

## 3.68 Policy-Based Data Structures

Collaboration diagram for Policy-Based Data Structures:

### Modules

- [Containers](#)
- [Exceptions](#)
- [Tags](#)
- [Traits](#)

### 3.68.1 Detailed Description

This is a library of policy-based elementary data structures: associative containers and priority queues. It is designed for high-performance, flexibility, semantic safety, and conformance to the corresponding containers in `std` (except for some points where it differs by design).

For details, see: [http://gcc.gnu.org/onlinedocs/libstdc++/ext/pb\\_ds/index.html](http://gcc.gnu.org/onlinedocs/libstdc++/ext/pb_ds/index.html)

### 3.69 Tags

Collaboration diagram for Tags:

#### Modules

- [Data Structure Type](#)
- [Invalidation Guarantees](#)

#### Classes

- [struct `\_\_gnu\_pbds::trivial\_iterator\_tag`](#)

#### Typedefs

- [typedef void `\_\_gnu\_pbds::trivial\_iterator\_difference\_type`](#)

#### 3.69.1 Detailed Description

#### 3.69.2 Typedef Documentation

##### 3.69.2.1 typedef void `__gnu_pbds::trivial_iterator_difference_type`

Prohibit moving trivial iterators.

Definition at line 79 of file `tag_and_trait.hpp`.

### 3.70 Invalidation Guarantees

Collaboration diagram for Invalidation Guarantees:

#### Classes

### 3.73.1 Detailed Description

These classes define objects which provide random or pseudorandom numbers, either from a discrete or a continuous interval. The random number generator supplied as a part of this library are all uniform random number generators which provide a sequence of random number uniformly distributed over their range.

A number generator is a function object with an operator() that takes zero arguments and returns a number.

A compliant random number generator must satisfy the following requirements.

|                   |
|-------------------|
| To be documented. |
|-------------------|

Table 1: Random Number Generator Requirements

### 3.73.2 Typedef Documentation

#### 3.73.2.1 typedef linear\_congruential\_engine<uint\_fast32\_t, 48271UL, 0UL, 2147483647UL> std::minstd\_rand

An alternative LCR (Lehmer Generator function).

Definition at line 1512 of file random.h.

#### 3.73.2.2 typedef linear\_congruential\_engine<uint\_fast32\_t, 16807UL, 0UL, 2147483647UL> std::minstd\_rand0

The classic Minimum Standard rand0 of Lewis, Goodman, and Miller.

Definition at line 1506 of file random.h.

```
3.73.2.3 typedef mersenne_twister_engine< uint_fast32_t, 32, 624, 397, 31, 0x9908b0dfUL, 11, 0xffffffffUL, 7, 0x9d2c5680UL, 15,
0xefc60000UL, 18, 1812433253UL> std::mt19937
```

The classic Mersenne Twister.

Reference: M. Matsumoto and T. Nishimura, Mersenne Twister: A 623-Dimensionally Equidistributed Uniform Pseudo-Random Number Generator, ACM Transactions on Modeling and Computer Simulation, Vol. 8, No. 1, January 1998, pp 3-30.

Definition at line 1528 of file random.h.

```
3.73.2.4 typedef mersenne_twister_engine< uint_fast64_t, 64, 312, 156, 31, 0xb5026f5aa96619e9ULL, 29, 0x5555555555555555ULL,
17, 0x71d67ffeda60000ULL, 37, 0xffff7eee00000000ULL, 43, 6364136223846793005ULL> std::mt19937_64
```

An alternative Mersenne Twister.

Definition at line 1540 of file random.h.

### 3.73.3 Function Documentation

```
3.73.3.1 template<typename UIntType, UIntType __a, UIntType __c, UIntType __m> bool std::operator!=
( const std::linear_congruential_engine< UIntType, __a, __c, __m > & __lhs, const
std::linear_congruential_engine< UIntType, __a, __c, __m > & __rhs ) [inline]
```

Compares two linear congruential random number generator objects of the same type for inequality.

#### Parameters

|                    |                                                             |
|--------------------|-------------------------------------------------------------|
| <code>__lhs</code> | A linear congruential random number generator object.       |
| <code>__rhs</code> | Another linear congruential random number generator object. |

#### Returns

true if the infinite sequences of generated values would be different, false otherwise.

Definition at line 397 of file random.h.

```
3.73.3.2 template<typename UIntType, size_t __w, size_t __n, size_t __m, size_t __r, UIntType __a, size_t __u, UIntType
__d, size_t __s, UIntType __b, size_t __t, UIntType __c, size_t __l, UIntType __f> bool std::operator!= ( const
std::mersenne_twister_engine< UIntType, __w, __n, __m, __r, __a, __u, __d, __s, __b, __t, __c, __l, __f > & __lhs,
const std::mersenne_twister_engine< UIntType, __w, __n, __m, __r, __a, __u, __d, __s, __b, __t, __c, __l, __f > &
__rhs ) [inline]
```

Compares two % mersenne\_twister\_engine random number generator objects of the same type for inequality.

#### Parameters

|                    |                                                                   |
|--------------------|-------------------------------------------------------------------|
| <code>__lhs</code> | A % mersenne_twister_engine random number generator object.       |
| <code>__rhs</code> | Another % mersenne_twister_engine random number generator object. |

#### Returns

true if the infinite sequences of generated values would be different, false otherwise.

Definition at line 629 of file random.h.

```
3.73.3.3 template<typename UIntType, size_t __w, size_t __s, size_t __r> bool std::operator!=( const std::subtract_with_carry_engine< UIntType, __w, __s, __r > & __lhs, const std::subtract_with_carry_engine< UIntType, __w, __s, __r > & __rhs ) [inline]
```

Compares two % subtract\_with\_carry\_engine random number generator objects of the same type for inequality.

## Parameters

|                    |                                                                                   |
|--------------------|-----------------------------------------------------------------------------------|
| <code>__lhs</code> | A % <code>subtract_with_carry_engine</code> random number generator object.       |
| <code>__rhs</code> | Another % <code>subtract_with_carry_engine</code> random number generator object. |

## Returns

true if the infinite sequences of generated values would be different, false otherwise.

Definition at line 825 of file `random.h`.

```
3.73.3.4 template<typename _RandomNumberEngine , size_t __p, size_t __r> bool std::operator!=( const
std::discard_block_engine< _RandomNumberEngine, __p, __r > & __lhs, const std::discard_block_engine<
_RandomNumberEngine, __p, __r > & __rhs ) [inline]
```

Compares two `discard_block_engine` random number generator objects of the same type for inequality.

## Parameters

|                    |                                                                           |
|--------------------|---------------------------------------------------------------------------|
| <code>__lhs</code> | A <code>discard_block_engine</code> random number generator object.       |
| <code>__rhs</code> | Another <code>discard_block_engine</code> random number generator object. |

## Returns

true if the infinite sequences of generated values would be different, false otherwise.

Definition at line 1047 of file `random.h`.

```
3.73.3.5 template<typename _RandomNumberEngine , size_t __w, typename _UIntType > bool std::operator!=(
const std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType > & __lhs, const
std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType > & __rhs ) [inline]
```

Compares two `independent_bits_engine` random number generator objects of the same type for inequality.

## Parameters

|                    |                                                                              |
|--------------------|------------------------------------------------------------------------------|
| <code>__lhs</code> | A <code>independent_bits_engine</code> random number generator object.       |
| <code>__rhs</code> | Another <code>independent_bits_engine</code> random number generator object. |

## Returns

true if the infinite sequences of generated values would be different, false otherwise.

Definition at line 1243 of file `random.h`.

```
3.73.3.6 template<typename _RandomNumberEngine , size_t __k> bool std::operator!=( const std::shuffle_order_engine<
_RandomNumberEngine, __k > & __lhs, const std::shuffle_order_engine< _RandomNumberEngine, __k > & __rhs )
[inline]
```

Compares two `shuffle_order_engine` random number generator objects of the same type for inequality.

## Parameters

|                    |                                                                           |
|--------------------|---------------------------------------------------------------------------|
| <code>__lhs</code> | A <code>shuffle_order_engine</code> random number generator object.       |
| <code>__rhs</code> | Another <code>shuffle_order_engine</code> random number generator object. |

**Returns**

true if the infinite sequences of generated values would be different, false otherwise.

Definition at line 1495 of file `random.h`.

```
3.73.3.7 template<typename _RandomNumberEngine, size_t __w, typename _UIntType, typename _CharT, typename _Traits >
std::basic_ostream<_CharT, _Traits>& std::operator<<< ( std::basic_ostream<_CharT, _Traits> & __os, const
std::independent_bits_engine<_RandomNumberEngine, __w, _UIntType> & __x )
```

Inserts the current state of a `independent_bits_engine` random number generator engine `__x` into the output stream `__os`.

**Parameters**

|                   |                                                                        |
|-------------------|------------------------------------------------------------------------|
| <code>__os</code> | An output stream.                                                      |
| <code>__x</code>  | A <code>independent_bits_engine</code> random number generator engine. |

**Returns**

The output stream with the state of `__x` inserted or in an error state.

Definition at line 1262 of file `random.h`.

- `template<typename _RealType, typename _CharT, typename _Traits >`  
`std::basic_istream<_CharT, _Traits> & std::operator>>(std::basic_istream<_CharT, _Traits> &, std::uniform_real_distribution<_RealType> &)`

#### 3.75.1 Detailed Description

#### 3.75.2 Function Documentation

- 3.75.2.1 `template<typename _IntType > bool std::operator!=(const std::uniform_int_distribution<_IntType> &__d1, const std::uniform_int_distribution<_IntType> &__d2) [inline]`

Return true if two uniform integer distributions have different parameters.

Definition at line 1660 of file random.h.

3.75.2.2 `template<typename _IntType> bool std::operator!=( const std::uniform_real_distribution< _IntType> & __d1, const std::uniform_real_distribution< _IntType> & __d2 ) [inline]`

Return true if two uniform real distributions have different parameters.

Definition at line 1874 of file random.h.

3.75.2.3 `template<typename _IntType, typename _CharT, typename _Traits> std::basic_ostream< _CharT, _Traits> & std::operator<<( std::basic_ostream< _CharT, _Traits> & __os, const std::uniform_int_distribution< _IntType> & __x )`

Inserts a `uniform_int_distribution` random number distribution `__x` into the output stream `os`.

Parameters

|                   |                                                                     |
|-------------------|---------------------------------------------------------------------|
| <code>__os</code> | An output stream.                                                   |
| <code>__x</code>  | A <code>uniform_int_distribution</code> random number distribution. |

Returns

The output stream with the state of `__x` inserted or in an error state.

Definition at line 874 of file bits/random.tcc.

References `std::ios_base::flags()`, `std::left()`, and `std::scientific()`.

3.75.2.4 `template<typename _RealType, typename _CharT, typename _Traits> std::basic_ostream< _CharT, _Traits> & std::operator<<( std::basic_ostream< _CharT, _Traits> & __os, const std::uniform_real_distribution< _RealType> & __x )`

Inserts a `uniform_real_distribution` random number distribution `__x` into the output stream `__os`.

Parameters

|                   |                                                                      |
|-------------------|----------------------------------------------------------------------|
| <code>__os</code> | An output stream.                                                    |
| <code>__x</code>  | A <code>uniform_real_distribution</code> random number distribution. |

Returns

The output stream with the state of `__x` inserted or in an error state.

Definition at line 933 of file bits/random.tcc.

References `std::ios_base::flags()`, `std::left()`, and `std::scientific()`.

3.75.2.5 `template<typename _IntType, typename _CharT, typename _Traits> std::basic_istream< _CharT, _Traits> & std::operator>>( std::basic_istream< _CharT, _Traits> & __is, std::uniform_int_distribution< _IntType> & __x )`

Extracts a `uniform_int_distribution` random number distribution `__x` from the input stream `__is`.

Parameters

|                   |                  |
|-------------------|------------------|
| <code>__is</code> | An input stream. |
|-------------------|------------------|

|                  |                                                                         |
|------------------|-------------------------------------------------------------------------|
| <code>__x</code> | A <code>uniform_int_distribution</code> random number generator engine. |
|------------------|-------------------------------------------------------------------------|

**Returns**

The input stream with `__x` extracted or in an error state.

Definition at line 895 of file `bits/random.tcc`.

References `std::dec()`, `std::ios_base::flags()`, `std::uniform_int_distribution<_IntType>::param()`, and `std::skipws()`.

**3.75.2.6** `template<typename _RealType, typename _CharT, typename _Traits> std::basic_istream<_CharT, _Traits> & std::operator>>( std::basic_istream<_CharT, _Traits> & __is, std::uniform_real_distribution<_RealType> & __x )`

Extracts a `uniform_real_distribution` random number distribution `__x` from the input stream `__is`.

**Parameters**

|                   |                                                                          |
|-------------------|--------------------------------------------------------------------------|
| <code>__is</code> | An input stream.                                                         |
| <code>__x</code>  | A <code>uniform_real_distribution</code> random number generator engine. |

**Returns**

The input stream with `__x` extracted or in an error state.

Definition at line 957 of file `bits/random.tcc`.

References `std::ios_base::flags()`, `std::uniform_real_distribution<_RealType>::param()`, and `std::skipws()`.

## 3.76 Normal Distributions

`std::basic_istream<_CharT,`  
`_Traits > & std::operator>> (std::basic_istream<_CharT, _Traits > &__is, std::cauchy_distribution<_RealType`  
`> &__x)`

### 3.76.1 Detailed Description

### 3.76.2 Function Documentation

- 3.76.2.1 `template<typename _RealType > bool std::operator!= ( const std::normal_distribution<_RealType > &__d1, const`  
`std::normal_distribution<_RealType > &__d2 ) [inline]`

Return true if two normal distributions are different.

Definition at line 2128 of file random.h.

- 3.76.2.2 `template<typename _RealType > bool std::operator!= ( const std::lognormal_distribution<_RealType > &__d1,`  
`const std::lognormal_distribution<_RealType > &__d2 ) [inline]`

Return true if two lognormal distributions are different.

Definition at line 2337 of file random.h.

- 3.76.2.3 `template<typename _RealType > bool std::operator!= ( const std::gamma_distribution<_RealType > &__d1, const`  
`std::gamma_distribution<_RealType > &__d2 ) [inline]`

Return true if two gamma distributions are different.

Definition at line 2562 of file random.h.

- 3.76.2.4 `template<typename _RealType > bool std::operator!= ( const std::chi_squared_distribution<_RealType > &__d1,`  
`const std::chi_squared_distribution<_RealType > &__d2 ) [inline]`

Return true if two Chi-squared distributions are different.

Definition at line 2782 of file random.h.

- 3.76.2.5 `template<typename _RealType > bool std::operator!= ( const std::cauchy_distribution<_RealType > &__d1, const`  
`std::cauchy_distribution<_RealType > &__d2 ) [inline]`

Return true if two Cauchy distributions have different parameters.

Definition at line 2954 of file random.h.

- 3.76.2.6 `template<typename _RealType > bool std::operator!= ( const std::fisher_f_distribution<_RealType > &__d1,`  
`const std::fisher_f_distribution<_RealType > &__d2 ) [inline]`

Return true if two Fisher f distributions are different.

Definition at line 3215 of file random.h.

- 3.76.2.7 `template<typename _RealType > bool std::operator!= ( const std::student_t_distribution<_RealType > &__d1,`  
`const std::student_t_distribution<_RealType > &__d2 ) [inline]`

Return true if two Student t distributions are different.

Definition at line 3433 of file random.h.

```
3.76.2.8 template<typename _RealType , typename _CharT , typename _Traits > std::basic_ostream< _CharT, _Traits > &  
std::operator<<( std::basic_ostream< _CharT, _Traits > & __os, const std::cauchy_distribution< _RealType  
> & __x )
```

Inserts a `cauchy_distribution` random number distribution `__x` into the output stream `__os`.

**Parameters**

|                   |                                                                |
|-------------------|----------------------------------------------------------------|
| <code>__os</code> | An output stream.                                              |
| <code>__x</code>  | A <code>cauchy_distribution</code> random number distribution. |

**Returns**

The output stream with the state of `__x` inserted or in an error state.

Definition at line 2126 of file `bits/random.tcc`.

References `std::ios_base::flags()`, `std::left()`, and `std::scientific()`.

```
3.76.2.9 template<typename _RealType, typename _CharT, typename _Traits > std::basic_istream<_CharT, _Traits > &
std::operator>>( std::basic_istream<_CharT, _Traits > & __is, std::cauchy_distribution<_RealType > & __x
)
```

Extracts a `cauchy_distribution` random number distribution `__x` from the input stream `__is`.

**Parameters**

|                   |                                                                    |
|-------------------|--------------------------------------------------------------------|
| <code>__is</code> | An input stream.                                                   |
| <code>__x</code>  | A <code>cauchy_distribution</code> random number generator engine. |

**Returns**

The input stream with `__x` extracted or in an error state.

Definition at line 2150 of file `bits/random.tcc`.

References `std::dec()`, `std::ios_base::flags()`, `std::cauchy_distribution<_RealType >::param()`, and `std::skipws()`.

### 3.77 Bernoulli Distributions

Collaboration diagram for Bernoulli Distributions:

#### Classes

`std::basic_istream<_CharT, _Traits>` & `std::operator>>` (`std::basic_istream<_CharT, _Traits>` &\_\_is, `std::geometric_distribution<_IntType>` &\_\_x)

## 3.77.1 Detailed Description

## 3.77.2 Function Documentation

3.77.2.1 `bool std::operator!=( const std::bernoulli_distribution & __d1, const std::bernoulli_distribution & __d2 )`  
`[inline]`

Return true if two Bernoulli distributions have different parameters.

Definition at line 3614 of file random.h.

3.77.2.2 `template<typename _IntType > bool std::operator!=( const std::binomial_distribution<_IntType > & __d1, const std::binomial_distribution<_IntType > & __d2 )` `[inline]`

Return true if two binomial distributions are different.

Definition at line 3885 of file random.h.

3.77.2.3 `template<typename _IntType > bool std::operator!=( const std::geometric_distribution<_IntType > & __d1, const std::geometric_distribution<_IntType > & __d2 )` `[inline]`

Return true if two geometric distributions have different parameters.

Definition at line 4059 of file random.h.

3.77.2.4 `template<typename _IntType > bool std::operator!=( const std::negative_binomial_distribution<_IntType > & __d1, const std::negative_binomial_distribution<_IntType > & __d2 )` `[inline]`

Return true if two negative binomial distributions are different.

Definition at line 4309 of file random.h.

3.77.2.5 `template<typename _CharT, typename _Traits > std::basic_ostream<_CharT, _Traits > & std::operator<< ( std::basic_ostream<_CharT, _Traits > & __os, const std::bernoulli_distribution & __x )`

Inserts a `bernoulli_distribution` random number distribution `__x` into the output stream `__os`.

## Parameters

|                   |                                                                   |
|-------------------|-------------------------------------------------------------------|
| <code>__os</code> | An output stream.                                                 |
| <code>__x</code>  | A <code>bernoulli_distribution</code> random number distribution. |

## Returns

The output stream with the state of `__x` inserted or in an error state.

Definition at line 995 of file bits/random.tcc.

References `std::ios_base::flags()`, `std::left()`, and `std::scientific()`.

3.77.2.6 `template<typename _IntType, typename _CharT, typename _Traits > std::basic_ostream<_CharT, _Traits > & std::operator<< ( std::basic_ostream<_CharT, _Traits > & __os, const std::geometric_distribution<_IntType > & __x )`

Inserts a `geometric_distribution` random number distribution `__x` into the output stream `__os`.

## Parameters

|                   |                                                                   |
|-------------------|-------------------------------------------------------------------|
| <code>__os</code> | An output stream.                                                 |
| <code>__x</code>  | A <code>geometric_distribution</code> random number distribution. |

## Returns

The output stream with the state of `__x` inserted or in an error state.

Definition at line 1077 of file `bits/random.tcc`.

References `std::ios_base::flags()`, `std::left()`, and `std::scientific()`.

```
3.77.2.7 template<typename _CharT, typename _Traits > std::basic_istream<_CharT, _Traits>& std::operator>> (
    std::basic_istream<_CharT, _Traits > & __is, std::bernoulli_distribution & __x )
```

Extracts a `bernoulli_distribution` random number distribution `__x` from the input stream `__is`.

## Parameters

|                   |                                                                       |
|-------------------|-----------------------------------------------------------------------|
| <code>__is</code> | An input stream.                                                      |
| <code>__x</code>  | A <code>bernoulli_distribution</code> random number generator engine. |

## Returns

The input stream with `__x` extracted or in an error state.

Definition at line 3644 of file `random.h`.

References `std::bernoulli_distribution::param()`.

```
3.77.2.8 template<typename _IntType, typename _CharT, typename _Traits > std::basic_istream<_CharT, _Traits > &
    std::operator>> ( std::basic_istream<_CharT, _Traits > & __is, std::geometric_distribution<_IntType > &
    __x )
```

Extracts a `geometric_distribution` random number distribution `__x` from the input stream `__is`.

## Parameters

|                   |                                                                       |
|-------------------|-----------------------------------------------------------------------|
| <code>__is</code> | An input stream.                                                      |
| <code>__x</code>  | A <code>geometric_distribution</code> random number generator engine. |

## Returns

The input stream with `__x` extracted or in an error state.

Definition at line 1101 of file `bits/random.tcc`.

References `std::ios_base::flags()`, `std::geometric_distribution<_IntType >::param()`, and `std::skipws()`.

### 3.78 Poisson Distributions

Collaboration diagram for Poisson Distributions:

#### Classes

### 3.78.1 Detailed Description

### 3.78.2 Function Documentation

**3.78.2.1** `template<typename _IntType > bool std::operator!=( const std::poisson_distribution< _IntType > & __d1, const`  
`std::poisson_distribution< _IntType > & __d2 ) [inline]`

Return true if two Poisson distributions are different.

Definition at line 4530 of file random.h.

**3.78.2.2** `template<typename _RealType > bool std::operator!=( const std::exponential_distribution< _RealType > & __d1,`  
`const std::exponential_distribution< _RealType > & __d2 ) [inline]`

Return true if two exponential distributions have different parameters.

Definition at line 4713 of file random.h.

**3.78.2.3** `template<typename _RealType > bool std::operator!=( const std::weibull_distribution< _RealType > & __d1, const`  
`std::weibull_distribution< _RealType > & __d2 ) [inline]`

Return true if two Weibull distributions have different parameters.

Definition at line 4921 of file random.h.

**3.78.2.4** `template<typename _RealType > bool std::operator!=( const std::extreme_value_distribution< _RealType > &`  
`__d1, const std::extreme_value_distribution< _RealType > & __d2 ) [inline]`

Return true if two extreme value distributions have different parameters.

Definition at line 5129 of file random.h.

**3.78.2.5** `template<typename _IntType > bool std::operator!=( const std::discrete_distribution< _IntType > & __d1, const`  
`std::discrete_distribution< _IntType > & __d2 ) [inline]`

Return true if two discrete distributions have different parameters.

Definition at line 5394 of file random.h.

**3.78.2.6** `template<typename _RealType > bool std::operator!=( const std::piecewise_constant_distribution< _RealType > & __d1, const std::piecewise_constant_distribution< _RealType > & __d2 ) [inline]`

Return true if two piecewise constant distributions have different parameters.

Definition at line 5666 of file random.h.

**3.78.2.7** `template<typename _RealType > bool std::operator!=( const std::piecewise_linear_distribution< _RealType > & __d1, const std::piecewise_linear_distribution< _RealType > & __d2 ) [inline]`

Return true if two piecewise linear distributions have different parameters.

Definition at line 5940 of file random.h.

**3.78.2.8** `template<typename _RealType , typename _CharT , typename _Traits > std::basic_ostream< _CharT, _Traits > & std::operator<< ( std::basic_ostream< _CharT, _Traits > & __os, const std::exponential_distribution< _RealType > & __x )`

Inserts a `exponential_distribution` random number distribution `__x` into the output stream `__os`.

#### Parameters

|                   |                                                                     |
|-------------------|---------------------------------------------------------------------|
| <code>__os</code> | An output stream.                                                   |
| <code>__x</code>  | A <code>exponential_distribution</code> random number distribution. |

#### Returns

The output stream with the state of `__x` inserted or in an error state.

Definition at line 1734 of file bits/random.tcc.

References `std::ios_base::flags()`, `std::left()`, and `std::scientific()`.

**3.78.2.9** `template<typename _RealType , typename _CharT , typename _Traits > std::basic_ostream< _CharT, _Traits > & std::operator<< ( std::basic_ostream< _CharT, _Traits > & __os, const std::weibull_distribution< _RealType > & __x )`

Inserts a `weibull_distribution` random number distribution `__x` into the output stream `__os`.

#### Parameters

|                   |                                                                 |
|-------------------|-----------------------------------------------------------------|
| <code>__os</code> | An output stream.                                               |
| <code>__x</code>  | A <code>weibull_distribution</code> random number distribution. |

#### Returns

The output stream with the state of `__x` inserted or in an error state.

Definition at line 2525 of file bits/random.tcc.

References `std::ios_base::flags()`, `std::left()`, and `std::scientific()`.

**3.78.2.10** `template<typename _RealType , typename _CharT , typename _Traits > std::basic_ostream< _CharT, _Traits > & std::operator<< ( std::basic_ostream< _CharT, _Traits > & __os, const std::extreme_value_distribution< _RealType > & __x )`

Inserts a `extreme_value_distribution` random number distribution `__x` into the output stream `__os`.

## Parameters

|                   |                                                                       |
|-------------------|-----------------------------------------------------------------------|
| <code>__os</code> | An output stream.                                                     |
| <code>__x</code>  | A <code>extreme_value_distribution</code> random number distribution. |

## Returns

The output stream with the state of `__x` inserted or in an error state.

Definition at line 2601 of file `bits/random.tcc`.

References `std::ios_base::flags()`, `std::left()`, and `std::scientific()`.

```
3.78.2.11 template<typename _RealType, typename _CharT, typename _Traits > std::basic_istream< _CharT, _Traits > &
std::operator>> ( std::basic_istream< _CharT, _Traits > & __is, std::exponential_distribution< _RealType >
& __x )
```

Extracts a `exponential_distribution` random number distribution `__x` from the input stream `__is`.

## Parameters

|                   |                                                                         |
|-------------------|-------------------------------------------------------------------------|
| <code>__is</code> | An input stream.                                                        |
| <code>__x</code>  | A <code>exponential_distribution</code> random number generator engine. |

## Returns

The input stream with `__x` extracted or in an error state.

Definition at line 1757 of file `bits/random.tcc`.

References `std::dec()`, `std::ios_base::flags()`, `std::exponential_distribution< _RealType >::param()`, and `std::skipws()`.

```
3.78.2.12 template<typename _RealType, typename _CharT, typename _Traits > std::basic_istream< _CharT, _Traits > &
std::operator>> ( std::basic_istream< _CharT, _Traits > & __is, std::weibull_distribution< _RealType > &
__x )
```

Extracts a `weibull_distribution` random number distribution `__x` from the input stream `__is`.

## Parameters

|                   |                                                                     |
|-------------------|---------------------------------------------------------------------|
| <code>__is</code> | An input stream.                                                    |
| <code>__x</code>  | A <code>weibull_distribution</code> random number generator engine. |

## Returns

The input stream with `__x` extracted or in an error state.

Definition at line 2549 of file `bits/random.tcc`.

References `std::dec()`, `std::ios_base::flags()`, `std::weibull_distribution< _RealType >::param()`, and `std::skipws()`.

```
3.78.2.13 template<typename _RealType, typename _CharT, typename _Traits > std::basic_istream< _CharT, _Traits > &
std::operator>> ( std::basic_istream< _CharT, _Traits > & __is, std::extreme_value_distribution<
_RealType > & __x )
```

Extracts a `extreme_value_distribution` random number distribution `__x` from the input stream `__is`.

**Parameters**

|                   |                                                                           |
|-------------------|---------------------------------------------------------------------------|
| <code>__is</code> | An input stream.                                                          |
| <code>__x</code>  | A <code>extreme_value_distribution</code> random number generator engine. |

**Returns**

The input stream with `__x` extracted or in an error state.

Definition at line 2625 of file `bits/random.tcc`.

References `std::dec()`, `std::ios_base::flags()`, `std::extreme_value_distribution<_RealType>::param()`, and `std::skipws()`.

### 4.1.1 Detailed Description

GNU extensions for public use.

### 4.1.2 Function Documentation

- #### 4.1.2.1 `template<typename _ToType, typename _FromType > _ToType __gnu_cxx::_static_pointer_cast ( const _FromType & __arg ) [inline]`

Casting operations for cases where `_FromType` is not a standard pointer. `_ToType` can be a standard or non-standard pointer. Given that `_FromType` is not a pointer, it must have a `get()` method that returns the standard pointer equivalent of the address it points to, and must have an `element_type` typedef which names the type it points to.

Definition at line 68 of file `cast.h`.

4.1.2.2 `template<typename _ToType, typename _FromType > _ToType __gnu_cxx::_static_pointer_cast( _FromType * __arg )`  
`[inline]`

Casting operations for cases where `_FromType` is a standard pointer. `_ToType` can be a standard or non-standard pointer.

Definition at line 96 of file `cast.h`.

4.1.2.3 `size_t __gnu_cxx::_Bit_scan_forward( size_t __num )` `[inline]`

Generic Version of the `bsf` instruction.

Definition at line 510 of file `bitmap_allocator.h`.

Referenced by `__gnu_cxx::bitmap_allocator< _Tp >::_M_allocate_single_object()`.

4.1.2.4 `template<typename _Tp > __gnu_cxx::_promote<_Tp>::_type __gnu_cxx::airy_ai( _Tp __x )` `[inline]`

Return the Airy function  $Ai(x)$  of real argument `x`.

Definition at line 1238 of file `specfun.h`.

4.1.2.5 `float __gnu_cxx::airy_aif( float __x )` `[inline]`

Return the Airy function  $Ai(x)$  of `float` argument `x`.

Definition at line 1215 of file `specfun.h`.

4.1.2.6 `long double __gnu_cxx::airy_ail( long double __x )` `[inline]`

Return the Airy function  $Ai(x)$  of `long double` argument `x`.

Definition at line 1226 of file `specfun.h`.

4.1.2.7 `template<typename _Tp > __gnu_cxx::_promote<_Tp>::_type __gnu_cxx::airy_bi( _Tp __x )` `[inline]`

Return the Airy function  $Bi(x)$  of real argument `x`.

Definition at line 1273 of file `specfun.h`.

4.1.2.8 `float __gnu_cxx::airy_bif( float __x )` `[inline]`

Return the Airy function  $Bi(x)$  of `float` argument `x`.

Definition at line 1250 of file `specfun.h`.

4.1.2.9 `long double __gnu_cxx::airy_bil( long double __x )` `[inline]`

Return the Airy function  $Bi(x)$  of `long double` argument `x`.

Definition at line 1261 of file `specfun.h`.

4.1.2.10 `template<typename _Tpa, typename _Tpc, typename _Tp > __gnu_cxx::_promote_3<_Tpa, _Tpc, _Tp>::_type`  
`__gnu_cxx::conf_hyperg( _Tpa __a, _Tpc __c, _Tp __x )` `[inline]`

Return the confluent hypergeometric function  ${}_1F_1(a; c; x)$  of real numeratorial parameter `a`, denominatorial parameter `c`, and argument `x`.

The confluent hypergeometric function is defined by

$${}_1F_1(a; c; x) = \sum_{n=0}^{\infty} \frac{(a)_n x^n}{(c)_n n!}$$

where the Pochhammer symbol is  $(x)_k = (x)(x+1)\dots(x+k-1)$ ,  $(x)_0 = 1$

Parameters

|                  |                              |
|------------------|------------------------------|
| <code>__a</code> | The numeratorial parameter   |
| <code>__c</code> | The denominatorial parameter |
| <code>__x</code> | The argument                 |

Definition at line 1323 of file `specfun.h`.

4.1.2.11 `float __gnu_cxx::conf_hypergf ( float __a, float __c, float __x ) [inline]`

Return the confluent hypergeometric function  ${}_1F_1(a; c; x)$  of `float` numeratorial parameter `a`, denominatorial parameter `c`, and argument `x`.

See Also

`conf_hyperg` for details.

Definition at line 1291 of file `specfun.h`.

4.1.2.12 `long double __gnu_cxx::conf_hypergl ( long double __a, long double __c, long double __x ) [inline]`

Return the confluent hypergeometric function  ${}_1F_1(a; c; x)$  of `long double` numeratorial parameter `a`, denominatorial parameter `c`, and argument `x`.

See Also

`conf_hyperg` for details.

Definition at line 1302 of file `specfun.h`.

4.1.2.13 `template<typename _Tpa, typename _Tpb, typename _Tpc, typename _Tp> __gnu_cxx::__promote_4<_Tpa, _Tpb, _Tpc, _Tp>::__type __gnu_cxx::hyperg ( _Tpa __a, _Tpb __b, _Tpc __c, _Tp __x ) [inline]`

Return the hypergeometric function  ${}_2F_1(a, b; c; x)$  of real numeratorial parameters `a` and `b`, denominatorial parameter `c`, and argument `x`.

The hypergeometric function is defined by

$${}_2F_1(a; c; x) = \sum_{n=0}^{\infty} \frac{(a)_n (b)_n x^n}{(c)_n n!}$$

where the Pochhammer symbol is  $(x)_k = (x)(x+1)\dots(x+k-1)$ ,  $(x)_0 = 1$

Parameters

|                  |                                   |
|------------------|-----------------------------------|
| <code>__a</code> | The first numeratorial parameter  |
| <code>__b</code> | The second numeratorial parameter |

|                  |                              |
|------------------|------------------------------|
| <code>__c</code> | The denominatorial parameter |
| <code>__x</code> | The argument                 |

Definition at line 1372 of file `specfun.h`.

4.1.2.14 `float __gnu_cxx::hypergf ( float __a, float __b, float __c, float __x ) [inline]`

Return the hypergeometric function  ${}_2F_1(a, b; c; x)$  of @ float numeratorial parameters a and b, denominatorial parameter c, and argument x.

#### See Also

`hyperg` for details.

Definition at line 1339 of file `specfun.h`.

4.1.2.15 `long double __gnu_cxx::hypergl ( long double __a, long double __b, long double __c, long double __x ) [inline]`

Return the hypergeometric function  ${}_2F_1(a, b; c; x)$  of long double numeratorial parameters a and b, denominatorial parameter c, and argument x.

#### See Also

`hyperg` for details.

Definition at line 1350 of file `specfun.h`.

4.1.2.16 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> bool __gnu_cxx::operator!=( const __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs, const __versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs ) [inline]`

Test difference of two strings.

#### Parameters

|                    |                |
|--------------------|----------------|
| <code>__lhs</code> | First string.  |
| <code>__rhs</code> | Second string. |

#### Returns

True if `__lhs.compare(__rhs) != 0`. False otherwise.

Definition at line 2388 of file `vstring.h`.

4.1.2.17 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> bool __gnu_cxx::operator!=( const _CharT * __lhs, const __versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs ) [inline]`

Test difference of C string and string.

#### Parameters

|                    |           |
|--------------------|-----------|
| <code>__lhs</code> | C string. |
|--------------------|-----------|

|                    |         |
|--------------------|---------|
| <code>__rhs</code> | String. |
|--------------------|---------|

**Returns**

True if `__rhs.compare(__lhs) != 0`. False otherwise.

Definition at line 2401 of file `vstring.h`.

4.1.2.18 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> bool __gnu_cxx::operator!=( const __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs, const _CharT * __rhs ) [inline]`

Test difference of string and C string.

**Parameters**

|                    |           |
|--------------------|-----------|
| <code>__lhs</code> | String.   |
| <code>__rhs</code> | C string. |

**Returns**

True if `__lhs.compare(__rhs) != 0`. False otherwise.

Definition at line 2414 of file `vstring.h`.

4.1.2.19 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string< _CharT, _Traits, _Alloc, _Base > __gnu_cxx::operator+ ( const __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs, const __versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs )`

Concatenate two strings.

**Parameters**

|                    |               |
|--------------------|---------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Last string.  |

**Returns**

New string with value of `__lhs` followed by `__rhs`.

Definition at line 181 of file `vstring.tcc`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append()`, `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::reserve()`, and `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size()`.

4.1.2.20 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string< _CharT, _Traits, _Alloc, _Base > __gnu_cxx::operator+ ( const _CharT * __lhs, const __versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs )`

Concatenate C string and string.

**Parameters**

\_\_\_\_\_

|                    |               |
|--------------------|---------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Last string.  |

**Returns**

New string with value of `__lhs` followed by `__rhs`.

Definition at line 194 of file `vstring.tcc`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::size()`.

4.1.2.21 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string<_CharT, _Traits, _Alloc, _Base > __gnu_cxx::operator+ ( _CharT __lhs, const __versa_string<_CharT, _Traits, _Alloc, _Base > & __rhs )`

Concatenate character and string.

**Parameters**

|                    |               |
|--------------------|---------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Last string.  |

**Returns**

New string with `__lhs` followed by `__rhs`.

Definition at line 211 of file `vstring.tcc`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::append()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::push_back()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::reserve()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::size()`.

4.1.2.22 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string<_CharT, _Traits, _Alloc, _Base > __gnu_cxx::operator+ ( const __versa_string<_CharT, _Traits, _Alloc, _Base > & __lhs, const _CharT * __rhs )`

Concatenate string and C string.

**Parameters**

|                    |               |
|--------------------|---------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Last string.  |

**Returns**

New string with `__lhs` followed by `__rhs`.

Definition at line 224 of file `vstring.tcc`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::size()`.

4.1.2.23 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string<_CharT, _Traits, _Alloc, _Base > __gnu_cxx::operator+ ( const __versa_string<_CharT, _Traits, _Alloc, _Base > & __lhs, _CharT __rhs )`

Concatenate string and character.

## Parameters

|                    |               |
|--------------------|---------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Last string.  |

## Returns

New string with `__lhs` followed by `__rhs`.

Definition at line 241 of file `vstring.tcc`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::append()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::push_back()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::reserve()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::size()`.

```
4.1.2.24 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename >
class _Base> bool __gnu_cxx::operator<( const __versa_string<_CharT, _Traits, _Alloc, _Base > &__lhs, const
__versa_string<_CharT, _Traits, _Alloc, _Base > &__rhs ) [inline]
```

Test if string precedes string.

## Parameters

|                    |                |
|--------------------|----------------|
| <code>__lhs</code> | First string.  |
| <code>__rhs</code> | Second string. |

## Returns

True if `__lhs` precedes `__rhs`. False otherwise.

Definition at line 2428 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::compare()`.

```
4.1.2.25 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> bool __gnu_cxx::operator<( const __versa_string<_CharT, _Traits, _Alloc, _Base > &__lhs, const _CharT *
__rhs ) [inline]
```

Test if string precedes C string.

## Parameters

|                    |           |
|--------------------|-----------|
| <code>__lhs</code> | String.   |
| <code>__rhs</code> | C string. |

## Returns

True if `__lhs` precedes `__rhs`. False otherwise.

Definition at line 2441 of file `vstring.h`.

```
4.1.2.26 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> bool __gnu_cxx::operator<( const _CharT * __lhs, const __versa_string<_CharT, _Traits, _Alloc, _Base > &
__rhs ) [inline]
```

Test if C string precedes string.

## Parameters

|                    |           |
|--------------------|-----------|
| <code>__lhs</code> | C string. |
| <code>__rhs</code> | String.   |

## Returns

True if `__lhs` precedes `__rhs`. False otherwise.

Definition at line 2454 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::compare()`.

```
4.1.2.27 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename >
class _Base> bool __gnu_cxx::operator<= ( const __versa_string<_CharT, _Traits, _Alloc, _Base > & __lhs, const
__versa_string<_CharT, _Traits, _Alloc, _Base > & __rhs ) [inline]
```

Test if string doesn't follow string.

## Parameters

|                    |                |
|--------------------|----------------|
| <code>__lhs</code> | First string.  |
| <code>__rhs</code> | Second string. |

## Returns

True if `__lhs` doesn't follow `__rhs`. False otherwise.

Definition at line 2508 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::compare()`.

```
4.1.2.28 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> bool __gnu_cxx::operator<= ( const __versa_string<_CharT, _Traits, _Alloc, _Base > & __lhs, const _CharT *
__rhs ) [inline]
```

Test if string doesn't follow C string.

## Parameters

|                    |           |
|--------------------|-----------|
| <code>__lhs</code> | String.   |
| <code>__rhs</code> | C string. |

## Returns

True if `__lhs` doesn't follow `__rhs`. False otherwise.

Definition at line 2521 of file `vstring.h`.

```
4.1.2.29 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> bool __gnu_cxx::operator<= ( const _CharT * __lhs, const __versa_string<_CharT, _Traits, _Alloc, _Base > &
__rhs ) [inline]
```

Test if C string doesn't follow string.

## Parameters

|                    |           |
|--------------------|-----------|
| <code>__lhs</code> | C string. |
| <code>__rhs</code> | String.   |

## Returns

True if `__lhs` doesn't follow `__rhs`. False otherwise.

Definition at line 2534 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::compare()`.

4.1.2.30 `template<typename _Tp > bool __gnu_cxx::operator==( const _Pointer_adapter<_Tp > & __lhs, const _Pointer_adapter<_Tp > & __rhs ) [inline]`

Comparison operators for `_Pointer_adapter` defer to the base class' comparison operators, when possible.

Definition at line 529 of file `pointer.h`.

4.1.2.31 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> bool __gnu_cxx::operator==( const __versa_string<_CharT, _Traits, _Alloc, _Base > & __lhs, const __versa_string<_CharT, _Traits, _Alloc, _Base > & __rhs ) [inline]`

Test equivalence of two strings.

## Parameters

|                    |                |
|--------------------|----------------|
| <code>__lhs</code> | First string.  |
| <code>__rhs</code> | Second string. |

## Returns

True if `__lhs.compare(__rhs) == 0`. False otherwise.

Definition at line 2337 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::compare()`.

4.1.2.32 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> bool __gnu_cxx::operator==( const _CharT * __lhs, const __versa_string<_CharT, _Traits, _Alloc, _Base > & __rhs ) [inline]`

Test equivalence of C string and string.

## Parameters

|                    |           |
|--------------------|-----------|
| <code>__lhs</code> | C string. |
| <code>__rhs</code> | String.   |

## Returns

True if `__rhs.compare(__lhs) == 0`. False otherwise.

Definition at line 2361 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::compare()`.

```
4.1.2.33 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
    _Base> bool __gnu_cxx::operator==( const __versa_string< _CharT, _Traits, _Alloc, _Base > & _lhs, const _CharT *
    _rhs ) [inline]
```

Test equivalence of string and C string.

## Parameters

|                    |           |
|--------------------|-----------|
| <code>__lhs</code> | String.   |
| <code>__rhs</code> | C string. |

## Returns

True if `__lhs.compare(__rhs) == 0`. False otherwise.

Definition at line 2374 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::compare()`.

4.1.2.34 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> bool __gnu_cxx::operator> ( const __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs, const __versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs ) [inline]`

Test if string follows string.

## Parameters

|                    |                |
|--------------------|----------------|
| <code>__lhs</code> | First string.  |
| <code>__rhs</code> | Second string. |

## Returns

True if `__lhs` follows `__rhs`. False otherwise.

Definition at line 2468 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::compare()`.

4.1.2.35 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> bool __gnu_cxx::operator> ( const __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs, const _CharT * __rhs ) [inline]`

Test if string follows C string.

## Parameters

|                    |           |
|--------------------|-----------|
| <code>__lhs</code> | String.   |
| <code>__rhs</code> | C string. |

## Returns

True if `__lhs` follows `__rhs`. False otherwise.

Definition at line 2481 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::compare()`.

4.1.2.36 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> bool __gnu_cxx::operator> ( const _CharT * __lhs, const __versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs ) [inline]`

Test if C string follows string.

## Parameters

|                    |           |
|--------------------|-----------|
| <code>__lhs</code> | C string. |
| <code>__rhs</code> | String.   |

## Returns

True if `__lhs` follows `__rhs`. False otherwise.

Definition at line 2494 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::compare()`.

```
4.1.2.37 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename >

__versa_string<_CharT, _Traits, _Alloc, _Base > & __rhs ) [inline]
```

Test if string doesn't precede string.

