This function returns an enum from `time_base::dateorder` giving the preferred ordering if the format `x` given to `time_put::put()` only uses month, day, and year. If the format `x` for the associated locale uses other fields, this function returns `time_base::dateorder::noorder`.

NOTE: The library always returns `noorder` at the moment.

#### Returns

A member of `time_base::dateorder`.

Definition at line 406 of file `locale_facets_nonio.h`.

References `std::time_get<_CharT, _InIter >::do_date_order()`.

**5.1040.2.2** `template<typename _CharT, typename _InIter > _GLIBCXX_END_NAMESPACE_LDBL_OR_CXX11 time_base::dateorder std::time_get<_CharT, _InIter >::do_date_order ( ) const` `[protected]`, `[virtual]`, `[inherited]`

Return preferred order of month, day, and year.

This function returns an enum from `time_base::dateorder` giving the preferred ordering if the format `x` given to `time_put::put()` only uses month, day, and year. This function is a hook for derived classes to change the value returned.

#### Returns

A member of `time_base::dateorder`.

Definition at line 627 of file `locale_facets_nonio.tcc`.

Referenced by `std::time_get<_CharT, _InIter >::date_order()`.

**5.1040.2.3** `template<typename _CharT, typename _InIter > _InIter std::time_get<_CharT, _InIter >::do_get ( iter_type __s, iter_type __end, ios_base & __f, ios_base::iostate & __err, tm * __tm, char __format, char __modifier ) const` `[inline]`, `[protected]`, `[inherited]`

Parse input string according to format.

This function parses the string according to the provided format and optional modifier. This function is a hook for derived classes to change the value returned.

#### See Also

`get()` for more details.

#### Parameters

<code>__s</code>	Start of string to parse.
<code>__end</code>	End of string to parse.
<code>__f</code>	Source of the locale.
<code>__err</code>	Error flags to set.
<code>__tm</code>	Pointer to struct <code>tm</code> to fill in.
<code>__format</code>	Format specifier.
<code>__modifier</code>	Format modifier.

#### Returns

Iterator to first char not parsed.

Definition at line 1241 of file `locale_facets_nonio.tcc`.

References `std::ios_base::_M_getloc()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, and `std::__ctype_abstract_base<_CharT >::widen()`.

Referenced by `std::time_get<_CharT, _InIter >::get()`.

5.1040.2.4 `template<typename _CharT, typename _InIter > _InIter std::time_get<_CharT, _InIter >::do_get_date ( iter_type __beg, iter_type __end, ios_base & __io, ios_base::iostate & __err, tm * __tm ) const` `[protected]`, `[virtual]`, `[inherited]`

Parse input date string.

This function parses a date according to the format *X* and puts the results into a user-supplied struct `tm`. This function is a hook for derived classes to change the value returned.

#### See Also

`get_date()` for details.

#### Parameters

<code>__beg</code>	Start of string to parse.
<code>__end</code>	End of string to parse.
<code>__io</code>	Source of the locale.
<code>__err</code>	Error flags to set.
<code>__tm</code>	Pointer to struct <code>tm</code> to fill in.

#### Returns

Iterator to first char beyond date string.

Definition at line 1077 of file `locale_facets_nonio.tcc`.

References `std::ios_base::_M_getloc()`, and `std::ios_base::eofbit`.

Referenced by `std::time_get<_CharT, _InIter >::get_date()`.

5.1040.2.5 `template<typename _CharT, typename _InIter > _InIter std::time_get<_CharT, _InIter >::do_get_monthname ( iter_type __beg, iter_type __end, ios_base & __io, ios_base::iostate & __err, tm * __tm ) const` `[protected]`, `[virtual]`, `[inherited]`

Parse input month string.

This function parses a month name and puts the results into a user-supplied struct `tm`. This function is a hook for derived classes to change the value returned.

#### See Also

`get_monthname()` for details.

#### Parameters

<code>__beg</code>	Start of string to parse.
<code>__end</code>	End of string to parse.

<code>__io</code>	Source of the locale.
<code>__err</code>	Error flags to set.
<code>__tm</code>	Pointer to struct <code>tm</code> to fill in.

**Returns**

Iterator to first char beyond month name.

Definition at line 1120 of file `locale_facets_nonio.tcc`.

References `std::ios_base::_M_getloc()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, and `std::ios_base::goodbit`.

Referenced by `std::time_get<_CharT, _InIter >::get_monthname()`.

5.1040.2.6 `template<typename _CharT, typename _InIter > _InIter std::time_get<_CharT, _InIter >::do_get_time ( iter_type __beg, iter_type __end, ios_base & __io, ios_base::iostate & __err, tm * __tm ) const` `[protected]`, `[virtual]`, `[inherited]`

Parse input time string.

This function parses a time according to the format `x` and puts the results into a user-supplied struct `tm`. This function is a hook for derived classes to change the value returned.

**See Also**

`get_time()` for details.

**Parameters**

<code>__beg</code>	Start of string to parse.
<code>__end</code>	End of string to parse.
<code>__io</code>	Source of the locale.
<code>__err</code>	Error flags to set.
<code>__tm</code>	Pointer to struct <code>tm</code> to fill in.

**Returns**

Iterator to first char beyond time string.

Definition at line 1060 of file `locale_facets_nonio.tcc`.

References `std::ios_base::_M_getloc()`, and `std::ios_base::eofbit`.

Referenced by `std::time_get<_CharT, _InIter >::get_time()`.

5.1040.2.7 `template<typename _CharT, typename _InIter > _InIter std::time_get<_CharT, _InIter >::do_get_weekday ( iter_type __beg, iter_type __end, ios_base & __io, ios_base::iostate & __err, tm * __tm ) const` `[protected]`, `[virtual]`, `[inherited]`

Parse input weekday string.

This function parses a weekday name and puts the results into a user-supplied struct `tm`. This function is a hook for derived classes to change the value returned.

**See Also**

`get_weekday()` for details.

**Parameters**

<code>__beg</code>	Start of string to parse.
<code>__end</code>	End of string to parse.
<code>__io</code>	Source of the locale.
<code>__err</code>	Error flags to set.
<code>__tm</code>	Pointer to struct tm to fill in.

**Returns**

Iterator to first char beyond weekday name.

Definition at line 1094 of file locale\_facets\_nonio.tcc.

References `std::ios_base::M_getloc()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, and `std::ios_base::goodbit`.

Referenced by `std::time_get<_CharT, _InIter>::get_weekday()`.

```
5.1040.2.8 template<typename _CharT, typename _InIter > _InIter std::time_get<_CharT, _InIter>::do_get_year ( iter_type
    __beg, iter_type __end, ios_base & __io, ios_base::iostate & __err, tm * __tm ) const [protected],
    [virtual],[inherited]
```

Parse input year string.

This function reads up to 4 characters to parse a year string and puts the results into a user-supplied struct tm. This function is a hook for derived classes to change the value returned.

**See Also**

`get_year()` for details.

**Parameters**

<code>__beg</code>	Start of string to parse.
<code>__end</code>	End of string to parse.
<code>__io</code>	Source of the locale.
<code>__err</code>	Error flags to set.
<code>__tm</code>	Pointer to struct tm to fill in.

**Returns**

Iterator to first char beyond year.

Definition at line 1146 of file locale\_facets\_nonio.tcc.

References `std::ios_base::eofbit`, `std::ios_base::failbit`, and `std::ios_base::goodbit`.

Referenced by `std::time_get<_CharT, _InIter>::get_year()`.

```
5.1040.2.9 template<typename _CharT, typename _InIter > iter_type std::time_get<_CharT, _InIter>::get ( iter_type __s,
    iter_type __end, ios_base & __io, ios_base::iostate & __err, tm * __tm, char __format, char __modifier = 0 )
    const [inline],[inherited]
```

Parse input string according to format.

This function calls `time_get::do_get` with the provided parameters.

**See Also**

`do_get()` and `get()`.

## Parameters

<code>__s</code>	Start of string to parse.
<code>__end</code>	End of string to parse.
<code>__io</code>	Source of the locale.
<code>__err</code>	Error flags to set.
<code>__tm</code>	Pointer to struct tm to fill in.
<code>__format</code>	Format specifier.
<code>__modifier</code>	Format modifier.

## Returns

Iterator to first char not parsed.

Definition at line 559 of file locale\_facets\_nonio.h.

References `std::time_get< _CharT, _InIter >::do_get()`.

5.1040.2.10 `template<typename _CharT, typename _InIter > _InIter std::time_get< _CharT, _InIter >::get ( iter_type __s, iter_type __end, ios_base & __io, ios_base::iostate & __err, tm * __tm, const char_type * __fmt, const char_type * __fmtend ) const` `[inline]`, `[inherited]`

Parse input string according to format.

This function parses the input string according to a provided format string. It does the inverse of `time_put::put`. The format string follows the format specified for `strptime(3)/strptime(3)`. The actual parsing is done by `time_get::do_get`.

## Parameters

<code>__s</code>	Start of string to parse.
<code>__end</code>	End of string to parse.
<code>__io</code>	Source of the locale.
<code>__err</code>	Error flags to set.
<code>__tm</code>	Pointer to struct tm to fill in.
<code>__fmt</code>	Start of the format string.
<code>__fmtend</code>	End of the format string.

## Returns

Iterator to first char not parsed.

Definition at line 1169 of file locale\_facets\_nonio.tcc.

References `std::ios_base::_M_getloc()`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::_ctype_abstract_base< _CharT >::is()`, `std::_ctype_abstract_base< _CharT >::narrow()`, `std::_ctype_abstract_base< _CharT >::tolower()`, and `std::_ctype_abstract_base< _CharT >::toupper()`.

5.1040.2.11 `template<typename _CharT, typename _InIter > iter_type std::time_get< _CharT, _InIter >::get_date ( iter_type __beg, iter_type __end, ios_base & __io, ios_base::iostate & __err, tm * __tm ) const` `[inline]`, `[inherited]`

Parse input date string.

This function parses a date according to the format `x` and puts the results into a user-supplied struct tm. The result is returned by calling `time_get::do_get_date()`.

If there is a valid date string according to format `x`, `tm` will be filled in accordingly and the returned iterator will point to the first character beyond the date string. If an error occurs before the end, `err` |= `ios_base::failbit`. If parsing reads all the characters, `err` |= `ios_base::eofbit`.

## Parameters

<code>__beg</code>	Start of string to parse.
<code>__end</code>	End of string to parse.
<code>__io</code>	Source of the locale.
<code>__err</code>	Error flags to set.
<code>__tm</code>	Pointer to struct tm to fill in.

## Returns

Iterator to first char beyond date string.

Definition at line 455 of file locale\_facets\_nonio.h.

References `std::time_get<_CharT, _InIter>::do_get_date()`.

```
5.1040.2.12 template<typename _CharT, typename _InIter > iter_type std::time_get<_CharT, _InIter >::get_monthname
( iter_type __beg, iter_type __end, ios_base & __io, ios_base::iostate & __err, tm * __tm ) const
[inline], [inherited]
```

Parse input month string.

This function parses a month name and puts the results into a user-supplied struct tm. The result is returned by calling `time_get::do_get_monthname()`.

Parsing starts by parsing an abbreviated month name. If a valid abbreviation is followed by a character that would lead to the full month name, parsing continues until the full name is found or an error occurs. Otherwise parsing finishes at the end of the abbreviated name.

If an error occurs before the end, `err |= ios_base::failbit`. If parsing reads all the characters, `err |= ios_base::eofbit`.

## Parameters

<code>__beg</code>	Start of string to parse.
<code>__end</code>	End of string to parse.
<code>__io</code>	Source of the locale.
<code>__err</code>	Error flags to set.
<code>__tm</code>	Pointer to struct tm to fill in.

## Returns

Iterator to first char beyond month name.

Definition at line 512 of file locale\_facets\_nonio.h.

References `std::time_get<_CharT, _InIter>::do_get_monthname()`.

```
5.1040.2.13 template<typename _CharT, typename _InIter > iter_type std::time_get<_CharT, _InIter >::get_time ( iter_type
__beg, iter_type __end, ios_base & __io, ios_base::iostate & __err, tm * __tm ) const [inline],
[inherited]
```

Parse input time string.

This function parses a time according to the format *X* and puts the results into a user-supplied struct tm. The result is returned by calling `time_get::do_get_time()`.

If there is a valid time string according to format *X*, *tm* will be filled in accordingly and the returned iterator will point to the first character beyond the time string. If an error occurs before the end, `err |= ios_base::failbit`. If parsing reads all the characters, `err |= ios_base::eofbit`.

## Parameters

<code>__beg</code>	Start of string to parse.
<code>__end</code>	End of string to parse.
<code>__io</code>	Source of the locale.
<code>__err</code>	Error flags to set.
<code>__tm</code>	Pointer to struct tm to fill in.

## Returns

Iterator to first char beyond time string.

Definition at line 430 of file locale\_facets\_nonio.h.

References std::time\_get< \_CharT, \_Inlter >::do\_get\_time().

```
5.1040.2.14 template<typename _CharT, typename _Inlter > iter_type std::time_get< _CharT, _Inlter >::get_weekday
( iter_type __beg, iter_type __end, ios_base & __io, ios_base::iostate & __err, tm * __tm ) const
[inline], [inherited]
```

Parse input weekday string.

This function parses a weekday name and puts the results into a user-supplied struct tm. The result is returned by calling time\_get::do\_get\_weekday().

Parsing starts by parsing an abbreviated weekday name. If a valid abbreviation is followed by a character that would lead to the full weekday name, parsing continues until the full name is found or an error occurs. Otherwise parsing finishes at the end of the abbreviated name.

If an error occurs before the end, err |= ios\_base::failbit. If parsing reads all the characters, err |= ios\_base::eofbit.

## Parameters

<code>__beg</code>	Start of string to parse.
<code>__end</code>	End of string to parse.
<code>__io</code>	Source of the locale.
<code>__err</code>	Error flags to set.
<code>__tm</code>	Pointer to struct tm to fill in.

## Returns

Iterator to first char beyond weekday name.

Definition at line 483 of file locale\_facets\_nonio.h.

References std::time\_get< \_CharT, \_Inlter >::do\_get\_weekday().

```
5.1040.2.15 template<typename _CharT, typename _Inlter > iter_type std::time_get< _CharT, _Inlter >::get_year( iter_type
__beg, iter_type __end, ios_base & __io, ios_base::iostate & __err, tm * __tm ) const [inline],
[inherited]
```

Parse input year string.

This function reads up to 4 characters to parse a year string and puts the results into a user-supplied struct tm. The result is returned by calling time\_get::do\_get\_year().

4 consecutive digits are interpreted as a full year. If there are exactly 2 consecutive digits, the library interprets this as the number of years since 1900.

If an error occurs before the end, err |= ios\_base::failbit. If parsing reads all the characters, err |= ios\_base::eofbit.

## Parameters

<code>__beg</code>	Start of string to parse.
<code>__end</code>	End of string to parse.
<code>__io</code>	Source of the locale.
<code>__err</code>	Error flags to set.
<code>__tm</code>	Pointer to struct tm to fill in.

## Returns

Iterator to first char beyond year.

Definition at line 538 of file locale\_facets\_nonio.h.

References `std::time_get<_CharT, _InIter >::do_get_year()`.

**5.1041.1 Detailed Description**

`template<typename _CharT, typename _OutIter>class std::time_put<_CharT, _OutIter>`

Primary class template `time_put`.

This facet encapsulates the code to format and output dates and times according to formats used by `strftime()`.

The `time_put` template uses protected virtual functions to provide the actual results. The public accessors forward the call to the virtual functions. These virtual functions are hooks for developers to implement the behavior they require from the `time_put` facet.

Definition at line 797 of file `locale_facets_nonio.h`.

**5.1041.2 Member Typedef Documentation**

**5.1041.2.1** `template<typename _CharT, typename _OutIter> typedef _CharT std::time_put<_CharT, _OutIter>::char_type`

Public typedefs.

Definition at line 803 of file `locale_facets_nonio.h`.

### 5.1041.2.2 `template<typename _CharT, typename _Outiter > typedef _Outiter std::time_put< _CharT, _Outiter >::iter_type`

Public typedefs.

Definition at line 804 of file `locale_facets_nonio.h`.

### 5.1041.3 Constructor & Destructor Documentation

#### 5.1041.3.1 `template<typename _CharT, typename _Outiter > std::time_put< _CharT, _Outiter >::time_put ( size_t __refs = 0 ) [inline], [explicit]`

Constructor performs initialization.

This is the constructor provided by the standard.

#### Parameters

<code>__refs</code>	Passed to the base facet class.
---------------------	---------------------------------

Definition at line 818 of file `locale_facets_nonio.h`.

#### 5.1041.3.2 `template<typename _CharT, typename _Outiter > virtual std::time_put< _CharT, _Outiter >::~~time_put ( ) [inline], [protected], [virtual]`

Destructor.

Definition at line 864 of file `locale_facets_nonio.h`.

### 5.1041.4 Member Function Documentation

#### 5.1041.4.1 `template<typename _CharT, typename _Outiter > _Outiter std::time_put< _CharT, _Outiter >::do_put ( iter_type __s, ios_base & __io, char_type __fill, const tm * __tm, char __format, char __mod ) const [protected], [virtual]`

Format and output a time or date.

This function formats the data in struct `tm` according to the provided format char and optional modifier. This function is a hook for derived classes to change the value returned.

#### See Also

`put()` for more details.

#### Parameters

<code>__s</code>	The stream to write to.
<code>__io</code>	Source of locale.
<code>__fill</code>	<code>char_type</code> to use for padding.
<code>__tm</code>	Struct <code>tm</code> with date and time info to format.
<code>__format</code>	Format char.
<code>__mod</code>	Optional modifier char.

#### Returns

Iterator after writing.

Definition at line 1309 of file `locale_facets_nonio.tcc`.

References std::ios\_base::\_M\_getloc(), and std::\_\_ctype\_abstract\_base< \_CharT >::widen().

Referenced by std::time\_put< \_CharT, \_Outlter >::put().

5.1041.4.2 `template<typename _CharT, typename _Outlter > _Outlter std::time_put< _CharT, _Outlter >::put ( iter_type __s, ios_base & __io, char_type __fill, const tm * __tm, const _CharT * __beg, const _CharT * __end ) const`

Format and output a time or date.

This function formats the data in struct tm according to the provided format string. The format string is interpreted as by strftime().

#### Parameters

<code>__s</code>	The stream to write to.
<code>__io</code>	Source of locale.
<code>__fill</code>	char_type to use for padding.
<code>__tm</code>	Struct tm with date and time info to format.
<code>__beg</code>	Start of format string.
<code>__end</code>	End of format string.

#### Returns

Iterator after writing.

Definition at line 1274 of file locale\_facets\_nonio.tcc.

References std::ios\_base::\_M\_getloc(), and std::\_\_ctype\_abstract\_base< \_CharT >::narrow().

5.1041.4.3 `template<typename _CharT, typename _Outlter > iter_type std::time_put< _CharT, _Outlter >::put ( iter_type __s, ios_base & __io, char_type __fill, const tm * __tm, char __format, char __mod = 0 ) const [inline]`

Format and output a time or date.

This function formats the data in struct tm according to the provided format char and optional modifier. The format and modifier are interpreted as by strftime(). It does so by returning time\_put::do\_put().

#### Parameters

<code>__s</code>	The stream to write to.
<code>__io</code>	Source of locale.
<code>__fill</code>	char_type to use for padding.
<code>__tm</code>	Struct tm with date and time info to format.
<code>__format</code>	Format char.
<code>__mod</code>	Optional modifier char.

#### Returns

Iterator after writing.

Definition at line 857 of file locale\_facets\_nonio.h.

References std::time\_put< \_CharT, \_Outlter >::do\_put().

### 5.1041.5 Member Data Documentation

5.1041.5.1 `template<typename _CharT, typename _Outlter > locale::id std::time_put< _CharT, _Outlter >::id [static]`

Numpunct facet id.

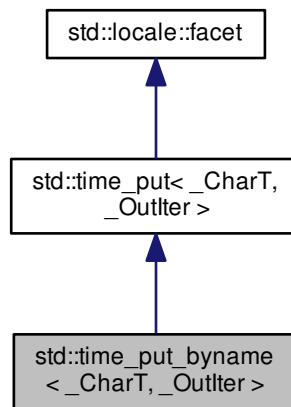

Definition at line 808 of file locale\_facets\_nonio.h.

## 5.1042.1 Detailed Description

```
template<typename _CharT, typename _Outlter>class std::time_put_byname< _CharT, _Outlter >
```

class time\_put\_byname [22.2.5.4].

Definition at line 893 of file locale\_facets\_nonio.h.

## 5.1042.2 Member Function Documentation

5.1042.2.1 `template<typename _CharT, typename _Outlter > _Outlter std::time_put< _CharT, _Outlter >::do_put ( iter_type __s, ios_base & __io, char_type __fill, const tm *__tm, char __format, char __mod ) const` [protected], [virtual], [inherited]

Format and output a time or date.

This function formats the data in struct tm according to the provided format char and optional modifier. This function is a hook for derived classes to change the value returned.

## See Also

`put()` for more details.

## Parameters

<code>__s</code>	The stream to write to.
<code>__io</code>	Source of locale.
<code>__fill</code>	<code>char_type</code> to use for padding.
<code>__tm</code>	Struct tm with date and time info to format.
<code>__format</code>	Format char.
<code>__mod</code>	Optional modifier char.

## Returns

Iterator after writing.

Definition at line 1309 of file locale\_facets\_nonio.tcc.

References `std::ios_base::M_getloc()`, and `std::__ctype_abstract_base< _CharT >::widen()`.

Referenced by `std::time_put< _CharT, _Outlter >::put()`.

5.1042.2.2 `template<typename _CharT, typename _OutIter > _OutIter std::time_put< _CharT, _OutIter >::put ( iter_type __s, ios_base & __io, char_type __fill, const tm * __tm, const _CharT * __beg, const _CharT * __end ) const` [inherited]

Format and output a time or date.

This function formats the data in struct tm according to the provided format string. The format string is interpreted as by strftime().

#### Parameters

<code>__s</code>	The stream to write to.
<code>__io</code>	Source of locale.
<code>__fill</code>	char_type to use for padding.
<code>__tm</code>	Struct tm with date and time info to format.
<code>__beg</code>	Start of format string.
<code>__end</code>	End of format string.

#### Returns

Iterator after writing.

Definition at line 1274 of file locale\_facets\_nonio.tcc.

References std::ios\_base::\_M\_getloc(), and std::\_\_ctype\_abstract\_base< \_CharT >::narrow().

5.1042.2.3 `template<typename _CharT, typename _OutIter > iter_type std::time_put< _CharT, _OutIter >::put ( iter_type __s, ios_base & __io, char_type __fill, const tm * __tm, char __format, char __mod = 0 ) const` [inline], [inherited]

Format and output a time or date.

This function formats the data in struct tm according to the provided format char and optional modifier. The format and modifier are interpreted as by strftime(). It does so by returning time\_put::do\_put().

#### Parameters

<code>__s</code>	The stream to write to.
<code>__io</code>	Source of locale.
<code>__fill</code>	char_type to use for padding.
<code>__tm</code>	Struct tm with date and time info to format.
<code>__format</code>	Format char.
<code>__mod</code>	Optional modifier char.

#### Returns

Iterator after writing.

Definition at line 857 of file locale\_facets\_nonio.h.

References std::time\_put< \_CharT, \_OutIter >::do\_put().

### 5.1042.3 Member Data Documentation

5.1042.3.1 `template<typename _CharT, typename _OutIter > locale::id std::time_put< _CharT, _OutIter >::id` [static], [inherited]

Numpunct facet id.

Definition at line 808 of file locale\_facets\_nonio.h.

The documentation for this class was generated from the following file:

### 5.1049.1 Detailed Description

[bool\\_set](#)

See N2136, Bool\_set: multi-valued logic by Hervé Brönnimann, Guillaume Melquiond, Sylvain Pion.

The implicit conversion to bool is slippery! I may use the new explicit conversion. This has been specialized in the language so that in contexts requiring a bool the conversion happens implicitly. Thus most objections should be eliminated.

Definition at line 54 of file [bool\\_set](#).

### 5.1049.2 Constructor & Destructor Documentation

#### 5.1051.1 Detailed Description

```
template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>class std::tr2::dynamic_bitset< _WordT, _Alloc >
```

The `dynamic_bitset` class represents a sequence of bits.

See N2050, Proposal to Add a Dynamically Sizeable Bitset to the Standard Library.

In the general unoptimized case, storage is allocated in word-sized blocks. Let  $B$  be the number of bits in a word, then  $(Nb+(B-1))/B$  words will be used for storage.  $B - NbB$  bits are unused. (They are the high-order bits in the highest word.) It is a class invariant that those unused bits are always zero.

If you think of `dynamic_bitset` as "a simple array of bits," be aware that your mental picture is reversed: a `dynamic_bitset` behaves the same way as bits in integers do, with the bit at index 0 in the "least significant / right-hand" position, and

the bit at index Nb-1 in the "most significant / left-hand" position. Thus, unlike other containers, a `dynamic_bitset`'s index "counts from right to left," to put it very loosely.

This behavior is preserved when translating to and from strings. For example, the first line of the following program probably prints "b('a') is 0001100001" on a modern ASCII system.

```
* #include <dynamic_bitset>
* #include <iostream>
* #include <sstream>
*
* using namespace std;
*
* int main()
* {
*     long a = 'a';
*     dynamic_bitset<> b(a);
*
*     cout << "b('a') is " << b << endl;
*
*     ostringstream s;
*     s << b;
*     string str = s.str();
*     cout << "index 3 in the string is " << str[3] << " but\n"
*          << "index 3 in the bitset is " << b[3] << endl;
* }
*
```

Most of the actual code isn't contained in `dynamic_bitset<>` itself, but in the base class `__dynamic_bitset_base`. The base class works with whole words, not with individual bits. This allows us to specialize `__dynamic_bitset_base` for the important special case where the `dynamic_bitset` is only a single word.

Extra confusion can result due to the fact that the storage for `__dynamic_bitset_base` is a vector, and is indexed as such. This is carefully encapsulated.

Definition at line 413 of file `dynamic_bitset`.

## 5.1051.2 Constructor & Destructor Documentation

**5.1051.2.1** `template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> std::tr2::dynamic_bitset<_WordT, _Alloc >::dynamic_bitset ( size_type __nbits, unsigned long long __val = 0ULL, const allocator_type & __alloc = allocator_type() ) [inline], [explicit]`

Initial bits bitwise-copied from a single word (others set to zero).

Definition at line 580 of file `dynamic_bitset`.

**5.1051.2.2** `template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> template<typename _CharT, typename _Traits, typename _Alloc1 > std::tr2::dynamic_bitset<_WordT, _Alloc >::dynamic_bitset ( const std::basic_string<_CharT, _Traits, _Alloc1 > & __str, typename basic_string<_CharT, _Traits, _Alloc1 >::size_type __pos = 0, typename basic_string<_CharT, _Traits, _Alloc1 >::size_type __n = std::basic_string<_CharT, _Traits, _Alloc1>::npos, _CharT __zero = _CharT('0'), _CharT __one = _CharT('1'), const allocator_type & __alloc = allocator_type() ) [inline], [explicit]`

Use a subset of a string.

### Parameters

<code>__str</code>	A string of '0' and '1' characters.
--------------------	-------------------------------------

<code>__pos</code>	Index of the first character in <code>__str</code> to use.
<code>__n</code>	The number of characters to copy.
<code>__zero</code>	The character to use for unset bits.
<code>__one</code>	The character to use for set bits.
<code>__alloc</code>	An allocator.

**Exceptions**

<code>std::out_of_range</code>	If <code>__pos</code> is bigger the size of <code>__str</code> .
<code>std::invalid_argument</code>	If a character appears in the string which is neither '0' nor '1'.

Definition at line 605 of file `dynamic_bitset`.

References `std::tr2::dynamic_bitset<_WordT, _Alloc >::resize()`, and `std::basic_string<_CharT, _Traits, _Alloc >::size()`.

```
5.1051.2.3 template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>
std::tr2::dynamic_bitset<_WordT, _Alloc >::dynamic_bitset ( const char * __str, const allocator_type &
__alloc = allocator_type() ) [inline], [explicit]
```

Construct from a string.

**Parameters**

<code>__str</code>	A string of '0' and '1' characters.
<code>__alloc</code>	An allocator.

**Exceptions**

<code>std::invalid_argument</code>	If a character appears in the string which is neither '0' nor '1'.
------------------------------------	--

Definition at line 634 of file `dynamic_bitset`.

References `std::tr2::dynamic_bitset<_WordT, _Alloc >::resize()`.

```
5.1051.2.4 template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>
std::tr2::dynamic_bitset<_WordT, _Alloc >::dynamic_bitset ( const dynamic_bitset<_WordT, _Alloc > &
__b ) [inline]
```

Copy constructor.

Definition at line 650 of file `dynamic_bitset`.

```
5.1051.2.5 template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>
std::tr2::dynamic_bitset<_WordT, _Alloc >::dynamic_bitset ( dynamic_bitset<_WordT, _Alloc > && __b )
[inline]
```

Move constructor.

Definition at line 657 of file `dynamic_bitset`.

**5.1051.3 Member Function Documentation**

```
5.1051.3.1 template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> bool
std::tr2::dynamic_bitset<_WordT, _Alloc >::all ( ) const [inline]
```

Tests whether all the bits are on.

**Returns**

True if all the bits are set.

Definition at line 1046 of file `dynamic_bitset`.

```
5.1051.3.2 template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> bool
std::tr2::dynamic_bitset<_WordT, _Alloc >::any( ) const [inline]
```

Tests whether any of the bits are on.

**Returns**

True if at least one bit is set.

Definition at line 1054 of file `dynamic_bitset`.

```
5.1051.3.3 template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> void
std::tr2::dynamic_bitset<_WordT, _Alloc >::append( block_type __block ) [inline]
```

Append a block.

Definition at line 740 of file `dynamic_bitset`.

Referenced by `std::tr2::dynamic_bitset<_WordT, _Alloc >::append()`.

```
5.1051.3.4 template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> template<typename
_BlockInputIterator > void std::tr2::dynamic_bitset<_WordT, _Alloc >::append( _BlockInputIterator __first,
_BlockInputIterator __last ) [inline]
```

Append an iterator range of blocks.

Definition at line 758 of file `dynamic_bitset`.

References `std::tr2::dynamic_bitset<_WordT, _Alloc >::append()`.

```
5.1051.3.5 template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> void
std::tr2::dynamic_bitset<_WordT, _Alloc >::clear( ) [inline]
```

Clear the bitset.

Definition at line 718 of file `dynamic_bitset`.

```
5.1051.3.6 template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> size_type
std::tr2::dynamic_bitset<_WordT, _Alloc >::count( ) const [inline], [noexcept]
```

Returns the number of bits which are set.

Definition at line 1002 of file `dynamic_bitset`.

```
5.1051.3.7 template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> bool
std::tr2::dynamic_bitset<_WordT, _Alloc >::empty( ) const [inline], [noexcept]
```

Returns true if the `dynamic_bitset` is empty.

Definition at line 1017 of file `dynamic_bitset`.

```
5.1051.3.8 template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> size_type
std::tr2::dynamic_bitset<_WordT, _Alloc >::find_first( ) const [inline]
```

Finds the index of the first "on" bit.

**Returns**

The index of the first bit set, or size() if not found.

**See Also**

find\_next

Definition at line 1082 of file dynamic\_bitset.

```
5.1051.3.9 template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> size_type
std::tr2::dynamic_bitset<_WordT, _Alloc>::find_next ( size_t __prev ) const [inline]
```

Finds the index of the next "on" bit after prev.

**Returns**

The index of the next bit set, or size() if not found.

**Parameters**

<code>__prev</code>	Where to start searching.
---------------------	---------------------------

**See Also**

find\_first

Definition at line 1092 of file dynamic\_bitset.

```
5.1051.3.10 template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>
dynamic_bitset<_WordT, _Alloc>& std::tr2::dynamic_bitset<_WordT, _Alloc>::flip ( ) [inline]
```

Toggles every bit to its opposite value.

Definition at line 897 of file dynamic\_bitset.

Referenced by std::tr2::dynamic\_bitset<\_WordT, \_Alloc>::operator~().

```
5.1051.3.11 template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>
dynamic_bitset<_WordT, _Alloc>& std::tr2::dynamic_bitset<_WordT, _Alloc>::flip ( size_type __pos )
[inline]
```

Toggles a given bit to its opposite value.

**Parameters**

<code>__pos</code>	The index of the bit.
--------------------	-----------------------

**Exceptions**

<code>std::out_of_range</code>	If <code>__pos</code> is bigger the size of the set.
--------------------------------	--

Definition at line 910 of file dynamic\_bitset.

```
5.1051.3.12 template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> allocator_type
std::tr2::dynamic_bitset<_WordT, _Alloc>::get_allocator ( ) const [inline]
```

Return the allocator for the bitset.

Definition at line 698 of file dynamic\_bitset.

5.1051.3.13 `template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> constexpr size_type std::tr2::dynamic_bitset<_WordT, _Alloc >::max_size ( ) [inline], [noexcept]`

Returns the maximum size of a `dynamic_bitset` object having the same type as `*this`. The real answer is `max() * bits_per_block` but is likely to overflow.

Definition at line 1024 of file `dynamic_bitset`.

References `std::numeric_limits<_Tp >::max()`.

5.1051.3.14 `template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> bool std::tr2::dynamic_bitset<_WordT, _Alloc >::none ( ) const [inline]`

Tests whether any of the bits are on.

#### Returns

True if none of the bits are set.

Definition at line 1062 of file `dynamic_bitset`.

5.1051.3.15 `template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> size_type std::tr2::dynamic_bitset<_WordT, _Alloc >::num_blocks ( ) const [inline], [noexcept]`

Returns the total number of blocks.

Definition at line 1012 of file `dynamic_bitset`.

5.1051.3.16 `template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> dynamic_bitset<_WordT, _Alloc>& std::tr2::dynamic_bitset<_WordT, _Alloc >::operator&= ( const dynamic_bitset<_WordT, _Alloc > &_rhs ) [inline]`

Operations on `dynamic_bitsets`.

#### Parameters

<code>__rhs</code>	A same-sized <code>dynamic_bitset</code> .
--------------------	--

These should be self-explanatory.

Definition at line 773 of file `dynamic_bitset`.

5.1051.3.17 `template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> dynamic_bitset<_WordT, _Alloc>& std::tr2::dynamic_bitset<_WordT, _Alloc >::operator&= ( dynamic_bitset<_WordT, _Alloc > &&_rhs ) [inline]`

Operations on `dynamic_bitsets`.

#### Parameters

--------------------	--

These should be self-explanatory.

Definition at line 780 of file `dynamic_bitset`.

5.1051.3.18 `template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> dynamic_bitset<_WordT, _Alloc>& std::tr2::dynamic_bitset<_WordT, _Alloc >::operator-= ( const dynamic_bitset<_WordT, _Alloc > &_rhs ) [inline]`

Operations on `dynamic_bitsets`.

## Parameters

<code>__rhs</code>	A same-sized <code>dynamic_bitset</code> .
--------------------	--

These should be self-explanatory.

Definition at line 801 of file `dynamic_bitset`.

```
5.1051.3.19 template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>
dynamic_bitset<_WordT, _Alloc> std::tr2::dynamic_bitset<_WordT, _Alloc >::operator<<< ( size_type
__pos ) const [inline]
```

Self-explanatory.

Definition at line 1068 of file `dynamic_bitset`.

```
5.1051.3.20 template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>
dynamic_bitset<_WordT, _Alloc>& std::tr2::dynamic_bitset<_WordT, _Alloc >::operator<<= ( size_type
__pos ) [inline]
```

Operations on `dynamic_bitsets`.

## Parameters

<code>__pos</code>	The number of places to shift.
--------------------	--------------------------------

These should be self-explanatory.

Definition at line 816 of file `dynamic_bitset`.

```
5.1051.3.21 template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> dynamic_bitset&
std::tr2::dynamic_bitset<_WordT, _Alloc >::operator= ( const dynamic_bitset<_WordT, _Alloc > & __b )
[inline]
```

Assignment.

Definition at line 675 of file `dynamic_bitset`.

```
5.1051.3.22 template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> dynamic_bitset&
std::tr2::dynamic_bitset<_WordT, _Alloc >::operator= ( dynamic_bitset<_WordT, _Alloc > && __b )
[inline]
```

Move assignment.

Definition at line 688 of file `dynamic_bitset`.

References `std::tr2::dynamic_bitset<_WordT, _Alloc >::swap()`.

```
5.1051.3.23 template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>
dynamic_bitset<_WordT, _Alloc> std::tr2::dynamic_bitset<_WordT, _Alloc >::operator>>> ( size_type
__pos ) const [inline]
```

Self-explanatory.

Definition at line 1072 of file `dynamic_bitset`.

```
5.1051.3.24 template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>
dynamic_bitset<_WordT, _Alloc>& std::tr2::dynamic_bitset<_WordT, _Alloc >::operator>>= ( size_type
__pos ) [inline]
```

Operations on `dynamic_bitsets`.

## Parameters

<code>__pos</code>	The number of places to shift.
--------------------	--------------------------------

These should be self-explanatory.

Definition at line 829 of file `dynamic_bitset`.

5.1051.3.25 `template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> reference std::tr2::dynamic_bitset<_WordT, _Alloc >::operator[] ( size_type __pos ) [inline]`

Array-indexing support.

## Parameters

<code>__pos</code>	Index into the <code>dynamic_bitset</code> .
--------------------	--

## Returns

A `bool` for a 'const `dynamic_bitset`'. For non-const bitsets, an instance of the reference proxy class.

## Note

These operators do no range checking and throw no exceptions, as required by DR 11 to the standard.

Definition at line 932 of file `dynamic_bitset`.

5.1051.3.26 `template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> const_reference std::tr2::dynamic_bitset<_WordT, _Alloc >::operator[] ( size_type __pos ) const [inline]`

Array-indexing support.

## Parameters

<code>__pos</code>	Index into the <code>dynamic_bitset</code> .
--------------------	--

## Returns

A `bool` for a 'const `dynamic_bitset`'. For non-const bitsets, an instance of the reference proxy class.

## Note

These operators do no range checking and throw no exceptions, as required by DR 11 to the standard.

Definition at line 936 of file `dynamic_bitset`.

5.1051.3.27 `template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> dynamic_bitset<_WordT, _Alloc>& std::tr2::dynamic_bitset<_WordT, _Alloc >::operator^= ( const dynamic_bitset<_WordT, _Alloc > &_rhs ) [inline]`

Operations on `dynamic_bitsets`.

## Parameters

<code>__rhs</code>	A same-sized <code>dynamic_bitset</code> .
--------------------	--

These should be self-explanatory.

Definition at line 794 of file `dynamic_bitset`.

```
5.1051.3.28 template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>
dynamic_bitset<_WordT, _Alloc>& std::tr2::dynamic_bitset<_WordT, _Alloc>::operator|= ( const
dynamic_bitset<_WordT, _Alloc> &__rhs ) [inline]
```

Operations on `dynamic_bitsets`.

Parameters

<code>__rhs</code>	A same-sized <code>dynamic_bitset</code> .
--------------------	--

These should be self-explanatory.

Definition at line 787 of file `dynamic_bitset`.

```
5.1051.3.29 template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>
dynamic_bitset<_WordT, _Alloc> std::tr2::dynamic_bitset<_WordT, _Alloc>::operator~ ( ) const
[inline]
```

See the no-argument `flip()`.

Definition at line 919 of file `dynamic_bitset`.

References `std::tr2::dynamic_bitset<_WordT, _Alloc>::flip()`.

```
5.1051.3.30 template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> void
std::tr2::dynamic_bitset<_WordT, _Alloc>::push_back ( bool __bit ) [inline]
```

Push a bit onto the high end of the bitset.

Definition at line 728 of file `dynamic_bitset`.

References `std::tr2::dynamic_bitset<_WordT, _Alloc>::size()`.

```
5.1051.3.31 template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>
dynamic_bitset<_WordT, _Alloc>& std::tr2::dynamic_bitset<_WordT, _Alloc>::reset ( ) [inline]
```

Sets every bit to false.

Definition at line 872 of file `dynamic_bitset`.

```
5.1051.3.32 template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>
dynamic_bitset<_WordT, _Alloc>& std::tr2::dynamic_bitset<_WordT, _Alloc>::reset ( size_type __pos )
[inline]
```

Sets a given bit to false.

Parameters

<code>__pos</code>	The index of the bit.
--------------------	-----------------------

Exceptions

<code>std::out_of_range</code>	If <code>__pos</code> is bigger the size of the set.
--------------------------------	--

Same as writing `set (__pos, false)`.

Definition at line 886 of file `dynamic_bitset`.

5.1051.333 `template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> void std::tr2::dynamic_bitset<_WordT, _Alloc >::resize ( size_type __nbits, bool __value = false ) [inline]`

Resize the bitset.

Definition at line 705 of file `dynamic_bitset`.

Referenced by `std::tr2::dynamic_bitset<_WordT, _Alloc >::dynamic_bitset()`, and `std::tr2::operator>>()`.

5.1051.334 `template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> dynamic_bitset<_WordT, _Alloc>& std::tr2::dynamic_bitset<_WordT, _Alloc >::set ( ) [inline]`

Sets every bit to true.