## Parameters

|                    |                |
|--------------------|----------------|
| <code>__lhs</code> | First string.  |
| <code>__rhs</code> | Second string. |

## Returns

True if `__lhs` doesn't precede `__rhs`. False otherwise.

Definition at line 2548 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::compare()`.

```
4.1.2.38 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> bool __gnu_cxx::operator>= ( const __versa_string<_CharT, _Traits, _Alloc, _Base > & __lhs, const _CharT *
__rhs ) [inline]
```

Test if string doesn't precede C string.

## Parameters

|                    |           |
|--------------------|-----------|
| <code>__lhs</code> | String.   |
| <code>__rhs</code> | C string. |

## Returns

True if `__lhs` doesn't precede `__rhs`. False otherwise.

Definition at line 2561 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::compare()`.

```
4.1.2.39 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> bool __gnu_cxx::operator>= ( const _CharT * __lhs, const __versa_string<_CharT, _Traits, _Alloc, _Base > &
__rhs ) [inline]
```

Test if C string doesn't precede string.

## Parameters

|                    |           |
|--------------------|-----------|
| <code>__lhs</code> | C string. |
| <code>__rhs</code> | String.   |

## Returns

True if `__lhs` doesn't precede `__rhs`. False otherwise.

Definition at line 2574 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::compare()`.

4.1.2.40 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> void __gnu_cxx::swap ( __versa_string<_CharT, _Traits, _Alloc, _Base > &__lhs, __versa_string<_CharT, _Traits, _Alloc, _Base > &__rhs ) [inline]`

Swap contents of two strings.

## Parameters

|                    |                |
|--------------------|----------------|
| <code>__lhs</code> | First string.  |
| <code>__rhs</code> | Second string. |

Exchanges the contents of `__lhs` and `__rhs` in constant time.

Definition at line 2588 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::swap()`.

## 4.2.1 Detailed Description

Implementation details not part of the namespace `__gnu_cxx` interface.

## 4.2.2 Function Documentation

4.2.2.1 `void __gnu_cxx::__detail::_bit_allocate ( size_t * __pbitmap, size_t __pos ) throw` `[inline]`

Mark a memory address as allocated by re-setting the corresponding bit in the bit-map.

Definition at line 489 of file `bitmap_allocator.h`.

Referenced by `__gnu_cxx::bitmap_allocator<_Tp >::_M_allocate_single_object()`.

4.2.2.2 `void __gnu_cxx::__detail::_bit_free ( size_t * __pbitmap, size_t __pos ) throw` `[inline]`

Mark a memory address as free by setting the corresponding bit in the bit-map.

Definition at line 500 of file `bitmap_allocator.h`.

Referenced by `__gnu_cxx::bitmap_allocator<_Tp >::_M_deallocate_single_object()`.

4.2.2.3 `template<typename AddrPair > size_t __gnu_cxx::__detail::_num_bitmaps ( AddrPair __ap )` `[inline]`

The number of Bit-maps pointed to by the address pair passed to the function.

Definition at line 277 of file `bitmap_allocator.h`.

References `__num_blocks()`.

Referenced by `__gnu_cxx::bitmap_allocator<_Tp >::_M_allocate_single_object()`, and `__gnu_cxx::bitmap_allocator<_Tp >::_M_deallocate_single_object()`.

4.2.2.4 `template<typename AddrPair > size_t __gnu_cxx::__detail::_num_blocks ( AddrPair __ap )` `[inline]`

The number of Blocks pointed to by the address pair passed to the function.

Definition at line 269 of file `bitmap_allocator.h`.

Referenced by `__num_bitmaps()`.

#### 4.4.1 Detailed Description

GNU debug classes for public use.

#### 4.4.2 Enumeration Type Documentation

##### 4.4.2.1 `enum __gnu_debug::Distance_precision`

The precision to which we can calculate the distance between two iterators.

Definition at line 43 of file `helper_functions.h`.

#### 4.4.3 Function Documentation

##### 4.4.3.1 `template<typename _Iterator > bool __gnu_debug::__check_dereferenceable ( const _Iterator & ) [inline]`

Assume that some arbitrary iterator is dereferenceable, because we can't prove that it isn't.

Definition at line 74 of file `functions.h`.

##### 4.4.3.2 `template<typename _Tp > bool __gnu_debug::__check_dereferenceable ( const _Tp * __ptr ) [inline]`

Non-NULL pointers are dereferenceable.

Definition at line 80 of file `functions.h`.

##### 4.4.3.3 `template<typename _Iterator, typename _Sequence > bool __gnu_debug::__check_dereferenceable ( const` `__Safe_local_iterator< _Iterator, _Sequence > & __x ) [inline]`

Safe local iterators know if they are dereferenceable.

Definition at line 436 of file `safe_local_iterator.h`.

##### 4.4.3.4 `template<typename _Iterator, typename _Sequence > bool __gnu_debug::__check_dereferenceable ( const` `__Safe_iterator< _Iterator, _Sequence > & __x ) [inline]`

Safe iterators know if they are dereferenceable.

Definition at line 743 of file `safe_iterator.h`.

References `__gnu_debug::_Safe_iterator<_Iterator, _Sequence >::_M_dereferenceable()`.

4.4.3.5 `template<typename _Tp > bool __gnu_debug::_check_singular ( const _Tp* __ptr ) [inline]`

Non-NULL pointers are nonsingular.

Definition at line 67 of file `functions.h`.

4.4.3.6 `bool __gnu_debug::_check_singular_aux ( const _Safe_iterator_base* __x ) [inline]`

Iterators that derive from `_Safe_iterator_base` can be determined singular or non-singular.

Definition at line 168 of file `safe_base.h`.

References `__gnu_debug::_Safe_iterator_base::_M_singular()`.

4.4.3.7 `template<typename _CharT, typename _Integer > const _CharT* __gnu_debug::_check_string ( const _CharT* __s, const _Integer & __n __attribute__( _unused_ ) ) [inline]`

Checks that `__s` is non-NULL or `__n == 0`, and then returns `__s`.

Definition at line 217 of file `functions.h`.

4.4.3.8 `template<typename _CharT > const _CharT* __gnu_debug::_check_string ( const _CharT* __s ) [inline]`

Checks that `__s` is non-NULL and then returns `__s`.

Definition at line 229 of file `functions.h`.

4.4.3.9 `template<typename _Iterator, typename _Sequence, typename _OtherIterator > bool __gnu_debug::_foreign_iterator_aux2 ( const _Safe_iterator<_Iterator, _Sequence > & __it, const _Safe_iterator<_OtherIterator, _Sequence > & __other, const _Safe_iterator<_OtherIterator, _Sequence > & ) [inline]`

Handle debug iterators from the same type of container.

Definition at line 150 of file `functions.h`.

4.4.3.10 `template<typename _Iterator, typename _Sequence, typename _OtherIterator, typename _OtherSequence > bool __gnu_debug::_foreign_iterator_aux2 ( const _Safe_iterator<_Iterator, _Sequence > & __it, const _Safe_iterator<_OtherIterator, _OtherSequence > &, const _Safe_iterator<_OtherIterator, _OtherSequence > & ) [inline]`

Handle debug iterators from different types of container.

Definition at line 159 of file `functions.h`.

4.4.3.11 `template<typename _Iterator > _Distance_traits<_Iterator>::_type __gnu_debug::_get_distance ( const _Iterator & __lhs, const _Iterator & __rhs, std::random_access_iterator_tag ) [inline]`

Determine the distance between two iterators with some known precision.

Definition at line 83 of file `helper_functions.h`.

References `std::make_pair()`.

Referenced by `__valid_range_aux()`.

4.4.3.12 `template<typename _Iterator, typename _Sequence > std::pair<typename std::iterator_traits<_Iterator>::difference_type, _Distance_precision > __gnu_debug::_get_distance ( const _Safe_local_iterator<_Iterator, _Sequence > & __first, const _Safe_local_iterator<_Iterator, _Sequence > & __last, std::input_iterator_tag ) [inline]`

Safe local iterators need a special method to get distance between each other.

Definition at line 453 of file `safe_local_iterator.h`.

```
4.4.3.13 template<typename _Iterator, typename _Sequence> _Distance_traits<_Iterator>::_type __gnu_debug::_get_distance
( const _Safe_iterator<_Iterator, _Sequence> & __first, const _Safe_iterator<_Iterator, _Sequence> & __last,
  std::random_access_iterator_tag ) [inline]
```

Safe iterators can help to get better distance knowledge.

Definition at line 757 of file `safe_iterator.h`.

References `__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::base()`, and `std::make_pair()`.

```
4.4.3.14 template<typename _InputIterator> bool __gnu_debug::_valid_range ( const _InputIterator & __first, const _InputIterator
& __last, typename _Distance_traits<_InputIterator>::_type & __dist ) [inline]
```

Don't know what these iterators are, or if they are even iterators (we may get an integral type for `InputIterator`), so see if they are integral and pass them on to the next phase otherwise.

Definition at line 152 of file `helper_functions.h`.

References `__valid_range_aux()`.

```
4.4.3.15 template<typename _Iterator, typename _Sequence> bool __gnu_debug::_valid_range ( const _Safe_local_iterator<
_Iterator, _Sequence> & __first, const _Safe_local_iterator<_Iterator, _Sequence> & __last, typename
_Distance_traits<_Iterator>::_type & __dist_info ) [inline]
```

Safe local iterators know how to check if they form a valid range.

Definition at line 443 of file `safe_local_iterator.h`.

```
4.4.3.16 template<typename _Iterator, typename _Sequence> bool __gnu_debug::_valid_range ( const _Safe_iterator<_Iterator,
_Sequene> & __first, const _Safe_iterator<_Iterator, _Sequence> & __last, typename _Distance_traits<_Iterator
>::_type & __dist ) [inline]
```

Safe iterators know how to check if they form a valid range.

Definition at line 749 of file `safe_iterator.h`.

```
4.4.3.17 template<typename _Integral> bool __gnu_debug::_valid_range_aux ( const _Integral &, const _Integral &, typename
_Distance_traits<_Integral>::_type & __dist, std::true_type ) [inline]
```

We say that integral types for a valid range, and defer to other routines to realize what to do with integral types instead of iterators.

Definition at line 109 of file `helper_functions.h`.

References `std::make_pair()`.

Referenced by `__valid_range()`.

```
4.4.3.18 template<typename _InputIterator> bool __gnu_debug::_valid_range_aux ( const _InputIterator & __first, const
_InputIterator & __last, typename _Distance_traits<_InputIterator>::_type & __dist, std::false_type ) [inline]
```

We have iterators, so figure out what kind of iterators that are to see if we can check the range ahead of time.

Definition at line 122 of file `helper_functions.h`.

References `__get_distance()`, `std::pair<_T1, _T2>::first`, and `std::pair<_T1, _T2>::second`.

## 4.5 `__gnu_internal` Namespace Reference

#### 4.5.1 Detailed Description

GNU implementation details, not for public use or export. Used only when anonymous namespaces cannot be substituted.

### 4.6 `__gnu_parallel` Namespace Reference

## Variables

- static const int [\\_CASable\\_bits](#)
- static const [\\_CASable](#) [\\_CASable\\_mask](#)

### 4.6.1 Detailed Description

GNU parallel code for public use.

### 4.6.2 Typedef Documentation

#### 4.6.2.1 typedef unsigned short [\\_\\_gnu\\_parallel::\\_BinIndex](#)

Type to hold the index of a bin.

Since many variables of this type are allocated, it should be chosen as small as possible.

Definition at line 47 of file [random\\_shuffle.h](#).

#### 4.6.2.2 typedef int64\_t [\\_\\_gnu\\_parallel::\\_CASable](#)

Longest compare-and-swappable integer type on this platform.

Definition at line 127 of file [types.h](#).

#### 4.6.2.3 typedef uint64\_t [\\_\\_gnu\\_parallel::\\_SequenceIndex](#)

Unsigned integer to index [\\_\\_elements](#). The total number of elements for each algorithm must fit into this type.

Definition at line 117 of file [types.h](#).

#### 4.6.2.4 typedef uint16\_t [\\_\\_gnu\\_parallel::\\_ThreadIndex](#)

Unsigned integer to index a thread number. The maximum thread number (for each processor) must fit into this type.

Definition at line 123 of file [types.h](#).

### 4.6.3 Enumeration Type Documentation

#### 4.6.3.1 enum [\\_\\_gnu\\_parallel::\\_AlgorithmStrategy](#)

Strategies for run-time algorithm selection:

Definition at line 67 of file [types.h](#).

#### 4.6.3.2 enum [\\_\\_gnu\\_parallel::\\_FindAlgorithm](#)

Find algorithms:

Definition at line 106 of file [types.h](#).

#### 4.6.3.3 enum [\\_\\_gnu\\_parallel::\\_MultiwayMergeAlgorithm](#)

Merging algorithms:

Definition at line 85 of file [types.h](#).

4.6.3.4 enum `__gnu_parallel::Parallelism`

Run-time equivalents for the compile-time tags.

## Enumerator

***sequential*** Not parallel.

***parallel\_unbalanced*** Parallel unbalanced (equal-sized chunks).

***parallel\_balanced*** Parallel balanced (work-stealing).

***parallel\_omp\_loop*** Parallel with OpenMP dynamic load-balancing.

***parallel\_omp\_loop\_static*** Parallel with OpenMP static load-balancing.

***parallel\_taskqueue*** Parallel with OpenMP taskqueue construct.

Definition at line 44 of file `types.h`.

4.6.3.5 enum `__gnu_parallel::PartialSumAlgorithm`

Partial sum algorithms: recursive, linear.

Definition at line 91 of file `types.h`.

4.6.3.6 enum `__gnu_parallel::SortAlgorithm`

Sorting algorithms:

Definition at line 76 of file `types.h`.

4.6.3.7 enum `__gnu_parallel::SplittingAlgorithm`

Sorting/merging algorithms: sampling, `__exact`.

Definition at line 98 of file `types.h`.

## 4.6.4 Function Documentation

4.6.4.1 `template<typename _RAIter, typename _DifferenceTp> void __gnu_parallel::__calc_borders ( _RAIter __elements, _DifferenceTp __length, _DifferenceTp * __off )`

Precalculate `__advances` for Knuth-Morris-Pratt algorithm.

## Parameters

|                         |                                           |
|-------------------------|-------------------------------------------|
| <code>__elements</code> | Begin iterator of sequence to search for. |
| <code>__length</code>   | Length of sequence to search for.         |
| <code>__off</code>      | Returned <code>__offsets</code> .         |

Definition at line 51 of file `search.h`.

Referenced by `__search_template()`.

4.6.4.2 `template<typename _Tp> bool __gnu_parallel::__compare_and_swap ( volatile _Tp * __ptr, _Tp __comparand, _Tp __replacement ) [inline]`

Compare-and-swap.

Compare `*__ptr` and `__comparand`. If equal, let `*__ptr=__replacement` and return true, return false otherwise.

## Parameters

|                            |                            |
|----------------------------|----------------------------|
| <code>__ptr</code>         | Pointer to signed integer. |
| <code>__comparand</code>   | Compare value.             |
| <code>__replacement</code> | Replacement value.         |

Definition at line 108 of file `parallel/compatibility.h`.

Referenced by `__parallel_partition()`, `__gnu_parallel::_RestrictedBoundedConcurrentQueue< pair< _RAIter, _RAIter > >::pop_back()`, and `__gnu_parallel::_RestrictedBoundedConcurrentQueue< pair< _RAIter, _RAIter > >::pop_front()`.

4.6.4.3 `void __gnu_parallel::_decode2 ( _CASable __x, int & __a, int & __b ) [inline]`

Decode two integers from one `gnu_parallel::_CASable`.

## Parameters

|                  |                                                                                                                |
|------------------|----------------------------------------------------------------------------------------------------------------|
| <code>__x</code> | <code>__gnu_parallel::_CASable</code> to decode integers from.                                                 |
| <code>__a</code> | First integer, to be decoded from the most-significant <code>_CASable_bits/2</code> bits of <code>__x</code> . |
| <code>__b</code> | Second integer, to be encoded in the least-significant <code>_CASable_bits/2</code> bits of <code>__x</code> . |

## See Also

`__encode2`

Definition at line 133 of file `parallel/base.h`.

References `_CASable_bits`, and `_CASable_mask`.

Referenced by `__gnu_parallel::_RestrictedBoundedConcurrentQueue< pair< _RAIter, _RAIter > >::pop_back()`, `__gnu_parallel::_RestrictedBoundedConcurrentQueue< pair< _RAIter, _RAIter > >::pop_front()`, and `__gnu_parallel::_RestrictedBoundedConcurrentQueue< pair< _RAIter, _RAIter > >::push_front()`.

4.6.4.4 `template<typename _RAIter, typename _DifferenceTp> void __gnu_parallel::_determine_samples ( _PMWMSortingData< _RAIter > * __sd, _DifferenceTp __num_samples )`

Select `_M_samples` from a sequence.

## Parameters

|                            |                                                                                         |
|----------------------------|-----------------------------------------------------------------------------------------|
| <code>__sd</code>          | Pointer to algorithm data. _Result will be placed in <code>__sd-&gt;_M_samples</code> . |
| <code>__num_samples</code> | Number of <code>_M_samples</code> to select.                                            |

Definition at line 97 of file `multiway_mergesort.h`.

References `__equally_split()`, `__gnu_parallel::_PMWMSortingData< _RAIter >::_M_samples`, `__gnu_parallel::_PMWMSortingData< _RAIter >::_M_source`, and `__gnu_parallel::_PMWMSortingData< _RAIter >::_M_starts`.

4.6.4.5 `_CASable __gnu_parallel::_encode2 ( int __a, int __b ) [inline]`

Encode two integers into one `gnu_parallel::_CASable`.

## Parameters

|                  |                                                                                         |
|------------------|-----------------------------------------------------------------------------------------|
| <code>__a</code> | First integer, to be encoded in the most-significant <code>_CASable_bits/2</code> bits. |
|------------------|-----------------------------------------------------------------------------------------|

|                  |                                                                                           |
|------------------|-------------------------------------------------------------------------------------------|
| <code>__b</code> | Second integer, to be encoded in the least-significant <code>_CASable_bits/2</code> bits. |
|------------------|-------------------------------------------------------------------------------------------|

**Returns**

value encoding `__a` and `__b`.

**See Also**

`__decode2`

Definition at line 119 of file `parallel/base.h`.

References `_CASable_bits`.

Referenced by `__gnu_parallel::_RestrictedBoundedConcurrentQueue< pair< _RAIter, _RAIter > >::_RestrictedBoundedConcurrentQueue()`, `__gnu_parallel::_RestrictedBoundedConcurrentQueue< pair< _RAIter, _RAIter > >::pop_back()`, `__gnu_parallel::_RestrictedBoundedConcurrentQueue< pair< _RAIter, _RAIter > >::pop_front()`, and `__gnu_parallel::_RestrictedBoundedConcurrentQueue< pair< _RAIter, _RAIter > >::push_front()`.

4.6.4.6 `template<typename _DifferenceType, typename _OutputIterator > _OutputIterator __gnu_parallel::_equally_split ( _DifferenceType __n, _ThreadIndex __num_threads, _OutputIterator __s )`

function to split a sequence into parts of almost equal size.

The resulting sequence `__s` of length `__num_threads+1` contains the splitting positions when splitting the range `[0, __n)` into parts of almost equal size (plus minus 1). The first entry is 0, the last one `n`. There may result empty parts.

**Parameters**

|                            |                    |
|----------------------------|--------------------|
| <code>__n</code>           | Number of elements |
| <code>__num_threads</code> | Number of parts    |
| <code>__s</code>           | Splitters          |

**Returns**

End of `__splitter` sequence, i.e. `__s+__num_threads+1`

Definition at line 48 of file `equally_split.h`.

Referenced by `__determine_samples()`, `__find_template()`, `__parallel_partial_sum_linear()`, `__parallel_unique_copy()`, `__search_template()`, and `multiway_merge_exact_splitting()`.

4.6.4.7 `template<typename _DifferenceType > _DifferenceType __gnu_parallel::_equally_split_point ( _DifferenceType __n, _ThreadIndex __num_threads, _ThreadIndex __thread_no )`

function to split a sequence into parts of almost equal size.

Returns the position of the splitting point between thread number `__thread_no` (included) and thread number `__thread_no+1` (excluded).

**Parameters**

|                  |                    |
|------------------|--------------------|
| <code>__n</code> | Number of elements |
|------------------|--------------------|

|                            |                   |
|----------------------------|-------------------|
| <code>__num_threads</code> | Number of parts   |
| <code>__thread_no</code>   | Number of threads |

**Returns**

splitting point

Definition at line 75 of file `equally_split.h`.

Referenced by `__for_each_template_random_access_ed()`.

4.6.4.8 `template<typename Tp > Tp __gnu_parallel::__fetch_and_add ( volatile Tp* __ptr, Tp __addend ) [inline]`

Add a value to a variable, atomically.

**Parameters**

|                       |                              |
|-----------------------|------------------------------|
| <code>__ptr</code>    | Pointer to a signed integer. |
| <code>__addend</code> | Value to add.                |

Definition at line 74 of file `parallel/compatibility.h`.

Referenced by `__parallel_partition()`, and `__gnu_parallel::_RestrictedBoundedConcurrentQueue< pair< _RAIter, _RAIter > >::push_front()`.

4.6.4.9 `template<typename _RAIter1, typename _RAIter2, typename _Pred, typename _Selector > std::pair< _RAIter1, _RAIter2> __gnu_parallel::__find_template ( _RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred, _Selector __selector ) [inline]`

Parallel `std::find`, switch for different algorithms.

**Parameters**

|                         |                                                                                                  |
|-------------------------|--------------------------------------------------------------------------------------------------|
| <code>__begin1</code>   | Begin iterator of first sequence.                                                                |
| <code>__end1</code>     | End iterator of first sequence.                                                                  |
| <code>__begin2</code>   | Begin iterator of second sequence. Must have same length as first sequence.                      |
| <code>__pred</code>     | Find predicate.                                                                                  |
| <code>__selector</code> | <code>_Functionality</code> (e. g. <code>std::find_if()</code> , <code>std::equal()</code> ,...) |

**Returns**

Place of finding in both sequences.

Definition at line 60 of file `find.h`.

References `__gnu_parallel::_Settings::get()`, and `std::make_pair()`.

4.6.4.10 `template<typename _RAIter1, typename _RAIter2, typename _Pred, typename _Selector > std::pair< _RAIter1, _RAIter2> __gnu_parallel::__find_template ( _RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred, _Selector __selector, equal_split_tag )`

Parallel `std::find`, equal splitting variant.

**Parameters**

---

|                         |                                                                                                            |
|-------------------------|------------------------------------------------------------------------------------------------------------|
| <code>__begin1</code>   | Begin iterator of first sequence.                                                                          |
| <code>__end1</code>     | End iterator of first sequence.                                                                            |
| <code>__begin2</code>   | Begin iterator of second sequence. Second <code>__sequence</code> must have same length as first sequence. |
| <code>__pred</code>     | Find predicate.                                                                                            |
| <code>__selector</code> | <code>_Functionality</code> (e. g. <code>std::find_if()</code> , <code>std::equal()</code> ,...)           |

**Returns**

Place of finding in both sequences.

Definition at line 97 of file `find.h`.

References `__equally_split()`, and `_GLIBCXX_CALL`.

```
4.6.4.11 template<typename _RAIter1 , typename _RAIter2 , typename _Pred , typename _Selector > std::pair<_RAIter1,
    _RAIter2> __gnu_parallel::__find_template ( _RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred,
    _Selector __selector, growing_blocks_tag )
```

Parallel `std::find`, growing block size variant.

**Parameters**

|                         |                                                                                                            |
|-------------------------|------------------------------------------------------------------------------------------------------------|
| <code>__begin1</code>   | Begin iterator of first sequence.                                                                          |
| <code>__end1</code>     | End iterator of first sequence.                                                                            |
| <code>__begin2</code>   | Begin iterator of second sequence. Second <code>__sequence</code> must have same length as first sequence. |
| <code>__pred</code>     | Find predicate.                                                                                            |
| <code>__selector</code> | <code>_Functionality</code> (e. g. <code>std::find_if()</code> , <code>std::equal()</code> ,...)           |

**Returns**

Place of finding in both sequences.

**See Also**

`__gnu_parallel::_Settings::find_sequential_search_size`  
`__gnu_parallel::_Settings::find_scale_factor`

There are two main differences between the growing blocks and the constant-size blocks variants. 1. For GB, the block size grows; for CSB, the block size is fixed. 2. For GB, the blocks are allocated dynamically; for CSB, the blocks are allocated in a predetermined manner, namely spacial round-robin.

Definition at line 185 of file `find.h`.

References `_GLIBCXX_CALL`, `__gnu_parallel::_Settings::find_scale_factor`, `__gnu_parallel::_Settings::find_sequential_search_size`, and `__gnu_parallel::_Settings::get()`.

```
4.6.4.12 template<typename _RAIter1 , typename _RAIter2 , typename _Pred , typename _Selector > std::pair<_RAIter1,
    _RAIter2> __gnu_parallel::__find_template ( _RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred,
    _Selector __selector, constant_size_blocks_tag )
```

Parallel `std::find`, constant block size variant.

## Parameters

|                         |                                                                                                            |
|-------------------------|------------------------------------------------------------------------------------------------------------|
| <code>__begin1</code>   | Begin iterator of first sequence.                                                                          |
| <code>__end1</code>     | End iterator of first sequence.                                                                            |
| <code>__begin2</code>   | Begin iterator of second sequence. Second <code>__sequence</code> must have same length as first sequence. |
| <code>__pred</code>     | Find predicate.                                                                                            |
| <code>__selector</code> | <code>_Functionality</code> (e. g. <code>std::find_if()</code> , <code>std::equal()</code> ,...)           |

Chose the desired algorithm by evaluating `__parallelism_tag`.

## Parameters

|                                |                                                                                                                                                                 |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>__begin</code>           | Begin iterator of input sequence.                                                                                                                               |
| <code>__end</code>             | End iterator of input sequence.                                                                                                                                 |
| <code>__user_op</code>         | A user-specified functor (comparator, predicate, associative operator,...)                                                                                      |
| <code>__functionality</code>   | functor to <i>process</i> an element with <code>__user_op</code> (depends on desired functionality, e. g. <code>accumulate</code> , <code>for_each</code> ,...) |
| <code>__reduction</code>       | Reduction functor.                                                                                                                                              |
| <code>__reduction_start</code> | Initial value for reduction.                                                                                                                                    |
| <code>__output</code>          | Output iterator.                                                                                                                                                |
| <code>__bound</code>           | Maximum number of elements processed.                                                                                                                           |
| <code>__parallelism_tag</code> | Parallelization method                                                                                                                                          |

Definition at line 61 of file `for_each.h`.

References `__for_each_template_random_access_ed()`, `__for_each_template_random_access_omp_loop()`, `__for_each_template_random_access_workstealing()`, `parallel_omp_loop`, `parallel_omp_loop_static`, and `parallel_unbalanced`.

4.6.4.14 `template<typename _RAIter , typename _Op , typename _Fu , typename _Red , typename _Result > _Op  
__gnu_parallel::for_each_template_random_access_ed ( _RAIter __begin, _RAIter __end, _Op __o, _Fu & __f, _Red __r,  
_Result __base, _Result & __output, typename std::iterator_traits< _RAIter >::difference_type __bound )`

Embarrassingly parallel algorithm for random access iterators, using hand-crafted parallelization by equal splitting the work.

## Parameters

|                       |                                                                                                                                          |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| <code>__begin</code>  | Begin iterator of element sequence.                                                                                                      |
| <code>__end</code>    | End iterator of element sequence.                                                                                                        |
| <code>__o</code>      | User-supplied functor (comparator, predicate, adding functor, ...)                                                                       |
| <code>__f</code>      | Functor to "process" an element with <code>__op</code> (depends on desired functionality, e. g. for <code>std::for_each()</code> , ...). |
| <code>__r</code>      | Functor to "add" a single <code>__result</code> to the already processed elements (depends on functionality).                            |
| <code>__base</code>   | Base value for reduction.                                                                                                                |
| <code>__output</code> | Pointer to position where final result is written to                                                                                     |
| <code>__bound</code>  | Maximum number of elements processed (e. g. for <code>std::count_n()</code> ).                                                           |

## Returns

User-supplied functor (that may contain a part of the result).

Definition at line 67 of file `par_loop.h`.

References `__equally_split_point()`.

Referenced by `__for_each_template_random_access()`.

```
4.6.4.15 template<typename _RAIter, typename _Op, typename _Fu, typename _Red, typename _Result > _Op
__gnu_parallel::__for_each_template_random_access_omp_loop( _RAIter __begin, _RAIter __end, _Op __o, _Fu & __f,
_Red __r, _Result __base, _Result & __output, typename std::iterator_traits<_RAIter >::difference_type __bound )
```

Embarrassingly parallel algorithm for random access iterators, using an OpenMP for loop.

## Parameters

|                       |                                                                                                                                               |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| <code>__begin</code>  | Begin iterator of element sequence.                                                                                                           |
| <code>__end</code>    | End iterator of element sequence.                                                                                                             |
| <code>__o</code>      | User-supplied functor (comparator, predicate, adding functor, etc.).                                                                          |
| <code>__f</code>      | Functor to <i>process</i> an element with <code>__op</code> (depends on desired functionality, e. g. for <code>std::for_each()</code> , ...). |
| <code>__r</code>      | Functor to <i>add</i> a single <code>__result</code> to the already processed elements (depends on functionality).                            |
| <code>__base</code>   | Base value for reduction.                                                                                                                     |
| <code>__output</code> | Pointer to position where final result is written to                                                                                          |
| <code>__bound</code>  | Maximum number of elements processed (e. g. for <code>std::count_n()</code> ).                                                                |

## Returns

User-supplied functor (that may contain a part of the result).

Definition at line 67 of file `omp_loop.h`.

Referenced by `__for_each_template_random_access()`.

```
4.6.4.16 template<typename _RAIter, typename _Op, typename _Fu, typename _Red, typename _Result > _Op
__gnu_parallel::__for_each_template_random_access_omp_loop_static( _RAIter __begin, _RAIter __end, _Op __o, _Fu &
__f, _Red __r, _Result __base, _Result & __output, typename std::iterator_traits<_RAIter >::difference_type __bound )
```

Embarrassingly parallel algorithm for random access iterators, using an OpenMP for loop with static scheduling.

## Parameters

|                       |                                                                                                                                               |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| <code>__begin</code>  | Begin iterator of element sequence.                                                                                                           |
| <code>__end</code>    | End iterator of element sequence.                                                                                                             |
| <code>__o</code>      | User-supplied functor (comparator, predicate, adding functor, ...).                                                                           |
| <code>__f</code>      | Functor to <i>process</i> an element with <code>__op</code> (depends on desired functionality, e. g. for <code>std::for_each()</code> , ...). |
| <code>__r</code>      | Functor to <i>add</i> a single <code>__result</code> to the already processed <code>__elements</code> (depends on functionality).             |
| <code>__base</code>   | Base value for reduction.                                                                                                                     |
| <code>__output</code> | Pointer to position where final result is written to                                                                                          |
| <code>__bound</code>  | Maximum number of elements processed (e. g. for <code>std::count_n()</code> ).                                                                |

## Returns

User-supplied functor (that may contain a part of the result).

Definition at line 66 of file `omp_loop_static.h`.

```
4.6.4.17 template<typename _RAIter, typename _Op, typename _Fu, typename _Red, typename _Result > _Op
    __gnu_parallel::__for_each_template_random_access_workstealing ( _RAIter __begin, _RAIter __end, _Op __op, _Fu &
        __f, _Red __r, _Result __base, _Result & __output, typename std::iterator_traits< _RAIter >::difference_type __bound )
```

Work stealing algorithm for random access iterators.

Uses  $O(1)$  additional memory. Synchronization at job lists is done with atomic operations.

## Parameters

|                       |                                                                                                                                               |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| <code>__begin</code>  | Begin iterator of element sequence.                                                                                                           |
| <code>__end</code>    | End iterator of element sequence.                                                                                                             |
| <code>__op</code>     | User-supplied functor (comparator, predicate, adding functor, ...).                                                                           |
| <code>__f</code>      | Functor to <i>process</i> an element with <code>__op</code> (depends on desired functionality, e. g. for <code>std::for_each()</code> , ...). |
| <code>__r</code>      | Functor to <i>add</i> a single <code>__result</code> to the already processed elements (depends on functionality).                            |
| <code>__base</code>   | Base value for reduction.                                                                                                                     |
| <code>__output</code> | Pointer to position where final result is written to                                                                                          |
| <code>__bound</code>  | Maximum number of elements processed (e. g. for <code>std::count_n()</code> ).                                                                |

## Returns

User-supplied functor (that may contain a part of the result).

Definition at line 99 of file `workstealing.h`.

References `__yield()`, `_GLIBCXX_CALL`, `__gnu_parallel::Job< _DifferenceTp >::M_first`, `__gnu_parallel::Job< -_DifferenceTp >::M_last`, `__gnu_parallel::Job< _DifferenceTp >::M_load`, `__gnu_parallel::_Settings::cache_line_size`, `__gnu_parallel::_Settings::get()`, and `min()`.

Referenced by `__for_each_template_random_access()`.

```
4.6.4.18 template<typename _Iter, typename _Compare > bool __gnu_parallel::__is_sorted ( _Iter __begin, _Iter __end,
    _Compare __comp )
```

Check whether `[ __begin, __end)` is sorted according to `__comp`.

## Parameters

|                      |                             |
|----------------------|-----------------------------|
| <code>__begin</code> | Begin iterator of sequence. |
| <code>__end</code>   | End iterator of sequence.   |
| <code>__comp</code>  | Comparator.                 |

## Returns

`true` if sorted, `false` otherwise.

Definition at line 51 of file `checkers.h`.

Referenced by `__sequential_multiway_merge()`, `multiway_merge_loser_tree_sentinel()`, and `parallel_multiway_merge()`.

4.6.4.19 `template<typename _RAIter, typename _Compare > _RAIter __gnu_parallel::__median_of_three_iterators ( _RAIter __a, _RAIter __b, _RAIter __c, _Compare __comp )`

Compute the median of three referenced elements, according to `__comp`.

## Parameters

|                     |                  |
|---------------------|------------------|
| <code>__a</code>    | First iterator.  |
| <code>__b</code>    | Second iterator. |
| <code>__c</code>    | Third iterator.  |
| <code>__comp</code> | Comparator.      |

Definition at line 398 of file `parallel/base.h`.

Referenced by `__qsb_divide()`.

4.6.4.20 `template<typename _RAIter1, typename _RAIter2, typename _OutputIterator, typename _DifferenceTp, typename _Compare > _OutputIterator __gnu_parallel::__merge_advance ( _RAIter1 &__begin1, _RAIter1 __end1, _RAIter2 &__begin2, _RAIter2 __end2, _OutputIterator __target, _DifferenceTp __max_length, _Compare __comp ) [inline]`

Merge routine being able to merge only the `__max_length` smallest elements.

The `__begin` iterators are advanced accordingly, they might not reach `__end`, in contrast to the usual variant. Static switch on whether to use the conditional-move variant.

## Parameters

|                           |                                      |
|---------------------------|--------------------------------------|
| <code>__begin1</code>     | Begin iterator of first sequence.    |
| <code>__end1</code>       | End iterator of first sequence.      |
| <code>__begin2</code>     | Begin iterator of second sequence.   |
| <code>__end2</code>       | End iterator of second sequence.     |
| <code>__target</code>     | Target begin iterator.               |
| <code>__max_length</code> | Maximum number of elements to merge. |
| <code>__comp</code>       | Comparator.                          |

## Returns

Output end iterator.

Definition at line 171 of file `merge.h`.

References `__merge_advance_movc()`, and `_GLIBCXX_CALL`.

Referenced by `__parallel_merge_advance()`, and `__sequential_multiway_merge()`.

4.6.4.21 `template<typename _RAIter1 , typename _RAIter2 , typename _OutputIterator , typename _DifferenceTp , typename _Compare > _OutputIterator __gnu_parallel::__merge_advance_movc ( _RAIter1 & __begin1, _RAIter1 __end1, _RAIter2 & __begin2, _RAIter2 __end2, _OutputIterator __target, _DifferenceTp __max_length, _Compare __comp )`

Merge routine being able to merge only the `__max_length` smallest elements.

The `__begin` iterators are advanced accordingly, they might not reach `__end`, in contrast to the usual variant. Specially designed code should allow the compiler to generate conditional moves instead of branches.

#### Parameters

|                           |                                      |
|---------------------------|--------------------------------------|
| <code>__begin1</code>     | Begin iterator of first sequence.    |
| <code>__end1</code>       | End iterator of first sequence.      |
| <code>__begin2</code>     | Begin iterator of second sequence.   |
| <code>__end2</code>       | End iterator of second sequence.     |
| <code>__target</code>     | Target begin iterator.               |
| <code>__max_length</code> | Maximum number of elements to merge. |
| <code>__comp</code>       | Comparator.                          |

#### Returns

Output end iterator.

Definition at line 105 of file `merge.h`.

Referenced by `__merge_advance()`.

4.6.4.22 `template<typename _RAIter1 , typename _RAIter2 , typename _OutputIterator , typename _DifferenceTp , typename _Compare > _OutputIterator __gnu_parallel::__merge_advance_usual ( _RAIter1 & __begin1, _RAIter1 __end1, _RAIter2 & __begin2, _RAIter2 __end2, _OutputIterator __target, _DifferenceTp __max_length, _Compare __comp )`

Merge routine being able to merge only the `__max_length` smallest elements.

The `__begin` iterators are advanced accordingly, they might not reach `__end`, in contrast to the usual variant.

#### Parameters

|                           |                                      |
|---------------------------|--------------------------------------|
| <code>__begin1</code>     | Begin iterator of first sequence.    |
| <code>__end1</code>       | End iterator of first sequence.      |
| <code>__begin2</code>     | Begin iterator of second sequence.   |
| <code>__end2</code>       | End iterator of second sequence.     |
| <code>__target</code>     | Target begin iterator.               |
| <code>__max_length</code> | Maximum number of elements to merge. |
| <code>__comp</code>       | Comparator.                          |

#### Returns

Output end iterator.

Definition at line 57 of file `merge.h`.

4.6.4.23 `template<typename _RAIter1 , typename _RAIter2 , typename _RAIter3 , typename _Compare > _RAIter3 __gnu_parallel::__parallel_merge_advance ( _RAIter1 & __begin1, _RAIter1 __end1, _RAIter2 & __begin2, _RAIter2 __end2, _RAIter3 __target, typename std::iterator_traits<_RAIter1 >::difference_type __max_length, _Compare __comp ) [inline]`

Merge routine fallback to sequential in case the iterators of the two input sequences are of different type.

## Parameters

|                           |                                      |
|---------------------------|--------------------------------------|
| <code>__begin1</code>     | Begin iterator of first sequence.    |
| <code>__end1</code>       | End iterator of first sequence.      |
| <code>__begin2</code>     | Begin iterator of second sequence.   |
| <code>__end2</code>       | End iterator of second sequence.     |
| <code>__target</code>     | Target begin iterator.               |
| <code>__max_length</code> | Maximum number of elements to merge. |
| <code>__comp</code>       | Comparator.                          |

## Returns

Output end iterator.

Definition at line 195 of file `merge.h`.

References `__merge_advance()`.

```
4.6.4.24 template<typename _RAIter1, typename _RAIter3, typename _Compare > _RAIter3 __gnu_parallel::_parallel_merge_
advance ( _RAIter1 & __begin1, _RAIter1 __end1, _RAIter1 & __begin2, _RAIter1 __end2, _RAIter3 __target, typename
std::iterator_traits< _RAIter1 >::difference_type __max_length, _Compare __comp ) [inline]
```

Parallel merge routine being able to merge only the `__max_length` smallest elements.

The `__begin` iterators are advanced accordingly, they might not reach `__end`, in contrast to the usual variant. The functionality is projected onto `parallel_multiway_merge`.

## Parameters

|                           |                                      |
|---------------------------|--------------------------------------|
| <code>__begin1</code>     | Begin iterator of first sequence.    |
| <code>__end1</code>       | End iterator of first sequence.      |
| <code>__begin2</code>     | Begin iterator of second sequence.   |
| <code>__end2</code>       | End iterator of second sequence.     |
| <code>__target</code>     | Target begin iterator.               |
| <code>__max_length</code> | Maximum number of elements to merge. |
| <code>__comp</code>       | Comparator.                          |

## Returns

Output end iterator.

Definition at line 223 of file `merge.h`.

References `std::make_pair()`, `multiway_merge_exact_splitting()`, and `parallel_multiway_merge()`.

```
4.6.4.25 template<typename _RAIter, typename _Compare > void __gnu_parallel::_parallel_nth_element ( _RAIter __begin,
_RAlter __nth, _RAIter __end, _Compare __comp )
```

Parallel implementation of `std::nth_element()`.

## Parameters

|                      |                                   |
|----------------------|-----------------------------------|
| <code>__begin</code> | Begin iterator of input sequence. |
|----------------------|-----------------------------------|

|                     |                                                          |
|---------------------|----------------------------------------------------------|
| <code>__nth</code>  | Iterator of element that must be in position afterwards. |
| <code>__end</code>  | End iterator of input sequence.                          |
| <code>__comp</code> | Comparator.                                              |

Definition at line 332 of file `partition.h`.

References `__parallel_partition()`, `_GLIBCXX_CALL`, `__gnu_parallel::_Settings::get()`, `std::max()`, `__gnu_parallel::_Settings::nth_element_minimal_n`, and `__gnu_parallel::_Settings::partition_minimal_n`.

Referenced by `__parallel_partial_sort()`.

4.6.4.26 `template<typename _RAIter, typename _Compare > void __gnu_parallel::_parallel_partial_sort ( _RAIter __begin, _RAIter __middle, _RAIter __end, _Compare __comp )`

Parallel implementation of `std::partial_sort()`.

#### Parameters

|                       |                                   |
|-----------------------|-----------------------------------|
| <code>__begin</code>  | Begin iterator of input sequence. |
| <code>__middle</code> | Sort until this position.         |
| <code>__end</code>    | End iterator of input sequence.   |
| <code>__comp</code>   | Comparator.                       |

Definition at line 422 of file `partition.h`.

References `__parallel_nth_element()`.

4.6.4.27 `template<typename _lIter, typename _OutputIterator, typename _BinaryOperation > _OutputIterator __gnu_parallel::_parallel_partial_sum ( _lIter __begin, _lIter __end, _OutputIterator __result, _BinaryOperation __bin_op )`

Parallel partial sum front-`__end`.

#### Parameters

|                       |                                    |
|-----------------------|------------------------------------|
| <code>__begin</code>  | Begin iterator of input sequence.  |
| <code>__end</code>    | End iterator of input sequence.    |
| <code>__result</code> | Begin iterator of output sequence. |
| <code>__bin_op</code> | Associative binary function.       |

#### Returns

End iterator of output sequence.

Definition at line 205 of file `partial_sum.h`.

References `__parallel_partial_sum_linear()`, `_GLIBCXX_CALL`, and `__gnu_parallel::_Settings::get()`.

4.6.4.28 `template<typename _lIter, typename _OutputIterator, typename _BinaryOperation > _OutputIterator __gnu_parallel::_parallel_partial_sum_basecase ( _lIter __begin, _lIter __end, _OutputIterator __result, _BinaryOperation __bin_op, typename std::iterator_traits<_lIter >::value_type __value )`

Base case prefix sum routine.

#### Parameters

|                       |                                                                              |
|-----------------------|------------------------------------------------------------------------------|
| <code>__begin</code>  | Begin iterator of input sequence.                                            |
| <code>__end</code>    | End iterator of input sequence.                                              |
| <code>__result</code> | Begin iterator of output sequence.                                           |
| <code>__bin_op</code> | Associative binary function.                                                 |
| <code>__value</code>  | Start value. Must be passed since the neutral element is unknown in general. |

**Returns**

End iterator of output sequence.

Definition at line 58 of file `partial_sum.h`.

Referenced by `__parallel_partial_sum_linear()`.

4.6.4.29 `template<typename _Iter , typename _OutputIterator , typename _BinaryOperation > _OutputIterator  
__gnu_parallel::__parallel_partial_sum_linear ( _Iter __begin, _Iter __end, _OutputIterator __result, _BinaryOperation  
__bin_op, typename std::iterator_traits<_Iter >::difference_type __n )`

Parallel partial sum implementation, two-phase approach, no recursion.

**Parameters**

|                       |                                    |
|-----------------------|------------------------------------|
| <code>__begin</code>  | Begin iterator of input sequence.  |
| <code>__end</code>    | End iterator of input sequence.    |
| <code>__result</code> | Begin iterator of output sequence. |
| <code>__bin_op</code> | Associative binary function.       |
| <code>__n</code>      | Length of sequence.                |

**Returns**

End iterator of output sequence.

Definition at line 89 of file `partial_sum.h`.

References `__equally_split()`, `__parallel_partial_sum_basecase()`, `std::accumulate()`, `__gnu_parallel::_Settings::get()`, and `__gnu_parallel::_Settings::partial_sum_dilation`.

Referenced by `__parallel_partial_sum()`.

4.6.4.30 `template<typename _RAIter , typename _Predicate > std::iterator_traits<_RAIter>::difference_type  
__gnu_parallel::__parallel_partition ( _RAIter __begin, _RAIter __end, _Predicate __pred, _ThreadIndex __num_threads )`

Parallel implementation of `std::partition`.

**Parameters**

|                            |                                                             |
|----------------------------|-------------------------------------------------------------|
| <code>__begin</code>       | Begin iterator of input sequence to split.                  |
| <code>__end</code>         | End iterator of input sequence to split.                    |
| <code>__pred</code>        | Partition predicate, possibly including some kind of pivot. |
| <code>__num_threads</code> | Maximum number of threads to use for this task.             |

**Returns**

Number of elements not fulfilling the predicate.

Definition at line 56 of file `partition.h`.

References `__compare_and_swap()`, `__fetch_and_add()`, `_GLIBCXX_CALL`, `_GLIBCXX_VOLATILE`, `__gnu_parallel::Settings::get()`, `__gnu_parallel::Settings::partition_chunk_share`, and `__gnu_parallel::Settings::partition_chunk_size`.

Referenced by `__parallel_nth_element()`, `__parallel_sort_qs_divide()`, and `__qsb_divide()`.

```
4.6.4.31 template<typename _RAIter, typename _RandomNumberGenerator > void __gnu_parallel::__parallel_random_shuffle (
    _RAIter __begin, _RAIter __end, _RandomNumberGenerator __rng = _RandomNumber() ) [inline]
```

Parallel random public call.

Parameters

|                      |                                 |
|----------------------|---------------------------------|
| <code>__begin</code> | Begin iterator of sequence.     |
| <code>__end</code>   | End iterator of sequence.       |
| <code>__rng</code>   | Random number generator to use. |

Definition at line 522 of file `random_shuffle.h`.

References `__parallel_random_shuffle_drs()`.

```
4.6.4.32 template<typename _RAIter, typename _RandomNumberGenerator > void __gnu_parallel::__parallel_random_shuffle_drs
( _RAIter __begin, _RAIter __end, typename std::iterator_traits<_RAIter>::difference_type __n, _ThreadIndex
  __num_threads, _RandomNumberGenerator & __rng )
```

Main parallel random shuffle step.

Parameters

|                            |                                 |
|----------------------------|---------------------------------|
| <code>__begin</code>       | Begin iterator of sequence.     |
| <code>__end</code>         | End iterator of sequence.       |
| <code>__n</code>           | Length of sequence.             |
| <code>__num_threads</code> | Number of threads to use.       |
| <code>__rng</code>         | Random number generator to use. |

4.6.4.34 `template<bool __stable, typename _RAIter, typename _Compare > void __gnu_parallel::_parallel_sort ( _RAIter __begin, _RAIter __end, _Compare __comp, multiway_mergesort_tag __parallelism ) [inline]`

Choose multiway mergesort, splitting variant at run-time, for parallel sorting.

## Parameters

|                      |                                   |
|----------------------|-----------------------------------|
| <code>__begin</code> | Begin iterator of input sequence. |
| <code>__end</code>   | End iterator of input sequence.   |
| <code>__comp</code>  | Comparator.                       |

## Template Parameters

|                       |              |
|-----------------------|--------------|
| <code>__stable</code> | Sort stable. |
|-----------------------|--------------|

Definition at line 75 of file `sort.h`.

References `__gnu_parallel::parallel_tag::get_num_threads()`, `_GLIBCXX_CALL`, and `__gnu_parallel::_Settings::get()`.

Here is the call graph for this function:

4.6.4.35 `template<bool __stable, typename _RAIter, typename _Compare > void __gnu_parallel::_parallel_sort ( _RAIter __begin, _RAIter __end, _Compare __comp, multiway_mergesort_exact_tag __parallelism ) [inline]`

Choose multiway mergesort with exact splitting, for parallel sorting.

## Parameters

|                      |                                   |
|----------------------|-----------------------------------|
| <code>__begin</code> | Begin iterator of input sequence. |
| <code>__end</code>   | End iterator of input sequence.   |
| <code>__comp</code>  | Comparator.                       |

## Template Parameters

|                       |              |
|-----------------------|--------------|
| <code>__stable</code> | Sort stable. |
|-----------------------|--------------|

Definition at line 99 of file sort.h.

4.6.4.45 `template<typename _Iter, class _OutputIterator, class _BinaryPredicate > _OutputIterator __gnu_parallel::__parallel_unique_copy ( _Iter __first, _Iter __last, _OutputIterator __result, _BinaryPredicate __binary_pred )`

Parallel `std::unique_copy()`, w/\_o explicit equality predicate.

## Parameters

|                            |                                                    |
|----------------------------|----------------------------------------------------|
| <code>__first</code>       | Begin iterator of input sequence.                  |
| <code>__last</code>        | End iterator of input sequence.                    |
| <code>__result</code>      | Begin iterator of result <code>__sequence</code> . |
| <code>__binary_pred</code> | Equality predicate.                                |

## Returns

End iterator of result `__sequence`.

Definition at line 50 of file unique\_copy.h.

References `__equally_split()`, and `_GLIBCXX_CALL`.

Referenced by `__parallel_unique_copy()`.

4.6.4.46 `template<typename _Iter, class _OutputIterator > _OutputIterator __gnu_parallel::__parallel_unique_copy ( _Iter __first, _Iter __last, _OutputIterator __result ) [inline]`

Parallel `std::unique_copy()`, without explicit equality predicate.

## Parameters

|                       |                                                    |
|-----------------------|----------------------------------------------------|
| <code>__first</code>  | Begin iterator of input sequence.                  |
| <code>__last</code>   | End iterator of input sequence.                    |
| <code>__result</code> | Begin iterator of result <code>__sequence</code> . |

## Returns

End iterator of result `__sequence`.

Definition at line 186 of file `unique_copy.h`.

References `__parallel_unique_copy()`.

```
4.6.4.47 template<typename _RAIter, typename _Compare > void __gnu_parallel::qsb_conquer (
    _QSBThreadLocal< _RAIter > & __tls, _RAIter __begin, _RAIter __end, _Compare __comp,
    _ThreadIndex __iam, _ThreadIndex __num_threads, bool __parent_wait )
```

Quicksort conquer step.

## Parameters

|                            |                                                          |
|----------------------------|----------------------------------------------------------|
| <code>__tls</code>         | Array of thread-local storages.                          |
| <code>__begin</code>       | Begin iterator of subsequence.                           |
| <code>__end</code>         | End iterator of subsequence.                             |
| <code>__comp</code>        | Comparator.                                              |
| <code>__iam</code>         | Number of the thread processing this function.           |
| <code>__num_threads</code> | Number of threads that are allowed to work on this part. |

Definition at line 174 of file `balanced_quicksort.h`.

References `__qsb_divide()`, `__qsb_local_sort_with_helping()`, `__gnu_parallel::QSBThreadLocal< _RAIter >::M_elements_leftover`, and `__gnu_parallel::QSBThreadLocal< _RAIter >::M_initial`.

Referenced by `__qsb_conquer()`.

4.6.4.50 `template<typename _RandomNumberGenerator > int __gnu_parallel::__random_number_pow2 ( int __logp, _RandomNumberGenerator & __rng ) [inline]`

Generate a random number in  $[0, 2^{\text{__logp}})$ .

## Parameters

|                     |                                                               |
|---------------------|---------------------------------------------------------------|
| <code>__logp</code> | Logarithm (basis 2) of the upper range <code>__bound</code> . |
| <code>__rng</code>  | Random number generator to use.                               |

Definition at line 115 of file `random_shuffle.h`.

Referenced by `__parallel_random_shuffle_drs_pu()`, and `__sequential_random_shuffle()`.

4.6.4.51 `template<typename _Size > _Size __gnu_parallel::__rd_log2 ( _Size __n ) [inline]`

Calculates the rounded-down logarithm of `__n` for base 2.

## Parameters

|                  |           |
|------------------|-----------|
| <code>__n</code> | Argument. |
|------------------|-----------|

## Returns

Returns 0 for any argument  $< 1$ .

Definition at line 102 of file `parallel/base.h`.

Referenced by `__parallel_random_shuffle_drs()`, `__parallel_sort_qsb()`, `__round_up_to_pow2()`, `__sequential_random_shuffle()`, `__gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_LoserTreeBase()`, `multiseq_partition()`, and `multiseq_selection()`.

4.6.4.52 `template<typename _Tp > _Tp __gnu_parallel::__round_up_to_pow2 ( _Tp __x )`

Round up to the next greater power of 2.

## Parameters

|                  |                     |
|------------------|---------------------|
| <code>__x</code> | Integer to round up |
|------------------|---------------------|

Definition at line 248 of file `random_shuffle.h`.

References `__rd_log2()`.

Referenced by `__parallel_random_shuffle_drs()`, `__sequential_random_shuffle()`, and `multiseq_selection()`.

4.6.4.53 `template<typename __RAIter1, typename __RAIter2, typename _Pred > __RAIter1 __gnu_parallel::__search_template (`  
`__RAIter1 __begin1, __RAIter1 __end1, __RAIter2 __begin2, __RAIter2 __end2, _Pred __pred )`

Parallel `std::search`.

## Parameters

|                       |                                    |
|-----------------------|------------------------------------|
| <code>__begin1</code> | Begin iterator of first sequence.  |
| <code>__end1</code>   | End iterator of first sequence.    |
| <code>__begin2</code> | Begin iterator of second sequence. |
| <code>__end2</code>   | End iterator of second sequence.   |
| <code>__pred</code>   | Find predicate.                    |

## Returns

Place of finding in first sequences.

Definition at line 81 of file `search.h`.

References `__calc_borders()`, `__equally_split()`, `_GLIBCXX_CALL`, and `std::min()`.

```
4.6.4.54 template<bool __stable, bool __sentinels, typename _RAIter1, typename _RAIter2, typename _DifferenceTp,
typename _Compare > _RAIter3 __gnu_parallel::__sequential_multiway_merge ( _RAIter1 __seqs_begin,
_RAIter1 __seqs_end, _RAIter2 __target, const typename std::iterator_traits< typename std::iterator_traits<
_RAIter1 >::value_type::first_type >::value_type & __sentinel, _DifferenceTp __length, _Compare __comp )
```

Sequential multi-way merging switch.

The `_GLIBCXX_PARALLEL_DECISION` is based on the branching factor and runtime settings.

## Parameters

|                           |                                                                                 |
|---------------------------|---------------------------------------------------------------------------------|
| <code>__seqs_begin</code> | Begin iterator of iterator pair input sequence.                                 |
| <code>__seqs_end</code>   | End iterator of iterator pair input sequence.                                   |
| <code>__target</code>     | Begin iterator of output sequence.                                              |
| <code>__comp</code>       | Comparator.                                                                     |
| <code>__length</code>     | Maximum length to merge, possibly larger than the number of elements available. |
| <code>__sentinel</code>   | The sequences have <code>__a</code> <code>__sentinel</code> element.            |

## Returns

End iterator of output sequence.

Definition at line 920 of file `multiway_merge.h`.

References `__is_sorted()`, `__merge_advance()`, `_GLIBCXX_CALL`, and `_GLIBCXX_PARALLEL_LENGTH`.

Referenced by `multiway_merge()`, and `multiway_merge_sentinels()`.

```
4.6.4.55 template<typename _RAIter, typename _RandomNumberGenerator > void __gnu_parallel::__sequential_random_shuffle (
_RAIter __begin, _RAIter __end, _RandomNumberGenerator & __rng )
```

Sequential cache-efficient random shuffle.

## Parameters

|                      |                                 |
|----------------------|---------------------------------|
| <code>__begin</code> | Begin iterator of sequence.     |
| <code>__end</code>   | End iterator of sequence.       |
| <code>__rng</code>   | Random number generator to use. |

Definition at line 410 of file `random_shuffle.h`.

4.6.4.56 `template<typename _Iter > void __gnu_parallel::__shrink ( std::vector< _Iter > & __os_starts, size_t & __count_to_two, size_t & __range_length )`

Combines two ranges into one and thus halves the number of ranges.

Parameters

|                             |                                          |
|-----------------------------|------------------------------------------|
| <code>__os_starts</code>    | Start positions worked on (oversampled). |
| <code>__count_to_two</code> | Counts up to 2.                          |
| <code>__range_length</code> | Current length of a chunk.               |

Definition at line 70 of file `list_partition.h`.

References `std::vector< _Tp, _Alloc >::size()`.

Referenced by `__shrink_and_double()`.

4.6.4.57 `template<typename _Iter > void __gnu_parallel::__shrink_and_double ( std::vector< _Iter > & __os_starts, size_t & __count_to_two, size_t & __range_length, const bool __make_twice )`

Shrinks and doubles the ranges.

Parameters

|                             |                                                                    |
|-----------------------------|--------------------------------------------------------------------|
| <code>__os_starts</code>    | Start positions worked on (oversampled).                           |
| <code>__count_to_two</code> | Counts up to 2.                                                    |
| <code>__range_length</code> | Current length of a chunk.                                         |
| <code>__make_twice</code>   | Whether the <code>__os_starts</code> is allowed to be grown or not |

Definition at line 50 of file `list_partition.h`.

References `__shrink()`, `std::vector< _Tp, _Alloc >::resize()`, and `std::vector< _Tp, _Alloc >::size()`.

Referenced by `list_partition()`.

4.6.4.58 `void __gnu_parallel::__yield ( ) [inline]`

Yield control to another thread, without waiting for the end of the time slice.

Definition at line 121 of file `parallel/compatibility.h`.

Referenced by `__for_each_template_random_access_workstealing()`, and `__qsb_local_sort_with_helping()`.

4.6.4.59 `template<typename _Iter, typename _FuncType > size_t __gnu_parallel::list_partition ( const _Iter __begin, const _Iter __end, _Iter * __starts, size_t * __lengths, const int __num_parts, _FuncType & __f, int __oversampling = 0 )`

Splits a sequence given by input iterators into parts of almost equal size.

The function needs only one pass over the sequence.

Parameters

|                       |                                                                                                                                                                                   |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>__begin</code>  | Begin iterator of input sequence.                                                                                                                                                 |
| <code>__end</code>    | End iterator of input sequence.                                                                                                                                                   |
| <code>__starts</code> | Start iterators for the resulting parts, dimension <code>__num_parts+1</code> . For convenience, <code>__starts [ __num_parts ]</code> contains the end iterator of the sequence. |

|                             |                                                                                                                                                                                                                                                   |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>__lengths</code>      | Length of the resulting parts.                                                                                                                                                                                                                    |
| <code>__num_parts</code>    | Number of parts to split the sequence into.                                                                                                                                                                                                       |
| <code>__f</code>            | Functor to be applied to each element by traversing <code>__it</code>                                                                                                                                                                             |
| <code>__oversampling</code> | Oversampling factor. If 0, then the partitions will differ in at most $\sqrt{\text{end} - \text{begin}}$ elements. Otherwise, the ratio between the longest and the shortest part is bounded by $1/(\text{oversampling} \cdot \text{num\_parts})$ |

**Returns**

Length of the whole sequence.

Definition at line 101 of file `list_partition.h`.

References `__shrink_and_double()`, and `std::vector<_Tp, _Alloc >::size()`.

4.6.4.60 `template<typename _Tp> const _Tp& __gnu_parallel::max ( const _Tp & __a, const _Tp & __b ) [inline]`

Equivalent to `std::max`.

Definition at line 150 of file `parallel/base.h`.

4.6.4.61 `template<typename _Tp> const _Tp& __gnu_parallel::min ( const _Tp & __a, const _Tp & __b ) [inline]`

Equivalent to `std::min`.

Definition at line 144 of file `parallel/base.h`.

Referenced by `__for_each_template_random_access_workstealing()`.

4.6.4.62 `template<typename _RanSeqs, typename _RankType, typename _RankIterator, typename _Compare> void __gnu_parallel::multiseq_partition ( _RanSeqs __begin_seqs, _RanSeqs __end_seqs, _RankType __rank, _RankIterator __begin_offsets, _Compare __comp = std::less<typename std::iterator_traits<typename std::iterator_traits<_RanSeqs>::value_type::first_type>::value_type>() )`

Splits several sorted sequences at a certain global `__rank`, resulting in a splitting point for each sequence. The sequences are passed via a sequence of random-access iterator pairs, none of the sequences may be empty. If there are several equal elements across the split, the ones on the `__left` side will be chosen from sequences with smaller number.

**Parameters**

|                              |                                                                                                                                                                                                                                                              |
|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>__begin_seqs</code>    | Begin of the sequence of iterator pairs.                                                                                                                                                                                                                     |
| <code>__end_seqs</code>      | End of the sequence of iterator pairs.                                                                                                                                                                                                                       |
| <code>__rank</code>          | The global rank to partition at.                                                                                                                                                                                                                             |
| <code>__begin_offsets</code> | A random-access <code>__sequence</code> <code>__begin</code> where the <code>__result</code> will be stored in. Each element of the sequence is an iterator that points to the first element on the greater part of the respective <code>__sequence</code> . |
| <code>__comp</code>          | The ordering functor, defaults to <code>std::less&lt;_Tp&gt;</code> .                                                                                                                                                                                        |

4.6.4.63 `template<typename _Tp, typename _RanSeqs, typename _RankType, typename _Compare > _Tp  
__gnu_parallel::multiseq_selection ( _RanSeqs __begin_seqs, _RanSeqs __end_seqs, _RankType __rank, _RankType &  
__offset, _Compare __comp = std::less<_Tp> ( ) )`

Selects the element at a certain global `__rank` from several sorted sequences.

The sequences are passed via a sequence of random-access iterator pairs, none of the sequences may be empty.

#### Parameters

|                           |                                                                                                                                                            |
|---------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>__begin_seqs</code> | Begin of the sequence of iterator pairs.                                                                                                                   |
| <code>__end_seqs</code>   | End of the sequence of iterator pairs.                                                                                                                     |
| <code>__rank</code>       | The global rank to partition at.                                                                                                                           |
| <code>__offset</code>     | The rank of the selected element in the global subsequence of elements equal to the selected element. If the selected element is unique, this number is 0. |
| <code>__comp</code>       | The ordering functor, defaults to <code>std::less</code> .                                                                                                 |

Definition at line 388 of file `multiseq_selection.h`.

4.6.4.64 `template<typename _RAIterPairIterator, typename _RAIterOut, typename _DifferenceTp, typename _Compare >  
_RAIterOut __gnu_parallel::multiway_merge ( _RAIterPairIterator __seqs_begin, _RAIterPairIterator __seqs_end,  
_RAIterOut __target, _DifferenceTp __length, _Compare __comp, __gnu_parallel::sequential_tag )`

Multiway Merge Frontend.

Merge the sequences specified by `seqs_begin` and `__seqs_end` into `__target`. `__seqs_begin` and `__seqs_end` must point to a sequence of pairs. These pairs must contain an iterator to the beginning of a sequence in their first entry and an iterator the `_M_end` of the same sequence in their second entry.

Ties are broken arbitrarily. See `stable_multiway_merge` for a variant that breaks ties by sequence number but is slower.

The first entries of the pairs (i.e. the begin iterators) will be moved forward.

The output sequence has to provide enough space for all elements that are written to it.

This function will merge the input sequences:

- not stable
- parallel, depending on the input size and Settings
- using sampling for splitting
- not using sentinels

Example:

```
int sequences[10][10];
for (int __i = 0; __i < 10; ++__i)
    for (int __j = 0; __j < 10; ++__j)
        sequences[__i][__j] = __j;

int __out[33];
std::vector<std::pair<int*> > seqs;
```

```

for (int __i = 0; __i < 10; ++__i)
    { seqs.push(std::make_pair<int*>(sequences[__i],
                                   sequences[__i] + 10)) }

multiway_merge(seqs.begin(), seqs.end(), __target, std::less<int>(), 33);

```

**See Also**

`stable_multiway_merge`

**Precondition**

All input sequences must be sorted.

Target must provide enough space to merge out length elements or the number of elements in all sequences, whichever is smaller.

**Postcondition**

`__target`, return `__value`) contains merged `__elements` from the input sequences.

return `__value - __target = min(__length, number of elements in all sequences)`.

**Template Parameters**

|                                   |                                                            |
|-----------------------------------|------------------------------------------------------------|
| <code>__RAIterPairIterator</code> | iterator over sequence of pairs of iterators               |
| <code>__RAIterOut</code>          | iterator over target sequence                              |
| <code>__DifferenceTp</code>       | difference type for the sequence                           |
| <code>__Compare</code>            | strict weak ordering type to compare elements in sequences |

**Parameters**

|                           |                                                                                 |
|---------------------------|---------------------------------------------------------------------------------|
| <code>__seqs_begin</code> | begin of sequence <code>__sequence</code>                                       |
| <code>__seqs_end</code>   | <code>_M_end</code> of sequence <code>__sequence</code>                         |
| <code>__target</code>     | target sequence to merge to.                                                    |
| <code>__comp</code>       | strict weak ordering to use for element comparison.                             |
| <code>__length</code>     | Maximum length to merge, possibly larger than the number of elements available. |

**Returns**

`_M_end` iterator of output sequence

Definition at line 1418 of file `multiway_merge.h`.

References `__sequential_multiway_merge()`, and `_GLIBCXX_CALL`.

**4.6.4.65** `template<template< typename RAI, typename C > class iterator, typename __RAIterIterator, typename __RAIter3, typename __DifferenceTp, typename __Compare > __RAIter3 __gnu_parallel::multiway_merge_3_variant ( __RAIterIterator __seqs_begin, __RAIterIterator __seqs_end, __RAIter3 __target, __DifferenceTp __length, __Compare __comp )`

Highly efficient 3-way merging procedure.

Merging is done with the algorithm implementation described by Peter Sanders. Basically, the idea is to minimize the number of necessary comparison after merging an element. The implementation trick that makes this fast is that the order of the sequences is stored in the instruction pointer (translated into labels in C++).

This works well for merging up to 4 sequences.

Note that making the merging stable does *not* come at a performance hit.

Whether the merging is done guarded or unguarded is selected by the used iterator class.

## Parameters

|                           |                                                                                  |
|---------------------------|----------------------------------------------------------------------------------|
| <code>__seqs_begin</code> | Begin iterator of iterator pair input sequence.                                  |
| <code>__seqs_end</code>   | End iterator of iterator pair input sequence.                                    |
| <code>__target</code>     | Begin iterator of output sequence.                                               |
| <code>__comp</code>       | Comparator.                                                                      |
| <code>__length</code>     | Maximum length to merge, less equal than the total number of elements available. |

## Returns

End iterator of output sequence.

Definition at line 241 of file `multiway_merge.h`.

References `_GLIBCXX_CALL`.

```
4.6.4.66 template<template< typename RAI, typename C > class iterator, typename _RAItererator , typename _RAIter3 , typename
_DifferenceTp , typename _Compare > _RAIter3 __gnu_parallel::multiway_merge_4_variant ( _RAItererator __seqs_begin,
_RAItererator __seqs_end, _RAIter3 __target, _DifferenceTp __length, _Compare __comp )
```

Highly efficient 4-way merging procedure.

Merging is done with the algorithm implementation described by Peter Sanders. Basically, the idea is to minimize the number of necessary comparison after merging an element. The implementation trick that makes this fast is that the order of the sequences is stored in the instruction pointer (translated into goto labels in C++).

This works well for merging up to 4 sequences.

Note that making the merging stable does *not* come at a performance hit.

Whether the merging is done guarded or unguarded is selected by the used iterator class.

## Parameters

|                           |                                                                                  |
|---------------------------|----------------------------------------------------------------------------------|
| <code>__seqs_begin</code> | Begin iterator of iterator pair input sequence.                                  |
| <code>__seqs_end</code>   | End iterator of iterator pair input sequence.                                    |
| <code>__target</code>     | Begin iterator of output sequence.                                               |
| <code>__comp</code>       | Comparator.                                                                      |
| <code>__length</code>     | Maximum length to merge, less equal than the total number of elements available. |

## Returns

End iterator of output sequence.

Definition at line 360 of file `multiway_merge.h`.

References `_GLIBCXX_CALL`.

```
4.6.4.67 template<bool __stable, typename _RAItererator , typename _Compare , typename _DifferenceType > void
__gnu_parallel::multiway_merge_exact_splitting ( _RAItererator __seqs_begin, _RAItererator __seqs_end,
_DifferenceType __length, _DifferenceType __total_length, _Compare __comp, std::vector< std::pair<
_DifferenceType, _DifferenceType > > * __pieces )
```

Exact splitting for parallel multiway-merge routine.

None of the passed sequences may be empty.

Definition at line 1120 of file `multiway_merge.h`.

References `__equally_split()`, `_GLIBCXX_PARALLEL_LENGTH`, `std::vector< _Tp, _Alloc >::begin()`, `std::vector< _Tp, _Alloc >::end()`, `multiseq_partition()`, and `std::vector< _Tp, _Alloc >::resize()`.

Referenced by `__parallel_merge_advance()`.

```
4.6.4.68 template<typename _LT, typename _RAIterIterator, typename _RAIter3, typename _DifferenceTp, typename _Compare >
    _RAIter3 __gnu_parallel::multiway_merge_loser_tree ( _RAIterIterator __seqs_begin, _RAIterIterator __seqs_end, _RAIter3
    __target, _DifferenceTp __length, _Compare __comp )
```

Multi-way merging procedure for a high branching factor, guarded case.

This merging variant uses a `LoserTree` class as selected by `_LT`.

Stability is selected through the used `LoserTree` class `_LT`.

At least one non-empty sequence is required.

#### Parameters

|                           |                                                                                  |
|---------------------------|----------------------------------------------------------------------------------|
| <code>__seqs_begin</code> | Begin iterator of iterator pair input sequence.                                  |
| <code>__seqs_end</code>   | End iterator of iterator pair input sequence.                                    |
| <code>__target</code>     | Begin iterator of output sequence.                                               |
| <code>__comp</code>       | Comparator.                                                                      |
| <code>__length</code>     | Maximum length to merge, less equal than the total number of elements available. |

#### Returns

End iterator of output sequence.

Definition at line 491 of file `multiway_merge.h`.

References `_GLIBCXX_CALL`, and `_GLIBCXX_PARALLEL_LENGTH`.

```
4.6.4.69 template<typename UnguardedLoserTree, typename _RAIterIterator, typename _RAIter3, typename _DifferenceTp,
    typename _Compare > _RAIter3 __gnu_parallel::multiway_merge_loser_tree_sentinel ( _RAIterIterator __seqs_begin,
    _RAIterIterator __seqs_end, _RAIter3 __target, const typename std::iterator_traits< typename std::iterator_traits<
    _RAIterIterator >::value_type::first_type >::value_type & __sentinel, _DifferenceTp __length, _Compare __comp )
```

Multi-way merging procedure for a high branching factor, requiring sentinels to exist.

#### Template Parameters

|                                 |                                                                   |
|---------------------------------|-------------------------------------------------------------------|
| <code>UnguardedLoserTree</code> | <code>_LoserTree</code> variant to use for the unguarded merging. |
|---------------------------------|-------------------------------------------------------------------|

#### Parameters

|                           |                                                                                  |
|---------------------------|----------------------------------------------------------------------------------|
| <code>__seqs_begin</code> | Begin iterator of iterator pair input sequence.                                  |
| <code>__seqs_end</code>   | End iterator of iterator pair input sequence.                                    |
| <code>__target</code>     | Begin iterator of output sequence.                                               |
| <code>__comp</code>       | Comparator.                                                                      |
| <code>__length</code>     | Maximum length to merge, less equal than the total number of elements available. |

**Returns**

End iterator of output sequence.

Definition at line 662 of file multiway\_merge.h.

References `__is_sorted()`, and `_GLIBCXX_CALL`.

```
4.6.4.70 template<typename _LT, typename _RAIterIterator, typename _RAIter3, typename _DifferenceTp, typename _Compare
> _RAIter3 __gnu_parallel::multiway_merge_loser_tree_unguarded ( _RAIterIterator __seqs_begin, _RAIterIterator
__seqs_end, _RAIter3 __target, const typename std::iterator_traits< typename std::iterator_traits< _RAIterIterator
>::value_type::first_type >::value_type & __sentinel, _DifferenceTp __length, _Compare __comp )
```

Multi-way merging procedure for a high branching factor, unguarded case.

Merging is done using the LoserTree class `_LT`.

Stability is selected by the used LoserTrees.

**Precondition**

No input will run out of elements during the merge.

**Parameters**

|                           |                                                                                  |
|---------------------------|----------------------------------------------------------------------------------|
| <code>__seqs_begin</code> | Begin iterator of iterator pair input sequence.                                  |
| <code>__seqs_end</code>   | End iterator of iterator pair input sequence.                                    |
| <code>__target</code>     | Begin iterator of output sequence.                                               |
| <code>__comp</code>       | Comparator.                                                                      |
| <code>__length</code>     | Maximum length to merge, less equal than the total number of elements available. |

**Returns**

End iterator of output sequence.

_DifferenceType __length, _DifferenceType __total_length, _Compare __comp, std::vector< std::pair<
_DifferenceType, _DifferenceType > > * __pieces )
```

Sampling based splitting for parallel multiway-merge routine.

Definition at line 1035 of file multiway\_merge.h.

References `_GLIBCXX_PARALLEL_LENGTH`, `__gnu_parallel::_Settings::get()`, and `__gnu_parallel::_Settings::merge_oversampling`.

```
4.6.4.72 template<typename _RAIterPairIterator, typename _RAIterOut, typename _DifferenceTp, typename _Compare >
_RAIterOut __gnu_parallel::multiway_merge_sentinels ( _RAIterPairIterator __seqs_begin, _RAIterPairIterator __seqs_end,
_RAIterOut __target, _DifferenceTp __length, _Compare __comp, __gnu_parallel::sequential_tag )
```

Multiway Merge Frontend.

Merge the sequences specified by `seqs_begin` and `__seqs_end` into `__target`. `__seqs_begin` and `__seqs_end` must point to a sequence of pairs. These pairs must contain an iterator to the beginning of a sequence in their first entry and an iterator the `_M_end` of the same sequence in their second entry.

Ties are broken arbitrarily. See `stable_multiway_merge` for a variant that breaks ties by sequence number but is slower.

The first entries of the pairs (i.e. the begin iterators) will be moved forward accordingly.

The output sequence has to provide enough space for all elements that are written to it.

This function will merge the input sequences:

- not stable
- parallel, depending on the input size and Settings
- using sampling for splitting
- using sentinels

You have to take care that the element the `_M_end` iterator points to is readable and contains a value that is greater than any other non-sentinel value in all sequences.

Example:

```
int sequences[10][11];
for (int __i = 0; __i < 10; ++__i)
    for (int __j = 0; __j < 11; ++__j)
        sequences[__i][__j] = __j; // __last one is sentinel!

int __out[33];
std::vector<std::pair<int*> > seqs;
for (int __i = 0; __i < 10; ++__i)
    { seqs.push(std::make_pair<int*>(sequences[__i],
                                   sequences[__i] + 10)) }

multiway_merge(seqs.begin(), seqs.end(), __target, std::less<int>(), 33);
```

#### Precondition

All input sequences must be sorted.

Target must provide enough space to merge out length elements or the number of elements in all sequences, whichever is smaller.

For each `__i`, `__seqs_begin[__i].second` must be the end marker of the sequence, but also reference the one more `__sentinel` element.

#### Postcondition

`[_target, return __value)` contains merged `__elements` from the input sequences.

`return __value - __target = min(__length, number of elements in all sequences).`

### Template Parameters

|                                   |                                                            |
|-----------------------------------|------------------------------------------------------------|
| <code>__RAIterPairIterator</code> | iterator over sequence of pairs of iterators               |
| <code>__RAIterOut</code>          | iterator over target sequence                              |
| <code>__DifferenceTp</code>       | difference type for the sequence                           |
| <code>__Compare</code>            | strict weak ordering type to compare elements in sequences |

### Parameters

|                           |                                                                                 |
|---------------------------|---------------------------------------------------------------------------------|
| <code>__seqs_begin</code> | __begin of sequence __sequence                                                  |
| <code>__seqs_end</code>   | __M_end of sequence __sequence                                                  |
| <code>__target</code>     | target sequence to merge to.                                                    |
| <code>__comp</code>       | strict weak ordering to use for element comparison.                             |
| <code>__length</code>     | Maximum length to merge, possibly larger than the number of elements available. |

### Returns

`__M_end` iterator of output sequence

Definition at line 1782 of file `multiway_merge.h`.

References `__sequential_multiway_merge()`, and `__GLIBCXX_CALL`.

```
4.6.4.73 template<bool __stable, bool __sentinels, typename __RAIterIterator , typename __RAIter3 , typename __DifferenceTp
, typename __Splitter , typename __Compare > __RAIter3 __gnu_parallel::parallel_multiway_merge ( __RAIterIterator
__seqs_begin, __RAIterIterator __seqs_end, __RAIter3 __target, __Splitter __splitter, __DifferenceTp __length, __Compare
__comp, __ThreadIndex __num_threads )
```

Parallel multi-way merge routine.

The `__GLIBCXX_PARALLEL_DECISION` is based on the branching factor and runtime settings.

Must not be called if the number of sequences is 1.

### Template Parameters

|                         |                                                                        |
|-------------------------|------------------------------------------------------------------------|
| <code>__Splitter</code> | functor to split input (either <code>__exact</code> or sampling based) |
| <code>__stable</code>   | Stable merging incurs a performance penalty.                           |
| <code>__sentinel</code> | Ignored.                                                               |

### Parameters

|                           |                                                                                 |
|---------------------------|---------------------------------------------------------------------------------|
| <code>__seqs_begin</code> | Begin iterator of iterator pair input sequence.                                 |
| <code>__seqs_end</code>   | End iterator of iterator pair input sequence.                                   |
| <code>__target</code>     | Begin iterator of output sequence.                                              |
| <code>__comp</code>       | Comparator.                                                                     |
| <code>__length</code>     | Maximum length to merge, possibly larger than the number of elements available. |

### Returns

End iterator of output sequence.

Definition at line 1225 of file `multiway_merge.h`.

References `__is_sorted()`, `__GLIBCXX_CALL`, `__GLIBCXX_PARALLEL_LENGTH`, `__gnu_parallel::_Settings::get()`, `std::make_pair()`, and `__gnu_parallel::_Settings::merge_oversampling`.

---

4.6.4.74 `template<bool __stable, bool __exact, typename _RAIter, typename _Compare > void __gnu_parallel::parallel_sort_mwms  
( _RAIter __begin, _RAIter __end, _Compare __comp, _ThreadIndex __num_threads )`

PMWMS main call.

## Parameters

|                            |                             |
|----------------------------|-----------------------------|
| <code>__begin</code>       | Begin iterator of sequence. |
| <code>__end</code>         | End iterator of sequence.   |
| <code>__comp</code>        | Comparator.                 |
| <code>__num_threads</code> | Number of threads to use.   |

Definition at line 395 of file `multiway_mergesort.h`.

References `_GLIBCXX_CALL`, `__gnu_parallel::PMWMSortingData<_RAIter>::M_num_threads`, `__gnu_parallel::PMWMSortingData<_RAIter>::M_offsets`, `__gnu_parallel::PMWMSortingData<_RAIter>::M_pieces`, `__gnu_parallel::PMWMSortingData<_RAIter>::M_samples`, `__gnu_parallel::PMWMSortingData<_RAIter>::M_source`, `__gnu_parallel::PMWMSortingData<_RAIter>::M_starts`, `__gnu_parallel::PMWMSortingData<_RAIter>::M_temporary`, `__gnu_parallel::Settings::get()`, and `__gnu_parallel::Settings::sort_mwms_oversampling`.

```
4.6.4.75 template<bool __stable, bool __exact, typename _RAIter, typename _Compare> void __gnu_parallel::parallel_sort_mwms_pu (
    _PMWMSortingData<_RAIter> * __sd, _Compare & __comp
)
```

PMWMS code executed by each thread.

## Parameters

|                     |                            |
|---------------------|----------------------------|
| <code>__sd</code>   | Pointer to algorithm data. |
| <code>__comp</code> | Comparator.                |

Definition at line 308 of file `multiway_mergesort.h`.

#### 4.8.1 Detailed Description

GNU profile code for public use.

#### 4.8.2 Typedef Documentation

##### 4.8.2.1 `typedef std::unordered_map<std::string, std::string> __gnu_profile::__env_t`

Internal environment. Values can be set one of two ways: 1. In config file "var = value". The default config file path is `libstdcxx-profile.conf`. 2. By setting process environment variables. For instance, in a Bash shell you can set the unit cost of iterating through a map like this: `export __map_iterate_cost_factor=5.0`. If a value is set both in the input file and through an environment variable, the environment value takes precedence.

Definition at line 65 of file `profiler_trace.h`.

#### 4.8.3 Function Documentation

##### 4.8.3.1 `bool __gnu_profile::__profcxx_init( ) [inline]`

This function must be called by each instrumentation point.

The common path is inlined fully.

Definition at line 653 of file `profiler_trace.h`.

#### 4.8.3.2 `void __gnu_profile::__report ( ) [inline]`

Final report method, registered with **atexit**.

This can also be called directly by user code, including signal handlers. It is protected against deadlocks by the reentrance guard in `profiler.h`. However, when called from a signal handler that triggers while within `__gnu_profile` (under the guarded zone), no output will be produced.

Definition at line 448 of file `profiler_trace.h`.

References `std::min()`.

#### 4.8.3.3 `__gnu_profile::_GLIBCXX_PROFILE_DEFINE_UNINIT_DATA ( __gnu_cxx::_mutex , __global_mutex )`

Master lock.

## 4.9 `__gnu_sequential` Namespace Reference

### 4.9.1 Detailed Description

GNU sequential classes for public use.

## 4.10 `abi` Namespace Reference

### 4.10.1 Detailed Description

The cross-vendor C++ Application Binary Interface. A namespace alias to `__cxxabiv1`, but user programs should use the alias `'abi'`. A brief overview of an ABI is given in the `libstdc++` FAQ, question 5.8 (you may have a copy of the FAQ locally, or you can view the online version at [http://gcc.gnu.org/onlinedocs/libstdc++/faq.html#5\\_8](http://gcc.gnu.org/onlinedocs/libstdc++/faq.html#5_8)).

GCC subscribes to a cross-vendor ABI for C++, sometimes called the IA64 ABI because it happens to be the native ABI for that platform. It is summarized at <http://www.codesourcery.com/cxx-abi/> along with the current specification.

For users of GCC greater than or equal to 3.x, entry points are available in `<cxxabi.h>`, which notes, *'It is not normally necessary for user programs to include this header, or use the entry points directly. However, this header is available should that be needed.'*

### Standard Stream Objects

The `<iostream>` header declares the eight standard stream objects. For other declarations, see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/io.html> and the *I/O forward declarations*

They are required by default to cooperate with the global C library's `FILE` streams, and to be available during program startup and termination. For more information, see the section of the manual linked to above.

#### 4.11.1 Detailed Description

ISO C++ entities toplevel namespace is std.

#### 4.11.2 Typedef Documentation

##### 4.11.2.1 `template<typename Ptr , typename Tp > using std::__ptr_rebind = typedef typename pointer_traits<Ptr>::template rebind<Tp>`

Convenience alias for rebinding pointers.

Definition at line 147 of file ptr\_traits.h.

##### 4.11.2.2 `template<bool _Cache> using std::__umap_traits = typedef __detail::_Hashtable_traits<_Cache, false, true>`

Base types for unordered\_map.

Definition at line 40 of file unordered\_map.h.

##### 4.11.2.3 `template<bool _Cache> using std::__ummap_traits = typedef __detail::_Hashtable_traits<_Cache, false, false>`

Base types for unordered\_multimap.

Definition at line 57 of file unordered\_map.h.

##### 4.11.2.4 `template<bool _Cache> using std::__umset_traits = typedef __detail::_Hashtable_traits<_Cache, true, false>`

Base types for unordered\_multiset.

Definition at line 55 of file unordered\_set.h.

##### 4.11.2.5 `template<bool _Cache> using std::__uset_traits = typedef __detail::_Hashtable_traits<_Cache, true, true>`

Base types for unordered\_set.

Definition at line 40 of file unordered\_set.h.

##### 4.11.2.6 `template<size_t... _Idx> using std::index_sequence = typedef integer_sequence<size_t, _Idx...>`

Alias template index\_sequence.

Definition at line 336 of file utility.

##### 4.11.2.7 `template<typename... _Types> using std::index_sequence_for = typedef make_index_sequence<sizeof...( _Types)>`

Alias template index\_sequence\_for.

Definition at line 344 of file utility.

##### 4.11.2.8 `template<size_t _Num> using std::make_index_sequence = typedef make_integer_sequence<size_t, _Num>`

Alias template make\_index\_sequence.

Definition at line 340 of file utility.

##### 4.11.2.9 `template<typename Tp , Tp _Num> using std::make_integer_sequence = typedef integer_sequence<Tp, __integer_pack(_Num)...>`

Alias template make\_integer\_sequence.

Definition at line 329 of file utility.

#### 4.11.2.10 `typedef void(* std::new_handler)()`

If you write your own error handler to be called by `new`, it must be of this type.

Definition at line 97 of file new.

#### 4.11.2.11 `typedef long long std::streamoff`

Type used by `fpos`, `char_traits<char>`, and `char_traits<wchar_t>`.

In clauses 21.1.3.1 and 27.4.1 `streamoff` is described as an implementation defined type. Note: In versions of GCC up to and including GCC 3.3, `streamoff` was `typedef long`.

Definition at line 94 of file postypes.h.

#### 4.11.2.12 `typedef fpos<mbstate_t> std::streampos`

File position for char streams.

Definition at line 228 of file postypes.h.

#### 4.11.2.13 `typedef ptrdiff_t std::streamsize`

Integral type for I/O operation counts and buffer sizes.

Definition at line 98 of file postypes.h.

#### 4.11.2.14 `typedef void(* std::terminate_handler)()`

If you write a replacement terminate handler, it must be of this type.

Definition at line 61 of file exception.

#### 4.11.2.15 `typedef fpos<mbstate_t> std::u16streampos`

File position for `char16_t` streams.

Definition at line 234 of file postypes.h.

#### 4.11.2.16 `typedef fpos<mbstate_t> std::u32streampos`

File position for `char32_t` streams.

Definition at line 236 of file postypes.h.

#### 4.11.2.17 `typedef void(* std::unexpected_handler)()`

If you write a replacement unexpected handler, it must be of this type.

Definition at line 64 of file exception.

#### 4.11.2.18 `typedef fpos<mbstate_t> std::wstreampos`

File position for `wchar_t` streams.

Definition at line 230 of file postypes.h.

### 4.11.3 Enumeration Type Documentation

#### 4.11.3.1 anonymous enum

**Todo** Needs documentation! See [http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-\\_style.html](http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-_style.html) This controls some aspect of the sort routines.

Definition at line 1875 of file `stl_algo.h`.

#### 4.11.3.2 `enum std::float_denorm_style`

Describes the denormalization for floating-point types.

These values represent the presence or absence of a variable number of exponent bits. This type is used in the `std::numeric_limits` class.

##### Enumerator

***denorm\_indeterminate*** Indeterminate at compile time whether denormalized values are allowed.

***denorm\_absent*** The type does not allow denormalized values.

***denorm\_present*** The type allows denormalized values.

Definition at line 182 of file `limits`.

#### 4.11.3.3 `enum std::float_round_style`

Describes the rounding style for floating-point types.

This is used in the `std::numeric_limits` class.

##### Enumerator

***round\_toward\_zero*** Intermediate.

***round\_to\_nearest*** To zero.

***round\_toward\_infinity*** To the nearest representable value.

***round\_toward\_neg\_infinity*** To infinity.

Definition at line 167 of file `limits`.

#### 4.11.3.4 `enum std::io_errc` [`strong`]

I/O error code.

Definition at line 203 of file `ios_base.h`.

#### 4.11.4 Function Documentation

##### 4.11.4.1 `template<typename _Alloc> __allocated_ptr<_Alloc> std::__allocate_guarded ( _Alloc & __a )`

Allocate space for a single object using `__a`.

Definition at line 95 of file `allocated_ptr.h`.

##### 4.11.4.2 `template<typename _RandomAccessIterator, typename _Compare> void std::_final_insertion_sort ( _RandomAccessIterator __first, _RandomAccessIterator __last, _Compare __comp )`

This is a helper function for the sort routine.

Definition at line 1880 of file `stl_algo.h`.

References `__insertion_sort()`, and `__unguarded_insertion_sort()`.

4.11.4.3 `template<typename _InputIterator, typename _Predicate > _InputIterator std::_find_if ( _InputIterator __first, _InputIterator __last, _Predicate __pred, input_iterator_tag ) [inline]`

This is an overload used by find algos for the Input Iterator case.

Definition at line 101 of file `stl_algo.h`.

Referenced by `__find_if_not()`, `__search_n_aux()`, `find()`, and `find_if()`.

4.11.4.4 `template<typename _RandomAccessIterator, typename _Predicate > _RandomAccessIterator std::_find_if ( _RandomAccessIterator __first, _RandomAccessIterator __last, _Predicate __pred, random_access_iterator_tag )`

This is an overload used by find algos for the RAI case.

Definition at line 112 of file `stl_algo.h`.

4.11.4.5 `template<typename _InputIterator, typename _Predicate > _InputIterator std::_find_if_not ( _InputIterator __first, _InputIterator __last, _Predicate __pred ) [inline]`

Provided for `stable_partition` to use.

Definition at line 168 of file `stl_algo.h`.

References `__find_if()`, and `__iterator_category()`.

Referenced by `find_if_not()`.

4.11.4.6 `template<typename _InputIterator, typename _Predicate, typename _Distance > _InputIterator std::_find_if_not_n ( _InputIterator __first, _Distance & __len, _Predicate __pred )`

Like `find_if_not()`, but uses and updates a count of the remaining range length instead of comparing against an end iterator.

Definition at line 181 of file `stl_algo.h`.

Referenced by `__stable_partition_adaptive()`.

4.11.4.7 `template<typename _EuclideanRingElement > _EuclideanRingElement std::_gcd ( _EuclideanRingElement __m, _EuclideanRingElement __n )`

This is a helper function for the rotate algorithm specialized on RAIs. It returns the greatest common divisor of two integer values.

Definition at line 1232 of file `stl_algo.h`.

4.11.4.8 `template<typename _IntType, typename _UniformRandomBitGenerator > pair<_IntType, _IntType> std::_gen_two_uniform_ints ( _IntType __b0, _IntType __b1, _UniformRandomBitGenerator && __g )`

Generate two uniformly distributed integers using a single distribution invocation.

#### Parameters

|                   |                                            |
|-------------------|--------------------------------------------|
| <code>__b0</code> | The upper bound for the first integer.     |
| <code>__b1</code> | The upper bound for the second integer.    |
| <code>__g</code>  | A <code>UniformRandomBitGenerator</code> . |

#### Returns

A pair  $(i, j)$  with  $i$  and  $j$  uniformly distributed over  $[0, \text{__b0})$  and  $[0, \text{__b1})$ , respectively.

Requires: `__b0 * __b1 <= __g.max() - __g.min()`.

Using `uniform_int_distribution` with a range that is very small relative to the range of the generator ends up wasting potentially expensively generated randomness, since `uniform_int_distribution` does not store leftover randomness between invocations.

If we know we want two integers in ranges that are sufficiently small, we can compose the ranges, use a single distribution invocation, and significantly reduce the waste.

Definition at line 3769 of file `stl_algo.h`.

References `make_pair()`.

Referenced by `__sample()`, and `shuffle()`.

**4.11.4.9** `template<typename _RandomAccessIterator, typename _Compare > void std::_heap_select ( _RandomAccessIterator __first, _RandomAccessIterator __middle, _RandomAccessIterator __last, _Compare __comp )`

This is a helper function for the sort routines.

Definition at line 1668 of file `stl_algo.h`.

**4.11.4.10** `template<typename _RandomAccessIterator, typename _Compare > void std::_inplace_stable_sort ( _RandomAccessIterator __first, _RandomAccessIterator __last, _Compare __comp )`

This is a helper function for the stable sorting routines.

Definition at line 2761 of file `stl_algo.h`.

References `__insertion_sort()`, and `__merge_without_buffer()`.

**4.11.4.11** `template<typename _RandomAccessIterator, typename _Compare > void std::_insertion_sort ( _RandomAccessIterator __first, _RandomAccessIterator __last, _Compare __comp )`

This is a helper function for the sort routine.

Definition at line 1840 of file `stl_algo.h`.

References `__unguarded_linear_insert()`.

Referenced by `__final_insertion_sort()`, and `__inplace_stable_sort()`.

**4.11.4.12** `template<typename _RandomAccessIterator, typename _Size, typename _Compare > void std::_introsort_loop ( _RandomAccessIterator __first, _RandomAccessIterator __last, _Size __depth_limit, _Compare __comp )`

This is a helper function for the sort routine.

Definition at line 1940 of file `stl_algo.h`.

References `__unguarded_partition_pivot()`.

**4.11.4.13** `constexpr int std::_lg ( int __n ) [inline]`

This is a helper function for the sort routines and for `random.tcc`.

Definition at line 1000 of file `stl_algobase.h`.

Referenced by `nth_element()`, `std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::operator()()`, and `std::linear_congruential_engine< _UIntType, __a, __c, __m >::seed()`.

**4.11.4.14** `template<typename _BidirectionalIterator, typename _Distance, typename _Pointer, typename _Compare > void std::_merge_adaptive ( _BidirectionalIterator __first, _BidirectionalIterator __middle, _BidirectionalIterator __last, _Distance __len1, _Distance __len2, _Pointer __buffer, _Distance __buffer_size, _Compare __comp )`

This is a helper function for the merge routines.

Definition at line 2415 of file `stl_algo.h`.

References `__move_merge_adaptive()`, `__move_merge_adaptive_backward()`, `__rotate_adaptive()`, `advance()`, and `distance()`.