Definition at line 847 of file `dynamic_bitset`.

5.1051.335 `template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> dynamic_bitset<_WordT, _Alloc>& std::tr2::dynamic_bitset<_WordT, _Alloc >::set ( size_type __pos, bool __val = true ) [inline]`

Sets a given bit to a particular value.

Parameters

<code>__pos</code>	The index of the bit.
<code>__val</code>	Either true or false, defaults to true.

Exceptions

<code>std::out_of_range</code>	If <code>__pos</code> is bigger the size of the set.
--------------------------------	--

Definition at line 861 of file `dynamic_bitset`.

5.1051.336 `template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> size_type std::tr2::dynamic_bitset<_WordT, _Alloc >::size ( ) const [inline], [noexcept]`

Returns the total number of bits.

Definition at line 1007 of file `dynamic_bitset`.

Referenced by `std::tr2::operator>>()`, and `std::tr2::dynamic_bitset<_WordT, _Alloc >::push_back()`.

5.1051.337 `template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> void std::tr2::dynamic_bitset<_WordT, _Alloc >::swap ( dynamic_bitset<_WordT, _Alloc > & __b ) [inline]`

Swap with another bitset.

Definition at line 665 of file `dynamic_bitset`.

Referenced by `std::tr2::dynamic_bitset<_WordT, _Alloc >::operator=()`.

5.1051.338 `template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> bool std::tr2::dynamic_bitset<_WordT, _Alloc >::test ( size_type __pos ) const [inline]`

Tests the value of a bit.

## Parameters

<code>__pos</code>	The index of a bit.
--------------------	---------------------

## Returns

The value at `__pos`.

## Exceptions

<code>std::out_of_range</code>	If <code>__pos</code> is bigger the size of the set.
--------------------------------	--

Definition at line 1034 of file `dynamic_bitset`.

```
5.1051.339 template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> template<typename
_CharT = char, typename _Traits = std::char_traits<_CharT>, typename _Alloc1 = std::allocator<_CharT>>
std::basic_string<_CharT, _Traits, _Alloc1> std::tr2::dynamic_bitset<_WordT, _Alloc>::to_string ( _CharT
_zero = _CharT('0'), _CharT_one = _CharT('1') ) const [inline]
```

Returns a character interpretation of the `dynamic_bitset`.

## Returns

The string equivalent of the bits.

Note the ordering of the bits: decreasing character positions correspond to increasing bit positions (see the main class notes for an example).

Definition at line 972 of file `dynamic_bitset`.

```
5.1051.340 template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> unsigned long long
std::tr2::dynamic_bitset<_WordT, _Alloc>::to_ulong ( ) const [inline]
```

Returns a numerical interpretation of the `dynamic_bitset`.

## Returns

The integral equivalent of the bits.

## Exceptions

<code>std::overflow_error</code>	If there are too many bits to be represented in an unsigned long.
----------------------------------	---

Definition at line 957 of file `dynamic_bitset`.

```
5.1051.341 template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>> unsigned long
std::tr2::dynamic_bitset<_WordT, _Alloc>::to_ulong ( ) const [inline]
```

Returns a numerical interpretation of the `dynamic_bitset`.

## Returns

The integral equivalent of the bits.

## Exceptions

<code>std::overflow_error</code>	If there are too many bits to be represented in an unsigned long.
----------------------------------	---

Definition at line 947 of file `dynamic_bitset`.

## 5.1051.4 Member Data Documentation

5.1051.4.1 `template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>  
std::tr2::dynamic_bitset<_WordT, _Alloc >::_pad0__` [explicit]

All bits set to zero.

Definition at line 575 of file `dynamic_bitset`.

## 5.1052.1 Detailed Description

`template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>class std::tr2::dynamic_bitset<_WordT, _Alloc >::reference`

This encapsulates the concept of a single bit. An instance of this class is a proxy for an actual bit; this way the individual bit operations are done as faster word-size bitwise instructions.

Most users will never need to use this class directly; conversions to and from `bool` are automatic and should be transparent. Overloaded operators help to preserve the illusion.

(On a typical system, this "bit %reference" is 64 times the size of an actual bit. Ha.)

Definition at line 507 of file `dynamic_bitset`.

The documentation for this class was generated from the following file:

#### 5.1055.1 Detailed Description

`template<typename _T1, typename _T2>class std::tuple< _T1, _T2 >`

Partial specialization, 2-element tuple. Includes construction and assignment from a pair.

Definition at line 907 of file tuple.

The documentation for this class was generated from the following file:

- [tuple](#)

## 5.1056 `std::tuple_element< _Int, _Tp >` Struct Template Reference

### 5.1056.1 Detailed Description

`template<std::size_t _Int, typename _Tp>struct std::tuple_element< _Int, _Tp >`

`tuple_element`

Gives the type of the *ith* element of a given tuple type.

Definition at line 359 of file array.

The documentation for this struct was generated from the following file:

- [array](#)

## 5.1057 `std::tuple_element< 0, std::pair< _Tp1, _Tp2 > >` Struct Template Reference

Public Types

- `typedef _Tp1 type`

### 5.1057.1 Detailed Description

```
template<class _Tp1, class _Tp2>struct std::tuple_element< 0, std::pair< _Tp1, _Tp2 > >
```

Partial specialization for `std::pair`.

Definition at line 155 of file `utility`.

The documentation for this struct was generated from the following file:

- [utility](#)

## 5.1058 `std::tuple_element< 0, tuple< _Head, _Tail...> >` Struct Template Reference

### Public Types

- `typedef _Head type`

#### 5.1058.1 Detailed Description

```
template<typename _Head, typename... _Tail>struct std::tuple_element< 0, tuple< _Head, _Tail...> >
```

Basis case for `tuple_element`: The first element is the one we're seeking.

Definition at line 1286 of file `tuple`.

The documentation for this struct was generated from the following file:

- [tuple](#)

## 5.1059 `std::tuple_element< 1, std::pair< _Tp1, _Tp2 > >` Struct Template Reference

### Public Types

- `typedef _Tp2 type`

#### 5.1059.1 Detailed Description

```
template<class _Tp1, class _Tp2>struct std::tuple_element< 1, std::pair< _Tp1, _Tp2 > >
```

Partial specialization for `std::pair`.

Definition at line 160 of file `utility`.

The documentation for this struct was generated from the following file:

- [utility](#)

5.1060 `std::tuple_element< __i, tuple< _Head, _Tail...> >` Struct Template Reference

Inheritance diagram for `std::tuple_element< __i, tuple< _Head, _Tail...> >`:

## 5.1060.1 Detailed Description

```
template<std::size_t __i, typename _Head, typename... _Tail>struct std::tuple_element< __i, tuple< _Head, _Tail...> >
```

Recursive case for `tuple_element`: strip off the first element in the tuple and retrieve the (i-1)th element of the remaining tuple.

Definition at line 1279 of file `tuple`.

The documentation for this struct was generated from the following file:

- [tuple](#)

5.1061 `std::tuple_element< __i, tuple<> >` Struct Template Reference

## 5.1061.1 Detailed Description

```
template<size_t __i>struct std::tuple_element< __i, tuple<> >
```

Error case for `tuple_element`: invalid index.

Definition at line 1295 of file `tuple`.

The documentation for this struct was generated from the following file:

- [tuple](#)

5.1062 `std::tuple_element< _Int, std::__debug::array< _Tp, _Nm > >` Struct Template Reference

## Public Types

- typedef `_Tp` **type**

### 5.1062.1 Detailed Description

```
template<std::size_t _Int, typename _Tp, std::size_t _Nm>struct std::tuple_element< _Int, std::__debug::array< _Tp, _Nm > >
```

tuple\_element

Definition at line 329 of file debug/array.

The documentation for this struct was generated from the following file:

- [debug/array](#)

### 5.1063 std::tuple\_element< \_Int,::array< \_Tp, \_Nm > > Struct Template Reference

#### Public Types

- typedef **\_Tp type**

### 5.1063.1 Detailed Description

```
template<std::size_t _Int, typename _Tp, std::size_t _Nm>struct std::tuple_element< _Int,::array< _Tp, _Nm > >
```

Partial specialization for std::array.

Definition at line 363 of file array.

The documentation for this struct was generated from the following file:

- [array](#)

### 5.1064 std::tuple\_size< \_Tp > Struct Template Reference

Inherited by std::tuple\_size< const \_\_enable\_if\_has\_tuple\_size< \_Tp > >, std::tuple\_size< const volatile \_\_enable\_if\_has\_tuple\_size< \_Tp > >, and std::tuple\_size< volatile \_\_enable\_if\_has\_tuple\_size< \_Tp > >.

### 5.1064.1 Detailed Description

```
template<typename _Tp>struct std::tuple_size< _Tp >
```

tuple\_size

Finds the size of a given tuple type.

Definition at line 350 of file array.

The documentation for this struct was generated from the following file:

- [array](#)

## 5.1065 std::tuple\_size&lt; std::\_\_debug::array&lt; \_Tp, \_Nm &gt; &gt; Struct Template Reference

## Protected Member Functions

- **type\_info** (const char \*\_\_n)

## Protected Attributes

- const char \* **\_\_name**

### 5.1070.1 Detailed Description

Part of RTTI.

The `type_info` class describes type information generated by an implementation.

Definition at line 88 of file `typeinfo`.

### 5.1070.2 Constructor & Destructor Documentation

#### 5.1070.2.1 virtual `std::type_info::~~type_info ( )` [virtual]

Destructor first. Being the first non-inline virtual function, this controls in which translation unit the vtable is emitted. The compiler makes use of that information to know where to emit the runtime-mandated `type_info` structures in the new-abi.

### 5.1070.3 Member Function Documentation

#### 5.1070.3.1 `const char* std::type_info::name ( ) const` [inline],[noexcept]

Returns an *implementation-defined* byte string; this is not portable between compilers!

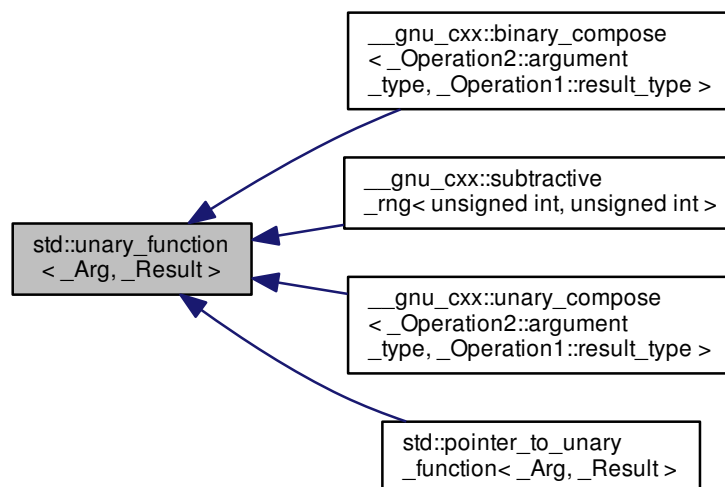

Definition at line 99 of file `typeinfo`.

The documentation for this class was generated from the following file:

- [typeinfo](#)

### 5.1071 `std::unary_function<_Arg, _Result >` Struct Template Reference

Inheritance diagram for `std::unary_function<_Arg, _Result >`:

## Public Types

- typedef `_Arg` [argument\\_type](#)
- typedef `_Result` [result\\_type](#)

### 5.1071.1 Detailed Description

```
template<typename _Arg, typename _Result>struct std::unary_function< _Arg, _Result >
```

This is one of the [functor base classes](#).

Definition at line 105 of file `stl_function.h`.

### 5.1071.2 Member Typedef Documentation

5.1071.2.1 `template<typename _Arg, typename _Result> typedef _Arg std::unary_function< _Arg, _Result >::argument_type`

`argument_type` is the type of the argument

Definition at line 108 of file `stl_function.h`.

5.1071.2.2 `template<typename _Arg, typename _Result> typedef _Result std::unary_function< _Arg, _Result >::result_type`

`result_type` is the return type

Definition at line 111 of file `stl_function.h`.

The documentation for this struct was generated from the following file:

- [stl\\_function.h](#)

## 5.1072 std::unary\_negate<\_Predicate > Class Template Reference

Inheritance diagram for `std::unary_negate<_Predicate >`:

## Public Types

- typedef `_Predicate::argument_type` [argument\\_type](#)
- typedef `bool` [result\\_type](#)

## Public Member Functions

- `_GLIBCXX14_CONSTEXPR` **unary\_negate** (const `_Predicate` &\_\_x)
- `_GLIBCXX14_CONSTEXPR` **bool operator()** (const typename `_Predicate::argument_type` &\_\_x) const

## Protected Attributes

- `_Predicate` **\_M\_pred**

### 5.1072.1 Detailed Description

`template<typename _Predicate>class std::unary_negate<_Predicate >`

One of the [negation functors](#).

Definition at line 979 of file `stl_function.h`.

### 5.1072.2 Member Typedef Documentation

**5.1072.2.1** `typedef _Predicate::argument_type std::unary_function<_Predicate::argument_type, bool >::argument_type` [inherited]

`argument_type` is the type of the argument

Definition at line 108 of file `stl_function.h`.

**5.1072.2.2** `typedef bool std::unary_function<_Predicate::argument_type, bool >::result_type` [inherited]

`result_type` is the return type

Definition at line 111 of file `stl_function.h`.

The documentation for this class was generated from the following file:

- [stl\\_function.h](#)

## 5.1073 std::underflow\_error Class Reference

Inheritance diagram for std::underflow\_error:

## Public Member Functions

- **underflow\_error** (const [string](#) &\_\_arg) `_GLIBCXX_TXN_SAFE`
- **underflow\_error** (const char \*) `_GLIBCXX_TXN_SAFE`
- virtual const char \* [what](#) () const `_GLIBCXX_TXN_SAFE_DYN` `noexcept`

## 5.1073.1 Detailed Description

Thrown to indicate arithmetic underflow.

Definition at line 252 of file `stdexcept`.

## 5.1073.2 Member Function Documentation

## 5.1073.2.1 virtual const char\* std::runtime\_error::what ( ) const [virtual],[noexcept],[inherited]

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [stdexcept](#)

## 5.1074 std::underlying\_type&lt;\_Tp&gt; Struct Template Reference

## Public Member Functions

- typedef **\_\_underlying\_type** (\_Tp) type

### 5.1074.1 Detailed Description

```
template<typename _Tp>struct std::underlying_type< _Tp >
```

The underlying type of an enum.

Definition at line 2044 of file `type_traits`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

### 5.1075 `std::uniform_int_distribution< _IntType >` Class Template Reference

#### Classes

- struct [param\\_type](#)

#### Public Types

- `template<typename _UniformRandomNumberGenerator >`  
[result\\_type operator\(\)](#) (`_UniformRandomNumberGenerator &__urng, const param\_type &__p`)
- `template<typename _UniformRandomNumberGenerator >`  
[uniform\\_int\\_distribution](#)  
< `_IntType >::`[result\\_type operator\(\)](#) (`_UniformRandomNumberGenerator &__urng, const param\_type &__param`)
- [param\\_type param](#) () const
- void [param](#) (const [param\\_type](#) &\_\_param)
- void [reset](#) ()

## Friends

- `bool operator==(const uniform_int_distribution &__d1, const uniform_int_distribution &__d2)`

## 5.1075.1 Detailed Description

```
template<typename _IntType = int>class std::uniform_int_distribution<_IntType >
```

Uniform discrete distribution for random numbers. A discrete random distribution on the range  $[min, max]$  with equal probability throughout the range.

Definition at line 58 of file `uniform_int_dist.h`.

## 5.1075.2 Member Typedef Documentation

5.1075.2.1 `template<typename _IntType = int> typedef _IntType std::uniform_int_distribution<_IntType>::result_type`

The type of the range of the distribution.

Definition at line 61 of file `uniform_int_dist.h`.

## 5.1075.3 Constructor &amp; Destructor Documentation

5.1075.3.1 `template<typename _IntType = int> std::uniform_int_distribution<_IntType>::uniform_int_distribution ( _IntType __a = 0, _IntType __b = std::numeric_limits<_IntType>::max() ) [inline], [explicit]`

Constructs a uniform distribution object.

Definition at line 105 of file `uniform_int_dist.h`.

## 5.1075.4 Member Function Documentation

5.1075.4.1 `template<typename _IntType = int> result_type std::uniform_int_distribution<_IntType>::max ( ) const [inline]`

Returns the inclusive upper bound of the distribution range.

Definition at line 157 of file `uniform_int_dist.h`.

5.1075.4.2 `template<typename _IntType = int> result_type std::uniform_int_distribution<_IntType>::min ( ) const [inline]`

Returns the inclusive lower bound of the distribution range.

Definition at line 150 of file `uniform_int_dist.h`.

5.1075.4.3 `template<typename _IntType = int> template<typename _UniformRandomNumberGenerator > result_type std::uniform_int_distribution<_IntType>::operator() ( _UniformRandomNumberGenerator & __urng ) [inline]`

Generating functions.

Definition at line 165 of file `uniform_int_dist.h`.

5.1075.4.4 `template<typename _IntType = int> param_type std::uniform_int_distribution<_IntType>::param ( ) const`  
`[inline]`

Returns the parameter set of the distribution.

Definition at line 135 of file `uniform_int_dist.h`.

Referenced by `std::operator>>()`.

5.1075.4.5 `template<typename _IntType = int> void std::uniform_int_distribution<_IntType>::param ( const param_type`  
`&__param ) [inline]`

Sets the parameter set of the distribution.

Parameters

<code>__param</code>	The new parameter set of the distribution.
----------------------	--

Definition at line 143 of file `uniform_int_dist.h`.

5.1075.4.6 `template<typename _IntType = int> void std::uniform_int_distribution<_IntType>::reset ( ) [inline]`

Resets the distribution state.

Does nothing for the uniform integer distribution.

Definition at line 121 of file `uniform_int_dist.h`.

## 5.1075.5 Friends And Related Function Documentation

5.1075.5.1 `template<typename _IntType = int> bool operator==( const uniform_int_distribution<_IntType> &__d1, const`  
`uniform_int_distribution<_IntType> &__d2 ) [friend]`

Return true if two uniform integer distributions have the same parameters.

Definition at line 200 of file `uniform_int_dist.h`.

The documentation for this class was generated from the following file:

- [uniform\\_int\\_dist.h](#)

## 5.1076 `std::uniform_int_distribution<_IntType>::param_type` Struct Reference

Public Types

## 5.1077.1 Detailed Description

```
template<typename _RealType = double>class std::uniform_real_distribution< _RealType >
```

Uniform continuous distribution for random numbers.

A continuous random distribution on the range [min, max) with equal probability throughout the range. The URNG should be real-valued and deliver number in the range [0, 1).

Definition at line 1702 of file random.h.

## 5.1077.2 Member Typedef Documentation

```
5.1077.2.1 template<typename _RealType = double> typedef _RealType std::uniform_real_distribution< _RealType >::result_type
```

The type of the range of the distribution.

Definition at line 1705 of file random.h.

## 5.1077.3 Constructor &amp; Destructor Documentation

```
5.1077.3.1 template<typename _RealType = double> std::uniform_real_distribution< _RealType >::uniform_real_distribution ( _RealType __a = _RealType(0), _RealType __b = _RealType(1) )
[inline], [explicit]
```

Constructs a `uniform_real_distribution` object.

## Parameters

<code>__a</code>	[IN] The lower bound of the distribution.
<code>__b</code>	[IN] The upper bound of the distribution.

Definition at line 1753 of file random.h.

## 5.1077.4 Member Function Documentation

```
5.1077.4.1 template<typename _RealType = double> result_type std::uniform_real_distribution< _RealType >::max ( )
const [inline]
```

Returns the inclusive upper bound of the distribution range.

Definition at line 1805 of file random.h.

```
5.1077.4.2 template<typename _RealType = double> result_type std::uniform_real_distribution< _RealType >::min ( )
const [inline]
```

Returns the inclusive lower bound of the distribution range.

Definition at line 1798 of file random.h.

5.1077.4.3 `template<typename _RealType = double> template<typename _UniformRandomNumberGenerator > result_type  
std::uniform_real_distribution<_RealType>::operator() ( _UniformRandomNumberGenerator & __urng )  
[inline]`

Generating functions.

Definition at line 1813 of file `random.h`.

5.1077.4.4 `template<typename _RealType = double> param_type std::uniform_real_distribution<_RealType>::param ( ) const [inline]`

Returns the parameter set of the distribution.

Definition at line 1783 of file `random.h`.

Referenced by `std::operator>>()`.

5.1077.4.5 `template<typename _RealType = double> void std::uniform_real_distribution<_RealType>::param ( const  
param_type & __param ) [inline]`

Sets the parameter set of the distribution.

Parameters

<code>__param</code>	The new parameter set of the distribution.
----------------------	--

Definition at line 1791 of file `random.h`.

5.1077.4.6 `template<typename _RealType = double> void std::uniform_real_distribution<_RealType>::reset ( )  
[inline]`

Resets the distribution state.

Does nothing for the uniform real distribution.

Definition at line 1769 of file `random.h`.

## 5.1077.5 Friends And Related Function Documentation

5.1077.5.1 `template<typename _RealType = double> bool operator==( const uniform_real_distribution<_RealType> &  
__d1, const uniform_real_distribution<_RealType> & __d2 ) [friend]`

Return true if two uniform real distributions have the same parameters.

Definition at line 1853 of file `random.h`.

The documentation for this class was generated from the following files:

- [random.h](#)
- [bits/random.tcc](#)

## 5.1078 `std::uniform_real_distribution<_RealType>::param_type` Struct Reference

`bool try_lock_until (const chrono::time\_point< _Clock, _Duration > &__atime)`
- `void unlock ()`

### 5.1079.1 Detailed Description

`template<typename _Mutex>class std::unique_lock< _Mutex >`

A movable scoped lock type.

A `unique_lock` controls mutex ownership within a scope. Ownership of the mutex can be delayed until after construction and can be transferred to another `unique_lock` by move construction or move assignment. If a mutex lock is owned when the destructor runs ownership will be released.

Definition at line 185 of file `std_mutex.h`.

The documentation for this class was generated from the following file:

- [std\\_mutex.h](#)

### 5.1080.1 Detailed Description

```
template<typename _Tp, typename _Dp = default_delete<_Tp>> class std::unique_ptr< _Tp, _Dp >
```

20.7.1.2 `unique_ptr` for single objects.

Definition at line 160 of file `unique_ptr.h`.

### 5.1080.2 Constructor & Destructor Documentation

5.1080.2.1 `template<typename _Tp, typename _Dp = default_delete<_Tp>> template<typename _Up = _Dp, typename = _DeleterConstraint<_Up>> constexpr std::unique_ptr< _Tp, _Dp >::unique_ptr ( ) [inline], [noexcept]`

Default constructor, creates a `unique_ptr` that owns nothing.

Definition at line 191 of file `unique_ptr.h`.

5.1080.2.2 `template<typename _Tp, typename _Dp = default_delete<_Tp>> template<typename _Up = _Dp, typename = _DeleterConstraint<_Up>> std::unique_ptr< _Tp, _Dp >::unique_ptr ( pointer __p ) [inline], [explicit], [noexcept]`

Takes ownership of a pointer.

#### Parameters

<code>__p</code>	A pointer to an object of <code>element_type</code>
------------------	---

The deleter will be value-initialized.

Definition at line 204 of file `unique_ptr.h`.

```
5.1080.2.3 template<typename _Tp, typename _Dp = default_delete<_Tp>> std::unique_ptr<_Tp, _Dp>::unique_ptr (  
    pointer __p, typename conditional< is_reference< deleter_type >::value, deleter_type, const deleter_type &  
    >::type __d ) [inline], [noexcept]
```

Takes ownership of a pointer.

## Parameters

<code>__p</code>	A pointer to an object of <code>element_type</code>
<code>__d</code>	A reference to a deleter.

The deleter will be initialized with `__d`

Definition at line 215 of file `unique_ptr.h`.

5.1080.2.4 `template<typename _Tp, typename _Dp = default_delete<_Tp>> std::unique_ptr<_Tp, _Dp>::unique_ptr ( pointer __p, typename remove_reference< deleter_type >::type && __d ) [inline], [noexcept]`

Takes ownership of a pointer.

## Parameters

<code>__p</code>	A pointer to an object of <code>element_type</code>
<code>__d</code>	An rvalue reference to a deleter.

The deleter will be initialized with `std::move(__d)`

Definition at line 227 of file `unique_ptr.h`.

5.1080.2.5 `template<typename _Tp, typename _Dp = default_delete<_Tp>> template<typename _Up = _Dp, typename = _DeleterConstraint<_Up>> constexpr std::unique_ptr<_Tp, _Dp>::unique_ptr ( nullptr_t ) [inline], [noexcept]`

Creates a `unique_ptr` that owns nothing.

Definition at line 236 of file `unique_ptr.h`.

5.1080.2.6 `template<typename _Tp, typename _Dp = default_delete<_Tp>> std::unique_ptr<_Tp, _Dp>::unique_ptr ( unique_ptr<_Tp, _Dp> && __u ) [inline], [noexcept]`

Move constructor.

Definition at line 241 of file `unique_ptr.h`.

5.1080.2.7 `template<typename _Tp, typename _Dp = default_delete<_Tp>> template<typename _Up, typename _Ep, typename = _Require<__safe_conversion_up<_Up, _Ep>, typename conditional<is_reference<_Dp>::value, is_same<_Ep, _Dp>, is_convertible<_Ep, _Dp>>::type>> std::unique_ptr<_Tp, _Dp>::unique_ptr ( unique_ptr<_Up, _Ep> && __u ) [inline], [noexcept]`

Converting constructor from another type.

Requires that the pointer owned by `__u` is convertible to the type of pointer owned by this object, `__u` does not own an array, and `__u` has a compatible deleter type.

Definition at line 255 of file `unique_ptr.h`.

5.1080.2.8 `template<typename _Tp, typename _Dp = default_delete<_Tp>> std::unique_ptr<_Tp, _Dp>::~unique_ptr ( ) [inline], [noexcept]`

Destructor, invokes the deleter if the stored pointer is not null.

Definition at line 270 of file `unique_ptr.h`.

## 5.1080.3 Member Function Documentation

5.1080.3.1 `template<typename _Tp, typename _Dp = default_delete<_Tp>> pointer std::unique_ptr<_Tp, _Dp>::get ( void ) const [inline], [noexcept]`

Return the stored pointer.

Definition at line 342 of file `unique_ptr.h`.

5.1080.3.2 `template<typename _Tp, typename _Dp = default_delete<_Tp>> deleter_type& std::unique_ptr<_Tp, _Dp>::get_deleter ( ) [inline], [noexcept]`

Return a reference to the stored deleter.

Definition at line 347 of file `unique_ptr.h`.

Referenced by `std::unique_ptr<_Result<_Res>>::operator=()`, `std::unique_ptr<_Tp[], _Dp>::operator=()`, `std::unique_ptr<_Result<_Res>>::reset()`, `std::unique_ptr<_Tp[], _Dp>::reset()`, `std::unique_ptr<_Result<_Res>>::~~unique_ptr()`, and `std::unique_ptr<_Tp[], _Dp>::~~unique_ptr()`.

5.1080.3.3 `template<typename _Tp, typename _Dp = default_delete<_Tp>> const deleter_type& std::unique_ptr<_Tp, _Dp>::get_deleter ( ) const [inline], [noexcept]`

Return a reference to the stored deleter.

Definition at line 352 of file `unique_ptr.h`.

5.1080.3.4 `template<typename _Tp, typename _Dp = default_delete<_Tp>> std::unique_ptr<_Tp, _Dp>::operator bool ( ) const [inline], [explicit], [noexcept]`

Return `true` if the stored pointer is not null.

Definition at line 356 of file `unique_ptr.h`.

5.1080.3.5 `template<typename _Tp, typename _Dp = default_delete<_Tp>> add_lvalue_reference<element_type>::type std::unique_ptr<_Tp, _Dp>::operator*( ) const [inline]`

Dereference the stored pointer.

Definition at line 326 of file `unique_ptr.h`.

5.1080.3.6 `template<typename _Tp, typename _Dp = default_delete<_Tp>> pointer std::unique_ptr<_Tp, _Dp>::operator-> ( ) const [inline], [noexcept]`

Return the stored pointer.

Definition at line 334 of file `unique_ptr.h`.

5.1080.3.7 `template<typename _Tp, typename _Dp = default_delete<_Tp>> unique_ptr& std::unique_ptr<_Tp, _Dp>::operator= ( unique_ptr<_Tp, _Dp> && __u ) [inline], [noexcept]`

Move assignment operator.

Parameters

<code>__u</code>	The object to transfer ownership from.
------------------	--

Invokes the deleter first if this object owns a pointer.

Definition at line 287 of file `unique_ptr.h`.

```
5.1080.3.8  template<typename _Tp, typename _Dp = default_delete<_Tp>> template<typename _Up, typename _Ep >
             enable_if<__and<__safe_conversion_up<_Up, _Ep>, is_assignable<deleter_type&, _Ep&&>>::value,
             unique_ptr&>::type std::unique_ptr<_Tp, _Dp >::operator= ( unique_ptr<_Up, _Ep > && _u )
             [inline], [noexcept]
```

Assignment from another type.

## Parameters

<code>__u</code>	The object to transfer ownership from, which owns a convertible pointer to a non-array object.
------------------	--

Invokes the deleter first if this object owns a pointer.

Definition at line 307 of file `unique_ptr.h`.

5.1080.3.9 `template<typename _Tp, typename _Dp = default_delete<_Tp>> unique_ptr& std::unique_ptr< _Tp, _Dp >::operator=( nullptr_t )` [`inline`], [`noexcept`]

Reset the `unique_ptr` to empty, invoking the deleter if necessary.

Definition at line 316 of file `unique_ptr.h`.

5.1080.3.10 `template<typename _Tp, typename _Dp = default_delete<_Tp>> pointer std::unique_ptr< _Tp, _Dp >::release ( )` [`inline`], [`noexcept`]

Release ownership of any stored pointer.

Definition at line 363 of file `unique_ptr.h`.

5.1080.3.11 `template<typename _Tp, typename _Dp = default_delete<_Tp>> void std::unique_ptr< _Tp, _Dp >::reset ( pointer _p = pointer ( ) )` [`inline`], [`noexcept`]

Replace the stored pointer.

## Parameters

<code>__p</code>	The new pointer to store.
------------------	---------------------------

The deleter will be invoked if a pointer is already owned.

Definition at line 377 of file `unique_ptr.h`.

Referenced by `std::unique_ptr< _Result< _Res > >::operator=()`, and `std::unique_ptr< _Tp[], _Dp >::operator=()`.

5.1080.3.12 `template<typename _Tp, typename _Dp = default_delete<_Tp>> void std::unique_ptr< _Tp, _Dp >::swap ( unique_ptr< _Tp, _Dp > &__u )` [`inline`], [`noexcept`]

Exchange the pointer and deleter with another object.

Definition at line 387 of file `unique_ptr.h`.

Referenced by `std::unique_ptr< _Result< _Res > >::reset()`, `std::unique_ptr< _Tp[], _Dp >::reset()`, `std::unique_ptr< _Result< _Res > >::swap()`, and `std::unique_ptr< _Tp[], _Dp >::swap()`.

The documentation for this class was generated from the following files:

## 5.1081.1 Detailed Description

```
template<typename _Tp, typename _Dp> class std::unique_ptr<_Tp[], _Dp>
```

## 20.7.1.3 unique\_ptr for array objects with a runtime length

Definition at line 403 of file unique\_ptr.h.

## 5.1081.2 Constructor &amp; Destructor Documentation

```
5.1081.2.1 template<typename _Tp, typename _Dp> template<typename _Up = _Dp, typename = _DeleterConstraint<_Up>>
constexpr std::unique_ptr<_Tp[], _Dp>::unique_ptr ( ) [inline], [noexcept]
```

Default constructor, creates a unique\_ptr that owns nothing.

Definition at line 459 of file unique\_ptr.h.

```
5.1081.2.2 template<typename _Tp, typename _Dp> template<typename _Up, typename _Vp = _Dp, typename =
_DeleterConstraint<_Vp>, typename = typename enable_if<__safe_conversion_raw<_Up>::value, bool>::type>
std::unique_ptr<_Tp[], _Dp>::unique_ptr ( _Up __p ) [inline], [explicit], [noexcept]
```

Takes ownership of a pointer.

## Parameters

<code>__p</code>	A pointer to an array of a type safely convertible to an array of <code>element_type</code>
------------------	---

The deleter will be value-initialized.

Definition at line 476 of file unique\_ptr.h.

```
5.1081.2.3 template<typename _Tp, typename _Dp> template<typename _Up, typename = typename enable_if<
__safe_conversion_raw<_Up>::value, bool>::type> std::unique_ptr<_Tp[], _Dp>::unique_ptr ( _Up __p,
typename conditional<is_reference<deleter_type>::value, deleter_type, const deleter_type &>::type __d )
[inline], [noexcept]
```

Takes ownership of a pointer.

## Parameters

<code>__p</code>	A pointer to an array of a type safely convertible to an array of <code>element_type</code>
<code>__d</code>	A reference to a deleter.

The deleter will be initialized with `__d`

Definition at line 491 of file unique\_ptr.h.

```
5.1081.2.4 template<typename _Tp, typename _Dp> template<typename _Up, typename = typename enable_if<
__safe_conversion_raw<_Up>::value, bool>::type> std::unique_ptr<_Tp[], _Dp>::unique_ptr ( _Up __p,
typename remove_reference<deleter_type>::type && __d ) [inline], [noexcept]
```

Takes ownership of a pointer.

## Parameters

<code>__p</code>	A pointer to an array of a type safely convertible to an array of <code>element_type</code>
------------------	---

<code>__d</code>	A reference to a deleter.
------------------	---------------------------

The deleter will be initialized with `std::move(__d)`

Definition at line 507 of file `unique_ptr.h`.

**5.1081.2.5** `template<typename _Tp, typename _Dp> std::unique_ptr<_Tp[], _Dp>::unique_ptr( unique_ptr<_Tp[],  
_Dp> &&_u ) [inline], [noexcept]`

Move constructor.

Definition at line 514 of file `unique_ptr.h`.

**5.1081.2.6** `template<typename _Tp, typename _Dp> template<typename _Up = _Dp, typename = _DeleterConstraint<_Up>>  
constexpr std::unique_ptr<_Tp[], _Dp>::unique_ptr( nullptr_t ) [inline], [noexcept]`

Creates a `unique_ptr` that owns nothing.

Definition at line 520 of file `unique_ptr.h`.

**5.1081.2.7** `template<typename _Tp, typename _Dp> std::unique_ptr<_Tp[], _Dp>::~~unique_ptr( ) [inline]`

Destructor, invokes the deleter if the stored pointer is not null.

Definition at line 529 of file `unique_ptr.h`.

References `std::unique_ptr<_Tp, _Dp>::get_deleter()`.

### 5.1081.3 Member Function Documentation

**5.1081.3.1** `template<typename _Tp, typename _Dp> pointer std::unique_ptr<_Tp[], _Dp>::get( void ) const  
[inline], [noexcept]`

Return the stored pointer.

Definition at line 593 of file `unique_ptr.h`.

**5.1081.3.2** `template<typename _Tp, typename _Dp> deleter_type& std::unique_ptr<_Tp[], _Dp>::get_deleter( )  
[inline], [noexcept]`

Return a reference to the stored deleter.

Definition at line 598 of file `unique_ptr.h`.

**5.1081.3.3** `template<typename _Tp, typename _Dp> const deleter_type& std::unique_ptr<_Tp[], _Dp>::get_deleter( )  
const [inline], [noexcept]`

Return a reference to the stored deleter.

Definition at line 603 of file `unique_ptr.h`.

**5.1081.3.4** `template<typename _Tp, typename _Dp> std::unique_ptr<_Tp[], _Dp>::operator bool( ) const [inline],  
[explicit], [noexcept]`

Return `true` if the stored pointer is not null.

Definition at line 607 of file `unique_ptr.h`.

5.1081.3.5 `template<typename _Tp, typename _Dp> unique_ptr& std::unique_ptr<_Tp[],_Dp>::operator= (unique_ptr<_Tp[],_Dp> && _u) [inline],[noexcept]`

Move assignment operator.

## Parameters

<code>__u</code>	The object to transfer ownership from.
------------------	--

Invokes the deleter first if this object owns a pointer.

Definition at line 546 of file `unique_ptr.h`.

References `std::unique_ptr<_Tp, _Dp>::get_deleter()`, and `std::unique_ptr<_Tp, _Dp>::reset()`.

```
5.1081.3.6 template<typename _Tp, typename _Dp > template<typename _Up, typename _Ep > enable_if<__and<__-
safe_conversion_up<_Up, _Ep>, is_assignable<deleter_type&, _Ep&&> >::value, unique_ptr&>::type
std::unique_ptr<_Tp[], _Dp>::operator= ( unique_ptr<_Up, _Ep > && __u ) [inline], [noexcept]
```

Assignment from another type.

## Parameters

<code>__u</code>	The object to transfer ownership from, which owns a convertible pointer to an array object.
------------------	---

Invokes the deleter first if this object owns a pointer.

Definition at line 566 of file `unique_ptr.h`.

References `std::unique_ptr<_Tp, _Dp>::get_deleter()`, and `std::unique_ptr<_Tp, _Dp>::reset()`.

```
5.1081.3.7 template<typename _Tp, typename _Dp > unique_ptr& std::unique_ptr<_Tp[], _Dp >::operator= ( nullptr_t )
[inline], [noexcept]
```

Reset the `unique_ptr` to empty, invoking the deleter if necessary.

Definition at line 575 of file `unique_ptr.h`.

References `std::unique_ptr<_Tp, _Dp >::reset()`.

```
5.1081.3.8 template<typename _Tp, typename _Dp > std::add_lvalue_reference<element_type>::type std::unique_ptr<
_Tp[], _Dp >::operator[] ( size_t __i ) const [inline]
```

Access an element of owned array.

Definition at line 585 of file `unique_ptr.h`.

```
5.1081.3.9 template<typename _Tp, typename _Dp > pointer std::unique_ptr<_Tp[], _Dp >::release ( ) [inline],
[noexcept]
```

Release ownership of any stored pointer.

Definition at line 614 of file `unique_ptr.h`.

```
5.1081.3.10 template<typename _Tp, typename _Dp > template<typename _Up, typename = _Require<__or<is_same<_Up,
pointer>, __and<is_same<pointer, element_type*>, is_pointer<_Up>, is_convertible< typename
remove_pointer<_Up>::type(*)[], element_type(*)[] > > > > void std::unique_ptr<_Tp[], _Dp >::reset ( _Up
__p ) [inline], [noexcept]
```

Replace the stored pointer.

## Parameters

<code>__p</code>	The new pointer to store.
------------------	---------------------------

The deleter will be invoked if a pointer is already owned.

Definition at line 640 of file `unique_ptr.h`.

References `std::unique_ptr<_Tp, _Dp >::get_deleter()`, and `std::unique_ptr<_Tp, _Dp >::swap()`.

5.1081.3.11 `template<typename _Tp, typename _Dp > void std::unique_ptr<_Tp[], _Dp >::swap ( unique_ptr<_Tp[], _Dp > &_u ) [inline], [noexcept]`

Exchange the pointer and deleter with another object.

Definition at line 656 of file `unique_ptr.h`.

References `std::unique_ptr<_Tp, _Dp >::swap()`.

### 5.1082.1 Detailed Description

```
template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> class std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc >
```

A standard container composed of unique keys (containing at most one of each key value) that associates values of another type with the keys.

#### Template Parameters

---

<code>_Key</code>	Type of key objects.
<code>_Tp</code>	Type of mapped objects.
<code>_Hash</code>	Hashing function object type, defaults to <code>hash&lt;_Value&gt;</code> .
<code>_Pred</code>	Predicate function object type, defaults to <code>equal_to&lt;_Value&gt;</code> .
<code>_Alloc</code>	Allocator type, defaults to <code>std::allocator&lt;std::pair&lt;const _Key, _Tp&gt;&gt;</code> .

Meets the requirements of a `container`, and `unordered associative container`

The resulting value type of the container is `std::pair<const _Key, _Tp>`.

Base is `_Hashtable`, dispatched at compile time via template alias `__umap_hashtable`.

Definition at line 102 of file `unordered_map.h`.

### 5.1082.2 Member Typedef Documentation

5.1082.2.1 `template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> typedef _Hashtable::allocator_type std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc>::allocator_type`

Public typedefs.

Definition at line 116 of file `unordered_map.h`.

### 5.1082.3 Constructor & Destructor Documentation

5.1082.3.1 `template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc >::unordered_map( ) [default]`

Default constructor.

5.1082.3.2 `template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc >::unordered_map( size_type __n, const hasher & __hf = hasher(), const key_equal & __eqf = key_equal(), const allocator_type & __a = allocator_type() ) [inline],[explicit]`

Default constructor creates no elements.

Parameters

<code>__n</code>	Minimal initial number of buckets.
<code>__hf</code>	A hash functor.
<code>__eqf</code>	A key equality functor.
<code>__a</code>	An allocator object.

Definition at line 151 of file `unordered_map.h`.

```
5.1082.3.3 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>> template<typename _InputIterator >
std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc >::unordered_map ( _InputIterator __first, _InputIterator
__last, size_type __n = 0, const hasher & __hf = hasher(), const key_equal & __eq = key_equal(), const
allocator_type & __a = allocator_type() ) [inline]
```

Builds an unordered\_map from a range.