```
4.11.4.15 template<typename _BidirectionalIterator , typename _Distance , typename _Compare > void
std::__merge_without_buffer ( _BidirectionalIterator __first, _BidirectionalIterator __middle, _BidirectionalIterator __last,
_Distance __len1, _Distance __len2, _Compare __comp )
```

This is a helper function for the merge routines.

Definition at line 2476 of file `stl_algo.h`.

References `advance()`, `distance()`, and `iter_swap()`.

Referenced by `__inplace_stable_sort()`.

```
4.11.4.16 template<typename _Iterator , typename _Compare > void std::__move_median_to_first ( _Iterator __result, _Iterator
__a, _Iterator __b, _Iterator __c, _Compare __comp )
```

Swaps the median value of `*__a`, `*__b` and `*__c` under `__comp` to `*__result`.

Definition at line 78 of file `stl_algo.h`.

References `iter_swap()`.

Referenced by `__unguarded_partition_pivot()`.

```
4.11.4.17 template<typename _InputIterator , typename _OutputIterator , typename _Compare > _OutputIterator
std::__move_merge ( _InputIterator __first1, _InputIterator __last1, _InputIterator __first2, _InputIterator __last2,
_OutputIterator __result, _Compare __comp )
```

This is a helper function for the `__merge_sort_loop` routines.

Definition at line 2639 of file `stl_algo.h`.

```
4.11.4.18 template<typename _InputIterator1 , typename _InputIterator2 , typename _OutputIterator , typename _Compare > void
std::__move_merge_adaptive ( _InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2
__last2, _OutputIterator __result, _Compare __comp )
```

This is a helper function for the `__merge_adaptive` routines.

Definition at line 2304 of file `stl_algo.h`.

Referenced by `__merge_adaptive()`.

```
4.11.4.19 template<typename _BidirectionalIterator1 , typename _BidirectionalIterator2 , typename _BidirectionalIterator3
, typename _Compare > void std::__move_merge_adaptive_backward ( _BidirectionalIterator1 __first1,
_BidirectionalIterator1 __last1, _BidirectionalIterator2 __first2, _BidirectionalIterator2 __last2, _BidirectionalIterator3
__result, _Compare __comp )
```

This is a helper function for the `__merge_adaptive` routines.

Definition at line 2330 of file `stl_algo.h`.

Referenced by `__merge_adaptive()`.

```
4.11.4.20 void std::__once_proxy ( void )
```

Generic `try_lock`.

## Parameters

|                   |                                                     |
|-------------------|-----------------------------------------------------|
| <code>__l1</code> | Meets Lockable requirements (try_lock() may throw). |
| <code>__l2</code> | Meets Lockable requirements (try_lock() may throw). |
| <code>__l3</code> | Meets Lockable requirements (try_lock() may throw). |

## Returns

Returns -1 if all try\_lock() calls return true. Otherwise returns a 0-based index corresponding to the argument that returned false.

## Postcondition

Either all arguments are locked, or none will be.

Sequentially calls try\_lock() on each argument.

Referenced by call\_once().

4.11.4.21 `template<typename _ForwardIterator, typename _Predicate > _ForwardIterator std::_partition ( _ForwardIterator __first, _ForwardIterator __last, _Predicate __pred, forward_iterator_tag )`

This is a helper function...

Definition at line 1488 of file stl\_algo.h.

References iter\_swap().

Referenced by partition().

4.11.4.22 `template<typename _BidirectionalIterator, typename _Predicate > _BidirectionalIterator std::_partition ( _BidirectionalIterator __first, _BidirectionalIterator __last, _Predicate __pred, bidirectional_iterator_tag )`

This is a helper function...

Definition at line 1513 of file stl\_algo.h.

References iter\_swap().

4.11.4.23 `template<typename _BidirectionalIterator > void std::_reverse ( _BidirectionalIterator __first, _BidirectionalIterator __last, bidirectional_iterator_tag )`

This is an uglified reverse(\_BidirectionalIterator, \_BidirectionalIterator) overloaded for bidirectional iterators.

Definition at line 1132 of file stl\_algo.h.

References iter\_swap().

Referenced by reverse().

4.11.4.24 `template<typename _RandomAccessIterator > void std::_reverse ( _RandomAccessIterator __first, _RandomAccessIterator __last, random_access_iterator_tag )`

This is an uglified reverse(\_BidirectionalIterator, \_BidirectionalIterator) overloaded for random access iterators.

Definition at line 1152 of file stl\_algo.h.

References iter\_swap().

```
4.11.4.25 template<typename _BidirectionalIterator1 , typename _BidirectionalIterator2 , typename _Distance >
    _BidirectionalIterator1 std::_rotate_adaptive ( _BidirectionalIterator1 __first, _BidirectionalIterator1 __middle,
    _BidirectionalIterator1 __last, _Distance __len1, _Distance __len2, _BidirectionalIterator2 __buffer, _Distance
    __buffer_size )
```

This is a helper function for the merge routines.

Definition at line 2373 of file `stl_algo.h`.

References `advance()`, and `distance()`.

Referenced by `__merge_adaptive()`.

```
4.11.4.26 template<typename _InputIterator , typename _RandomAccessIterator , typename _Size , typename
    _UniformRandomBitGenerator > _RandomAccessIterator std::_sample ( _InputIterator __first, _InputIterator
    __last, input_iterator_tag , _RandomAccessIterator __out, random_access_iterator_tag , _Size __n,
    _UniformRandomBitGenerator && __g )
```

Reservoir sampling algorithm.

Definition at line 5719 of file `stl_algo.h`.

Referenced by `__gnu_parallel::multiseq_partition()`, and `__gnu_parallel::multiseq_selection()`.

```
4.11.4.27 template<typename _ForwardIterator , typename _OutputIterator , typename _Cat , typename _Size , typename
    _UniformRandomBitGenerator > _OutputIterator std::_sample ( _ForwardIterator __first, _ForwardIterator __last,
    forward_iterator_tag , _OutputIterator __out, _Cat , _Size __n, _UniformRandomBitGenerator && __g )
```

Selection sampling algorithm.

Definition at line 5746 of file `stl_algo.h`.

References `__gen_two_uniform_ints()`, `distance()`, `std::pair< _T1, _T2 >::first`, `min()`, and `std::pair< _T1, _T2 >::second`.

```
4.11.4.28 template<typename _ForwardIterator , typename _Integer , typename _UnaryPredicate > _ForwardIterator
    std::_search_n_aux ( _ForwardIterator __first, _ForwardIterator __last, _Integer __count, _UnaryPredicate
    __unary_pred, std::forward_iterator_tag )
```

This is an helper function for `search_n` overloaded for forward iterators.

Definition at line 257 of file `stl_algo.h`.

References `__find_if()`.

```
4.11.4.29 template<typename _RandomAccessIter , typename _Integer , typename _UnaryPredicate > _RandomAccessIter
    std::_search_n_aux ( _RandomAccessIter __first, _RandomAccessIter __last, _Integer __count, _UnaryPredicate
    __unary_pred, std::random_access_iterator_tag )
```

This is an helper function for `search_n` overloaded for random access iterators.

Definition at line 289 of file `stl_algo.h`.

```
4.11.4.30 template<typename _ForwardIterator , typename _Pointer , typename _Predicate , typename _Distance > _ForwardIterator
    std::_stable_partition_adaptive ( _ForwardIterator __first, _ForwardIterator __last, _Predicate __pred, _Distance __len,
    _Pointer __buffer, _Distance __buffer_size )
```

This is a helper function... Requires `__first != __last` and `!__pred(__first)` and `__len == distance(__first, __last)`.

`!__pred(__first)` allows us to guarantee that we don't move-assign an element onto itself.

Definition at line 1549 of file `stl_algo.h`.

References `__find_if_not_n()`, `advance()`, and `distance()`.

4.11.4.31 `template<typename _Lock > unique_lock<_Lock> std::__try_to_lock ( _Lock & __l ) [inline]`

Generic `try_lock`.

Parameters

|                   |                                                                   |
|-------------------|-------------------------------------------------------------------|
| <code>__l1</code> | Meets Lockable requirements ( <code>try_lock()</code> may throw). |
| <code>__l2</code> | Meets Lockable requirements ( <code>try_lock()</code> may throw). |
| <code>__l3</code> | Meets Lockable requirements ( <code>try_lock()</code> may throw). |

Returns

Returns -1 if all `try_lock()` calls return true. Otherwise returns a 0-based index corresponding to the argument that returned false.

Postcondition

Either all arguments are locked, or none will be.

Sequentially calls `try_lock()` on each argument.

Definition at line 469 of file `mutex`.

References `try_to_lock`.

4.11.4.32 `template<typename _RandomAccessIterator , typename _Compare > void std::__unguarded_insertion_sort ( _RandomAccessIterator __first, _RandomAccessIterator __last, _Compare __comp ) [inline]`

This is a helper function for the sort routine.

Definition at line 1863 of file `stl_algo.h`.

References `__unguarded_linear_insert()`.

Referenced by `__final_insertion_sort()`.

4.11.4.33 `template<typename _RandomAccessIterator , typename _Compare > void std::__unguarded_linear_insert ( _RandomAccessIterator __last, _Compare __comp )`

This is a helper function for the sort routine.

Definition at line 1821 of file `stl_algo.h`.

Referenced by `__insertion_sort()`, and `__unguarded_insertion_sort()`.

4.11.4.34 `template<typename _RandomAccessIterator , typename _Compare > _RandomAccessIterator std::__unguarded_partition ( _RandomAccessIterator __first, _RandomAccessIterator __last, _RandomAccessIterator __pivot, _Compare __comp )`

This is a helper function...

Definition at line 1896 of file `stl_algo.h`.

References `iter_swap()`.

Referenced by `__unguarded_partition_pivot()`.

4.11.4.35 `template<typename _RandomAccessIterator , typename _Compare > _RandomAccessIterator std::__unguarded_partition_pivot ( _RandomAccessIterator __first, _RandomAccessIterator __last, _Compare __comp ) [inline]`

This is a helper function...

Definition at line 1917 of file `stl_algo.h`.

References `__move_median_to_first()`, and `__unguarded_partition()`.

Referenced by `__introsort_loop()`.

```
4.11.4.36 template<typename _ForwardIterator, typename _OutputIterator, typename _BinaryPredicate > _OutputIterator
std::__unique_copy ( _ForwardIterator __first, _ForwardIterator __last, _OutputIterator __result, _BinaryPredicate
__binary_pred, forward_iterator_tag, output_iterator_tag )
```

This is an uglified `unique_copy(_InputIterator, _InputIterator, _OutputIterator, _BinaryPredicate)` overloaded for forward iterators and output iterator as result.

Definition at line 1049 of file `stl_algo.h`.

Referenced by `unique_copy()`.

```
4.11.4.37 template<typename _InputIterator, typename _OutputIterator, typename _BinaryPredicate > _OutputIterator
std::__unique_copy ( _InputIterator __first, _InputIterator __last, _OutputIterator __result, _BinaryPredicate
__binary_pred, input_iterator_tag, output_iterator_tag )
```

This is an uglified `unique_copy(_InputIterator, _InputIterator, _OutputIterator, _BinaryPredicate)` overloaded for input iterators and output iterator as result.

Definition at line 1078 of file `stl_algo.h`.

```
4.11.4.38 template<typename _InputIterator, typename _ForwardIterator, typename _BinaryPredicate > _ForwardIterator
std::__unique_copy ( _InputIterator __first, _InputIterator __last, _ForwardIterator __result, _BinaryPredicate
__binary_pred, input_iterator_tag, forward_iterator_tag )
```

This is an uglified `unique_copy(_InputIterator, _InputIterator, _OutputIterator, _BinaryPredicate)` overloaded for input iterators and forward iterator as result.

Definition at line 1110 of file `stl_algo.h`.

```
4.11.4.39 template<typename _T1, typename... _Args> void std::_Construct ( _T1 * __p, _Args &&... __args ) [inline]
```

Constructs an object in existing memory by invoking an allocated object's constructor with an initializer.

Definition at line 74 of file `stl_construct.h`.

```
4.11.4.40 template<typename _Tp > void std::_Destroy ( _Tp * __pointer ) [inline]
```

Destroy the object pointed to by a pointer type.

Definition at line 97 of file `stl_construct.h`.

Referenced by `std::deque<_Tp, _Alloc >::_M_fill_initialize()`, `std::deque<_Tp, _Alloc >::_M_range_initialize()`, and `std::vector<_Tp, _Alloc >::reserve()`.

```
4.11.4.41 template<typename _ForwardIterator > void std::_Destroy ( _ForwardIterator __first, _ForwardIterator __last )
[inline]
```

Destroy a range of objects. If the `value_type` of the object has a trivial destructor, the compiler should optimize all of this away, otherwise the objects' destructors must be invoked.

Definition at line 127 of file `stl_construct.h`.

4.11.4.42 `template<typename _ForwardIterator, typename _Allocator > void std::Destroy ( _ForwardIterator __first, _ForwardIterator __last, _Allocator & __alloc )`

Destroy a range of objects using the supplied allocator. For nondefault allocators we do not optimize away invocation of `destroy()` even if `_Tp` has a trivial destructor.

Definition at line 193 of file `stl_construct.h`.

References `__addressof()`.

4.11.4.43 `template<typename _ForwardIterator, typename _Size > _ForwardIterator std::Destroy_n ( _ForwardIterator __first, _Size __count ) [inline]`

Destroy a range of objects. If the `value_type` of the object has a trivial destructor, the compiler should optimize all of this away, otherwise the objects' destructors must be invoked.

Definition at line 172 of file `stl_construct.h`.

4.11.4.44 `template<typename _InputIterator, typename _Tp > _Tp std::accumulate ( _InputIterator __first, _InputIterator __last, _Tp __init ) [inline]`

Accumulate values in a range.

Accumulates the values in the range `[first,last)` using `operator+()`. The initial value is `init`. The values are processed in order.

Parameters

|                      |                                        |
|----------------------|----------------------------------------|
| <code>__first</code> | Start of range.                        |
| <code>__last</code>  | End of range.                          |
| <code>__init</code>  | Starting value to add other values to. |

Returns

The final sum.

Definition at line 120 of file `stl_numeric.h`.

Referenced by `__gnu_parallel::__parallel_partial_sum_linear()`.

4.11.4.45 `template<typename _InputIterator, typename _Tp, typename _BinaryOperation > _Tp std::accumulate ( _InputIterator __first, _InputIterator __last, _Tp __init, _BinaryOperation __binary_op ) [inline]`

Accumulate values in a range with operation.

Accumulates the values in the range `[first,last)` using the function object `__binary_op`. The initial value is `__init`. The values are processed in order.

Parameters

|                          |                                        |
|--------------------------|----------------------------------------|
| <code>__first</code>     | Start of range.                        |
| <code>__last</code>      | End of range.                          |
| <code>__init</code>      | Starting value to add other values to. |
| <code>__binary_op</code> | Function object to accumulate with.    |

Returns

The final sum.

Definition at line 146 of file `stl_numeric.h`.

4.11.4.46 `template<typename _Tp> std::complex<_Tp> std::acos ( const std::complex<_Tp> & __z ) [inline]`

`acos(__z)` [8.1.2].

Definition at line 1638 of file `complex`.

4.11.4.47 `template<typename _Tp> std::complex<_Tp> std::acosh ( const std::complex<_Tp> & __z ) [inline]`

`acosh(__z)` [8.1.5].

Definition at line 1754 of file `complex`.

4.11.4.48 `template<typename _InputIterator, typename _OutputIterator > _OutputIterator std::adjacent_difference ( _InputIterator __first, _InputIterator __last, _OutputIterator __result )`

Return differences between adjacent values.

Computes the difference between adjacent values in the range `[first,last)` using operator-() and writes the result to `__result`.

#### Parameters

|                       |                       |
|-----------------------|-----------------------|
| <code>__first</code>  | Start of input range. |
| <code>__last</code>   | End of input range.   |
| <code>__result</code> | Output sums.          |

#### Returns

Iterator pointing just beyond the values written to result.

`_GLIBCXX_RESOLVE_LIB_DEFECTS DR 539`. `partial_sum` and `adjacent_difference` should mention requirements

Definition at line 317 of file `stl_numeric.h`.

4.11.4.49 `template<typename _InputIterator, typename _OutputIterator, typename _BinaryOperation > _OutputIterator std::adjacent_difference ( _InputIterator __first, _InputIterator __last, _OutputIterator __result, _BinaryOperation __binary_op )`

Return differences between adjacent values.

Computes the difference between adjacent values in the range `[__first,__last)` using the function object `__binary_op` and writes the result to `__result`.

#### Parameters

|                          |                       |
|--------------------------|-----------------------|
| <code>__first</code>     | Start of input range. |
| <code>__last</code>      | End of input range.   |
| <code>__result</code>    | Output sum.           |
| <code>__binary_op</code> | Function object.      |

**Returns**

Iterator pointing just beyond the values written to result.

`_GLIBCXX_RESOLVE_LIB_DEFECTS` DR 539. `partial_sum` and `adjacent_difference` should mention requirements  
Definition at line 360 of file `stl_numeric.h`.

4.11.4.50 `template<typename _InputIterator, typename _Distance> _GLIBCXX17_CONSTEXPR void std::advance ( _InputIterator  
& __i, _Distance __n ) [inline]`

A generalization of pointer arithmetic.

## Parameters

|                  |                                                        |
|------------------|--------------------------------------------------------|
| <code>__i</code> | An input iterator.                                     |
| <code>__n</code> | The <i>delta</i> by which to change <code>__i</code> . |

## Returns

Nothing.

This increments `i` by `n`. For bidirectional and random access iterators, `__n` may be negative, in which case `__i` is decremented.

For random access iterators, this uses their `+` and `-` operations and are constant time. For other iterator classes they are linear time.

Definition at line 202 of file `stl_iterator_base_funcs.h`.

References `__iterator_category()`.

Referenced by `__merge_adaptive()`, `__merge_without_buffer()`, `__rotate_adaptive()`, `__stable_partition_adaptive()`, `std::deque<_Tp, _Alloc >::_M_range_initialize()`, `__gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::get_child()`, `__gnu_pbds::detail::pat_trie_base::_Node_iter< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::get_child()`, and `partition_point()`.

4.11.4.51 `void* std::align ( size_t __align, size_t __size, void *& __ptr, size_t & __space ) [inline], [noexcept]`

Fit aligned storage in buffer.

[`ptr.align`]

This function tries to fit `__size` bytes of storage with alignment `__align` into the buffer `__ptr` of size `__space` bytes. If such a buffer fits then `__ptr` is changed to point to the first byte of the aligned storage and `__space` is reduced by the bytes used for alignment.

## Parameters

|                      |                                                       |
|----------------------|-------------------------------------------------------|
| <code>__align</code> | A fundamental or extended alignment value.            |
| <code>__size</code>  | Size of the aligned storage required.                 |
| <code>__ptr</code>   | Pointer to a buffer of <code>__space</code> bytes.    |
| <code>__space</code> | Size of the buffer pointed to by <code>__ptr</code> . |

## Returns

the updated pointer if the aligned storage fits, otherwise `nullptr`.

Definition at line 114 of file `memory`.

4.11.4.52 `template<typename _Tp> __gnu_cxx::_promote<_Tp>::_type std::arg ( _Tp __x ) [inline]`

Additional overloads [8.1.9].

Definition at line 1852 of file `complex`.

References `arg()`.

4.11.4.53 `template<typename _Tp> std::complex<_Tp> std::asin ( const std::complex<_Tp> & __z ) [inline]`

`asin(__z)` [8.1.3].

Definition at line 1674 of file `complex`.

`asinh(__z)` [8.1.6].

Definition at line 1793 of file `complex`.

4.11.4.55 `template<typename _Tp> std::complex<_Tp> std::atan ( const std::complex<_Tp> &__z ) [inline]`

`atan(__z)` [8.1.4].

Definition at line 1718 of file `complex`.

4.11.4.56 `template<typename _Tp> std::complex<_Tp> std::atanh ( const std::complex<_Tp> &__z ) [inline]`

`atanh(__z)` [8.1.7].

Definition at line 1837 of file `complex`.

4.11.4.57 `template<typename _Container > _GLIBCXX17_CONSTEXPR auto std::begin ( _Container &__cont )-> decltype(__cont.begin()) [inline]`

Return an iterator pointing to the first element of the container.

Parameters

|                     |            |
|---------------------|------------|
| <code>__cont</code> | Container. |
|---------------------|------------|

Definition at line 48 of file `range_access.h`.

4.11.4.58 `template<typename _Container > _GLIBCXX17_CONSTEXPR auto std::begin ( const _Container &__cont )-> decltype(__cont.begin()) [inline]`

Return an iterator pointing to the first element of the const container.

Parameters

|                     |            |
|---------------------|------------|
| <code>__cont</code> | Container. |
|---------------------|------------|

Definition at line 58 of file `range_access.h`.

4.11.4.59 `template<class _Tp > constexpr const _Tp* std::begin ( initializer_list<_Tp> __ils ) [noexcept]`

Return an iterator pointing to the first element of the `initializer_list`.

Parameters

|                    |                   |
|--------------------|-------------------|
| <code>__ils</code> | Initializer list. |
|--------------------|-------------------|

Definition at line 89 of file `initializer_list`.

4.11.4.60 `ios_base& std::boolalpha ( ios_base &__base ) [inline]`

Calls `base.setf(ios_base::boolalpha)`.

Definition at line 880 of file `ios_base.h`.

References `std::ios_base::boolalpha`, and `std::ios_base::setf()`.

4.11.4.61 `template<typename _Callable, typename... _Args> void std::call_once ( once_flag & __once, _Callable && __f, _Args &&... __args )`

call\_once

Definition at line 667 of file mutex.

References `__addressof()`, `__once_call`, `__once_callable`, and `__once_proxy()`.

4.11.4.62 `template<typename _Container > constexpr auto std::cbegin ( const _Container & __cont ) -> decltype(std::begin(__cont)) [inline], [noexcept]`

Return an iterator pointing to the first element of the const container.

Parameters

|                     |            |
|---------------------|------------|
| <code>__cont</code> | Container. |
|---------------------|------------|

Definition at line 116 of file range\_access.h.

References `begin()`.

4.11.4.63 `template<typename _Container > constexpr auto std::cend ( const _Container & __cont ) -> decltype(std::end(__cont)) [inline], [noexcept]`

Return an iterator pointing to one past the last element of the const container.

Parameters

|                     |            |
|---------------------|------------|
| <code>__cont</code> | Container. |
|---------------------|------------|

Definition at line 127 of file range\_access.h.

References `end()`.

4.11.4.64 `template<typename _Tp, typename _Tp1, _Lock_policy _Lp> __shared_ptr<_Tp, _Lp> std::const_pointer_cast ( const __shared_ptr<_Tp1, _Lp> & __r ) [inline], [noexcept]`

const\_pointer\_cast

Definition at line 1549 of file shared\_ptr\_base.h.

4.11.4.65 `template<typename _Container > _GLIBCXX17_CONSTEXPR auto std::crbegin ( const _Container & __cont ) -> decltype(std::rbegin(__cont)) [inline]`

Return a reverse iterator pointing to the last element of the const container.

Parameters

|                     |            |
|---------------------|------------|
| <code>__cont</code> | Container. |
|---------------------|------------|

Definition at line 218 of file range\_access.h.

References `rbegin()`.

4.11.4.66 `template<typename _Tp > reference_wrapper<const _Tp> std::cref ( const _Tp & __t ) [inline], [noexcept]`

Denotes a const reference should be taken to a variable.

Definition at line 333 of file refwrap.h.

4.11.4.67 `template<typename _Tp> void std::cref ( const _Tp && ) [delete]`

Denotes a reference should be taken to a variable.

4.11.4.68 `template<typename _Tp> reference_wrapper<const _Tp> std::cref ( reference_wrapper<_Tp> __t ) [inline], [noexcept]`

`std::cref` overload to prevent wrapping a `reference_wrapper`

Definition at line 351 of file `refwrap.h`.

4.11.4.69 `template<typename _Container > _GLIBCXX17_CONSTEXPR auto std::crend ( const _Container & __cont ) -> decltype(std::rend(__cont)) [inline]`

Return a reverse iterator pointing one past the first element of the const container.

Parameters

|                     |            |
|---------------------|------------|
| <code>__cont</code> | Container. |
|---------------------|------------|

Definition at line 228 of file `range_access.h`.

References `rend()`.

4.11.4.70 `ios_base& std::dec ( ios_base & __base ) [inline]`

Calls `base.setf(ios_base::dec, ios_base::basefield)`.

Definition at line 1018 of file `ios_base.h`.

References `std::ios_base::basefield`, `std::ios_base::dec`, and `std::ios_base::setf()`.

Referenced by operator `>>()`.

4.11.4.71 `ios_base& std::defaultfloat ( ios_base & __base ) [inline]`

Calls `base.unsetf(ios_base::floatfield)`

Definition at line 1071 of file `ios_base.h`.

References `std::ios_base::floatfield`, and `std::ios_base::unsetf()`.

4.11.4.72 `template<typename _InputIterator > _GLIBCXX17_CONSTEXPR iterator_traits<_InputIterator>::difference_type std::distance ( _InputIterator __first, _InputIterator __last ) [inline]`

A generalization of pointer arithmetic.

Parameters

|                      |                    |
|----------------------|--------------------|
| <code>__first</code> | An input iterator. |
| <code>__last</code>  | An input iterator. |

Returns

The distance between them.

Returns `n` such that `__first + n == __last`. This requires that `__last` must be reachable from `__first`. Note that `n` may be negative.

For random access iterators, this uses their `+` and `-` operations and are constant time. For other iterator classes they are linear time.

Definition at line 138 of file `stl_iterator_base_funcs.h`.

References `__iterator_category()`.

Referenced by `__merge_adaptive()`, `__merge_without_buffer()`, `__rotate_adaptive()`, `__sample()`, `__stable_partition_adaptive()`, `std::deque<_Tp, _Alloc>::M_range_initialize()`, `is_heap()`, `is_heap_until()`, `std::sub_match<_Bi_iter>::length()`, `__gnu_parallel::multiseq_partition()`, `__gnu_parallel::multiseq_selection()`, `__gnu_pbds::detail::pat_trie_base::Node_citer<Node, Leaf, Head, Inode, C_iterator, Iterator, _Alloc>::num_children()`, `partition_point()`, `std::match_results<_Bi_iter>::position()`, and `__gnu_cxx::random_sample_n()`.

4.11.4.73 `template<typename _Tp, typename _Tp1, _Lock_policy _Lp> __shared_ptr<_Tp, _Lp> std::dynamic_pointer_cast ( const __shared_ptr<_Tp1, _Lp> &_r ) [inline], [noexcept]`

`dynamic_pointer_cast`

Definition at line 1562 of file `shared_ptr_base.h`.

4.11.4.74 `template<typename _Container > _GLIBCXX17_CONSTEXPR auto std::end ( _Container & __cont ) -> decltype(__cont.end()) [inline]`

Return an iterator pointing to one past the last element of the container.

Parameters

|                     |            |
|---------------------|------------|
| <code>__cont</code> | Container. |
|---------------------|------------|

Definition at line 68 of file `range_access.h`.

4.11.4.75 `template<typename _Container > _GLIBCXX17_CONSTEXPR auto std::end ( const _Container & __cont ) -> decltype(__cont.end()) [inline]`

Return an iterator pointing to one past the last element of the const container.

Parameters

|                     |            |
|---------------------|------------|
| <code>__cont</code> | Container. |
|---------------------|------------|

Definition at line 78 of file `range_access.h`.

4.11.4.76 `template<class _Tp > constexpr const _Tp* std::end ( initializer_list<_Tp> __ils ) [noexcept]`

Return an iterator pointing to one past the last element of the `initializer_list`.

Parameters

|                    |                   |
|--------------------|-------------------|
| <code>__ils</code> | Initializer list. |
|--------------------|-------------------|

Definition at line 99 of file `initializer_list`.

Referenced by `chend()`, `std::list<_Tp, _Alloc>::remove()`, `std::list<_Tp, _Alloc>::remove_if()`, `std::forward_list<_Tp, _Alloc>::resize()`, `std::list<_Tp, _Alloc>::resize()`, `std::list<_Tp, _Alloc>::sort()`, `std::forward_list<_Tp, _Alloc>::unique()`, and `std::list<_Tp, _Alloc>::unique()`.

4.11.4.77 `template<typename _CharT, typename _Traits > basic_ostream<_CharT, _Traits>& std::endl ( basic_ostream<_CharT, _Traits> &__os ) [inline]`

Write a newline and flush the stream.

This manipulator is often mistakenly used when a simple newline is desired, leading to poor buffering performance. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html#io.streambuf.-buffering> for more on this subject.

Definition at line 590 of file `ostream`.

References flush().

4.11.4.78 `template<typename _CharT, typename _Traits > basic_ostream<_CharT, _Traits>& std::ends ( basic_ostream<_CharT, _Traits > &__os ) [inline]`

Write a null character into the output sequence.

*Null character* is `CharT()` by definition. For `CharT` of `char`, this correctly writes the ASCII NUL character string terminator.

Definition at line 602 of file ostream.

4.11.4.79 `template<typename _Tp, typename _Up = _Tp> _Tp std::exchange ( _Tp &__obj, _Up && __new_val ) [inline]`

Assign `__new_val` to `__obj` and return its previous value.

Definition at line 283 of file utility.

4.11.4.80 `template<typename _Tp > _Tp std::fabs ( const std::complex<_Tp > &__z ) [inline]`

`fabs(__z)` [8.1.8].

Definition at line 1846 of file complex.

References `abs()`.

Referenced by `std::tr1::fabs()`.

4.11.4.81 `ios_base& std::fixed ( ios_base &__base ) [inline]`

Calls `base.setf(ios_base::fixed, ios_base::floatfield)`.

Definition at line 1043 of file ios\_base.h.

References `std::ios_base::fixed`, `std::ios_base::floatfield`, and `std::ios_base::setf()`.

4.11.4.82 `template<typename _CharT, typename _Traits > basic_ostream<_CharT, _Traits>& std::flush ( basic_ostream<_CharT, _Traits > &__os ) [inline]`

Flushes the output stream.

This manipulator simply calls the stream's `flush()` member function.

Definition at line 612 of file ostream.

Referenced by `endl()`.

4.11.4.83 `template<typename _MoneyT > _Get_money<_MoneyT> std::get_money ( _MoneyT &__mon, bool __intl = false ) [inline]`

Extended manipulator for extracting money.

Parameters

|                     |                                                                       |
|---------------------|-----------------------------------------------------------------------|
| <code>__mon</code>  | Either long double or a specialization of <code>basic_string</code> . |
| <code>__intl</code> | A bool indicating whether international format is to be used.         |

Sent to a stream object, this manipulator extracts `__mon`.

Definition at line 259 of file iomanip.

4.11.4.84 `new_handler std::get_new_handler ( ) [noexcept]`

Return the current new handler.

4.11.4.85 `template<typename _Tp> pair<_Tp*, ptrdiff_t> std::get_temporary_buffer ( ptrdiff_t __len ) [noexcept]`

Allocates a temporary buffer.

Parameters

|                    |                                                 |
|--------------------|-------------------------------------------------|
| <code>__len</code> | The number of objects of type <code>Tp</code> . |
|--------------------|-------------------------------------------------|

Returns

See full description.

Reinventing the wheel, but this time with prettier spokes!

This function tries to obtain storage for `__len` adjacent `Tp` objects. The objects themselves are not constructed, of course. A `pair<>` is returned containing *the buffer's address and capacity (in the units of `sizeof(_Tp)`), or a pair of 0 values if no storage can be obtained*. Note that the capacity obtained may be less than that requested if the memory is unavailable; you should compare `len` with the `.second` return value.

Provides the `nothrow` exception guarantee.

Definition at line 85 of file `stl_tempbuf.h`.

Referenced by `std::_Temporary_buffer<_ForwardIterator, _Tp >::_Temporary_buffer()`.

4.11.4.86 `terminate_handler std::get_terminate ( ) [noexcept]`

Return the current terminate handler.

4.11.4.87 `template<typename _CharT > _Get_time<_CharT> std::get_time ( std::tm * __tmb, const _CharT * __fmt ) [inline]`

Extended manipulator for extracting time.

This manipulator uses `time_get::get` to extract time. [ext.manip]

Parameters

|                    |                                     |
|--------------------|-------------------------------------|
| <code>__tmb</code> | struct to extract the time data to. |
| <code>__fmt</code> | format string.                      |

Definition at line 413 of file `iomanip`.

4.11.4.88 `unexpected_handler std::get_unexpected ( ) [noexcept]`

Return the current unexpected handler.

4.11.4.89 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> basic_istream<_CharT, _Traits> & std::getline ( basic_istream<_CharT, _Traits> & __is, __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base> & __str, _CharT __delim )`

Read a line from stream into a string.

Parameters

|                   |               |
|-------------------|---------------|
| <code>__is</code> | Input stream. |
|-------------------|---------------|

|                      |                                |
|----------------------|--------------------------------|
| <code>__str</code>   | Buffer to store into.          |
| <code>__delim</code> | Character marking end of line. |

**Returns**

Reference to the input stream.

Stores characters from `__is` into `__str` until `__delim` is found, the end of the stream is encountered, or `str.max_size()` is reached. If `is.width()` is non-zero, that is the limit on the number of characters stored into `__str`. Any previous contents of `__str` are erased. If `delim` was encountered, it is extracted but not stored into `__str`.

Definition at line 627 of file `vstring.tcc`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::append()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::erase()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::max_size()`, `std::basic_ios<_CharT, _Traits >::rdbuf()`, and `std::basic_ios<_CharT, _Traits >::setstate()`.

4.11.4.90 `template<typename _CharT, typename _Traits, typename _Alloc, template<typename, typename, typename> class _Base> basic_istream<_CharT, _Traits>& std::getline ( basic_istream<_CharT, _Traits > & __is, __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base > & __str ) [inline]`

Read a line from stream into a string.

**Parameters**

|                    |                       |
|--------------------|-----------------------|
| <code>__is</code>  | Input stream.         |
| <code>__str</code> | Buffer to store into. |

**Returns**

Reference to the input stream.

Stores characters from `is` into `__str` until `'`

`'` is found, the end of the stream is encountered, or `str.max_size()` is reached. If `is.width()` is non-zero, that is the limit on the number of characters stored into `__str`. Any previous contents of `__str` are erased. If end of line was encountered, it is extracted but not stored into `__str`.

Definition at line 2676 of file `vstring.h`.

References `getline()`, and `std::basic_ios<_CharT, _Traits >::widen()`.

4.11.4.91 `template<typename _CharT, typename _Traits, typename _Alloc > basic_istream<_CharT, _Traits > & std::getline ( basic_istream<_CharT, _Traits > & __is, basic_string<_CharT, _Traits, _Alloc > & __str, _CharT __delim )`

Read a line from stream into a string.

**Parameters**

|                      |                                |
|----------------------|--------------------------------|
| <code>__is</code>    | Input stream.                  |
| <code>__str</code>   | Buffer to store into.          |
| <code>__delim</code> | Character marking end of line. |

**Returns**

Reference to the input stream.

Stores characters from `__is` into `__str` until `__delim` is found, the end of the stream is encountered, or `str.max_size()` is reached. Any previous contents of `__str` are erased. If `__delim` is encountered, it is extracted but not stored into `__str`.

Definition at line 1537 of file basic\_string.tcc.

References `std::basic_string<_CharT, _Traits, _Alloc >::erase()`, `std::basic_string<_CharT, _Traits, _Alloc >::max_size()`, `std::basic_ios<_CharT, _Traits >::rdbuf()`, and `std::basic_ios<_CharT, _Traits >::setstate()`.

Referenced by `getline()`.

**4.11.4.92** `template<typename _CharT, typename _Traits, typename _Alloc > basic_istream<_CharT, _Traits>& std::getline ( basic_istream<_CharT, _Traits > & __is, basic_string<_CharT, _Traits, _Alloc > & __str ) [inline]`

Read a line from stream into a string.

Parameters

|                    |                       |
|--------------------|-----------------------|
| <code>__is</code>  | Input stream.         |
| <code>__str</code> | Buffer to store into. |

Returns

Reference to the input stream.

Stores characters from `is` into `__str` until ‘

’ is found, the end of the stream is encountered, or `str.max_size()` is reached. Any previous contents of `__str` are erased. If end of line is encountered, it is extracted but not stored into `__str`.

Calls `base.setf(ios_base::fixed|ios_base::scientific, ios_base::floatfield)`

Definition at line 1063 of file ios\_base.h.

References `std::ios_base::fixed`, `std::ios_base::floatfield`, `std::ios_base::scientific`, and `std::ios_base::setf()`.

4.11.4.97 `template<typename _InputIterator1, typename _InputIterator2, typename _Tp > _Tp std::inner_product ( _InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _Tp __init ) [inline]`

Compute inner product of two ranges.

Starting with an initial value of `__init`, multiplies successive elements from the two ranges and adds each product into the accumulated value using operator`+`(`)`. The values in the ranges are processed in order.

#### Parameters

|                       |                                        |
|-----------------------|----------------------------------------|
| <code>__first1</code> | Start of range 1.                      |
| <code>__last1</code>  | End of range 1.                        |
| <code>__first2</code> | Start of range 2.                      |
| <code>__init</code>   | Starting value to add other values to. |

#### Returns

The final inner product.

Definition at line 174 of file `stl_numeric.h`.

4.11.4.98 `template<typename _InputIterator1, typename _InputIterator2, typename _Tp, typename _BinaryOperation1, typename _BinaryOperation2 > _Tp std::inner_product ( _InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _Tp __init, _BinaryOperation1 __binary_op1, _BinaryOperation2 __binary_op2 ) [inline]`

Compute inner product of two ranges.

Starting with an initial value of `__init`, applies `__binary_op2` to successive elements from the two ranges and accumulates each result into the accumulated value using `__binary_op1`. The values in the ranges are processed in order.

#### Parameters

|                           |                                                    |
|---------------------------|----------------------------------------------------|
| <code>__first1</code>     | Start of range 1.                                  |
| <code>__last1</code>      | End of range 1.                                    |
| <code>__first2</code>     | Start of range 2.                                  |
| <code>__init</code>       | Starting value to add other values to.             |
| <code>__binary_op1</code> | Function object to accumulate with.                |
| <code>__binary_op2</code> | Function object to apply to pairs of input values. |

#### Returns

The final inner product.

Definition at line 206 of file `stl_numeric.h`.

4.11.4.99 `ios_base& std::internal ( ios_base & __base ) [inline]`

Calls `base.setf(ios_base::internal, ios_base::adjustfield)`.

Definition at line 993 of file `ios_base.h`.

References `std::ios_base::adjustfield`, and `std::ios_base::internal`.

4.11.4.100 `template<typename _ForwardIterator, typename _Tp > void std::iota ( _ForwardIterator __first, _ForwardIterator __last, _Tp __value )`

Create a range of sequentially increasing values.

---

For each element in the range `[first,last)` assigns `value` and increments `value` as if by `++value`.

## Parameters

|                      |                 |
|----------------------|-----------------|
| <code>__first</code> | Start of range. |
| <code>__last</code>  | End of range.   |
| <code>__value</code> | Starting value. |

## Returns

Nothing.

Definition at line 82 of file `stl_numeric.h`.

4.11.4.114 `template<typename _L1 , typename _L2 , typename... _L3> void std::lock ( _L1 & __l1, _L2 & __l2, _L3 &... __l3 )`

Generic lock.

#### Parameters

|                   |                                                                   |
|-------------------|-------------------------------------------------------------------|
| <code>__l1</code> | Meets Lockable requirements ( <code>try_lock()</code> may throw). |
| <code>__l2</code> | Meets Lockable requirements ( <code>try_lock()</code> may throw). |
| <code>__l3</code> | Meets Lockable requirements ( <code>try_lock()</code> may throw). |

#### Exceptions

|           |                                                                                          |
|-----------|------------------------------------------------------------------------------------------|
| <i>An</i> | exception thrown by an argument's <code>lock()</code> or <code>try_lock()</code> member. |
|-----------|------------------------------------------------------------------------------------------|

#### Postcondition

All arguments are locked.

All arguments are locked via a sequence of calls to `lock()`, `try_lock()` and `unlock()`. If the call exits via an exception any locks that were obtained will be released.

Definition at line 542 of file `mutex`.

References `tie()`.

4.11.4.115 `ios_base& std::noboolalpha ( ios_base & __base ) [inline]`

Calls `base.unsetf(ios_base::boolalpha)`.

Definition at line 888 of file ios\_base.h.

References std::ios\_base::boolalpha, and std::ios\_base::unsetf().

4.11.4.116 `template<typename _Key, typename _Compare, typename _Alloc > void std::noexcept ( ) [inline]`

See std::set::swap().

Definition at line 1011 of file stl\_set.h.

4.11.4.117 `template<typename _Tp, typename _Alloc > void std::noexcept ( ) [inline]`

See std::deque::swap().

See std::vector::swap().

See std::list::swap().

Definition at line 2332 of file stl\_deque.h.

4.11.4.118 `ios_base& std::noshowbase ( ios_base & __base ) [inline]`

Calls base.unsetf(ios\_base::showbase).

Definition at line 904 of file ios\_base.h.

References std::ios\_base::showbase, and std::ios\_base::unsetf().

4.11.4.119 `ios_base& std::noshowpoint ( ios_base & __base ) [inline]`

Calls base.unsetf(ios\_base::showpoint).

Definition at line 920 of file ios\_base.h.

References std::ios\_base::showpoint, and std::ios\_base::unsetf().

4.11.4.120 `ios_base& std::noshowpos ( ios_base & __base ) [inline]`

Calls base.unsetf(ios\_base::showpos).

Definition at line 936 of file ios\_base.h.

References std::ios\_base::showpos, and std::ios\_base::unsetf().

4.11.4.121 `ios_base& std::noskipws ( ios_base & __base ) [inline]`

Calls base.unsetf(ios\_base::skipws).

Definition at line 952 of file ios\_base.h.

References std::ios\_base::skipws, and std::ios\_base::unsetf().

4.11.4.122 `ios_base& std::nounitbuf ( ios_base & __base ) [inline]`

Calls base.unsetf(ios\_base::unitbuf).

Definition at line 984 of file ios\_base.h.

References std::ios\_base::unitbuf, and std::ios\_base::unsetf().

4.11.4.123 `ios_base& std::nouppercase ( ios_base & __base ) [inline]`

Calls base.unsetf(ios\_base::uppercase).

Definition at line 968 of file ios\_base.h.

References `std::ios_base::unsetf()`, and `std::ios_base::uppercase`.

**4.11.4.124** `ios_base& std::oct( ios_base & __base ) [inline]`

Calls `base.setf(ios_base::oct, ios_base::basefield)`.

Definition at line 1034 of file `ios_base.h`.

References `std::ios_base::basefield`, `std::ios_base::oct`, and `std::ios_base::setf()`.

Referenced by `std::regex_traits< _Ch_type >::value()`.

**4.11.4.125** `template<typename _Tp > bool std::operator!=( const _Fwd_list_iterator< _Tp > & __x, const _Fwd_list_const_iterator< _Tp > & __y ) [inline], [noexcept]`

Forward list iterator inequality comparison.

Definition at line 281 of file `forward_list.h`.

**4.11.4.126** `template<typename _Tp, typename _Seq > bool std::operator!=( const stack< _Tp, _Seq > & __x, const stack< _Tp, _Seq > & __y ) [inline]`

Based on `operator==`.

Definition at line 317 of file `stl_stack.h`.

**4.11.4.127** `template<typename _Tp, typename _Seq > bool std::operator!=( const queue< _Tp, _Seq > & __x, const queue< _Tp, _Seq > & __y ) [inline]`

Based on `operator==`.

Definition at line 342 of file `stl_queue.h`.

**4.11.4.128** `template<typename _Res, typename... _Args> bool std::operator!=( const function< _Res(_Args...) > & __f, nullptr_t ) [inline], [noexcept]`

Compares a polymorphic function object wrapper against 0 (the NULL pointer).

#### Returns

`false` if the wrapper has no target, `true` otherwise

This function will not throw an exception.

Definition at line 763 of file `std_function.h`.

**4.11.4.129** `template<typename _Res, typename... _Args> bool std::operator!=( nullptr_t, const function< _Res(_Args...) > & __f ) [inline], [noexcept]`

This is an overloaded member function, provided for convenience. It differs from the above function only in what argument(s) it accepts.

Definition at line 769 of file `std_function.h`.

**4.11.4.130** `template<typename _Key, typename _Compare, typename _Alloc > bool std::operator!=( const multiset< _Key, _Compare, _Alloc > & __x, const multiset< _Key, _Compare, _Alloc > & __y ) [inline]`

Returns `!(x == y)`.

Definition at line 967 of file `stl_multiset.h`.

4.11.4.131 `template<typename _Key, typename _Compare, typename _Alloc > bool std::operator!=( const set< _Key, _Compare, _Alloc > & __x, const set< _Key, _Compare, _Alloc > & __y ) [inline]`

Returns `!(x == y)`.

Definition at line 982 of file `stl_set.h`.

4.11.4.132 `template<typename _Key, typename _Tp, typename _Compare, typename _Alloc > bool std::operator!=( const multimap< _Key, _Tp, _Compare, _Alloc > & __x, const multimap< _Key, _Tp, _Compare, _Alloc > & __y ) [inline]`

Based on `operator==`.

Definition at line 1124 of file `stl_multimap.h`.

4.11.4.133 `template<typename _Tp, typename _Alloc > bool std::operator!=( const forward_list< _Tp, _Alloc > & __lx, const forward_list< _Tp, _Alloc > & __ly ) [inline]`

Based on `operator==`.

Definition at line 1440 of file `forward_list.h`.

4.11.4.134 `template<typename _Key, typename _Tp, typename _Compare, typename _Alloc > bool std::operator!=( const map< _Key, _Tp, _Compare, _Alloc > & __x, const map< _Key, _Tp, _Compare, _Alloc > & __y ) [inline]`

Based on `operator==`.

Definition at line 1459 of file `stl_map.h`.

4.11.4.135 `template<typename _Tp, typename _Alloc > bool std::operator!=( const vector< _Tp, _Alloc > & __x, const vector< _Tp, _Alloc > & __y ) [inline]`

Based on `operator==`.

Definition at line 1777 of file `stl_vector.h`.

4.11.4.136 `template<typename _Tp, typename _Alloc > bool std::operator!=( const list< _Tp, _Alloc > & __x, const list< _Tp, _Alloc > & __y ) [inline]`

Based on `operator==`.

Definition at line 2027 of file `stl_list.h`.

4.11.4.137 `template<typename _Tp, typename _Alloc > bool std::operator!=( const deque< _Tp, _Alloc > & __x, const deque< _Tp, _Alloc > & __y ) [inline]`

Based on `operator==`.

Definition at line 2303 of file `stl_deque.h`.

4.11.4.138 `template<typename _CharT, typename _Traits, typename _Alloc > bool std::operator!=( const basic_string< _CharT, _Traits, _Alloc > & __lhs, const basic_string< _CharT, _Traits, _Alloc > & __rhs ) [inline], [noexcept]`

Test difference of two strings.

**Parameters**

---

|                    |                |
|--------------------|----------------|
| <code>__lhs</code> | First string.  |
| <code>__rhs</code> | Second string. |

**Returns**

True if `__lhs.compare(__rhs) != 0`. False otherwise.

Definition at line 6086 of file `basic_string.h`.