## Parameters

<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.
<code>__n</code>	Minimal initial number of buckets.
<code>__hf</code>	A hash functor.
<code>__eqf</code>	A key equality functor.
<code>__a</code>	An allocator object.

Create an `unordered_map` consisting of copies of the elements from `[__first,__last)`. This is linear in  $N$  (where  $N$  is `distance(__first,__last)`).

Definition at line 172 of file `unordered_map.h`.

```
5.1082.3.4 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>> std::unordered_map<_Key, _Tp, _Hash, _Pred,
_Alloc>::unordered_map ( const unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc> & ) [default]
```

Copy constructor.

```
5.1082.3.5 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>> std::unordered_map<_Key, _Tp, _Hash, _Pred,
_Alloc>::unordered_map ( unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc> && ) [default]
```

Move constructor.

```
5.1082.3.6 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>> std::unordered_map<_Key, _Tp, _Hash, _Pred,
_Alloc>::unordered_map ( const allocator_type & __a ) [inline],[explicit]
```

Creates an `unordered_map` with no elements.

## Parameters

<code>__a</code>	An allocator object.
------------------	----------------------

Definition at line 191 of file `unordered_map.h`.

```
5.1082.3.7 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>>> std::unordered_map<_Key, _Tp, _Hash, _Pred,
_Alloc>::unordered_map ( initializer_list<value_type> __l, size_type __n = 0, const hasher & __hf =
hasher(), const key_equal & __eqf = key_equal(), const allocator_type & __a = allocator_type() )
[inline]
```

Builds an `unordered_map` from an `initializer_list`.

## Parameters

<code>__l</code>	An <code>initializer_list</code> .
<code>__n</code>	Minimal initial number of buckets.
<code>__hf</code>	A hash functor.
<code>__eqf</code>	A key equality functor.
<code>__a</code>	An allocator object.

Create an `unordered_map` consisting of copies of the elements in the list. This is linear in  $N$  (where  $N$  is `__l.size()`).

Definition at line 226 of file `unordered_map.h`.

## 5.1082.4 Member Function Documentation

5.1082.4.1 `template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> mapped_type& std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc >::at ( const key_type & _k ) [inline]`

Access to `unordered_map` data.

## Parameters

<code>__k</code>	The key for which data should be retrieved.
------------------	---

## Returns

A reference to the data whose key is equal to `__k`, if such a data is present in the `unordered_map`.

## Exceptions

<code>std::out_of_range</code>	If no such data is present.
--------------------------------	-----------------------------

Definition at line 993 of file `unordered_map.h`.

```
5.1082.4.2 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>> const mapped_type& std::unordered_map<_Key,
_Tp, _Hash, _Pred, _Alloc>::at ( const key_type & __k ) const [inline]
```

Access to `unordered_map` data.

## Parameters

<code>__k</code>	The key for which data should be retrieved.
------------------	---

## Returns

A reference to the data whose key is equal to `__k`, if such a data is present in the `unordered_map`.

## Exceptions

<code>std::out_of_range</code>	If no such data is present.
--------------------------------	-----------------------------

Definition at line 997 of file `unordered_map.h`.

```
5.1082.4.3 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>> iterator std::unordered_map<_Key, _Tp, _Hash,
_Pred, _Alloc>::begin ( ) [inline], [noexcept]
```

Returns a read/write iterator that points to the first element in the `unordered_map`.

Definition at line 324 of file `unordered_map.h`.

```
5.1082.4.4 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>> const_iterator std::unordered_map<_Key, _Tp,
_Hash, _Pred, _Alloc>::begin ( ) const [inline], [noexcept]
```

Returns a read-only (constant) iterator that points to the first element in the `unordered_map`.

Definition at line 333 of file `unordered_map.h`.

```
5.1082.4.5 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>> local_iterator std::unordered_map<_Key, _Tp,
_Hash, _Pred, _Alloc>::begin ( size_type __n ) [inline]
```

Returns a read/write iterator pointing to the first bucket element.

## Parameters

<code>__n</code>	The bucket index.
------------------	-------------------

## Returns

A read/write local iterator.

Definition at line 1038 of file unordered\_map.h.

```
5.1082.4.6 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>> const_local_iterator std::unordered_map< _Key,
_Tp, _Hash, _Pred, _Alloc >::begin ( size_type __n ) const [inline]
```

Returns a read-only (constant) iterator pointing to the first bucket element.

## Parameters

<code>__n</code>	The bucket index.
------------------	-------------------

## Returns

A read-only local iterator.

Definition at line 1049 of file unordered\_map.h.

```
5.1082.4.7 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>> size_type std::unordered_map< _Key, _Tp, _Hash,
_Pred, _Alloc >::bucket_count ( ) const [inline], [noexcept]
```

Returns the number of buckets of the unordered\_map.

Definition at line 1005 of file unordered\_map.h.

```
5.1082.4.8 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>> const_iterator std::unordered_map< _Key, _Tp,
_Hash, _Pred, _Alloc >::cbegin ( ) const [inline], [noexcept]
```

Returns a read-only (constant) iterator that points to the first element in the unordered\_map.

Definition at line 337 of file unordered\_map.h.

```
5.1082.4.9 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>> const_local_iterator std::unordered_map< _Key,
_Tp, _Hash, _Pred, _Alloc >::cbegin ( size_type __n ) const [inline]
```

Returns a read-only (constant) iterator pointing to the first bucket element.

## Parameters

<code>__n</code>	The bucket index.
------------------	-------------------

## Returns

A read-only local iterator.

Definition at line 1053 of file unordered\_map.h.

5.1082.4.10 `template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> const_iterator std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc>::cend ( ) const [inline], [noexcept]`

Returns a read-only (constant) iterator that points one past the last element in the `unordered_map`.

Definition at line 359 of file `unordered_map.h`.

5.1082.4.11 `template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> const_local_iterator std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc>::cend ( size_type __n ) const [inline]`

Returns a read-only (constant) iterator pointing to one past the last bucket elements.

Parameters

<code>__n</code>	The bucket index.
------------------	-------------------

Returns

A read-only local iterator.

Definition at line 1079 of file `unordered_map.h`.

5.1082.4.12 `template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> void std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc>::clear ( ) [inline], [noexcept]`

Erases all elements in an `unordered_map`. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 845 of file `unordered_map.h`.

5.1082.4.13 `template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> size_type std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc>::count ( const key_type & __x ) const [inline]`

Finds the number of elements.

Parameters

<code>__x</code>	Key to count.
------------------	---------------

Returns

Number of elements with specified key.

This function only makes sense for `unordered_multimap`; for `unordered_map` the result will either be 0 (not present) or 1 (present).

Definition at line 941 of file `unordered_map.h`.

5.1082.4.14 `template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> template<typename... _Args> std::pair<iterator, bool> std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc>::emplace ( _Args &&... __args ) [inline]`

Attempts to build and insert a `std::pair` into the `unordered_map`.

## Parameters

<code>__args</code>	Arguments used to generate a new pair instance (see <code>std::piecewise_construct</code> for passing arguments to each part of the pair constructor).
---------------------	--

## Returns

A pair, of which the first element is an iterator that points to the possibly inserted pair, and the second is a bool that is true if the pair was actually inserted.

This function attempts to build and insert a (key, value) pair into the `unordered_map`. An `unordered_map` relies on unique keys and thus a pair is only inserted if its first element (the key) is not already present in the `unordered_map`.

Insertion requires amortized constant time.

Definition at line 387 of file `unordered_map.h`.

```
5.1082.4.15  template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
            typename _Alloc = allocator<std::pair<const _Key, _Tp>>> template<typename... _Args> iterator
            std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc >::emplace_hint( const_iterator __pos, _Args &&...
            __args ) [inline]
```

Attempts to build and insert a `std::pair` into the `unordered_map`.

## Parameters

<code>__pos</code>	An iterator that serves as a hint as to where the pair should be inserted.
<code>__args</code>	Arguments used to generate a new pair instance (see <code>std::piecewise_construct</code> for passing arguments to each part of the pair constructor).

## Returns

An iterator that points to the element with key of the `std::pair` built from `__args` (may or may not be that `std::pair`).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument `emplace()` does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See [https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.-associative.insert\\_hints](https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.-associative.insert_hints) for more on *hinting*.

Insertion requires amortized constant time.

Definition at line 418 of file `unordered_map.h`.

```
5.1082.4.16  template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
            typename _Alloc = allocator<std::pair<const _Key, _Tp>>> bool std::unordered_map<_Key, _Tp, _Hash,
            _Pred, _Alloc >::empty( ) const [inline], [noexcept]
```

Returns true if the `unordered_map` is empty.

Definition at line 304 of file `unordered_map.h`.

```
5.1082.4.17  template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
            typename _Alloc = allocator<std::pair<const _Key, _Tp>>> iterator std::unordered_map<_Key, _Tp, _Hash,
            _Pred, _Alloc >::end( ) [inline], [noexcept]
```

Returns a read/write iterator that points one past the last element in the `unordered_map`.

Definition at line 346 of file `unordered_map.h`.

5.1082.4.18 `template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> const_iterator std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc>::end( ) const [inline], [noexcept]`

Returns a read-only (constant) iterator that points one past the last element in the `unordered_map`.

Definition at line 355 of file `unordered_map.h`.

5.1082.4.19 `template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> local_iterator std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc>::end( size_type __n ) [inline]`

Returns a read/write iterator pointing to one past the last bucket elements.

Parameters

<code>__n</code>	The bucket index.
------------------	-------------------

Returns

A read/write local iterator.

Definition at line 1064 of file `unordered_map.h`.

5.1082.4.20 `template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> const_local_iterator std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc>::end( size_type __n ) const [inline]`

Returns a read-only (constant) iterator pointing to one past the last bucket elements.

Parameters

<code>__n</code>	The bucket index.
------------------	-------------------

Returns

A read-only local iterator.

Definition at line 1075 of file `unordered_map.h`.

5.1082.4.21 `template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> std::pair<iterator, iterator> std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc>::equal_range( const key_type & __x ) [inline]`

Finds a subsequence matching given key.

Parameters

<code>__x</code>	Key to be located.
------------------	--------------------

Returns

Pair of iterators that possibly points to the subsequence matching given key.

This function probably only makes sense for `unordered_multimap`.

Definition at line 954 of file `unordered_map.h`.

```
5.1082.4.22 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>> std::pair<const_iterator, const_iterator>
std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc >::equal_range ( const key_type & __x ) const
[inline]
```

Finds a subsequence matching given key.

## Parameters

<code>__x</code>	Key to be located.
------------------	--------------------

## Returns

Pair of iterators that possibly points to the subsequence matching given key.

This function probably only makes sense for `unordered_multimap`.

Definition at line 958 of file `unordered_map.h`.

```
5.1082.4.23  template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
             typename _Alloc = allocator<std::pair<const _Key, _Tp>>> iterator std::unordered_map<_Key, _Tp, _Hash,
             _Pred, _Alloc >::erase ( const_iterator __position ) [inline]
```

Erases an element from an `unordered_map`.

## Parameters

<code>__position</code>	An iterator pointing to the element to be erased.
-------------------------	---

## Returns

An iterator pointing to the element immediately following `__position` prior to the element being erased. If no such element exists, `end()` is returned.

This function erases an element, pointed to by the given iterator, from an `unordered_map`. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 795 of file `unordered_map.h`.

```
5.1082.4.24  template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
             typename _Alloc = allocator<std::pair<const _Key, _Tp>>> iterator std::unordered_map<_Key, _Tp, _Hash,
             _Pred, _Alloc >::erase ( iterator __position ) [inline]
```

Erases an element from an `unordered_map`.

## Parameters

<code>__position</code>	An iterator pointing to the element to be erased.
-------------------------	---

## Returns

An iterator pointing to the element immediately following `__position` prior to the element being erased. If no such element exists, `end()` is returned.

This function erases an element, pointed to by the given iterator, from an `unordered_map`. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 800 of file `unordered_map.h`.

```
5.1082.4.25  template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
             typename _Alloc = allocator<std::pair<const _Key, _Tp>>> size_type std::unordered_map<_Key, _Tp,
             _Hash, _Pred, _Alloc >::erase ( const key_type & __x ) [inline]
```

Erases elements according to the provided key.

## Parameters

<code>__x</code>	Key of element to be erased.
------------------	------------------------------

## Returns

The number of elements erased.

This function erases all the elements located by the given key from an `unordered_map`. For an `unordered_map` the result of this function can only be 0 (not present) or 1 (present). Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 817 of file `unordered_map.h`.

```
5.1082.4.26  template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
              typename _Alloc = allocator<std::pair<const _Key, _Tp>>> iterator std::unordered_map<_Key, _Tp, _Hash,
              _Pred, _Alloc >::erase( const_iterator __first, const_iterator __last ) [inline]
```

Erases a [`__first`,`__last`) range of elements from an `unordered_map`.

## Parameters

<code>__first</code>	Iterator pointing to the start of the range to be erased.
<code>__last</code>	Iterator pointing to the end of the range to be erased.

## Returns

The iterator `__last`.

This function erases a sequence of elements from an `unordered_map`. Note that this function only erases the elements, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 835 of file `unordered_map.h`.

```
5.1082.4.27  template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
              typename _Alloc = allocator<std::pair<const _Key, _Tp>>> iterator std::unordered_map<_Key, _Tp, _Hash,
              _Pred, _Alloc >::find( const key_type & __x ) [inline]
```

Tries to locate an element in an `unordered_map`.

## Parameters

<code>__x</code>	Key to be located.
------------------	--------------------

## Returns

Iterator pointing to sought-after element, or `end()` if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end (`end()`) iterator.

Definition at line 923 of file `unordered_map.h`.

```
5.1082.4.28  template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
              typename _Alloc = allocator<std::pair<const _Key, _Tp>>> const_iterator std::unordered_map<_Key, _Tp,
              _Hash, _Pred, _Alloc >::find( const key_type & __x ) const [inline]
```

Tries to locate an element in an `unordered_map`.

## Parameters

__x	Key to be located.
-----	--------------------

## Returns

Iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end ( end() ) iterator.

Definition at line 927 of file unordered\_map.h.

```
5.1082.4.29  template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
            typename _Alloc = allocator<std::pair<const _Key, _Tp>>> allocator_type std::unordered_map<_Key, _Tp,
            _Hash, _Pred, _Alloc>::get_allocator( ) const  [inline], [noexcept]
```

Returns the allocator object used by the unordered\_map.

Definition at line 297 of file unordered\_map.h.

```
5.1082.4.30  template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,

            _Pred, _Alloc>::hash_function( ) const  [inline]
```

Returns the hash functor object with which the unordered\_map was constructed.

Definition at line 899 of file unordered\_map.h.

```
5.1082.4.31  template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
            typename _Alloc = allocator<std::pair<const _Key, _Tp>>> std::pair<iterator, bool> std::unordered_map<
            _Key, _Tp, _Hash, _Pred, _Alloc>::insert( const value_type & __x )  [inline]
```

Attempts to insert a std::pair into the unordered\_map.

## Parameters

__x	Pair to be inserted (see std::make_pair for easy creation of pairs).
-----	--

## Returns

A pair, of which the first element is an iterator that points to the possibly inserted pair, and the second is a bool that is true if the pair was actually inserted.

This function attempts to insert a (key, value) pair into the unordered\_map. An unordered\_map relies on unique keys and thus a pair is only inserted if its first element (the key) is not already present in the unordered\_map.

Insertion requires amortized constant time.

Definition at line 579 of file unordered\_map.h.

```
5.1082.4.32  template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
            typename _Alloc = allocator<std::pair<const _Key, _Tp>>> std::pair<iterator, bool> std::unordered_map<
            _Key, _Tp, _Hash, _Pred, _Alloc>::insert( value_type && __x )  [inline]
```

Attempts to insert a std::pair into the unordered\_map.

## Parameters

<code>__x</code>	Pair to be inserted (see <code>std::make_pair</code> for easy creation of pairs).
------------------	---

## Returns

A pair, of which the first element is an iterator that points to the possibly inserted pair, and the second is a bool that is true if the pair was actually inserted.

This function attempts to insert a (key, value) pair into the `unordered_map`. An `unordered_map` relies on unique keys and thus a pair is only inserted if its first element (the key) is not already present in the `unordered_map`.

Insertion requires amortized constant time.

Definition at line 585 of file `unordered_map.h`.

```
5.1082.4.33 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>> template<typename _Pair, typename = typename
std::enable_if<std::is_constructible<value_type, _Pair&&>::value>::type> std::pair<iterator, bool>
std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc >::insert ( _Pair && __x ) [inline]
```

Attempts to insert a `std::pair` into the `unordered_map`.

## Parameters

<code>__x</code>	Pair to be inserted (see <code>std::make_pair</code> for easy creation of pairs).
------------------	---

## Returns

A pair, of which the first element is an iterator that points to the possibly inserted pair, and the second is a bool that is true if the pair was actually inserted.

This function attempts to insert a (key, value) pair into the `unordered_map`. An `unordered_map` relies on unique keys and thus a pair is only inserted if its first element (the key) is not already present in the `unordered_map`.

Insertion requires amortized constant time.

Definition at line 592 of file `unordered_map.h`.

```
5.1082.4.34 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>> iterator std::unordered_map<_Key, _Tp, _Hash,
_Pred, _Alloc >::insert ( const_iterator __hint, const value_type & __x ) [inline]
```

Attempts to insert a `std::pair` into the `unordered_map`.

## Parameters

<code>__hint</code>	An iterator that serves as a hint as to where the pair should be inserted.
<code>__x</code>	Pair to be inserted (see <code>std::make_pair</code> for easy creation of pairs).

## Returns

An iterator that points to the element with key of `__x` (may or may not be the pair passed in).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument `insert()` does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See [https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.-associative.insert\\_hints](https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.-associative.insert_hints) for more on *hinting*.

Insertion requires amortized constant time.

Definition at line 619 of file unordered\_map.h.

```
5.1082.4.35 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>> iterator std::unordered_map<_Key, _Tp, _Hash,
_Pred, _Alloc >::insert ( const_iterator __hint, value_type && __x ) [inline]
```

Attempts to insert a std::pair into the unordered\_map.

#### Parameters

<code>__hint</code>	An iterator that serves as a hint as to where the pair should be inserted.
<code>__x</code>	Pair to be inserted (see std::make_pair for easy creation of pairs).

#### Returns

An iterator that points to the element with key of `__x` (may or may not be the pair passed in).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument insert() does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See [https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.-associative.insert\\_hints](https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.-associative.insert_hints) for more on *hinting*.

Insertion requires amortized constant time.

5.1082.4.37 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>> template<typename _InputIterator > void
std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc >::insert ( _InputIterator __first, _InputIterator __last )
[inline]
```

A template function that attempts to insert a range of elements.

## Parameters

<code>__first</code>	Iterator pointing to the start of the range to be inserted.
<code>__last</code>	Iterator pointing to the end of the range.

Complexity similar to that of the range constructor.

Definition at line 647 of file `unordered_map.h`.

```
5.1082.4.38 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>> void std::unordered_map<_Key, _Tp, _Hash,
_Pred, _Alloc>::insert ( initializer_list< value_type > _l ) [inline]
```

Attempts to insert a list of elements into the `unordered_map`.

## Parameters

<code>__l</code>	A <code>std::initializer_list&lt;value_type&gt;</code> of elements to be inserted.
------------------	--

Complexity similar to that of the range constructor.

Definition at line 658 of file `unordered_map.h`.

```
5.1082.4.39 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>> key_equal std::unordered_map<_Key, _Tp,
_Hash, _Pred, _Alloc>::key_eq ( ) const [inline]
```

Returns the key comparison object with which the `unordered_map` was constructed.

Definition at line 905 of file `unordered_map.h`.

```
5.1082.4.40 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>> float std::unordered_map<_Key, _Tp, _Hash,
_Pred, _Alloc>::load_factor ( ) const [inline], [noexcept]
```

Returns the average number of elements per bucket.

Definition at line 1087 of file `unordered_map.h`.

```
5.1082.4.41 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>> size_type std::unordered_map<_Key, _Tp,
_Hash, _Pred, _Alloc>::max_bucket_count ( ) const [inline], [noexcept]
```

Returns the maximum number of buckets of the `unordered_map`.

Definition at line 1010 of file `unordered_map.h`.

```
5.1082.4.42 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>> float std::unordered_map<_Key, _Tp, _Hash,
_Pred, _Alloc>::max_load_factor ( ) const [inline], [noexcept]
```

Returns a positive number that the `unordered_map` tries to keep the load factor less than or equal to.

Definition at line 1093 of file `unordered_map.h`.

```
5.1082.4.43 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>> void std::unordered_map<_Key, _Tp, _Hash,
_Pred, _Alloc>::max_load_factor ( float __z ) [inline]
```

Change the `unordered_map` maximum load factor.

## Parameters

<code>__z</code>	The new maximum load factor.
------------------	------------------------------

Definition at line 1101 of file `unordered_map.h`.

5.1082.4.44 `template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> size_type std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc>::max_size ( ) const` [`inline`], [`noexcept`]

Returns the maximum size of the `unordered_map`.

Definition at line 314 of file `unordered_map.h`.

5.1082.4.45 `template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> void std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc>::noexcept ( noexcept( M_h.swap( x.M_h) ) )` [`inline`]

Swaps data with another `unordered_map`.

## Parameters

<code>__x</code>	An <code>unordered_map</code> of the same element and allocator types.
------------------	--

This exchanges the elements between two `unordered_map` in constant time. Note that the global `std::swap()` function is specialized such that `std::swap(m1,m2)` will feed to this function.

Definition at line 860 of file `unordered_map.h`.

5.1082.4.46 `template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> unordered_map& std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc>::operator= ( const unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc> & )` [`default`]

Copy assignment operator.

5.1082.4.47 `template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> unordered_map& std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc>::operator= ( unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc> && )` [`default`]

Move assignment operator.

5.1082.4.48 `template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>, typename _Alloc = allocator<std::pair<const _Key, _Tp>>> unordered_map& std::unordered_map<_Key, _Tp, _Hash, _Pred, _Alloc>::operator= ( initializer_list<value_type> __l )` [`inline`]

`Unordered_map` list assignment operator.

## Parameters

<code>__l</code>	An <code>initializer_list</code> .
------------------	------------------------------------

This function fills an `unordered_map` with copies of the elements in the initializer list `__l`.

Note that the assignment completely changes the `unordered_map` and that the resulting `unordered_map`'s size is the same as the number of elements assigned.

Definition at line 289 of file `unordered_map.h`.

```
5.1082.4.49 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>> mapped_type& std::unordered_map<_Key, _Tp,
_Hash, _Pred, _Alloc >::operator[]( const key_type &__k ) [inline]
```

Subscript ( [] ) access to unordered\_map data.

## Parameters

<code>__k</code>	The key for which data should be retrieved.
------------------	---

## Returns

A reference to the data of the (key,data) pair.

Allows for easy lookup with the subscript ( [] ) operator. Returns data associated with the key specified in subscript. If the key does not exist, a pair with that key is created using default values, which is then returned.

Lookup requires constant time.

Definition at line 976 of file unordered\_map.h.

```
5.1082.4.50 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>> mapped_type& std::unordered_map<_Key, _Tp,
_Hash, _Pred, _Alloc>::operator[]( key_type && __k ) [inline]
```

Subscript ( [] ) access to unordered\_map data.

## Parameters

<code>__k</code>	The key for which data should be retrieved.
------------------	---

## Returns

A reference to the data of the (key,data) pair.

Allows for easy lookup with the subscript ( [] ) operator. Returns data associated with the key specified in subscript. If the key does not exist, a pair with that key is created using default values, which is then returned.

Lookup requires constant time.

Definition at line 980 of file unordered\_map.h.

```
5.1082.4.51 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>> void std::unordered_map<_Key, _Tp, _Hash,
_Pred, _Alloc>::rehash ( size_type __n ) [inline]
```

May rehash the unordered\_map.

## Parameters

<code>__n</code>	The new number of buckets.
------------------	----------------------------

Rehash will occur only if the new number of buckets respect the unordered\_map maximum load factor.

Definition at line 1112 of file unordered\_map.h.

```
5.1082.4.52 template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
typename _Alloc = allocator<std::pair<const _Key, _Tp>>> void std::unordered_map<_Key, _Tp, _Hash,
_Pred, _Alloc>::reserve ( size_type __n ) [inline]
```

Prepare the unordered\_map for a specified number of elements.

## Parameters

<code>__n</code>	Number of elements required.
------------------	------------------------------

Same as `rehash(ceil(n / max_load_factor()))`.

Definition at line 1123 of file `unordered_map.h`.

```
5.1082.4.53  template<typename _Key, typename _Tp, typename _Hash = hash<_Key>, typename _Pred = equal_to<_Key>,
              typename _Alloc = allocator<std::pair<const _Key, _Tp>>> size_type std::unordered_map<_Key, _Tp,
              _Hash, _Pred, _Alloc>::size ( ) const    [inline], [noexcept]
```

Returns the size of the `unordered_map`.

Definition at line 309 of file `unordered_map.h`.

#### 5.1083.1 Detailed Description

```
template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc>class std::unordered_multimap< _Key, _Tp, _Hash, _Pred,
_Alloc >
```

A standard container composed of equivalent keys (possibly containing multiple of each key value) that associates values of another type with the keys.

#### Template Parameters

<code>_Key</code>	Type of key objects.
-------------------	----------------------

<code>_Tp</code>	Type of mapped objects.
<code>_Hash</code>	Hashing function object type, defaults to <code>hash&lt;_Value&gt;</code> .
<code>_Pred</code>	Predicate function object type, defaults to <code>equal_to&lt;_Value&gt;</code> .
<code>_Alloc</code>	Allocator type, defaults to <code>std::allocator&lt;std::pair&lt;const _Key, _Tp&gt;&gt;</code> .

Meets the requirements of a [container](#), and [unordered associative container](#)

The resulting value type of the container is `std::pair<const _Key, _Tp>`.

Base is `_Hashtable`, dispatched at compile time via template alias `__ummap_hashtable`.

Definition at line 73 of file `unordered_map.h`.

### 5.1083.2 Member Typedef Documentation

5.1083.2.1 `template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> typedef _Hashtable::allocator_type std::unordered_multimap<_Key, _Tp, _Hash, _Pred, _Alloc >::allocator_type`

Public typedefs.

```

Public typedefs.

Definition at line 1246 of file unordered\_map.h.

### 5.1083.3 Constructor & Destructor Documentation

```
5.1083.3.1 template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> std::unordered_multimap<_Key,_Tp,
_Hash,_Pred,_Alloc>::unordered_multimap( ) [default]
```

Default constructor.

```
5.1083.3.2 template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> std::unordered_multimap<_Key,_Tp,
_Hash,_Pred,_Alloc>::unordered_multimap( size_type __n, const hasher & __hf = hasher(), const
key_equal & __eqf = key_equal(), const allocator_type & __a = allocator_type() ) [inline],
[explicit]
```

Default constructor creates no elements.

Parameters

<code>__n</code>	Minimal initial number of buckets.
<code>__hf</code>	A hash functor.
<code>__eqf</code>	A key equality functor.
<code>__a</code>	An allocator object.

Definition at line 1284 of file unordered\_map.h.

```
5.1083.3.3 template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> template<typename _InputIterator >
std::unordered_multimap<_Key,_Tp,_Hash,_Pred,_Alloc>::unordered_multimap( _InputIterator
__first, _InputIterator __last, size_type __n = 0, const hasher & __hf = hasher(), const key_equal & __eqf =
key_equal(), const allocator_type & __a = allocator_type() ) [inline]
```

Builds an unordered\_multimap from a range.

Parameters

<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.
<code>__n</code>	Minimal initial number of buckets.
<code>__hf</code>	A hash functor.
<code>__eqf</code>	A key equality functor.
<code>__a</code>	An allocator object.

Create an unordered\_multimap consisting of copies of the elements from [`__first`,`__last`). This is linear in N (where N is distance(`__first`,`__last`)).

Definition at line 1305 of file unordered\_map.h.

```
5.1083.3.4 template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> std::unordered_multimap<_Key,_Tp,
_Hash,_Pred,_Alloc>::unordered_multimap( const unordered_multimap<_Key,_Tp,_Hash,_Pred,_Alloc >
& ) [default]
```

Copy constructor.

5.1083.3.5 `template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::unordered_multimap ( unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc > && ) [default]`

Move constructor.

5.1083.3.6 `template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::unordered_multimap ( const allocator_type & __a ) [inline],[explicit]`

Creates an unordered\_multimap with no elements.

Parameters

<code>__a</code>	An allocator object.
------------------	----------------------

Definition at line 1324 of file unordered\_map.h.

5.1083.3.7 `template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::unordered_multimap ( initializer_list< value_type > __l, size_type __n = 0, const hasher & __hf = hasher (), const key_equal & __eqf = key_equal (), const allocator_type & __a = allocator_type () ) [inline]`

Builds an unordered\_multimap from an initializer\_list.

Parameters

<code>__l</code>	An initializer_list.
<code>__n</code>	Minimal initial number of buckets.
<code>__hf</code>	A hash functor.
<code>__eqf</code>	A key equality functor.
<code>__a</code>	An allocator object.

Create an unordered\_multimap consisting of copies of the elements in the list. This is linear in N (where N is `__l.size()`).

Definition at line 1359 of file unordered\_map.h.

#### 5.1083.4 Member Function Documentation

5.1083.4.1 `template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::begin ( ) [inline],[noexcept]`

Returns a read/write iterator that points to the first element in the unordered\_multimap.

Definition at line 1457 of file unordered\_map.h.

5.1083.4.2 `template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> const_iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::begin ( ) const [inline],[noexcept]`

Returns a read-only (constant) iterator that points to the first element in the unordered\_multimap.

Definition at line 1466 of file unordered\_map.h.

5.1083.4.3 `template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> local_iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::begin ( size_type __n ) [inline]`

Returns a read/write iterator pointing to the first bucket element.

## Parameters

<code>__n</code>	The bucket index.
------------------	-------------------

## Returns

A read/write local iterator.

Definition at line 1875 of file `unordered_map.h`.

5.1083.4.4 `template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> const_local_iterator std::unordered_multimap<_Key,_Tp,_Hash,_Pred,_Alloc>::begin( size_type __n ) const [inline]`

Returns a read-only (constant) iterator pointing to the first bucket element.

## Parameters

<code>__n</code>	The bucket index.
------------------	-------------------

## Returns

A read-only local iterator.

Definition at line 1886 of file `unordered_map.h`.

5.1083.4.5 `template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> size_type std::unordered_multimap<_Key,_Tp,_Hash,_Pred,_Alloc>::bucket_count( ) const [inline], [noexcept]`

Returns the number of buckets of the `unordered_multimap`.

Definition at line 1842 of file `unordered_map.h`.

5.1083.4.6 `template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> const_iterator std::unordered_multimap<_Key,_Tp,_Hash,_Pred,_Alloc>::cbegin( ) const [inline], [noexcept]`

Returns a read-only (constant) iterator that points to the first element in the `unordered_multimap`.

Definition at line 1470 of file `unordered_map.h`.

5.1083.4.7 `template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> const_local_iterator std::unordered_multimap<_Key,_Tp,_Hash,_Pred,_Alloc>::cbegin( size_type __n ) const [inline]`

Returns a read-only (constant) iterator pointing to the first bucket element.

## Parameters

<code>__n</code>	The bucket index.
------------------	-------------------

## Returns

A read-only local iterator.

Definition at line 1890 of file `unordered_map.h`.

5.1083.4.8 `template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> const_iterator std::unordered_multimap<_Key,_Tp,_Hash,_Pred,_Alloc>::cend( ) const [inline], [noexcept]`

Returns a read-only (constant) iterator that points one past the last element in the `unordered_multimap`.

Definition at line 1492 of file `unordered_map.h`.

5.1083.4.9 `template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> const_local_iterator  
std::unordered_multimap<_Key, _Tp, _Hash, _Pred, _Alloc >::cend ( size_type __n ) const [inline]`

Returns a read-only (constant) iterator pointing to one past the last bucket elements.

## Parameters

<code>__n</code>	The bucket index.
------------------	-------------------

## Returns

A read-only local iterator.

Definition at line 1916 of file `unordered_map.h`.

5.1083.4.10 `template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> void std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::clear ( ) [inline], [noexcept]`

Erases all elements in an `unordered_multimap`. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1725 of file `unordered_map.h`.

5.1083.4.11 `template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> size_type std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::count ( const key_type & __x ) const [inline]`

Finds the number of elements.

## Parameters

<code>__x</code>	Key to count.
------------------	---------------

## Returns

Number of elements with specified key.

Definition at line 1819 of file `unordered_map.h`.

5.1083.4.12 `template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> template<typename... _Args> iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::emplace ( _Args &&... __args ) [inline]`

Attempts to build and insert a `std::pair` into the `unordered_multimap`.

## Parameters

<code>__args</code>	Arguments used to generate a new pair instance (see <code>std::piecewise_construct</code> for passing arguments to each part of the pair constructor).
---------------------	--

## Returns

An iterator that points to the inserted pair.

This function attempts to build and insert a (key, value) pair into the `unordered_multimap`.

Insertion requires amortized constant time.

Definition at line 1515 of file `unordered_map.h`.

5.1083.4.13 `template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> template<typename... _Args> iterator std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::emplace_hint ( const_iterator __pos, _Args &&... __args ) [inline]`

Attempts to build and insert a `std::pair` into the `unordered_multimap`.

## Parameters

<code>__pos</code>	An iterator that serves as a hint as to where the pair should be inserted.
<code>__args</code>	Arguments used to generate a new pair instance (see <code>std::piecewise_construct</code> for passing arguments to each part of the pair constructor).

## Returns

An iterator that points to the element with key of the `std::pair` built from `__args`.

Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See [https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.-associative.insert\\_hints](https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.-associative.insert_hints) for more on *hinting*.

Insertion requires amortized constant time.

Definition at line 1542 of file `unordered_map.h`.

```
5.1083.4.14  template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> bool std::unordered_multimap< _Key,
            _Tp, _Hash, _Pred, _Alloc >::empty( ) const  [inline],[noexcept]
```

Returns true if the `unordered_multimap` is empty.

Definition at line 1437 of file `unordered_map.h`.

```
5.1083.4.15  template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> iterator std::unordered_multimap<
            _Key, _Tp, _Hash, _Pred, _Alloc >::end( )  [inline],[noexcept]
```

Returns a read/write iterator that points one past the last element in the `unordered_multimap`.

Definition at line 1479 of file `unordered_map.h`.

```
5.1083.4.16  template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> const_iterator
            std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::end( ) const  [inline],[noexcept]
```

Returns a read-only (constant) iterator that points one past the last element in the `unordered_multimap`.

Definition at line 1488 of file `unordered_map.h`.

```
5.1083.4.17  template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> local_iterator
            std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::end( size_type __n )  [inline]
```

Returns a read/write iterator pointing to one past the last bucket elements.

## Parameters

<code>__n</code>	The bucket index.
------------------	-------------------

## Returns

A read/write local iterator.

Definition at line 1901 of file `unordered_map.h`.

```
5.1083.4.18  template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> const_local_iterator
            std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::end( size_type __n ) const  [inline]
```

Returns a read-only (constant) iterator pointing to one past the last bucket elements.

## Parameters

<code>__n</code>	The bucket index.
------------------	-------------------

## Returns

A read-only local iterator.

Definition at line 1912 of file `unordered_map.h`.

```
5.1083.4.19 template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> std::pair<iterator, iterator>
std::unordered_multimap<_Key, _Tp, _Hash, _Pred, _Alloc >::equal_range ( const key_type & __x )
[inline]
```

Finds a subsequence matching given key.

## Parameters

<code>__x</code>	Key to be located.
------------------	--------------------

## Returns

Pair of iterators that possibly points to the subsequence matching given key.

Definition at line 1830 of file `unordered_map.h`.

```
5.1083.4.20 template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> std::pair<const_iterator,
const_iterator> std::unordered_multimap<_Key, _Tp, _Hash, _Pred, _Alloc >::equal_range ( const
key_type & __x ) const [inline]
```

Finds a subsequence matching given key.

## Parameters

<code>__x</code>	Key to be located.
------------------	--------------------

## Returns

Pair of iterators that possibly points to the subsequence matching given key.

Definition at line 1834 of file `unordered_map.h`.

```
5.1083.4.21 template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> iterator std::unordered_multimap<
_Key, _Tp, _Hash, _Pred, _Alloc >::erase ( const_iterator __position ) [inline]
```

Erases an element from an `unordered_multimap`.

## Parameters

<code>__position</code>	An iterator pointing to the element to be erased.
-------------------------	---

## Returns

An iterator pointing to the element immediately following `__position` prior to the element being erased. If no such element exists, `end()` is returned.

This function erases an element, pointed to by the given iterator, from an `unordered_multimap`. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1675 of file unordered\_map.h.

```
5.1083.4.22 template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> iterator std::unordered_multimap<
    _Key, _Tp, _Hash, _Pred, _Alloc >::erase ( iterator __position ) [inline]
```

Erases an element from an unordered\_multimap.

#### Parameters

<code>__position</code>	An iterator pointing to the element to be erased.
-------------------------	---

#### Returns

An iterator pointing to the element immediately following `__position` prior to the element being erased. If no such element exists, `end()` is returned.

This function erases an element, pointed to by the given iterator, from an unordered\_multimap. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1680 of file unordered\_map.h.

```
5.1083.4.23 template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> size_type std::unordered_multimap<
    _Key, _Tp, _Hash, _Pred, _Alloc >::erase ( const key_type & __x ) [inline]
```

Erases elements according to the provided key.

#### Parameters

<code>__x</code>	Key of elements to be erased.
------------------	-------------------------------

#### Returns

The number of elements erased.

This function erases all the elements located by the given key from an unordered\_multimap. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1696 of file unordered\_map.h.

```
5.1083.4.24 template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> iterator std::unordered_multimap<
    _Key, _Tp, _Hash, _Pred, _Alloc >::erase ( const_iterator __first, const_iterator __last ) [inline]
```

Erases a [`__first`,`__last`) range of elements from an unordered\_multimap.

#### Parameters

<code>__first</code>	Iterator pointing to the start of the range to be erased.
<code>__last</code>	Iterator pointing to the end of the range to be erased.

#### Returns

The iterator `__last`.

This function erases a sequence of elements from an unordered\_multimap. Note that this function only erases the elements, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1715 of file unordered\_map.h.

5.1083.4.25 `template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> iterator std::unordered_multimap<_Key, _Tp, _Hash, _Pred, _Alloc >::find ( const key_type & __x ) [inline]`

Tries to locate an element in an `unordered_multimap`.

## Parameters

__x	Key to be located.
-----	--------------------

## Returns

Iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end ( end() ) iterator.

Definition at line 1805 of file unordered\_map.h.

```
5.1083.4.26 template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> const_iterator
std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::find ( const key_type & __x ) const
[inline]
```

Tries to locate an element in an unordered\_multimap.

## Parameters

__x	Key to be located.
-----	--------------------

## Returns

Iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end ( end() ) iterator.

Definition at line 1809 of file unordered\_map.h.

```
5.1083.4.27 template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> allocator_type
std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::get_allocator ( ) const [inline],
[noexcept]
```

Returns the allocator object used by the unordered\_multimap.

Definition at line 1430 of file unordered\_map.h.

```
5.1083.4.28 template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> hasher std::unordered_multimap<
_Key, _Tp, _Hash, _Pred, _Alloc >::hash_function ( ) const [inline]
```

Returns the hash functor object with which the unordered\_multimap was constructed.

Definition at line 1781 of file unordered\_map.h.

```
5.1083.4.29 template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> iterator std::unordered_multimap<
_Key, _Tp, _Hash, _Pred, _Alloc >::insert ( const value_type & __x ) [inline]
```

Inserts a std::pair into the unordered\_multimap.

## Parameters

__x	Pair to be inserted (see std::make_pair for easy creation of pairs).
-----	--

**Returns**

An iterator that points to the inserted pair.

Insertion requires amortized constant time.

Definition at line 1556 of file unordered\_map.h.

```
5.1083.4.30 template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> iterator std::unordered_multimap<
    _Key, _Tp, _Hash, _Pred, _Alloc >::insert ( value_type && __x ) [inline]
```

Inserts a std::pair into the unordered\_multimap.

**Parameters**

__x	Pair to be inserted (see std::make_pair for easy creation of pairs).
-----	--

**Returns**

An iterator that points to the inserted pair.

Insertion requires amortized constant time.

Definition at line 1560 of file unordered\_map.h.

```
5.1083.4.31 template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> template<typename _Pair ,
    typename = typename std::enable_if<std::is_constructible<value_type, _Pair&&>::value>::type> iterator
    std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::insert ( _Pair && __x ) [inline]
```

Inserts a std::pair into the unordered\_multimap.

**Parameters**

__x	Pair to be inserted (see std::make_pair for easy creation of pairs).
-----	--

**Returns**

An iterator that points to the inserted pair.

Insertion requires amortized constant time.

Definition at line 1567 of file unordered\_map.h.

```
5.1083.4.32 template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> iterator std::unordered_multimap<
    _Key, _Tp, _Hash, _Pred, _Alloc >::insert ( const_iterator __hint, const value_type & __x ) [inline]
```

Inserts a std::pair into the unordered\_multimap.

**Parameters**

__hint	An iterator that serves as a hint as to where the pair should be inserted.
__x	Pair to be inserted (see std::make_pair for easy creation of pairs).

**Returns**

An iterator that points to the element with key of \_\_x (may or may not be the pair passed in).

Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See [https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.-associative.insert\\_hints](https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.-associative.insert_hints) for more on *hinting*.

Insertion requires amortized constant time.

Definition at line 1592 of file unordered\_map.h.

```
5.1083.4.33  template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> iterator std::unordered_multimap<
    _Key, _Tp, _Hash, _Pred, _Alloc >::insert ( const_iterator __hint, value_type && __x ) [inline]
```

Inserts a std::pair into the unordered\_multimap.

#### Parameters

<code>__hint</code>	An iterator that serves as a hint as to where the pair should be inserted.
<code>__x</code>	Pair to be inserted (see std::make_pair for easy creation of pairs).

#### Returns

An iterator that points to the element with key of `__x` (may or may not be the pair passed in).

Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See [https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.-associative.insert\\_hints](https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.-associative.insert_hints) for more on *hinting*.

Insertion requires amortized constant time.

Definition at line 1598 of file unordered\_map.h.

```
5.1083.4.34  template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> template<typename _Pair ,
    typename = typename std::enable_if<std::is_constructible<value_type, _Pair&&>::value>::type> iterator
    std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::insert ( const_iterator __hint, _Pair && __x )
    [inline]
```

Inserts a std::pair into the unordered\_multimap.

#### Parameters

<code>__hint</code>	An iterator that serves as a hint as to where the pair should be inserted.
<code>__x</code>	Pair to be inserted (see std::make_pair for easy creation of pairs).

#### Returns

An iterator that points to the element with key of `__x` (may or may not be the pair passed in).

Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

See [https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.-associative.insert\\_hints](https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.-associative.insert_hints) for more on *hinting*.

Insertion requires amortized constant time.

Definition at line 1605 of file unordered\_map.h.

```
5.1083.4.35  template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> template<typename _InputIterator > void
    std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::insert ( _InputIterator __first, _InputIterator __last
    ) [inline]
```

A template function that attempts to insert a range of elements.

## Parameters

<code>__first</code>	Iterator pointing to the start of the range to be inserted.
<code>__last</code>	Iterator pointing to the end of the range.

Complexity similar to that of the range constructor.

Definition at line 1620 of file `unordered_map.h`.

```
5.1083.4.36 template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> void std::unordered_multimap<_Key,
    _Tp, _Hash, _Pred, _Alloc>::insert( initializer_list<value_type> __l ) [inline]
```

Attempts to insert a list of elements into the `unordered_multimap`.

## Parameters

<code>__l</code>	A <code>std::initializer_list&lt;value_type&gt;</code> of elements to be inserted.
------------------	--

Complexity similar to that of the range constructor.

Definition at line 1632 of file `unordered_map.h`.

```
5.1083.4.37 template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> key_equal std::unordered_multimap<
    _Key, _Tp, _Hash, _Pred, _Alloc>::key_eq( ) const [inline]
```

Returns the key comparison object with which the `unordered_multimap` was constructed.

Definition at line 1787 of file `unordered_map.h`.

```
5.1083.4.38 template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> float std::unordered_multimap<_Key,
    _Tp, _Hash, _Pred, _Alloc>::load_factor( ) const [inline],[noexcept]
```

Returns the average number of elements per bucket.

Definition at line 1924 of file `unordered_map.h`.

```
5.1083.4.39 template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> size_type std::unordered_multimap<
    _Key, _Tp, _Hash, _Pred, _Alloc>::max_bucket_count( ) const [inline],[noexcept]
```

Returns the maximum number of buckets of the `unordered_multimap`.

Definition at line 1847 of file `unordered_map.h`.

```
5.1083.4.40 template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> float std::unordered_multimap<_Key,
    _Tp, _Hash, _Pred, _Alloc>::max_load_factor( ) const [inline],[noexcept]
```

Returns a positive number that the `unordered_multimap` tries to keep the load factor less than or equal to.

Definition at line 1930 of file `unordered_map.h`.

```
5.1083.4.41 template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> void std::unordered_multimap<_Key,
    _Tp, _Hash, _Pred, _Alloc>::max_load_factor( float __z ) [inline]
```

Change the `unordered_multimap` maximum load factor.

## Parameters

<code>__z</code>	The new maximum load factor.
------------------	------------------------------

Definition at line 1938 of file `unordered_map.h`.

5.1083.4.42 `template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> size_type std::unordered_multimap<_Key, _Tp, _Hash, _Pred, _Alloc >::max_size ( ) const` [inline],[noexcept]

Returns the maximum size of the unordered\_multimap.

Definition at line 1447 of file unordered\_map.h.

5.1083.4.43 `template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> void std::unordered_multimap<_Key, _Tp, _Hash, _Pred, _Alloc >::noexcept ( noexcept(_M_h.swap(__x._M_h)) )` [inline]

Swaps data with another unordered\_multimap.

Parameters

<code>__x</code>	An unordered_multimap of the same element and allocator types.
------------------	--

This exchanges the elements between two unordered\_multimap in constant time. Note that the global std::swap() function is specialized such that std::swap(m1,m2) will feed to this function.

Definition at line 1740 of file unordered\_map.h.

5.1083.4.44 `template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> unordered_multimap& std::unordered_multimap<_Key, _Tp, _Hash, _Pred, _Alloc >::operator= ( const unordered_multimap<_Key, _Tp, _Hash, _Pred, _Alloc > & )` [default]

Copy assignment operator.

5.1083.4.45 `template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> unordered_multimap& std::unordered_multimap<_Key, _Tp, _Hash, _Pred, _Alloc >::operator= ( unordered_multimap<_Key, _Tp, _Hash, _Pred, _Alloc > && )` [default]

Move assignment operator.

5.1083.4.46 `template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> unordered_multimap& std::unordered_multimap<_Key, _Tp, _Hash, _Pred, _Alloc >::operator= ( initializer_list<value_type > __l )` [inline]

Unordered\_multimap list assignment operator.

Parameters

<code>__l</code>	An initializer_list.
------------------	----------------------

This function fills an unordered\_multimap with copies of the elements in the initializer list `__l`.

Note that the assignment completely changes the unordered\_multimap and that the resulting unordered\_multimap's size is the same as the number of elements assigned.

Definition at line 1422 of file unordered\_map.h.

5.1083.4.47 `template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> void std::unordered_multimap<_Key, _Tp, _Hash, _Pred, _Alloc >::rehash ( size_type __n )` [inline]

May rehash the unordered\_multimap.

Parameters

<code>__n</code>	The new number of buckets.
------------------	----------------------------

Rehash will occur only if the new number of buckets respect the unordered\_multimap maximum load factor.

Definition at line 1949 of file unordered\_map.h.

5.1083.4.48 `template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> void std::unordered_multimap<_Key, _Tp, _Hash, _Pred, _Alloc >::reserve ( size_type __n ) [inline]`

Prepare the `unordered_multimap` for a specified number of elements.

## Parameters

<code>__n</code>	Number of elements required.
------------------	------------------------------

Same as `rehash(ceil(n / max_load_factor()))`.

Definition at line 1960 of file `unordered_map.h`.

5.1083.4.49 `template<class _Key, class _Tp, class _Hash, class _Pred, class _Alloc> size_type std::unordered_multimap<_Key, _Tp, _Hash, _Pred, _Alloc >::size ( ) const [inline], [noexcept]`

Returns the size of the `unordered_multimap`.

Definition at line 1442 of file `unordered_map.h`.

#### 5.1084.1 Detailed Description

`template<class _Value, class _Hash, class _Pred, class _Alloc>class std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >`

A standard container composed of equivalent keys (possibly containing multiple of each key value) in which the elements' keys are the elements themselves.

#### Template Parameters

<code>_Value</code>	Type of key objects.
<code>_Hash</code>	Hashing function object type, defaults to <code>hash&lt;_Value&gt;</code> .
<code>_Pred</code>	Predicate function object type, defaults to <code>equal_to&lt;_Value&gt;</code> .
<code>_Alloc</code>	Allocator type, defaults to <code>allocator&lt;_Key&gt;</code> .

Meets the requirements of a [container](#), and [unordered associative container](#)

Base is `_Hashtable`, dispatched at compile time via template alias `__umset_hashtable`.

Definition at line 70 of file `unordered_set.h`.

## 5.1084.2 Member Typedef Documentation

5.1084.2.1 `template<class _Value, class _Hash, class _Pred, class _Alloc> typedef _Hashtable::allocator_type  
std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::allocator_type`

Public typedefs.

Definition at line 908 of file `unordered_set.h`.

5.1084.2.2 `template<class _Value, class _Hash, class _Pred, class _Alloc> typedef _Hashtable::const_iterator  
std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::const_iterator`

Iterator-related typedefs.

Definition at line 918 of file `unordered_set.h`.

5.1084.2.3 `template<class _Value, class _Hash, class _Pred, class _Alloc> typedef _Hashtable::const_local_iterator  
std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::const_local_iterator`

Iterator-related typedefs.

Definition at line 920 of file `unordered_set.h`.

5.1084.2.4 `template<class _Value, class _Hash, class _Pred, class _Alloc> typedef _Hashtable::const_pointer  
std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::const_pointer`

Iterator-related typedefs.

Definition at line 914 of file `unordered_set.h`.

5.1084.2.5 `template<class _Value, class _Hash, class _Pred, class _Alloc> typedef _Hashtable::const_reference  
std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::const_reference`

Iterator-related typedefs.

Definition at line 916 of file `unordered_set.h`.

5.1084.2.6 `template<class _Value, class _Hash, class _Pred, class _Alloc> typedef _Hashtable::difference_type  
std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::difference_type`

Iterator-related typedefs.

Definition at line 922 of file `unordered_set.h`.

5.1084.2.7 `template<class _Value, class _Hash, class _Pred, class _Alloc> typedef _Hashtable::hasher  
std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::hasher`

Public typedefs.

Definition at line 906 of file `unordered_set.h`.

5.1084.2.8 `template<class _Value, class _Hash, class _Pred, class _Alloc> typedef _Hashtable::iterator  
std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::iterator`

Iterator-related typedefs.

Definition at line 917 of file `unordered_set.h`.

5.1084.2.9 `template<class _Value, class _Hash, class _Pred, class _Alloc> typedef _Hashtable::key_equal  
std::unordered_multiset<_Value, _Hash, _Pred, _Alloc >::key_equal`

Public typedefs.

Definition at line 907 of file `unordered_set.h`.

5.1084.2.10 `template<class _Value, class _Hash, class _Pred, class _Alloc> typedef _Hashtable::key_type  
std::unordered_multiset<_Value, _Hash, _Pred, _Alloc >::key_type`

Public typedefs.

Definition at line 904 of file `unordered_set.h`.

5.1084.2.11 `template<class _Value, class _Hash, class _Pred, class _Alloc> typedef _Hashtable::local_iterator  
std::unordered_multiset<_Value, _Hash, _Pred, _Alloc >::local_iterator`

Iterator-related typedefs.

Definition at line 919 of file `unordered_set.h`.

5.1084.2.12 `template<class _Value, class _Hash, class _Pred, class _Alloc> typedef _Hashtable::pointer  
std::unordered_multiset<_Value, _Hash, _Pred, _Alloc >::pointer`

Iterator-related typedefs.

Definition at line 913 of file `unordered_set.h`.

5.1084.2.13 `template<class _Value, class _Hash, class _Pred, class _Alloc> typedef _Hashtable::reference  
std::unordered_multiset<_Value, _Hash, _Pred, _Alloc >::reference`

Iterator-related typedefs.

Definition at line 915 of file `unordered_set.h`.

5.1084.2.14 `template<class _Value, class _Hash, class _Pred, class _Alloc> typedef _Hashtable::size_type  
std::unordered_multiset<_Value, _Hash, _Pred, _Alloc >::size_type`

Iterator-related typedefs.

Definition at line 921 of file `unordered_set.h`.

5.1084.2.15 `template<class _Value, class _Hash, class _Pred, class _Alloc> typedef _Hashtable::value_type  
std::unordered_multiset<_Value, _Hash, _Pred, _Alloc >::value_type`

Public typedefs.

Definition at line 905 of file `unordered_set.h`.

### 5.1084.3 Constructor & Destructor Documentation

5.1084.3.1 `template<class _Value, class _Hash, class _Pred, class _Alloc> std::unordered_multiset<_Value, _Hash, _Pred,  
_Alloc >::unordered_multiset( ) [default]`

Default constructor.

5.1084.3.2 `template<class _Value, class _Hash, class _Pred, class _Alloc> std::unordered_multiset<_Value, _Hash, _Pred, _Alloc>::unordered_multiset( size_type __n, const hasher & __hf = hasher(), const key_equal & __eqf = key_equal(), const allocator_type & __a = allocator_type() )` `[inline]`, `[explicit]`

Default constructor creates no elements.

## Parameters

<code>__n</code>	Minimal initial number of buckets.
<code>__hf</code>	A hash functor.
<code>__eqf</code>	A key equality functor.
<code>__a</code>	An allocator object.

Definition at line 942 of file `unordered_set.h`.

```
5.1084.3.3 template<class _Value, class _Hash, class _Pred, class _Alloc> template<typename _InputIterator >
std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::unordered_multiset ( _InputIterator __first,
_InputIterator __last, size_type __n = 0, const hasher & __hf = hasher (), const key_equal & __eqf =
key_equal (), const allocator_type & __a = allocator_type () ) [inline]
```

Builds an `unordered_multiset` from a range.

## Parameters

<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.
<code>__n</code>	Minimal initial number of buckets.
<code>__hf</code>	A hash functor.
<code>__eqf</code>	A key equality functor.
<code>__a</code>	An allocator object.

Create an `unordered_multiset` consisting of copies of the elements from `[__first,__last)`. This is linear in `N` (where `N` is `distance(__first,__last)`).

Definition at line 963 of file `unordered_set.h`.

```
5.1084.3.4 template<class _Value, class _Hash, class _Pred, class _Alloc> std::unordered_multiset< _Value, _Hash,
_Pred, _Alloc >::unordered_multiset ( const unordered_multiset< _Value, _Hash, _Pred, _Alloc > & )
[default]
```

Copy constructor.

```
5.1084.3.5 template<class _Value, class _Hash, class _Pred, class _Alloc> std::unordered_multiset< _Value, _Hash, _Pred,
_Alloc >::unordered_multiset ( unordered_multiset< _Value, _Hash, _Pred, _Alloc > && ) [default]
```

Move constructor.

```
5.1084.3.6 template<class _Value, class _Hash, class _Pred, class _Alloc> std::unordered_multiset< _Value, _Hash, _Pred,
_Alloc >::unordered_multiset ( initializer_list< value_type > __l, size_type __n = 0, const hasher & __hf =
hasher (), const key_equal & __eqf = key_equal (), const allocator_type & __a = allocator_type () )
[inline]
```

Builds an `unordered_multiset` from an `initializer_list`.

## Parameters

<code>__l</code>	An <code>initializer_list</code> .
<code>__n</code>	Minimal initial number of buckets.
<code>__hf</code>	A hash functor.
<code>__eqf</code>	A key equality functor.

<code>__a</code>	An allocator object.
------------------	----------------------

Create an `unordered_multiset` consisting of copies of the elements in the list. This is linear in  $N$  (where  $N$  is `l.size()`).

Definition at line 988 of file `unordered_set.h`.

**5.1084.3.7** `template<class _Value, class _Hash, class _Pred, class _Alloc> std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::unordered_multiset ( const allocator_type & __a ) [inline],[explicit]`

Creates an `unordered_multiset` with no elements.

Parameters

<code>__a</code>	An allocator object.
------------------	----------------------

Definition at line 1009 of file `unordered_set.h`.

#### 5.1084.4 Member Function Documentation

**5.1084.4.1** `template<class _Value, class _Hash, class _Pred, class _Alloc> iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::begin ( ) [inline],[noexcept]`

Returns a read-only (constant) iterator that points to the first element in the `unordered_multiset`.

Definition at line 1116 of file `unordered_set.h`.

**5.1084.4.2** `template<class _Value, class _Hash, class _Pred, class _Alloc> const_iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::begin ( ) const [inline],[noexcept]`

Returns a read-only (constant) iterator that points to the first element in the `unordered_multiset`.

Definition at line 1120 of file `unordered_set.h`.

**5.1084.4.3** `template<class _Value, class _Hash, class _Pred, class _Alloc> local_iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::begin ( size_type __n ) [inline]`

Returns a read-only (constant) iterator pointing to the first bucket element.

Parameters

<code>__n</code>	The bucket index.
------------------	-------------------

Returns

A read-only local iterator.

Definition at line 1502 of file `unordered_set.h`.

**5.1084.4.4** `template<class _Value, class _Hash, class _Pred, class _Alloc> const_local_iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::begin ( size_type __n ) const [inline]`

Returns a read-only (constant) iterator pointing to the first bucket element.

Parameters

<code>__n</code>	The bucket index.
------------------	-------------------

**Returns**

A read-only local iterator.

Definition at line 1506 of file unordered\_set.h.

```
5.1084.4.5  template<class _Value, class _Hash, class _Pred, class _Alloc> size_type std::unordered_multiset< _Value,
            _Hash, _Pred, _Alloc >::bucket_count ( ) const  [inline],[noexcept]
```

Returns the number of buckets of the unordered\_multiset.

Definition at line 1468 of file unordered\_set.h.

```
5.1084.4.6  template<class _Value, class _Hash, class _Pred, class _Alloc> const_iterator std::unordered_multiset<
            _Value, _Hash, _Pred, _Alloc >::cbegin ( ) const  [inline],[noexcept]
```

Returns a read-only (constant) iterator that points to the first element in the unordered\_multiset.

Definition at line 1143 of file unordered\_set.h.

```
5.1084.4.7  template<class _Value, class _Hash, class _Pred, class _Alloc> const_local_iterator std::unordered_multiset<
            _Value, _Hash, _Pred, _Alloc >::cbegin ( size_type __n ) const  [inline]
```

Returns a read-only (constant) iterator pointing to the first bucket element.

**Parameters**

<code>__n</code>	The bucket index.
------------------	-------------------

**Returns**

A read-only local iterator.

Definition at line 1510 of file unordered\_set.h.

```
5.1084.4.8  template<class _Value, class _Hash, class _Pred, class _Alloc> const_iterator std::unordered_multiset<
            _Value, _Hash, _Pred, _Alloc >::cend ( ) const  [inline],[noexcept]
```

Returns a read-only (constant) iterator that points one past the last element in the unordered\_multiset.

Definition at line 1151 of file unordered\_set.h.

```
5.1084.4.9  template<class _Value, class _Hash, class _Pred, class _Alloc> const_local_iterator std::unordered_multiset<
            _Value, _Hash, _Pred, _Alloc >::cend ( size_type __n ) const  [inline]
```

Returns a read-only (constant) iterator pointing to one past the last bucket elements.

**Parameters**

<code>__n</code>	The bucket index.
------------------	-------------------

**Returns**

A read-only local iterator.

Definition at line 1530 of file unordered\_set.h.

```
5.1084.4.10  template<class _Value, class _Hash, class _Pred, class _Alloc> void std::unordered_multiset< _Value, _Hash,
            _Pred, _Alloc >::clear ( )  [inline],[noexcept]
```

Erases all elements in an unordered\_multiset.

Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1352 of file unordered\_set.h.

5.1084.4.11 `template<class _Value, class _Hash, class _Pred, class _Alloc> size_type std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::count ( const key_type & __x ) const [inline]`

Finds the number of elements.

Parameters

<code>__x</code>	Element to located.
------------------	---------------------

Returns

Number of elements with specified key.

Definition at line 1445 of file unordered\_set.h.

5.1084.4.12 `template<class _Value, class _Hash, class _Pred, class _Alloc> template<typename... _Args> iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::emplace ( _Args &&... __args ) [inline]`

Builds and insert an element into the unordered\_multiset.

Parameters

<code>__args</code>	Arguments used to generate an element.
---------------------	--

Returns

An iterator that points to the inserted element.

Insertion requires amortized constant time.

Definition at line 1165 of file unordered\_set.h.

5.1084.4.13 `template<class _Value, class _Hash, class _Pred, class _Alloc> template<typename... _Args> iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::emplace_hint ( const_iterator __pos, _Args &&... __args ) [inline]`

Inserts an element into the unordered\_multiset.

Parameters

<code>__pos</code>	An iterator that serves as a hint as to where the element should be inserted.
<code>__args</code>	Arguments used to generate the element to be inserted.

Returns

An iterator that points to the inserted element.

Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

For more on *hinting*, see: [https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.-html#containers.associative.insert\\_hints](https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.-html#containers.associative.insert_hints)

Insertion requires amortized constant time.

Definition at line 1187 of file unordered\_set.h.

5.1084.4.14 `template<class _Value, class _Hash, class _Pred, class _Alloc> bool std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::empty ( ) const [inline], [noexcept]`

Returns true if the `unordered_multiset` is empty.

Definition at line 1095 of file `unordered_set.h`.

5.1084.4.15 `template<class _Value, class _Hash, class _Pred, class _Alloc> iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::end ( ) [inline], [noexcept]`

Returns a read-only (constant) iterator that points one past the last element in the `unordered_multiset`.

Definition at line 1130 of file `unordered_set.h`.

5.1084.4.16 `template<class _Value, class _Hash, class _Pred, class _Alloc> const_iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::end ( ) const [inline], [noexcept]`

Returns a read-only (constant) iterator that points one past the last element in the `unordered_multiset`.

Definition at line 1134 of file `unordered_set.h`.

5.1084.4.17 `template<class _Value, class _Hash, class _Pred, class _Alloc> local_iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::end ( size_type __n ) [inline]`

Returns a read-only (constant) iterator pointing to one past the last bucket elements.

Parameters

<code>__n</code>	The bucket index.
------------------	-------------------

Returns

A read-only local iterator.

Definition at line 1522 of file `unordered_set.h`.

5.1084.4.18 `template<class _Value, class _Hash, class _Pred, class _Alloc> const_local_iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::end ( size_type __n ) const [inline]`

Returns a read-only (constant) iterator pointing to one past the last bucket elements.

Parameters

<code>__n</code>	The bucket index.
------------------	-------------------

Returns

A read-only local iterator.

Definition at line 1526 of file `unordered_set.h`.

5.1084.4.19 `template<class _Value, class _Hash, class _Pred, class _Alloc> std::pair<iterator, iterator> std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::equal_range ( const key_type & __x ) [inline]`

Finds a subsequence matching given key.

## Parameters

<code>__x</code>	Key to be located.
------------------	--------------------

## Returns

Pair of iterators that possibly points to the subsequence matching given key.

Definition at line 1456 of file `unordered_set.h`.

```
5.1084.4.20 template<class _Value, class _Hash, class _Pred, class _Alloc> std::pair<const_iterator, const_iterator>
std::unordered_multiset<_Value, _Hash, _Pred, _Alloc>::equal_range ( const key_type & __x ) const
[inline]
```

Finds a subsequence matching given key.

## Parameters

<code>__x</code>	Key to be located.
------------------	--------------------

## Returns

Pair of iterators that possibly points to the subsequence matching given key.

Definition at line 1460 of file `unordered_set.h`.

```
5.1084.4.21 template<class _Value, class _Hash, class _Pred, class _Alloc> iterator std::unordered_multiset<_Value,
_Hash, _Pred, _Alloc>::erase ( const_iterator __position ) [inline]
```

Erases an element from an `unordered_multiset`.

## Parameters

<code>__position</code>	An iterator pointing to the element to be erased.
-------------------------	---

## Returns

An iterator pointing to the element immediately following `__position` prior to the element being erased. If no such element exists, `end()` is returned.

This function erases an element, pointed to by the given iterator, from an `unordered_multiset`.

Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1298 of file `unordered_set.h`.

```
5.1084.4.22 template<class _Value, class _Hash, class _Pred, class _Alloc> iterator std::unordered_multiset<_Value,
_Hash, _Pred, _Alloc>::erase ( iterator __position ) [inline]
```

Erases an element from an `unordered_multiset`.

## Parameters

<code>__position</code>	An iterator pointing to the element to be erased.
-------------------------	---

**Returns**

An iterator pointing to the element immediately following `__position` prior to the element being erased. If no such element exists, `end()` is returned.

This function erases an element, pointed to by the given iterator, from an `unordered_multiset`.

Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1303 of file `unordered_set.h`.

```
5.1084.4.23  template<class _Value, class _Hash, class _Pred, class _Alloc> size_type std::unordered_multiset< _Value,
              _Hash, _Pred, _Alloc >::erase ( const key_type & __x ) [inline]
```

Erases elements according to the provided key.

**Parameters**

<code>__x</code>	Key of element to be erased.
------------------	------------------------------

**Returns**

The number of elements erased.

This function erases all the elements located by the given key from an `unordered_multiset`.

Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1321 of file `unordered_set.h`.

```
5.1084.4.24  template<class _Value, class _Hash, class _Pred, class _Alloc> iterator std::unordered_multiset< _Value,
              _Hash, _Pred, _Alloc >::erase ( const_iterator __first, const_iterator __last ) [inline]
```

Erases a [`__first`,`__last`) range of elements from an `unordered_multiset`.

**Parameters**

<code>__first</code>	Iterator pointing to the start of the range to be erased.
<code>__last</code>	Iterator pointing to the end of the range to be erased.

**Returns**

The iterator `__last`.

This function erases a sequence of elements from an `unordered_multiset`.

Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1341 of file `unordered_set.h`.

```
5.1084.4.25  template<class _Value, class _Hash, class _Pred, class _Alloc> iterator std::unordered_multiset< _Value,
              _Hash, _Pred, _Alloc >::find ( const key_type & __x ) [inline]
```

Tries to locate an element in an `unordered_multiset`.

## Parameters

__x	Element to be located.
-----	------------------------

## Returns

Iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end ( end() ) iterator.

Definition at line 1431 of file unordered\_set.h.

```
5.1084.4.26 template<class _Value, class _Hash, class _Pred, class _Alloc> const_iterator std::unordered_multiset<
    _Value, _Hash, _Pred, _Alloc >::find ( const key_type & __x ) const [inline]
```

Tries to locate an element in an unordered\_multiset.

## Parameters

__x	Element to be located.
-----	------------------------

## Returns

Iterator pointing to sought-after element, or end() if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end ( end() ) iterator.

Definition at line 1435 of file unordered\_set.h.

```
5.1084.4.27 template<class _Value, class _Hash, class _Pred, class _Alloc> allocator_type std::unordered_multiset<
    _Value, _Hash, _Pred, _Alloc >::get_allocator ( ) const [inline],[noexcept]
```

Returns the allocator object used by the unordered\_multiset.

Definition at line 1088 of file unordered\_set.h.

```
5.1084.4.28 template<class _Value, class _Hash, class _Pred, class _Alloc> hasher std::unordered_multiset< _Value,
    _Hash, _Pred, _Alloc >::hash_function ( ) const [inline]
```

Returns the hash functor object with which the unordered\_multiset was constructed.

Definition at line 1407 of file unordered\_set.h.

```
5.1084.4.29 template<class _Value, class _Hash, class _Pred, class _Alloc> iterator std::unordered_multiset< _Value,
    _Hash, _Pred, _Alloc >::insert ( const value_type & __x ) [inline]
```

Inserts an element into the unordered\_multiset.

## Parameters

__x	Element to be inserted.
-----	-------------------------

## Returns

An iterator that points to the inserted element.

Insertion requires amortized constant time.

Definition at line 1199 of file unordered\_set.h.

5.1084.4.30 `template<class _Value, class _Hash, class _Pred, class _Alloc> iterator std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::insert ( value_type && __x ) [inline]`

Inserts an element into the `unordered_multiset`.

## Parameters

<code>__x</code>	Element to be inserted.
------------------	-------------------------

## Returns

An iterator that points to the inserted element.

Insertion requires amortized constant time.

Definition at line 1203 of file `unordered_set.h`.

```
5.1084.4.31 template<class _Value, class _Hash, class _Pred, class _Alloc> iterator std::unordered_multiset< _Value,
    _Hash, _Pred, _Alloc >::insert ( const_iterator __hint, const value_type & __x ) [inline]
```

Inserts an element into the `unordered_multiset`.

## Parameters

<code>__hint</code>	An iterator that serves as a hint as to where the element should be inserted.
<code>__x</code>	Element to be inserted.

## Returns

An iterator that points to the inserted element.

Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

For more on *hinting*, see: [https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.-html#containers.associative.insert\\_hints](https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.-html#containers.associative.insert_hints)

Insertion requires amortized constant.

Definition at line 1225 of file `unordered_set.h`.

```
5.1084.4.32 template<class _Value, class _Hash, class _Pred, class _Alloc> iterator std::unordered_multiset< _Value,
    _Hash, _Pred, _Alloc >::insert ( const_iterator __hint, value_type && __x ) [inline]
```

Inserts an element into the `unordered_multiset`.

## Parameters

<code>__hint</code>	An iterator that serves as a hint as to where the element should be inserted.
<code>__x</code>	Element to be inserted.

## Returns

An iterator that points to the inserted element.

Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

For more on *hinting*, see: [https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.-html#containers.associative.insert\\_hints](https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.-html#containers.associative.insert_hints)

Insertion requires amortized constant.

Definition at line 1229 of file `unordered_set.h`.

```
5.1084.4.33 template<class _Value, class _Hash, class _Pred, class _Alloc> template<typename _InputIterator > void
std::unordered_multiset<_Value, _Hash, _Pred, _Alloc >::insert ( _InputIterator __first, _InputIterator __last )
[inline]
```

A template function that inserts a range of elements.

## Parameters

<code>__first</code>	Iterator pointing to the start of the range to be inserted.
<code>__last</code>	Iterator pointing to the end of the range.

Complexity similar to that of the range constructor.

Definition at line 1243 of file `unordered_set.h`.

```
5.1084.4.34 template<class _Value, class _Hash, class _Pred, class _Alloc> void std::unordered_multiset< _Value, _Hash,
_Pred, _Alloc >::insert( initializer_list< value_type > __l ) [inline]
```

Inserts a list of elements into the `unordered_multiset`.

## Parameters

<code>__l</code>	A <code>std::initializer_list&lt;value_type&gt;</code> of elements to be inserted.
------------------	--

Complexity similar to that of the range constructor.

Definition at line 1254 of file `unordered_set.h`.

```
5.1084.4.35 template<class _Value, class _Hash, class _Pred, class _Alloc> key_equal std::unordered_multiset< _Value,
_Hash, _Pred, _Alloc >::key_eq( ) const [inline]
```

Returns the key comparison object with which the `unordered_multiset` was constructed.

Definition at line 1413 of file `unordered_set.h`.

```
5.1084.4.36 template<class _Value, class _Hash, class _Pred, class _Alloc> float std::unordered_multiset< _Value, _Hash,
_Pred, _Alloc >::load_factor( ) const [inline], [noexcept]
```

Returns the average number of elements per bucket.

Definition at line 1538 of file `unordered_set.h`.

```
5.1084.4.37 template<class _Value, class _Hash, class _Pred, class _Alloc> size_type std::unordered_multiset< _Value,
_Hash, _Pred, _Alloc >::max_bucket_count( ) const [inline], [noexcept]
```

Returns the maximum number of buckets of the `unordered_multiset`.

Definition at line 1473 of file `unordered_set.h`.

```
5.1084.4.38 template<class _Value, class _Hash, class _Pred, class _Alloc> float std::unordered_multiset< _Value, _Hash,
_Pred, _Alloc >::max_load_factor( ) const [inline], [noexcept]
```

Returns a positive number that the `unordered_multiset` tries to keep the load factor less than or equal to.

Definition at line 1544 of file `unordered_set.h`.

```
5.1084.4.39 template<class _Value, class _Hash, class _Pred, class _Alloc> void std::unordered_multiset< _Value, _Hash,
_Pred, _Alloc >::max_load_factor( float __z ) [inline]
```

Change the `unordered_multiset` maximum load factor.

## Parameters

<code>__z</code>	The new maximum load factor.
------------------	------------------------------

Definition at line 1552 of file `unordered_set.h`.

5.1084.4.40 `template<class _Value, class _Hash, class _Pred, class _Alloc> size_type std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::max_size ( ) const` [inline], [noexcept]

Returns the maximum size of the unordered\_multiset.

Definition at line 1105 of file unordered\_set.h.

5.1084.4.41 `template<class _Value, class _Hash, class _Pred, class _Alloc> void std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::noexcept ( noexcept( _M_h.swap( __x._M_h) ) )` [inline]

Swaps data with another unordered\_multiset.

Parameters

<code>__x</code>	An unordered_multiset of the same element and allocator types.
------------------	--

This exchanges the elements between two sets in constant time. Note that the global std::swap() function is specialized such that std::swap(s1,s2) will feed to this function.

Definition at line 1366 of file unordered\_set.h.

5.1084.4.42 `template<class _Value, class _Hash, class _Pred, class _Alloc> unordered_multiset& std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::operator= ( const unordered_multiset< _Value, _Hash, _Pred, _Alloc > & )` [default]

Copy assignment operator.

5.1084.4.43 `template<class _Value, class _Hash, class _Pred, class _Alloc> unordered_multiset& std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::operator= ( unordered_multiset< _Value, _Hash, _Pred, _Alloc > && )` [default]

Move assignment operator.

5.1084.4.44 `template<class _Value, class _Hash, class _Pred, class _Alloc> unordered_multiset& std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::operator= ( initializer_list< value_type > __l )` [inline]

Unordered\_multiset list assignment operator.

Parameters

<code>__l</code>	An initializer_list.
------------------	----------------------

This function fills an unordered\_multiset with copies of the elements in the initializer list \_\_l.

Note that the assignment completely changes the unordered\_multiset and that the resulting unordered\_multiset's size is the same as the number of elements assigned.

Definition at line 1080 of file unordered\_set.h.

5.1084.4.45 `template<class _Value, class _Hash, class _Pred, class _Alloc> void std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::rehash ( size_type __n )` [inline]

May rehash the unordered\_multiset.

Parameters

<code>__n</code>	The new number of buckets.
------------------	----------------------------

Rehash will occur only if the new number of buckets respect the unordered\_multiset maximum load factor.

Definition at line 1563 of file unordered\_set.h.

5.1084.4.46 `template<class _Value, class _Hash, class _Pred, class _Alloc> void std::unordered_multiset<_Value,_Hash,_Pred,_Alloc>::reserve ( size_type __n ) [inline]`

Prepare the `unordered_multiset` for a specified number of elements.

## Parameters

<code>__n</code>	Number of elements required.
------------------	------------------------------

Same as `rehash(ceil(n / max_load_factor()))`.

Definition at line 1574 of file `unordered_set.h`.

**5.1084.4.47** `template<class _Value, class _Hash, class _Pred, class _Alloc> size_type std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::size ( ) const` `[inline], [noexcept]`

Returns the size of the `unordered_multiset`.

Definition at line 1100 of file `unordered_set.h`.

#### 5.1085.1 Detailed Description

```
template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> class std::unordered_set< _Value, _Hash, _Pred, _Alloc >
```

A standard container composed of unique keys (containing at most one of each key value) in which the elements' keys are the elements themselves.

#### Template Parameters

<code>_Value</code>	Type of key objects.
<code>_Hash</code>	Hashing function object type, defaults to <code>hash&lt;_Value&gt;</code> .
<code>_Pred</code>	Predicate function object type, defaults to <code>equal_to&lt;_Value&gt;</code> .
<code>_Alloc</code>	Allocator type, defaults to <code>allocator&lt;_Key&gt;</code> .

Meets the requirements of a [container](#), and [unordered associative container](#)

Base is `_Hashtable`, dispatched at compile time via template alias `__uset_hashtable`.

Definition at line 97 of file `unordered_set.h`.

## 5.1085.2 Member Typedef Documentation

5.1085.2.1 `template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> typedef _Hashtable::allocator_type std::unordered_set<_Value, _Hash, _Pred, _Alloc>::allocator_type`

### 5.1085.3 Constructor & Destructor Documentation

5.1085.3.1 `template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> std::unordered_set<_Value, _Hash, _Pred, _Alloc >::unordered_set ( )`  
`[default]`

Default constructor.

5.1085.3.2 `template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> std::unordered_set<_Value, _Hash, _Pred, _Alloc >::unordered_set ( size_type __n,`  
`const hasher & __hf = hasher ( ), const key_equal & __eq = key_equal ( ), const allocator_type & __a =`  
`allocator_type ( ) ) [inline],[explicit]`

Default constructor creates no elements.

#### Parameters

<code>__n</code>	Minimal initial number of buckets.
<code>__hf</code>	A hash functor.
<code>__eq</code>	A key equality functor.
<code>__a</code>	An allocator object.

Definition at line 145 of file unordered\_set.h.

5.1085.3.3 `template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> template<typename InputIterator > std::unordered_set<_Value, _Hash, _Pred,`  
`_Alloc >::unordered_set ( InputIterator __first, InputIterator __last, size_type __n = 0, const hasher & __hf =`  
`hasher ( ), const key_equal & __eq = key_equal ( ), const allocator_type & __a = allocator_type ( ) )`  
`[inline]`

Builds an unordered\_set from a range.

#### Parameters

<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.
<code>__n</code>	Minimal initial number of buckets.
<code>__hf</code>	A hash functor.
<code>__eq</code>	A key equality functor.
<code>__a</code>	An allocator object.

Create an unordered\_set consisting of copies of the elements from [`__first`,`__last`). This is linear in N (where N is distance(`__first`,`__last`)).

Definition at line 166 of file unordered\_set.h.

5.1085.3.4 `template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> std::unordered_set<_Value, _Hash, _Pred, _Alloc >::unordered_set ( const`  
`unordered_set<_Value, _Hash, _Pred, _Alloc > & ) [default]`

Copy constructor.

5.1085.3.5 `template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> std::unordered_set<_Value, _Hash, _Pred, _Alloc>::unordered_set ( unordered_set<_Value, _Hash, _Pred, _Alloc> && ) [default]`

Move constructor.

5.1085.3.6 `template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> std::unordered_set<_Value, _Hash, _Pred, _Alloc>::unordered_set ( const allocator_type & __a ) [inline], [explicit]`

Creates an `unordered_set` with no elements.

Parameters

<code>__a</code>	An allocator object.
------------------	----------------------

Definition at line 185 of file `unordered_set.h`.

5.1085.3.7 `template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> std::unordered_set<_Value, _Hash, _Pred, _Alloc>::unordered_set ( initializer_list<value_type> & __l, size_type __n = 0, const hasher & __hf = hasher(), const key_equal & __eqf = key_equal(), const allocator_type & __a = allocator_type() ) [inline]`

Builds an `unordered_set` from an `initializer_list`.

Parameters

<code>__l</code>	An <code>initializer_list</code> .
<code>__n</code>	Minimal initial number of buckets.
<code>__hf</code>	A hash functor.
<code>__eqf</code>	A key equality functor.
<code>__a</code>	An allocator object.

Create an `unordered_set` consisting of copies of the elements in the list. This is linear in  $N$  (where  $N$  is `__l.size()`).

Definition at line 220 of file `unordered_set.h`.

#### 5.1085.4 Member Function Documentation

5.1085.4.1 `template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> iterator std::unordered_set<_Value, _Hash, _Pred, _Alloc>::begin ( ) [inline], [noexcept]`

Returns a read-only (constant) iterator that points to the first element in the `unordered_set`.

Definition at line 319 of file `unordered_set.h`.

5.1085.4.2 `template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> const_iterator std::unordered_set<_Value, _Hash, _Pred, _Alloc>::begin ( ) const [inline], [noexcept]`

Returns a read-only (constant) iterator that points to the first element in the `unordered_set`.

Definition at line 323 of file `unordered_set.h`.

```
5.1085.4.3 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> local_iterator std::unordered_set<_Value, _Hash, _Pred, _Alloc >::begin ( size_type __n ) [inline]
```

Returns a read-only (constant) iterator pointing to the first bucket element.

## Parameters

<code>__n</code>	The bucket index.
------------------	-------------------

## Returns

A read-only local iterator.

Definition at line 726 of file `unordered_set.h`.

```
5.1085.4.4 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc
= allocator<_Value>> const_local_iterator std::unordered_set<_Value, _Hash, _Pred, _Alloc >::begin (
size_type __n ) const [inline]
```

Returns a read-only (constant) iterator pointing to the first bucket element.

## Parameters

<code>__n</code>	The bucket index.
------------------	-------------------

## Returns

A read-only local iterator.

Definition at line 730 of file `unordered_set.h`.

```
5.1085.4.5 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc
= allocator<_Value>> size_type std::unordered_set<_Value, _Hash, _Pred, _Alloc >::bucket_count ( ) const
[inline], [noexcept]
```

Returns the number of buckets of the `unordered_set`.

Definition at line 692 of file `unordered_set.h`.

```
5.1085.4.6 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc
= allocator<_Value>> const_iterator std::unordered_set<_Value, _Hash, _Pred, _Alloc >::cbegin ( ) const
[inline], [noexcept]
```

Returns a read-only (constant) iterator that points to the first element in the `unordered_set`.

Definition at line 346 of file `unordered_set.h`.

```
5.1085.4.7 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc
= allocator<_Value>> const_local_iterator std::unordered_set<_Value, _Hash, _Pred, _Alloc >::cbegin (
size_type __n ) const [inline]
```

Returns a read-only (constant) iterator pointing to the first bucket element.