```
4.11.4.139 template<typename _CharT, typename _Traits, typename _Alloc > bool std::operator!=( const _CharT * __lhs, const
basic_string< _CharT, _Traits, _Alloc > & __rhs ) [inline]
```

Test difference of C string and string.

**Parameters**

|                    |           |
|--------------------|-----------|
| <code>__lhs</code> | C string. |
| <code>__rhs</code> | String.   |

**Returns**

True if `__rhs.compare(__lhs) != 0`. False otherwise.

Definition at line 6099 of file `basic_string.h`.

```
4.11.4.140 template<typename _CharT, typename _Traits, typename _Alloc > bool std::operator!=( const basic_string< _CharT,
_Traits, _Alloc > & __lhs, const _CharT * __rhs ) [inline]
```

Test difference of string and C string.

**Parameters**

|                    |           |
|--------------------|-----------|
| <code>__lhs</code> | String.   |
| <code>__rhs</code> | C string. |

**Returns**

True if `__lhs.compare(__rhs) != 0`. False otherwise.

Definition at line 6111 of file `basic_string.h`.

```
4.11.4.141 template<size_t _Nb> bitset<_Nb> std::operator&( const bitset< _Nb > & __x, const bitset< _Nb > & __y )
[inline], [noexcept]
```

Global bitwise operations on bitsets.

**Parameters**

|                  |                                                 |
|------------------|-------------------------------------------------|
| <code>__x</code> | A bitset.                                       |
| <code>__y</code> | A bitset of the same size as <code>__x</code> . |

**Returns**

A new bitset.

These should be self-explanatory.

Definition at line 1429 of file `bitset`.

4.11.4.142 `template<typename _CharT, typename _Traits, typename _Alloc> basic_string<_CharT, _Traits, _Alloc>  
std::operator+ ( const basic_string<_CharT, _Traits, _Alloc> & __lhs, const basic_string<_CharT, _Traits, _Alloc> &  
__rhs )`

Concatenate two strings.

## Parameters

|                    |               |
|--------------------|---------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Last string.  |

## Returns

New string with value of `__lhs` followed by `__rhs`.

Definition at line 5918 of file `basic_string.h`.

4.11.4.143 `template<typename _CharT, typename _Traits, typename _Alloc > basic_string<_CharT, _Traits, _Alloc > std::operator+ ( const _CharT * __lhs, const basic_string<_CharT, _Traits, _Alloc > & __rhs )`

Concatenate C string and string.

## Parameters

|                    |               |
|--------------------|---------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Last string.  |

## Returns

New string with value of `__lhs` followed by `__rhs`.

Definition at line 1157 of file `basic_string.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc >::size()`.

4.11.4.144 `template<typename _CharT, typename _Traits, typename _Alloc > basic_string<_CharT, _Traits, _Alloc > std::operator+ ( _CharT __lhs, const basic_string<_CharT, _Traits, _Alloc > & __rhs )`

Concatenate character and string.

## Parameters

|                    |               |
|--------------------|---------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Last string.  |

## Returns

New string with `__lhs` followed by `__rhs`.

Definition at line 1173 of file `basic_string.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc >::size()`.

4.11.4.145 `template<typename _CharT, typename _Traits, typename _Alloc > basic_string<_CharT, _Traits, _Alloc > std::operator+ ( const basic_string<_CharT, _Traits, _Alloc > & __lhs, const _CharT * __rhs ) [inline]`

Concatenate string and C string.

## Parameters

|                    |               |
|--------------------|---------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Last string.  |

**Returns**

New string with `__lhs` followed by `__rhs`.

Definition at line 5955 of file `basic_string.h`.

```
4.11.4.146 template<typename _CharT, typename _Traits, typename _Alloc > basic_string<_CharT, _Traits, _Alloc>
std::operator+ ( const basic_string<_CharT, _Traits, _Alloc > &__lhs, _CharT __rhs ) [inline]
```

Concatenate string and character.

**Parameters**

|                    |               |
|--------------------|---------------|
| <code>__lhs</code> | First string. |
| <code>__rhs</code> | Last string.  |

**Returns**

New string with `__lhs` followed by `__rhs`.

Definition at line 5971 of file `basic_string.h`.

```
4.11.4.147 template<typename _Tp, typename _Seq > bool std::operator< ( const stack<_Tp, _Seq > &__x, const stack<_Tp,
_Seq > &__y ) [inline]
```

Stack ordering relation.

**Parameters**

|                  |                                              |
|------------------|----------------------------------------------|
| <code>__x</code> | A stack.                                     |
| <code>__y</code> | A stack of the same type as <code>x</code> . |

**Returns**

True iff `x` is lexicographically less than `__y`.

This is an total ordering relation. Complexity and semantics depend on the underlying sequence type, but the expected rules are: this relation is linear in the size of the sequences, the elements must be comparable with `<`, and `std::lexicographical_compare()` is usually used to make the determination.

Definition at line 311 of file `stl_stack.h`.

```
4.11.4.148 template<typename _Tp, typename _Seq > bool std::operator< ( const queue<_Tp, _Seq > &__x, const queue<
_Tp, _Seq > &__y ) [inline]
```

Queue ordering relation.

**Parameters**

|                  |          |
|------------------|----------|
| <code>__x</code> | A queue. |
|------------------|----------|

|     |                                |
|-----|--------------------------------|
| __y | A queue of the same type as x. |
|-----|--------------------------------|

**Returns**

True iff \_\_x is lexicographically less than \_\_y.

This is a total ordering relation. Complexity and semantics depend on the underlying sequence type, but the expected rules are: this relation is linear in the size of the sequences, the elements must be comparable with <, and std::lexicographical\_compare() is usually used to make the determination.

Definition at line 336 of file stl\_queue.h.

```
4.11.4.149 template<typename _Key, typename _Compare, typename _Alloc > bool std::operator< ( const multiset< _Key,
    _Compare, _Alloc > & __x, const multiset< _Key, _Compare, _Alloc > & __y ) [inline]
```

Multiset ordering relation.

**Parameters**

|     |                                     |
|-----|-------------------------------------|
| __x | A multiset.                         |
| __y | A multiset of the same type as __x. |

**Returns**

True iff \_\_x is lexicographically less than \_\_y.

This is a total ordering relation. It is linear in the size of the sets. The elements must be comparable with <.

See std::lexicographical\_compare() for how the determination is made.

Definition at line 960 of file stl\_multiset.h.

```
4.11.4.150 template<typename _Key, typename _Compare, typename _Alloc > bool std::operator< ( const set< _Key, _Compare,
    _Alloc > & __x, const set< _Key, _Compare, _Alloc > & __y ) [inline]
```

Set ordering relation.

**Parameters**

|     |                              |
|-----|------------------------------|
| __x | A set.                       |
| __y | A set of the same type as x. |

**Returns**

True iff \_\_x is lexicographically less than \_\_y.

This is a total ordering relation. It is linear in the size of the sets. The elements must be comparable with <.

See std::lexicographical\_compare() for how the determination is made.

Definition at line 975 of file stl\_set.h.

```
4.11.4.151 template<typename _Key, typename _Tp, typename _Compare, typename _Alloc > bool std::operator< ( const
    multimap< _Key, _Tp, _Compare, _Alloc > & __x, const multimap< _Key, _Tp, _Compare, _Alloc > & __y )
    [inline]
```

Multimap ordering relation.

## Parameters

|                  |                                                   |
|------------------|---------------------------------------------------|
| <code>__x</code> | A multimap.                                       |
| <code>__y</code> | A multimap of the same type as <code>__x</code> . |

## Returns

True iff `x` is lexicographically less than `y`.

This is a total ordering relation. It is linear in the size of the multimaps. The elements must be comparable with `<`.

See `std::lexicographical_compare()` for how the determination is made.

Definition at line 1117 of file `stl_multimap.h`.

```
4.11.4.152 template<typename _Tp, typename _Alloc > bool std::operator< ( const forward_list< _Tp, _Alloc > & __lx, const
    forward_list< _Tp, _Alloc > & __ly ) [inline]
```

Forward list ordering relation.

## Parameters

|                   |                                                                     |
|-------------------|---------------------------------------------------------------------|
| <code>__lx</code> | A <code>forward_list</code> .                                       |
| <code>__ly</code> | A <code>forward_list</code> of the same type as <code>__lx</code> . |

## Returns

True iff `__lx` is lexicographically less than `__ly`.

This is a total ordering relation. It is linear in the number of elements of the forward lists. The elements must be comparable with `<`.

See `std::lexicographical_compare()` for how the determination is made.

Definition at line 1432 of file `forward_list.h`.

References `lexicographical_compare()`.

```
4.11.4.153 template<typename _Key, typename _Tp, typename _Compare, typename _Alloc > bool std::operator< ( const map<
    _Key, _Tp, _Compare, _Alloc > & __x, const map< _Key, _Tp, _Compare, _Alloc > & __y ) [inline]
```

Map ordering relation.

## Parameters

|                  |                                            |
|------------------|--------------------------------------------|
| <code>__x</code> | A map.                                     |
| <code>__y</code> | A map of the same type as <code>x</code> . |

## Returns

True iff `x` is lexicographically less than `y`.

This is a total ordering relation. It is linear in the size of the maps. The elements must be comparable with `<`.

See `std::lexicographical_compare()` for how the determination is made.

Definition at line 1452 of file `stl_map.h`.

```
4.11.4.154 template<typename _Tp, typename _Alloc > bool std::operator< ( const vector< _Tp, _Alloc > & __x, const vector<
    _Tp, _Alloc > & __y ) [inline]
```

Vector ordering relation.

**Parameters**

|                  |                                                 |
|------------------|-------------------------------------------------|
| <code>__x</code> | A vector.                                       |
| <code>__y</code> | A vector of the same type as <code>__x</code> . |

**Returns**

True iff `__x` is lexicographically less than `__y`.

This is a total ordering relation. It is linear in the size of the vectors. The elements must be comparable with `<`.

See `std::lexicographical_compare()` for how the determination is made.

Definition at line 1770 of file `stl_vector.h`.

References `lexicographical_compare()`.

```
4.11.4.155 template<typename _Tp, typename _Alloc > bool std::operator< ( const list< _Tp, _Alloc > & __x, const list< _Tp,
    _Alloc > & __y ) [inline]
```

List ordering relation.

**Parameters**

|                  |                                               |
|------------------|-----------------------------------------------|
| <code>__x</code> | A list.                                       |
| <code>__y</code> | A list of the same type as <code>__x</code> . |

**Returns**

True iff `__x` is lexicographically less than `__y`.

This is a total ordering relation. It is linear in the size of the lists. The elements must be comparable with `<`.

See `std::lexicographical_compare()` for how the determination is made.

Definition at line 2020 of file `stl_list.h`.

References `lexicographical_compare()`.

```
4.11.4.156 template<typename _Tp, typename _Alloc > bool std::operator< ( const deque< _Tp, _Alloc > & __x, const deque<
    _Tp, _Alloc > & __y ) [inline]
```

Deque ordering relation.

**Parameters**

|                  |                                                |
|------------------|------------------------------------------------|
| <code>__x</code> | A deque.                                       |
| <code>__y</code> | A deque of the same type as <code>__x</code> . |

**Returns**

True iff `x` is lexicographically less than `__y`.

This is a total ordering relation. It is linear in the size of the deques. The elements must be comparable with `<`.

See `std::lexicographical_compare()` for how the determination is made.

Definition at line 2295 of file `stl_deque.h`.

References `lexicographical_compare()`.

---

4.11.4.157 `template<typename _CharT, typename _Traits, typename _Alloc > bool std::operator< ( const basic_string<_CharT, _Traits, _Alloc > &__lhs, const basic_string<_CharT, _Traits, _Alloc > &__rhs ) [inline], [noexcept]`

Test if string precedes string.

## Parameters

|                    |                |
|--------------------|----------------|
| <code>__lhs</code> | First string.  |
| <code>__rhs</code> | Second string. |

## Returns

True if `__lhs` precedes `__rhs`. False otherwise.

Definition at line 6124 of file `basic_string.h`.

References `std::basic_string<_CharT, _Traits, _Alloc>::compare()`.

4.11.4.158 `template<typename _CharT, typename _Traits, typename _Alloc> bool std::operator< ( const basic_string<_CharT, _Traits, _Alloc> &__lhs, const _CharT *__rhs ) [inline]`

Test if string precedes C string.

## Parameters

|                    |           |
|--------------------|-----------|
| <code>__lhs</code> | String.   |
| <code>__rhs</code> | C string. |

## Returns

True if `__lhs` precedes `__rhs`. False otherwise.

Definition at line 6137 of file `basic_string.h`.

4.11.4.159 `template<typename _CharT, typename _Traits, typename _Alloc> bool std::operator< ( const _CharT *__lhs, const basic_string<_CharT, _Traits, _Alloc> &__rhs ) [inline]`

Test if C string precedes string.

## Parameters

|                    |           |
|--------------------|-----------|
| <code>__lhs</code> | C string. |
| <code>__rhs</code> | String.   |

## Returns

True if `__lhs` precedes `__rhs`. False otherwise.

Definition at line 6149 of file `basic_string.h`.

4.11.4.160 `template<class _Traits> basic_ostream<char, _Traits>& std::operator<< ( basic_ostream<char, _Traits> &__out, signed char __c ) [inline]`

Character inserters.

## Parameters

|                    |                   |
|--------------------|-------------------|
| <code>__out</code> | An output stream. |
|--------------------|-------------------|

|                  |              |
|------------------|--------------|
| <code>__c</code> | A character. |
|------------------|--------------|

**Returns**

`out`

Behaves like one of the formatted arithmetic inserters described in `std::basic_ostream`. After constructing a sentry object with good status, this function inserts a single character and any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.

If `__c` is of type `char` and the character type of the stream is not `char`, the character is widened before insertion.

Definition at line 514 of file `ostream`.

```
4.11.4.161 template<typename _CharT, typename _Traits > basic_ostream< _CharT, _Traits > & std::operator<< (
    basic_ostream< _CharT, _Traits > & __out, const char * __s )
```

String inserters.

**Parameters**

|                    |                     |
|--------------------|---------------------|
| <code>__out</code> | An output stream.   |
| <code>__s</code>   | A character string. |

**Returns**

`out`

**Precondition**

`__s` must be a non-NULL pointer

Behaves like one of the formatted arithmetic inserters described in `std::basic_ostream`. After constructing a sentry object with good status, this function inserts `traits::length(__s)` characters starting at `__s`, widened if necessary, followed by any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.

Definition at line 321 of file `ostream.tcc`.

References `std::ios_base::badbit`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

```
4.11.4.162 template<typename _CharT, typename _Traits > basic_ostream< _CharT, _Traits > & std::operator<< (
    basic_ostream< _CharT, _Traits > & __out, _CharT __c ) [inline]
```

Character inserters.

**Parameters**

|                    |                   |
|--------------------|-------------------|
| <code>__out</code> | An output stream. |
| <code>__c</code>   | A character.      |

**Returns**

`out`

Behaves like one of the formatted arithmetic inserters described in `std::basic_ostream`. After constructing a sentry object with good status, this function inserts a single character and any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.

If `__c` is of type `char` and the character type of the stream is not `char`, the character is widened before insertion.

Definition at line 497 of file `ostream`.

---

4.11.4.163 `template<typename _CharT, typename _Traits > basic_ostream<_CharT, _Traits>& std::operator<< (`  
`basic_ostream<_CharT, _Traits > &__out, const _CharT* __s ) [inline]`

String inserters.

## Parameters

|                    |                     |
|--------------------|---------------------|
| <code>__out</code> | An output stream.   |
| <code>__s</code>   | A character string. |

## Returns

`out`

## Precondition

`__s` must be a non-NULL pointer

Behaves like one of the formatted arithmetic inserters described in `std::basic_ostream`. After constructing a sentry object with good status, this function inserts `traits::length(__s)` characters starting at `__s`, widened if necessary, followed by any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.

Definition at line 539 of file `ostream`.

References `std::ios_base::badbit`.

```
4.11.4.164 template<class _Traits> basic_ostream<char, _Traits>& std::operator<< ( basic_ostream< char, _Traits > &
    __out, char __c ) [inline]
```

Character inserters.

## Parameters

|                    |                   |
|--------------------|-------------------|
| <code>__out</code> | An output stream. |
| <code>__c</code>   | A character.      |

## Returns

`out`

Behaves like one of the formatted arithmetic inserters described in `std::basic_ostream`. After constructing a sentry object with good status, this function inserts a single character and any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.

If `__c` is of type `char` and the character type of the stream is not `char`, the character is widened before insertion.

```
4.11.4.167 template<class _Traits > basic_ostream<char, _Traits>& std::operator<< ( basic_ostream< char, _Traits > &
    __out, const char * __s ) [inline]
```

String inserters.

Parameters

|                    |                     |
|--------------------|---------------------|
| <code>__out</code> | An output stream.   |
| <code>__s</code>   | A character string. |

Returns

`out`

Precondition

`__s` must be a non-NULL pointer

Behaves like one of the formatted arithmetic inserters described in `std::basic_ostream`. After constructing a sentry object with good status, this function inserts `traits::length(__s)` characters starting at `__s`, widened if necessary, followed by any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.

Definition at line 556 of file `ostream`.

References `std::ios_base::badbit`.

```
4.11.4.168 template<class _Traits > basic_ostream<char, _Traits>& std::operator<< ( basic_ostream< char, _Traits > &
    __out, const signed char * __s ) [inline]
```

String inserters.

## Parameters

|                    |                     |
|--------------------|---------------------|
| <code>__out</code> | An output stream.   |
| <code>__s</code>   | A character string. |

## Returns

out

## Precondition

`__s` must be a non-NULL pointer

Behaves like one of the formatted arithmetic inserters described in `std::basic_ostream`. After constructing a sentry object with good status, this function inserts `traits::length(__s)` characters starting at `__s`, widened if necessary, followed by any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.

Definition at line 569 of file `ostream`.

```
4.11.4.169 template<class _Traits > basic_ostream<char, _Traits>& std::operator<< ( basic_ostream< char, _Traits > &
__out, const unsigned char * __s ) [inline]
```

String inserters.

## Parameters

|                    |                     |
|--------------------|---------------------|
| <code>__out</code> | An output stream.   |
| <code>__s</code>   | A character string. |

## Returns

out

## Precondition

`__s` must be a non-NULL pointer

Behaves like one of the formatted arithmetic inserters described in `std::basic_ostream`. After constructing a sentry object with good status, this function inserts `traits::length(__s)` characters starting at `__s`, widened if necessary, followed by any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.

Definition at line 574 of file `ostream`.

```
4.11.4.170 template<typename _Ostream, typename _Tp > enable_if<__and<__not<is_lvalue_reference<_Ostream>
>, __is_convertible_to_basic_ostream<_Ostream>, __is_insertable<__rvalue_ostream_type<_Ostream>, const
_Tp&> >::value, __rvalue_ostream_type<_Ostream> >::type std::operator<< ( _Ostream && __os, const _Tp & __x
) [inline]
```

Generic inserter for rvalue stream.

## Parameters

|                   |                  |
|-------------------|------------------|
| <code>__os</code> | An input stream. |
|-------------------|------------------|

|                  |                                           |
|------------------|-------------------------------------------|
| <code>__x</code> | A reference to the object being inserted. |
|------------------|-------------------------------------------|

**Returns**

os

This is just a forwarding function to allow insertion to rvalue streams since they won't bind to the inserter functions that take an lvalue reference.

Definition at line 682 of file ostream.

```
4.11.4.171 template<class _CharT, class _Traits, size_t _Nb> std::basic_ostream<_CharT, _Traits>& std::operator<<< (
    std::basic_ostream<_CharT, _Traits> & __os, const bitset<_Nb> & __x )
```

Global I/O operators for bitsets.

Direct I/O between streams and bitsets is supported. Output is straightforward. Input will skip whitespace, only accept *0* and *1* characters, and will only extract as many digits as the bitset will hold.

Definition at line 1534 of file bitset.

References `std::__ctype_abstract_base<_CharT>::widen()`.

```
4.11.4.172 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
    _Base> basic_ostream<_CharT, _Traits>& std::operator<<< ( basic_ostream<_CharT, _Traits> & __os, const
    __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base> & __str ) [inline]
```

Write string to a stream.

**Parameters**

|                    |                      |
|--------------------|----------------------|
| <code>__os</code>  | Output stream.       |
| <code>__str</code> | String to write out. |

**Returns**

Reference to the output stream.

Output characters of `__str` into `os` following the same rules as for writing a C string.

Definition at line 2630 of file vstring.h.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::data()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size()`.

```
4.11.4.173 template<typename _CharT, typename _Traits, typename _Alloc> basic_ostream<_CharT, _Traits>&
    std::operator<<< ( basic_ostream<_CharT, _Traits> & __os, const basic_string<_CharT, _Traits, _Alloc> & __str )
    [inline]
```

Write string to a stream.

**Parameters**

|                    |                      |
|--------------------|----------------------|
| <code>__os</code>  | Output stream.       |
| <code>__str</code> | String to write out. |

**Returns**

Reference to the output stream.

Output characters of `__str` into `os` following the same rules as for writing a C string.

Definition at line 6314 of file `basic_string.h`.

4.11.4.174 `template<typename _Tp, typename _Seq> bool std::operator<= ( const stack< _Tp, _Seq> & __x, const stack< _Tp, _Seq> & __y ) [inline]`

4.11.4.184 `template<typename _CharT, typename _Traits, typename _Alloc > bool std::operator<= ( const basic_string< _CharT, _Traits, _Alloc > & __lhs, const basic_string< _CharT, _Traits, _Alloc > & __rhs ) [inline], [noexcept]`

Test if string doesn't follow string.

Parameters

|                    |                |
|--------------------|----------------|
| <code>__lhs</code> | First string.  |
| <code>__rhs</code> | Second string. |

Returns

True if `__lhs` doesn't follow `__rhs`. False otherwise.

Definition at line 6200 of file `basic_string.h`.

References `std::basic_string< _CharT, _Traits, _Alloc >::compare()`.

4.11.4.185 `template<typename _CharT, typename _Traits, typename _Alloc > bool std::operator<= ( const basic_string< _CharT, _Traits, _Alloc > & __lhs, const _CharT * __rhs ) [inline]`

Test if string doesn't follow C string.

Parameters

|                    |           |
|--------------------|-----------|
| <code>__lhs</code> | String.   |
| <code>__rhs</code> | C string. |

Returns

True if `__lhs` doesn't follow `__rhs`. False otherwise.

Definition at line 6213 of file `basic_string.h`.

4.11.4.186 `template<typename _CharT, typename _Traits, typename _Alloc > bool std::operator<= ( const _CharT * __lhs, const basic_string< _CharT, _Traits, _Alloc > & __rhs ) [inline]`

Test if C string doesn't follow string.

## Parameters

|                    |           |
|--------------------|-----------|
| <code>__lhs</code> | C string. |
| <code>__rhs</code> | String.   |

## Returns

True if `__lhs` doesn't follow `__rhs`. False otherwise.

Definition at line 6225 of file `basic_string.h`.

```
4.11.4.187 template<typename _StateT> bool std::operator==( const fpos<_StateT> & __lhs, const fpos<_StateT> & __rhs ) [inline]
```

Test if equivalent to another position.

Definition at line 216 of file `postypes.h`.

```
4.11.4.188 template<typename _Tp> bool std::operator==( const _Fwd_list_iterator<_Tp> & __x, const _Fwd_list_const_iterator<_Tp> & __y ) [inline], [noexcept]
```

Forward list iterator equality comparison.

Definition at line 272 of file `forward_list.h`.

```
4.11.4.189 template<typename _Tp, typename _Seq> bool std::operator==( const stack<_Tp, _Seq> & __x, const stack<_Tp, _Seq> & __y ) [inline]
```

Stack equality comparison.

## Parameters

|                  |                                                |
|------------------|------------------------------------------------|
| <code>__x</code> | A stack.                                       |
| <code>__y</code> | A stack of the same type as <code>__x</code> . |

## Returns

True iff the size and elements of the stacks are equal.

This is an equivalence relation. Complexity and semantics depend on the underlying sequence type, but the expected rules are: this relation is linear in the size of the sequences, and stacks are considered equivalent if their sequences compare equal.

Definition at line 293 of file `stl_stack.h`.

```
4.11.4.190 template<typename _Tp, typename _Seq> bool std::operator==( const queue<_Tp, _Seq> & __x, const queue<_Tp, _Seq> & __y ) [inline]
```

Queue equality comparison.

## Parameters

|                  |                                                |
|------------------|------------------------------------------------|
| <code>__x</code> | A queue.                                       |
| <code>__y</code> | A queue of the same type as <code>__x</code> . |

**Returns**

True iff the size and elements of the queues are equal.

This is an equivalence relation. Complexity and semantics depend on the underlying sequence type, but the expected rules are: this relation is linear in the size of the sequences, and queues are considered equivalent if their sequences compare equal.

Definition at line 318 of file `stl_queue.h`.

References `std::queue<_Tp, _Sequence >::c`.

**4.11.4.191** `template<typename _Res, typename... _Args> bool std::operator==( const function<_Res(_Args...)> &__f, nullptr_t ) [inline], [noexcept]`

Compares a polymorphic function object wrapper against 0 (the NULL pointer).

**Returns**

`true` if the wrapper has no target, `false` otherwise

This function will not throw an exception.

Definition at line 745 of file `std_function.h`.

**4.11.4.192** `template<typename _Res, typename... _Args> bool std::operator==( nullptr_t, const function<_Res(_Args...)> &__f ) [inline], [noexcept]`

This is an overloaded member function, provided for convenience. It differs from the above function only in what argument(s) it accepts.

Definition at line 751 of file `std_function.h`.

**4.11.4.193** `template<typename _Key, typename _Compare, typename _Alloc > bool std::operator==( const multiset<_Key, _Compare, _Alloc > &__x, const multiset<_Key, _Compare, _Alloc > &__y ) [inline]`

Multiset equality comparison.

**Parameters**

|                  |                                                   |
|------------------|---------------------------------------------------|
| <code>__x</code> | A multiset.                                       |
| <code>__y</code> | A multiset of the same type as <code>__x</code> . |

**Returns**

True iff the size and elements of the multisets are equal.

This is an equivalence relation. It is linear in the size of the multisets. Multisets are considered equivalent if their sizes are equal, and if corresponding elements compare equal.

Definition at line 943 of file `stl_multiset.h`.

**4.11.4.194** `template<typename _Key, typename _Compare, typename _Alloc > bool std::operator==( const set<_Key, _Compare, _Alloc > &__x, const set<_Key, _Compare, _Alloc > &__y ) [inline]`

Set equality comparison.

**Parameters**

|                  |                                            |
|------------------|--------------------------------------------|
| <code>__x</code> | A set.                                     |
| <code>__y</code> | A set of the same type as <code>x</code> . |

**Returns**

True iff the size and elements of the sets are equal.

This is an equivalence relation. It is linear in the size of the sets. Sets are considered equivalent if their sizes are equal, and if corresponding elements compare equal.

Definition at line 958 of file `stl_set.h`.

```
4.11.4.195 template<typename _Key, typename _Tp, typename _Compare, typename _Alloc > bool std::operator==( const
    multimap< _Key, _Tp, _Compare, _Alloc > & __x, const multimap< _Key, _Tp, _Compare, _Alloc > & __y )
    [inline]
```

Multimap equality comparison.

**Parameters**

|                  |                                                   |
|------------------|---------------------------------------------------|
| <code>__x</code> | A multimap.                                       |
| <code>__y</code> | A multimap of the same type as <code>__x</code> . |

**Returns**

True iff the size and elements of the maps are equal.

This is an equivalence relation. It is linear in the size of the multimaps. Multimaps are considered equivalent if their sizes are equal, and if corresponding elements compare equal.

Definition at line 1100 of file `stl_multimap.h`.

```
4.11.4.196 template<typename _Tp, typename _Alloc > bool std::operator==( const forward_list< _Tp, _Alloc > & __lx, const
    forward_list< _Tp, _Alloc > & __ly )
```

Forward list equality comparison.

**Parameters**

|                   |                                                                     |
|-------------------|---------------------------------------------------------------------|
| <code>__lx</code> | A <code>forward_list</code>                                         |
| <code>__ly</code> | A <code>forward_list</code> of the same type as <code>__lx</code> . |

**Returns**

True iff the elements of the forward lists are equal.

This is an equivalence relation. It is linear in the number of elements of the forward lists. Deques are considered equivalent if corresponding elements compare equal.

Definition at line 369 of file `forward_list.tcc`.

References `std::forward_list< _Tp, _Alloc >::cbegin()`, and `std::forward_list< _Tp, _Alloc >::cend()`.

```
4.11.4.197 template<typename _Key, typename _Tp, typename _Compare, typename _Alloc > bool std::operator==( const map<
    _Key, _Tp, _Compare, _Alloc > & __x, const map< _Key, _Tp, _Compare, _Alloc > & __y ) [inline]
```

Map equality comparison.

## Parameters

|                  |                                            |
|------------------|--------------------------------------------|
| <code>__x</code> | A map.                                     |
| <code>__y</code> | A map of the same type as <code>x</code> . |

## Returns

True iff the size and elements of the maps are equal.

This is an equivalence relation. It is linear in the size of the maps. Maps are considered equivalent if their sizes are equal, and if corresponding elements compare equal.

Definition at line 1435 of file `stl_map.h`.

```
4.11.4.198 template<typename _Tp, typename _Alloc > bool std::operator==( const vector< _Tp, _Alloc > & __x, const vector<
    _Tp, _Alloc > & __y ) [inline]
```

Vector equality comparison.

## Parameters

|                  |                                                 |
|------------------|-------------------------------------------------|
| <code>__x</code> | A vector.                                       |
| <code>__y</code> | A vector of the same type as <code>__x</code> . |

## Returns

True iff the size and elements of the vectors are equal.

This is an equivalence relation. It is linear in the size of the vectors. Vectors are considered equivalent if their sizes are equal, and if corresponding elements compare equal.

Definition at line 1753 of file `stl_vector.h`.

References `std::vector< _Tp, _Alloc >::begin()`, `std::vector< _Tp, _Alloc >::end()`, `equal()`, and `std::vector< _Tp, _Alloc >::size()`.

```
4.11.4.199 template<typename _Tp, typename _Alloc > _GLIBCXX_END_NAMESPACE_CXX11 bool std::operator==( const list<
    _Tp, _Alloc > & __x, const list< _Tp, _Alloc > & __y ) [inline]
```

List equality comparison.

## Parameters

|                  |                                               |
|------------------|-----------------------------------------------|
| <code>__x</code> | A list.                                       |
| <code>__y</code> | A list of the same type as <code>__x</code> . |

## Returns

True iff the size and elements of the lists are equal.

This is an equivalence relation. It is linear in the size of the lists. Lists are considered equivalent if their sizes are equal, and if corresponding elements compare equal.

Definition at line 1986 of file `stl_list.h`.

References `std::list< _Tp, _Alloc >::begin()`, `std::list< _Tp, _Alloc >::end()`, and `std::list< _Tp, _Alloc >::size()`.

```
4.11.4.200 template<typename _Tp, typename _Alloc > bool std::operator==( const deque< _Tp, _Alloc > & __x, const deque<
    _Tp, _Alloc > & __y ) [inline]
```

Deque equality comparison.

## Parameters

|                  |                                                |
|------------------|------------------------------------------------|
| <code>__x</code> | A deque.                                       |
| <code>__y</code> | A deque of the same type as <code>__x</code> . |

## Returns

True iff the size and elements of the deques are equal.

This is an equivalence relation. It is linear in the size of the deques. Deques are considered equivalent if their sizes are equal, and if corresponding elements compare equal.

Definition at line 2277 of file `std_deque.h`.

References `std::deque<_Tp, _Alloc>::begin()`, `std::deque<_Tp, _Alloc>::end()`, `equal()`, and `std::deque<_Tp, _Alloc>::size()`.

4.11.4.201 `template<typename _CharT, typename _Traits, typename _Alloc> bool std::operator==( const basic_string<_CharT, _Traits, _Alloc> & __lhs, const basic_string<_CharT, _Traits, _Alloc> & __rhs ) [inline], [noexcept]`

Test equivalence of two strings.

## Parameters

|                    |                |
|--------------------|----------------|
| <code>__lhs</code> | First string.  |
| <code>__rhs</code> | Second string. |

## Returns

True if `__lhs.compare(__rhs) == 0`. False otherwise.

Definition at line 6039 of file `basic_string.h`.

4.11.4.202 `template<typename _CharT, typename _Traits, typename _Alloc> bool std::operator==( const _CharT * __lhs, const basic_string<_CharT, _Traits, _Alloc> & __rhs ) [inline]`

Test equivalence of C string and string.

## Parameters

|                    |           |
|--------------------|-----------|
| <code>__lhs</code> | C string. |
| <code>__rhs</code> | String.   |

## Returns

True if `__rhs.compare(__lhs) == 0`. False otherwise.

Definition at line 6061 of file `basic_string.h`.

4.11.4.203 `template<typename _CharT, typename _Traits, typename _Alloc> bool std::operator==( const basic_string<_CharT, _Traits, _Alloc> & __lhs, const _CharT * __rhs ) [inline]`

Test equivalence of string and C string.

## Parameters

|                    |           |
|--------------------|-----------|
| <code>__lhs</code> | String.   |
| <code>__rhs</code> | C string. |

## Returns

True if `__lhs.compare(__rhs) == 0`. False otherwise.

Definition at line 6073 of file `basic_string.h`.

Definition at line 6251 of file `basic_string.h`.

4.11.4.229 `template<typename _CharT, typename _Traits, typename _Alloc > bool std::operator>= ( const _CharT * __lhs, const basic_string< _CharT, _Traits, _Alloc > & __rhs ) [inline]`

Test if C string doesn't precede string.

## Parameters

|                    |           |
|--------------------|-----------|
| <code>__lhs</code> | C string. |
| <code>__rhs</code> | String.   |

## Returns

True if `__lhs` doesn't precede `__rhs`. False otherwise.

Definition at line 6263 of file `basic_string.h`.

```
4.11.4.230 template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::operator>> (
    basic_istream< _CharT, _Traits > & __in, _CharT & __c )
```

Character extractors.

## Parameters

|                   |                        |
|-------------------|------------------------|
| <code>__in</code> | An input stream.       |
| <code>__c</code>  | A character reference. |

## Returns

`in`

Behaves like one of the formatted arithmetic extractors described in `std::basic_istream`. After constructing a sentry object with good status, this function extracts a character (if one is available) and stores it in `__c`. Otherwise, sets failbit in the input stream.

Definition at line 931 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

```
4.11.4.231 template<class _Traits > basic_istream<char, _Traits>& std::operator>> ( basic_istream< char, _Traits > & __in,
    unsigned char & __c ) [inline]
```

Character extractors.

## Parameters

|                   |                        |
|-------------------|------------------------|
| <code>__in</code> | An input stream.       |
| <code>__c</code>  | A character reference. |

## Returns

`in`

Behaves like one of the formatted arithmetic extractors described in `std::basic_istream`. After constructing a sentry object with good status, this function extracts a character (if one is available) and stores it in `__c`. Otherwise, sets failbit in the input stream.

Definition at line 756 of file `istream`.