## Parameters

<code>__n</code>	The bucket index.
------------------	-------------------

## Returns

A read-only local iterator.

Definition at line 734 of file `unordered_set.h`.

5.1085.4.8 `template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> const_iterator std::unordered_set<_Value, _Hash, _Pred, _Alloc >::cend ( ) const` `[inline]`, `[noexcept]`

Returns a read-only (constant) iterator that points one past the last element in the `unordered_set`.

Definition at line 354 of file `unordered_set.h`.

5.1085.4.9 `template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> const_local_iterator std::unordered_set<_Value, _Hash, _Pred, _Alloc >::cend ( size_type __n ) const` `[inline]`

Returns a read-only (constant) iterator pointing to one past the last bucket elements.

Parameters

<code>__n</code>	The bucket index.
------------------	-------------------

Returns

A read-only local iterator.

Definition at line 754 of file `unordered_set.h`.

5.1085.4.10 `template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> void std::unordered_set<_Value, _Hash, _Pred, _Alloc >::clear ( )` `[inline]`, `[noexcept]`

Erases all elements in an `unordered_set`. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 572 of file `unordered_set.h`.

5.1085.4.11 `template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> size_type std::unordered_set<_Value, _Hash, _Pred, _Alloc >::count ( const key_type & __x ) const` `[inline]`

Finds the number of elements.

Parameters

<code>__x</code>	Element to located.
------------------	---------------------

Returns

Number of elements with specified key.

This function only makes sense for `unordered_multisets`; for `unordered_set` the result will either be 0 (not present) or 1 (present).

Definition at line 667 of file `unordered_set.h`.

5.1085.4.12 `template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> template<typename... _Args> std::pair<iterator, bool> std::unordered_set<_Value, _Hash, _Pred, _Alloc >::emplace ( _Args &&... __args )` `[inline]`

Attempts to build and insert an element into the `unordered_set`.

## Parameters

<code>__args</code>	Arguments used to generate an element.
---------------------	--

## Returns

A pair, of which the first element is an iterator that points to the possibly inserted element, and the second is a bool that is true if the element was actually inserted.

This function attempts to build and insert an element into the `unordered_set`. An `unordered_set` relies on unique keys and thus an element is only inserted if it is not already present in the `unordered_set`.

Insertion requires amortized constant time.

Definition at line 376 of file `unordered_set.h`.

```
5.1085.4.13 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename
_Alloc = allocator<_Value>> template<typename... _Args> iterator std::unordered_set<_Value, _Hash, _Pred,
_Alloc >::emplace_hint ( const_iterator __pos, _Args &&... __args ) [inline]
```

Attempts to insert an element into the `unordered_set`.

## Parameters

<code>__pos</code>	An iterator that serves as a hint as to where the element should be inserted.
<code>__args</code>	Arguments used to generate the element to be inserted.

## Returns

An iterator that points to the element with key equivalent to the one generated from `__args` (may or may not be the element itself).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument `emplace()` does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

For more on *hinting*, see: [https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.-html#containers.associative.insert\\_hints](https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.-html#containers.associative.insert_hints)

Insertion requires amortized constant time.

Definition at line 402 of file `unordered_set.h`.

```
5.1085.4.14 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename
_Alloc = allocator<_Value>> bool std::unordered_set<_Value, _Hash, _Pred, _Alloc >::empty ( ) const
[inline], [noexcept]
```

Returns true if the `unordered_set` is empty.

Definition at line 298 of file `unordered_set.h`.

```
5.1085.4.15 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename
_Alloc = allocator<_Value>> iterator std::unordered_set<_Value, _Hash, _Pred, _Alloc >::end ( )
[inline], [noexcept]
```

Returns a read-only (constant) iterator that points one past the last element in the `unordered_set`.

Definition at line 333 of file `unordered_set.h`.

5.1085.4.16 `template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> const_iterator std::unordered_set<_Value, _Hash, _Pred, _Alloc >::end ( ) const [inline], [noexcept]`

Returns a read-only (constant) iterator that points one past the last element in the unordered\_set.

Definition at line 337 of file unordered\_set.h.

5.1085.4.17 `template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> local_iterator std::unordered_set<_Value, _Hash, _Pred, _Alloc >::end ( size_type __n ) [inline]`

Returns a read-only (constant) iterator pointing to one past the last bucket elements.

Parameters

<code>__n</code>	The bucket index.
------------------	-------------------

Returns

A read-only local iterator.

Definition at line 746 of file unordered\_set.h.

5.1085.4.18 `template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> const_local_iterator std::unordered_set<_Value, _Hash, _Pred, _Alloc >::end ( size_type __n ) const [inline]`

Returns a read-only (constant) iterator pointing to one past the last bucket elements.

Parameters

<code>__n</code>	The bucket index.
------------------	-------------------

Returns

A read-only local iterator.

Definition at line 750 of file unordered\_set.h.

5.1085.4.19 `template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> std::pair<iterator, iterator> std::unordered_set<_Value, _Hash, _Pred, _Alloc >::equal_range ( const key_type & __x ) [inline]`

Finds a subsequence matching given key.

Parameters

<code>__x</code>	Key to be located.
------------------	--------------------

Returns

Pair of iterators that possibly points to the subsequence matching given key.

This function probably only makes sense for multisets.

Definition at line 680 of file unordered\_set.h.

---

5.1085.4.20 `template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename  
_Alloc = allocator<_Value>> std::pair<const_iterator, const_iterator> std::unordered_set<_Value,  
_Hash, _Pred, _Alloc >::equal_range ( const key_type & __x ) const [inline]`

Finds a subsequence matching given key.

## Parameters

<code>__x</code>	Key to be located.
------------------	--------------------

## Returns

Pair of iterators that possibly points to the subsequence matching given key.

This function probably only makes sense for multisets.

Definition at line 684 of file unordered\_set.h.

```
5.1085.4.21  template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename
              _Alloc = allocator<_Value>> iterator std::unordered_set<_Value, _Hash, _Pred, _Alloc >::erase (
              const_iterator __position ) [inline]
```

Erases an element from an unordered\_set.

## Parameters

<code>__position</code>	An iterator pointing to the element to be erased.
-------------------------	---

## Returns

An iterator pointing to the element immediately following `__position` prior to the element being erased. If no such element exists, `end()` is returned.

This function erases an element, pointed to by the given iterator, from an unordered\_set. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 522 of file unordered\_set.h.

```
5.1085.4.22  template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename
              _Alloc = allocator<_Value>> iterator std::unordered_set<_Value, _Hash, _Pred, _Alloc >::erase ( iterator
              __position ) [inline]
```

Erases an element from an unordered\_set.

## Parameters

<code>__position</code>	An iterator pointing to the element to be erased.
-------------------------	---

## Returns

An iterator pointing to the element immediately following `__position` prior to the element being erased. If no such element exists, `end()` is returned.

This function erases an element, pointed to by the given iterator, from an unordered\_set. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 527 of file unordered\_set.h.

```
5.1085.4.23  template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename
              _Alloc = allocator<_Value>> size_type std::unordered_set<_Value, _Hash, _Pred, _Alloc >::erase ( const
              key_type & __x ) [inline]
```

Erases elements according to the provided key.

## Parameters

<code>__x</code>	Key of element to be erased.
------------------	------------------------------

## Returns

The number of elements erased.

This function erases all the elements located by the given key from an `unordered_set`. For an `unordered_set` the result of this function can only be 0 (not present) or 1 (present). Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 544 of file `unordered_set.h`.

```
5.1085.4.24  template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename
             _Alloc = allocator<_Value>> iterator std::unordered_set<_Value, _Hash, _Pred, _Alloc >::erase (
             const_iterator __first, const_iterator __last ) [inline]
```

Erases a [`__first`,`__last`) range of elements from an `unordered_set`.

## Parameters

<code>__first</code>	Iterator pointing to the start of the range to be erased.
<code>__last</code>	Iterator pointing to the end of the range to be erased.

## Returns

The iterator `__last`.

This function erases a sequence of elements from an `unordered_set`. Note that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 562 of file `unordered_set.h`.

```
5.1085.4.25  template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename
             _Alloc = allocator<_Value>> iterator std::unordered_set<_Value, _Hash, _Pred, _Alloc >::find ( const
             key_type & __x ) [inline]
```

Tries to locate an element in an `unordered_set`.

## Parameters

<code>__x</code>	Element to be located.
------------------	------------------------

## Returns

Iterator pointing to sought-after element, or `end()` if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end (`end()`) iterator.

Definition at line 649 of file `unordered_set.h`.

```
5.1085.4.26  template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename
             _Alloc = allocator<_Value>> const_iterator std::unordered_set<_Value, _Hash, _Pred, _Alloc >::find ( const
             key_type & __x ) const [inline]
```

Tries to locate an element in an `unordered_set`.

## Parameters

<code>__x</code>	Element to be located.
------------------	------------------------

## Returns

Iterator pointing to sought-after element, or `end()` if not found.

This function takes a key and tries to locate the element with which the key matches. If successful the function returns an iterator pointing to the sought after element. If unsuccessful it returns the past-the-end (`end()`) iterator.

Definition at line 653 of file `unordered_set.h`.

```
5.1085.4.27 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
typename _Alloc = allocator<_Value>> allocator_type std::unordered_set<_Value, _Hash, _Pred, _Alloc
>::get_allocator( ) const [inline], [noexcept]
```

Returns the allocator object used by the `unordered_set`.

Definition at line 291 of file `unordered_set.h`.

```
5.1085.4.28 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename
_Alloc = allocator<_Value>> hasher std::unordered_set<_Value, _Hash, _Pred, _Alloc >::hash_function( )
const [inline]
```

Returns the hash functor object with which the `unordered_set` was constructed.

Definition at line 625 of file `unordered_set.h`.

```
5.1085.4.29 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename
_Alloc = allocator<_Value>> std::pair<iterator, bool> std::unordered_set<_Value, _Hash, _Pred, _Alloc
>::insert( const value_type & __x ) [inline]
```

Attempts to insert an element into the `unordered_set`.

## Parameters

<code>__x</code>	Element to be inserted.
------------------	-------------------------

## Returns

A pair, of which the first element is an iterator that points to the possibly inserted element, and the second is a `bool` that is true if the element was actually inserted.

This function attempts to insert an element into the `unordered_set`. An `unordered_set` relies on unique keys and thus an element is only inserted if it is not already present in the `unordered_set`.

Insertion requires amortized constant time.

Definition at line 420 of file `unordered_set.h`.

```
5.1085.4.30 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename
_Alloc = allocator<_Value>> std::pair<iterator, bool> std::unordered_set<_Value, _Hash, _Pred, _Alloc
>::insert( value_type && __x ) [inline]
```

Attempts to insert an element into the `unordered_set`.

## Parameters

<code>__x</code>	Element to be inserted.
------------------	-------------------------

## Returns

A pair, of which the first element is an iterator that points to the possibly inserted element, and the second is a bool that is true if the element was actually inserted.

This function attempts to insert an element into the `unordered_set`. An `unordered_set` relies on unique keys and thus an element is only inserted if it is not already present in the `unordered_set`.

Insertion requires amortized constant time.

Definition at line 424 of file `unordered_set.h`.

```
5.1085.4.31  template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename
             _Alloc = allocator<_Value>> iterator std::unordered_set<_Value, _Hash, _Pred, _Alloc>::insert (
             const_iterator __hint, const value_type & __x ) [inline]
```

Attempts to insert an element into the `unordered_set`.

## Parameters

<code>__hint</code>	An iterator that serves as a hint as to where the element should be inserted.
<code>__x</code>	Element to be inserted.

## Returns

An iterator that points to the element with key of `__x` (may or may not be the element passed in).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument `insert()` does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

For more on *hinting*, see: [https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.-html#containers.associative.insert\\_hints](https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.-html#containers.associative.insert_hints)

Insertion requires amortized constant.

Definition at line 449 of file `unordered_set.h`.

```
5.1085.4.32  template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename
             _Alloc = allocator<_Value>> iterator std::unordered_set<_Value, _Hash, _Pred, _Alloc>::insert (
             const_iterator __hint, value_type && __x ) [inline]
```

Attempts to insert an element into the `unordered_set`.

## Parameters

<code>__hint</code>	An iterator that serves as a hint as to where the element should be inserted.
<code>__x</code>	Element to be inserted.

## Returns

An iterator that points to the element with key of `__x` (may or may not be the element passed in).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument `insert()` does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

For more on *hinting*, see: [https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.-.html#containers.associative.insert\\_hints](https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.-.html#containers.associative.insert_hints)

Insertion requires amortized constant.

Definition at line 453 of file unordered\_set.h.

```
5.1085.4.33 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename
    _Alloc = allocator<_Value>> template<typename InputIterator > void std::unordered_set<_Value, _Hash,
    _Pred, _Alloc >::insert ( InputIterator __first, InputIterator __last ) [inline]
```

A template function that attempts to insert a range of elements.

Parameters

<code>__first</code>	Iterator pointing to the start of the range to be inserted.
<code>__last</code>	Iterator pointing to the end of the range.

Complexity similar to that of the range constructor.

Definition at line 468 of file unordered\_set.h.

```
5.1085.4.34 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
    typename _Alloc = allocator<_Value>> void std::unordered_set<_Value, _Hash, _Pred, _Alloc >::insert (
    initializer_list<value_type > __l ) [inline]
```

Attempts to insert a list of elements into the unordered\_set.

Parameters

<code>__l</code>	A std::initializer_list<value_type> of elements to be inserted.
------------------	---

Complexity similar to that of the range constructor.

Definition at line 479 of file unordered\_set.h.

```
5.1085.4.35 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename
    _Alloc = allocator<_Value>> key_equal std::unordered_set<_Value, _Hash, _Pred, _Alloc >::key_eq ( ) const
    [inline]
```

Returns the key comparison object with which the unordered\_set was constructed.

Definition at line 631 of file unordered\_set.h.

```
5.1085.4.36 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename
    _Alloc = allocator<_Value>> float std::unordered_set<_Value, _Hash, _Pred, _Alloc >::load_factor ( ) const
    [inline], [noexcept]
```

Returns the average number of elements per bucket.

Definition at line 762 of file unordered\_set.h.

```
5.1085.4.37 template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>,
    typename _Alloc = allocator<_Value>> size_type std::unordered_set<_Value, _Hash, _Pred, _Alloc
    >::max_bucket_count ( ) const [inline], [noexcept]
```

Returns the maximum number of buckets of the unordered\_set.

Definition at line 697 of file unordered\_set.h.

5.1085.4.38 `template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> float std::unordered_set<_Value, _Hash, _Pred, _Alloc>::max_load_factor ( ) const [inline], [noexcept]`

Returns a positive number that the `unordered_set` tries to keep the load factor less than or equal to.

Definition at line 768 of file `unordered_set.h`.

5.1085.4.39 `template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> void std::unordered_set<_Value, _Hash, _Pred, _Alloc>::max_load_factor ( float __z ) [inline]`

Change the `unordered_set` maximum load factor.

Parameters

<code>__z</code>	The new maximum load factor.
------------------	------------------------------

Definition at line 776 of file `unordered_set.h`.

5.1085.4.40 `template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> size_type std::unordered_set<_Value, _Hash, _Pred, _Alloc>::max_size ( ) const [inline], [noexcept]`

Returns the maximum size of the `unordered_set`.

Definition at line 308 of file `unordered_set.h`.

5.1085.4.41 `template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> void std::unordered_set<_Value, _Hash, _Pred, _Alloc>::noexcept ( noexcept(_M_h.swap(__x._M_h)) ) [inline]`

Swaps data with another `unordered_set`.

Parameters

<code>__x</code>	An <code>unordered_set</code> of the same element and allocator types.
------------------	--

This exchanges the elements between two sets in constant time. Note that the global `std::swap()` function is specialized such that `std::swap(s1,s2)` will feed to this function.

Definition at line 586 of file `unordered_set.h`.

5.1085.4.42 `template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> unordered_set& std::unordered_set<_Value, _Hash, _Pred, _Alloc>::operator= ( const unordered_set<_Value, _Hash, _Pred, _Alloc> & ) [default]`

Copy assignment operator.

5.1085.4.43 `template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> unordered_set& std::unordered_set<_Value, _Hash, _Pred, _Alloc>::operator= ( unordered_set<_Value, _Hash, _Pred, _Alloc> && ) [default]`

Move assignment operator.

5.1085.4.44 `template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename _Alloc = allocator<_Value>> unordered_set& std::unordered_set<_Value, _Hash, _Pred, _Alloc>::operator= ( initializer_list<value_type> _l ) [inline]`

`Unordered_set` list assignment operator.

## Parameters

<code>__l</code>	An initializer_list.
------------------	----------------------

This function fills an unordered\_set with copies of the elements in the initializer list `__l`.

Note that the assignment completely changes the unordered\_set and that the resulting unordered\_set's size is the same as the number of elements assigned.

Definition at line 283 of file unordered\_set.h.

```
5.1085.4.45  template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename
             _Alloc = allocator<_Value>> void std::unordered_set< _Value, _Hash, _Pred, _Alloc >::rehash ( size_type __n
             ) [inline]
```

May rehash the unordered\_set.

## Parameters

<code>__n</code>	The new number of buckets.
------------------	----------------------------

Rehash will occur only if the new number of buckets respect the unordered\_set maximum load factor.

Definition at line 787 of file unordered\_set.h.

```
5.1085.4.46  template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename
             _Alloc = allocator<_Value>> void std::unordered_set< _Value, _Hash, _Pred, _Alloc >::reserve ( size_type __n
             ) [inline]
```

Prepare the unordered\_set for a specified number of elements.

## Parameters

<code>__n</code>	Number of elements required.
------------------	------------------------------

Same as rehash(ceil(n / max\_load\_factor())).

Definition at line 798 of file unordered\_set.h.

```
5.1085.4.47  template<typename _Value, typename _Hash = hash<_Value>, typename _Pred = equal_to<_Value>, typename
             _Alloc = allocator<_Value>> size_type std::unordered_set< _Value, _Hash, _Pred, _Alloc >::size ( ) const
             [inline], [noexcept]
```

Returns the size of the unordered\_set.

Definition at line 303 of file unordered\_set.h.

## Friends

- class `_Array<_Tp >`

## 5.1088.1 Detailed Description

```
template<class _Tp>class std::valarray<_Tp >
```

Smart array designed to support numeric processing.

Return an iterator pointing to one past the last element of the array.

A valarray is an array that provides constraints intended to allow for effective optimization of numeric array processing by reducing the aliasing that can result from pointer representations. It represents a one-dimensional array from which different multidimensional subsets can be accessed and modified.

## Template Parameters

<code>_Tp</code>	Type of object in the array.
------------------	------------------------------

## Parameters

<code>__arr</code>	Array.
--------------------	--------

Definition at line 78 of file valarray.

## 5.1088.2 Constructor &amp; Destructor Documentation

5.1088.2.1 `template<class _Tp> std::valarray<_Tp >::valarray ( const _Tp * __restrict__, size_t )`

Construct an array initialized to the first  $n$  elements of  $t$ .

The documentation for this class was generated from the following file:

- [valarray](#)

#### 5.1089.1 Detailed Description

`template<typename _Tp, typename _Alloc = std::allocator<_Tp>>class std::vector< _Tp, _Alloc >`

A standard container which offers fixed time access to individual elements in any order.

## Template Parameters

<code>_Tp</code>	Type of element.
<code>_Alloc</code>	Allocator type, defaults to <code>allocator&lt;_Tp&gt;</code> .

Meets the requirements of a [container](#), a [reversible container](#), and a [sequence](#), including the [optional sequence requirements](#) with the exception of `push_front` and `pop_front`.

In some terminology a vector can be described as a dynamic C-style array, it offers fast and efficient access to individual elements in any order and saves the user from worrying about memory and size allocation. Subscripting ( `[]` ) access is also provided as with C-style arrays.

Definition at line 339 of file `stl_vector.h`.

## 5.1089.2 Constructor &amp; Destructor Documentation

5.1089.2.1 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::vector<_Tp, _Alloc >::vector ( size_type __n, const value_type & __value, const allocator_type & __a = allocator_type() ) [inline]`

Creates a vector with copies of an exemplar element.

## Parameters

<code>__n</code>	The number of elements to initially create.
<code>__value</code>	An element to copy.
<code>__a</code>	An allocator.

This constructor fills the vector with `__n` copies of `__value`.

Definition at line 427 of file `stl_vector.h`.

5.1089.2.2 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::vector<_Tp, _Alloc >::vector ( const vector<_Tp, _Alloc > & __x ) [inline]`

Vector copy constructor.

## Parameters

<code>__x</code>	A vector of identical element and allocator types.
------------------	--

All the elements of `__x` are copied, but any unused capacity in `__x` will not be copied (i.e. `capacity() == size()` in the new vector).

The newly-created vector uses a copy of the allocator object used by `__x` (unless the allocator traits dictate a different object).

Definition at line 458 of file `stl_vector.h`.

5.1089.2.3 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::vector<_Tp, _Alloc >::vector ( vector<_Tp, _Alloc > && __x ) [inline], [noexcept]`

Vector move constructor.

## Parameters

<code>__x</code>	A vector of identical element and allocator types.
------------------	--

The newly-created vector contains the exact contents of `__x`. The contents of `__x` are a valid, but unspecified vector.

Definition at line 476 of file `stl_vector.h`.

5.1089.2.4 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::vector<_Tp, _Alloc>::vector ( const vector<_Tp, _Alloc> & __x, const allocator_type & __a ) [inline]`

Copy constructor with alternative allocator.

Definition at line 480 of file `stl_vector.h`.

### 5.1089.3 Member Function Documentation

5.1089.3.1 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> template<typename _ForwardIterator > pointer std::vector<_Tp, _Alloc>::M_allocate_and_copy ( size_type __n, _ForwardIterator __first, _ForwardIterator __last ) [inline],[protected]`

Memory expansion handler. Uses the member allocation function to obtain  $n$  bytes of memory, and then copies `[first,last)` into it.

Definition at line 1395 of file `stl_vector.h`.

5.1089.3.2 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::vector<_Tp, _Alloc>::M_range_check ( size_type __n ) const [inline],[protected]`

Safety check used only from `at()`.

Definition at line 957 of file `stl_vector.h`.

Referenced by `std::vector< block_type, allocator_type >::at()`.

5.1089.3.3 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::vector<_Tp, _Alloc>::assign ( size_type __n, const value_type & __val ) [inline]`

Assigns a given value to a vector.

#### Parameters

<code>__n</code>	Number of elements to be assigned.
<code>__val</code>	Value to be assigned.

This function fills a vector with `__n` copies of the given value. Note that the assignment completely changes the vector and that the resulting vector's size is the same as the number of elements assigned.

Definition at line 636 of file `stl_vector.h`.

5.1089.3.4 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> template<typename _InputIterator, typename = std::_RequireInputIter<_InputIterator>> void std::vector<_Tp, _Alloc>::assign ( _InputIterator __first, _InputIterator __last ) [inline]`

Assigns a range to a vector.

#### Parameters

<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.

This function fills a vector with copies of the elements in the range `[__first,__last)`.

Note that the assignment completely changes the vector and that the resulting vector's size is the same as the number of elements assigned.

Definition at line 655 of file `stl_vector.h`.

```
5.1089.3.5 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::vector<_Tp, _Alloc >::assign (  
    initializer_list<value_type > __l ) [inline]
```

Assigns an initializer list to a vector.

## Parameters

<code>__l</code>	An initializer_list.
------------------	----------------------

This function fills a vector with copies of the elements in the initializer list `__l`.

Note that the assignment completely changes the vector and that the resulting vector's size is the same as the number of elements assigned.

Definition at line 681 of file `stl_vector.h`.

**5.1089.3.6** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> reference std::vector<_Tp, _Alloc>::at ( size_type __n ) [inline]`

Provides access to the data contained in the vector.

## Parameters

<code>__n</code>	The index of the element for which data should be accessed.
------------------	---

## Returns

Read/write reference to data.

## Exceptions

<code>std::out_of_range</code>	If <code>__n</code> is an invalid index.
--------------------------------	--

This function provides for safer data access. The parameter is first checked that it is in the range of the vector. The function throws `out_of_range` if the check fails.

Definition at line 979 of file `stl_vector.h`.

**5.1089.3.7** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reference std::vector<_Tp, _Alloc>::at ( size_type __n ) const [inline]`

Provides access to the data contained in the vector.

## Parameters

<code>__n</code>	The index of the element for which data should be accessed.
------------------	---

## Returns

Read-only (constant) reference to data.

## Exceptions

<code>std::out_of_range</code>	If <code>__n</code> is an invalid index.
--------------------------------	--

This function provides for safer data access. The parameter is first checked that it is in the range of the vector. The function throws `out_of_range` if the check fails.

Definition at line 997 of file `stl_vector.h`.

**5.1089.3.8** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> reference std::vector<_Tp, _Alloc>::back ( ) [inline], [noexcept]`

Returns a read/write reference to the data at the last element of the vector.

Definition at line 1030 of file `stl_vector.h`.

Referenced by `std::piecewise_constant_distribution<_RealType>::max()`, and `std::piecewise_linear_distribution<_RealType>::max()`.

**5.1089.3.9** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reference std::vector<_Tp, _Alloc>::back ( ) const [inline], [noexcept]`

Returns a read-only (constant) reference to the data at the last element of the vector.

Definition at line 1041 of file `stl_vector.h`.

**5.1089.3.10** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> iterator std::vector<_Tp, _Alloc>::begin ( ) [inline], [noexcept]`

Returns a read/write iterator that points to the first element in the vector. Iteration is done in ordinary element order.

Definition at line 698 of file `stl_vector.h`.

Referenced by `std::vector< block_type, allocator_type >::crend()`, `std::vector< block_type, allocator_type >::empty()`, `std::vector< block_type, allocator_type >::erase()`, `std::vector< block_type, allocator_type >::front()`, `std::vector< block_type, allocator_type >::insert()`, `__gnu_parallel::multiseq_partition()`, `__gnu_parallel::multiseq_selection()`, `__gnu_parallel::multiway_merge_exact_splitting()`, `std::operator==(,)`, `std::vector< block_type, allocator_type >::rend()`, and `std::vector< block_type, allocator_type >::vector()`.

**5.1089.3.11** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_iterator std::vector<_Tp, _Alloc>::begin ( ) const [inline], [noexcept]`

Returns a read-only (constant) iterator that points to the first element in the vector. Iteration is done in ordinary element order.

Definition at line 707 of file `stl_vector.h`.

**5.1089.3.12** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> size_type std::vector<_Tp, _Alloc>::capacity ( ) const [inline], [noexcept]`

Returns the total number of elements that the vector can hold before needing to allocate more memory.

Definition at line 885 of file `stl_vector.h`.

**5.1089.3.13** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_iterator std::vector<_Tp, _Alloc>::cbegin ( ) const [inline], [noexcept]`

Returns a read-only (constant) iterator that points to the first element in the vector. Iteration is done in ordinary element order.

Definition at line 771 of file `stl_vector.h`.

Referenced by `std::vector< block_type, allocator_type >::erase()`, and `std::vector< block_type, allocator_type >::insert()`.

**5.1089.3.14** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_iterator std::vector<_Tp, _Alloc>::cend ( ) const [inline], [noexcept]`

Returns a read-only (constant) iterator that points one past the last element in the vector. Iteration is done in ordinary element order.

Definition at line 780 of file `stl_vector.h`.

**5.1089.3.15** `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::vector<_Tp, _Alloc>::clear ( ) [inline], [noexcept]`

Erases all the elements. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1385 of file `stl_vector.h`.

5.1089.3.16 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reverse_iterator std::vector<_Tp, _Alloc >::crbegin ( ) const [inline], [noexcept]`

Returns a read-only (constant) reverse iterator that points to the last element in the vector. Iteration is done in reverse element order.

Definition at line 789 of file `stl_vector.h`.

5.1089.3.17 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reverse_iterator std::vector<_Tp, _Alloc >::crend ( ) const [inline], [noexcept]`

Returns a read-only (constant) reverse iterator that points to one before the first element in the vector. Iteration is done in reverse element order.

Definition at line 798 of file `stl_vector.h`.

5.1089.3.18 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> _Tp* std::vector<_Tp, _Alloc >::data ( ) [inline], [noexcept]`

Returns a pointer such that `[data(), data() + size())` is a valid range. For a non-empty vector, `data() == &front()`.

Definition at line 1055 of file `stl_vector.h`.

Referenced by `std::regex_traits<_CharType >::transform_primary()`.

5.1089.3.19 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> template<typename... _Args> iterator std::vector<_Tp, _Alloc >::emplace ( const_iterator __position, _Args &&... __args ) [inline]`

Inserts an object in vector before specified iterator.

Parameters

<code>__position</code>	A <code>const_iterator</code> into the vector.
<code>__args</code>	Arguments.

Returns

An iterator that points to the inserted data.

This function will insert an object of type `T` constructed with `T(std::forward<Args>(args)...) before the specified location. Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using std::list.`

Definition at line 1135 of file `stl_vector.h`.

5.1089.3.20 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> bool std::vector<_Tp, _Alloc >::empty ( ) const [inline], [noexcept]`

Returns true if the vector is empty. (Thus `begin()` would equal `end()`.)

Definition at line 894 of file `stl_vector.h`.

Referenced by `std::piecewise_constant_distribution<_RealType >::densities()`, `std::piecewise_linear_distribution<_RealType >::densities()`, `std::piecewise_constant_distribution<_RealType >::intervals()`, `std::piecewise_linear_distribution<_RealType >::intervals()`, `std::discrete_distribution<_IntType >::max()`, `std::piecewise_constant_distribution<_RealType >::max()`, `std::piecewise_linear_distribution<_RealType >::max()`, `std::piecewise_constant_distribution<_RealType >::min()`, `std::piecewise_linear_distribution<_RealType >::min()`, and `std::discrete_distribution<_IntType >::probabilities()`.

5.1089.3.21 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> iterator std::vector<_Tp, _Alloc >::end ( )`  
`[inline], [noexcept]`

Returns a read/write iterator that points one past the last element in the vector. Iteration is done in ordinary element order.

Definition at line 716 of file `stl_vector.h`.

Referenced by `std::vector< block_type, allocator_type >::back()`, `std::vector< block_type, allocator_type >::crbegin()`, `std::vector< block_type, allocator_type >::empty()`, `__gnu_parallel::multiseq_partition()`, `__gnu_parallel::multiseq_selection()`, `__gnu_parallel::multiway_merge_exact_splitting()`, `std::operator==()`, `std::vector< block_type, allocator_type >::push_back()`, `std::vector< block_type, allocator_type >::rbegin()`, `std::vector< block_type, allocator_type >::resize()`, and `std::vector< block_type, allocator_type >::vector()`.

5.1089.3.22 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_iterator std::vector<_Tp, _Alloc >::end ( ) const` `[inline], [noexcept]`

Returns a read-only (constant) iterator that points one past the last element in the vector. Iteration is done in ordinary element order.

Definition at line 725 of file `stl_vector.h`.

5.1089.3.23 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> iterator std::vector<_Tp, _Alloc >::erase ( const_iterator __position )` `[inline]`

Remove element at given position.

#### Parameters

<code>__position</code>	Iterator pointing to element to be erased.
-------------------------	--

#### Returns

An iterator pointing to the next element (or `end()`).

This function will erase the element at the given position and thus shorten the vector by one.

Note This operation could be expensive and if it is frequently used the user should consider using `std::list`. The user is also cautioned that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1317 of file `stl_vector.h`.

5.1089.3.24 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> iterator std::vector<_Tp, _Alloc >::erase ( const_iterator __first, const_iterator __last )` `[inline]`

Remove a range of elements.

#### Parameters

<code>__first</code>	Iterator pointing to the first element to be erased.
<code>__last</code>	Iterator pointing to one past the last element to be erased.

#### Returns

An iterator pointing to the element pointed to by `__last` prior to erasing (or `end()`).

This function will erase the elements in the range `[__first, __last)` and shorten the vector accordingly.

Note This operation could be expensive and if it is frequently used the user should consider using `std::list`. The user is also cautioned that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1344 of file `stl_vector.h`.

```
5.1089.3.25  template<typename _Tp, typename _Alloc = std::allocator<_Tp>> reference std::vector<_Tp, _Alloc>::front ( )
              [inline], [noexcept]
```

Returns a read/write reference to the data at the first element of the vector.

Definition at line 1008 of file `stl_vector.h`.

Referenced by `std::piecewise_constant_distribution<_RealType>::min()`, and `std::piecewise_linear_distribution<_RealType>::min()`.

```
5.1089.3.26  template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reference std::vector<_Tp, _Alloc>::front ( ) const
              [inline], [noexcept]
```

Returns a read-only (constant) reference to the data at the first element of the vector.

Definition at line 1019 of file `stl_vector.h`.

```
5.1089.3.27  template<typename _Tp, typename _Alloc = std::allocator<_Tp>> iterator std::vector<_Tp, _Alloc>::insert (
              const_iterator __position, const value_type & __x )
```

Inserts given value into vector before specified iterator.

#### Parameters

<code>__position</code>	A <code>const_iterator</code> into the vector.
<code>__x</code>	Data to be inserted.

#### Returns

An iterator that points to the inserted data.

This function will insert a copy of the given value before the specified location. Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using `std::list`.

```
5.1089.3.28  template<typename _Tp, typename _Alloc = std::allocator<_Tp>> iterator std::vector<_Tp, _Alloc>::insert (
              const_iterator __position, value_type && __x ) [inline]
```

Inserts given rvalue into vector before specified iterator.

#### Parameters

<code>__position</code>	A <code>const_iterator</code> into the vector.
<code>__x</code>	Data to be inserted.

#### Returns

An iterator that points to the inserted data.

This function will insert a copy of the given rvalue before the specified location. Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using `std::list`.

Definition at line 1180 of file `stl_vector.h`.

5.1089.3.29 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> iterator std::vector<_Tp, _Alloc >::insert ( const_iterator __position, initializer_list< value_type > __l ) [inline]`

Inserts an `initializer_list` into the vector.

## Parameters

<code>__position</code>	An iterator into the vector.
<code>__l</code>	An initializer_list.

This function will insert copies of the data in the initializer\_list *l* into the vector before the location specified by *position*.

Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using `std::list`.

Definition at line 1197 of file `stl_vector.h`.

```
5.1089.3.30  template<typename _Tp, typename _Alloc = std::allocator<_Tp>> iterator std::vector<_Tp, _Alloc>::insert (
               const_iterator __position, size_type __n, const value_type & __x ) [inline]
```

Inserts a number of copies of given data into the vector.

## Parameters

<code>__position</code>	A const_iterator into the vector.
<code>__n</code>	Number of elements to be inserted.
<code>__x</code>	Data to be inserted.

## Returns

An iterator that points to the inserted data.

This function will insert a specified number of copies of the given data before the location specified by *position*.

Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using `std::list`.

Definition at line 1222 of file `stl_vector.h`.

```
5.1089.3.31  template<typename _Tp, typename _Alloc = std::allocator<_Tp>> template<typename _InputIterator, typename =
               std::_RequireInputIter<_InputIterator>> iterator std::vector<_Tp, _Alloc>::insert ( const_iterator __position,
               _InputIterator __first, _InputIterator __last ) [inline]
```

Inserts a range into the vector.

## Parameters

<code>__position</code>	A const_iterator into the vector.
<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.

## Returns

An iterator that points to the inserted data.

This function will insert copies of the data in the range [`__first`, `__last`) into the vector before the location specified by *pos*.

Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using `std::list`.

Definition at line 1266 of file `stl_vector.h`.

```
5.1089.3.32  template<typename _Tp, typename _Alloc = std::allocator<_Tp>> size_type std::vector<_Tp, _Alloc>::max_size
               ( ) const [inline], [noexcept]
```

Returns the `size()` of the largest possible vector.

Definition at line 810 of file stl\_vector.h.

```
5.1089.3.33 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> vector& std::vector<_Tp, _Alloc >::operator=
( vector<_Tp, _Alloc > && __x ) [inline], [noexcept]
```

Vector move assignment operator.

Parameters

<code>__x</code>	A vector of identical element and allocator types.
------------------	--

The contents of `__x` are moved into this vector (without copying, if the allocators permit it). Afterwards `__x` is a valid, but unspecified vector.

Whether the allocator is moved depends on the allocator traits.

Definition at line 596 of file stl\_vector.h.

```
5.1089.3.34 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> vector& std::vector<_Tp, _Alloc >::operator=
( initializer_list<value_type > __l ) [inline]
```

Vector list assignment operator.

Parameters

<code>__l</code>	An <code>initializer_list</code> .
------------------	------------------------------------

This function fills a vector with copies of the elements in the initializer list `__l`.

Note that the assignment completely changes the vector and that the resulting vector's size is the same as the number of elements assigned.

Definition at line 617 of file stl\_vector.h.

```
5.1089.3.35 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> reference std::vector<_Tp, _Alloc
>::operator[]( size_type __n ) [inline], [noexcept]
```

Subscript access to the data contained in the vector.

Parameters

<code>__n</code>	The index of the element for which data should be accessed.
------------------	---

Returns

Read/write reference to data.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and `out_of_range` lookups are not defined. (For checked lookups see `at()`.)

Definition at line 930 of file stl\_vector.h.

```
5.1089.3.36 template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reference std::vector<_Tp, _Alloc
>::operator[]( size_type __n ) const [inline], [noexcept]
```

Subscript access to the data contained in the vector.

Parameters

---

<code>__n</code>	The index of the element for which data should be accessed.
------------------	---

**Returns**

Read-only (constant) reference to data.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and `out_of_range` lookups are not defined. (For checked lookups see `at()`.)

Definition at line 948 of file `stl_vector.h`.

```
5.1089.3.37  template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::vector<_Tp, _Alloc>::pop_back ( )
           [inline], [noexcept]
```

Removes last element.

This is a typical stack operation. It shrinks the vector by one.

Note that no data is returned, and if the last element's data is needed, it should be retrieved before `pop_back()` is called.

Definition at line 1112 of file `stl_vector.h`.

```
5.1089.3.38  template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::vector<_Tp, _Alloc>::push_back (
           const value_type & _x ) [inline]
```

Add data to the end of the vector.

**Parameters**

<code>__x</code>	Data to be added.
------------------	-------------------

This is a typical stack operation. The function creates an element at the end of the vector and assigns the given data to it. Due to the nature of a vector this operation can be done in constant time if the vector has preallocated space available.

Definition at line 1074 of file `stl_vector.h`.

Referenced by `__gnu_parallel::multiseq_partition()`, and `__gnu_parallel::multiseq_selection()`.

```
5.1089.3.39  template<typename _Tp, typename _Alloc = std::allocator<_Tp>> reverse_iterator std::vector<_Tp, _Alloc>
           >::rbegin ( ) [inline], [noexcept]
```

Returns a read/write reverse iterator that points to the last element in the vector. Iteration is done in reverse element order.

Definition at line 734 of file `stl_vector.h`.

```
5.1089.3.40  template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reverse_iterator std::vector<_Tp,
           _Alloc>::rbegin ( ) const [inline], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to the last element in the vector. Iteration is done in reverse element order.

Definition at line 743 of file `stl_vector.h`.

```
5.1089.3.41  template<typename _Tp, typename _Alloc = std::allocator<_Tp>> reverse_iterator std::vector<_Tp, _Alloc>
           >::rend ( ) [inline], [noexcept]
```

Returns a read/write reverse iterator that points to one before the first element in the vector. Iteration is done in reverse element order.

Definition at line 752 of file `stl_vector.h`.

5.1089.3.42 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reverse_iterator std::vector<_Tp, _Alloc >::rend ( ) const` [*inline*], [*noexcept*]

Returns a read-only (constant) reverse iterator that points to one before the first element in the vector. Iteration is done in reverse element order.

Definition at line 761 of file `stl_vector.h`.

5.1089.3.43 `template<typename _Tp, typename _Alloc > void vector::reserve ( size_type __n )`

Attempt to preallocate enough memory for specified number of elements.

#### Parameters

<code>__n</code>	Number of elements required.
------------------	------------------------------

#### Exceptions

<code>std::length_error</code>	If <i>n</i> exceeds <code>max_size()</code> .
--------------------------------	---

This function attempts to reserve enough memory for the vector to hold the specified number of elements. If the number requested is more than `max_size()`, `length_error` is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the number of elements that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of vector data.

Definition at line 67 of file `vector.tcc`.

References `std::_Destroy()`.

5.1089.3.44 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::vector<_Tp, _Alloc >::resize ( size_type __new_size )` [*inline*]

Resizes the vector to the specified number of elements.

#### Parameters

<code>__new_size</code>	Number of elements the vector should contain.
-------------------------	---

This function will resize the vector to the specified number of elements. If the number is smaller than the vector's current size the vector is truncated, otherwise default constructed elements are appended.

Definition at line 824 of file `stl_vector.h`.

Referenced by `__gnu_parallel::__shrink_and_double()`, and `__gnu_parallel::multiway_merge_exact_splitting()`.

5.1089.3.45 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::vector<_Tp, _Alloc >::resize ( size_type __new_size, const value_type & __x )` [*inline*]

Resizes the vector to the specified number of elements.

#### Parameters

<code>__new_size</code>	Number of elements the vector should contain.
<code>__x</code>	Data with which new elements should be populated.

This function will resize the vector to the specified number of elements. If the number is smaller than the vector's current size the vector is truncated, otherwise the vector is extended and new elements are populated with given data.

Definition at line 844 of file `stl_vector.h`.

5.1089.3.46 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::vector<_Tp, _Alloc>::shrink_to_fit ( ) [inline]`

A non-binding request to reduce capacity() to size().

Definition at line 876 of file stl\_vector.h.

5.1089.3.47 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> size_type std::vector<_Tp, _Alloc>::size ( ) const [inline],[noexcept]`

Returns the number of elements in the vector.

Definition at line 805 of file stl\_vector.h.

Referenced by `__gnu_parallel::__shrink()`, `__gnu_parallel::__shrink_and_double()`, `std::vector< block_type, allocator_type >::M_range_check()`, `__gnu_parallel::list_partition()`, `std::discrete_distribution< _IntType >::max()`, `std::operator==( )`, `std::vector< block_type, allocator_type >::resize()`, and `std::regex_traits< _CharType >::transform_primary()`.

5.1089.3.48 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::vector<_Tp, _Alloc>::swap ( vector<_Tp, _Alloc> &_x ) [inline],[noexcept]`

Swaps data with another vector.

Parameters

<code>__x</code>	A vector of the same element and allocator types.
------------------	---

This exchanges the elements between two vectors in constant time. (Three pointers, so it should be quite fast.) Note that the global `std::swap()` function is specialized such that `std::swap(v1,v2)` will feed to this function.

Whether the allocators are swapped depends on the allocator traits.

Definition at line 1367 of file stl\_vector.h.

#### 5.1089.4 Member Data Documentation

5.1089.4.1 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::vector<_Tp, _Alloc>::__pad0__`

Creates a vector with no elements.

Definition at line 416 of file stl\_vector.h.

5.1089.4.2 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::vector<_Tp, _Alloc>::__pad1__`

Move constructor with alternative allocator.

Definition at line 492 of file stl\_vector.h.

The documentation for this class was generated from the following files:

- [stl\\_vector.h](#)
- [vector.tcc](#)

#### 5.1090 `std::vector< bool, _Alloc >` Class Template Reference

## 5.1090.1 Detailed Description

```
template<typename _Alloc> class std::vector< bool, _Alloc >
```

A specialization of vector for booleans which offers fixed time access to individual elements in any order.

## Template Parameters

<code>_Alloc</code>	Allocator type.
---------------------	-----------------

Note that `vector<bool>` does not actually meet the requirements for being a container. This is because the reference and pointer types are not really references and pointers to `bool`. See DR96 for details.

## See Also

`vector` for function documentation.

In some terminology a vector can be described as a dynamic C-style array, it offers fast and efficient access to individual elements in any order and saves the user from worrying about memory and size allocation. Subscripting ( `[]` ) access is also provided as with C-style arrays.

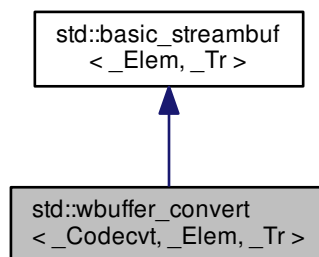

Definition at line 588 of file `stl_bvector.h`.

The documentation for this class was generated from the following files:

#### 5.1091.1 Detailed Description

```
template<typename _Codecv, typename _Elem = wchar_t, typename _Tr = char_traits<_Elem>>class std::wbuffer_convert< _Codecv, _Elem, _Tr >
```

Buffer conversions.

Definition at line 321 of file `locale_conv.h`.

#### 5.1091.2 Member Typedef Documentation

```
5.1091.2.1 typedef basic_streambuf<char_type, traits_type> std::basic_streambuf< _Elem , _Tr >::__streambuf_type [inherited]
```

This is a non-standard type.

Definition at line 140 of file `streambuf`.

```
5.1091.2.2 typedef _Elem std::basic_streambuf< _Elem , _Tr >::char_type [inherited]
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 131 of file `streambuf`.

5.1091.2.3 `typedef traits_type::int_type std::basic_streambuf<_Elem, _Tr>::int_type` [inherited]

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 133 of file `streambuf`.

5.1091.2.4 `typedef traits_type::off_type std::basic_streambuf<_Elem, _Tr>::off_type` [inherited]

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 135 of file `streambuf`.

5.1091.2.5 `typedef traits_type::pos_type std::basic_streambuf<_Elem, _Tr>::pos_type` [inherited]

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 134 of file `streambuf`.

5.1091.2.6 `typedef _Tr std::basic_streambuf<_Elem, _Tr>::traits_type` [inherited]

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 132 of file `streambuf`.

## 5.1091.3 Constructor &amp; Destructor Documentation

5.1091.3.1 `template<typename _Codecvt, typename _Elem = wchar_t, typename _Tr = char_traits<_Elem>>  
std::wbuffer_convert<_Codecvt, _Elem, _Tr>::wbuffer_convert ( streambuf * __bytebuf = 0, _Codecvt *  
__pcvt = new _Codecvt, state_type __state = state_type() )` [inline],[explicit]

Default constructor.

## Parameters

<code>__bytebuf</code>	The underlying byte stream buffer.
<code>__pcvt</code>	The facet to use for conversions.
<code>__state</code>	Initial conversion state.

Takes ownership of `__pcvt` and will delete it in the destructor.

Definition at line 337 of file `locale_conv.h`.

References `std::basic_streambuf<_Elem, _Tr>::setg()`, and `std::basic_streambuf<_Elem, _Tr>::setp()`.

## 5.1091.4 Member Function Documentation

5.1091.4.1 `char_type* std::basic_streambuf<_Elem, _Tr>::eback ( ) const` [inline],[protected],[inherited]

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence

- `egptr()` returns the end pointer for the input sequence

Definition at line 489 of file `streambuf`.

References `std::basic_streambuf<_CharT, _Traits>::_M_in_beg`.

**5.1091.4.2** `char_type* std::basic_streambuf<_Elem, _Tr>::egptr ( ) const` `[inline], [protected], [inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 495 of file `streambuf`.

References `std::basic_streambuf<_CharT, _Traits>::_M_in_end`.

Referenced by `std::wbuffer_convert<_Codecvt, _Elem, _Tr>::underflow()`.

**5.1091.4.3** `char_type* std::basic_streambuf<_Elem, _Tr>::eptr ( ) const` `[inline], [protected], [inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `eptr()` returns the end pointer for the output sequence

Definition at line 542 of file `streambuf`.

References `std::basic_streambuf<_CharT, _Traits>::_M_out_end`.

**5.1091.4.4** `void std::basic_streambuf<_Elem, _Tr>::gbump ( int __n )` `[inline], [protected], [inherited]`

Moving the read position.

Parameters

<code>__n</code>	The delta by which to move.
------------------	-----------------------------

This just advances the read position without returning any data.

Definition at line 505 of file `streambuf`.

References `std::basic_streambuf<_CharT, _Traits>::_M_in_cur`.

**5.1091.4.5** `locale std::basic_streambuf<_Elem, _Tr>::getloc ( ) const` `[inline], [inherited]`

Locale access.

**Returns**

The current locale in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

Definition at line 233 of file `streambuf`.

References `std::basic_streambuf<_CharT, _Traits>::_M_buf_locale`.

**5.1091.4.6** `char_type* std::basic_streambuf<_Elem, _Tr>::gptr ( ) const` `[inline]`, `[protected]`, `[inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 492 of file `streambuf`.

References `std::basic_streambuf<_CharT, _Traits>::_M_in_cur`.

Referenced by `std::wbuffer_convert<_Codecvt, _Elem, _Tr>::underflow()`.

**5.1091.4.7** `virtual void std::basic_streambuf<_Elem, _Tr>::imbue ( const locale &_loc __attribute__((unused)) )` `[inline]`, `[protected]`, `[virtual]`, `[inherited]`

Changes translations.

**Parameters**

<code>__loc</code>	A new locale.
--------------------	---------------

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from `streambuf` can safely cache results of calls to locale functions and to members of facets so obtained.*

**Note**

Base class version does nothing.

Definition at line 583 of file `streambuf`.

**5.1091.4.8** `streamsize std::basic_streambuf<_Elem, _Tr>::in_avail ( )` `[inline]`, `[inherited]`

Looking ahead into the stream.

**Returns**

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

Definition at line 291 of file `streambuf`.

References `std::basic_streambuf<_CharT, _Traits>::egptr()`, `std::basic_streambuf<_CharT, _Traits>::gptr()`, and `std::basic_streambuf<_CharT, _Traits>::showmanyc()`.

**5.1091.4.9** `char_type* std::basic_streambuf<_Elem, _Tr>::pbase ( ) const` [inline], [protected], [inherited]

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Definition at line 536 of file `streambuf`.

References `std::basic_streambuf<_CharT, _Traits>::_M_out_beg`.

**5.1091.4.10** `void std::basic_streambuf<_Elem, _Tr>::pbump ( int __n )` [inline], [protected], [inherited]

Moving the write position.

Parameters

<code>__n</code>	The delta by which to move.
------------------	-----------------------------

This just advances the write position without returning any data.

Definition at line 552 of file `streambuf`.

References `std::basic_streambuf<_CharT, _Traits>::_M_out_cur`.

**5.1091.4.11** `char_type* std::basic_streambuf<_Elem, _Tr>::pptr ( ) const` [inline], [protected], [inherited]

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Definition at line 539 of file `streambuf`.

References `std::basic_streambuf<_CharT, _Traits>::_M_out_cur`.

**5.1091.4.12** `locale std::basic_streambuf<_Elem, _Tr>::pubimbue ( const locale & __loc )` [inline], [inherited]

Entry point for `imbue()`.

Parameters

<code>__loc</code>	The new locale.
--------------------	-----------------

**Returns**

The previous locale.

Calls the derived `imbue(__loc)`.

Definition at line 216 of file `streambuf`.

References `std::basic_streambuf<_CharT, _Traits>::_M_buf_locale`, `std::basic_streambuf<_CharT, _Traits>::getloc()`, and `std::basic_streambuf<_CharT, _Traits>::imbue()`.

**5.1091.4.13** `pos_type std::basic_streambuf<_Elem, _Tr>::pubseekoff ( off_type __off, ios_base::seekdir __way, ios_base::openmode __mode = ios_base::in | ios_base::out )` `[inline],[inherited]`

Alters the stream position.

**Parameters**

<code>__off</code>	Offset.
<code>__way</code>	Value for <code>ios_base::seekdir</code> .
<code>__mode</code>	Value for <code>ios_base::openmode</code> .

Calls virtual `seekoff` function.

Definition at line 258 of file `streambuf`.

References `std::basic_streambuf<_CharT, _Traits>::seekoff()`.

**5.1091.4.14** `pos_type std::basic_streambuf<_Elem, _Tr>::pubseekpos ( pos_type __sp, ios_base::openmode __mode = ios_base::in | ios_base::out )` `[inline],[inherited]`

Alters the stream position.

**Parameters**

<code>__sp</code>	Position
<code>__mode</code>	Value for <code>ios_base::openmode</code> .

Calls virtual `seekpos` function.

Definition at line 270 of file `streambuf`.

References `std::basic_streambuf<_CharT, _Traits>::seekpos()`.

**5.1091.4.15** `basic_streambuf* std::basic_streambuf<_Elem, _Tr>::pubsetbuf ( char_type * __s, streamsize __n )` `[inline],[inherited]`

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 246 of file `streambuf`.

References `std::basic_streambuf<_CharT, _Traits>::setbuf()`.

**5.1091.4.16** `int std::basic_streambuf<_Elem, _Tr>::pubsync ( )` `[inline],[inherited]`

Calls virtual `sync` function.

Definition at line 278 of file `streambuf`.

References `std::basic_streambuf<_CharT, _Traits>::sync()`.

**5.1091.4.17** `int_type std::basic_streambuf<_Elem, _Tr>::sbumpc( )` [inline], [inherited]

Getting the next character.

#### Returns

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 323 of file `streambuf`.

References `std::basic_streambuf<_CharT, _Traits>::egptr()`, `std::basic_streambuf<_CharT, _Traits>::gbump()`, `std::basic_streambuf<_CharT, _Traits>::gptr()`, and `std::basic_streambuf<_CharT, _Traits>::uflow()`.

**5.1091.4.18** `virtual pos_type std::basic_streambuf<_Elem, _Tr>::seekoff( off_type, ios_base::seekdir, ios_base::openmode = ios_base::in | ios_base::out )` [inline], [protected], [virtual], [inherited]

Alters the stream positions.

Each derived class provides its own appropriate behavior.

#### Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Definition at line 609 of file `streambuf`.

**5.1091.4.19** `virtual pos_type std::basic_streambuf<_Elem, _Tr>::seekpos( pos_type, ios_base::openmode = ios_base::in | ios_base::out )` [inline], [protected], [virtual], [inherited]

Alters the stream positions.

Each derived class provides its own appropriate behavior.

#### Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Definition at line 621 of file `streambuf`.

**5.1091.4.20** `virtual basic_streambuf<char_type, Tr>* std::basic_streambuf<_Elem, _Tr>::setbuf( char_type*, streamsize )` [inline], [protected], [virtual], [inherited]

Manipulates the buffer.

Each derived class provides its own appropriate behavior. See the next-to-last paragraph of <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html#io.streambuf.buffering> for more on this function.

#### Note

Base class version does nothing, returns `this`.

Definition at line 598 of file `streambuf`.

5.1091.4.21 `void std::basic_streambuf<_Elem, _Tr>::setg ( char_type * __gbeg, char_type * __gnext, char_type * __gend )` [inline], [protected], [inherited]

Setting the three read area pointers.

## Parameters

<code>__gbeg</code>	A pointer.
<code>__gnext</code>	A pointer.
<code>__gend</code>	A pointer.

## Postcondition

`__gbeg == eback()`, `__gnext == gptr()`, and `__gend == egptr()`

Definition at line 516 of file `streambuf`.

References `std::basic_streambuf<_CharT, _Traits>::_M_in_beg`, `std::basic_streambuf<_CharT, _Traits>::_M_in_cur`, and `std::basic_streambuf<_CharT, _Traits>::_M_in_end`.

Referenced by `std::wbuffer_convert<_Codecvt, _Elem, _Tr>::wbuffer_convert()`.

**5.1091.4.22** `void std::basic_streambuf<_Elem, _Tr>::setp( char_type * __pbeg, char_type * __pend )` `[inline]`, `[protected]`, `[inherited]`

Setting the three write area pointers.

## Parameters

<code>__pbeg</code>	A pointer.
<code>__pend</code>	A pointer.

## Postcondition

`__pbeg == pbase()`, `__pbeg == pptr()`, and `__pend == epptr()`

Definition at line 562 of file `streambuf`.

References `std::basic_streambuf<_CharT, _Traits>::_M_out_beg`, `std::basic_streambuf<_CharT, _Traits>::_M_out_cur`, and `std::basic_streambuf<_CharT, _Traits>::_M_out_end`.

Referenced by `std::wbuffer_convert<_Codecvt, _Elem, _Tr>::wbuffer_convert()`.

**5.1091.4.23** `int_type std::basic_streambuf<_Elem, _Tr>::sgetc( )` `[inline]`, `[inherited]`

Getting the next character.

## Returns

The next character, or `eof`.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 345 of file `streambuf`.

References `std::basic_streambuf<_CharT, _Traits>::egptr()`, `std::basic_streambuf<_CharT, _Traits>::gptr()`, and `std::basic_streambuf<_CharT, _Traits>::underflow()`.

**5.1091.4.24** `streamsize std::basic_streambuf<_Elem, _Tr>::sgetn( char_type * __s, streamsize __n )` `[inline]`, `[inherited]`

Entry point for `xsggetn`.

## Parameters

<code>__s</code>	A buffer area.
<code>__n</code>	A count.

Returns `xsgetn(__s, __n)`. The effect is to fill `__s[0]` through `__s[__n-1]` with characters from the input sequence, if possible.

Definition at line 364 of file `streambuf`.

References `std::basic_streambuf<_CharT, _Traits >::xsgetn()`.

**5.1091.4.25** virtual streamsize `std::basic_streambuf<_Elem, _Tr>::showmanyc ( )` [`inline`], [`protected`], [`virtual`], [`inherited`]

Investigating the data available.

## Returns

An estimate of the number of characters available in the input sequence, or -1.

*If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail.* [27.5.2.4.3]/1

## Note

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to `underflow` or `uflow`] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Definition at line 656 of file `streambuf`.

**5.1091.4.26** int\_type `std::basic_streambuf<_Elem, _Tr>::snextc ( )` [`inline`], [`inherited`]

Getting the next character.

## Returns

The next character, or `eof`.

Calls `sputc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 305 of file `streambuf`.

References `std::basic_streambuf<_CharT, _Traits >::sputc()`, and `std::basic_streambuf<_CharT, _Traits >::sgetc()`.

**5.1091.4.27** int\_type `std::basic_streambuf<_Elem, _Tr>::sputbackc ( char_type __c )` [`inline`], [`inherited`]

Pushing characters back into the input stream.

## Parameters

<code>__c</code>	The character to push back.
------------------	-----------------------------

**Returns**

The previous character, if possible.

Similar to `sungetc()`, but `__c` is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be `__c`.

Definition at line 379 of file `streambuf`.

References `std::basic_streambuf<_CharT, _Traits >::eback()`, `std::basic_streambuf<_CharT, _Traits >::gbump()`, and `std::basic_streambuf<_CharT, _Traits >::gptr()`.

**5.1091.4.28** `int_type std::basic_streambuf<_Elem, _Tr>::sputc ( char_type __c )` `[inline], [inherited]`

Entry point for all single-character output functions.

**Parameters**

<code>__c</code>	A character to output.
------------------	------------------------

**Returns**

`__c`, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores `__c` in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(-__c)`.

Definition at line 431 of file `streambuf`.

References `std::basic_streambuf<_CharT, _Traits >::eptr()`, `std::basic_streambuf<_CharT, _Traits >::pbump()`, and `std::basic_streambuf<_CharT, _Traits >::pptr()`.

**5.1091.4.29** `streamsize std::basic_streambuf<_Elem, _Tr>::sputn ( const char_type * __s, streamsize __n )` `[inline], [inherited]`

Entry point for all single-character output functions.

**Parameters**

<code>__s</code>	A buffer read area.
<code>__n</code>	A count.

One of two public output functions.

Returns `xsputn(__s, __n)`. The effect is to write `__s[0]` through `__s[__n-1]` to the output sequence, if possible.

Definition at line 457 of file `streambuf`.

References `std::basic_streambuf<_CharT, _Traits >::xsputn()`.

**5.1091.4.30** `template<typename _Codecvt, typename _Elem = wchar_t, typename _Tr = char_traits<_Elem>> state_type std::wbuffer_convert<_Codecvt, _Elem, _Tr>::state ( ) const` `[inline], [noexcept]`

The conversion state following the last conversion.

Definition at line 373 of file `locale_conv.h`.

**5.1091.4.31** `int_type std::basic_streambuf<_Elem, _Tr>::sungetc ( )` `[inline], [inherited]`

Moving backwards in the input stream.

**Returns**

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns `pbackfail()`. The effect is to *unget* the last character *gotten*.

Definition at line 404 of file `streambuf`.

References `std::basic_streambuf<_CharT, _Traits >::eback()`, `std::basic_streambuf<_CharT, _Traits >::gbump()`, and `std::basic_streambuf<_CharT, _Traits >::gptr()`.

**5.1091.4.32** `template<typename _Codecvt, typename _Elem = wchar_t, typename _Tr = char_traits<_Elem>> int  
std::wbuffer_convert<_Codecvt, _Elem, _Tr >::sync( void )` `[inline]`, `[protected]`, `[virtual]`

Synchronizes the buffer arrays with the controlled sequences.

**Returns**

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

**Note**

Base class version does nothing, returns zero.

Reimplemented from `std::basic_streambuf<_Elem, _Tr >`.

Definition at line 377 of file `locale_conv.h`.

References `std::basic_streambuf<_CharT, _Traits >::pubsync()`.

**5.1091.4.33** `virtual int_type return std::basic_streambuf<_Elem, _Tr >::traits_type::eof( )` `[protected]`, `[virtual]`, `[inherited]`

Tries to back up the input sequence.

**Parameters**

<code>__c</code>	The character to be inserted back into the sequence.
------------------	--

**Returns**

`eof()` on failure, *some other value* on success

**Postcondition**

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

**Note**

Base class version does nothing, returns `eof()`.

**5.1091.4.34** `virtual int_type std::basic_streambuf<_Elem, _Tr >::uflow( )` `[inline]`, `[protected]`, `[virtual]`, `[inherited]`

Fetches more data from the controlled sequence.

**Returns**

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Definition at line 707 of file `streambuf`.

References `std::basic_streambuf<_CharT, _Traits >::gbump()`, `std::basic_streambuf<_CharT, _Traits >::gptr()`, and `std::basic_streambuf<_CharT, _Traits >::underflow()`.

```
5.1091.4.35  template<typename _Codecvt, typename _Elem = wchar_t, typename _Tr = char_traits<_Elem>>
             _Wide_streambuf::int_type std::wbuffer_convert<_Codecvt, _Elem, _Tr>::underflow ( ) [inline],
             [protected], [virtual]
```

Fetches more data from the controlled sequence.

**Returns**

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html>

**Note**

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf<_Elem, _Tr >`.

Definition at line 391 of file `locale_conv.h`.

References `std::basic_streambuf<_Elem, _Tr >::egptr()`, and `std::basic_streambuf<_Elem, _Tr >::gptr()`.

```
5.1091.4.36  virtual streamsize std::basic_streambuf<_Elem, _Tr >::xsgetn ( char_type * __s, streamsize __n )
             [protected], [virtual], [inherited]
```

Multiple character extraction.

**Parameters**

<code>__s</code>	A buffer area.
<code>__n</code>	Maximum number of characters to assign.

**Returns**

The number of characters assigned.

Fills `__s[0]` through `__s[__n-1]` with characters from the input sequence, as if by `sbumpc()`. Stops when either `__n` characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

5.1091.4.37 `virtual streamsize std::basic_streambuf<_Elem, _Tr>::xspn ( const char_type * __s, streamsize __n )`  
[protected], [virtual], [inherited]

Multiple character insertion.

## Parameters

<code>__s</code>	A buffer area.
<code>__n</code>	Maximum number of characters to write.

## Returns

The number of characters written.

Writes `__s[0]` through `__s[__n-1]` to the output sequence, as if by `sputc()`. Stops when either `n` characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

## 5.1091.5 Member Data Documentation

5.1091.5.1 `locale std::basic_streambuf<_Elem, _Tr>::_M_buf_locale` [protected], [inherited]

Current locale setting.

Definition at line 199 of file `streambuf`.

5.1091.5.2 `char_type* std::basic_streambuf<_Elem, _Tr>::_M_in_beg` [protected], [inherited]

Start of get area.

Definition at line 191 of file `streambuf`.

5.1091.5.3 `char_type* std::basic_streambuf<_Elem, _Tr>::_M_in_cur` [protected], [inherited]

Current read area.

Definition at line 192 of file `streambuf`.

5.1091.5.4 `char_type* std::basic_streambuf<_Elem, _Tr>::_M_in_end` [protected], [inherited]

End of get area.

Definition at line 193 of file `streambuf`.

5.1091.5.5 `char_type* std::basic_streambuf<_Elem, _Tr>::_M_out_beg` [protected], [inherited]

Start of put area.

Definition at line 194 of file `streambuf`.

5.1091.5.6 `char_type* std::basic_streambuf<_Elem, _Tr>::_M_out_cur` [protected], [inherited]

Current put area.

Definition at line 195 of file `streambuf`.

5.1091.5.7 `char_type* std::basic_streambuf<_Elem, _Tr>::_M_out_end` [protected], [inherited]

End of put area.

Definition at line 196 of file `streambuf`.

5.1091.5.8 `virtual std::basic_streambuf<_Elem, _Tr>::int_type` [protected], [inherited]

Consumes data from the buffer; writes to the controlled sequence.

## Parameters

<code>__c</code>	An additional character to consume.
------------------	-------------------------------------

## Returns

`eof()` to indicate failure, something else (usually `__c`, or `not_eof()`)

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character `c` is also written out, if `__c` is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

## Note

Base class version does nothing, returns `eof()`.

Definition at line 776 of file `streambuf`.

The documentation for this class was generated from the following file:

#### 5.1093.1 Detailed Description

`template<typename _RealType = double>class std::weibull_distribution<_RealType >`

A `weibull_distribution` random number distribution.

The formula for the normal probability density function is:

$$p(x|\alpha, \beta) = \frac{\alpha}{\beta} \left(\frac{x}{\beta}\right)^{\alpha-1} \exp\left(-\left(\frac{x}{\beta}\right)^\alpha\right)$$

Definition at line 4758 of file `random.h`.

#### 5.1093.2 Member Typedef Documentation

5.1093.2.1 `template<typename _RealType = double> typedef _RealType std::weibull_distribution<_RealType >::result_type`

The type of the range of the distribution.

Definition at line 4761 of file `random.h`.

#### 5.1093.3 Member Function Documentation

5.1093.3.1 `template<typename _RealType = double> _RealType std::weibull_distribution<_RealType >::a ( ) const`  
`[inline]`

Return the  $a$  parameter of the distribution.

Definition at line 4821 of file `random.h`.

5.1093.3.2 `template<typename _RealType = double> _RealType std::weibull_distribution<_RealType >::b ( ) const`  
`[inline]`

Return the  $b$  parameter of the distribution.

Definition at line 4828 of file `random.h`.

5.1093.3.3 `template<typename _RealType = double> result_type std::weibull_distribution<_RealType>::max ( ) const`  
`[inline]`

Returns the least upper bound value of the distribution.

Definition at line 4857 of file `random.h`.

References `std::numeric_limits<_Tp>::max()`.

5.1093.3.4 `template<typename _RealType = double> result_type std::weibull_distribution<_RealType>::min ( ) const`  
`[inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 4850 of file `random.h`.

5.1093.3.5 `template<typename _RealType = double> template<typename _UniformRandomNumberGenerator> result_type`  
`std::weibull_distribution<_RealType>::operator() ( _UniformRandomNumberGenerator & __urng )`  
`[inline]`

Generating functions.

Definition at line 4865 of file `random.h`.

5.1093.3.6 `template<typename _RealType = double> param_type std::weibull_distribution<_RealType>::param ( )`  
`const [inline]`

Returns the parameter set of the distribution.

Definition at line 4835 of file `random.h`.

Referenced by `std::operator>>()`.

5.1093.3.7 `template<typename _RealType = double> void std::weibull_distribution<_RealType>::param ( const`  
`param_type & __param ) [inline]`

Sets the parameter set of the distribution.

Parameters

<code>__param</code>	The new parameter set of the distribution.
----------------------	--

Definition at line 4843 of file `random.h`.

5.1093.3.8 `template<typename _RealType = double> void std::weibull_distribution<_RealType>::reset ( ) [inline]`

Resets the distribution state.

Definition at line 4814 of file `random.h`.

#### 5.1093.4 Friends And Related Function Documentation

5.1093.4.1 `template<typename _RealType = double> bool operator==( const weibull_distribution<_RealType> & __d1,`  
`const weibull_distribution<_RealType> & __d2 ) [friend]`

Return true if two Weibull distributions have the same parameters.

Definition at line 4900 of file `random.h`.

The documentation for this class was generated from the following files:

- [random.h](#)
- [bits/random.tcc](#)

## 5.1095.1 Detailed Description

```
template<typename _Codecvt, typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>, typename _Byte_alloc =
allocator<char>>class std::wstring_convert<_Codecvt, _Elem, _Wide_alloc, _Byte_alloc >
```

String conversions.

Definition at line 169 of file `locale_conv.h`.

## 5.1095.2 Constructor &amp; Destructor Documentation

```
5.1095.2.1 template<typename _Codecvt, typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>, typename
_Byte_alloc = allocator<char>> std::wstring_convert<_Codecvt, _Elem, _Wide_alloc, _Byte_alloc
>::wstring_convert ( _Codecvt *__pcvt=new _Codecvt() ) [inline], [explicit]
```

Default constructor.

## Parameters

<code>__pcvt</code>	The facet to use for conversions.
---------------------	-----------------------------------

Takes ownership of `__pcvt` and will delete it in the destructor.

Definition at line 184 of file `locale_conv.h`.

```
5.1095.2.2 template<typename _Codecvt, typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>, typename
_Byte_alloc = allocator<char>> std::wstring_convert<_Codecvt, _Elem, _Wide_alloc, _Byte_alloc
>::wstring_convert ( _Codecvt *__pcvt, state_type __state ) [inline]
```

Construct with an initial conversion state.

## Parameters

<code>__pcvt</code>	The facet to use for conversions.
<code>__state</code>	Initial conversion state.

Takes ownership of `__pcvt` and will delete it in the destructor. The object's conversion state will persist between conversions.

Definition at line 198 of file `locale_conv.h`.

```
5.1095.2.3 template<typename _Codecvt, typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>, typename
    _Byte_alloc = allocator<char>> std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc
    >::wstring_convert ( const byte_string & __byte_err, const wide_string & __wide_err = wide_string () )
    [inline], [explicit]
```

Construct with error strings.

## Parameters

<code>__byte_err</code>	A string to return on failed conversions.
<code>__wide_err</code>	A wide string to return on failed conversions.

Definition at line 211 of file `locale_conv.h`.

## 5.1095.3 Member Function Documentation

```
5.1095.3.1 template<typename _Codecvt, typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>, typename
    _Byte_alloc = allocator<char>> size_t std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc
    >::converted ( ) const [inline], [noexcept]
```

The number of elements successfully converted in the last conversion.

Definition at line 301 of file `locale_conv.h`.

```
5.1095.3.2 template<typename _Codecvt, typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>, typename
    _Byte_alloc = allocator<char>> wide_string std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc
    >::from_bytes ( char __byte ) [inline]
```

Convert from bytes.

Definition at line 230 of file `locale_conv.h`.