```
4.11.4.232 template<class _Traits > basic_istream<char, _Traits>& std::operator>> ( basic_istream< char, _Traits > & __in,
    signed char & __c ) [inline]
```

Character extractors.

## Parameters

|                   |                        |
|-------------------|------------------------|
| <code>__in</code> | An input stream.       |
| <code>__c</code>  | A character reference. |

## Returns

`in`

Behaves like one of the formatted arithmetic extractors described in `std::basic_istream`. After constructing a sentry object with good status, this function extracts a character (if one is available) and stores it in `__c`. Otherwise, sets failbit in the input stream.

Definition at line 761 of file `istream`.

```
4.11.4.233 template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::operator>> (
    basic_istream< _CharT, _Traits > & __in, _CharT * __s )
```

Character string extractors.

## Parameters

|                   |                                 |
|-------------------|---------------------------------|
| <code>__in</code> | An input stream.                |
| <code>__s</code>  | A pointer to a character array. |

## Returns

`__in`

Behaves like one of the formatted arithmetic extractors described in `std::basic_istream`. After constructing a sentry object with good status, this function extracts up to `n` characters and stores them into the array starting at `__s`. `n` is defined as:

- if `width()` is greater than zero, `n` is `width()` otherwise
- `n` is the number of elements of the largest array of `*`
- *char\_type* that can store a terminating *eos*.
- [27.6.1.2.3]/6

Characters are extracted and stored until one of the following happens:

- `n-1` characters are stored
- EOF is reached
- the next character is whitespace according to the current locale
- the next character is a null byte (i.e., `charT()`)

`width(0)` is then called for the input stream.

If no characters are extracted, sets failbit.

Definition at line 963 of file `istream.tcc`.

References `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::getloc()`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::ios_base::width()`.

---

4.11.4.234 `template<> basic_istream<char>& std::operator>> ( basic_istream< char > & __in, char * __s )`

Character string extractors.

**Parameters**

|                   |                                 |
|-------------------|---------------------------------|
| <code>__in</code> | An input stream.                |
| <code>__s</code>  | A pointer to a character array. |

**Returns**`__in`

Behaves like one of the formatted arithmetic extractors described in `std::basic_istream`. After constructing a sentry object with good status, this function extracts up to `n` characters and stores them into the array starting at `__s`. `n` is defined as:

- if `width()` is greater than zero, `n` is `width()` otherwise
- `n` is *the number of elements of the largest array of \**
- *char\_type that can store a terminating eos.*
- [27.6.1.2.3]/6

Characters are extracted and stored until one of the following happens:

- `n-1` characters are stored
- EOF is reached
- the next character is whitespace according to the current locale
- the next character is a null byte (i.e., `charT()`)

`width(0)` is then called for the input stream.

If no characters are extracted, sets failbit.

```
4.11.4.235 template<class _Traits> basic_istream<char, _Traits>& std::operator>> ( basic_istream< char, _Traits > & __in,
    unsigned char * __s ) [inline]
```

Character string extractors.

**Parameters**

|                   |                                 |
|-------------------|---------------------------------|
| <code>__in</code> | An input stream.                |
| <code>__s</code>  | A pointer to a character array. |

**Returns**`__in`

Behaves like one of the formatted arithmetic extractors described in `std::basic_istream`. After constructing a sentry object with good status, this function extracts up to `n` characters and stores them into the array starting at `__s`. `n` is defined as:

- if `width()` is greater than zero, `n` is `width()` otherwise
- `n` is *the number of elements of the largest array of \**
- *char\_type that can store a terminating eos.*

- [27.6.1.2.3]/6

Characters are extracted and stored until one of the following happens:

- $n-1$  characters are stored
- EOF is reached
- the next character is whitespace according to the current locale
- the next character is a null byte (i.e., `charT()`)

`width(0)` is then called for the input stream.

If no characters are extracted, sets failbit.

Definition at line 803 of file `istream`.

**4.11.4.236** `template<class _Traits> basic_istream<char, _Traits>& std::operator>> ( basic_istream< char, _Traits > & __in, signed char * __s ) [inline]`

Character string extractors.

Parameters

|                   |                                 |
|-------------------|---------------------------------|
| <code>__in</code> | An input stream.                |
| <code>__s</code>  | A pointer to a character array. |

Returns

`__in`

Behaves like one of the formatted arithmetic extractors described in `std::basic_istream`. After constructing a sentry object with good status, this function extracts up to  $n$  characters and stores them into the array starting at `__s`.  $n$  is defined as:

- if `width()` is greater than zero,  $n$  is `width()` otherwise
- $n$  is *the number of elements of the largest array of \**
- *char\_type that can store a terminating eos.*
- [27.6.1.2.3]/6

Characters are extracted and stored until one of the following happens:

- $n-1$  characters are stored
- EOF is reached
- the next character is whitespace according to the current locale
- the next character is a null byte (i.e., `charT()`)

`width(0)` is then called for the input stream.

If no characters are extracted, sets failbit.

Definition at line 808 of file `istream`.

```
4.11.4.237 template<typename _Istream, typename _Tp > enable_if<__and_<__not_<is_lvalue_reference<_Istream>
    >, __is_convertible_to_basic_istream<_Istream>, __is_extractable<__rvalue_istream_type<_Istream>, _Tp&&>
    >::value, __rvalue_istream_type<_Istream> >::type std::operator>> ( _Istream && __is, _Tp && __x )
    [inline]
```

Generic extractor for rvalue stream.

## Parameters

|                   |                                       |
|-------------------|---------------------------------------|
| <code>__is</code> | An input stream.                      |
| <code>__x</code>  | A reference to the extraction target. |

## Returns

`is`

This is just a forwarding function to allow extraction from rvalue streams since they won't bind to the extractor functions that take an lvalue reference.

Definition at line 980 of file `istream`.

```
4.11.4.238 template<class _CharT, class _Traits, size_t _Nb> std::basic_istream<_CharT, _Traits>& std::operator>> (
    std::basic_istream<_CharT, _Traits> & __is, bitset<_Nb> & __x )
```

Global I/O operators for bitsets.

Direct I/O between streams and bitsets is supported. Output is straightforward. Input will skip whitespace, only accept `0` and `1` characters, and will only extract as many digits as the bitset will hold.

Definition at line 1466 of file `bitset`.

References `std::basic_string<_CharT, _Traits, _Alloc>::empty()`, `std::basic_string<_CharT, _Traits, _Alloc>::push_back()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_string<_CharT, _Traits, _Alloc>::reserve()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_ios<_CharT, _Traits>::widen()`.

```
4.11.4.239 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
    _Base> basic_istream<_CharT, _Traits> & std::operator>> ( basic_istream<_CharT, _Traits> & __is,
    __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base> & __str )
```

Read stream into a string.

## Parameters

|                    |                       |
|--------------------|-----------------------|
| <code>__is</code>  | Input stream.         |
| <code>__str</code> | Buffer to store into. |

## Returns

Reference to the input stream.

Stores characters from `__is` into `__str` until whitespace is found, the end of the stream is encountered, or `str.max_size()` is reached. If `is.width()` is non-zero, that is the limit on the number of characters stored into `__str`. Any previous contents of `__str` are erased.

Definition at line 552 of file `vstring.tcc`.

References `std::ios_base::getloc()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::ios_base::width()`.

```
4.11.4.240 template<typename _CharT, typename _Traits, typename _Alloc> basic_istream<_CharT, _Traits> &
    std::operator>> ( basic_istream<_CharT, _Traits> & __is, basic_string<_CharT, _Traits, _Alloc> & __str )
```

Read stream into a string.

## Parameters

|                    |                       |
|--------------------|-----------------------|
| <code>__is</code>  | Input stream.         |
| <code>__str</code> | Buffer to store into. |

## Returns

Reference to the input stream.

Stores characters from `__is` into `__str` until whitespace is found, the end of the stream is encountered, or `str.max_size()` is reached. If `is.width()` is non-zero, that is the limit on the number of characters stored into `__str`. Any previous contents of `__str` are erased.

Definition at line 1465 of file `basic_string.tcc`.

References `std::basic_string<_CharT, _Traits, _Alloc>::append()`, `std::basic_string<_CharT, _Traits, _Alloc>::erase()`, `std::ios_base::getloc()`, `std::basic_string<_CharT, _Traits, _Alloc>::max_size()`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::ios_base::width()`.

4.11.4.241 `template<size_t_Nb> bitset<_Nb> std::operator^ ( const bitset<_Nb> & __x, const bitset<_Nb> & __y )`  
`[inline], [noexcept]`

Global bitwise operations on bitsets.

## Parameters

|                  |                                                 |
|------------------|-------------------------------------------------|
| <code>__x</code> | A bitset.                                       |
| <code>__y</code> | A bitset of the same size as <code>__x</code> . |

## Returns

A new bitset.

These should be self-explanatory.

Definition at line 1447 of file `bitset`.

4.11.4.242 `template<size_t_Nb> bitset<_Nb> std::operator| ( const bitset<_Nb> & __x, const bitset<_Nb> & __y )`  
`[inline], [noexcept]`

Global bitwise operations on bitsets.

## Parameters

|                  |                                                 |
|------------------|-------------------------------------------------|
| <code>__x</code> | A bitset.                                       |
| <code>__y</code> | A bitset of the same size as <code>__x</code> . |

## Returns

A new bitset.

These should be self-explanatory.

Definition at line 1438 of file `bitset`.

4.11.4.243 `template<typename _InputIterator, typename _OutputIterator> _OutputIterator std::partial_sum ( _InputIterator __first, _InputIterator __last, _OutputIterator __result )`

Return list of partial sums.

Accumulates the values in the range [first,last) using the + operator. As each successive input value is added into the total, that partial sum is written to `__result`. Therefore, the first value in `__result` is the first value of the input, the second value in `__result` is the sum of the first and second input values, and so on.

#### Parameters

|                       |                       |
|-----------------------|-----------------------|
| <code>__first</code>  | Start of input range. |
| <code>__last</code>   | End of input range.   |
| <code>__result</code> | Output sum.           |

#### Returns

Iterator pointing just beyond the values written to `__result`.

Definition at line 237 of file `stl_numeric.h`.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs_pu()`, and `__gnu_parallel::__sequential_random_shuffle()`.

```
4.11.4.244 template<typename _InputIterator, typename _OutputIterator, typename _BinaryOperation > _OutputIterator
std::partial_sum ( _InputIterator __first, _InputIterator __last, _OutputIterator __result, _BinaryOperation __binary_op )
```

Return list of partial sums.

Accumulates the values in the range [first,last) using `__binary_op`. As each successive input value is added into the total, that partial sum is written to `__result`. Therefore, the first value in `__result` is the first value of the input, the second value in `__result` is the sum of the first and second input values, and so on.

#### Parameters

|                          |                       |
|--------------------------|-----------------------|
| <code>__first</code>     | Start of input range. |
| <code>__last</code>      | End of input range.   |
| <code>__result</code>    | Output sum.           |
| <code>__binary_op</code> | Function object.      |

#### Returns

Iterator pointing just beyond the values written to `__result`.

Definition at line 278 of file `stl_numeric.h`.

```
4.11.4.245 template<typename _MoneyT > _Put_money<_MoneyT> std::put_money ( const _MoneyT & __mon, bool __intl =
false ) [inline]
```

Extended manipulator for inserting money.

#### Parameters

|                     |                                                                       |
|---------------------|-----------------------------------------------------------------------|
| <code>__mon</code>  | Either long double or a specialization of <code>basic_string</code> . |
| <code>__intl</code> | A bool indicating whether international format is to be used.         |

Sent to a stream object, this manipulator inserts `__mon`.

Definition at line 306 of file `iomanip`.

```
4.11.4.246 template<typename _CharT > _Put_time<_CharT> std::put_time ( const std::tm * __tmb, const _CharT * __fmt )
[inline]
```

Extended manipulator for formatting time.

This manipulator uses `time_put::put` to format time. [ext.manip]

## Parameters

|                    |                                |
|--------------------|--------------------------------|
| <code>__tmb</code> | struct tm time data to format. |
| <code>__fmt</code> | format string.                 |

Definition at line 358 of file iomanip.

4.11.4.247 `template<typename _CharT > auto std::quoted ( const _CharT * __string, _CharT __delim = _CharT(' '), _CharT __escape = _CharT('\\') ) [inline]`

Manipulator for quoted strings.

## Parameters

|                       |                                                       |
|-----------------------|-------------------------------------------------------|
| <code>__string</code> | String to quote.                                      |
| <code>__delim</code>  | Character to quote string with.                       |
| <code>__escape</code> | Escape character to escape itself or quote character. |

Definition at line 461 of file iomanip.

4.11.4.248 `template<typename _Container > _GLIBCXX17_CONSTEXPR auto std::rbegin ( _Container & __cont )-> decltype(__cont.rbegin()) [inline]`

Return a reverse iterator pointing to the last element of the container.

## Parameters

|                     |            |
|---------------------|------------|
| <code>__cont</code> | Container. |
|---------------------|------------|

Definition at line 138 of file range\_access.h.

Referenced by `crbegin()`.

4.11.4.249 `template<typename _Container > _GLIBCXX17_CONSTEXPR auto std::rbegin ( const _Container & __cont )-> decltype(__cont.rbegin()) [inline]`

Return a reverse iterator pointing to the last element of the const container.

## Parameters

|                     |            |
|---------------------|------------|
| <code>__cont</code> | Container. |
|---------------------|------------|

Definition at line 148 of file range\_access.h.

4.11.4.250 `template<typename _Tp > _GLIBCXX17_CONSTEXPR reverse_iterator<const _Tp*> std::rbegin ( initializer_list< _Tp > __il ) [inline]`

Return a reverse iterator pointing to the last element of the `initializer_list`.

## Parameters

|                   |                                 |
|-------------------|---------------------------------|
| <code>__il</code> | <code>initializer_list</code> . |
|-------------------|---------------------------------|

Definition at line 198 of file range\_access.h.

4.11.4.251 `template<typename _Tp > reference_wrapper<_Tp> std::ref ( _Tp & __t ) [inline], [noexcept]`

Denotes a reference should be taken to a variable.

Definition at line 327 of file refwrap.h.

4.11.4.252 `template<typename _Tp > void std::ref ( const _Tp && ) [delete]`

Denotes a reference should be taken to a variable.

4.11.4.253 `template<typename _Tp > reference_wrapper<_Tp> std::ref ( reference_wrapper<_Tp> __t ) [inline], [noexcept]`

`std::ref` overload to prevent wrapping a `reference_wrapper`

Definition at line 345 of file `refwrap.h`.

4.11.4.254 `template<typename _Container > _GLIBCXX17_CONSTEXPR auto std::rend ( _Container & __cont )-> decltype(__cont.rend()) [inline]`

Return a reverse iterator pointing one past the first element of the container.

Parameters

|                     |            |
|---------------------|------------|
| <code>__cont</code> | Container. |
|---------------------|------------|

Definition at line 158 of file `range_access.h`.

Referenced by `crend()`.

4.11.4.255 `template<typename _Container > _GLIBCXX17_CONSTEXPR auto std::rend ( const _Container & __cont )-> decltype(__cont.rend()) [inline]`

Return a reverse iterator pointing one past the first element of the const container.

Parameters

|                     |            |
|---------------------|------------|
| <code>__cont</code> | Container. |
|---------------------|------------|

Definition at line 168 of file `range_access.h`.

4.11.4.256 `template<typename _Tp > _GLIBCXX17_CONSTEXPR reverse_iterator<const _Tp*> std::rend ( initializer_list<_Tp> __il ) [inline]`

Return a reverse iterator pointing one past the first element of the `initializer_list`.

Parameters

|                   |                                 |
|-------------------|---------------------------------|
| <code>__il</code> | <code>initializer_list</code> . |
|-------------------|---------------------------------|

Definition at line 208 of file `range_access.h`.

4.11.4.257 `template<typename _InputIterator , typename _OutputIterator , typename _Tp > _OutputIterator std::replace_copy ( _InputIterator __first, _InputIterator __last, _OutputIterator __result, const _Tp & __old_value, const _Tp & __new_value ) [inline]`

Copy a sequence, replacing each element of one value with another value.

Parameters

|                       |                     |
|-----------------------|---------------------|
| <code>__first</code>  | An input iterator.  |
| <code>__last</code>   | An input iterator.  |
| <code>__result</code> | An output iterator. |

|                          |                           |
|--------------------------|---------------------------|
| <code>__old_value</code> | The value to be replaced. |
| <code>__new_value</code> | The replacement value.    |

**Returns**

The end of the output sequence, `result+(last-first)`.

Copies each element in the input range `[__first,__last)` to the output range `[__result,__result+(__last-__first))` replacing elements equal to `__old_value` with `__new_value`.

Definition at line 3136 of file `stl_algo.h`.

**4.11.4.258** `_Resetiosflags` `std::resetiosflags ( ios_base::fmtflags __mask )` `[inline]`

Manipulator for `setf`.

**Parameters**

|                     |                      |
|---------------------|----------------------|
| <code>__mask</code> | A format flags mask. |
|---------------------|----------------------|

Sent to a stream object, this manipulator resets the specified flags, via `stream.setf(0,__mask)`.

Definition at line 66 of file `iomanipl`.

**4.11.4.259** `template<typename _Tp> void std::return_temporary_buffer ( _Tp* __p )` `[inline]`

The companion to `get_temporary_buffer()`.

**Parameters**

|                  |                                                                      |
|------------------|----------------------------------------------------------------------|
| <code>__p</code> | A buffer previously allocated by <code>get_temporary_buffer</code> . |
|------------------|----------------------------------------------------------------------|

**Returns**

None.

Frees the memory pointed to by `__p`.

Definition at line 112 of file `stl_tempbuf.h`.

Referenced by `std::_Temporary_buffer<_ForwardIterator, _Tp>::_Temporary_buffer()`.

**4.11.4.260** `ios_base& std::right ( ios_base & __base )` `[inline]`

Calls `base.setf(ios_base::right, ios_base::adjustfield)`.

Definition at line 1009 of file `ios_base.h`.

References `std::ios_base::adjustfield`, `std::ios_base::right`, and `std::ios_base::setf()`.

**4.11.4.261** `ios_base& std::scientific ( ios_base & __base )` `[inline]`

Calls `base.setf(ios_base::scientific, ios_base::floatfield)`.

Definition at line 1051 of file `ios_base.h`.

References `std::ios_base::floatfield`, `std::ios_base::scientific`, and `std::ios_base::setf()`.

Referenced by `operator<<()`.

**4.11.4.262** `new_handler std::set_new_handler ( new_handler ) throw`

Takes a replacement handler as the argument, returns the previous handler.

4.11.4.263 `terminate_handler` `std::set_terminate ( terminate_handler )` [noexcept]

Takes a new handler function as an argument, returns the old function.

4.11.4.264 `unexpected_handler` `std::set_unexpected ( unexpected_handler )` [noexcept]

Takes a new handler function as an argument, returns the old function.

4.11.4.265 `_Setbase` `std::setbase ( int __base )` [inline]

Manipulator for `setf`.

#### Parameters

|                     |                 |
|---------------------|-----------------|
| <code>__base</code> | A numeric base. |
|---------------------|-----------------|

Sent to a stream object, this manipulator changes the `ios_base::basefield` flags to `oct`, `dec`, or `hex` when `base` is 8, 10, or 16, accordingly, and to 0 if `__base` is any other value.

Definition at line 127 of file `iomanip`.

4.11.4.266 `template<typename CharT> _Setfill<CharT>` `std::setfill ( CharT __c )` [inline]

Manipulator for `fill`.

#### Parameters

|                  |                         |
|------------------|-------------------------|
| <code>__c</code> | The new fill character. |
|------------------|-------------------------|

Sent to a stream object, this manipulator calls `fill (__c)` for that object.

Definition at line 165 of file `iomanip`.

4.11.4.267 `_Setiosflags` `std::setiosflags ( ios_base::fmtflags __mask )` [inline]

Manipulator for `setf`.

#### Parameters

|                     |                      |
|---------------------|----------------------|
| <code>__mask</code> | A format flags mask. |
|---------------------|----------------------|

Sent to a stream object, this manipulator sets the format flags to `__mask`.

Definition at line 96 of file `iomanip`.

4.11.4.268 `_Setprecision` `std::setprecision ( int __n )` [inline]

Manipulator for `precision`.

#### Parameters

|                  |                    |
|------------------|--------------------|
| <code>__n</code> | The new precision. |
|------------------|--------------------|

Sent to a stream object, this manipulator calls `precision (__n)` for that object.

Definition at line 195 of file `iomanip`.

4.11.4.269 `_Setw` `std::setw ( int __n )` [inline]

Manipulator for `width`.

## Parameters

|                  |                |
|------------------|----------------|
| <code>__n</code> | The new width. |
|------------------|----------------|

Sent to a stream object, this manipulator calls `width(__n)` for that object.

Definition at line 225 of file `iosmanip`.

#### 4.11.4.270 `ios_base& std::showbase ( ios_base & __base ) [inline]`

Calls `base.setf(ios_base::showbase)`.

Definition at line 896 of file `ios_base.h`.

References `std::ios_base::setf()`, and `std::ios_base::showbase`.

#### 4.11.4.271 `ios_base& std::showpoint ( ios_base & __base ) [inline]`

Calls `base.setf(ios_base::showpoint)`.

Definition at line 912 of file `ios_base.h`.

References `std::ios_base::setf()`, and `std::ios_base::showpoint`.

#### 4.11.4.272 `ios_base& std::showpos ( ios_base & __base ) [inline]`

Calls `base.setf(ios_base::showpos)`.

Definition at line 928 of file `ios_base.h`.

References `std::ios_base::setf()`, and `std::ios_base::showpos`.

#### 4.11.4.273 `ios_base& std::skipws ( ios_base & __base ) [inline]`

Calls `base.setf(ios_base::skipws)`.

Definition at line 944 of file `ios_base.h`.

References `std::ios_base::setf()`, and `std::ios_base::skipws`.

Referenced by `std::__detail::operator>>()`, and `operator>>()`.

#### 4.11.4.274 `template<typename _Tp, typename _Tp1, _Lock_policy _Lp> __shared_ptr<_Tp, _Lp> std::static_pointer_cast ( const __shared_ptr<_Tp1, _Lp> & __r ) [inline], [noexcept]`

`static_pointer_cast`

Definition at line 1536 of file `shared_ptr_base.h`.

#### 4.11.4.275 `template<typename _Res, typename... _Args> void std::swap ( function<_Res(_Args...)> & __x, function<_Res(_Args...)> & __y ) [inline], [noexcept]`

Swap the targets of two polymorphic function object wrappers.

This function will not throw an exception.

Definition at line 784 of file `std_function.h`.

#### 4.11.4.276 `template<class _CharT, class _Traits, class _Allocator> void std::swap ( basic_stringbuf<_CharT, _Traits, _Allocator> & __x, basic_stringbuf<_CharT, _Traits, _Allocator> & __y ) [inline]`

Swap specialization for stringbufs.

Definition at line 797 of file `sstream`.

4.11.4.277 `template<class _CharT, class _Traits, class _Allocator > void std::swap ( basic_istream< _CharT, _Traits, _Allocator > &__x, basic_istream< _CharT, _Traits, _Allocator > &__y ) [inline]`

Swap specialization for istreams.

Definition at line 804 of file sstream.

4.11.4.278 `template<class _CharT, class _Traits, class _Allocator > void std::swap ( basic_ostringstream< _CharT, _Traits, _Allocator > &__x, basic_ostringstream< _CharT, _Traits, _Allocator > &__y ) [inline]`

Swap specialization for ostringstreams.

Definition at line 811 of file sstream.

4.11.4.279 `template<class _CharT, class _Traits, class _Allocator > void std::swap ( basic_stringstream< _CharT, _Traits, _Allocator > &__x, basic_stringstream< _CharT, _Traits, _Allocator > &__y ) [inline]`

Swap specialization for stringstreams.

Definition at line 818 of file sstream.

4.11.4.280 `template<typename _Key, typename _Compare, typename _Alloc > void std::swap ( multiset< _Key, _Compare, _Alloc > &__x, multiset< _Key, _Compare, _Alloc > &__y ) [inline], [noexcept]`

See `std::multiset::swap()`.

Definition at line 995 of file `stl_multiset.h`.

4.11.4.281 `template<class _CharT, class _Traits > void std::swap ( basic_filebuf< _CharT, _Traits > &__x, basic_filebuf< _CharT, _Traits > &__y ) [inline]`

Swap specialization for filebufs.

Definition at line 1140 of file `fstream`.

4.11.4.282 `template<class _CharT, class _Traits > void std::swap ( basic_ifstream< _CharT, _Traits > &__x, basic_ifstream< _CharT, _Traits > &__y ) [inline]`

Swap specialization for ifstreams.

Definition at line 1147 of file `fstream`.

4.11.4.283 `template<typename _Key, typename _Tp, typename _Compare, typename _Alloc > void std::swap ( multimap< _Key, _Tp, _Compare, _Alloc > &__x, multimap< _Key, _Tp, _Compare, _Alloc > &__y ) [inline], [noexcept]`

See `std::multimap::swap()`.

Definition at line 1152 of file `stl_multimap.h`.

4.11.4.284 `template<class _CharT, class _Traits > void std::swap ( basic_ofstream< _CharT, _Traits > &__x, basic_ofstream< _CharT, _Traits > &__y ) [inline]`

Swap specialization for ofstreams.

Definition at line 1154 of file `fstream`.

4.11.4.285 `template<class _CharT, class _Traits > void std::swap ( basic_fstream< _CharT, _Traits > &__x, basic_fstream< _CharT, _Traits > &__y ) [inline]`

Swap specialization for fstreams.

Definition at line 1161 of file `fstream`.

4.11.4.286 `template<typename _Tp, typename _Alloc > void std::swap ( forward_list< _Tp, _Alloc > & __lx, forward_list< _Tp, _Alloc > & __ly ) [inline], [noexcept]`

See `std::forward_list::swap()`.

Definition at line 1468 of file `forward_list.h`.

4.11.4.287 `template<typename _Key, typename _Tp, typename _Compare, typename _Alloc > void std::swap ( map< _Key, _Tp, _Compare, _Alloc > & __x, map< _Key, _Tp, _Compare, _Alloc > & __y ) [inline], [noexcept]`

See `std::map::swap()`.

Definition at line 1487 of file `stl_map.h`.

4.11.4.288 `template<typename _CharT, typename _Traits, typename _Alloc > void std::swap ( basic_string< _CharT, _Traits, _Alloc > & __lhs, basic_string< _CharT, _Traits, _Alloc > & __rhs ) [inline], [noexcept]`

Swap contents of two strings.

Parameters

|                    |                |
|--------------------|----------------|
| <code>__lhs</code> | First string.  |
| <code>__rhs</code> | Second string. |

Exchanges the contents of `__lhs` and `__rhs` in constant time.

Definition at line 6276 of file `basic_string.h`.

4.11.4.289 `void std::terminate ( ) [noexcept]`

The runtime will call this function if exception handling must be abandoned for any reason. It can also be called by the user.

4.11.4.290 `template<typename _CharT > _CharT std::tolower ( _CharT __c, const locale & __loc ) [inline]`

Convenience interface to `ctype::tolower(__c)`.

Definition at line 2645 of file `locale_facets.h`.

4.11.4.291 `template<typename _CharT > _CharT std::toupper ( _CharT __c, const locale & __loc ) [inline]`

Convenience interface to `ctype::toupper(__c)`.

Definition at line 2639 of file `locale_facets.h`.

4.11.4.292 `template<typename _Lock1, typename _Lock2, typename... _Lock3> int std::try_lock ( _Lock1 & __l1, _Lock2 & __l2, _Lock3 &... __l3 )`

Generic `try_lock`.

Parameters

|                   |                                                                   |
|-------------------|-------------------------------------------------------------------|
| <code>__l1</code> | Meets Lockable requirements ( <code>try_lock()</code> may throw). |
| <code>__l2</code> | Meets Lockable requirements ( <code>try_lock()</code> may throw). |
| <code>__l3</code> | Meets Lockable requirements ( <code>try_lock()</code> may throw). |

**Returns**

Returns -1 if all `try_lock()` calls return true. Otherwise returns a 0-based index corresponding to the argument that returned false.

**Postcondition**

Either all arguments are locked, or none will be.

Sequentially calls `try_lock()` on each argument.

Definition at line 521 of file `mutex`.

References `tie()`.

#### 4.11.4.293 `_GLIBCXX17_DEPRECATED` `bool std::uncaught_exception ( )` `[noexcept]`

[18.6.4]/1: 'Returns true after completing evaluation of a throw-expression until either completing initialization of the exception-declaration in the matching handler or entering `unexpected()` due to the throw; or after entering `terminate()` for any reason other than an explicit call to `terminate()`. [Note: This includes stack unwinding [15.2]. end note]'

2: 'When `uncaught_exception()` is true, throwing an exception can result in a call of `terminate()` (15.5.1).'

Referenced by `std::basic_ostream<_CharT, _Traits>::sentry::~~sentry()`.

#### 4.11.4.294 `int std::uncaught_exceptions ( )` `[noexcept]`

The number of uncaught exceptions.

#### 4.11.4.295 `void std::unexpected ( )`

The runtime will call this function if an exception is thrown which violates the function's exception specification.

#### 4.11.4.296 `template<typename _InputIterator, typename _ForwardIterator > _ForwardIterator std::uninitialized_copy (` `_InputIterator __first, _InputIterator __last, _ForwardIterator __result )` `[inline]`

Copies the range `[first,last)` into `result`.

**Parameters**

|                       |                     |
|-----------------------|---------------------|
| <code>__first</code>  | An input iterator.  |
| <code>__last</code>   | An input iterator.  |
| <code>__result</code> | An output iterator. |

**Returns**

`__result + (__first - __last)`

Like `copy()`, but does not require an initialized output range.

Definition at line 115 of file `stl_uninitialized.h`.

Referenced by `__gnu_parallel::parallel_sort_mwms_pu()`.

#### 4.11.4.297 `template<typename _InputIterator, typename _Size, typename _ForwardIterator > _ForwardIterator` `std::uninitialized_copy_n ( _InputIterator __first, _Size __n, _ForwardIterator __result )` `[inline]`

Copies the range `[first,first+n)` into `result`.

## Parameters

|                       |                                 |
|-----------------------|---------------------------------|
| <code>__first</code>  | An input iterator.              |
| <code>__n</code>      | The number of elements to copy. |
| <code>__result</code> | An output iterator.             |

## Returns

`__result + __n`

Like `copy_n()`, but does not require an initialized output range.

Definition at line 812 of file `stl_uninitialized.h`.

References `__iterator_category()`.

4.11.4.298 `template<typename _ForwardIterator, typename _Tp> void std::uninitialized_fill ( _ForwardIterator __first, _ForwardIterator __last, const _Tp & __x ) [inline]`

Copies the value `x` into the range `[first,last)`.

## Parameters

|                      |                    |
|----------------------|--------------------|
| <code>__first</code> | An input iterator. |
| <code>__last</code>  | An input iterator. |
| <code>__x</code>     | The source value.  |

## Returns

Nothing.

Like `fill()`, but does not require an initialized output range.

Definition at line 181 of file `stl_uninitialized.h`.

4.11.4.299 `template<typename _ForwardIterator, typename _Size, typename _Tp> _ForwardIterator std::uninitialized_fill_n ( _ForwardIterator __first, _Size __n, const _Tp & __x ) [inline]`

Copies the value `x` into the range `[first,first+n)`.

## Parameters

|                      |                               |
|----------------------|-------------------------------|
| <code>__first</code> | An input iterator.            |
| <code>__n</code>     | The number of copies to make. |
| <code>__x</code>     | The source value.             |

## Returns

Nothing.

Like `fill_n()`, but does not require an initialized output range.

Definition at line 244 of file `stl_uninitialized.h`.

4.11.4.300 `ios_base& std::unitbuf ( ios_base & __base ) [inline]`

Calls `base.setf(ios_base::unitbuf)`.

Definition at line 976 of file `ios_base.h`.

References `std::ios_base::setf()`, and `std::ios_base::unitbuf`.

4.11.4.301 `ios_base& std::uppercase ( ios_base & __base ) [inline]`

Calls `base.setf(ios_base::uppercase)`.

Definition at line 960 of file `ios_base.h`.

References `std::ios_base::setf()`, and `std::ios_base::uppercase`.

4.11.4.302 `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::ws ( basic_istream< _CharT, _Traits > & __is )`

Quick and easy way to eat whitespace.

This manipulator extracts whitespace characters, stopping when the next character is non-whitespace, or when the input sequence is empty. If the sequence is empty, `eofbit` is set in the stream, but not `failbit`.

The current locale is used to distinguish whitespace characters.

Example:

```
* MyClass mc;
*
* std::cin >> std::ws >> mc;
*
```

will skip leading whitespace before calling operator<>> on `cin` and your object. Note that the same effect can be achieved by creating a `std::basic_istream::sentry` inside your definition of operator<>>.

Definition at line 1024 of file `istream.tcc`.

References `std::ios_base::eofbit`, `std::ios_base::getloc()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

## 4.11.5 Variable Documentation

4.11.5.1 `template<typename _Tp, size_t _Nm> _GLIBCXX14_CONSTEXPR _Tp* return std::__arr [inline]`

Return an iterator pointing to the first element of the array.

Parameters

|                    |        |
|--------------------|--------|
| <code>__arr</code> | Array. |
|--------------------|--------|

Definition at line 88 of file `range_access.h`.

Referenced by `std::linear_congruential_engine< _UIntType, __a, __c, __m >::seed()`.

4.11.5.2 `ios_base::Init std::_ioinit [static]`

Linked to standard error (buffered)

Definition at line 74 of file `iostream`.

4.11.5.3 `__thread void(* std::__once_call)()`

Generic `try_lock`.

**Parameters**

|                   |                                                     |
|-------------------|-----------------------------------------------------|
| <code>__l1</code> | Meets Lockable requirements (try_lock() may throw). |
| <code>__l2</code> | Meets Lockable requirements (try_lock() may throw). |
| <code>__l3</code> | Meets Lockable requirements (try_lock() may throw). |

**Returns**

Returns -1 if all try\_lock() calls return true. Otherwise returns a 0-based index corresponding to the argument that returned false.

**Postcondition**

Either all arguments are locked, or none will be.

Sequentially calls try\_lock() on each argument.

Referenced by call\_once().

**4.11.5.4 `__thread void* std::__once_callable`**

Generic try\_lock.

**Parameters**

|                   |                                                     |
|-------------------|-----------------------------------------------------|
| <code>__l1</code> | Meets Lockable requirements (try_lock() may throw). |
| <code>__l2</code> | Meets Lockable requirements (try_lock() may throw). |
| <code>__l3</code> | Meets Lockable requirements (try_lock() may throw). |

**Returns**

Returns -1 if all try\_lock() calls return true. Otherwise returns a 0-based index corresponding to the argument that returned false.

**Postcondition**

Either all arguments are locked, or none will be.

Sequentially calls try\_lock() on each argument.

Referenced by call\_once().

**4.11.5.5 `ostream std::cerr`**

Linked to standard output.

**4.11.5.6 `istream std::cin`**

Linked to standard input.

**4.11.5.7 `ostream std::clog`**

Linked to standard error (unbuffered)

**4.11.5.8 `ostream std::cout`**

Linked to standard input.

4.11.5.9 `template<typename _Tp > _GLIBCXX17_INLINE constexpr bool std::is_nothrow_swappable_v`

`is_nothrow_swappable_v`

Definition at line 2516 of file `type_traits`.

4.11.5.10 `template<typename _Tp, typename _Up > _GLIBCXX17_INLINE constexpr bool std::is_nothrow_swappable_with_v`

`is_nothrow_swappable_with_v`

Definition at line 2600 of file `type_traits`.

4.11.5.11 `template<typename _Tp > _GLIBCXX17_INLINE constexpr bool std::is_swappable_v`

`is_swappable_v`

Definition at line 2511 of file `type_traits`.

4.11.5.12 `template<typename _Tp, typename _Up > _GLIBCXX17_INLINE constexpr bool std::is_swappable_with_v`

`is_swappable_with_v`

Definition at line 2595 of file `type_traits`.

4.11.5.13 `template<typename _Tp, size_t _Nm> _GLIBCXX17_CONSTEXPR std::reverse_iterator<_Tp*> [inline]`

Return a reverse iterator pointing to the last element of the array.

Return a reverse iterator pointing one past the first element of the array.

Parameters

|                    |        |
|--------------------|--------|
| <code>__arr</code> | Array. |
|--------------------|--------|

Definition at line 179 of file `range_access.h`.

4.11.5.14 `wostream` `std::wcerr`

Linked to standard output.

4.11.5.15 `wistream` `std::wcin`

Linked to standard error (buffered)

4.11.5.16 `wostream` `std::wclog`

Linked to standard error (unbuffered)

4.11.5.17 `wostream` `std::wcout`

Linked to standard input.

#### 4.12.1 Detailed Description

GNU debug code, replaces standard behavior with debug behavior. Macros and namespaces used by the implementation outside of debug wrappers to verify certain properties. The `__glibcxx_requires_xxx` macros are merely wrappers around the `__glibcxx_check_xxx` wrappers when we are compiling with debug mode, but disappear when we are in release mode so that there is no checking performed in, e.g., the standard library algorithms.

#### 4.12.2 Function Documentation

4.12.2.1 `template<typename _Tp, typename _Alloc > void std::__debug::noexcept ( noexcept(__lx.swap(__ly)) ) [inline]`

See `std::forward_list::swap()`.

Definition at line 828 of file `debug/forward_list`.

References `std::forward_list< _Tp, _Alloc >::swap()`.

4.12.2.2 `template<typename _Tp, typename _Alloc > bool std::__debug::operator<= ( const forward_list< _Tp, _Alloc > &__lx, const forward_list< _Tp, _Alloc > &__ly ) [inline]`

Based on `operator<`.

Definition at line 820 of file `debug/forward_list`.

4.12.2.3 `template<typename _Tp, typename _Alloc > bool std::__debug::operator> ( const forward_list< _Tp, _Alloc > &__lx, const forward_list< _Tp, _Alloc > &__ly ) [inline]`

Based on `operator<`.

Definition at line 806 of file `debug/forward_list`.

4.12.2.4 `template<typename _Tp, typename _Alloc > bool std::__debug::operator>= ( const forward_list< _Tp, _Alloc > &__lx, const forward_list< _Tp, _Alloc > &__ly ) [inline]`

Based on `operator<`.

Definition at line 813 of file `debug/forward_list`.

### 4.13.1 Detailed Description

Implementation details not part of the namespace std interface.

### 4.13.2 Function Documentation

- 4.13.2.1 `template<typename _Mn, typename _Nn > constexpr common_type_t<_Mn, _Nn> std::_detail::_lcm ( _Mn __m,`  
`_Nn __n )`

Least common multiple.

Definition at line 113 of file numeric.

- 4.13.2.2 `template<typename _CharT, typename _Traits > std::basic_ostream<_CharT, _Traits>& std::_detail::operator<< (`  
`std::basic_ostream< _CharT, _Traits > & __os, const _Quoted_string< const _CharT *, _CharT > & __str )`

Insertion for quoted strings.

`_GLIBCXX_RESOLVE_LIB_DEFECTS DR 2344` `quoted()`'s interaction with padding is unclear

Definition at line 93 of file `quoted_string.h`.

References `std::basic_ostringstream< _CharT, _Traits, _Alloc >::str()`.

- 4.13.2.3 `template<typename _CharT, typename _Traits, typename _String > std::basic_ostream<_CharT, _Traits>&`  
`std::_detail::operator<< ( std::basic_ostream< _CharT, _Traits > & __os, const _Quoted_string< _String, _CharT`  
`> & __str )`

Insertion for quoted strings.

`_GLIBCXX_RESOLVE_LIB_DEFECTS DR 2344` `quoted()`'s interaction with padding is unclear

Definition at line 117 of file `quoted_string.h`.

References `std::basic_ostringstream< _CharT, _Traits, _Alloc >::str()`.

4.13.2.4 `template<typename _CharT, typename _Traits, typename _Alloc> std::basic_istream<_CharT, _Traits>& std::__detail::operator>> ( std::basic_istream<_CharT, _Traits> & __is, const _Quoted_string< basic_string<_CharT, _Traits, _Alloc> &, _CharT > & __str )`

Extractor for delimited strings. The left and right delimiters can be different.

Definition at line 139 of file `quoted_string.h`.

References `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::flags()`, `std::basic_ios<_CharT, _Traits>::good()`, `std::ios_base::setf()`, `std::skipws()`, and `std::basic_istream<_CharT, _Traits>::unset()`.

#### 4.14.1 Detailed Description

GNU parallel code, replaces standard behavior with parallel behavior.

## 4.15 `std::__profile` Namespace Reference

#### 4.15.1 Detailed Description

GNU profile code, replaces standard behavior with profile behavior.

## 4.15.2 Function Documentation

4.15.2.1 `template<typename _Tp, typename _Alloc > bool std::__profile::operator<= ( const forward_list< _Tp, _Alloc > & __lx, const forward_list< _Tp, _Alloc > & __ly ) [inline]`

Based on operator<.

Definition at line 202 of file profile/forward\_list.

4.15.2.2 `template<typename _Tp, typename _Alloc > bool std::__profile::operator> ( const forward_list< _Tp, _Alloc > & __lx, const forward_list< _Tp, _Alloc > & __ly ) [inline]`

Based on operator<.

Definition at line 188 of file profile/forward\_list.

4.15.2.3 `template<typename _Tp, typename _Alloc > bool std::__profile::operator>= ( const forward_list< _Tp, _Alloc > & __lx, const forward_list< _Tp, _Alloc > & __ly ) [inline]`

Based on operator<.

Definition at line 195 of file profile/forward\_list.

4.15.2.4 `template<typename _Tp, typename _Alloc > void std::__profile::swap ( forward_list< _Tp, _Alloc > & __lx, forward_list< _Tp, _Alloc > & __ly ) [inline], [noexcept]`

See `std::forward_list::swap()`.

Definition at line 209 of file profile/forward\_list.

References `std::noexcept`.

- `syntax_option_type & operator^=` (`syntax_option_type &__a`, `syntax_option_type __b`)

### 5.2 Matching Rules

Matching a regular expression against a sequence of characters [first, last) proceeds according to the rules of the grammar specified for the regular expression object, modified according to the effects listed below for any bitmask elements set.

- enum `__match_flag` {  
`_S_not_bol`, `_S_not_eol`, `_S_not_bow`, `_S_not_eow`,  
`_S_any`, `_S_not_null`, `_S_continuous`, `_S_prev_avail`,  
`_S_sed`, `_S_no_copy`, `_S_first_only`, `_S_match_flag_last` }
- enum `match_flag_type` : unsigned int
- `_GLIBCXX17_INLINE` constexpr  
[match\\_flag\\_type match\\_default](#)

- `_GLIBCXX17_INLINE` constexpr `match_flag_type` `match_not_bol`
- `_GLIBCXX17_INLINE` constexpr `match_flag_type` `match_not_eol`
- `_GLIBCXX17_INLINE` constexpr `match_flag_type` `match_not_bow`
- `_GLIBCXX17_INLINE` constexpr `match_flag_type` `match_not_eow`
- `_GLIBCXX17_INLINE` constexpr `match_flag_type` `match_any`
- `_GLIBCXX17_INLINE` constexpr `match_flag_type` `match_not_null`
- `_GLIBCXX17_INLINE` constexpr `match_flag_type` `match_continuous`
- `_GLIBCXX17_INLINE` constexpr `match_flag_type` `match_prev_avail`
- `_GLIBCXX17_INLINE` constexpr `match_flag_type` `format_default`
- `_GLIBCXX17_INLINE` constexpr `match_flag_type` `format_sed`
- `_GLIBCXX17_INLINE` constexpr `match_flag_type` `format_no_copy`
- `_GLIBCXX17_INLINE` constexpr `match_flag_type` `format_first_only`
- constexpr `match_flag_type` `operator&` (`match_flag_type` \_\_a, `match_flag_type` \_\_b)
- constexpr `match_flag_type` `operator|` (`match_flag_type` \_\_a, `match_flag_type` \_\_b)
- constexpr `match_flag_type` `operator^` (`match_flag_type` \_\_a, `match_flag_type` \_\_b)
- constexpr `match_flag_type` `operator~` (`match_flag_type` \_\_a)
- `match_flag_type` & `operator&=` (`match_flag_type` &\_\_a, `match_flag_type` \_\_b)
- `match_flag_type` & `operator|=` (`match_flag_type` &\_\_a, `match_flag_type` \_\_b)
- `match_flag_type` & `operator^=` (`match_flag_type` &\_\_a, `match_flag_type` \_\_b)

### 5.3 Error Types

- enum `error_type` {  
`_S_error_collate`, `_S_error_ctype`, `_S_error_escape`, `_S_error_backref`,  
`_S_error_brack`, `_S_error_paren`, `_S_error_brace`, `_S_error_badbrace`,  
`_S_error_range`, `_S_error_space`, `_S_error_badrepeat`, `_S_error_complexity`,  
`_S_error_stack` }
- constexpr `error_type` `error_collate` (`_S_error_collate`)
- constexpr `error_type` `error_ctype` (`_S_error_ctype`)
- constexpr `error_type` `error_escape` (`_S_error_escape`)
- constexpr `error_type` `error_backref` (`_S_error_backref`)
- constexpr `error_type` `error_brack` (`_S_error_brack`)
- constexpr `error_type` `error_paren` (`_S_error_paren`)
- constexpr `error_type` `error_brace` (`_S_error_brace`)
- constexpr `error_type` `error_badbrace` (`_S_error_badbrace`)
- constexpr `error_type` `error_range` (`_S_error_range`)
- constexpr `error_type` `error_space` (`_S_error_space`)
- constexpr `error_type` `error_badrepeat` (`_S_error_badrepeat`)
- constexpr `error_type` `error_complexity` (`_S_error_complexity`)
- constexpr `error_type` `error_stack` (`_S_error_stack`)

#### 4.19.1 Detailed Description

ISO C++-0x entities sub namespace for regex.

#### 4.19.2 Enumeration Type Documentation

##### 4.19.2.1 enum `std::regex_constants::__match_flag`

This is a bitmask type indicating regex matching rules.

The `match_flag_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

Definition at line 232 of file `regex_constants.h`.

##### 4.19.2.2 enum `std::regex_constants::__syntax_option`

This is a bitmask type indicating how to interpret the regex.

The `syntax_option_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

A valid value of type `syntax_option_type` shall have exactly one of the elements `ECMAScript`, `basic`, `extended`, `awk`, `grep`, `egrep set`.

Definition at line 54 of file `regex_constants.h`.

##### 4.19.2.3 enum `std::regex_constants::error_type`

The expression contained an invalid collating element name.

Definition at line 49 of file `regex_error.h`.

##### 4.19.2.4 enum `std::regex_constants::match_flag_type` : unsigned int

This is a bitmask type indicating regex matching rules.

The `match_flag_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

Definition at line 255 of file `regex_constants.h`.

##### 4.19.2.5 enum `std::regex_constants::syntax_option_type` : unsigned int

This is a bitmask type indicating how to interpret the regex.

The `syntax_option_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

A valid value of type `syntax_option_type` shall have exactly one of the elements `ECMAScript`, `basic`, `extended`, `awk`, `grep`, `egrep set`.

Definition at line 81 of file `regex_constants.h`.

#### 4.19.3 Function Documentation

##### 4.19.3.1 `constexpr error_type std::regex_constants::error_backref ( _S_error_backref )`

The expression contained an invalid back reference.

**4.19.3.2** `constexpr error_type std::regex_constants::error_badbrace ( _S_error_badbrace )`

The expression contained an invalid range in a {} expression.

**4.19.3.3** `constexpr error_type std::regex_constants::error_badrepeat ( _S_error_badrepeat )`

One of \*?+{ was not preceded by a valid regular expression.

**4.19.3.4** `constexpr error_type std::regex_constants::error_brace ( _S_error_brace )`

The expression contained mismatched { and }

**4.19.3.5** `constexpr error_type std::regex_constants::error_brack ( _S_error_brack )`

The expression contained mismatched [ and ].

**4.19.3.6** `constexpr error_type std::regex_constants::error_collate ( _S_error_collate )`

The expression contained an invalid collating element name.

**4.19.3.7** `constexpr error_type std::regex_constants::error_complexity ( _S_error_complexity )`

The complexity of an attempted match against a regular expression exceeded a pre-set level.

**4.19.3.8** `constexpr error_type std::regex_constants::error_ctype ( _S_error_ctype )`

The expression contained an invalid character class name.

**4.19.3.9** `constexpr error_type std::regex_constants::error_escape ( _S_error_escape )`

The expression contained an invalid escaped character, or a trailing escape.

**4.19.3.10** `constexpr error_type std::regex_constants::error_paren ( _S_error_paren )`

The expression contained mismatched ( and ).

**4.19.3.11** `constexpr error_type std::regex_constants::error_range ( _S_error_range )`

The expression contained an invalid character range, such as [b-a] in most encodings.

**4.19.3.12** `constexpr error_type std::regex_constants::error_space ( _S_error_space )`

There was insufficient memory to convert the expression into a finite state machine.

**4.19.3.13** `constexpr error_type std::regex_constants::error_stack ( _S_error_stack )`

There was insufficient memory to determine whether the regular expression could match the specified character sequence.

**4.19.3.14** `constexpr syntax_option_type std::regex_constants::operator& ( syntax_option_type __a, syntax_option_type __b )  
[inline]`

This is a bitmask type indicating how to interpret the regex.

The `syntax_option_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

A valid value of type `syntax_option_type` shall have exactly one of the elements `ECMAScript`, `basic`, `extended`,

awk, grep, egrep set.

Definition at line 183 of file regex\_constants.h.

**4.19.3.15** `constexpr match_flag_type std::regex_constants::operator&( match_flag_type __a, match_flag_type __b )`  
[inline]

This is a bitmask type indicating regex matching rules.

The `match_flag_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

Definition at line 374 of file regex\_constants.h.

**4.19.3.16** `syntax_option_type& std::regex_constants::operator&= ( syntax_option_type & __a, syntax_option_type __b )`  
[inline]

This is a bitmask type indicating how to interpret the regex.

The `syntax_option_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

A valid value of type `syntax_option_type` shall have exactly one of the elements `ECMAScript`, `basic`, `extended`, `awk`, `grep`, `egrep` set.

Definition at line 208 of file regex\_constants.h.

**4.19.3.17** `match_flag_type& std::regex_constants::operator&= ( match_flag_type & __a, match_flag_type __b )` [inline]

This is a bitmask type indicating regex matching rules.

The `match_flag_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

Definition at line 399 of file regex\_constants.h.

**4.19.3.18** `constexpr syntax_option_type std::regex_constants::operator^( syntax_option_type __a, syntax_option_type __b )`  
[inline]

This is a bitmask type indicating how to interpret the regex.

The `syntax_option_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

A valid value of type `syntax_option_type` shall have exactly one of the elements `ECMAScript`, `basic`, `extended`, `awk`, `grep`, `egrep` set.

Definition at line 197 of file regex\_constants.h.

**4.19.3.19** `constexpr match_flag_type std::regex_constants::operator^( match_flag_type __a, match_flag_type __b )`  
[inline]

This is a bitmask type indicating regex matching rules.

The `match_flag_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

Definition at line 388 of file regex\_constants.h.

**4.19.3.20** `syntax_option_type& std::regex_constants::operator^( syntax_option_type & __a, syntax_option_type __b )`  
[inline]

This is a bitmask type indicating how to interpret the regex.

The `syntax_option_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

A valid value of type `syntax_option_type` shall have exactly one of the elements `ECMAScript`, `basic`, `extended`, `awk`, `grep`, `egrep` set.

Definition at line 216 of file `regex_constants.h`.

**4.19.3.21** `match_flag_type& std::regex_constants::operator^( match_flag_type & __a, match_flag_type __b )` [inline]

This is a bitmask type indicating regex matching rules.

The `match_flag_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

Definition at line 407 of file `regex_constants.h`.

**4.19.3.22** `constexpr syntax_option_type std::regex_constants::operator|( syntax_option_type __a, syntax_option_type __b )`  
[inline]

This is a bitmask type indicating how to interpret the regex.

The `syntax_option_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

A valid value of type `syntax_option_type` shall have exactly one of the elements `ECMAScript`, `basic`, `extended`, `awk`, `grep`, `egrep` set.

Definition at line 190 of file `regex_constants.h`.

**4.19.3.23** `constexpr match_flag_type std::regex_constants::operator|( match_flag_type __a, match_flag_type __b )`  
[inline]

This is a bitmask type indicating regex matching rules.

The `match_flag_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

Definition at line 381 of file `regex_constants.h`.

**4.19.3.24** `syntax_option_type& std::regex_constants::operator|=( syntax_option_type & __a, syntax_option_type __b )`  
[inline]

This is a bitmask type indicating how to interpret the regex.

The `syntax_option_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

A valid value of type `syntax_option_type` shall have exactly one of the elements `ECMAScript`, `basic`, `extended`, `awk`, `grep`, `egrep` set.

Definition at line 212 of file `regex_constants.h`.

**4.19.3.25** `match_flag_type& std::regex_constants::operator|=( match_flag_type & __a, match_flag_type __b )` [inline]

This is a bitmask type indicating regex matching rules.

The `match_flag_type` is implementation defined but it is valid to perform bitwise operations on these values and

expect the right thing to happen.

Definition at line 403 of file `regex_constants.h`.

#### 4.19.3.26 `constexpr syntax_option_type std::regex_constants::operator~( syntax_option_type __a ) [inline]`

This is a bitmask type indicating how to interpret the regex.

The `syntax_option_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

A valid value of type `syntax_option_type` shall have exactly one of the elements `ECMAScript`, `basic`, `extended`, `awk`, `grep`, `egrep` set.

Definition at line 204 of file `regex_constants.h`.

#### 4.19.3.27 `constexpr match_flag_type std::regex_constants::operator~( match_flag_type __a ) [inline]`

This is a bitmask type indicating regex matching rules.

The `match_flag_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

Definition at line 395 of file `regex_constants.h`.

### 4.19.4 Variable Documentation

#### 4.19.4.1 `_GLIBCXX17_INLINE constexpr syntax_option_type std::regex_constants::__polynomial`

Extension: Ensure both space complexity of compiled regex and time complexity execution are not exponential. If specified in a regex with back-references, the exception `regex_constants::error_complexity` will be thrown.

Definition at line 179 of file `regex_constants.h`.

#### 4.19.4.2 `_GLIBCXX17_INLINE constexpr syntax_option_type std::regex_constants::awk`

Specifies that the grammar recognized by the regular expression engine is that used by POSIX utility `awk` in IEEE Std 1003.1-2001. This option is identical to `syntax_option_type extended`, except that C-style escape sequences are supported. These sequences are: `\\`, `\a`, `\b`, `\f`, `\n`, `\r`, `\t`, `\v`, `\&apos;`, `&apos;`, and `\ddd` (where `ddd` is one, two, or three octal digits).

Definition at line 152 of file `regex_constants.h`.

#### 4.19.4.3 `_GLIBCXX17_INLINE constexpr syntax_option_type std::regex_constants::basic`

Specifies that the grammar recognized by the regular expression engine is that used by POSIX basic regular expressions in IEEE Std 1003.1-2001, Portable Operating System Interface (POSIX), Base Definitions and Headers, Section 9, Regular Expressions [IEEE, Information Technology – Portable Operating System Interface (POSIX), IEEE Standard 1003.1-2001].

Definition at line 132 of file `regex_constants.h`.

#### 4.19.4.4 `_GLIBCXX17_INLINE constexpr syntax_option_type std::regex_constants::collate`

Specifies that character ranges of the form `[a-b]` should be locale sensitive.

Definition at line 111 of file `regex_constants.h`.

#### 4.19.4.5 `_GLIBCXX17_INLINE constexpr syntax_option_type std::regex_constants::ECMAScript`

Specifies that the grammar recognized by the regular expression engine is that used by ECMAScript in ECMA-262 [Ecma International, ECMAScript Language Specification, Standard Ecma-262, third edition, 1999], as modified in section [28.13]. This grammar is similar to that defined in the PERL scripting language but extended with elements found in the POSIX regular expression grammar.

Definition at line 122 of file `regex_constants.h`.

#### 4.19.4.6 `_GLIBCXX17_INLINE constexpr syntax_option_type std::regex_constants::egrep`

Specifies that the grammar recognized by the regular expression engine is that used by POSIX utility `grep` when given the `-E` option in IEEE Std 1003.1-2001. This option is identical to `syntax_option_type` extended, except that newlines are treated as whitespace.

Definition at line 170 of file `regex_constants.h`.

#### 4.19.4.7 `_GLIBCXX17_INLINE constexpr syntax_option_type std::regex_constants::extended`

Specifies that the grammar recognized by the regular expression engine is that used by POSIX extended regular expressions in IEEE Std 1003.1-2001, Portable Operating System Interface (POSIX), Base Definitions and Headers, Section 9, Regular Expressions.

Definition at line 141 of file `regex_constants.h`.

#### 4.19.4.8 `_GLIBCXX17_INLINE constexpr match_flag_type std::regex_constants::format_default`

When a regular expression match is to be replaced by a new string, the new string is constructed using the rules used by the ECMAScript `replace` function in ECMA-262 [Ecma International, ECMAScript Language Specification, Standard Ecma-262, third edition, 1999], part 15.5.4.11 `String.prototype.replace`. In addition, during search and replace operations all non-overlapping occurrences of the regular expression are located and replaced, and sections of the input that did not match the expression are copied unchanged to the output string.

Format strings (from ECMA-262 [15.5.4.11]):

- `$$` The dollar-sign itself (`$`)
- `&` The matched substring.
- `$'` The portion of *string* that precedes the matched substring. This would be `match_results::prefix()`.
- `$'` The portion of *string* that follows the matched substring. This would be `match_results::suffix()`.
- `$n` The *n*th capture, where *n* is in [1,9] and `$n` is not followed by a decimal digit. If `n <= match_results::size()` and the *n*th capture is undefined, use the empty string instead. If `n > match_results::size()`, the result is implementation-defined.
- `$nn` The *nn*th capture, where *nn* is a two-digit decimal number on [01, 99]. If `nn <= match_results::size()` and the *n*th capture is undefined, use the empty string instead. If `nn > match_results::size()`, the result is implementation-defined.

Definition at line 346 of file `regex_constants.h`.

#### 4.19.4.9 `_GLIBCXX17_INLINE constexpr match_flag_type std::regex_constants::format_first_only`

When specified during a search and replace operation, only the first occurrence of the regular expression shall be replaced.

Definition at line 370 of file `regex_constants.h`.

Referenced by `std::regex_replace()`.

#### 4.19.4.10 `_GLIBCXX17_INLINE constexpr match_flag_type std::regex_constants::format_no_copy`

During a search and replace operation, sections of the character container sequence being searched that do not match the regular expression shall not be copied to the output string.

Definition at line 363 of file `regex_constants.h`.

Referenced by `std::regex_replace()`.

#### 4.19.4.11 `_GLIBCXX17_INLINE constexpr match_flag_type std::regex_constants::format_sed`

When a regular expression match is to be replaced by a new string, the new string is constructed using the rules used by the POSIX `sed` utility in IEEE Std 1003.1-2001 [IEEE, Information Technology – Portable Operating System Interface (POSIX), IEEE Standard 1003.1-2001].

Definition at line 355 of file `regex_constants.h`.

#### 4.19.4.12 `_GLIBCXX17_INLINE constexpr syntax_option_type std::regex_constants::grep`

Specifies that the grammar recognized by the regular expression engine is that used by POSIX utility `grep` in IEEE Std 1003.1-2001. This option is identical to `syntax_option_type basic`, except that newlines are treated as whitespace.

Definition at line 161 of file `regex_constants.h`.

#### 4.19.4.13 `_GLIBCXX17_INLINE constexpr syntax_option_type std::regex_constants::icase`

Specifies that the matching of regular expressions against a character sequence shall be performed without regard to case.

Definition at line 87 of file `regex_constants.h`.

#### 4.19.4.14 `_GLIBCXX17_INLINE constexpr match_flag_type std::regex_constants::match_any`

If more than one match is possible then any match is an acceptable result.

Definition at line 297 of file `regex_constants.h`.

#### 4.19.4.15 `_GLIBCXX17_INLINE constexpr match_flag_type std::regex_constants::match_continuous`

The expression only matches a sub-sequence that begins at first .

Definition at line 309 of file `regex_constants.h`.

Referenced by `std::regex_iterator<_Bi_iter, _Ch_type, _Rx_traits >::operator++()`.

#### 4.19.4.16 `_GLIBCXX17_INLINE constexpr match_flag_type std::regex_constants::match_default`

The default matching rules.

Definition at line 260 of file `regex_constants.h`.

#### 4.19.4.17 `_GLIBCXX17_INLINE constexpr match_flag_type std::regex_constants::match_not_bol`

The first character in the sequence [first, last) is treated as though it is not at the beginning of a line, so the character (^) in the regular expression shall not match [first, first).

Definition at line 268 of file `regex_constants.h`.

#### 4.19.4.18 `_GLIBCXX17_INLINE constexpr match_flag_type std::regex_constants::match_not_bow`

The expression `\b` is not matched against the sub-sequence [first,first).

Definition at line 283 of file `regex_constants.h`.

#### 4.19.4.19 `_GLIBCXX17_INLINE constexpr match_flag_type std::regex_constants::match_not_eol`

The last character in the sequence [first, last) is treated as though it is not at the end of a line, so the character (\$) in the regular expression shall not match [last, last).

Definition at line 276 of file `regex_constants.h`.

#### 4.19.4.20 `_GLIBCXX17_INLINE constexpr match_flag_type std::regex_constants::match_not_eow`

The expression `\b` should not be matched against the sub-sequence [last,last).

Definition at line 290 of file `regex_constants.h`.

#### 4.19.4.21 `_GLIBCXX17_INLINE constexpr match_flag_type std::regex_constants::match_not_null`

The expression does not match an empty sequence.

Definition at line 303 of file `regex_constants.h`.

Referenced by `std::regex_iterator<_Bi_iter, _Ch_type, _Rx_traits >::operator++()`.

#### 4.19.4.22 `_GLIBCXX17_INLINE constexpr match_flag_type std::regex_constants::match_prev_avail`

`first` is a valid iterator position. When this flag is set then the flags `match_not_bol` and `match_not_bow` are ignored by the regular expression algorithms 28.11 and iterators 28.12.

Definition at line 317 of file `regex_constants.h`.

Referenced by `std::regex_iterator<_Bi_iter, _Ch_type, _Rx_traits >::operator++()`.

#### 4.19.4.23 `_GLIBCXX17_INLINE constexpr syntax_option_type std::regex_constants::nosubs`

Specifies that when a regular expression is matched against a character container sequence, no sub-expression matches are to be stored in the supplied `match_results` structure.

Definition at line 95 of file `regex_constants.h`.

#### 4.19.4.24 `_GLIBCXX17_INLINE constexpr syntax_option_type std::regex_constants::optimize`

Specifies that the regular expression engine should pay more attention to the speed with which regular expressions are matched, and less to the speed with which regular expression objects are constructed. Otherwise it has no detectable effect on the program output.

Definition at line 104 of file `regex_constants.h`.

## 4.20 `std::rel_ops` Namespace Reference

### Functions

- `template<class _Tp > bool operator!= (const _Tp &__x, const _Tp &__y)`
- `template<class _Tp > bool operator<= (const _Tp &__x, const _Tp &__y)`
- `template<class _Tp > bool operator> (const _Tp &__x, const _Tp &__y)`
- `template<class _Tp > bool operator>= (const _Tp &__x, const _Tp &__y)`

#### 4.20.1 Detailed Description

The generated relational operators are sequestered here.

#### 4.20.2 Function Documentation

4.20.2.1 `template<class _Tp > bool std::rel_ops::operator!=( const_Tp & __x, const_Tp & __y ) [inline]`

Defines != for arbitrary types, in terms of ==.

##### Parameters

|                  |                |
|------------------|----------------|
| <code>__x</code> | A thing.       |
| <code>__y</code> | Another thing. |

##### Returns

`__x != __y`

This function uses == to determine its result.

Definition at line 87 of file stl\_relops.h.

4.20.2.2 `template<class _Tp > bool std::rel_ops::operator<= ( const_Tp & __x, const_Tp & __y ) [inline]`

Defines <= for arbitrary types, in terms of <.

##### Parameters

|                  |                |
|------------------|----------------|
| <code>__x</code> | A thing.       |
| <code>__y</code> | Another thing. |

##### Returns

`__x <= __y`

This function uses < to determine its result.

Definition at line 113 of file stl\_relops.h.

4.20.2.3 `template<class _Tp > bool std::rel_ops::operator> ( const_Tp & __x, const_Tp & __y ) [inline]`

Defines > for arbitrary types, in terms of <.

##### Parameters

|                  |                |
|------------------|----------------|
| <code>__x</code> | A thing.       |
| <code>__y</code> | Another thing. |

##### Returns

`__x > __y`

This function uses < to determine its result.

Definition at line 100 of file stl\_relops.h.

4.20.2.4 `template<class _Tp > bool std::rel_ops::operator>= ( const_Tp & __x, const_Tp & __y ) [inline]`

Defines >= for arbitrary types, in terms of <.

## Parameters

|                  |                |
|------------------|----------------|
| <code>__x</code> | A thing.       |
| <code>__y</code> | Another thing. |

## Returns

`__x >= __y`

This function uses `<` to determine its result.

Definition at line 126 of file `std_relops.h`.

4.21 `std::this_thread` Namespace Reference

## Functions

- `void __sleep_for (chrono::seconds, chrono::nanoseconds)`
- `thread::id get_id () noexcept`
- `template<typename _Rep, typename _Period > void sleep_for (const chrono::duration< _Rep, _Period > &__rtime)`
- `template<typename _Clock, typename _Duration > void sleep_until (const chrono::time_point< _Clock, _Duration > &__atime)`
- `void yield () noexcept`

## 4.21.1 Detailed Description

ISO C++ 2011 entities sub-namespace for thread. 30.3.2 Namespace `this_thread`.

## 4.21.2 Function Documentation

4.21.2.1 `thread::id std::this_thread::get_id ( ) [inline], [noexcept]`

`get_id`

Definition at line 329 of file `thread`.

4.21.2.2 `template<typename _Rep, typename _Period > void std::this_thread::sleep_for ( const chrono::duration< _Rep, _Period > &__rtime ) [inline]`

`sleep_for`

Definition at line 357 of file `thread`.

4.21.2.3 `template<typename _Clock, typename _Duration > void std::this_thread::sleep_until ( const chrono::time_point< _Clock, _Duration > &__atime ) [inline]`

`sleep_until`

Definition at line 379 of file `thread`.

4.21.2.4 `void std::this_thread::yield ( ) [inline], [noexcept]`

`yield`

Definition at line 344 of file `thread`.

### 5.2.1 Detailed Description

`template<typename _Alloc, typename = typename _Alloc::value_type>struct __gnu_cxx::__alloc_traits<_Alloc, typename >`

Uniform interface to C++98 and C++11 allocators.

Definition at line 50 of file `ext/alloc_traits.h`.

### 5.2.2 Member Typedef Documentation

**5.2.2.1** `template<typename _Alloc> using std::allocator_traits<_Alloc >::const_void_pointer = typename _Ptr<__cv_pointer, const void>::type` [inherited]

The allocator's const void pointer type.

`Alloc::const_void_pointer` if that type exists, otherwise `pointer_traits<pointer>::rebind<const void>`

Definition at line 151 of file `bits/alloc_traits.h`.

**5.2.2.2** `template<typename _Alloc> using std::allocator_traits<_Alloc >::is_always_equal = __detected_or_t<typename is_empty<_Alloc>::type, __equal, _Alloc>` [inherited]

Whether all instances of the allocator type compare equal.

`Alloc::is_always_equal` if that type exists, otherwise `is_empty<Alloc>::type`

Definition at line 203 of file `bits/alloc_traits.h`.

**5.2.2.3** `template<typename _Alloc> using std::allocator_traits<_Alloc >::propagate_on_container_copy_assignment = __detected_or_t<false_type, __pocca, _Alloc>` [inherited]

How the allocator is propagated on copy assignment.

`Alloc::propagate_on_container_copy_assignment` if that type exists, otherwise `false_type`

Definition at line 176 of file `bits/alloc_traits.h`.

**5.2.2.4** `template<typename _Alloc> using std::allocator_traits<_Alloc >::propagate_on_container_move_assignment = __detected_or_t<false_type, __pocma, _Alloc>` [inherited]

How the allocator is propagated on move assignment.

`Alloc::propagate_on_container_move_assignment` if that type exists, otherwise `false_type`

Definition at line 185 of file `bits/alloc_traits.h`.

**5.2.2.5** `template<typename _Alloc> using std::allocator_traits< _Alloc >::propagate_on_container_swap =  
 __detected_or_t<false_type, __pocs, _Alloc> [inherited]`

How the allocator is propagated on swap.

`Alloc::propagate_on_container_swap` if that type exists, otherwise `false_type`

Definition at line 194 of file `bits/alloc_traits.h`.

**5.2.2.6** `template<typename _Alloc> using std::allocator_traits< _Alloc >::void_pointer = typename _Ptr<__v_pointer,  
 void>::type [inherited]`

The allocator's void pointer type.

`Alloc::void_pointer` if that type exists, otherwise `pointer_traits<pointer>::rebind<void>`

Definition at line 143 of file `bits/alloc_traits.h`.

### 5.2.3 Member Function Documentation

**5.2.3.1** `template<typename _Alloc> static pointer std::allocator_traits< _Alloc >::allocate ( _Alloc & __a, size_type __n )  
 [inline], [static], [inherited]`

Allocate memory.

#### Parameters

|                  |                                              |
|------------------|----------------------------------------------|
| <code>__a</code> | An allocator.                                |
| <code>__n</code> | The number of objects to allocate space for. |

Calls `a.allocate(n)`

Definition at line 300 of file `bits/alloc_traits.h`.

**5.2.3.2** `template<typename _Alloc> static pointer std::allocator_traits< _Alloc >::allocate ( _Alloc & __a, size_type __n,  
 const_void_pointer __hint ) [inline], [static], [inherited]`

Allocate memory.

#### Parameters

|                     |                                              |
|---------------------|----------------------------------------------|
| <code>__a</code>    | An allocator.                                |
| <code>__n</code>    | The number of objects to allocate space for. |
| <code>__hint</code> | Aid to locality.                             |

#### Returns

Memory of suitable size and alignment for  $n$  objects of type `value_type`

Returns `a.allocate(n, hint)` if that expression is well-formed, otherwise returns `a.allocate(n)`

Definition at line 315 of file `bits/alloc_traits.h`.

**5.2.3.3** `template<typename _Alloc> template<typename _Tp, typename... _Args> static auto std::allocator_traits<  
 _Alloc >::construct ( _Alloc & __a, _Tp * __p, _Args &&... __args ) -> decltype(_S_construct(__a, __p,  
 std::forward<_Args>(_args)...)) [inline], [static], [inherited]`

Construct an object of type `_Tp`.

## Parameters

|                     |                                                                      |
|---------------------|----------------------------------------------------------------------|
| <code>__a</code>    | An allocator.                                                        |
| <code>__p</code>    | Pointer to memory of suitable size and alignment for <code>Tp</code> |
| <code>__args</code> | Constructor arguments.                                               |

Calls `__a.construct(__p, std::forward<Args>(__args)...)`  if that expression is well-formed, otherwise uses placement-new to construct an object of type `_Tp` at location `__p` from the arguments `__args...`

Definition at line 342 of file `bits/alloc_traits.h`.

**5.2.3.4** `template<typename _Alloc> static void std::allocator_traits<_Alloc >::deallocate ( _Alloc & __a, pointer __p, size_type __n )` `[inline]`, `[static]`, `[inherited]`

Deallocate memory.

## Parameters

|                  |                                                |
|------------------|------------------------------------------------|
| <code>__a</code> | An allocator.                                  |
| <code>__p</code> | Pointer to the memory to deallocate.           |
| <code>__n</code> | The number of objects space was allocated for. |

Calls `a.deallocate(p, n)`

Definition at line 327 of file `bits/alloc_traits.h`.

Referenced by `std::__allocated_ptr<_Alloc >::~~__allocated_ptr()`.

**5.2.3.5** `template<typename _Alloc> template<typename _Tp > static void std::allocator_traits<_Alloc >::destroy ( _Alloc & __a, _Tp* __p )` `[inline]`, `[static]`, `[inherited]`

Destroy an object of type `_Tp`.

## Parameters

|                  |                                  |
|------------------|----------------------------------|
| <code>__a</code> | An allocator.                    |
| <code>__p</code> | Pointer to the object to destroy |

Calls `__a.destroy(__p)` if that expression is well-formed, otherwise calls `__p->~_Tp()`

Definition at line 355 of file `bits/alloc_traits.h`.

**5.2.3.6** `template<typename _Alloc> static size_type std::allocator_traits<_Alloc >::max_size ( const _Alloc & __a )` `[inline]`, `[static]`, `[noexcept]`, `[inherited]`

The maximum supported allocation size.

## Parameters

|                  |               |
|------------------|---------------|
| <code>__a</code> | An allocator. |
|------------------|---------------|

**Returns**

`__a.max_size()` or `numeric_limits<size_type>::max()`

Returns `__a.max_size()` if that expression is well-formed, otherwise returns `numeric_limits<size_type>::max()`

Definition at line 366 of file `bits/alloc_traits.h`.

Referenced by `std::forward_list<_Tp, _Alloc>::max_size()`, and `std::list<__inp, __rebind_inp>::max_size()`.

**5.2.3.7** `template<typename _Alloc> static _Alloc std::allocator_traits<_Alloc>::select_on_container_copy_construction ( const _Alloc & __rhs )` `[inline]`, `[static]`, `[inherited]`

Obtain an allocator to use when copying a container.

## Parameters

|                    |               |
|--------------------|---------------|
| <code>__rhs</code> | An allocator. |
|--------------------|---------------|

## Returns

`__rhs.select_on_container_copy_construction()` or `__rhs`

Returns `__rhs.select_on_container_copy_construction()` if that expression is well-formed, otherwise returns `__rhs`

Definition at line 378 of file `bits/alloc_traits.h`.

The documentation for this struct was generated from the following file:

- [ext/alloc\\_traits.h](#)

5.3 `__gnu_cxx::__common_pool_policy<_PoolTp, _Thread >` Struct Template Reference

Inherits `__gnu_cxx::__common_pool_base<_PoolTp, _Thread >`.

## 5.3.1 Detailed Description

```
template<template< bool > class _PoolTp, bool _Thread> struct __gnu_cxx::__common_pool_policy< _PoolTp, _Thread >
```

Policy for shared `__pool` objects.

Definition at line 460 of file `mt_allocator.h`.

The documentation for this struct was generated from the following file:

- [mt\\_allocator.h](#)

5.4 `__gnu_cxx::__detail::__mini_vector<_Tp >` Class Template Reference

## Public Types

- typedef const `_Tp` & **const\_reference**
- typedef ptrdiff\_t **difference\_type**
- typedef pointer **iterator**
- typedef `_Tp` \* **pointer**
- typedef `_Tp` & **reference**
- typedef size\_t **size\_type**

- size\_type **size** () const throw ()

#### 5.4.1 Detailed Description

```
template<typename _Tp>class __gnu_cxx::__detail::__mini_vector< _Tp >
```

`__mini_vector<>` is a stripped down version of the full-fledged `std::vector<>`.

It is to be used only for built-in types or PODs. Notable differences are:

1. Not all accessor functions are present.
2. Used ONLY for PODs.
3. No Allocator template argument. Uses operator `new()` to get memory, and operator `delete()` to free it. Caveat: The dtor does NOT free the memory allocated, so this a memory-leaking vector!

Definition at line 70 of file `bitmap_allocator.h`.

The documentation for this class was generated from the following file:

- [bitmap\\_allocator.h](#)

## 5.5 `__gnu_cxx::__detail::Bitmap_counter< _Tp >` Class Template Reference

### Public Member Functions

- `_Bitmap_counter` (`_BPVector` &Rvbp, long \_\_index=-1)
- pointer `_M_base` () const throw ()
- bool `_M_finished` () const throw ()
- `size_t * _M_get` () const throw ()
- `_Index_type _M_offset` () const throw ()
- void `_M_reset` (long \_\_index=-1) throw ()
- void `_M_set_internal_bitmap` (`size_t * __new_internal_marker`) throw ()
- `_Index_type _M_where` () const throw ()
- `_Bitmap_counter` & `operator++` () throw ()

#### 5.5.1 Detailed Description

```
template<typename _Tp>class __gnu_cxx::__detail::Bitmap_counter< _Tp >
```

The bitmap counter which acts as the bitmap manipulator, and manages the bit-manipulation functions and the searching and identification functions on the bit-map.

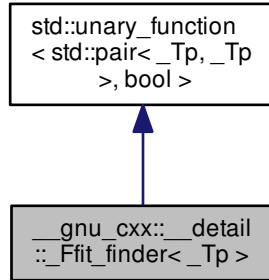

Definition at line 397 of file `bitmap_allocator.h`.

The documentation for this class was generated from the following file:

- [bitmap\\_allocator.h](#)

5.6 `__gnu_cxx::__detail::_Ffit_finder<_Tp>` Class Template Reference

Inheritance diagram for `__gnu_cxx::__detail::_Ffit_finder<_Tp>`:

## Public Types

- typedef `std::pair<_Tp, _Tp>` `argument_type`
- typedef `bool` `result_type`

## Public Member Functions

- `size_t * _M_get () const throw ()`
- `_Counter_type _M_offset () const throw ()`
- `bool operator() (_Block_pair __bp) throw ()`

## 5.6.1 Detailed Description

```
template<typename _Tp>class __gnu_cxx::__detail::_Ffit_finder<_Tp>
```

The class which acts as a predicate for applying the first-fit memory allocation policy for the bitmap allocator.

Definition at line 332 of file `bitmap_allocator.h`.

## 5.6.2 Member Typedef Documentation

5.6.2.1 typedef `std::pair<_Tp, _Tp>` `std::unary_function<std::pair<_Tp, _Tp>, bool>::argument_type`  
`[inherited]`

`argument_type` is the type of the argument

Definition at line 108 of file `stl_function.h`.

### 5.6.2.2 typedef bool std::unary\_function< std::pair< \_Tp, \_Tp >, bool >::result\_type [inherited]

result\_type is the return type

Definition at line 111 of file stl\_function.h.

The documentation for this class was generated from the following file:

- [bitmap\\_allocator.h](#)

## 5.7 \_\_gnu\_cxx::\_\_mt\_alloc< \_Tp, \_Poolp > Class Template Reference

Inheritance diagram for \_\_gnu\_cxx::\_\_mt\_alloc< \_Tp, \_Poolp >:

### Public Types

- typedef \_Poolp **\_\_policy\_type**
- typedef \_Poolp::pool\_type **\_\_pool\_type**
- typedef const \_Tp \* **const\_pointer**
- typedef const \_Tp & **const\_reference**
- typedef ptrdiff\_t **difference\_type**
- typedef \_Tp \* **pointer**

- template<typename \_Tp1, typename \_Poolp1 >  
  **\_\_mt\_alloc** (const [\\_\\_mt\\_alloc](#)< \_Tp1, \_Poolp1 > &) noexcept
- const \_\_pool\_base::\_Tune **\_M\_get\_options** ()
- void **\_M\_set\_options** (\_\_pool\_base::\_Tune \_\_t)
- pointer **address** (reference \_\_x) const noexcept

- const\_pointer **address** (const\_reference \_\_x) const noexcept
- pointer **allocate** (size\_type \_\_n, const void \*=0)
- template<typename \_Up, typename... \_Args>  
void **construct** (\_Up \*\_\_p, \_Args &&... \_\_args)
- void **deallocate** (pointer \_\_p, size\_type \_\_n)
- template<typename \_Up >  
void **destroy** (\_Up \*\_\_p)
- size\_type **max\_size** () const noexcept

### 5.7.1 Detailed Description

```
template<typename _Tp, typename _Poolp = __common_pool_policy<__pool, true >>class __gnu_cxx::__mt_alloc< _Tp, _Poolp >
```

This is a fixed size (power of 2) allocator which - when compiled with thread support - will maintain one freelist per size per thread plus a *global* one. Steps are taken to limit the per thread freelist sizes (by returning excess back to the *global* list).

Further details: [https://gcc.gnu.org/onlinedocs/libstdc++/manual/mt\\_allocator.html](https://gcc.gnu.org/onlinedocs/libstdc++/manual/mt_allocator.html).

Definition at line 639 of file `mt_allocator.h`.

The documentation for this class was generated from the following file:

- [mt\\_allocator.h](#)

## 5.8 `__gnu_cxx::__mt_alloc_base<_Tp>` Class Template Reference

Inheritance diagram for `__gnu_cxx::__mt_alloc_base<_Tp>`:

### Public Types

- typedef const \_Tp \* **const\_pointer**
- typedef const \_Tp & **const\_reference**
- typedef ptrdiff\_t **difference\_type**
- typedef \_Tp \* **pointer**

- typedef [std::true\\_type](#) **propagate\_on\_container\_move\_assignment**
- typedef `_Tp` & **reference**
- typedef `size_t` **size\_type**
- typedef `_Tp` **value\_type**

#### Public Member Functions

- pointer **address** (reference `__x`) const noexcept
- const\_pointer **address** (const\_reference `__x`) const noexcept

void **construct** (`_Up` \*`__p`, `_Args` &&...`__args`)
- template<typename `_Up` >  
void **destroy** (`_Up` \*`__p`)
- `size_type` **max\_size** () const noexcept

#### 5.8.1 Detailed Description

```
template<typename _Tp>class __gnu_cxx::__mt_alloc_base< _Tp >
```

Base class for `_Tp` dependent member functions.

Definition at line 570 of file `mt_allocator.h`.

The documentation for this class was generated from the following file:

- [mt\\_allocator.h](#)

### 5.9 `__gnu_cxx::__per_type_pool_policy< _Tp, _PoolTp, _Thread >` Struct Template Reference

Inherits `__gnu_cxx::__per_type_pool_base< _Tp, _PoolTp, _Thread >`.

#### 5.9.1 Detailed Description

```
template<typename _Tp, template< bool > class _PoolTp, bool _Thread>struct __gnu_cxx::__per_type_pool_policy< _Tp, _PoolTp, _Thread >
```

Policy for individual `__pool` objects.

Definition at line 555 of file `mt_allocator.h`.

The documentation for this struct was generated from the following file:

- [mt\\_allocator.h](#)

### 5.10 `__gnu_cxx::__pool< _Thread >` Class Template Reference

#### 5.10.1 Detailed Description

```
template<bool _Thread>class __gnu_cxx::__pool< _Thread >
```

Data describing the underlying memory pool, parameterized on threading support.

Definition at line 192 of file `mt_allocator.h`.

The documentation for this class was generated from the following file:

- [mt\\_allocator.h](#)

## 5.11 `__gnu_cxx::__pool<false>` Class Template Reference

Inheritance diagram for `__gnu_cxx::__pool<false>`:

### Public Types

- typedef unsigned short int `_Binmap_type`

### Public Member Functions

- `__pool` (const `__pool_base::Tune &__tune`)
- void `_M_adjust_freelist` (const `_Bin_record &`, `_Block_record *`, `size_t`)

- void `_M_reclaim_block` (`char * __p`, `size_t __bytes`) throw ()
- `char * _M_reserve_block` (`size_t __bytes`, const `size_t __thread_id`)
- void `_M_set_options` (`_Tune __t`)

### Protected Attributes

- `_Binmap_type * _M_binmap`
- bool `_M_init`
- `_Tune _M_options`

### 5.11.1 Detailed Description

```
template<>class __gnu_cxx::__pool< false >
```

Specialization for single thread.

Definition at line 196 of file `mt_allocator.h`.

The documentation for this class was generated from the following file:

- [mt\\_allocator.h](#)

### 5.12 \_\_gnu\_cxx::\_\_pool< true > Class Template Reference

Inheritance diagram for `__gnu_cxx::__pool< true >`:

#### Public Types

- typedef unsigned short int **\_Binmap\_type**

#### Public Member Functions

- **\_\_pool** (const \_\_pool\_base::\_Tune &\_\_tune)
- void **\_M\_adjust\_freelist** (const \_Bin\_record &\_\_bin, \_Block\_record \*\_\_block, size\_t \_\_thread\_id)
- bool **\_M\_check\_threshold** (size\_t \_\_bytes)
- void **\_M\_destroy** () throw ()
- void **\_M\_destroy\_thread\_key** (void \*) throw ()
- size\_t **\_M\_get\_align** ()
- const \_Bin\_record & **\_M\_get\_bin** (size\_t \_\_which)
- size\_t **\_M\_get\_binmap** (size\_t \_\_bytes)
- const \_Tune & **\_M\_get\_options** () const
- size\_t **\_M\_get\_thread\_id** ()
- void **\_M\_initialize** (\_\_destroy\_handler)
- void **\_M\_initialize\_once** ()
- void **\_M\_reclaim\_block** (char \*\_\_p, size\_t \_\_bytes) throw ()
- char \* **\_M\_reserve\_block** (size\_t \_\_bytes, const size\_t \_\_thread\_id)
- void **\_M\_set\_options** (\_Tune \_\_t)

## Protected Attributes

- `_Binmap_type * _M_binmap`
- `bool _M_init`
- `_Tune _M_options`

## 5.12.1 Detailed Description

```
template<>class __gnu_cxx::__pool< true >
```

Specialization for thread enabled, via gthreads.h.

Definition at line 263 of file `mt_allocator.h`.

The documentation for this class was generated from the following file:

- [mt\\_allocator.h](#)

## 5.13 \_\_gnu\_cxx::\_\_pool\_alloc&lt; \_Tp &gt; Class Template Reference

Inheritance diagram for `__gnu_cxx::__pool_alloc< _Tp >`:

## Public Types

- `typedef const _Tp * const_pointer`

- static `_Obj *volatile _S_free_list` [`_S_free_list_size`]
- static `size_t _S_heap_size`
- static `char * _S_start_free`

## 5.14.1 Detailed Description

Base class for `__pool_alloc`.

Uses various allocators to fulfill underlying requests (and makes as few requests as possible when in default high-speed pool mode).

Important implementation properties: 0. If globally mandated, then allocate objects from new 1. If the clients request an object of size  $> \_S\_max\_bytes$ , the resulting object will be obtained directly from new 2. In all other cases, we allocate an object of size exactly `\_S\_round\_up(requested\_size)`. Thus the client has enough size information that we can return the object to the proper free list without permanently losing part of the object.

Definition at line 78 of file pool\_allocator.h.

The documentation for this class was generated from the following file:

- [pool\\_allocator.h](#)

## 5.15 \_\_gnu\_cxx::\_\_pool\_base Struct Reference

Inheritance diagram for \_\_gnu\_cxx::\_\_pool\_base:

### Public Types

- typedef unsigned short int **\_Binmap\_type**

### Public Member Functions

- **\_\_pool\_base** (const \_Tune &\_\_options)

## 5.16.1 Detailed Description

template<typename `_CharT`, typename `_Traits`, typename `_Alloc`>class `__gnu_cxx::__rc_string_base`< `_CharT, _Traits, _Alloc` >

Documentation? What's that? Nathan Myers [ncm@cantrip.org](mailto:ncm@cantrip.org).

A string looks like this:

```
*
*                                     [_Rep]
*                                     _M_length
*  [__rc_string_base<char_type>]      _M_capacity
*  _M_dataplus                        _M_refcount
*  _M_p ----->                      unnamed array of char_type
*
```

Where the `_M_p` points to the first character in the string, and you cast it to a pointer-to-`_Rep` and subtract 1 to get a pointer to the header.

This approach has the enormous advantage that a string object requires only one allocation. All the ugliness is confined within a single pair of inline functions, which each compile to a single *add* instruction: `_Rep::_M_refdata()`, and `__rc_string_base::_M_rep()`; and the allocation function which gets a block of raw bytes and with room enough and constructs a `_Rep` object at the front.

The reason you want `_M_data` pointing to the character array and not the `_Rep` is so that the debugger can see the string contents. (Probably we should add a non-inline member to get the `_Rep` for the debugger to use, so users can check the actual string length.)

Note that the `_Rep` object is a POD so that you can have a static *empty string* `_Rep` object already *constructed* before static constructors have run. The reference-count encoding is chosen so that a 0 indicates one reference, so you never try to destroy the empty-string `_Rep` object.

All but the last paragraph is considered pretty conventional for a C++ string implementation.

#### 5.18.1 Detailed Description

`template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base>class __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >`

Template class `__versa_string`.

Data structure managing sequences of characters and character-like objects.

Definition at line 56 of file `vstring.h`.

## 5.18.2 Constructor & Destructor Documentation

5.18.2.1 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string ( const _Alloc & __a = _Alloc() ) [inline],[explicit],[noexcept]`

Construct an empty string using allocator *a*.

Definition at line 137 of file `vstring.h`.

Referenced by `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::substr()`.

5.18.2.2 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string ( const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str ) [inline]`

Construct string with copy of value of `__str`.

Parameters

|                    |                |
|--------------------|----------------|
| <code>__str</code> | Source string. |
|--------------------|----------------|

Definition at line 145 of file `vstring.h`.

5.18.2.3 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string ( __versa_string< _CharT, _Traits, _Alloc, _Base > && __str ) [inline],[noexcept]`

String move constructor.

Parameters

|                    |                |
|--------------------|----------------|
| <code>__str</code> | Source string. |
|--------------------|----------------|

The newly-constructed string contains the exact contents of `__str`. The contents of `__str` are a valid, but unspecified string.

Definition at line 157 of file `vstring.h`.

5.18.2.4 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string ( std::initializer_list< _CharT > __l, const _Alloc & __a = _Alloc() ) [inline]`

Construct string from an initializer list.

Parameters

|                  |                                                   |
|------------------|---------------------------------------------------|
| <code>__l</code> | <code>std::initializer_list</code> of characters. |
| <code>__a</code> | Allocator to use (default is default allocator).  |

Definition at line 165 of file `vstring.h`.

5.18.2.5 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string ( const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str, size_type __pos, size_type __n = npos ) [inline]`

Construct string as copy of a substring.

## Parameters

|                    |                                                   |
|--------------------|---------------------------------------------------|
| <code>__str</code> | Source string.                                    |
| <code>__pos</code> | Index of first character to copy from.            |
| <code>__n</code>   | Number of characters to copy (default remainder). |

Definition at line 176 of file `vstring.h`.