Referenced by `std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::from_bytes()`.

```

### 6.1.1 Detailed Description

Parallel STL function calls corresponding to the `stl_algo.h` header. The functions defined here mainly do case switches and call the actual parallelized versions in other files. Inlining policy: Functions that basically only contain one function call, are declared inline. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [algo.h](#).

`comp, _ThreadIndex __iam, bool __wait)`

### 6.29.1 Detailed Description

Implementation of a dynamically load-balanced parallel quicksort. It works in-place and needs only logarithmic extra memory. The algorithm is similar to the one proposed in

P. Tsigas and Y. Zhang. A simple, fast parallel implementation of quicksort and its performance evaluation on SUN enterprise 10000. In 11th Euromicro Conference on Parallel, Distributed and Network-Based Processing, page 372, 2003.

This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [balanced\\_quicksort.h](#).

## 6.30 base.h File Reference

## Functions

- `template<typename _CharT, typename _Traits, typename _Alloc >`  
`basic_istream< _CharT, _Traits > & std::getline (basic_istream< _CharT, _Traits > &__is, basic_string< _CharT, _Traits, _Alloc > &__str, _CharT __delim)`
- `template<typename _CharT, typename _Traits, typename _Alloc >`  
`basic_string< _CharT, _Traits, _Alloc > std::operator+ (const _CharT * __lhs, const basic_string< _CharT, _Traits, _Alloc > &__rhs)`
- `template<typename _CharT, typename _Traits, typename _Alloc >`  
`basic_string< _CharT, _Traits, _Alloc > std::operator+ (_CharT __lhs, const basic_string< _CharT, _Traits, _Alloc > &__rhs)`
- `template<typename _CharT, typename _Traits, typename _Alloc >`  
`basic_istream< _CharT, _Traits > & std::operator>> (basic_istream< _CharT, _Traits > &__is, basic_string< _CharT, _Traits, _Alloc > &__str)`

### 6.37.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<string>`.

Definition in file [basic\\_string.tcc](#).

## 6.38 `bin_search_tree.hpp` File Reference

### Namespaces

- [\\_\\_gnu\\_pbds](#)

### Macros

- `#define PB_DS_ASSERT_NODE_CONSISTENT(_Node)`
- `#define PB_DS_BIN_TREE_NAME`
- `#define PB_DS_BIN_TREE_TRAITS_BASE`
- `#define PB_DS_CLASS_C_DEC`
- `#define PB_DS_CLASS_T_DEC`
- `#define PB_DS_STRUCT_ONLY_ASSERT_VALID(X)`

### 6.38.1 Detailed Description

Contains an implementation class for binary search tree.

Definition in file [bin\\_search\\_tree.hpp](#).

## 6.39 `binary_heap.hpp` File Reference

### Classes

- class [\\_\\_gnu\\_pbds::detail::binary\\_heap](#)< Value\_Type, Cmp\_Fn, \_Alloc >

## Namespaces

- [\\_\\_gnu\\_pbds](#)

## Macros

- #define **PB\_DS\_ASSERT\_VALID**(X)
- #define **PB\_DS\_CLASS\_C\_DEC**
- #define **PB\_DS\_CLASS\_T\_DEC**
- #define **PB\_DS\_DEBUG\_VERIFY**(\_Cond)
- #define **PB\_DS\_ENTRY\_CMP\_DEC**
- #define **PB\_DS\_RESIZE\_POLICY\_DEC**

### 6.39.1 Detailed Description

Contains an implementation class for a binary heap.

Definition in file [binary\\_heap.hpp](#).

## 6.40 binders.h File Reference

### Classes

- class [std::binder1st](#)< [\\_Operation](#) >
- class [std::binder2nd](#)< [\\_Operation](#) >

### Namespaces

- [std](#)

### Functions

- [template](#)<typename [\\_Operation](#) , typename [\\_Tp](#) >  
[binder1st](#)< [\\_Operation](#) > [std::bind1st](#) (const [\\_Operation](#) &\_\_fn, const [\\_Tp](#) &\_\_x)
- [template](#)<typename [\\_Operation](#) , typename [\\_Tp](#) >  
[binder2nd](#)< [\\_Operation](#) > [std::bind2nd](#) (const [\\_Operation](#) &\_\_fn, const [\\_Tp](#) &\_\_x)

### 6.40.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<functional>`.

Definition in file [binders.h](#).

## 6.41 binomial\_heap.hpp File Reference

### Classes

- class [\\_\\_gnu\\_pbds::detail::binomial\\_heap](#)< [Value\\_Type](#), [Cmp\\_Fn](#), [\\_Alloc](#) >

## Namespaces

- [\\_\\_gnu\\_pbds](#)

## Macros

- #define **PB\_DS\_CLASS\_C\_DEC**
- #define **PB\_DS\_CLASS\_T\_DEC**

### 6.41.1 Detailed Description

Contains an implementation class for a binomial heap.

Definition in file [binomial\\_heap.hpp](#).

## 6.42 binomial\_heap\_base.hpp File Reference

### Classes

- class [\\_\\_gnu\\_pbds::detail::binomial\\_heap\\_base< Value\\_Type, Cmp\\_Fn, \\_Alloc >](#)

## Namespaces

- [\\_\\_gnu\\_pbds](#)

## Macros

- #define **PB\_DS\_ASSERT\_BASE\_NODE\_CONSISTENT**(\_Node, \_Bool)
- #define **PB\_DS\_ASSERT\_VALID\_COND**(X, \_StrictlyBinomial)
- #define **PB\_DS\_B\_HEAP\_BASE**
- #define **PB\_DS\_CLASS\_C\_DEC**
- #define **PB\_DS\_CLASS\_T\_DEC**

### 6.42.1 Detailed Description

Contains an implementation class for a base of binomial heaps.

Definition in file [binomial\\_heap\\_base.hpp](#).

## 6.43 bitmap\_allocator.h File Reference

### Classes

- class [\\_\\_gnu\\_cxx::\\_\\_detail::\\_\\_mini\\_vector< \\_Tp >](#)
- class [\\_\\_gnu\\_cxx::\\_\\_detail::Bitmap\\_counter< \\_Tp >](#)
- class [\\_\\_gnu\\_cxx::\\_\\_detail::Ffit\\_finder< \\_Tp >](#)

`_ToType \_\_gnu\_cxx::\_\_static\_pointer\_cast (_FromType *__arg)`

### 6.57.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<ext/pointer.h>`.

Definition in file [cast.h](#).

## 6.58 cc\_hash\_max\_collision\_check\_resize\_trigger\_imp.hpp File Reference

### 6.58.1 Detailed Description

Contains a resize trigger implementation.

Definition in file [cc\\_hash\\_max\\_collision\\_check\\_resize\\_trigger\\_imp.hpp](#).

## 6.59 cc\_ht\_map\_.hpp File Reference

### Classes

- class [\\_\\_gnu\\_pbds::detail::cc\\_ht\\_map< Key, Mapped, Hash\\_Fn, Eq\\_Fn, \\_Alloc, Store\\_Hash, Comb\\_Hash\\_Fn, Resize\\_Policy >](#)

### Namespaces

- [\\_\\_gnu\\_pbds](#)

### Macros

- `#define PB_DS_CC_HASH_NAME`
- `#define PB_DS_CC_HASH_TRAITS_BASE`
- `#define PB_DS_CLASS_C_DEC`
- `#define PB_DS_CLASS_T_DEC`
- `#define PB_DS_GEN_POS`
- `#define PB_DS_HASH_EQ_FN_C_DEC`
- `#define PB_DS_RANGED_HASH_FN_C_DEC`

### 6.59.1 Detailed Description

Contains an implementation class for `cc_ht_map_`.

Definition in file [cc\\_ht\\_map\\_.hpp](#).

## 6.60 ccomplex File Reference

### Macros

- `#define _GLIBCXX_CCOMPLEX`

### 6.60.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [ccomplex](#).

## 6.61 ccomplex File Reference

### Macros

- `#define _GLIBCXX_TR1_CCOMPLEX`

### 6.61.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/ccomplex](#).

## 6.62 ctype File Reference

### Namespaces

- [std](#)

### Macros

- `#define _GLIBCXX_CCTYPE`

### 6.62.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `ctype.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [ctype](#).

## 6.63 ctype File Reference

### Macros

- `#define _GLIBCXX_TR1_CCTYPE`

### 6.63.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/ctype](#).

## 6.64 `cerrno` File Reference

### Macros

- `#define _GLIBCXX_CERRNO`
- `#define errno`

#### 6.64.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `errno.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [`cerrno`](#).

## 6.65 `cfenv` File Reference

### Macros

- `#define _GLIBCXX_CFENV`

#### 6.65.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [`cfenv`](#).

## 6.66 `cfenv` File Reference

### Macros

- `#define _GLIBCXX_TR1_CFENV`

#### 6.66.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [`tr1/cfenv`](#).

## 6.67 `cfloat` File Reference

### Macros

- `#define _GLIBCXX_CFLOAT`
- `#define DECIMAL_DIG`
- `#define FLT_EVAL_METHOD`

### 6.67.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `float.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [cfloat](#).

## 6.68 cfloat File Reference

### Macros

- `#define _GLIBCXX_TR1_CFLOAT`

### 6.68.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/cfloat](#).

## 6.69 char\_traits.h File Reference

### Classes

- struct [\\_\\_gnu\\_cxx::\\_Char\\_types<\\_CharT>](#)
- struct [\\_\\_gnu\\_cxx::char\\_traits<\\_CharT>](#)
- struct [std::char\\_traits<\\_CharT>](#)
- struct [std::char\\_traits<char>](#)
- struct [std::char\\_traits<wchar\\_t>](#)

### Namespaces

- [\\_\\_gnu\\_cxx](#)
- [std](#)

### Macros

- `#define _GLIBCXX_ALWAYS_INLINE`

### 6.69.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<string>`.

Definition in file [char\\_traits.h](#).

## 6.70 checkers.h File Reference

### Namespaces

- [\\_\\_gnu\\_parallel](#)

### Functions

- `template<typename _Iter, typename _Compare >`  
`bool \_\_gnu\_parallel::\_\_is\_sorted (_Iter __begin, _Iter __end, _Compare __comp)`

#### 6.70.1 Detailed Description

Routines for checking the correctness of algorithm results. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [checkers.h](#).

## 6.71 chrono File Reference

### Classes

- struct [std::chrono::\\_V2::steady\\_clock](#)

### 6.71.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [chrono](#).

## 6.72 chrono File Reference

### Namespaces

- [std](#)
- [std::chrono](#)

### Macros

- `#define _GLIBCXX_EXPERIMENTAL_CHRONO`

### Variables

- `template<typename _Rep >  
constexpr bool std::chrono::experimental::fundamentals_v1::treat_as_floating_point_v`

#### 6.72.1 Detailed Description

This is a TS C++ Library header.

Definition in file [experimental/chrono](#).

## 6.73 cinttypes File Reference

### Macros

- `#define _GLIBCXX_CINTTYPES`

#### 6.73.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [cinttypes](#).

## 6.74 cinttypes File Reference

### Macros

- `#define _GLIBCXX_TR1_CINTTYPES`

#### 6.74.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/cinttypes](#).

## 6.75 `ciso646` File Reference

### 6.75.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `iso646.h`, which is empty in C++.

Definition in file [ciso646](#).

## 6.76 `climits` File Reference

### Macros

- `#define _GLIBCXX_CLIMITS`
- `#define LLONG_MAX`
- `#define LLONG_MIN`
- `#define ULLONG_MAX`

### 6.76.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `limits.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [climits](#).

## 6.77 `climits` File Reference

### Macros

- `#define _GLIBCXX_TR1_CLIMITS`

### 6.77.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/climits](#).

## 6.78 `clocale` File Reference

### Namespaces

- [std](#)

### Macros

- `#define _GLIBCXX_CLOCALE`

### 6.78.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `locale.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [clocale](#).

## 6.79 cmath File Reference

### Namespaces

### 6.79.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `math.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [cmath](#).

## 6.80 cmath File Reference

### Namespaces

- [\\_\\_gnu\\_cxx](#)

### Macros

- `#define _EXT_CMATH`

### 6.80.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

Definition in file [ext/cmath](#).

## 6.81 cmath File Reference

### Namespaces

- `void __gnu_parallel::__yield ()`

### 6.87.1 Detailed Description

Compatibility layer, mostly concerned with atomic operations. This file is a GNU parallel extension to the Standard C++ Library and contains implementation details for the library's internal use.

Definition in file [parallel/compatibility.h](#).

## 6.88 compiletime\_settings.h File Reference

### Macros

- `#define _GLIBCXX_CALL(__n)`
- `#define _GLIBCXX_PARALLEL_ASSERTIONS`
- `#define _GLIBCXX_RANDOM_SHUFFLE_CONSIDER_L1`
- `#define _GLIBCXX_RANDOM_SHUFFLE_CONSIDER_TLB`
- `#define _GLIBCXX_SCALE_DOWN_FPU`
- `#define _GLIBCXX_VERBOSE_LEVEL`

### 6.88.1 Detailed Description

Defines on options concerning debugging and performance, at compile-time. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [compiletime\\_settings.h](#).

## 6.88.2 Macro Definition Documentation

### 6.88.2.1 #define \_GLIBCXX\_CALL( \_\_n )

Macro to produce log message when entering a function.

#### Parameters

<code>__n</code>	Input size.
------------------	-------------

#### See Also

`_GLIBCXX_VERBOSE_LEVEL`

Definition at line 44 of file `completetime_settings.h`.

Referenced by `__gnu_parallel::_find_template()`, `__gnu_parallel::_for_each_template_random_access_workstealing()`, `__gnu_parallel::_merge_advance()`, `__gnu_parallel::_parallel_nth_element()`, `__gnu_parallel::_parallel_partial_sum()`, `__gnu_parallel::_parallel_partition()`, `__gnu_parallel::_parallel_random_shuffle_drs()`, `__gnu_parallel::_parallel_sort()`, `__gnu_parallel::_parallel_sort_qs()`, `__gnu_parallel::_parallel_sort_qsb()`, `__gnu_parallel::_parallel_unique_copy()`, `__gnu_parallel::_search_template()`, `__gnu_parallel::_sequential_multiway_merge()`, `__gnu_parallel::_multiseq_partition()`, `__gnu_parallel::_multiseq_selection()`, `__gnu_parallel::_multiway_merge()`, `__gnu_parallel::_multiway_merge_3_variant()`, `__gnu_parallel::_multiway_merge_4_variant()`, `__gnu_parallel::_multiway_merge_loser_tree()`, `__gnu_parallel::_multiway_merge_loser_tree_sentinel()`, `__gnu_parallel::_multiway_merge_loser_tree_unguarded()`, `__gnu_parallel::_multiway_merge_sentinels()`, `__gnu_parallel::_parallel_multiway_merge()`, and `__gnu_parallel::_parallel_sort_mwms()`.

### 6.88.2.2 #define \_GLIBCXX\_PARALLEL\_ASSERTIONS

Switch on many `_GLIBCXX_PARALLEL_ASSERTIONS` in parallel code. Should be switched on only locally.

Definition at line 61 of file `completetime_settings.h`.

Referenced by `__gnu_parallel::_qsb_local_sort_with_helping()`.

### 6.88.2.3 #define \_GLIBCXX\_RANDOM\_SHUFFLE\_CONSIDER\_L1

Switch on many `_GLIBCXX_PARALLEL_ASSERTIONS` in parallel code. Consider the size of the L1 cache for `gnu_parallel::_parallel_random_shuffle()`.

Definition at line 68 of file `completetime_settings.h`.

### 6.88.2.4 #define \_GLIBCXX\_RANDOM\_SHUFFLE\_CONSIDER\_TLB

Switch on many `_GLIBCXX_PARALLEL_ASSERTIONS` in parallel code. Consider the size of the TLB for `gnu_parallel::_parallel_random_shuffle()`.

Definition at line 74 of file `completetime_settings.h`.

### 6.88.2.5 #define \_GLIBCXX\_SCALE\_DOWN\_FPU

Use floating-point scaling instead of modulo for mapping random numbers to a range. This can be faster on certain CPUs.

Definition at line 55 of file `completetime_settings.h`.

### 6.88.2.6 #define \_GLIBCXX\_VERBOSE\_LEVEL

Determine verbosity level of the parallel mode. Level 1 prints a message each time a parallel-mode function is entered.

Definition at line 37 of file `completetime_settings.h`.

- `template<typename _Tp >  
std::complex< _Tp > std::tr1::pow (const std::complex< _Tp > &__x, const std::complex< _Tp > &__y)`

### 6.90.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/complex](#).

## 6.91 `complex.h` File Reference

### Macros

- `#define __GLIBCXX_COMPLEX_H`

### 6.91.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [complex.h](#).

## 6.92 `concept_check.h` File Reference

### Macros

- `#define __glibcxx_class_requires(_a, _b)`
- `#define __glibcxx_class_requires2(_a, _b, _c)`
- `#define __glibcxx_class_requires3(_a, _b, _c, _d)`
- `#define __glibcxx_class_requires4(_a, _b, _c, _d, _e)`
- `#define __glibcxx_function_requires(...)`

### 6.92.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<iterator>`.

Definition in file [concept\\_check.h](#).

## 6.93 `concurrency.h` File Reference

### Classes

- class [\\_\\_gnu\\_cxx::\\_\\_scoped\\_lock](#)

### Namespaces

- [\\_\\_gnu\\_cxx](#)

### Enumerations

- enum `_Lock_policy` { `_S_single`, `_S_mutex`, `_S_atomic` }

## Functions

- void `__gnu_cxx::__throw_concurrency_lock_error ()`
- void `__gnu_cxx::__throw_concurrency_unlock_error ()`

## Variables

- static const `_Lock_policy` `__gnu_cxx::__default_lock_policy`

## 6.93.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

Definition in file [concurrency.h](#).

## 6.94 cond\_dealtor.hpp File Reference

## Classes

- class [\\_\\_gnu\\_pbds::detail::cond\\_dealtor< Entry, \\_Alloc >](#)

## Namespaces

- [\\_\\_gnu\\_pbds](#)

## 6.94.1 Detailed Description

Contains a conditional deallocator.

Definition in file [cond\\_dealtor.hpp](#).

## 6.95 cond\_key\_dtor\_entry\_dealtor.hpp File Reference

## Classes

- class [\\_\\_gnu\\_pbds::detail::cond\\_dealtor< Entry, \\_Alloc >](#)

## Namespaces

- [\\_\\_gnu\\_pbds](#)

## 6.95.1 Detailed Description

Contains a conditional key destructor, used for exception handling.

Definition in file [cond\\_key\\_dtor\\_entry\\_dealtor.hpp](#).

## 6.96 `condition_variable` File Reference

### Classes

- class [std::\\_V2::condition\\_variable\\_any](#)
- class [std::condition\\_variable](#)

### Namespaces

- [std](#)

### Macros

- `#define _GLIBCXX_CONDITION_VARIABLE`

### Enumerations

- enum [std::cv\\_status](#) { `no_timeout`, `timeout` }

### Functions

- void [std::notify\\_all\\_at\\_thread\\_exit](#) (`condition_variable &`, `unique_lock< mutex >`)

#### 6.96.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [condition\\_variable](#).

## 6.97 `const_iterator.hpp` File Reference

### Classes

- class [\\_\\_gnu\\_pbds::detail::binary\\_heap\\_const\\_iterator\\_< Value\\_Type, Entry, Simple, \\_Alloc >](#)

### Namespaces

- [\\_\\_gnu\\_pbds](#)

### Macros

- `#define PB_DS_BIN_HEAP_CIT_BASE`

#### 6.97.1 Detailed Description

Contains an iterator class returned by the table's const find and insert methods.

Definition in file [binary\\_heap\\_/const\\_iterator.hpp](#).

## 6.98 `const_iterator.hpp` File Reference

### Classes

- class [\\_\\_gnu\\_pbds::detail::left\\_child\\_next\\_sibling\\_heap\\_const\\_iterator\\_< Node, \\_Alloc >](#)

### Namespaces

- [\\_\\_gnu\\_pbds](#)

### Macros

- `#define PB_DS_BASIC_HEAP_CIT_BASE`
- `#define PB_DS_CLASS_C_DEC`

#### 6.98.1 Detailed Description

Contains an iterator class returned by the table's const find and insert methods.

Definition in file [left\\_child\\_next\\_sibling\\_heap\\_/const\\_iterator.hpp](#).

## 6.99 `const_iterator.hpp` File Reference

### Classes

- class [const\\_iterator\\_](#)

#### 6.99.1 Detailed Description

Contains an iterator class used for const ranging over the elements of the table.

Definition in file [unordered\\_iterator/const\\_iterator.hpp](#).

## 6.100 `constructor_destructor_fn_imps.hpp` File Reference

#### 6.100.1 Detailed Description

Contains implementations of `cc_ht_map_`'s constructors, destructor, and related functions.

Definition in file [cc\\_hash\\_table\\_map\\_/constructor\\_destructor\\_fn\\_imps.hpp](#).

## 6.101 `constructor_destructor_fn_imps.hpp` File Reference

#### 6.101.1 Detailed Description

Contains implementations of `gp_ht_map_`'s constructors, destructor, and related functions.

Definition in file [gp\\_hash\\_table\\_map\\_/constructor\\_destructor\\_fn\\_imps.hpp](#).

## 6.102 `constructor_destructor_fn_imps.hpp` File Reference

## 6.103 `constructor_destructor_no_store_hash_fn_imps.hpp` File Reference

### 6.103.1 Detailed Description

Contains implementations of `cc_ht_map_`'s constructors, destructor, and related functions.  
Definition in file [cc\\_hash\\_table\\_map\\_/constructor\\_destructor\\_no\\_store\\_hash\\_fn\\_imps.hpp](#).

## 6.104 `constructor_destructor_no_store_hash_fn_imps.hpp` File Reference

### 6.104.1 Detailed Description

Contains implementations of `gp_ht_map_`'s constructors, destructor, and related functions.  
Definition in file [gp\\_hash\\_table\\_map\\_/constructor\\_destructor\\_no\\_store\\_hash\\_fn\\_imps.hpp](#).

## 6.105 `constructor_destructor_store_hash_fn_imps.hpp` File Reference

### 6.105.1 Detailed Description

Contains implementations of `cc_ht_map_`'s constructors, destructor, and related functions.  
Definition in file [cc\\_hash\\_table\\_map\\_/constructor\\_destructor\\_store\\_hash\\_fn\\_imps.hpp](#).

## 6.106 `constructor_destructor_store_hash_fn_imps.hpp` File Reference

### 6.106.1 Detailed Description

Contains implementations of `gp_ht_map_`'s constructors, destructor, and related functions.  
Definition in file [gp\\_hash\\_table\\_map\\_/constructor\\_destructor\\_store\\_hash\\_fn\\_imps.hpp](#).

## 6.107 `constructors_destructor_fn_imps.hpp` File Reference

### 6.107.1 Detailed Description

Contains an implementation class for `binary_heap_`.  
Definition in file [binary\\_heap\\_/constructors\\_destructor\\_fn\\_imps.hpp](#).

## 6.108 `constructors_destructor_fn_imps.hpp` File Reference

### 6.108.1 Detailed Description

Contains an implementation for `binomial_heap_`.  
Definition in file [binomial\\_heap\\_/constructors\\_destructor\\_fn\\_imps.hpp](#).

## 6.109 constructors\_destructor\_fn\_imps.hpp File Reference

### 6.109.1 Detailed Description

Contains an implementation class for a base of binomial heaps.

Definition in file [binomial\\_heap\\_base\\_/constructors\\_destructor\\_fn\\_imps.hpp](#).

## 6.110 constructors\_destructor\_fn\_imps.hpp File Reference

### 6.110.1 Detailed Description

Contains an implementation class for bin\_search\_tree\_.

Definition in file [bin\\_search\\_tree\\_/constructors\\_destructor\\_fn\\_imps.hpp](#).

## 6.111 constructors\_destructor\_fn\_imps.hpp File Reference

### 6.111.1 Detailed Description

Contains an implementation class for left\_child\_next\_sibling\_heap\_.

Definition in file [left\\_child\\_next\\_sibling\\_heap\\_/constructors\\_destructor\\_fn\\_imps.hpp](#).

## 6.112 constructors\_destructor\_fn\_imps.hpp File Reference

### 6.112.1 Detailed Description

Contains an implementation class for ov\_tree\_.

Definition in file [ov\\_tree\\_map\\_/constructors\\_destructor\\_fn\\_imps.hpp](#).

## 6.113 constructors\_destructor\_fn\_imps.hpp File Reference

### 6.113.1 Detailed Description

Contains an implementation class for a pairing heap.

Definition in file [pairing\\_heap\\_/constructors\\_destructor\\_fn\\_imps.hpp](#).

## 6.114 constructors\_destructor\_fn\_imps.hpp File Reference

### 6.114.1 Detailed Description

Contains an implementation class for pat\_trie.

Definition in file [pat\\_trie\\_/constructors\\_destructor\\_fn\\_imps.hpp](#).

## 6.115 constructors\_destructor\_fn\_imps.hpp File Reference

**6.115.1 Detailed Description**

Contains an implementation for `rb_tree_.`

Definition in file [rb\\_tree\\_map\\_/constructors\\_destructor\\_fn\\_imps.hpp](#).

**6.116 constructors\_destructor\_fn\_imps.hpp File Reference****6.116.1 Detailed Description**

Contains an implementation for `rc_binomial_heap_.`

Definition in file [rc\\_binomial\\_heap\\_/constructors\\_destructor\\_fn\\_imps.hpp](#).

**6.117 constructors\_destructor\_fn\_imps.hpp File Reference****6.117.1 Detailed Description**

Contains an implementation class for `splay_tree_.`

Definition in file [splay\\_tree\\_/constructors\\_destructor\\_fn\\_imps.hpp](#).

**6.118 constructors\_destructor\_fn\_imps.hpp File Reference****6.118.1 Detailed Description**

Contains an implementation for `thin_heap_.`

Definition in file [thin\\_heap\\_/constructors\\_destructor\\_fn\\_imps.hpp](#).

**6.119 container\_base\_dispatch.hpp File Reference****Classes**

- `#define PB_DS_V2F(X)`
- `#define PB_DS_V2S(X)`
- `#define PB_DS_V2S(X)`

### 6.119.1 Detailed Description

Contains associative container dispatching.

Definition in file [container\\_base\\_dispatch.hpp](#).

## 6.120 `cpp_type_traits.h` File Reference

### Namespaces

- [std](#)

### Macros

- `#define __INT_N(TYPE)`

### Functions

- `template<typename _Iterator >  
_Iterator std::__miter_base (_Iterator __it)`

### 6.120.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<ext/type_traits>`.

Definition in file [cpp\\_type\\_traits.h](#).

## 6.121 `cpu_defines.h` File Reference

### Macros

- `#define _GLIBCXX_NO_VERBOSE_TERMINATE`

### 6.121.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<iosfwd>`.

Definition in file [cpu\\_defines.h](#).

## 6.122 `csetjmp` File Reference

### Namespaces

- [std](#)

### Macros

- `#define _GLIBCXX_CSETJMP`
- `#define setjmp(env)`

### 6.122.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `setjmp.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [csetjmp](#).

## 6.123 `csignal` File Reference

### Namespaces

- [std](#)

### Macros

- `#define _GLIBCXX_CSIGNAL`

### 6.123.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `signal.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [csignal](#).

## 6.124 `cstdalign` File Reference

### Macros

- `#define _GLIBCXX_CSTDALIGN`

#### 6.124.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [cstdalign](#).

## 6.125 `cstdarg` File Reference

### Namespaces

- [std](#)

### Macros

- `#define _GLIBCXX_CSTDARG`
- `#define va_end(ap)`

#### 6.125.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `stdarg.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [cstdarg](#).

## 6.126 `cstdarg` File Reference

### Macros

- `#define _GLIBCXX_TR1_CSTDARG`

#### 6.126.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/cstdarg](#).

## 6.127 `cstdint` File Reference

### Macros

- `#define _GLIBCXX_CSTDBOOL`

### 6.127.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [cstdint](#).

## 6.128 `cstdint` File Reference

### Macros

- `#define _GLIBCXX_TR1_CSTDBOOL`

### 6.128.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/cstdint](#).

## 6.129 `cstdint` File Reference

### Namespaces

- [std](#)

### Macros

- `#define _GLIBCXX_CSTDDEF`

### 6.129.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `stdint.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [stdint](#).

## 6.130 `cstdint` File Reference

### Namespaces

- [std](#)

## Macros

- `#define _GLIBCXX_CSTDINT`

### 6.130.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [cstdint](#).

## 6.131 `cstdint` File Reference

### Namespaces

- [std](#)
- [std::tr1](#)

## Macros

- `#define _GLIBCXX_TR1_CSTDINT`

### 6.131.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/cstdint](#).

## 6.132 `cstdio` File Reference

### Namespaces

- [std](#)

## Macros

- `#define _GLIBCXX_CSTDIO`

### 6.132.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `stdio.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [cstdio](#).

## 6.133 `cstdio` File Reference

### Macros

- `#define _GLIBCXX_TR1_CSTDIO`

### 6.133.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/cstdio](#).

## 6.134 `cstdlib` File Reference

### Namespaces

- [std](#)

### Macros

- `#define _GLIBCXX_CSTDLIB`
- `#define EXIT_FAILURE`
- `#define EXIT_SUCCESS`

### Functions

- void **`std::abort`** (void) throw ()
- int **`std::atexit`** (void\*)(void) throw ()
- void **`std::exit`** (int) throw ()

### 6.134.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `stdlib.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [cstdlib](#).

## 6.135 `cstdlib` File Reference

### Macros

- `#define _GLIBCXX_TR1_CSTDLIB`

### 6.135.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/cstdlib](#).

## 6.136 `cstring` File Reference

### Namespaces

- [std](#)

### Macros

- `#define _GLIBCXX_CSTRING`

### Functions

- `void * std::memchr (void *__s, int __c, size_t __n)`
- `char * std::strchr (char *__s, int __n)`
- `char * std::strpbrk (char *__s1, const char *__s2)`
- `char * std::strrchr (char *__s, int __n)`
- `char * std::strstr (char *__s1, const char *__s2)`

#### 6.136.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `string.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [cstring](#).

## 6.137 `ctgmath` File Reference

### Macros

- `#define _GLIBCXX_CTGMATH`

#### 6.137.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [ctgmath](#).

## 6.138 `ctgmath` File Reference

### Macros

- `#define _GLIBCXX_TR1_CTGMATH`

#### 6.138.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/ctgmath](#).

## 6.139 `ctime` File Reference

### Namespaces

- [std](#)

### Macros

- `#define _GLIBCXX_CTIME`

### 6.139.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `time.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [ctime](#).

## 6.140 `ctime` File Reference

### Macros

- `#define _GLIBCXX_TR1_CTIME`

### 6.140.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/ctime](#).

## 6.141 `ctype_inline.h` File Reference

### Namespaces

- [std](#)

### 6.141.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<locale>`.

Definition in file [ctype\\_inline.h](#).

## 6.142 `cuchar` File Reference

### Macros

- `#define _GLIBCXX_CUCHAR`

### 6.142.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `uchar.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [cuchar](#).

## 6.143 `wchar` File Reference

### Namespaces

- [std](#)

### Macros

- `#define _GLIBCXX_CWCHAR`

### Functions

- `wchar_t * std::wcschr` (`wchar_t *__p`, `wchar_t __c`)
- `wchar_t * std::wenspbrk` (`wchar_t *__s1`, `const wchar_t *__s2`)
- `wchar_t * std::wcsrchr` (`wchar_t *__p`, `wchar_t __c`)
- `wchar_t * std::wcsstr` (`wchar_t *__s1`, `const wchar_t *__s2`)
- `wchar_t * std::wmemchr` (`wchar_t *__p`, `wchar_t __c`, `size_t __n`)

### 6.143.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `wchar.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [cwchar](#).

## 6.144 `wchar` File Reference

### Namespaces

- [std](#)
- [std::tr1](#)

### Macros

- `#define _GLIBCXX_TR1_CWCHAR`

### 6.144.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/cwchar](#).

## 6.145 cwctype File Reference

### Namespaces

- [std](#)

### Macros

- `#define _GLIBCXX_CWCTYPE`

### 6.145.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `wctype.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

Definition in file [cwctype](#).

## 6.146 cwctype File Reference

### Namespaces

- [std](#)
- [std::tr1](#)

### Macros

- `#define _GLIBCXX_TR1_CWCTYPE`

### 6.146.1 Detailed Description

This is a TR1 C++ Library header.

Definition in file [tr1/cwctype](#).

### Functions

- `template<typename _Alloc>`  
`bool __gnu_cxx::operator!=(const debug_allocator<_Alloc> &__lhs, const debug_allocator<_Alloc> &__rhs)`

#### 6.152.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

Definition in file [debug\\_allocator.h](#).

## 6.153 debug\_fn\_imps.hpp File Reference

#### 6.153.1 Detailed Description

Contains an implementation class for a `binary_heap`.

Definition in file [binary\\_heap\\_/debug\\_fn\\_imps.hpp](#).

## 6.154 `debug_fn_imps.hpp` File Reference

### 6.154.1 Detailed Description

Contains an implementation for `binomial_heap_`.

Definition in file [binomial\\_heap\\_/debug\\_fn\\_imps.hpp](#).

## 6.155 `debug_fn_imps.hpp` File Reference

### 6.155.1 Detailed Description

Contains an implementation class for a base of binomial heaps.

Definition in file [binomial\\_heap\\_base\\_/debug\\_fn\\_imps.hpp](#).

## 6.156 `debug_fn_imps.hpp` File Reference

### 6.156.1 Detailed Description

Contains an implementation class for `bin_search_tree_`.

Definition in file [bin\\_search\\_tree\\_/debug\\_fn\\_imps.hpp](#).

## 6.157 `debug_fn_imps.hpp` File Reference

### 6.157.1 Detailed Description

Contains implementations of `cc_ht_map_`'s debug-mode functions.

Definition in file [cc\\_hash\\_table\\_map\\_/debug\\_fn\\_imps.hpp](#).

## 6.158 `debug_fn_imps.hpp` File Reference

### 6.158.1 Detailed Description

Contains implementations of `gp_ht_map_`'s debug-mode functions.

Definition in file [gp\\_hash\\_table\\_map\\_/debug\\_fn\\_imps.hpp](#).

## 6.159 `debug_fn_imps.hpp` File Reference

### 6.159.1 Detailed Description

Contains an implementation class for `left_child_next_sibling_heap_`.

Definition in file [left\\_child\\_next\\_sibling\\_heap\\_/debug\\_fn\\_imps.hpp](#).

## 6.160 `debug_fn_imps.hpp` File Reference

### 6.160.1 Detailed Description

Contains implementations of `cc_ht_map_`'s debug-mode functions.

Definition in file [list\\_update\\_map\\_/debug\\_fn\\_imps.hpp](#).

### 6.161 `debug_fn_imps.hpp` File Reference

#### 6.161.1 Detailed Description

Contains an implementation class for `ov_tree_`.

Definition in file [ov\\_tree\\_map\\_/debug\\_fn\\_imps.hpp](#).

### 6.162 `debug_fn_imps.hpp` File Reference

#### 6.162.1 Detailed Description

Contains an implementation class for a pairing heap.

Definition in file [pairing\\_heap\\_/debug\\_fn\\_imps.hpp](#).

### 6.163 `debug_fn_imps.hpp` File Reference

#### 6.163.1 Detailed Description

Contains an implementation class for `pat_trie_`.

Definition in file [pat\\_trie\\_/debug\\_fn\\_imps.hpp](#).

### 6.164 `debug_fn_imps.hpp` File Reference

#### 6.164.1 Detailed Description

Contains an implementation for `rb_tree_`.

Definition in file [rb\\_tree\\_map\\_/debug\\_fn\\_imps.hpp](#).

### 6.165 `debug_fn_imps.hpp` File Reference

#### 6.165.1 Detailed Description

Contains an implementation for `rc_binomial_heap_`.

Definition in file [rc\\_binomial\\_heap\\_/debug\\_fn\\_imps.hpp](#).

### 6.166 `debug_fn_imps.hpp` File Reference

#### 6.166.1 Detailed Description

Contains an implementation class for `splay_tree_`.

Definition in file [splay\\_tree\\_/debug\\_fn\\_imps.hpp](#).

## 6.167 `debug_fn_imps.hpp` File Reference

### 6.167.1 Detailed Description

Contains an implementation for `thin_heap_`.

Definition in file [thin\\_heap\\_/debug\\_fn\\_imps.hpp](#).

## 6.168 `debug_map_base.hpp` File Reference

### 6.168.1 Detailed Description

Contains a debug-mode base for all maps.

Definition in file [debug\\_map\\_base.hpp](#).

## 6.169 `debug_no_store_hash_fn_imps.hpp` File Reference

### 6.169.1 Detailed Description

Contains implementations of `cc_ht_map_`'s debug-mode functions.

Definition in file [cc\\_hash\\_table\\_map\\_/debug\\_no\\_store\\_hash\\_fn\\_imps.hpp](#).

## 6.170 `debug_no_store_hash_fn_imps.hpp` File Reference

### 6.170.1 Detailed Description

Contains implementations of `gp_ht_map_`'s debug-mode functions.

Definition in file [gp\\_hash\\_table\\_map\\_/debug\\_no\\_store\\_hash\\_fn\\_imps.hpp](#).

## 6.171 `debug_store_hash_fn_imps.hpp` File Reference

### 6.171.1 Detailed Description

Contains implementations of `cc_ht_map_`'s debug-mode functions.

Definition in file [cc\\_hash\\_table\\_map\\_/debug\\_store\\_hash\\_fn\\_imps.hpp](#).

## 6.172 `debug_store_hash_fn_imps.hpp` File Reference

## 6.197 `erase_fn_imps.hpp` File Reference

### 6.197.1 Detailed Description

Contains implementations of `lu_map_`.

Definition in file [list\\_update\\_map\\_/erase\\_fn\\_imps.hpp](#).

## 6.198 `erase_fn_imps.hpp` File Reference

### 6.198.1 Detailed Description

Contains an implementation class for `ov_tree_`.

Definition in file [ov\\_tree\\_map\\_/erase\\_fn\\_imps.hpp](#).

## 6.199 `erase_fn_imps.hpp` File Reference

### 6.199.1 Detailed Description

Contains an implementation class for a pairing heap.

Definition in file [pairing\\_heap\\_/erase\\_fn\\_imps.hpp](#).

## 6.200 `erase_fn_imps.hpp` File Reference

### 6.200.1 Detailed Description

Contains an implementation class for pat\_trie.

Definition in file [pat\\_trie\\_/erase\\_fn\\_imps.hpp](#).

## 6.201 erase\_fn\_imps.hpp File Reference

### 6.201.1 Detailed Description

Contains an implementation for rb\_tree\_.

Definition in file [rb\\_tree\\_map\\_/erase\\_fn\\_imps.hpp](#).

## 6.202 erase\_fn\_imps.hpp File Reference

### 6.202.1 Detailed Description

Contains an implementation for rc\_binomial\_heap\_.

Definition in file [rc\\_binomial\\_heap\\_/erase\\_fn\\_imps.hpp](#).

## 6.203 erase\_fn\_imps.hpp File Reference

### 6.203.1 Detailed Description

Contains an implementation class for splay\_tree\_.

Definition in file [splay\\_tree\\_/erase\\_fn\\_imps.hpp](#).

## 6.204 erase\_fn\_imps.hpp File Reference

### 6.204.1 Detailed Description

Contains an implementation for thin\_heap\_.

Definition in file [thin\\_heap\\_/erase\\_fn\\_imps.hpp](#).

## 6.205 erase\_if.h File Reference

### Namespaces

- [std](#)

### Functions

- `template<typename _Container , typename _Predicate >  
void std::experimental::fundamentals_v2::__detail::__erase_nodes_if (_Container &__cont, _Predicate __pred)`

### 6.205.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly.

Definition in file [erase\\_if.h](#).

## 6.206 erase\_no\_store\_hash\_fn\_imps.hpp File Reference

### 6.206.1 Detailed Description

Contains implementations of `cc_ht_map_`'s erase related functions, when the hash value is not stored.

Definition in file [cc\\_hash\\_table\\_map\\_/erase\\_no\\_store\\_hash\\_fn\\_imps.hpp](#).

## 6.207 erase\_no\_store\_hash\_fn\_imps.hpp File Reference

### 6.207.1 Detailed Description

Contains implementations of `gp_ht_map_`'s erase related functions, when the hash value is not stored.

Definition in file [gp\\_hash\\_table\\_map\\_/erase\\_no\\_store\\_hash\\_fn\\_imps.hpp](#).

## 6.208 erase\_store\_hash\_fn\_imps.hpp File Reference

### 6.208.1 Detailed Description

Contains implementations of `cc_ht_map_`'s erase related functions, when the hash value is stored.

Definition in file [cc\\_hash\\_table\\_map\\_/erase\\_store\\_hash\\_fn\\_imps.hpp](#).

## 6.209 erase\_store\_hash\_fn\_imps.hpp File Reference

### 6.209.1 Detailed Description

Contains implementations of `gp_ht_map_`'s erase related functions, when the hash value is stored.

Definition in file [gp\\_hash\\_table\\_map\\_/erase\\_store\\_hash\\_fn\\_imps.hpp](#).

## 6.210 error\_constants.h File Reference

Namespaces

- [std](#)

## Enumerations

- enum `errc` {

- void [std::unexpected](#) () [\\_\\_attribute\\_\\_\(\(\\_\\_noreturn\\_\\_\)\)](#)

### 6.211.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [exception](#).

## 6.212 exception.h File Reference

### Classes

- class [std::exception](#)

### Namespaces

- [std](#)

### 6.212.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly.

Definition in file [exception.h](#).

## 6.213 exception.hpp File Reference

### Classes

- struct [\\_\\_gnu\\_pbds::container\\_error](#)
- struct [\\_\\_gnu\\_pbds::insert\\_error](#)
- struct [\\_\\_gnu\\_pbds::join\\_error](#)
- struct [\\_\\_gnu\\_pbds::resize\\_error](#)

### Namespaces

- [\\_\\_gnu\\_pbds](#)

## Functions

- void `__gnu_pbds::__throw_container_error ()`
- void `__gnu_pbds::__throw_insert_error ()`
- void `__gnu_pbds::__throw_join_error ()`
- void `__gnu_pbds::__throw_resize_error ()`

### 6.213.1 Detailed Description

Contains exception classes.

Definition in file [exception.hpp](#).

## 6.214 exception\_defines.h File Reference

### Macros

- `#define __catch(X)`
- `#define __throw_exception_again`
- `#define __try`

### 6.214.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<exception>`.

Definition in file [exception\\_defines.h](#).

## 6.215 exception\_ptr.h File Reference

### Classes

- class `std::__exception_ptr::exception_ptr`

### Namespaces

- `std`

### Functions

- `template<typename _Ex > void std::__exception_ptr::__dest_thunk (void *__x)`
- `exception_ptr std::current_exception () noexcept`
- `template<typename _Ex > exception_ptr std::make_exception_ptr (_Ex __ex) noexcept`
- `bool std::__exception_ptr::operator!= (const exception_ptr &, const exception_ptr &) noexcept __attribute__((__pure__))`
- `bool std::__exception_ptr::operator== (const exception_ptr &, const exception_ptr &) noexcept __attribute__((__pure__))`
- `void std::rethrow_exception (exception_ptr) __attribute__((__noreturn__))`
- `void std::__exception_ptr::swap (exception_ptr &__lhs, exception_ptr &__rhs)`

### 6.215.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<exception>`.

Definition in file [exception\\_ptr.h](#).

## 6.216 extc++.h File Reference

### 6.216.1 Detailed Description

This is an implementation file for a precompiled header.

Definition in file [extc++.h](#).

## 6.217 extptr\_allocator.h File Reference

### Classes

- class [\\_\\_gnu\\_cxx::\\_ExtPtr\\_allocator<\\_Tp>](#)

### Namespaces

- [\\_\\_gnu\\_cxx](#)

### Functions

- `template<typename _Tp >  
void \_\_gnu\_cxx::swap (_ExtPtr_allocator<_Tp > &__larg, _ExtPtr_allocator<_Tp > &__rarg)`

### 6.217.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

### Author

Bob Walters

An example allocator which uses an alternative pointer type from `bits/pointer.h`. Supports test cases which confirm container support for alternative pointers.

Definition in file [extptr\\_allocator.h](#).

## 6.218 features.h File Reference

### Macros

- `#define \_GLIBCXX\_BAL\_QUICKSORT`
- `#define \_GLIBCXX\_FIND\_CONSTANT\_SIZE\_BLOCKS`
- `#define \_GLIBCXX\_FIND\_EQUAL\_SPLIT`
- `#define \_GLIBCXX\_FIND\_GROWING\_BLOCKS`

- `#define _GLIBCXX_MERGESORT`
- `#define _GLIBCXX_QUICKSORT`
- `#define _GLIBCXX_TREE_DYNAMIC_BALANCING`
- `#define _GLIBCXX_TREE_FULL_COPY`
- `#define _GLIBCXX_TREE_INITIAL_SPLITTING`

### 6.218.1 Detailed Description

Defines on whether to include algorithm variants. Less variants reduce executable size and compile time. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [features.h](#).

### 6.218.2 Macro Definition Documentation

#### 6.218.2.1 `#define _GLIBCXX_BAL_QUICKSORT`

Include parallel dynamically load-balanced quicksort.

#### See Also

`__gnu_parallel::_Settings::sort_algorithm`

Definition at line 55 of file [features.h](#).

#### 6.218.2.2 `#define _GLIBCXX_FIND_CONSTANT_SIZE_BLOCKS`

Include the equal-sized blocks variant for `std::find`.

#### See Also

`__gnu_parallel::_Settings::find_algorithm`

Definition at line 67 of file [features.h](#).

#### 6.218.2.3 `#define _GLIBCXX_FIND_EQUAL_SPLIT`

Include the equal splitting variant for `std::find`.

#### See Also

`__gnu_parallel::_Settings::find_algorithm`

Definition at line 74 of file [features.h](#).

#### 6.218.2.4 `#define _GLIBCXX_FIND_GROWING_BLOCKS`

Include the growing blocks variant for `std::find`.

#### See Also

`__gnu_parallel::_Settings::find_algorithm`

Definition at line 61 of file [features.h](#).

### 6.218.2.5 #define \_GLIBCXX\_MERGESORT

Include parallel multi-way mergesort.

#### See Also

`__gnu_parallel::_Settings::sort_algorithm`

Definition at line 41 of file features.h.

### 6.218.2.6 #define \_GLIBCXX\_QUICKSORT

Include parallel unbalanced quicksort.

#### See Also

`__gnu_parallel::_Settings::sort_algorithm`

Definition at line 48 of file features.h.

### 6.218.2.7 #define \_GLIBCXX\_TREE\_DYNAMIC\_BALANCING

Include the dynamic balancing variant for `_Rb_tree::insert_unique(_Iter beg, _Iter __end)`.

#### See Also

`__gnu_parallel::_Rb_tree`

Definition at line 91 of file features.h.

### 6.218.2.8 #define \_GLIBCXX\_TREE\_FULL\_COPY

In order to sort the input sequence of `_Rb_tree::insert_unique(_Iter beg, _Iter __end)` a full copy of the input elements is done.

#### See Also

`__gnu_parallel::_Rb_tree`

Definition at line 100 of file features.h.

### 6.218.2.9 #define \_GLIBCXX\_TREE\_INITIAL\_SPLITTING

Include the initial splitting variant for `_Rb_tree::insert_unique(_Iter beg, _Iter __end)`.

#### See Also

`__gnu_parallel::_Rb_tree`

Definition at line 83 of file features.h.

## 6.219 fenv.h File Reference

### 6.219.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [fenv.h](#).

## 6.220 find.h File Reference

### Namespaces

- [\\_\\_gnu\\_parallel](#)

### Functions

- `template<typename _RAIter1, typename _RAIter2, typename _Pred, typename _Selector >  
std::pair< _RAIter1, _RAIter2 > \_\_gnu\_parallel::\_\_find\_template (_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred, _Selector __selector)`
- `template<typename _RAIter1, typename _RAIter2, typename _Pred, typename _Selector >  
std::pair< _RAIter1, _RAIter2 > \_\_gnu\_parallel::\_\_find\_template (_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred, _Selector __selector, equal_split_tag)`
- `template<typename _RAIter1, typename _RAIter2, typename _Pred, typename _Selector >  
std::pair< _RAIter1, _RAIter2 > \_\_gnu\_parallel::\_\_find\_template (_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred, _Selector __selector, growing_blocks_tag)`
- `template<typename _RAIter1, typename _RAIter2, typename _Pred, typename _Selector >  
std::pair< _RAIter1, _RAIter2 > \_\_gnu\_parallel::\_\_find\_template (_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred, _Selector __selector, constant_size_blocks_tag)`

#### 6.220.1 Detailed Description

Parallel implementation base for `std::find()`, `std::equal()` and related functions. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [find.h](#).

## 6.221 find\_fn\_imps.hpp File Reference

#### 6.221.1 Detailed Description

Contains an implementation class for a `binary_heap`.

Definition in file [binary\\_heap\\_/find\\_fn\\_imps.hpp](#).

## 6.222 find\_fn\_imps.hpp File Reference

#### 6.222.1 Detailed Description

Contains an implementation class for a base of binomial heaps.

Definition in file [binomial\\_heap\\_base\\_/find\\_fn\\_imps.hpp](#).

## 6.223 find\_fn\_imps.hpp File Reference

#### 6.223.1 Detailed Description

Contains an implementation class for `bin_search_tree_`.

Definition in file [bin\\_search\\_tree\\_/find\\_fn\\_imps.hpp](#).

## 6.224 `find_fn_imps.hpp` File Reference

### 6.224.1 Detailed Description

Contains implementations of `cc_ht_map_`'s find related functions.

Definition in file [cc\\_hash\\_table\\_map\\_/find\\_fn\\_imps.hpp](#).

## 6.225 `find_fn_imps.hpp` File Reference

### 6.225.1 Detailed Description

Contains implementations of `gp_ht_map_`'s find related functions.

Definition in file [gp\\_hash\\_table\\_map\\_/find\\_fn\\_imps.hpp](#).

## 6.226 `find_fn_imps.hpp` File Reference

### 6.226.1 Detailed Description

Contains implementations of `lu_map_`.

Definition in file [list\\_update\\_map\\_/find\\_fn\\_imps.hpp](#).

## 6.227 `find_fn_imps.hpp` File Reference

### 6.227.1 Detailed Description

Contains an implementation class for a pairing heap.

Definition in file [pairing\\_heap\\_/find\\_fn\\_imps.hpp](#).

## 6.228 `find_fn_imps.hpp` File Reference

### 6.228.1 Detailed Description

Contains an implementation class for `pat_trie`.

Definition in file [pat\\_trie\\_/find\\_fn\\_imps.hpp](#).

## 6.229 `find_fn_imps.hpp` File Reference

### 6.229.1 Detailed Description

Contains an implementation for `rb_tree_`.

Definition in file [rb\\_tree\\_map\\_/find\\_fn\\_imps.hpp](#).

## 6.230 `find_fn_imps.hpp` File Reference

### 6.230.1 Detailed Description

Contains an implementation class for `splay_tree_`.

Definition in file [splay\\_tree\\_/find\\_fn\\_imps.hpp](#).

## 6.231 `find_fn_imps.hpp` File Reference

### 6.231.1 Detailed Description

Contains an implementation for `thin_heap_`.

Definition in file [thin\\_heap\\_/find\\_fn\\_imps.hpp](#).

## 6.232 `find_no_store_hash_fn_imps.hpp` File Reference

### 6.232.1 Detailed Description

Contains implementations of `gp_ht_map_`'s find related functions, when the hash value is not stored.

Definition in file [find\\_no\\_store\\_hash\\_fn\\_imps.hpp](#).

## 6.233 `find_selectors.h` File Reference

### Classes

- struct [\\_\\_gnu\\_parallel::\\_\\_adjacent\\_find\\_selector](#)
- struct [\\_\\_gnu\\_parallel::\\_\\_find\\_first\\_of\\_selector<\\_FIterator >](#)
- struct [\\_\\_gnu\\_parallel::\\_\\_find\\_if\\_selector](#)
- struct [\\_\\_gnu\\_parallel::\\_\\_generic\\_find\\_selector](#)
- struct [\\_\\_gnu\\_parallel::\\_\\_mismatch\\_selector](#)

### Namespaces

- [\\_\\_gnu\\_parallel](#)

### 6.233.1 Detailed Description

`_Function` objects representing different tasks to be plugged into the parallel find algorithm. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [find\\_selectors.h](#).

## 6.234 `find_store_hash_fn_imps.hpp` File Reference

### 6.234.1 Detailed Description

Contains implementations of `cc_ht_map_`'s find related functions, when the hash value is stored.

Definition in file [cc\\_hash\\_table\\_map\\_/find\\_store\\_hash\\_fn\\_imps.hpp](#).

## 6.235 [find\\_store\\_hash\\_fn\\_imps.hpp](#) File Reference

### 6.235.1 Detailed Description

Contains implementations of `gp_ht_map_`'s insert related functions, when the hash value is stored.

Definition in file [gp\\_hash\\_table\\_map\\_/find\\_store\\_hash\\_fn\\_imps.hpp](#).

## 6.236 [for\\_each.h](#) File Reference

### Namespaces

- [\\_\\_gnu\\_parallel](#)

### Functions

- `template<typename _Iter, typename _UserOp, typename _Functionality, typename _Red, typename _Result > _UserOp __gnu_parallel::__for_each_template_random_access (_Iter __begin, _Iter __end, _UserOp __user_op, _Functionality &__functionality, _Red __reduction, _Result __reduction_start, _Result &__output, typename std::iterator_traits< _Iter >::difference_type __bound, _Parallelism __parallelism_tag)`

### 6.236.1 Detailed Description

Main interface for embarrassingly parallel functions. The explicit implementation are in other header files, like `workstealing.h`, `par_loop.h`, `omp_loop.h`, and `omp_loop_static.h`. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [for\\_each.h](#).

## 6.237 [for\\_each\\_selectors.h](#) File Reference

### Classes

- `struct __gnu_parallel::__accumulate_binop_reduct< _BinOp >`

### 6.256.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [future](#).

## 6.257 gp\_ht\_map.hpp File Reference

### Classes

- class [\\_\\_gnu\\_pbds::detail::gp\\_ht\\_map](#)< Key, Mapped, Hash\_Fn, Eq\_Fn, \_Alloc, Store\_Hash, Comb\_Probe\_Fn, Probe\_Fn, Resize\_Policy >

### Namespaces

- [\\_\\_gnu\\_pbds](#)

### Macros

- #define **PB\_DS\_CLASS\_C\_DEC**
- #define **PB\_DS\_CLASS\_T\_DEC**
- #define **PB\_DS\_GEN\_POS**
- #define **PB\_DS\_GP\_HASH\_NAME**
- #define **PB\_DS\_GP\_HASH\_TRAITS\_BASE**
- #define **PB\_DS\_HASH\_EQ\_FN\_C\_DEC**
- #define **PB\_DS\_RANGED\_PROBE\_FN\_C\_DEC**

### Variables

- **empty\_entry\_status**
- **erased\_entry\_status**
- **valid\_entry\_status**

### 6.257.1 Detailed Description

Contains an implementation class for general probing hash.

Definition in file [gp\\_ht\\_map.hpp](#).

## 6.258 `gslice.h` File Reference

### Classes

- class [std::gslice](#)

### Namespaces

- [std](#)

### 6.258.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<valarray>`.

Definition in file [gslice.h](#).

## 6.259 `gslice_array.h` File Reference

### Classes

- class [std::gslice\\_array<\\_Tp>](#)

### Namespaces

- [std](#)

### Macros

- `#define \_DEFINE\_VALARRAY\_OPERATOR(_Op, _Name)`

### 6.259.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<valarray>`.

Definition in file [gslice\\_array.h](#).

## 6.260 `hash_bytes.h` File Reference

### Namespaces

- [std](#)

### Functions

- `size_t std::Fnv\_hash\_bytes(const void *__ptr, size_t __len, size_t __seed)`
- `size_t std::Hash\_bytes(const void *__ptr, size_t __len, size_t __seed)`

### 6.260.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<functional>`.

Definition in file [hash\\_bytes.h](#).

## 6.261 hash\_eq\_fn.hpp File Reference

### Classes

- struct [\\_\\_gnu\\_pbds::detail::hash\\_eq\\_fn](#)< Key, Eq\_Fn, \_Alloc, Store\_Hash >
- struct [\\_\\_gnu\\_pbds::detail::hash\\_eq\\_fn](#)< Key, Eq\_Fn, \_Alloc, false >
- struct [\\_\\_gnu\\_pbds::detail::hash\\_eq\\_fn](#)< Key, Eq\_Fn, \_Alloc, true >

### Namespaces

- [\\_\\_gnu\\_pbds](#)

### 6.261.1 Detailed Description

Contains 2 equivalence functions, one employing a hash value, and one ignoring it.

Definition in file [hash\\_eq\\_fn.hpp](#).

## 6.262 hash\_exponential\_size\_policy\_imp.hpp File Reference

### 6.262.1 Detailed Description

Contains a resize size policy implementation.

Definition in file [hash\\_exponential\\_size\\_policy\\_imp.hpp](#).

## 6.263 hash\_fun.h File Reference

### Namespaces

- [\\_\\_gnu\\_cxx](#)

### Functions

- `size_t __gnu_cxx::__stl_hash_string` (const char \* \_\_s)

### 6.263.1 Detailed Description

This file is a GNU extension to the Standard C++ Library (possibly containing extensions from the HP/SGI STL subset).

Definition in file [hash\\_fun.h](#).

## 6.264 `hash_load_check_resize_trigger_imp.hpp` File Reference

### Macros

- `#define PB_DS_ASSERT_VALID(X)`
- `#define PB_DS_ASSERT_VALID(X)`

### 6.264.1 Detailed Description

Contains a resize trigger implementation.

Definition in file [hash\\_load\\_check\\_resize\\_trigger\\_imp.hpp](#).

## 6.265 `hash_load_check_resize_trigger_size_base.hpp` File Reference

### Classes

- class [\\_\\_gnu\\_pbds::detail::hash\\_load\\_check\\_resize\\_trigger\\_size\\_base< Size\\_Type, Hold\\_Size >](#)
- class [\\_\\_gnu\\_pbds::detail::hash\\_load\\_check\\_resize\\_trigger\\_size\\_base< Size\\_Type, true >](#)

### Namespaces

- [\\_\\_gnu\\_pbds](#)

### 6.265.1 Detailed Description

Contains an base holding size for some resize policies.

Definition in file [hash\\_load\\_check\\_resize\\_trigger\\_size\\_base.hpp](#).

## 6.266 `hash_map` File Reference

### Classes

- class [\\_\\_gnu\\_cxx::hash\\_map< \\_Key, \\_Tp, \\_HashFn, \\_EqualKey, \\_Alloc >](#)
- class [\\_\\_gnu\\_cxx::hash\\_multimap< \\_Key, \\_Tp, \\_HashFn, \\_EqualKey, \\_Alloc >](#)

### Namespaces

- [\\_\\_gnu\\_cxx](#)
- [std](#)

### Macros

- `#define _BACKWARD_HASH_MAP`

## Functions

- `template<class _Key, class _Tp, class _HashFn, class _EqKey, class _Alloc >`  
`bool __gnu_cxx::operator!= (const hash_map< _Key, _Tp, _HashFn, _EqKey, _Alloc > &__hm1, const hash_map< _Key, _Tp, _HashFn, _EqKey, _Alloc > &__hm2)`

### 6.309.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [iosfwd](#).

## 6.310 iostream File Reference

### Namespaces

- [std](#)

### Macros

- `#define \_GLIBCXX\_IOSTREAM`

### Variables

- static ios\_base::Init [std::\\_\\_ioinit](#)

### Standard Stream Objects

The `<iostream>` header declares the eight standard stream objects. For other declarations, see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/io.html> and the [I/O forward declarations](#)

They are required by default to cooperate with the global C library's `FILE` streams, and to be available during program startup and termination. For more information, see the section of the manual linked to above.

- istream [std::cin](#)
- ostream [std::cout](#)
- ostream [std::cerr](#)
- ostream [std::clog](#)
- wistream [std::wcin](#)
- wostream [std::wcout](#)
- wostream [std::wcerr](#)
- wostream [std::wclog](#)

### 6.310.1 Detailed Description

This is a Standard C++ Library header.

### 6.350.1 Detailed Description

This file is a GNU debug extension to the Standard C++ Library.

Definition in file [macros.h](#).

### 6.350.2 Macro Definition Documentation

#### 6.350.2.1 `#define __glibcxx_check_erase( _Position )`

Verify that we can erase the element referenced by the iterator `_Position`. We can erase the element if the `_Position` iterator is dereferenceable and references this sequence.

Definition at line 145 of file [macros.h](#).

#### 6.350.2.2 `#define __glibcxx_check_erase_after( _Position )`

Verify that we can erase the element after the iterator `_Position`. We can erase the element if the `_Position` iterator is before a dereferenceable one and references this sequence.

Definition at line 159 of file [macros.h](#).

### 6.350.2.3 #define \_\_glibcxx\_check\_erase\_range( *\_First*, *\_Last* )

Verify that we can erase the elements in the iterator range [*\_First*, *\_Last*). We can erase the elements if [*\_First*, *\_Last*) is a valid iterator range within this sequence.

Definition at line 173 of file macros.h.

### 6.350.2.4 #define \_\_glibcxx\_check\_erase\_range\_after( *\_First*, *\_Last* )

Verify that we can erase the elements in the iterator range (*\_First*, *\_Last*). We can erase the elements if (*\_First*, *\_Last*) is a valid iterator range within this sequence.

Definition at line 185 of file macros.h.

### 6.350.2.5 #define \_\_glibcxx\_check\_heap\_pred( *\_First*, *\_Last*, *\_Pred* )

Verify that the iterator range [*\_First*, *\_Last*) is a heap w.r.t. the predicate *\_Pred*.

Definition at line 335 of file macros.h.

### 6.350.2.6 #define \_\_glibcxx\_check\_insert( *\_Position* )

Verify that we can insert into \*this with the iterator *\_Position*. Insertion into a container at a specific position requires that the iterator be nonsingular, either dereferenceable or past-the-end, and that it reference the sequence we are inserting into. Note that this macro is only valid when the container is a *\_Safe\_sequence* and the iterator is a *\_Safe\_iterator*.

Definition at line 79 of file macros.h.

### 6.350.2.7 #define \_\_glibcxx\_check\_insert\_after( *\_Position* )

Verify that we can insert into \*this after the iterator *\_Position*. Insertion into a container after a specific position requires that the iterator be nonsingular, either dereferenceable or before-begin, and that it reference the sequence we are inserting into. Note that this macro is only valid when the container is a *\_Safe\_sequence* and the iterator is a *\_Safe\_iterator*.

Definition at line 96 of file macros.h.

### 6.350.2.8 #define \_\_glibcxx\_check\_insert\_range( *\_Position*, *\_First*, *\_Last*, *\_Dist* )

Verify that we can insert the values in the iterator range [*\_First*, *\_Last*) into \*this with the iterator *\_Position*. Insertion into a container at a specific position requires that the iterator be nonsingular (i.e., either dereferenceable or past-the-end), that it reference the sequence we are inserting into, and that the iterator range [*\_First*, *\_Last*) is a valid (possibly empty) range which does not reference the sequence we are inserting into. Note that this macro is only valid when the container is a *\_Safe\_sequence* and the *\_Position* iterator is a *\_Safe\_iterator*.

Definition at line 113 of file macros.h.

### 6.350.2.9 #define \_\_glibcxx\_check\_insert\_range\_after( *\_Position*, *\_First*, *\_Last*, *\_Dist* )

Verify that we can insert the values in the iterator range [*\_First*, *\_Last*) into \*this after the iterator *\_Position*. Insertion into a container after a specific position requires that the iterator be nonsingular (i.e., either dereferenceable or past-the-end), that it reference the sequence we are inserting into, and that the iterator range [*\_First*, *\_Last*) is a valid (possibly empty) range which does not reference the sequence we are inserting into. Note that this macro is only valid when the container is a *\_Safe\_sequence* and the *\_Position* iterator is a *\_Safe\_iterator*.

Definition at line 132 of file macros.h.

### 6.350.2.10 #define \_\_glibcxx\_check\_partitioned\_lower( *\_First*, *\_Last*, *\_Value* )

Verify that the iterator range [*\_First*, *\_Last*) is partitioned w.r.t. the value *\_Value*.

Definition at line 279 of file macros.h.

6.350.2.11 `#define __glibcxx_check_partitioned_lower_pred( _First, _Last, _Value, _Pred )`

Verify that the iterator range [`_First`, `_Last`) is partitioned w.r.t. the value `_Value` and predicate `_Pred`.

Definition at line 301 of file macros.h.

6.350.2.12 `#define __glibcxx_check_partitioned_upper_pred( _First, _Last, _Value, _Pred )`

Verify that the iterator range [`_First`, `_Last`) is partitioned w.r.t. the value `_Value` and predicate `_Pred`.

Definition at line 314 of file macros.h.

6.350.2.13 `#define __glibcxx_check_sorted_pred( _First, _Last, _Pred )`

Verify that the iterator range [`_First`, `_Last`) is sorted by the predicate `_Pred`.

Definition at line 245 of file macros.h.

6.350.2.14 `#define _GLIBCXX_DEBUG_VERIFY_AT( _Condition, _ErrorMessage, _File, _Line )`

Macros used by the implementation to verify certain properties. These macros may only be used directly by the debug wrappers. Note that these are macros (instead of the more obviously *correct* choice of making them functions) because we need line and file information at the call site, to minimize the distance between the user error and where the error is reported.

Definition at line 41 of file macros.h.

## 6.351 malloc\_allocator.h File Reference

### Classes

- void `operator delete[]` (void \*, void \*) noexcept

## Variables

- const nothrow\_t **std::nothrow**

### 6.380.1 Detailed Description

This is a Standard C++ Library header.

The header `new` defines several functions to manage dynamic memory and handling memory allocation errors; see [http://gcc.gnu.org/onlinedocs/libstdc++/18\\_support/howto.html#4](http://gcc.gnu.org/onlinedocs/libstdc++/18_support/howto.html#4) for more.

Definition in file `new`.

### 6.380.2 Function Documentation

#### 6.380.2.1 void operator delete ( void \* ) [noexcept]

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

**6.380.2.2** `void operator delete ( void *, const std::nothrow_t & ) [noexcept]`

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

**6.380.2.3** `void operator delete ( void *, void * ) [inline], [noexcept]`

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

Definition at line 174 of file `new`.

**6.380.2.4** `void operator delete[] ( void * ) [noexcept]`

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

**6.380.2.5** `void operator delete[] ( void *, const std::nothrow_t & ) [noexcept]`

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

**6.380.2.6** `void operator delete[]( void *, void * ) [inline], [noexcept]`

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

Definition at line 175 of file `new`.

**6.380.2.7** `void* operator new ( std::size_t )`

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

**6.380.2.8** `void* operator new ( std::size_t, const std::nothrow_t& ) [noexcept]`

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

**6.380.2.9** `void* operator new ( std::size_t, void * __p ) [inline], [noexcept]`

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

Definition at line 168 of file `new`.

### 6.380.2.10 `void* operator new[]( std::size_t )`

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

### 6.380.2.11 `void* operator new[]( std::size_t, const std::nothrow_t & ) [noexcept]`

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

### 6.380.2.12 `void* operator new[]( std::size_t, void *__p ) [inline], [noexcept]`

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

Definition at line 170 of file `new`.

## 6.381 `new_allocator.h` File Reference

### Classes

- class [\\_\\_gnu\\_cxx::new\\_allocator<\\_Tp>](#)

### Namespaces

- [\\_\\_gnu\\_cxx](#)

## Functions

- `template<typename _Tp >`  
`bool __gnu_cxx::operator!= (const new_allocator< _Tp > &, const new_allocator< _Tp > &)`
- `template<typename _Tp >`  
`bool __gnu_cxx::operator== (const new_allocator< _Tp > &, const new_allocator< _Tp > &)`

### 6.381.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

Definition in file [new\\_allocator.h](#).

## 6.382 node.hpp File Reference

### Classes

- [struct \\_\\_gnu\\_pbds::detail::left\\_child\\_next\\_sibling\\_heap\\_node\\_< \\_Value, \\_Metadata, \\_Alloc >](#)

### Namespaces

- [\\_\\_gnu\\_pbds](#)

### 6.382.1 Detailed Description

Contains an implementation struct for this type of heap's node.

Definition in file [left\\_child\\_next\\_sibling\\_heap\\_/node.hpp](#).

## 6.383 node.hpp File Reference

### Classes

- [struct \\_\\_gnu\\_pbds::detail::rb\\_tree\\_node\\_< Value\\_Type, Metadata, \\_Alloc >](#)

### Namespaces

- [\\_\\_gnu\\_pbds](#)

### 6.383.1 Detailed Description

Contains an implementation for `rb_tree_.`

Definition in file [rb\\_tree\\_map\\_/node.hpp](#).

## 6.384 node.hpp File Reference

### Classes

- [struct \\_\\_gnu\\_pbds::detail::splay\\_tree\\_node\\_< Value\\_Type, Metadata, \\_Alloc >](#)

## Namespaces

- [\\_\\_gnu\\_pbds](#)

### 6.384.1 Detailed Description

Contains an implementation struct for `splay_tree_`'s node.

Definition in file [splay\\_tree\\_/node.hpp](#).

## 6.385 node\_handle.h File Reference

### 6.385.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<map,set,unordered_map,unordered_set>`.

Definition in file [node\\_handle.h](#).

## 6.386 node\_iterators.hpp File Reference

### Classes

- class [\\_\\_gnu\\_pbds::detail::bin\\_search\\_tree\\_const\\_node\\_it\\_< Node, Const\\_Iterator, Iterator, \\_Alloc >](#)
- class [\\_\\_gnu\\_pbds::detail::bin\\_search\\_tree\\_node\\_it\\_< Node, Const\\_Iterator, Iterator, \\_Alloc >](#)

### Namespaces

### 6.393.1 Detailed Description

Parallel STL function calls corresponding to `stl_numeric.h`. The functions defined here mainly do case switches and call the actual parallelized versions in other files. Inlining policy: Functions that basically only contain one function call, are declared inline. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [parallel/numeric](#).

### 6.396.1 Detailed Description

This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [numericfwd.h](#).

## 6.397 omp\_loop.h File Reference

### Namespaces

- [\\_\\_gnu\\_parallel](#)

### Functions

- `template<typename _RAIter, typename _Op, typename _Fu, typename _Red, typename _Result > _Op __gnu_parallel::__for_each_template_random_access_omp_loop (_RAIter __begin, _RAIter __end, _Op __o, _Fu &__f, _Red __r, _Result __base, _Result &__output, typename std::iterator_traits< _RAIter >::difference_type __bound)`

### 6.397.1 Detailed Description

Parallelization of embarrassingly parallel execution by means of an OpenMP for loop. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [omp\\_loop.h](#).

## 6.398 omp\_loop\_static.h File Reference

### Namespaces

- [\\_\\_gnu\\_parallel](#)

## Functions

- `template<typename _RAIter , typename _Op , typename _Fu , typename _Red , typename _Result > _Op __gnu_parallel::__for_each_template_random_access_omp_loop_static ( _RAIter __begin, _RAIter __end, _Op __o, _Fu & __f, _Red __r, _Result __base, _Result & __output, typename std::iterator_traits< _RAIter >::difference_type __bound)`

### 6.398.1 Detailed Description

Parallelization of embarrassingly parallel execution by means of an OpenMP for loop with static scheduling. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [omp\\_loop\\_static.h](#).

## 6.399 `opt_random.h` File Reference

### 6.399.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<random>`.

Definition in file [opt\\_random.h](#).

#### 6.423.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

##### Author

Bob Walters

Provides reusable `_Pointer_adapter` for assisting in the development of custom pointer types that can be used with the standard containers via the `allocator::pointer` and `allocator::const_pointer` typedefs.

Definition in file [pointer.h](#).

#### 6.424 `policy_access_fn_imps.hpp` File Reference

##### 6.424.1 Detailed Description

Contains an implementation class for a `binary_heap`.

Definition in file [binary\\_heap\\_/policy\\_access\\_fn\\_imps.hpp](#).

#### 6.425 `policy_access_fn_imps.hpp` File Reference

##### 6.425.1 Detailed Description

Contains an implementation class for `bin_search_tree_`.

Definition in file [bin\\_search\\_tree\\_/policy\\_access\\_fn\\_imps.hpp](#).

## 6.426 [policy\\_access\\_fn\\_imps.hpp](#) File Reference

### 6.426.1 Detailed Description

Contains implementations of `cc_ht_map_`'s policy access functions.

Definition in file [cc\\_hash\\_table\\_map\\_/policy\\_access\\_fn\\_imps.hpp](#).

## 6.427 [policy\\_access\\_fn\\_imps.hpp](#) File Reference

### 6.427.1 Detailed Description

Contains implementations of `gp_ht_map_`'s policy access functions.

Definition in file [gp\\_hash\\_table\\_map\\_/policy\\_access\\_fn\\_imps.hpp](#).

## 6.428 [policy\\_access\\_fn\\_imps.hpp](#) File Reference

### 6.428.1 Detailed Description

Contains an implementation class for `left_child_next_sibling_heap_`.

Definition in file [left\\_child\\_next\\_sibling\\_heap\\_/policy\\_access\\_fn\\_imps.hpp](#).

## 6.429 [policy\\_access\\_fn\\_imps.hpp](#) File Reference

### 6.429.1 Detailed Description

Contains an implementation class for `ov_tree`.

Definition in file [ov\\_tree\\_map\\_/policy\\_access\\_fn\\_imps.hpp](#).

## 6.430 [policy\\_access\\_fn\\_imps.hpp](#) File Reference

### 6.430.1 Detailed Description

Contains an implementation class for `pat_trie`.

Definition in file [pat\\_trie\\_/policy\\_access\\_fn\\_imps.hpp](#).

`void` `__gnu_profile::__top_n` (`const` `_Container &` `__input`, `_Container &` `__output`, `typename` `_Container::size_type` `__n`)

#### 6.439.1 Detailed Description

Algorithms used by the profile extension. This file is needed to avoid including `<algorithm>` or `<bits/stl_algo.h>`. Including those files would result in recursive includes. These implementations are oversimplified. In general, efficiency may be sacrificed to minimize maintenance overhead.

Definition in file [profiler\\_algos.h](#).

## 6.496 [resize\\_no\\_store\\_hash\\_fn\\_imps.hpp](#) File Reference

### 6.496.1 Detailed Description

Contains implementations of `gp_ht_map_`'s resize related functions, when the hash value is not stored.

Definition in file [gp\\_hash\\_table\\_map\\_/resize\\_no\\_store\\_hash\\_fn\\_imps.hpp](#).

## 6.497 [resize\\_policy.hpp](#) File Reference

### Classes

- class [\\_\\_gnu\\_pbds::detail::resize\\_policy< \\_Tp >](#)

### Namespaces

- [\\_\\_gnu\\_pbds](#)

### 6.497.1 Detailed Description

Contains an implementation class for a `binary_heap`.

Definition in file [resize\\_policy.hpp](#).

## 6.498 [resize\\_store\\_hash\\_fn\\_imps.hpp](#) File Reference

### 6.498.1 Detailed Description

Contains implementations of `cc_ht_map_`'s resize related functions, when the hash value is stored.

Definition in file [cc\\_hash\\_table\\_map\\_/resize\\_store\\_hash\\_fn\\_imps.hpp](#).

## 6.499 `resize_store_hash_fn_imps.hpp` File Reference

### 6.499.1 Detailed Description

Contains implementations of `gp_ht_map_`'s `resize` related functions, when the hash value is stored.

Definition in file [gp\\_hash\\_table\\_map\\_/resize\\_store\\_hash\\_fn\\_imps.hpp](#).

## 6.500 `rope` File Reference

### 6.534.1 Detailed Description

Parallel implementations of set operations for random-access iterators. This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [set\\_operations.h](#).

## 6.535 settings.h File Reference

### Classes

- `struct __gnu_parallel::Settings`

## Namespaces

- [\\_\\_gnu\\_parallel](#)

## Macros

- `#define \_GLIBCXX\_PARALLEL\_CONDITION(__c)`

### 6.535.1 Detailed Description

Runtime settings and tuning parameters, heuristics to decide whether to use parallelized algorithms. This file is a GNU parallel extension to the Standard C++ Library.

### 6.535.2 `parallelization_decision`

The decision whether to run an algorithm in parallel.

There are several ways the user can switch on and \_\_\_off the parallel execution of an algorithm, both at compile- and run-time.

Only sequential execution can be forced at compile-time. This reduces code size and protects code parts that have non-thread-safe side effects.

Ultimately, forcing parallel execution at compile-time makes sense. Often, the sequential algorithm implementation is used as a subroutine, so no reduction in code size can be achieved. Also, the machine the program is run on might have only one processor core, so to avoid overhead, the algorithm is executed sequentially.

To force sequential execution of an algorithm ultimately at compile-time, the user must add the tag `gnu_parallel::sequential_tag()` to the end of the parameter list, e. g.

```
* std::sort(__v.begin(), __v.end(), \_\_gnu\_parallel::sequential\_tag(  
  );  
*
```

This is compatible with all overloaded algorithm variants. No additional code will be instantiated, at all. The same holds for most algorithm calls with iterators not providing random access.

If the algorithm call is not forced to be executed sequentially at compile-time, the decision is made at run-time. The global variable `__gnu_parallel::_Settings::algorithm_strategy` is checked. `_It` is a tristate variable corresponding to:

a. `force_sequential`, meaning the sequential algorithm is executed. b. `force_parallel`, meaning the parallel algorithm is executed. c. `heuristic`

For heuristic, the parallel algorithm implementation is called only if the input size is sufficiently large. For most algorithms, the input size is the (combined) length of the input sequence(`_s`). The threshold can be set by the user, individually for each algorithm. The according variables are called `gnu_parallel::_Settings::[algorithm]_minimal_n`.

For some of the algorithms, there are even more tuning options, e. g. the ability to choose from multiple algorithm variants. See below for details.

Definition in file [settings.h](#).

### 6.535.3 Macro Definition Documentation

#### 6.535.3.1 `#define \_GLIBCXX\_PARALLEL\_CONDITION( __c )`

Determine at compile(?) -time if the parallel variant of an algorithm should be called.

## Parameters

<code>__c</code>	A condition that is convertible to bool that is overruled by <code>__gnu_parallel::_Settings::algorithm_strategy</code> . Usually a decision based on the input size.
------------------	---

Definition at line 95 of file `settings.h`.

### 6.545.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<cmath>`.

Definition in file [specfun.h](#).

## 6.546 [splay\\_fn\\_imps.hpp](#) File Reference

### 6.546.1 Detailed Description

Contains an implementation class for `splay_tree_.`

Definition in file [splay\\_fn\\_imps.hpp](#).

## 6.547 [splay\\_tree\\_.hpp](#) File Reference

### Classes

- class [\\_\\_gnu\\_pbds::detail::splay\\_tree\\_map](#)< Key, Mapped, Cmp\_Fn, Node\_And\_It\_Traits, \_Alloc >

### Namespaces

- [\\_\\_gnu\\_pbds](#)

### Macros

- `#define PB_DS_ASSERT_BASE_NODE_CONSISTENT(_Node)`
- `#define PB_DS_CLASS_C_DEC`
- `#define PB_DS_CLASS_T_DEC`
- `#define PB_DS_S_TREE_BASE`
- `#define PB_DS_S_TREE_BASE_NAME`
- `#define PB_DS_S_TREE_NAME`

### 6.547.1 Detailed Description

Contains an implementation class for splay trees.

Definition in file [splay\\_tree\\_.hpp](#).

## 6.548 [split\\_fn\\_imps.hpp](#) File Reference

### 6.548.1 Detailed Description

Contains an implementation class for `pat_trie`.

Definition in file [split\\_fn\\_imps.hpp](#).

## 6.549 [split\\_join\\_fn\\_imps.hpp](#) File Reference

### 6.549.1 Detailed Description

Contains an implementation class for a `binary_heap`.

Definition in file [binary\\_heap\\_/split\\_join\\_fn\\_imps.hpp](#).

## 6.550 [split\\_join\\_fn\\_imps.hpp](#) File Reference

### 6.550.1 Detailed Description

Contains an implementation class for a base of binomial heaps.

Definition in file [binomial\\_heap\\_base\\_/split\\_join\\_fn\\_imps.hpp](#).

## 6.551 [split\\_join\\_fn\\_imps.hpp](#) File Reference

### 6.551.1 Detailed Description

Contains an implementation class for `bin_search_tree_`.

Definition in file [bin\\_search\\_tree\\_/split\\_join\\_fn\\_imps.hpp](#).

## 6.552 [split\\_join\\_fn\\_imps.hpp](#) File Reference

### 6.552.1 Detailed Description

Contains an implementation class for `ov_tree_`.

Definition in file [ov\\_tree\\_map\\_/split\\_join\\_fn\\_imps.hpp](#).

## 6.553 [split\\_join\\_fn\\_imps.hpp](#) File Reference

### 6.553.1 Detailed Description

Contains an implementation class for a pairing heap.

Definition in file [pairing\\_heap\\_/split\\_join\\_fn\\_imps.hpp](#).

## 6.554 [split\\_join\\_fn\\_imps.hpp](#) File Reference

### 6.554.1 Detailed Description

Contains an implementation for `rb_tree_`.

Definition in file [rb\\_tree\\_map\\_/split\\_join\\_fn\\_imps.hpp](#).

## 6.555 [split\\_join\\_fn\\_imps.hpp](#) File Reference

### 6.555.1 Detailed Description

Contains an implementation for `rc_binomial_heap_`.

Definition in file [rc\\_binomial\\_heap\\_/split\\_join\\_fn\\_imps.hpp](#).

## 6.556 [split\\_join\\_fn\\_imps.hpp](#) File Reference

### 6.556.1 Detailed Description

Contains an implementation class for `splay_tree_`.  
Definition in file [splay\\_tree\\_/split\\_join\\_fn\\_imps.hpp](#).

## 6.557 `split_join_fn_imps.hpp` File Reference

### 6.557.1 Detailed Description

Contains an implementation for `thin_heap_`.  
Definition in file [thin\\_heap\\_/split\\_join\\_fn\\_imps.hpp](#).

## 6.558 `sso_string_base.h` File Reference

### Namespaces

- [\\_\\_gnu\\_cxx](#)

### 6.558.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<ext/vstring.h>`.

Definition in file [sso\\_string\\_base.h](#).

## 6.559 `sstream` File Reference

### Classes

- class [std::basic\\_istringstream<\\_CharT, \\_Traits, \\_Alloc >](#)
- class [std::basic\\_ostringstream<\\_CharT, \\_Traits, \\_Alloc >](#)
- class [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc >](#)
- class [std::basic\\_stringstream<\\_CharT, \\_Traits, \\_Alloc >](#)

### Namespaces

- [std](#)

### Macros

- `#define \_GLIBCXX\_SSTREAM`

### Functions

- `template<class _CharT, class _Traits, class _Allocator >  
void std::swap (basic_stringbuf<_CharT, _Traits, _Allocator > &__x, basic_stringbuf<_CharT, _Traits, _Allocator > &__y)`

- `template<class _CharT, class _Traits, class _Allocator >`  
`void std::swap (basic_istream< _CharT, _Traits, _Allocator > &__x, basic_istream< _CharT, _Traits, _Allocator > &__y)`
- `template<class _CharT, class _Traits, class _Allocator >`  
`void std::swap (basic_ostringstream< _CharT, _Traits, _Allocator > &__x, basic_ostringstream< _CharT, _Traits, _Allocator > &__y)`
- `template<class _CharT, class _Traits, class _Allocator >`  
`void std::swap (basic_stringstream< _CharT, _Traits, _Allocator > &__x, basic_stringstream< _CharT, _Traits, _Allocator > &__y)`

#### 6.559.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [sstream](#).

## 6.560 `sstream.tcc` File Reference

### Namespaces

- [std](#)

### Macros

- `#define \_SSTREAM\_TCC`

#### 6.560.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<sstream>`.

Definition in file [sstream.tcc](#).

## 6.561 `stack` File Reference

### Macros

- `#define \_GLIBCXX\_STACK`

#### 6.561.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [stack](#).

## 6.562 `standard_policies.hpp` File Reference

### Classes

- struct [\\_\\_gnu\\_pbds::detail::default\\_comb\\_hash\\_fn](#)

- struct [\\_\\_gnu\\_pbds::detail::default\\_eq\\_fn< Key >](#)
- struct [\\_\\_gnu\\_pbds::detail::default\\_hash\\_fn< Key >](#)

### 6.572.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<algorithm>`.

Definition in file [stl\\_algo.h](#).

## 6.573 stl\_algobase.h File Reference

### Classes

- struct [std::char\\_traits<\\_CharT>](#)
- class [std::istreambuf\\_iterator<\\_CharT, \\_Traits>](#)
- class [std::ostreambuf\\_iterator<\\_CharT, \\_Traits>](#)

### Namespaces

- [std](#)

### Macros

- `#define __cpp_lib_robust_nonmodifying_seq_ops`
- `#define _GLIBCXX_MOVE3(_Tp, _Up, _Vp)`
- `#define _GLIBCXX_MOVE_BACKWARD3(_Tp, _Up, _Vp)`

### Functions

- `template<bool _IsMove, typename _II, typename _OI >

### 6.576.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<deque>`.

Definition in file [stl\\_deque.h](#).

## 6.576.2 Macro Definition Documentation

### 6.576.2.1 #define \_GLIBCXX\_DEQUE\_BUF\_SIZE

This function controls the size of memory nodes.

#### Parameters

<code>__size</code>	The size of an element.
---------------------	-------------------------

#### Returns

The number (not byte size) of elements per node.

This function started off as a compiler kludge from SGI, but seems to be a useful wrapper around a repeated constant expression. The **512** is tunable (and no other code needs to change), but no investigation has been done since inheriting the SGI code. Touch `_GLIBCXX_DEQUE_BUF_SIZE` only if you know what you are doing, however: changing it breaks the binary compatibility!!

Definition at line 88 of file `stl_deque.h`.

- `template<class _Tp >`  
`bool std::rel\_ops::operator>= (const _Tp &__x, const _Tp &__y)`

### 6.591.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<utility>`.

Inclusion of this file has been removed from all of the other STL headers for safety reasons, except `std_utility.h`. For more information, see the thread of about twenty messages starting with <http://gcc.gnu.org/ml/libstdc++/2001-01/msg00223.html>, or [http://gcc.gnu.org/onlinedocs/libstdc++/faq.html#faq.ambiguous\\_overloads](http://gcc.gnu.org/onlinedocs/libstdc++/faq.html#faq.ambiguous_overloads)

Short summary: the `rel_ops` operators should be avoided for the present.

Definition in file [stl\\_relops.h](#).

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<string>`.

Definition in file [stringfwd.h](#).

## 6.610 stringstream File Reference

### Namespaces

- [std](#)

### 6.610.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [stringstream](#).

## 6.611 synth\_access\_traits.hpp File Reference

### Classes

- struct [\\_\\_gnu\\_pbds::detail::synth\\_access\\_traits< Type\\_Traits, Set, \\_ATraits >](#)

### Namespaces

- [\\_\\_gnu\\_pbds](#)

### Macros

- `#define PB_DS_SYNTH_E_ACCESS_TRAITS_C_DEC`
- `#define PB_DS_SYNTH_E_ACCESS_TRAITS_T_DEC`

### 6.611.1 Detailed Description

Contains an implementation class for a patricia tree.

Definition in file [synth\\_access\\_traits.hpp](#).

## 6.612 `system_error` File Reference

### Classes

- class `std::_V2::error_category`
- struct `std::error_code`
- struct `std::error_condition`
- struct `std::hash<_Tp>`
- struct `std::hash<error_code>`
- struct `std::is_error_code_enum<_Tp>`
- struct `std::is_error_condition_enum<_Tp>`
- class `std::system_error`

### Namespaces

- `std`

### Macros

- `#define _GLIBCXX_SYSTEM_ERROR`

### Functions

- `const error_category & std::_V2::generic_category () noexcept`
- `error_code std::make_error_code (errc __e) noexcept`
- `error_condition std::make_error_condition (errc __e) noexcept`
- `bool std::operator!= (const error_code &__lhs, const error_code &__rhs) noexcept`
- `bool std::operator!= (const error_code &__lhs, const error_condition &__rhs) noexcept`
- `bool std::operator!= (const error_condition &__lhs, const error_code &__rhs) noexcept`
- `bool std::operator!= (const error_condition &__lhs, const error_condition &__rhs) noexcept`
- `bool std::operator< (const error_code &__lhs, const error_code &__rhs) noexcept`
- `bool std::operator< (const error_condition &__lhs, const error_condition &__rhs) noexcept`
- `template<typename _CharT, typename _Traits > basic_ostream<_CharT, _Traits > & std::operator<< (basic_ostream<_CharT, _Traits > &__os, const error_code &__e)`
- `bool std::operator== (const error_code &__lhs, const error_code &__rhs) noexcept`
- `bool std::operator== (const error_code &__lhs, const error_condition &__rhs) noexcept`
- `bool std::operator== (const error_condition &__lhs, const error_code &__rhs) noexcept`
- `bool std::operator== (const error_condition &__lhs, const error_condition &__rhs) noexcept`
- `const error_category & std::_V2::system_category () noexcept`

### Variables

- `error_code std::make_error_code (errc) noexcept`
- `error_condition std::make_error_condition (errc) noexcept`

#### 6.612.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [system\\_error](#).

## 6.613 system\_error File Reference

### Namespaces

- [std](#)

### Macros

- `#define _GLIBCXX_EXPERIMENTAL_SYSTEM_ERROR`

### Variables

- `template<typename _Tp >`  
`constexpr bool std::experimental::fundamentals_v1::is_error_code_enum_v`
- `template<typename _Tp >`  
`constexpr bool std::experimental::fundamentals_v1::is_error_condition_enum_v`

### 6.613.1 Detailed Description

This is a TS C++ Library header.

Definition in file [experimental/system\\_error](#).

### 6.619.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

Contains two exception-generating types (`throw_value`, `throw_allocator`) intended to be used as value and allocator types while testing exception safety in templated containers and algorithms. The allocator has additional log and debug features. The exception generated is of type `forced_exception_error`.

Definition in file [throw\\_allocator.h](#).

## 6.620 `time_members.h` File Reference

### Namespaces

- [std](#)

### 6.620.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<locale>`.

Definition in file [time\\_members.h](#).

## 6.621 `trace_fn_imps.hpp` File Reference

### 6.621.1 Detailed Description

Contains an implementation class for a `binary_heap`.

Definition in file [binary\\_heap/trace\\_fn\\_imps.hpp](#).

## 6.622 `trace_fn_imps.hpp` File Reference

### 6.622.1 Detailed Description

Contains implementations of `cc_ht_map`'s trace-mode functions.

Definition in file [cc\\_hash\\_table\\_map/trace\\_fn\\_imps.hpp](#).

## 6.623 `trace_fn_imps.hpp` File Reference

### 6.623.1 Detailed Description

Contains implementations of `gp_ht_map_`'s trace-mode functions.

Definition in file [gp\\_hash\\_table\\_map\\_/trace\\_fn\\_imps.hpp](#).

## 6.624 `trace_fn_imps.hpp` File Reference

### 6.624.1 Detailed Description

Contains an implementation class for `left_child_next_sibling_heap_`.

Definition in file [left\\_child\\_next\\_sibling\\_heap\\_/trace\\_fn\\_imps.hpp](#).

## 6.625 `trace_fn_imps.hpp` File Reference

### 6.625.1 Detailed Description

Contains implementations of `lu_map_`.

Definition in file [list\\_update\\_map\\_/trace\\_fn\\_imps.hpp](#).

## 6.626 `trace_fn_imps.hpp` File Reference

### 6.626.1 Detailed Description

Contains an implementation class for `pat_trie_`.

Definition in file [pat\\_trie\\_/trace\\_fn\\_imps.hpp](#).

## 6.627 `trace_fn_imps.hpp` File Reference

### 6.627.1 Detailed Description

Contains an implementation for `rc_binomial_heap_`.

Definition in file [rc\\_binomial\\_heap\\_/trace\\_fn\\_imps.hpp](#).

## 6.628 `trace_fn_imps.hpp` File Reference

### 6.628.1 Detailed Description

Contains an implementation class for `left_child_next_sibling_heap_`.

Definition in file [thin\\_heap\\_/trace\\_fn\\_imps.hpp](#).

## 6.629 `traits.hpp` File Reference

## Classes

### 6.669.1 Detailed Description

This is a Standard C++ Library header.

Definition in file [valarray](#).

## 6.670 valarray\_after.h File Reference

### Namespaces

- [std](#)

## Macros

- `#define _DEFINE_EXPR_BINARY_FUNCTION(_Fun, _UFun)`
- `#define _DEFINE_EXPR_BINARY_OPERATOR(_Op, _Name)`
- `#define _DEFINE_EXPR_UNARY_FUNCTION(_Name, _UName)`
- `#define _DEFINE_EXPR_UNARY_OPERATOR(_Op, _Name)`

## Functions

### 6.670.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<valarray>`.

Definition in file [valarray\\_after.h](#).

::difference_type __bound)`

### 6.683.1 Detailed Description

Parallelization of embarrassingly parallel execution by means of work-stealing. Work stealing is described in

R. D. Blumofe and C. E. Leiserson. Scheduling multithreaded computations by work stealing. *Journal of the ACM*, 46(5):720–748, 1999.

This file is a GNU parallel extension to the Standard C++ Library.

Definition in file [workstealing.h](#).