```
5.18.2.6 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename >
class _Base> __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::__versa_string ( const
__versa_string<_CharT, _Traits, _Alloc, _Base > & __str, size_type __pos, size_type __n, const _Alloc & __a )
[inline]
```

Construct string as copy of a substring.

## Parameters

|                    |                                        |
|--------------------|----------------------------------------|
| <code>__str</code> | Source string.                         |
| <code>__pos</code> | Index of first character to copy from. |
| <code>__n</code>   | Number of characters to copy.          |
| <code>__a</code>   | Allocator to use.                      |

Definition at line 191 of file `vstring.h`.

```
5.18.2.7 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::__versa_string ( const _CharT * __s,
size_type __n, const _Alloc & __a = _Alloc() ) [inline]
```

Construct string initialized by a character array.

## Parameters

|                  |                                                  |
|------------------|--------------------------------------------------|
| <code>__s</code> | Source character array.                          |
| <code>__n</code> | Number of characters to copy.                    |
| <code>__a</code> | Allocator to use (default is default allocator). |

NB: `__s` must have at least `__n` characters, `\0` has no special meaning.

Definition at line 208 of file `vstring.h`.

```
5.18.2.8 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base> template<class _InputIterator, typename = std::RequireInputIter<_InputIterator>>> __a
__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::__versa_string ( _InputIterator __beg,
_InputIterator __end, const _Alloc & __a = _Alloc() ) [inline]
```

Construct string as copy of a range.

## Parameters

|                    |                                                  |
|--------------------|--------------------------------------------------|
| <code>__beg</code> | Start of range.                                  |
| <code>__end</code> | End of range.                                    |
| <code>__a</code>   | Allocator to use (default is default allocator). |

Definition at line 242 of file `vstring.h`.

```
5.18.2.9 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::~~__versa_string ( ) [inline],
[noexcept]
```

Destroy the string instance.

Definition at line 249 of file `vstring.h`.

### 5.18.3 Member Function Documentation

5.18.3.1 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append ( const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str ) [inline]`

Append a string to this string.

#### Parameters

|                    |                       |
|--------------------|-----------------------|
| <code>__str</code> | The string to append. |
|--------------------|-----------------------|

#### Returns

Reference to this string.

Definition at line 692 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size()`.

Referenced by `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append()`, `std::getline()`, `__gnu_cxx::operator+()`, and `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator+=()`.

5.18.3.2 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append ( const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str, size_type __pos, size_type __n ) [inline]`

Append a substring.

#### Parameters

|                    |                                                             |
|--------------------|-------------------------------------------------------------|
| <code>__str</code> | The string to append.                                       |
| <code>__pos</code> | Index of the first character of <code>str</code> to append. |
| <code>__n</code>   | The number of characters to append.                         |

#### Returns

Reference to this string.

#### Exceptions

|                                |                                           |
|--------------------------------|-------------------------------------------|
| <code>std::out_of_range</code> | if <code>pos</code> is not a valid index. |
|--------------------------------|-------------------------------------------|

This function appends `__n` characters from `__str` starting at `__pos` to this string. If `__n` is larger than the number of available characters in `__str`, the remainder of `__str` is appended.

Definition at line 709 of file `vstring.h`.

5.18.3.3 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append ( const _CharT * __s, size_type __n ) [inline]`

Append a C substring.

## Parameters

|                  |                                     |
|------------------|-------------------------------------|
| <code>__s</code> | The C string to append.             |
| <code>__n</code> | The number of characters to append. |

## Returns

Reference to this string.

Definition at line 721 of file `vstring.h`.

```
5.18.3.4 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::append ( const _CharT *
__s ) [inline]
```

Append a C string.

## Parameters

|                  |                         |
|------------------|-------------------------|
| <code>__s</code> | The C string to append. |
|------------------|-------------------------|

## Returns

Reference to this string.

Definition at line 734 of file `vstring.h`.

```
5.18.3.5 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::append ( size_type __n,
_CharT __c ) [inline]
```

Append multiple characters.

## Parameters

|                  |                                     |
|------------------|-------------------------------------|
| <code>__n</code> | The number of characters to append. |
| <code>__c</code> | The character to use.               |

## Returns

Reference to this string.

Appends `n` copies of `c` to this string.

Definition at line 751 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::size()`.

```
5.18.3.6 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename >
class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::append (
std::initializer_list<_CharT > __l ) [inline]
```

Append an `initializer_list` of characters.

## Parameters

|                  |                                               |
|------------------|-----------------------------------------------|
| <code>__l</code> | The initializer_list of characters to append. |
|------------------|-----------------------------------------------|

## Returns

Reference to this string.

Definition at line 761 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::append()`.

```
5.18.3.7 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> template<class _InputIterator, typename = std::RequireInputIter<_InputIterator>> __versa_string&
__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::append ( _InputIterator __first, _InputIterator __last )
[inline]
```

Append a range of characters.

## Parameters

|                      |                                                     |
|----------------------|-----------------------------------------------------|
| <code>__first</code> | Iterator referencing the first character to append. |
| <code>__last</code>  | Iterator marking the end of the range.              |

## Returns

Reference to this string.

Appends characters in the range [first,last) to this string.

Definition at line 780 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace()`.

```
5.18.3.8 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign ( const
__versa_string<_CharT, _Traits, _Alloc, _Base > &__str ) [inline]
```

Set value to contents of another string.

## Parameters

|                    |                       |
|--------------------|-----------------------|
| <code>__str</code> | Source string to use. |
|--------------------|-----------------------|

## Returns

Reference to this string.

Definition at line 803 of file `vstring.h`.

Referenced by `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::operator=()`.

```
5.18.3.9 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename >
class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign (
__versa_string<_CharT, _Traits, _Alloc, _Base > &&__str ) [inline], [noexcept]
```

Set value to contents of another string.

## Parameters

|                    |                       |
|--------------------|-----------------------|
| <code>__str</code> | Source string to use. |
|--------------------|-----------------------|

## Returns

Reference to this string.

This function sets this string to the exact contents of `__str`. `__str` is a valid, but unspecified string.

Definition at line 819 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::swap()`.

5.18.3.10 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign ( const __versa_string<_CharT, _Traits, _Alloc, _Base > &__str, size_type __pos, size_type __n ) [inline]`

Set value to a substring of a string.

## Parameters

|                    |                                                    |
|--------------------|----------------------------------------------------|
| <code>__str</code> | The string to use.                                 |
| <code>__pos</code> | Index of the first character of <code>str</code> . |
| <code>__n</code>   | Number of characters to use.                       |

## Returns

Reference to this string.

## Exceptions

|                                |                                             |
|--------------------------------|---------------------------------------------|
| <code>std::out_of_range</code> | if <code>__pos</code> is not a valid index. |
|--------------------------------|---------------------------------------------|

This function sets this string to the substring of `__str` consisting of `__n` characters at `__pos`. If `__n` is larger than the number of available characters in `__str`, the remainder of `__str` is used.

Definition at line 840 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::size()`.

5.18.3.11 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign ( const _CharT *__s, size_type __n ) [inline]`

Set value to a C substring.

## Parameters

|                  |                              |
|------------------|------------------------------|
| <code>__s</code> | The C string to use.         |
| <code>__n</code> | Number of characters to use. |

## Returns

Reference to this string.

This function sets the value of this string to the first `__n` characters of `__s`. If `__n` is larger than the number of available characters in `__s`, the remainder of `__s` is used.

Definition at line 857 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::size()`.

---

5.18.3.12 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign ( const _CharT *_s ) [inline]`

Set value to contents of a C string.

## Parameters

|                  |                      |
|------------------|----------------------|
| <code>__s</code> | The C string to use. |
|------------------|----------------------|

## Returns

Reference to this string.

This function sets the value of this string to the value of `__s`. The data is copied, so there is no dependence on `__s` once the function returns.

Definition at line 873 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::size()`.

5.18.3.13 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign ( size_type __n, _CharT __c ) [inline]`

Set value to multiple characters.

## Parameters

|                  |                                 |
|------------------|---------------------------------|
| <code>__n</code> | Length of the resulting string. |
| <code>__c</code> | The character to use.           |

## Returns

Reference to this string.

This function sets the value of this string to `__n` copies of character `__c`.

Definition at line 890 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::size()`.

5.18.3.14 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> template<class _InputIterator, typename = std::RequireInputIter<_InputIterator>> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign ( _InputIterator __first, _InputIterator __last ) [inline]`

Set value to a range of characters.

## Parameters

|                      |                                                     |
|----------------------|-----------------------------------------------------|
| <code>__first</code> | Iterator referencing the first character to append. |
| <code>__last</code>  | Iterator marking the end of the range.              |

## Returns

Reference to this string.

Sets value of string to characters in the range `[first,last)`.

Definition at line 909 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace()`.

```
5.18.3.15 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename >
class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign (
std::initializer_list<_CharT > __l) [inline]
```

Set value to an initializer\_list of characters.

## Parameters

|                  |                                               |
|------------------|-----------------------------------------------|
| <code>__l</code> | The initializer_list of characters to assign. |
|------------------|-----------------------------------------------|

## Returns

Reference to this string.

Definition at line 919 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign()`.

5.18.3.16 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> const_reference __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::at ( size_type __n ) const`  
[inline]

Provides access to the data contained in the string.

## Parameters

|                  |                                       |
|------------------|---------------------------------------|
| <code>__n</code> | The index of the character to access. |
|------------------|---------------------------------------|

## Returns

Read-only (const) reference to the character.

## Exceptions

|                                |                                          |
|--------------------------------|------------------------------------------|
| <code>std::out_of_range</code> | If <code>__n</code> is an invalid index. |
|--------------------------------|------------------------------------------|

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails.

Definition at line 577 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::size()`.

5.18.3.17 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> reference __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::at ( size_type __n )`  
[inline]

Provides access to the data contained in the string.

## Parameters

|                  |                                       |
|------------------|---------------------------------------|
| <code>__n</code> | The index of the character to access. |
|------------------|---------------------------------------|

## Returns

Read/write reference to the character.

## Exceptions

|                                |                                          |
|--------------------------------|------------------------------------------|
| <code>std::out_of_range</code> | If <code>__n</code> is an invalid index. |
|--------------------------------|------------------------------------------|

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails. Success results in unsharing the string.

Definition at line 599 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::size()`.

**5.18.3.18** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> reference __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::back ( ) [inline], [noexcept]`

Returns a read/write reference to the data at the last element of the string.

Definition at line 632 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator[]()`, and `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size()`.

Returns a read-only (constant) iterator that points to the first character in the string.

Definition at line 390 of file `vstring.h`.

5.18.3.25 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> const_iterator __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::cend ( ) const` `[inline], [noexcept]`

Returns a read-only (constant) iterator that points one past the last character in the string.

Definition at line 398 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::size()`.

5.18.3.26 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> void __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::clear ( )` `[inline], [noexcept]`

Erases the string, making it empty.

Definition at line 514 of file `vstring.h`.

5.18.3.27 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> int __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::compare ( const __versa_string<_CharT, _Traits, _Alloc, _Base > & __str ) const` `[inline]`

Compare to a string.

Parameters

|                    |                            |
|--------------------|----------------------------|
| <code>__str</code> | String to compare against. |
|--------------------|----------------------------|

Returns

Integer `< 0`, `0`, or `> 0`.

Returns an integer `< 0` if this string is ordered before `__str`, `0` if their values are equivalent, or `> 0` if this string is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of `size()` and `str.size()`. The function then compares the two strings by calling `traits::compare(data(), str.data(), rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 2073 of file `vstring.h`.

5.18.3.28 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> int __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::compare ( size_type __pos, size_type __n, const __versa_string<_CharT, _Traits, _Alloc, _Base > & __str ) const`

Compare substring to a string.

## Parameters

|                    |                                        |
|--------------------|----------------------------------------|
| <code>__pos</code> | Index of first character of substring. |
| <code>__n</code>   | Number of characters in substring.     |
| <code>__str</code> | String to compare against.             |

## Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n` characters starting at `__pos`. Returns an integer < 0 if the substring is ordered before `__str`, 0 if their values are equivalent, or > 0 if the substring is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__str.size()`. The function then compares the two strings by calling `traits::compare(substring.data(),str.data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 460 of file `vstring.tcc`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::data()`, `std::min()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::size()`.

```
5.18.3.29 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> int __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::compare( size_type __pos1, size_type
__n1, const __versa_string<_CharT, _Traits, _Alloc, _Base > & __str, size_type __pos2, size_type __n2 ) const
```

Compare substring to a substring.

## Parameters

|                     |                                                             |
|---------------------|-------------------------------------------------------------|
| <code>__pos1</code> | Index of first character of substring.                      |
| <code>__n1</code>   | Number of characters in substring.                          |
| <code>__str</code>  | String to compare against.                                  |
| <code>__pos2</code> | Index of first character of substring of <code>str</code> . |
| <code>__n2</code>   | Number of characters in substring of <code>str</code> .     |

## Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n1` characters starting at `__pos1`. Form the substring of `__str` from the `__n2` characters starting at `__pos2`. Returns an integer < 0 if this substring is ordered before the substring of `__str`, 0 if their values are equivalent, or > 0 if this substring is ordered after the substring of `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling `traits::compare(substring.data(),str.substr(pos2,n2).data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 477 of file `vstring.tcc`.

```
5.18.3.30 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> int __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::compare( const _CharT * __s ) const
```

Compare to a C string.

## Parameters

|                  |                              |
|------------------|------------------------------|
| <code>__s</code> | C string to compare against. |
|------------------|------------------------------|

## Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Returns an integer  $< 0$  if this string is ordered before `__s`,  $0$  if their values are equivalent, or  $> 0$  if this string is ordered after `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of `size()` and the length of a string constructed from `__s`. The function then compares the two strings by calling `traits::compare(data(),s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

5.18.331 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> int __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::compare ( size_type __pos, size_type
__n1, const _CharT* __s ) const
```

Compare substring to a C string.

## Parameters

|                    |                                        |
|--------------------|----------------------------------------|
| <code>__pos</code> | Index of first character of substring. |
| <code>__n1</code>  | Number of characters in substring.     |
| <code>__s</code>   | C string to compare against.           |

## Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Form the substring of this string from the `__n1` characters starting at `__pos`. Returns an integer  $< 0$  if the substring is ordered before `__s`,  $0$  if their values are equivalent, or  $> 0$  if the substring is ordered after `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and the length of a string constructed from `__s`. The function then compares the two string by calling `traits::compare(substring.data(),s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 512 of file `vstring.tcc`.

References `std::min()`.

```
5.18.332 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> int __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::compare ( size_type __pos, size_type
__n1, const _CharT* __s, size_type __n2 ) const
```

Compare substring against a character array.

## Parameters

|                    |                                        |
|--------------------|----------------------------------------|
| <code>__pos</code> | Index of first character of substring. |
| <code>__n1</code>  | Number of characters in substring.     |
| <code>__s</code>   | character array to compare against.    |

|                   |                                          |
|-------------------|------------------------------------------|
| <code>__n2</code> | Number of characters of <code>s</code> . |
|-------------------|------------------------------------------|

**Returns**

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Form the substring of this string from the `__n1` characters starting at `__pos`. Form a string from the first `__n2` characters of `__s`. Returns an integer  $< 0$  if this substring is ordered before the string from `__s`,  $0$  if their values are equivalent, or  $> 0$  if this substring is ordered after the string from `__s`. Determines the effective length `r1en` of the strings to compare as the smallest of the length of the substring and `__n2`. The function then compares the two strings by calling `traits::compare(substring.data(), __s, r1en)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

NB: `__s` must have at least `n2` characters, `\0` has no special meaning.

Definition at line 529 of file `vstring.tcc`.

References `std::min()`.

```
5.18.3.33 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> __versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT,
_Traits, _Alloc, _Base >::copy ( _CharT * __s, size_type __n, size_type __pos = 0 ) const
```

Copy substring into C string.

**Parameters**

|                    |                                   |
|--------------------|-----------------------------------|
| <code>__s</code>   | C string to copy value into.      |
| <code>__n</code>   | Number of characters to copy.     |
| <code>__pos</code> | Index of first character to copy. |

**Returns**

Number of characters actually copied

**Exceptions**

|                                |                                     |
|--------------------------------|-------------------------------------|
| <code>std::out_of_range</code> | If <code>__pos &gt; size()</code> . |
|--------------------------------|-------------------------------------|

Copies up to `__n` characters starting at `__pos` into the C string `s`. If `__pos` is greater than `size()`, `out_of_range` is thrown.

Definition at line 255 of file `vstring.tcc`.

```
5.18.3.34 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> const_reverse_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rbegin ( )
const [inline], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

Definition at line 407 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::end()`.

Returns a read-only (constant) iterator that points one past the last character in the string.

Definition at line 345 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::size()`.

**5.18.340** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::erase ( size_type __pos = 0, size_type __n = npos ) [inline]`

Remove characters.

**Parameters**

---

|                    |                                                     |
|--------------------|-----------------------------------------------------|
| <code>__pos</code> | Index of first character to remove (default 0).     |
| <code>__n</code>   | Number of characters to remove (default remainder). |

**Returns**

Reference to this string.

**Exceptions**

|                                |                                                         |
|--------------------------------|---------------------------------------------------------|
| <code>std::out_of_range</code> | If <code>__pos</code> is beyond the end of this string. |
|--------------------------------|---------------------------------------------------------|

Removes `__n` characters from this string starting at `__pos`. The length of the string is reduced by `__n`. If there are `< __n` characters to remove, the remainder of the string is truncated. If `__p` is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1173 of file `vstring.h`.

Referenced by `std::getline()`.

```
5.18.3.41 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> __versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT,
_Traits, _Alloc, _Base >::find ( const _CharT* __s, size_type __pos, size_type __n ) const
```

Find position of a C substring.

**Parameters**

|                    |                                                           |
|--------------------|-----------------------------------------------------------|
| <code>__s</code>   | C string to locate.                                       |
| <code>__pos</code> | Index of character to search from.                        |
| <code>__n</code>   | Number of characters from <code>__s</code> to search for. |

**Returns**

Index of start of first occurrence.

Starting from `__pos`, searches forward for the first `__n` characters in `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

Definition at line 270 of file `vstring.tcc`.

Referenced by `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find()`, and `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_first_of()`.

const __versa_string<_CharT, _Traits, _Alloc, _Base > & __str, size_type __pos = 0 ) const [inline],
[noexcept]
```

Find position of a character not in string.

## Parameters

|                    |                                                |
|--------------------|------------------------------------------------|
| <code>__str</code> | String containing characters to avoid.         |
| <code>__pos</code> | Index of character to search from (default 0). |

## Returns

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 1925 of file `vstring.h`.

Find position of a character not in C substring.

## Parameters

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__s</code>   | C string containing characters to avoid.              |
| <code>__pos</code> | Index of character to search from.                    |
| <code>__n</code>   | Number of characters from <code>s</code> to consider. |

## Returns

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 392 of file `vstring.tcc`.

5.18.3.47 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> size_type __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::find_first_not_of ( const _CharT * __s, size_type __pos = 0 ) const [inline]`

Find position of a character not in C string.

## Parameters

|                    |                                                |
|--------------------|------------------------------------------------|
| <code>__s</code>   | C string containing characters to avoid.       |
| <code>__pos</code> | Index of character to search from (default 0). |

## Returns

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 1956 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::find_first_not_of()`.

5.18.3.48 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string<_CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::find_first_not_of( _CharT __c, size_type __pos = 0 ) const` [noexcept]

Find position of a different character.

## Parameters

|                    |                                                |
|--------------------|------------------------------------------------|
| <code>__c</code>   | Character to avoid.                            |
| <code>__pos</code> | Index of character to search from (default 0). |

## Returns

Index of first occurrence.

Starting from `__pos`, searches forward for a character other than `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 405 of file `vstring.tcc`.

```
5.18.3.49 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename
> class _Base> size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_first_of (
const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str, size_type __pos = 0 ) const [inline],
[noexcept]
```

Find position of a character of string.

## Parameters

|                    |                                                |
|--------------------|------------------------------------------------|
| <code>__str</code> | String containing characters to locate.        |
| <code>__pos</code> | Index of character to search from (default 0). |

## Returns

Index of first occurrence.

Starting from `__pos`, searches forward for one of the characters of `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 1798 of file `vstring.h`.

Referenced by `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_first_of()`.

```
5.18.3.50 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> __versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT,
_Traits, _Alloc, _Base >::find_first_of ( const _CharT * __s, size_type __pos, size_type __n ) const
```

Find position of a character of C substring.

## Parameters

|                    |                                                         |
|--------------------|---------------------------------------------------------|
| <code>__s</code>   | String containing characters to locate.                 |
| <code>__pos</code> | Index of character to search from.                      |
| <code>__n</code>   | Number of characters from <code>s</code> to search for. |

## Returns

Index of first occurrence.

Starting from `__pos`, searches forward for one of the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 353 of file `vstring.tcc`.

5.18.3.51 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> size_type __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::find_first_of ( const _CharT * __s, size_type __pos = 0 ) const [inline]`

Find position of a character of C string.

## Parameters

|                    |                                                |
|--------------------|------------------------------------------------|
| <code>__s</code>   | String containing characters to locate.        |
| <code>__pos</code> | Index of character to search from (default 0). |

## Returns

Index of first occurrence.

Starting from `__pos`, searches forward for one of the characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 1828 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::find_first_of()`.

```
5.18.3.52 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> size_type __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::find_first_of ( _CharT __c,
size_type __pos = 0 ) const [inline], [noexcept]
```

Find position of a character.

## Parameters

|                    |                                                |
|--------------------|------------------------------------------------|
| <code>__c</code>   | Character to locate.                           |
| <code>__pos</code> | Index of character to search from (default 0). |

## Returns

Index of first occurrence.

Starting from `__pos`, searches forward for the character `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Note: equivalent to `find(c, pos)`.

Definition at line 1847 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::find()`.

```
5.18.3.53 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> size_type __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::find_last_not_of ( const
__versa_string<_CharT, _Traits, _Alloc, _Base > & __str, size_type __pos = npos ) const [inline],
[noexcept]
```

Find last position of a character not in string.

## Parameters

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__str</code> | String containing characters to avoid.                |
| <code>__pos</code> | Index of character to search back from (default end). |

## Returns

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 1988 of file `vstring.h`.

Referenced by `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::find_last_not_of()`.

5.18.354 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string<_CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::find_last_not_of( const _CharT* __s, size_type __pos, size_type __n ) const`

Find last position of a character not in C substring.

#### Parameters

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__s</code>   | C string containing characters to avoid.              |
| <code>__pos</code> | Index of character to search back from.               |
| <code>__n</code>   | Number of characters from <code>s</code> to consider. |

#### Returns

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 417 of file `vstring.tcc`.

5.18.355 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> size_type __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::find_last_not_of( const _CharT* __s, size_type __pos = npos ) const [inline]`

Find last position of a character not in C string.

#### Parameters

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__s</code>   | C string containing characters to avoid.              |
| <code>__pos</code> | Index of character to search back from (default end). |

#### Returns

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 2019 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::find_last_not_of()`.

5.18.356 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string<_CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::find_last_not_of( _CharT __c, size_type __pos = npos ) const [noexcept]`

Find last position of a different character.

#### Parameters

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__c</code>   | Character to avoid.                                   |
| <code>__pos</code> | Index of character to search back from (default end). |

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for a character other than `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 439 of file `vstring.tcc`.

```
5.18.3.57 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename >
class _Base> size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_of( const
__versa_string< _CharT, _Traits, _Alloc, _Base > & __str, size_type __pos = npos ) const [inline],
[noexcept]
```

Find last position of a character of string.

**Parameters**

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__str</code> | String containing characters to locate.               |
| <code>__pos</code> | Index of character to search back from (default end). |

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for one of the characters of `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 1862 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::data()`, and `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size()`.

Referenced by `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_of()`.

```
5.18.3.58 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> __versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT,
_Traits, _Alloc, _Base >::find_last_of( const _CharT * __s, size_type __pos, size_type __n ) const
```

Find last position of a character of C substring.

**Parameters**

|                    |                                                         |
|--------------------|---------------------------------------------------------|
| <code>__s</code>   | C string containing characters to locate.               |
| <code>__pos</code> | Index of character to search back from.                 |
| <code>__n</code>   | Number of characters from <code>s</code> to search for. |

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for one of the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 370 of file `vstring.tcc`.

```
5.18.3.59 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_of( const _CharT * __s,
size_type __pos = npos ) const [inline]
```

Find last position of a character of C string.

## Parameters

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__s</code>   | C string containing characters to locate.             |
| <code>__pos</code> | Index of character to search back from (default end). |

## Returns

Index of last occurrence.

Starting from `__pos`, searches backward for one of the characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Definition at line 1892 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::find_last_of()`.

```
5.18.3.60 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> size_type __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::find_last_of ( _CharT __c,
size_type __pos = npos ) const [inline], [noexcept]
```

Find last position of a character.

## Parameters

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__c</code>   | Character to locate.                                  |
| <code>__pos</code> | Index of character to search back from (default end). |

## Returns

Index of last occurrence.

Starting from `__pos`, searches backward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Note: equivalent to `rfind(c, pos)`.

Definition at line 1911 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::rfind()`.

```
5.18.3.61 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> reference __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::front ( ) [inline],
[noexcept]
```

Returns a read/write reference to the data at the first element of the string.

Definition at line 616 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::operator[]()`.

```
5.18.3.62 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> const_reference __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::front ( ) const
[inline], [noexcept]
```

Returns a read-only (constant) reference to the data at the first element of the string.

Definition at line 624 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::operator[]()`.

5.18.3.63 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> allocator_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::get_allocator ( ) const [inline], [noexcept]`

Return copy of allocator used to construct this string.

Definition at line 1664 of file `vstring.h`.

5.18.3.64 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert ( const_iterator __p, size_type __n, _CharT __c ) [inline]`

Insert multiple characters.

#### Parameters

|                  |                                                             |
|------------------|-------------------------------------------------------------|
| <code>__p</code> | Const_iterator referencing location in string to insert at. |
| <code>__n</code> | Number of characters to insert                              |
| <code>__c</code> | The character to insert.                                    |

#### Returns

Iterator referencing the first inserted char.

#### Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Inserts `__n` copies of character `__c` starting at the position referenced by iterator `__p`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 940 of file `vstring.h`.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace()`.

Referenced by `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert()`.

5.18.3.65 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> template<class _InputIterator , typename = std:: RequireInputIter<_InputIterator>> iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert ( const_iterator __p, _InputIterator __beg, _InputIterator __end ) [inline]`

Insert a range of characters.

#### Parameters

|                    |                                                             |
|--------------------|-------------------------------------------------------------|
| <code>__p</code>   | Const_iterator referencing location in string to insert at. |
| <code>__beg</code> | Start of range.                                             |
| <code>__end</code> | End of range.                                               |

#### Returns

Iterator referencing the first inserted char.

#### Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Inserts characters in range `[beg,end)`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 984 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace()`.

5.18.3.66 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> iterator __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::insert ( const_iterator __p, std::initializer_list<_CharT > __l ) [inline]`

Insert an `initializer_list` of characters.

#### Parameters

|                  |                                                             |
|------------------|-------------------------------------------------------------|
| <code>__p</code> | Const_iterator referencing location in string to insert at. |
| <code>__l</code> | The <code>initializer_list</code> of characters to insert.  |

#### Returns

Iterator referencing the first inserted char.

#### Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Definition at line 1020 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::insert()`.

5.18.3.67 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::insert ( size_type __pos1, const __versa_string<_CharT, _Traits, _Alloc, _Base > & __str ) [inline]`

Insert value of a string.

#### Parameters

|                     |                                                       |
|---------------------|-------------------------------------------------------|
| <code>__pos1</code> | Iterator referencing location in string to insert at. |
| <code>__str</code>  | The string to insert.                                 |

#### Returns

Reference to this string.

#### Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Inserts value of `__str` starting at `__pos1`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1037 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::size()`.

5.18.3.68 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert ( size_type __pos1, const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str, size_type __pos2, size_type __n )`  
[inline]

Insert a substring.

## Parameters

|                     |                                                       |
|---------------------|-------------------------------------------------------|
| <code>__pos1</code> | Iterator referencing location in string to insert at. |
| <code>__str</code>  | The string to insert.                                 |
| <code>__pos2</code> | Start of characters in str to insert.                 |
| <code>__n</code>    | Number of characters to insert.                       |

## Returns

Reference to this string.

## Exceptions

|                                |                                                                               |
|--------------------------------|-------------------------------------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> .                               |
| <code>std::out_of_range</code> | If <code>__pos1 &gt; size()</code> or <code>__pos2 &gt; __str.size()</code> . |

Starting at `__pos1`, insert `__n` character of `__str` beginning with `__pos2`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos1` is beyond the end of this string or `__pos2` is beyond the end of `__str`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1060 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace()`.

5.18.3.69 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::insert ( size_type __pos, const _CharT* __s, size_type __n ) [inline]`

Insert a C substring.

## Parameters

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__pos</code> | Iterator referencing location in string to insert at. |
| <code>__s</code>   | The C string to insert.                               |
| <code>__n</code>   | The number of characters to insert.                   |

## Returns

Reference to this string.

## Exceptions

|                                |                                                         |
|--------------------------------|---------------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> .         |
| <code>std::out_of_range</code> | If <code>__pos</code> is beyond the end of this string. |

Inserts the first `__n` characters of `__s` starting at `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos` is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1083 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace()`.

5.18.3.70 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::insert ( size_type __pos, const _CharT* __s ) [inline]`

Insert a C string.

## Parameters

|                    |                                                       |
|--------------------|-------------------------------------------------------|
| <code>__pos</code> | Iterator referencing location in string to insert at. |
| <code>__s</code>   | The C string to insert.                               |

## Returns

Reference to this string.

## Exceptions

|                                |                                                         |
|--------------------------------|---------------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> .         |
| <code>std::out_of_range</code> | If <code>__pos</code> is beyond the end of this string. |

Inserts the first `__n` characters of `__s` starting at `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos` is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1102 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace()`.

```
5.18.3.71 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::insert ( size_type
__pos, size_type __n, _CharT __c ) [inline]
```

Insert multiple characters.

## Parameters

|                    |                                |
|--------------------|--------------------------------|
| <code>__pos</code> | Index in string to insert at.  |
| <code>__n</code>   | Number of characters to insert |
| <code>__c</code>   | The character to insert.       |

## Returns

Reference to this string.

## Exceptions

|                                |                                                         |
|--------------------------------|---------------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> .         |
| <code>std::out_of_range</code> | If <code>__pos</code> is beyond the end of this string. |

Inserts `__n` copies of character `__c` starting at index `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos > length()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1126 of file `vstring.h`.

```
5.18.3.72 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> size_type __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::length ( ) const [inline],
[noexcept]
```

Returns the number of characters in the string, not including any null-termination.

Definition at line 431 of file `vstring.h`.

5.18.3.73 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> size_type __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::max_size ( ) const [inline], [noexcept]`

Returns the size() of the largest possible string.

Definition at line 436 of file `vstring.h`.

Referenced by `std::getline()`.

5.18.3.74 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::operator+=( const __versa_string<_CharT, _Traits, _Alloc, _Base > &__str ) [inline]`

Append a string to this string.

Parameters

|                    |                       |
|--------------------|-----------------------|
| <code>__str</code> | The string to append. |
|--------------------|-----------------------|

Returns

Reference to this string.

Definition at line 651 of file `vstring.h`.

Append a C string.

Parameters

|                  |                         |
|------------------|-------------------------|
| <code>__s</code> | The C string to append. |
|------------------|-------------------------|

Returns

Reference to this string.

Definition at line 660 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::append()`.

5.18.3.76 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::operator+=( _CharT __c ) [inline]`

Append a character.

Parameters

|                  |                          |
|------------------|--------------------------|
| <code>__c</code> | The character to append. |
|------------------|--------------------------|

**Returns**

Reference to this string.

Definition at line 669 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::push_back()`.

5.18.3.77 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::operator+=( std::initializer_list<_CharT > __l ) [inline]`

Append an `initializer_list` of characters.

**Parameters**

|                  |                                                                 |
|------------------|-----------------------------------------------------------------|
| <code>__l</code> | The <code>initializer_list</code> of characters to be appended. |
|------------------|-----------------------------------------------------------------|

**Returns**

Reference to this string.

Definition at line 682 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::append()`.

5.18.3.78 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::operator=( const __versa_string<_CharT, _Traits, _Alloc, _Base > & __str ) [inline]`

Assign the value of `str` to this string.

**Parameters**

|                    |                |
|--------------------|----------------|
| <code>__str</code> | Source string. |
|--------------------|----------------|

Definition at line 256 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign()`.

5.18.3.79 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::operator=( __versa_string<_CharT, _Traits, _Alloc, _Base > && __str ) [inline], [noexcept]`

String move assignment operator.

**Parameters**

|                    |                |
|--------------------|----------------|
| <code>__str</code> | Source string. |
|--------------------|----------------|

The contents of `__str` are moved into this string (without copying). `__str` is a valid, but unspecified string.

Definition at line 268 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::swap()`.

5.18.3.80 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::operator=( std::initializer_list<_CharT > __l ) [inline]`

Set value to string constructed from initializer list.

## Parameters

|                  |                                      |
|------------------|--------------------------------------|
| <code>__l</code> | <code>std::initializer_list</code> . |
|------------------|--------------------------------------|

Definition at line 280 of file `vstring.h`.

5.18.3.81 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::operator= ( const _CharT* __s ) [inline]`

Copy contents of `__s` into this string.

## Parameters

|                  |                                |
|------------------|--------------------------------|
| <code>__s</code> | Source null-terminated string. |
|------------------|--------------------------------|

Definition at line 292 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign()`.

5.18.3.82 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::operator= ( _CharT __c ) [inline]`

Set value to string of length 1.

## Parameters

|                  |                   |
|------------------|-------------------|
| <code>__c</code> | Source character. |
|------------------|-------------------|

Assigning to a character makes this string length 1 and `(*this)[0] == __c`.

Definition at line 303 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign()`.

5.18.3.83 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> const_reference __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::operator[] ( size_type __pos ) const [inline], [noexcept]`

Subscript access to the data contained in the string.

## Parameters

|                    |                                       |
|--------------------|---------------------------------------|
| <code>__pos</code> | The index of the character to access. |
|--------------------|---------------------------------------|

## Returns

Read-only (constant) reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and `out_of_range` lookups are not defined. (For checked lookups see `at()`.)

Definition at line 537 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::size()`.

Referenced by `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::back()`, and `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::front()`.

5.18.3.84 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> reference __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator[] ( size_type __pos )`  
[inline], [noexcept]

Subscript access to the data contained in the string.

## Parameters

|                    |                                       |
|--------------------|---------------------------------------|
| <code>__pos</code> | The index of the character to access. |
|--------------------|---------------------------------------|

## Returns

Read/write reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and `out_of_range` lookups are not defined. (For checked lookups see `at()`.) Unshares the string.

Definition at line 554 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::size()`.

**5.18.3.85** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> void __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::pop_back ( ) [inline]`

Remove the last character.

The string must be non-empty.

Definition at line 1235 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::size()`.

**5.18.3.86** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> void __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::push_back ( _CharT _c ) [inline]`

Append a single character.

## Parameters

|                 |                      |
|-----------------|----------------------|
| <code>_c</code> | Character to append. |
|-----------------|----------------------|

Definition at line 788 of file `vstring.h`.

Returns a read/write reverse iterator that points to the last character in the string. Iteration is done in reverse element order. Unshares the string.

Definition at line 354 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::end()`.

**5.18.3.88** `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> const reverse_iterator __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::rbegin ( ) const [inline], [noexcept]`

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

Definition at line 363 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::end()`.

5.18.3.89 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> reverse_iterator __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::rend ( )`  
`[inline], [noexcept]`

Returns a read/write reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order. Unshares the string.

Definition at line 372 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::begin()`.

5.18.3.90 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> const_reverse_iterator __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::rend ( ) const`  
`[inline], [noexcept]`

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

Definition at line 381 of file `vstring.h`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::begin()`.

5.18.3.91 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace ( size_type __pos, size_type __n, const __versa_string<_CharT, _Traits, _Alloc, _Base > &__str )` `[inline]`

Replace characters with value from another string.

#### Parameters

|                    |                                      |
|--------------------|--------------------------------------|
| <code>__pos</code> | Index of first character to replace. |
| <code>__n</code>   | Number of characters to be replaced. |
| <code>__str</code> | String to insert.                    |

#### Returns

Reference to this string.

#### Exceptions

|                                |                                                         |
|--------------------------------|---------------------------------------------------------|
| <code>std::out_of_range</code> | If <code>__pos</code> is beyond the end of this string. |
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> .         |

Removes the characters in the range `[pos, pos+n)` from this string. In place, the value of `__str` is inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1257 of file `vstring.h`.

```
5.18.3.92 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace ( size_type
__pos1, size_type __n1, const __versa_string<_CharT, _Traits, _Alloc, _Base > & __str, size_type __pos2, size_type
__n2 ) [inline]
```

Replace characters with value from another string.

## Parameters

|                     |                                                      |
|---------------------|------------------------------------------------------|
| <code>__pos1</code> | Index of first character to replace.                 |
| <code>__n1</code>   | Number of characters to be replaced.                 |
| <code>__str</code>  | String to insert.                                    |
| <code>__pos2</code> | Index of first character of <code>str</code> to use. |
| <code>__n2</code>   | Number of characters from <code>str</code> to use.   |

## Returns

Reference to this string.

## Exceptions

|                                |                                                                             |
|--------------------------------|-----------------------------------------------------------------------------|
| <code>std::out_of_range</code> | If <code>__pos1 &gt; size()</code> or <code>__pos2 &gt; str.size()</code> . |
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> .                             |

Removes the characters in the range `[pos1, pos1 + n)` from this string. In place, the value of `__str` is inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace()`.

```
5.18.3.93 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace ( size_type
_pos, size_type __n1, const _CharT * __s, size_type __n2 ) [inline]
```

Replace characters with value of a C substring.

## Parameters

|                    |                                                    |
|--------------------|----------------------------------------------------|
| <code>__pos</code> | Index of first character to replace.               |
| <code>__n1</code>  | Number of characters to be replaced.               |
| <code>__s</code>   | C string to insert.                                |
| <code>__n2</code>  | Number of characters from <code>__s</code> to use. |

## Returns

Reference to this string.

## Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::out_of_range</code> | If <code>__pos1 &gt; size()</code> .            |
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |

Removes the characters in the range `[pos, pos + n1)` from this string. In place, the first `__n2` characters of `__s` are inserted, or all of `__s` if `__n2` is too large. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1308 of file `vstring.h`.

```
5.18.3.94 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class
_Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace ( size_type
_pos, size_type __n1, const _CharT * __s ) [inline]
```

Replace characters with value of a C string.

## Parameters

|                    |                                      |
|--------------------|--------------------------------------|
| <code>__pos</code> | Index of first character to replace. |
| <code>__n1</code>  | Number of characters to be replaced. |
| <code>__s</code>   | C string to insert.                  |

## Returns

Reference to this string.

## Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::out_of_range</code> | If <code>__pos &gt; size()</code> .             |

| <code>__n1</code>  | Number of characters to be replaced. |
| <code>__n2</code>  | Number of characters to insert.      |
| <code>__c</code>   | Character to insert.                 |

## Returns

Reference to this string.

## Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::out_of_range</code> | If <code>__pos &gt; size()</code> .             |
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |

Removes the characters in the range `[pos, pos + n1)` from this string. In place, `__n2` copies of `__c` are inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1356 of file `vstring.h`.

5.18.3.96 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace ( const_iterator __i1, const_iterator __i2, const __versa_string<_CharT, _Traits, _Alloc, _Base > &__str ) [inline]`

Replace range of characters with string.

## Parameters

|                    |                                                 |
|--------------------|-------------------------------------------------|
| <code>__i1</code>  | Iterator referencing start of range to replace. |
| <code>__i2</code>  | Iterator referencing end of range to replace.   |
| <code>__str</code> | String value to insert.                         |

## Returns

Reference to this string.

## Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Removes the characters in the range `[i1,i2)`. In place, the value of `__str` is inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1375 of file `vstring.h`.

5.18.3.97 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace ( const_iterator __i1, const_iterator __i2, const _CharT * __s, size_type __n ) [inline]`

Replace range of characters with C substring.

## Parameters

|                   |                                                     |
|-------------------|-----------------------------------------------------|
| <code>__i1</code> | Iterator referencing start of range to replace.     |
| <code>__i2</code> | Iterator referencing end of range to replace.       |
| <code>__s</code>  | C string value to insert.                           |
| <code>__n</code>  | Number of characters from <code>s</code> to insert. |

## Returns

Reference to this string.

## Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Removes the characters in the range `[i1,i2)`. In place, the first `n` characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1398 of file `vstring.h`.

5.18.3.98 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& return this __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace ( __i1, __i2, __s, traits_type::length_s )`

Replace range of characters with C string.

## Parameters

|                   |                                                 |
|-------------------|-------------------------------------------------|
| <code>__i1</code> | Iterator referencing start of range to replace. |
| <code>__i2</code> | Iterator referencing end of range to replace.   |
| <code>__s</code>  | C string value to insert.                       |

## Returns

Reference to this string.

## Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Removes the characters in the range `[i1,i2)`. In place, the characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

5.18.3.99 `template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace ( const_iterator __i1, const_iterator __i2, size_type __n, _CharT __c ) [inline]`

Replace range of characters with multiple characters.

## Parameters

|                   |                                                 |
|-------------------|-------------------------------------------------|
| <code>__i1</code> | Iterator referencing start of range to replace. |
| <code>__i2</code> | Iterator referencing end of range to replace.   |
| <code>__n</code>  | Number of characters to insert.                 |
| <code>__c</code>  | Character to insert.                            |

## Returns

Reference to this string.

## Exceptions

|                                |                                                 |
|--------------------------------|-------------------------------------------------|
| <code>std::length_error</code> | If new length exceeds <code>max_size()</code> . |
|--------------------------------|-------------------------------------------------|

Removes the characters in the range `[i1,i2)`. In place, `__n` copies of `__c` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.
